homotype (hō′mō-tīp), *n.* [< Gr. **ὁμότυπος*, having the same form (implied in deriv. *ὁμοτυπία*, sameness of form), < *ὁμός*, the same, + *τύπος*, impression, type, form.] In *biol.*: (*a*) That which is constructed on the same plan or type, as metameres of the body; that which exhibits serial homology. See *homology*. This is the original sense of the term, in which a homotype is a serial homologue, not an antitype or reversed repetition of another part. But serial parts may also be regarded as antitypic or symmetrical. Hence—(*b*) An organ or part of an organ symmetrical with or equivalent to another organ or part of an organ on the opposite side of the body; an antitypical, correlative, or reversed repetition of a part across a given axis.

homotypic (hō-mō-tip′ik), *a.* [< *homotype* + *-ic*.] Pertaining to or of the nature of a homotype; of the same type; symmetrical with or corresponding to something else on the opposite part of the same axis. Thus, the right hand is *homotypic* of the left; the right and left eyes are *homotypic*.

homotypical (hō-mō-tip′i-kal), *a.* [< *homotypic* + *-al*.] Same as *homotypic*.

homotypy (hō′mō-tī-pi), *n.* [< Gr. *ὁμοτυπία*, sameness of form: see *homotype*.] In *biol.*: (*a*) Serial homology; the structural correlation or correspondence between any two segments of the body. Thus, any vertebra compared with another, the shoulder compared with the hip, or the elbow with the knee, exhibits homotypy. But such parts may also be regarded as expressing symmetry, reversed repetition, or antitypy. Hence—(*b*) That kind of general homology which may be observed between parts or organs which are symmetrical, or fellows of each other, as right and left; the homology of reversed repetition of parts on opposite halves or across a given axis.

homuncle (hō′mung-kl), *n.* [< L. *homunculus*: see *homunculus*.] Same as *homunculus*.

homuncular (hō-mung′kū-lär), *a.* [< *homuncule* + *-ar*3.] Resembling or characteristic of a homunculus.

homuncule (hō-mung′kūl), *n.* [< L. *homunculus*: see *homunculus*.] Same as *homunculus*, 2.

The giant saw the *homuncule* was irascible, and played upon him. *C. Reade*, Cloister and Hearth, vii.

homunculus (hō-mung′kū-lus), *n.*; pl. *homunculi* (-lī). [L., dim. of *homo* (*homin-*, *homon-*), a man: see *Homo*.] 1. A tiny human being that may be produced (according to a fancy of Paracelsus) artificially, without a natural mother. Being produced by art, it was supposed that art was incarnate in it and that it had innate knowledge of secret things.

2. A little man; a dwarf.

homy (hō′mi), *a.* [< *home* + *-y*1.] Pertaining to or resembling home; homelike. Also spelled *homey*. [Colloq.]

I saw . . . plenty of our dear English "lady's smock in the wet meadows near here, which looked very *homy*. *Kingsley*, Life (1864), II. 168.

They [English drawing-rooms] have a *homey* look, which ours sometimes lack. *Christian Union*, June 30, 1887.

Hon. An abbreviation of *honorable*, used as a title.

hondt, *n.* An obsolete spelling of *hand*. *Chaucer*.

Honduras bark. See *bark*2.

hone1 (hōn), *n.* [< ME. *hone*, *hoone*, a hone, < AS. *hān*, a stone (the dat. *hāne* is found twice in charters, in ref. to boundary-stones), = Icel. *hein*, a hone, = Norw. *hein*, *hen* = Sw. *hen*, dial. *hein*, a hone; perhaps = L. *cūneus*, a wedge (> E. *coin*1, *coign*, *quoin*, q. v.), = Gr. *κῶνος*, a wedge, cone (> E. *cone*, q. v.), = Skt. *çāna*, a grindstone, < √ *çā*, *çi*, sharpen. The L. *cos* (*cot-*), a hone, is supposed to be from the same root.] 1. A stone used for sharpening instruments that require a delicate edge, and particularly for sharpening razors; an oilstone. A hone differs from a whetstone in being of finer grit and more compact texture. See *honestone*.

A *Hone*, a Bason, three Razors, and a Comb-case. *Steele*, Tender Husband, v. 1.

2. A thin piece of dry and stale bread; also, an oil-cake. [Prov. Eng.]—**German hone**, a soft, smooth, yellow stone obtained from the slate mountains near Ratisbon, and used almost exclusively for razor-setting.

hone1 (hōn), *v. t.*; pret. and pp. *honed*, ppr. *honing*. [ME. not found (cf. ME. *hene*, < AS. *hēnan*, stone, cast stones at); = Norw. *heina*, whet; from the noun.] To rub and sharpen on or as on a hone: as, to *hone* a razor.

Mr. Green . . . brought out a jack-knife, and commenced *honing* it on his shoe. *J. T. Trowbridge*, Coupon Bonds, p. 286.

hone2†, *v. i.* [< ME. *honen*, *hoynen*.] To linger; delay.

Good brother, let us weynd sone,
No longer here I rede we *hone*.
Towneley Mysteries, p. 11.

It may not helpe her for to *hone*, . . .
Than is goode tyme that we begynne.
York Plays, p. 349.

hone2†, *n.* [ME., < *hone*2, *v.*] Delay; lingering.

Tharfore Eraclius ful sone
Strake of his heuyd with-outen *hone*.
Holy Rood (E. E. T. S.), p. 127.

hone3 (hōn), *v.*; pret. and pp. *honed*, ppr. *honing*. [Prob. < F. *hogner*, formerly also *hoigner*, grumble, mutter, murmur, repine, whine, as a child or a dog, dial. (Norm.) *honer*, sing or hum in a low tone, *houiner*, lament.] **I.** *intrans.* To pine; long; yearn; moan. [Prov. Eng. and southern U. S.]

Some of the oxen in driving missed their fellows behind, and *honing* after them, bellowed, as their nature is. *Holland*, tr. of Livy, p. 6.

Commending her, lamenting, *honing*, wishing himself anything for her sake. *Burton*, Anat. of Mel., p. 525.

He lies pitying himself, *honing* and moaning over himself. *Lamb*, The Convalescent.

Sometimes . . . I git kotch wid emptiness in de pit er de stummuck, an' git ter fairly *honin'* arter sump'n w'at got substance in it. *J. C. Harris*, Uncle Remus, p. 198.

II. *trans.* To long for; crave. [Prov. Eng. and southern U. S.]

hone4 (hōn), *n.* A kind of swelling in the cheek.

hone5 (hōn), *n.* A circular barrow or hill.

Districts abounding in circular barrows, or, as they are here [in Yorkshire, England] called from the Norse name, *hones*, and, redundantly, *hone*-hills. *Archæologia*, XLII. 170.

hone6 (hōn), *n. pl.* A dialectal contraction of *hosen*, plural of *hose*.

hone7 (hōn), *interj.* See *och hone*.

honest (on′est), *a.* [< ME. *honest*, *onest*, < OF. *honeste*, later *honneste*, F. *honnête* (> D. Dan. *honnet* = Sw. *honnett*) = Pr. *honest* = Sp. Pg. *honesto* = It. *onesto*, < L. *honestus*, full of honor, honorable, worthy, virtuous, decent, < *honor*, *honos*, honor (see *honor*), + suffix *-tu-s*. The initial *h* in *honest*, *honor*, etc., is merely etymological, the sound having already disappeared when the word came into ME. use. See remarks under *H*, 1.] 1. Having a sense of honor; having honorable feelings, motives, or principles; free from deceit or hypocrisy; true, candid, upright, or just in speech and action; fair in dealing, or sincere in utterance; worthy to be trusted.

Be thou lowely and *honest*
To riche and pouere, in worde and dede,
And then thy name to worshyp shall sprede.
Booke of Precedence (E. E. T. S., extra ser.), i. 109.

Hee chides great men with most boldnesse, and is counted for it an *honest* fellow.
Bp. Earle, Micro-cosmographie, A Blunt Man.

This it is to have to do
With *honest* hearts: they easily may err,
But in the main they wish well to the truth.
Browning, Ring and Book, I. 271.

Specifically—(*a*) Having the virtue of chastity; chaste; virtuous: said of a woman.

Wives may be merry, and yet *honest* too.
Shak., M. W. of W., iv. 2.

Shee may be an *honest* woman, but is not beleeu'd so in her Parish, and no man is a greater Infidel in it then her Husband.
Bp. Earle, Micro-cosmographie, A Handsome Hostesse.

(*b*) Having no disposition to cheat, steal, or lie.

There s an *honest* conscionable fellow; he takes but ten shillings of a bellows-mender.
Middleton, The Phœnix, iv. 1.

An *honest* treasurer, like a black-plumed swan,
Not every day our eyes may look upon.
O. W. Holmes, The School-Boy.

2. Characterized by or proceeding from honorable motives or principles; marked by truth, justice, sincerity, fairness, etc.: as, an *honest* transaction; *honest* opinions or motives; an *honest* effort.

Therefore, whosoever maketh any promise, binding himself thereunto by an oath, let him foresee that the thing which he promiseth, be good, and *honest*, and not against the commandement of God.
Homilies, Against Swearing, ii.

But yet an *honest* mind I bore
To helpless people that were poor.
Jane Shore (Child's Ballads, VII. 197).

Honest labor bears a lovely face.
Chettle, Dekker, and Haughton, Patient Grissel, i. 1.

3. Of honorable quality; creditable; reputable; proper; becoming: as, a man of *honest* report.

Glad poverte is an *honeste* thyng certeyn.
Chaucer, Wife of Bath's Tale, l. 327.

Vpon thi trencher no fyllthe thou see,
It is not *honest*, as I telle the.
Babees Book (E. E. T. S.), p. 20.

Therefore while we may (yea alwaies if it coulde be) to reioyce and take our pleasures in vertuous and *honest* sort, it is not only allowable, but also necessary and very naturall to man. *Puttenham*, Arte of Eng. Poesie, p. 36.

Provide things *honest* in the sight of all men.
Rom. xii. 17.

4†. Excellent in quality; good.

And eke the londe is so *honest*
That it is plentuous and plaine;
There is no idell ground in vaine.
Gower, Conf. Amant., vii.

5. Of honorable appearance; fair-seeming; having the semblance of truthfulness, fairness, etc.

I'll devise some *honest* slanders
To stain my cousin with.
Shak., Much Ado, iii. 1.

Thy eye was ever chaste, thy countenance, too, *honest*,
And all thy wooings was like maidens' talk.
Beau. and Fl., Knight of Malta, v. 1.

Bacchus . . . shows his *honest* face.
Dryden, Alexander's Feast.

6. Open; undisguised; boldly or frankly showing purpose, character, or quality, whether good or bad: as, the *honest* pursuit of pleasure or gain; an *honest* rogue.

But as soon as the door opened, and he beheld the *honest* swindling countenance of a hotel porter, he felt secure against anything but imposture.
Howells, Venetian Life, ii.

To make an honest woman of, to marry: used in reference to a woman whom a man marries after he has dishonored her, especially if under promise of marriage. [Colloq. and rustic.]=**Syn. 1** and **2**. Conscientious, trustworthy, trusty, frank.

honest† (on′est), *v. t.* [< ME. *honesten*, < L. *honestare*, honor, adorn, grace, < *honestus*, honorable: see *honest*, *a.*] To do honor to; grace; adorn. *Wyclif*.

You should please God, benefite your countrie, and *honest* your owne name, if you would take the paines to impart to others what you learned of soch a Master.
Ascham, The Scholemaster, p. 21.

For fear of men, for loss of life or goods, yea, some for advantage and gain, will *honest* it [the mass] with their presence, dissembling both with God and man.
J. Bradford, Letters (Parker Soc., 1853), II. 48.

Sir Amorous, you have very much *honested* my lodging with your presence. *B. Jonson*, Epicœne, i. 1.

honestate† (on′es-tāt), *v. t.* [< L. *honestatus*, pp. of *honestare*, honor: see *honest*, *v.*] To honor. *Cockeram*.

honestation† (on-es-tā′shon), *n.* [< L. as if **honestatio*(*n-*), < *honestare*, honor, adorn: see *honestate*, *v.*] Adornment; grace.

By which virtuous qualities and *honestations* [prudence and sagacity] they have been more happy than others in their applications to move the mindes of men.
W. Montague, Devoute Essays, I. x. 6.

honestet†, *n.* A Middle English form of *honesty*.

honestete†, **honesteteet**, *n.* [ME. (mod. E. as if **honestity*), < OF. *honestete*, *honnestete*, F. *honnêteté* = Pr. *honestete*, *honestetat* = Sp. *honestidad* = Pg. *honestidade*, < L. as if **honestita*(*t-*)*s*, for which only *honesta*(*t-*)*s*, > ult. E. *honesty*: see *honesty*.] Middle English variants of *honesty*.

Wedded with fortunat *honestetee*.
Chaucer, Clerk's Tale, l. 466.

honest-hearted (on′est-här′ted), *a.* Of an honest heart; true; faithful.

A very *honest-hearted* fellow, and as poor as the king.
Shak., Lear, i. 4.

honestly (on′est-li), *adv.* [< ME. *honestly*, *onestly*; < *honest* + *-ly*2.] 1†. Honorably; in a manner to do honor to; properly.

In hir atire to the tempull tomly ho yode,
There *onestly* sho offert, honourt hir goddes
With giftes of golde & of gode stones.
Destruction of Troy (E. E. T. S.), l. 3001.

Wherefore brethren couet to prophecy, & forbid not to speake with tongues. And let all thynges be done *honestlye* and in order. *Bible of* 1551, 1 Cor. xiv. 40.

2. In an honest manner; with honesty.

Either society [the Bank or the Athenæum] may pay its debts *honestly*, [or] either may try to defraud its creditors.
Macaulay, Gladstone on Church and State.

honestone (hōn′stōn), *n.* A compact, fine-grained, homogeneous rock fit to be used for hones; a very silicious clay slate, having a conchoidal fracture across the grain of the rock. Also called *novaculite*.

honesty (on′es-ti), *n.* [< ME. *honeste*, *honestee*, < OF. *honeste*, *honneste*, *oneste*, *onneste*, *honestet* = Pr. *honestat* = Sp. *honestad* = It. *onestà*, < L. *honesta*(*t-*)*s*, honor, reputation, character, worthiness, honesty, < *honestus*, honorable, honest: see *honest*. Cf. *honestete*.] 1. The character or quality of being honest or honorable; upright disposition or conduct; sincerity; honor; virtue.

Corruption wins not more than *honesty*.
Shak., Hen. VIII., iii. 2.

I cannot now, in *honesty*, but frankly tell you, that many of these flies I have named, at least so made as we make them here, will peradventure do you no great service in your southern rivers. *Cotton*, in Walton's Angler, ii. 263.

A lawyer's dealings should be just and fair,
Honesty shines with great advantage there.
Cowper, Hope, l. 402.

Specifically—(*a*) Chastity; virtuous reputation; honor.

And also thynketh on myn *honeste*
That floureth yet, how foule I sholde it shende.
Chaucer, Troilus, iv. 1576.

She said her *honesty* was all her dowry.
Fletcher and Rowley, Maid in the Mill, iii. 3.

(*b*) The virtue of respecting the property rights of others; the absence of any disposition to cheat, steal, or lie.

Villon, who had not the courage to be poor with *honesty*, now whiningly implores our sympathy, now shows his teeth . . . with an ugly snarl.
R. L. Stevenson, Villon, Poet and Housebreaker.

2†. Decency; good manners.

For *honestee*
No vileyns word as yet to hym spak he.
Chaucer, Prol. to Friar's Tale, l. 3.

Alas, alas!
It is not *honesty* in me to speak
What I have seen and known.
Shak., Othello, iv. 1.

3†. Liberality.

A noble gentleman 'tis, if he would not keep so good a house. . . . Every man has his fault, and *honesty* is his.
Shak., T. of A., iii. 1.

4†. Credit; reputation.

When Sir Thos. More was at the place of execution, he said to the hangman, "I promise thee that thou shalt never have *honestie* in the stryking of my head, my necke is so short." *Hall*, Chron., p. 226.

I beseech you to remember me when you talk with your good God, that he may give me the strength of his Spirit, that I manfully yielding my life for his truth may do you some *honesty*, who have put me into his service.
J. Careless, in Bradford's Works (Parker Soc., 1853), II. 406.

5. In *bot.*, a name of several plants, especially of a small cruciferous plant, *Lunaria annua* (*L. biennis*): so called from the transparency of its dissepiments. The perennial honesty is *L. rediviva;* the maiden's-honesty is *Clematis Vitalba.*—**Syn. 1.** *Honesty, Honor, Integrity, Probity. Rectitude, Uprightness;* equity, trustworthiness, trustiness, fidelity, fairness, candor, veracity, plain-dealing; frankness. The first six words apply primarily to the spirit of the person, and by extension to conduct, etc. They may be negative or positive, expressing the spirit or the act of refraining or of doing. *Honesty* belongs to the absolute principle of right; *honor*, on the other hand, belongs to accepted standards of what is due to others or to one's self. Conformity to an exalted standard of *honor* is more creditable and illustrious than simple *honesty*. In earlier usage *honest* and *honesty* retained much of their Latin significance of *honorable* and *honorableness* in the objective sense. (See Rom. xii. 17.) *Integrity* means soundness, and is used with especial reference to trusts (as, a man of strict business *integrity*), but it may consider a person as inspected and found whole by others or by himself. *Probity* is tested *honesty*, tried and proved *integrity*. *Rectitude* and *uprightness* draw their meanings from the idea of standing up straight, and hence matching the standard of right, but *uprightness* is more manifestly connected with this idea, and hence, as well as on account of its native origin, is much the more vigorous of the two. See *justice*.

"*Honesty* is the best policy," but he who acts on that principle is not an honest man. *Whately.*

The sense of *honour* is of so fine and delicate a nature that it is only to be met with in minds which are naturally noble, or in such as have been cultivated by great examples, or a refined education.
Addison, Guardian, No. 161.

He [Savage] had not sufficient resolution to sacrifice the pleasure of affluence to that of *integrity*. *Johnson.*

Of commercial fame, but more
Famed for thy *probity* from shore to shore.
Cowper, In Memory of John Thornton.

The command of the political ruler is at first obeyed, not because of its perceived *rectitude*, but simply because it is his command, which there will be a penalty for disobeying. *H. Spencer*, Data of Ethics, § 44.

I know also, my God, that thou . . . hast pleasure in *uprightness*. 1 Chron. xxix. 17.

honewort (hōn′wėrt), *n.* [< *hone*[4] + *wort*[1].] A name applied to several umbelliferous plants, as *Sison Amomum*, the stone-parsley, *Trinia glauca*, and *Deringa Canadensis:* so named because formerly used to cure the swelling ★called a hone.

honey (hun′i), *n.* and *a.* [Early mod. E. also *hony, honie;* < ME. *hony, huny, huni, huniz,* < AS. *hunig* = OS. *honeg, hanig* = OFries. *hunig* = MD. *honig, honing*, D. *honig* = MLG. *honnich*, LG. *honnig* = OHG. *honag, honang*, MHG. *honec, hünic*, G. *honig* = Icel. *hunang* = Sw. *honung, honing* = Dan. *honning*, honey; root unknown. The Goth. word is different, *milith* = Gr. *μέλι* (*μελιτ-*) = L. *mel*, etc.: see *mildew, mell*[2].] **I.** *n.* **1.** A sweet viscid fluid collected from the nectaries of flowers and elaborated for food by several kinds of insects, especially by the honey-bee, *Apis mellifica*. It is deposited by the honey-bee in the cells of the honeycomb. Honey, when pure, is of a whitish color tinged with yellow, of a spicy sweetness and an agreeable smell; it is soluble in water, and becomes vinous by fermentation. It is essentially a solution of dextrose and levulose with volatile oils and occasionally cane-sugar. Bees often fill their cells with other substances than the nectar of flowers, as molasses, honeydew, or the juices of fruits, but the product is not true honey.

Thy mete shall be mylk, *honye*, & wyne;
Now, dere soule, latt us go dyne.
Political Poems, etc. (ed. Furnivall), p. 157.

The yellow-banded bees . . .
Fed thee, a child, lying alone,
With whitest *honey* in fairy gardens cull'd.
Tennyson, Eleänore.

2. Figuratively, sweetness or charm.

I, of ladies most deject and wretched,
That suck'd the *honey* of his music vows.
Shak., Hamlet, iii. 1.

Come, Henley's oratory, Osborne's wit!
The *honey* dropping from Favonio's tongue.
Pope, Epil. to Satires, i. 67.

3. Sweet one; darling: a trivial word of endearment.

Mi *hony*, mi hert, al hol thou me makest
With thi kinde cumfort of alle mi kares kold.
William of Palerne (E. E. T. S.), l. 1656.

O she was fair, O dear! she was bonnie,
A ship's captain courted her to be his *honey*.
Bonnie Annie (Child's Ballads, III. 47).

"Come to ole Candace! . . . *Honey*, darlin', ye a'nt right—dar's a dreffful mistake somewhar'."
H. B. Stowe, Minister's Wooing, xxiii.

Clarified honey, honey melted in a water-bath and freed from scum.—**Honey of borax**, clarified honey and borax, applied to the mouth as a remedy in aphthous affections.—**Unripe honey**, honey from which the water has not been sufficiently evaporated. *Phin*, Dict. Apiculture, p. 73.—**Virgin honey**, honey that flows spontaneously from the comb when the cells are uncapped.—**Wild honey**, honey made by wild bees, or bees not kept by man.

John was clothed with camel's hair; . . . and he did eat locusts and *wild honey*. Mark i. 6.

II. *a.* Having the nature of honey; sweet; luscious.

Prin. He speaks not like a man of God's making.
Arm. That's all one, my fair, sweet, *honey* monarch.
Shak., L. L. L., v. 2.

honey (hun′i), *v.*; pret. and pp. *honeyed* (also *honied*), ppr. *honeying*. [< *honey, n.*] **I.** *trans.* **1.** To cover with or as with honey; sweeten; make delicious: as, "*honeyed* lines of rhyme," *Byron.*—**2.** To talk sweetly to; coax; flatter.

Can'st thou not *honey* me with fluent speech,
And even adore my topless vilany?
Marston, Antonio and Mellida, iv.

II. *intrans.* To become sweet; be or become complimentary or tender; use endearments; talk fondly. [Rare.]

Honeying and making love. *Shak.*, Hamlet, iii. 4.

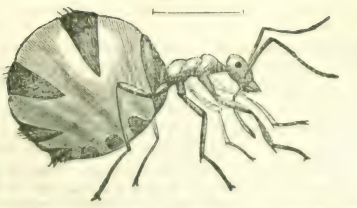
honey-ant (hun′i-ant), *n.* An ant of the genus *Myrmecocystus*, as *M. mexicanus* or *M. melliger*, of southwestern North America. The latter is found at an elevation of from 6,000 to 7,500 feet. In one form of the workers the abdomen is found in summer distended with honey to the size of a pea or a small grape, and appears pellucid. Later in the season, when food is scarce, these animated stores of honey are devoured by the other ants, and they are also dug up and eaten by the inhabitants of the country. See *honey-bearer*.

The *honey-ants* are a nocturnal species.
R. A. Proctor, Nature Studies, p. 24.

honey-badger (hun′i-baj″ėr), *n.* The ratel, *Mellivora ratellus:* so called from its fondness for honey.

honey-bag (hun′i-bag), *n.* An enlargement of the alimentary canal of the bee in which it carries its load of honey. This enlargement is in the esophagus or gullet, and corresponds to the sucking-stomach or crop of other *Hymenoptera* and of *Lepidoptera* and *Diptera*. In it the bee stores the honey gathered from flowers, which it disgorges into the cells of the honeycomb. Also called *honey-stomach*.

And, good monsieur, have a care the *honey-bag* break not; I would be loth to have you over-flown with a *honey-bag*, signior. *Shak.*, M. N. D., iv. 1.



honey-balm (hun′i-bäm), *n.* A European labiate plant, *Melittis melissophyllum*.

honey-basket (hun′i-bas″ket), *n.* In *entom.*, the corbiculum or structure on the legs of bees in which pollen mingled with honey is conveyed to the hive. See cut under *corbiculum*.

honey-bear (hun′i-bãr), *n.* **1.** An East Indian bear, *Mellursus* or *Prochilus labiatus;* the sloth-bear or aswail. See cut under *aswail*.—**2.** The kinkajou, *Cercoleptes caudivolvulus*. See cut under *kinkajou*.

honey-bearer (hun′i-bãr″ėr), *n.* One of the honey-ants whose office it is to receive and carry in its abdomen the honey which has been gathered by the workers.

The workers take it [the honey] home with them and give it to the *honey-bearers*, who swallow . . . it, . . . keep it in their crops ready for use, exactly as bees keep it in cells. . . . The *honey-bearers*, in short, have been converted into living honey-jars. When the workers are hungry they caress a *honey-bearer* and . . . sip it [the honey] from her throat.
R. A. Proctor, Nature Studies, p. 24.

Honey-bearer (*Myrmecocystus melliger*), with distended abdomen. (Line shows natural size.)

honey-bee (hun′i-bē), *n.* A bee that collects and stores honey; specifically, the hive-bee, *Apis mellifica*. See cuts under *bee*.

So work the *honey-bees;*
Creatures that, by a rule in nature, teach
The art of order to a peopled kingdom.
Shak., Hen. V., i. 2.

honeyberry (hun′i-ber″i), *n.*; pl. *honeyberries* (-iz). **1.** The berry of *Celtis australis*.—**2.** The berry of *Melicoccus bijugatus*.

honey-bird (hun′i-bėrd), *n.* **1.** A bird which feeds on the sweets of flowers; one of the *Nectariniidæ* or *Meliphagidæ;* a honey-sucker.—**2.** Same as *honey-guide*.—**3.** A bee. *Davies.* [Rare.]

The world have but one God, Heav'n but one Sun,
Quails but one Chief, the *Honey-birds* but One,
One Master-Bee.
Sylvester, tr. of Du Bartas's Weeks, ii., The Captaines.

honey-blob (hun′i-blob), *n.* The gooseberry. [Scotch.]

He saw out of the coach-window a woman selling the sweet yellow gooseberries, . . . and he cried, "Gie me a ha'porth of *honeyblobs*."
E. B. Ramsay, Scottish Life and Character, p. 254.

honey-bloom (hun′i-blöm), *n.* The spreading dog's-bane or Indian hemp, *Apocynum androsæmifolium*, a common American plant.

honey-bread (hun′i-bred), *n.* A small leguminous tree, *Ceratonia Siliqua*, a native of the Mediterranean region. Also called *St. John's bread*. See cut under *Ceratonia*.

honey-brown (hun′i-broun), *n.* In *entom.*, a pale-yellowish and generally somewhat translucent brown.

honey-buzzard (hun′i-buz″ärd), *n.* A bird of prey of the genus *Pernis*, subfamily *Buteoninæ*, and family *Falconidæ;* a pern. The common European species, *P. apivorus*, is also found in Africa. It does not eat honey, but breaks into the nests of bees and wasps to get at their larvæ.

honey-cell (hun′i-sel), *n.* A cell in a honeycomb.

His [Emerson's] laconic phrases are the *honey-cells* of ★thought. *E. C. Stedman*, Poets of America, p. 172.

honeycomb (hun′i-kōm), *n.* [< ME. *honycomb, hunycomb, honycoom, huny-camb,* < AS. *hunig-camb,* < *hunig*, honey, + *camb*, comb. The name is not found outside of E.; other words for 'honeycomb' are D. *honigzeem* = Icel. *hunangsseimr*, lit. 'honey-string'; Sw. *honungskaka* = Dan. *honningkage*, lit. 'honey-cake'; G. *honigscheibe*, lit. 'honey-shive,' or *honig-wabe*, lit. 'honey-cake,' *bienen-wabe*, lit. 'bee-cake,' or simply *wabe*, lit. 'cake' or 'wafer,' or 'waffle': see *wafer, waffle*. The L. term was *favus* (see *favus*); the Gr., *μελικηρίς* or *μελικήριον*.] **1.** A structure of wax of a firm texture, consisting of hexagonal cells with concave bottoms ranged side by side, formed by bees (or artificially) for the reception of honey and of their eggs.

And they gave him a piece of a broiled fish, and of an *honeycomb*. Luke xxiv. 42.

I have eaten my *honeycomb* with my honey. Cant. v. 1.

And well his words became him: was he not
A full-cell'd *honeycomb* of eloquence
Stored from all flowers? *Tennyson*, Edwin Morris.

2†. Sweet one; darling: a trivial term of endearment. Compare *honey*, 3.

What do ye, *hony comb*, sweete Alisoun?
Chaucer, Miller's Tale, l. 512.

3. Any substance, as a casting of iron, etc., having cells like those of a honeycomb.

A scratch or spot of *honey-comb* in the grooves renders the rifle completely useless for match-shooting.
W. W. Greener, The Gun, p. 146.

Specifically—**4.** In *mammal.*, the reticulum or second stomach of a ruminant. See cut under *ruminant*.—**Honeycomb bottom**, same as *hawse-pipe bottom* (which see, under *hawse-pipe*).—**Honeycomb decoration**, in *ceram.*, a name given to the Mayflower decoration, from the resemblance of the crowded blossoms to a honeycomb.—**Honeycomb moth**, a pyralid moth of the genus *Galleria*, which infests beehives, depositing its eggs in the comb, where the larvæ are developed and undergo their transformations. *G. ceranea* or *mellonella*,

about an inch long, and *G. alvearia*, about half an inch, are perhaps the worst enemies of the bee. See cut under *bee-moth*.—**Honeycomb sponge**, the grass-sponge.—**Honeycomb stitch**, a stitch used in producing gathers, as in the stiff material used for smock-frocks and the like, the result being a pattern of lozenges covering the whole surface, held at their intersections by loops of thread, usually of a different color from that of the material.—**Honeycomb tripe**, the part of tripe which is honeycombed or divided into numerous small cells. It is the second stomach of a ruminant, or second part of the cardiac division of the whole stomach, next to the paunch proper or rumen, and is technically called the *reticulum*. See cut under *ruminant*.—**Honeycomb work**, a name given to ancient representations of armor of a flexible character, as the hauberk or broigne. They show a series of open hexagons, separated by a slender bar or ridge, or sometimes openings more nearly approaching the form of circles. They may be assumed to represent indifferently chain-mail or a garment of fence made by sewing rings or small plates of metal on leather or linen.

honeycomb (hun′i-kōm), *v. t.* [< *honeycomb*, *n.*] To fill with cells or holes, as wood or earth, by perforation or excavation, in the manner of a honeycomb.

The rock itself over which the fort was raised is *honeycombed* with excavated passages for infantry and cavalry.
J. A. Symonds, Italy and Greece, p. 180.

There is the insignificant-looking worm, the "jengen," which insidiously *honeycombs* the poles.
Elect. Rev. (Amer.), II. 7.

honeycombed (hun′i-kōmd), *a.* 1. Perforated or excavated like a honeycomb; specifically, having little cells, as cast metal when not solid.

This geyser presents a shallow basin, with rather ill-defined margin, formed of thin plates of *honeycombed* geyserite.
Science, IV. 22.

2. Decorated with a honeycomb pattern—either the Mayflower pattern or one of hexagons.

honeycombing (hun′i-kō-ming), *n.* [Verbal n. of *honeycomb*, *v.*] An ornamental pattern produced in thin material by running stitches diagonally across the fabric, and drawing up these threads so that the lozenge-shaped spaces between them shall be puffed and in relief; ★smocking.

honey-creeper (hun′i-krē″pėr), *n.* Any bird of the American family *Cœrebidæ* or *Dacnididæ*; a guitguit. The species are quite numerous; one, *Certhiola bahamensis*, occurs in the United States. See cut under *Cœrebinæ*.

honey-crock (hun′i-krok), *n.* A crock or pot of honey.

Like foolish flies about an *hony-crocke*.
Spenser, F. Q., V. ii. 33.

honeydew (hun′i-dū), *n.* [= D. *honigdaauw* = G. *honigthau* = Dan. *honningdug* (cf. Sw. *honungsdagg*); as *honey* + *dew*. Cf. *honey-rore* and *mildew*.] 1. A saccharine substance found on the leaves of trees and other plants in small drops like dew. There are two kinds, one secreted from the plants, and the other by plant-lice, bark-lice, and leaf hoppers. Bees and ants are said to be fond of honeydew. The name is properly applied to the sugary secretion from the leaves of plants, occurring most frequently in hot weather. It usually appears as small glistening drops, but if particularly abundant may drip from the leaves in considerable quantity, when it has been called *manna*. The manna-ash, *Fraxinus Ornus*, exhibits this phenomenon, as does *Carduus arctioides*.

For he on *honey-dew* hath fed,
And drunk the milk of Paradise.
Coleridge, Kubla Khan.

Although further and thorough investigation is necessary to establish the fact, this will be the final solution—that the *honey-dew* is largely the product of the Pulvinaria, the sap being by it extracted from the tree, and elaborated by the insect organism into this sweet substance, as is a similar or perhaps identical substance by some of the Aphides, and honey by the honey-bee. *Science*, III. 737.

2. A kind of chewing-tobacco prepared with molasses. [Trade-name.]

honeydewed (hun′i-dūd), *a.* [< *honeydew* + *-ed*².] Covered with honeydew.

Three accounts have been published in Eastern Prussia of white and white-spotted horses being greatly injured by eating mildewed and *honeydewed* vetches.
Darwin, Var. of Animals and Plants, p. 331.

honey-eater (hun′i-ē″tėr), *n.* One who or that which eats honey. Specifically—(*a*) Any bird of the family *Meliphagidæ*; a honey-sucker. (*b*) A honey-bear.

honeyed (hun′id), *p. a.* [Also *honied*; < *honey* + *-ed*².] 1. Covered with, abounding in, or as sweet as honey.

Fair was the day, the *honeyed* beanfield's scent
The west wind bore unto him.
William Morris, Earthly Paradise, I. 379.

Hence—2. Sweet; dulcet; soothing; mollifying: as, *honeyed* words.

When he speaks,
The air, a charter'd libertine, is still,
And the mute wonder lurketh in men's ears,
To steal his sweet and *honey'd* sentences.
Shak., Hen. V., i. 1.

The *honeyed* breath of praise. *O. W. Holmes*, Agnes.

honeyedness (hun′id-nes), *n.* Sweetness; allurement. ★

honey-flower (hun′i-flou″ėr), *n.* A plant of the genus *Melianthus*, ornamental shrubs from the Cape of Good Hope, the flowers of which yield much honey.

honey-fly†, *n.* A honey-bee.

Up, up, ye princes! prince and people, rise,
And run to schoole among the *hony-flies*.
Du Bartas (trans.).

honeyfugle (hun′i-fū″gl), *v. t.*; pret. and pp. *honeyfugled*, ppr. *honeyfugling*. [< *honey* + **fugle*, to cheat, deceive, a word in provincial use.] To cajole; wheedle. [Slang, southern and western U. S.]

honey-garlic (hun′i-gär″lik), *n.* A plant of the section *Nectaroscordum*, of the genus *Allium*, family *Liliaceæ*. *Allium Siculum* (*A. Dioscoridis* of some authors) is a native of Sicily. It has a slender flower-scape 3 or 4 feet high, with a cluster of long, pendulous ★green or purplish flowers having honey-pores.

honey-guide (hun′i-gīd), *n.* A non-passerine African bird of the family *Indicatoridæ*, supposed to guide the honey-hunters to their spoil; an indicator. Also called *honey-bird*.

honeyless (hun′i-les), *a.* [< *honey* + *-less*.] Destitute of honey.

But for your words, they rob the Hybla bees,
And leave them *honeyless*.
Shak., J. C., v. 1.

honey-locust (hun′i-lō″kust), *n.* An ornamental North American tree, *Gleditsia triacanthos*. The water honey-locust is *G. aquatica*, also an American tree, growing from Illinois southward. The name is sometimes given to the mesquite, *Prosopis glandulosa*, a native of the southwestern United States.

At sunset he stood under the *honey-locust* tree on the levee, where he was wont to find his father waiting for him.
G. W. Cable, The Century, XXXV. 550.

honey-lotus (hun′i-lō″tus), *n.* A name sometimes given to *Melilotus alba*, the white melilot or sweet clover, a widely distributed European ★plant thoroughly naturalized in America.

honey-mesquite (hun′i-mes-kē′te), *n.* The algaroba or mesquite, *Prosopis glandulosa*, a small tree of the southwestern United States. Also called *honey-pod* and sometimes *honey-locust*.

honeymonth† (hun′i-munth), *n.* Same as *honeymoon*. [Rare.]

Sometimes the parties fly asunder even in the midst of courtship, and sometimes grow cool in the very *honeymonth*.
Tatler, No. 192.

honeymoon (hun′i-mön), *n.* [< *honey* + *moon*, 'month.' Cf. *honeymonth*.] 1. The first month after marriage; the interval, of whatever length, commonly spent by a newly married couple in traveling, visiting, or other recreation, before settling down to their ordinary occupations.

I was more than once nearly choked with gall during the *honeymoon*, and had lost all comfort in life before my friends had done wishing me joy.
Sheridan, School for Scandal, i. 2.

Hence—2†. A time of prosperity or enjoyment; an occasion of advantage.

I was there entertained as well by the great friends my father made, as by mine owne forwardnesse, where, it being now but *honey-moone*, I endeavoured to court it.
Lyly, Euphues.

honeymoon (hun′i-mön), *v. i.* [< *honeymoon*, *n.*] To keep one's honeymoon; take a wedding-trip.

So do not I, dear, till I have found some decent sort of body to *honeymoon* along with me.
Trollope, Dr. Thorne, iv.

As soon as I can get his discharge, and he has done *honeymooning*, we shall start.
T. Hughes, Tom Brown at Oxford, xlvii.

honey-moth (hun′i-môth), *n.* A European pyralid moth, *Achræa grisella*, which lives in the hives of the honey-bee.

honey-mouthed (hun′i-moutht), *a.* Soft or sweet in speech.

If I prove *honey-mouth'd*, let my tongue blister.
Shak., W. T., ii. 2.

honey-pod (hun′i-pod), *n.* Same as *honey-mesquit*.

honey-pot (hun′i-pot), *n.* A receptacle of various kinds, made of wax or other substance, and often of considerable size, in which many species of wild bees store their honey.

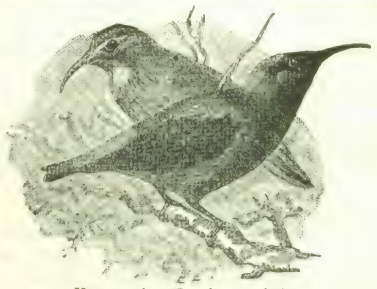
honey-pots (hun′i-pots), *n. pl.* A boys' game in which the players roll themselves up and are then pretended to be carried to market by others as honey, the amusement consisting in the difficulty of continuing in the required position. *Halliwell*.

honey-ratel (hun′i-rā″tel), *n.* Same as *honey-badger*. *J. G. Wood*.

honey-rore†, *n.* Honeydew. *Nares*.

He on a sudden felt loves *honey-rore*
Soak in, and wonted flames to heat his heart,
And to o'respread his bones and every part.
Vicars, tr. of Virgil (1632).

honey-stalk (hun′i-stâk), *n.* A sweet species of clover, upon which cattle are apt to overfeed.



With words more sweet, and yet more dangerous,
Than baits to fish, or *honey-stalks* to sheep.
Shak., Tit. And., iv. 4.

honey-stomach (hun′i-stum″uk), *n.* Same as *honey-bag*.

honeystone (hun′i-stōn), *n.* Same as *mellite*.

honey-strainer (hun′i-strā″nėr), *n.* A machine in which honeycomb, after a thin slice has been cut off to open the cells, is placed, and revolved rapidly, to extract the honey by centrifugal force. The empty comb is replaced in the hive to be refilled.

honey-sucker (hun′i-suk″ėr), *n.* A bird that sucks the sweets of flowers; a honey-eater or honey-bird; a nectar-bird: specifically applied

Honey-sucker (*Cæreba cærulea*).

to the *Meliphagidæ*, and less technically to sundry other small, chiefly slender-billed, birds, as ★the *Nectariniidæ*, *Cœrebidæ*, etc.

honeysuckle (hun′i-suk″l), *n.* [< ME. *honysocle*, *hunisuccle* (the alleged AS. **hunigsucle* is due to a mistake), a dim. form of the more common ME. *honysouke*, < AS. *hunisuce*, *hunisuge*, *hunigsuge*, < *hunig*, honey, + *sūcan*, *sūgan*, suck: see *honey* and *suck*. The name was applied to various plants, the ME. forms being variously glossed *ligustrum* (privet), *locusta* (for *ligustrum*?), *cerifolium* (chervil), *serpillum* (wild thyme), *apiago* (which elsewhere glosses AS. *beówyrt*, 'bee-wort,' and MHG. *binsuge*, *binesaug*, as if 'bee-suck'); the AS. forms are always glossed *ligustrum* (privet). The name means 'a plant from which honey is sucked,' namely by bees, as the name *apiago* (< L. *apis*, a bee) and the MHG. *binsuge*, above mentioned, indicate. Other names are E. *woodbine*, ML. *caprifolium* (glossing ME. *wodebynde*, woodbine), D. *kamperfoelie*, F. *chèvrefeuille*, etc. (see *caprifole*, *caprifolium*), G. *geissblatt*, lit. 'goat-leaf,' etc.] 1. A name of upright or climbing shrubs of the genus *Lonicera*, of the family *Caprifoliaceæ*, natives of the temperate parts of both hemispheres. They have entire opposite leaves, and axillary, often fragrant, white, red, or yellow flowers, which are succeeded by sweetish red or purple berries. The common honeysuckle, *L. Periclymenum*, a native of central and western Europe, cultivated in the United States, is also known by the name of *woodbine*, and is probably the 'twisted eglantine' of Milton. *L. Caprifolium*, which is frequent in gardens, and is characterized by the upper pairs of leaves being united into a cup, and *L. Xylosteum*, the fly-honeysuckle, are also found in England, the latter only being probably native. *L. sempervirens* (trumpet or coral honeysuckle), a native of North America, is cultivated on account of the beauty of its large flowers, which are red on the outside and yellowish within. *L. ciliata* is the American fly-honeysuckle; it has a honey-yellow corolla slightly tinged with purple. *L. flexuosa* is the Chinese honeysuckle, and *L. Tatarica* the Tatarian honeysuckle. The berries of *L. cærulea*, which is one of the most widely distributed species, are a favorite food of the Kamtchadales.

Flowering Branch and Fruit of Trumpet or Coral Honeysuckle (*Lonicera sempervirens*). *a*, flower; *b*, fruit.

So doth the woodbine the sweet *honeysuckle*
Gently entwist. *Shak.*, M. N. D., iv. 1.

I left this place, and saw a brother of the angle sit under that *honeysuckle* hedge, one that will prove worth your acquaintance. *I. Walton*, Complete Angler, p. 111.

I sat me down to watch upon a bank
With ivy canopied, and interwove
With flaunting *honey-suckle*.
Milton, Comus, l. 545.

2. A plant of some other genus. The name *honeysuckle* is very generally applied in northern New England to the genus *Aquilegia*, of the family *Ranunculaceæ*, and particularly to the native wild columbine, *A. Canadensis*. The African fly-honeysuckle is *Halleria lucida*, of the family *Scrophulariaceæ*; the Australian honeysuckles belong to the genus *Sirmuellera*, of the family *Proteaceæ*, as *S. serrata* and *S. integrifolia*. The bush-honeysuckles, of the genus *Diervilla* (a near relative of *Lonicera*, the true honeysuckle), are low shrubs, natives of North America, and extensively cultivated for their profuse, mostly rose-colored flowers. The dwarf honeysuckle is *Cornus Suecica*, of the family *Cornaceæ*, a native of north temperate or arctic countries; the French honeysuckle is *Hedysarum coronarium*, of the family *Fabaceæ*; the ground-honeysuckle is *Lotus corniculatus*, of the family *Fabaceæ*; the New Zealand honeysuckle is *Rymandra excelsa*, of the family *Proteaceæ*; the Tasmanian honeysuckle is *Sirmuellera microstachya*; the West Indian honeysuckle is *Tecomaria Capensis*; the purple honeysuckle or azalea is *Azalea nudiflora*; the white honeysuckle is *Azalea viscosa*, of the family *Ericaceæ*. Various species of *Meibomia* are also so called. See *Banksia*, *Diervilla*, *Lonicera*, *Cornus*, *Hedysarum*, *Desmodium*, *Halleria*, *Rhododendron*.

According to Culpepper, the white *honeysuckle* and red *honeysuckle* were names of the white and red sorts of meadow trefoil. In the west of England the red clover is still called *honeysuckle*. *Halliwell.*

3. The flower of any of the above plants.

Woodbine that beareth the *honeysuckle*.
Baret, Alvearie, 1580.

honeysuckle-apple (hun′i-suk-l-ap″l), *n.* A fungus, *Exobasidium Azaleæ*, occurring on the branches of *Azalea nudiflora*. It is eaten by children. Also called *swamp-apple* and *May-apple*. [New Eng.]

honeysuckle-clover (hun′i-suk-l-klō″vėr), *n.* The common white clover, *Trifolium repens*.

honeysuckled (hun′i-suk″ld), *a.* [< *honeysuckle* + *-ed*[2].] Covered with honeysuckles.

honeysuckle-tree (hun′i-suk-l-trē), *n.* A plant of the genus *Sirmuellera*, of the family *Proteaceæ*, of several species, particularly *S. microstachya* (*Banksia marginata*), *S. collima*, *S. Robur*, and *S. ericifolia*. They are large shrubs or small trees, natives of Australia and Tasmania, the flowers of which yield an abundance of honey.

honey-sugar (hun′i-shûg″ăr), *n.* The solid constituent of honey after granulation. It is said to be chiefly glucose.

honey-sweet (hun′i-swēt), *n.* The meadow-sweet, *Filipendula Ulmaria*.

honey-sweet (hun′i-swēt), *a.* [< ME. *honyswete* = D. *honigsoet*, etc.] Sweet as honey.

For which this Januarie of whom I tolde,
Considered hath inwith his dayes olde,
The lusty lyf, the vertuous quyete,
That is in marriage *hony-swete*.
Chaucer, Merchant's Tale, l. 152.

Prithee, *honey-sweet* husband, let me bring thee to Staines. *Shak.*, Hen. V., ii. 3.

honey-tongued (hun′i-tungd), *a.* Speaking sweetly, softly, or winningly.

Consciences, that will not die in debt,
Pay him the due of *honey-tongued* Boyet.
Shak., L. L. L., v. 2.

honey-tube (hun′i-tūb), *n.* In *entom.*, one of the siphonets or small tubular projections on the upper surface of the abdomen of an aphis: so called because a sweet fluid called *honey-dew* is extruded from them.

honeyware (hun′i-wār), *n.* Same as *badder-locks*.

honeywort (hun′i-wėrt), *n.* **1.** The crosswort, *Galium Cruciata*.—**2.** A plant of the genus *Cerinthe*, and of the family *Boraginaceæ*. *C. major* is a small European annual. The rough honeywort is *C. aspera*. It grows about a foot high, and has oval, stem-clasping, bluish-green leaves, with white rough dots, and racemes of purplish flowers, which secrete much honey.

hong[1]†, *v.* An obsolete form of *hang*.

hong[2] (hong), *n.* [Chin. *hang*, in Canton *hong*, a row or series.] **1.** A Chinese warehouse, consisting of a succession of rooms or storehouses.—**2.** Formerly, as used by the Chinese, one of the foreign factories maintained at Canton in the early days of trade with China; now, any foreign mercantile establishment in China, Japan, etc.—**Hong merchants**, a body of from eight to twelve Chinese merchants at Canton, who once had the sole privilege of trading with Europeans, and were responsible for the conduct of the foreigners with whom they dealt and for their payment of customs-duties. By the treaty of 1842 their peculiar functions ceased.

honiet, *n.* An obsolete spelling of *honey*.

honied, *p. a.* See *honeyed*.

honiset, honisht, *v. t.* [ME. *honisen, hunyschen*, < OF. *hons-*, stem of certain parts of *honir, hounir* = Pr. *aunir* = It. *onire*, < OHG. *hōnjan* (= Goth. *haunjan* = AS. *hȳnan*), disgrace, degrade, shame.] To destroy; ruin.

He [God] fyndeth al fayre a freke with-inne
That hert honest and hol, that hathel he honourez, . . .
And harde *honysez* thise other and of his erde flemez [banishes from his abode].
Alliterative Poems (ed. Morris), ii. 596.

honi soit qui mal y pense. See *Order of the Garter*, under *garter*.

Honiton lace. See *lace*.

honk (hongk), *n.* [Imitative.] The cry of the wild goose.

I heard the tread of a flock of geese, or else ducks, on the dry leaves in the woods by a pondhole behind my dwelling, where they had come up to feed, and the faint *honk*, or quack, of their leader as they hurried off.
Thoreau, Walden, p. 267.

honk (hongk), *v. i.* [< *honk*, *n.*] To emit the cry of the wild goose.

As the air grows colder, the long wedges of geese flying south, with their commodore in advance, and *honking* as they fly, are seen high up in the heavens.
O. W. Holmes, Old Vol. of Life, p. 169.

The sound of the heavy wing strokes [of geese] and the *honking* seemed directly overhead.
T. Roosevelt, Hunting Trips, p. 61.

honker (hong′kėr), *n.* That which honks, as a goose; specifically, the common wild goose of America, the Canada goose, *Bernicla canadensis*. See cut under *Bernicla*. [U. S.]

My first *Honker*. Well do I remember the morning on which he measured his length on the grass and flopped his life out in vain attempts to rise.
Forest and Stream, May 22, 1884.

Pretty soon a big flock [of wild geese], led by an old *honker*, comes sailin' along, sees our decoys, an' lights.
New York Evening Post, Aug. 28, 1885.

★ **honor, honour** (on′ọr), *n.* [The second spelling is still prevalent in England; early mod. E. *honor, honour*, < ME. *honour, honor, honur*, pronounced and sometimes written without the aspirate, *onour, onur* (earliest form in *-ur*), < AF. *honur*, later *honor, honour*, OF. *honur, hunur, honor, hounor, hounour, onor, ounor, ounour*, even *henor, enor, enur, annor* (the accent being on the last syllable), later *honeur, honneur*, F. *honneur* = Pr. *honor, onor* = Sp. Pg. *honor* = It. *onore*, < L. *honor, honos* (*honōr-*) (the form *honos* being the older, and that which is used almost exclusively in Cicero), honor, repute, etc.; root unknown. Hence ult. *honest*, etc.] **1.** Respect blended with some degree of reverence; esteem due to worth or exalted merit of any kind; deferential approbation or admiration.

For men suld hald that haly tre
In *honore* als it aw to be.
Holy Rood (E. E. T. S.), p. 123.

Thou art clothed with *honour* and majesty. Ps. civ. 1.

A prophet is not without *honour*, save in his own country. Mat. xiii. 57.

But what is this *honour*, I mean *honour* indeed, and that which ought to be so dear unto us, other than a kind of history, or fame following actions of virtue?
Raleigh, Hist. World, V. iii. § 2.

Fortune placed him [James I.] in a situation in which his weaknesses covered him with disgrace, and in which his accomplishments brought him no *honour*.
Macaulay, Lord Bacon.

2. Personal title to high respect or esteem; elevation of character; a controlling sense of what is right, true, and due; probity of feeling and conduct: often applied specifically to loyalty and high courage in men and chastity in women, as virtues of the highest consideration.

To extort and take away the right of the poor is against the *honor* of the king. *Latimer*, 1st Sermon bef. Edw. VI., 1549.

Heaven so comfort me
As I am free from foul pollution
With any man! my *honour* ta'en away,
I am no woman.
Beau. and Fl., Scornful Lady, v. 2.

From the field of Pavia, where France suffered one of the greatest reverses in her annals, Francis writes to his mother: "All is lost except *honor*." *Sumner*, Orations, I. 60.

A man of a nice sense of *honour* is one who is punctilious in doing things which he could not be punished for neglecting, and whose neglect would arouse but little disapprobation. *C. Mercier*, Mind, X. 13.

3. A state, condition, circumstance, or character which confers or attracts high consideration and respect; hence, a person of such condition or character; a source or ground of esteem, respect, or consideration, as elevated rank, dignity, conduct, etc.: as, a post of *honor;* I have not the *honor* of his acquaintance; he is an *honor* to his country.

He preide god yeve hem good a-uenture and grace to do so that it myght be savacion to theire soules, and *honour* to theire soules, and *honour* to theire bodyes.
Merlin (E. E. T. S.), iii. 580.

Erasmus, the *honour* of learning of all oure time, saide wiselie that experience is the common scholehouse of foles, and ill men. *Ascham*, The Scholemaster, p. 62.

But a trouble weigh'd upon her,
And perplex'd her, night and morn,
With the burthen of an *honour*
Unto which she was not born.
Tennyson, Lord of Burleigh.

Hence—**4.** That which attracts respect or admiration; distinction; adornment.

Therefore he bids thee stand, thou proud man,
Whilst, with the whisking of my sword about,
I take thy *honours* off.
Fletcher (*and another*), Noble Gentleman, v. 1.

The grateful tree was pleas'd with what he said,
And shook the shady *honours* of her head.
Dryden, tr. of Ovid's Metamorph., i. 769.

He spoke, and speaking in proud triumph spread
The long-contended *honours* of her head.
Pope, R. of the L., iv. 140.

5. A manifestation or token of esteem; a mark of respect, distinction, or high consideration: as, to do one *honor;* the *honor* of knighthood; the *honors* of war; military *honors*.

That it myght you please me do such *honoure*
That ye the Armes wold fouchesafe to bere
Off Luxemborugh.
Rom. of Partenay (E. E. T. S.), l. 2041.

Others . . . came, and were healed: who also honoured us with many *honours*. Acts xxviii. 9, 10.

She may help you to many fair preferments, . . .
And lay these *honours* on your high desert.
Shak., Rich. III., i. 3.

We will do him
No customary *honour:* since the knight
Came not to us, of us to claim the prize,
Ourselves will send it after.
Tennyson, Lancelot and Elaine.

6. With a possessive personal pronoun, a deferential title of address or denotation formerly used for men of superior condition generally, but now (except as a mark of servility) restricted in England to the holders of certain offices, particularly judges, including those of the county courts, and in the United States to mayors, judges, and magistrates: as, *your honor; his honor* the judge.

Your honours shall perceive how I will work
To bring this matter to the wished end.
Shak., 1 Hen. VI., iii. 3.

My master (said I) . . . is come to Bath to recruit. . . . I told Thomas that *your Honour* had already inlisted five disbanded chairmen. *Sheridan*, The Rivals, ii. 1.

"Judge—*your honor*—" said Mr. Bender, "I am entered here, so to speak, as a defendant."
W. A. Butler, Mrs. Limber's Raffle, ix.

7. In *Eng. law*, a seigniory of several manors held under one baron or lord paramount. Although it was not a distinct organization, but an aggregate of several manors, one court-baron was often held for the whole, but regarded as the court of each several manor. The name seems also to have been sometimes applied to a single great manor, escheating to the king, and farmed out for him, or granted by him anew.

A Man possessed of five Earldoms, Lancaster, Leicester, Ferrers, Lincoln, and Salisbury, besides the Liberties of Pickering, and the *Honour* of Cockermore.
Baker, Chronicles, p. 106.

8. In *whist* and *bridge*, one of the highest trump-cards. In whist, the honors are the A K Q J; in bridge, the 10 is added. When there is no trump in bridge, the aces of each suit reckon as honors.

Honours—i. e. ace, king, queen, and knave of trumps—are thus reckoned: if a player and his partner, either separately or conjointly, hold—(i) the four *honours*, they score four points; (ii) any three *honours*, they score two points; (iii) only two *honours*, they do not score.
Club Code, quoted in Encyc. Brit., XXIV. 546.

9. *pl.* Civilities paid; hospitalities or courtesies rendered, as at an entertainment.

I had all the *honours* done me that are usual at an eastern visit. *Pococke*, Description of the East, I. 15.

Then hire a slave, or (if you will) a lord,
To do the *honours*, and to give the word.
Pope, Imit. of Horace, I. vi. 100.

Neither is it slight praise to say of a woman that she does well the *honors* of her house in the way of hospitality. *Marg. Fuller*, Woman in 19th Cent., p. 262.

A very old man (a fragment, like the castle itself) emerged from some crumbling corner to do me the *honors*.
H. James, Jr., Little Tour, p. 189.

10. Special rank or distinction conferred by a university, college, or school upon a student for eminence in scholarship or success in some particular subject: usually in the plural.

I very early in the Sophomore year gave up all thoughts of obtaining high *honors*.
C. A. Bristed, English University, p. 6.

The son, after bearing away all the best *honours* of Cambridge, was ordained.
J. C. Jeaffreson, Live it Down, I. 155.

11. In *golf*, the right to play off first from the tee.—**Act of honor.** See *act*.—**An affair of honor**, a duel.—**Code of honor.** See *code*, and *laws of honor*, below.—**Court of honor**, a body of persons sitting as a court to de-

termine questions concerning honor or honorable conduct as affecting individuals or a community. Specifically—(*a*) One of a class of courts which formerly existed in Europe for regulating and settling matters relating to the laws of honor, and for correcting encroachments in matters of coat-armor, precedency, etc. They were courts of chivalry. (*b*) In several European armies, a court composed of officers authorized to inquire into and punish all breaches of the principles of honor on the part of officers.—**Debt of honor.** See *debt*.—**Honor bright!** a protestation of or appeal to honor. [Colloq.]—**Honors are easy.** See *easy*.—**Honors of war,** formal military manifestations of respect; specifically, the privileges granted to a capitulating force at the discretion of a victorious commander. Permission to march out *with all the honors of war* is the right accorded to a surrendering garrison of marching out of their camp or intrenchments with all their arms, and with colors flying, drums beating, etc.—**Last honor,** usually **last honors,** a ceremony of respect paid to the dead; funeral rites; obsequies.

As soon as the prince Facilidas had paid the *last honours* to his father, he set about composing those disorders which had so long distracted the kingdom by reason of the difference of religion. *Bruce,* Source of the Nile, II. 401.

Laws of honor, the laws or established rules of honorable conduct; especially, the regulations concerning the occasions for fighting duels and the methods of conducting them in an honorable manner. Such laws were formerly generally recognized and rigidly enforced by public opinion.—**Maid of honor,** a lady in the service of a queen, whose duty it is to attend the queen when she appears in public.

Poor soul! I had a *maid of honour* once;
She wept her true eyes blind for such a one,
A rogue of canzonets and serenades.
Tennyson, Princess, iv.

On or upon my honor, words accompanying a declaration, and pledging one's honor or reputation for the truth of it. The members of the British House of Lords, in their judicial capacity, give their verdict on their honor.

Look, the good man weeps!
He's honest, *on mine honour.*
Shak., Hen. VIII., v. 1.

York. Upon thine honour, is he prisoner?
Buck. Upon mine honour, he is prisoner.
Shak., 2 Hen. VI., v. 1.

Point of honor. (*a*) A scruple arising from sense of duty or delicacy of feeling, which determines the action of a man on a particular occasion: as, he hesitated on a *point of honor.* (*b*) Under the code or laws of honor, the obligation to demand or grant satisfaction for a wrong or an insult, especially by means of a duel.

The *point of honor* has been deem'd of use
To teach good manners and to curb abuse. . . .
'Tis hard, indeed, if nothing will defend
Mankind from quarrels but their fatal end.
Cowper, Conversation, l. 163.

To do honor to. (*a*) To treat with special or marked respect; manifest approbation of; confer honor upon: as, to *do honor to* a man or *to* his actions. (*b*) To gain respect for by honorable or laudable action; do something that brings honor or credit to: as, to *do honor to* one's self, or *to* one's profession or country.—**To make one's honors†,** to make obeisance; do reverence.

They paced once about, in their ring, every pair *making their honours,* as they came before the state.
B. Jonson, Masque of Hymen.

Caroline arose from her seat, made her curtsey awkwardly enough, with the air of a boarding-school miss, her hands before her. My father let her *make her honours,* and go to the door. *Richardson,* Sir Charles Grandison, II. 190.

Word of honor, a verbal promise or engagement which cannot be violated without disgrace.=**Syn. 1.** *Fame, Renown,* etc. (see *glory*[1], *n.*); repute, consideration, esteem, credit, respect, homage, civility, deference, high-mindedness, nobleness.—**2.** *Integrity, Probity,* etc. See *honesty.*

honor, honour (on′ọr), *v. t.* [Early mod. E. *honor, honour;* < ME. *honouren, honuren,* rarely *honoren, honren,* sometimes without the aspirate, *onouren,* < AF. *honurer,* OF. *honurer, honorer, honourer, onorer,* etc., F. *honorer* = Pr. *honorar, honrar, onrar* = Sp. Pg. *honrar* = It. *onorare,* < L. *honorare,* honor, < *honor, honos,* honor, pay respect to, grace: see *honor, n.*] **1.** To hold in honor; regard with honor; treat with deference; respect; revere; when said of the Supreme Being, to reverence; adore; worship.

That man that schal the wedde bifor god with a ryng,
Loue thou him & *honoure.*
Babees Book (E. E. T. S.), p. 38.

That all men should *honour* the Son, even as they *honour* the Father. John v. 23.

Hee [Bacchus] taught them the vse of Wine, Oyle, and Sacrificing: in memorie whereof, Posteritie *honered* him for a god. *Purchas,* Pilgrimage, p. 452.

2. To bestow honor upon; do or bring honor to; distinguish honorably or respectfully; favor (with) as an honor: as, to *honor* one with a title.

Thus shall it be done to the man whom the king delighteth to *honour.* Esther vi. 9.

I may not evermore acknowledge thee, . . .
Nor thou with public kindness *honour* me.
Shak., Sonnets, xxxvi.

A custom
More *honour'd* in the breach than in the observance.
Shak., Hamlet, i. 4.

To whom to nod, whom take into your coach,
Whom *honour* with your hand.
Pope, Imit. of Horace, I. vi. 103.

3. To perform some duty of respect or credit toward: as, to *honor* an invitation or an introduction; specifically, in *com.,* to accept and pay when due: as, to *honor* a bill of exchange.

"With great pleasure"—and Saffron *honoured* a challenge to wine. *D. Jerrold,* Men of Character, I. 69.

honorable, honourable (on′ọr-a-bl), *a.* and *n.* [< ME. *honourable, onorable,* < OF. *honorable, onorable,* F. *honorable* = Sp. *honorable* = It. *onorabile,* < L. *honorabilis* (rare), that procures honor or esteem, < *honorare,* honor: see *honor, v.*] **I.** *a.* **1.** Worthy of being honored; entitled to deference or respect on account of character or rank; eminent; illustrious.

Too the Courte of the Kyng till hee comme were,
Too looke on Olympias the *onorable* Queene.
Alisaunder of Macedoine (E. E. T. S.), l. 577.

Many of them believed; also of *honourable* women which were Greeks . . . not a few. Acts xvii. 12.

2. Actuated by principles of honor or a scrupulous regard to rectitude or reputation; acting justly or in good faith.

Thou a wretch, whom, foll'wing her old plan,
The world accounts an *honorable* man,
Because forsooth thy courage has been tried,
And stood the test perhaps on the wrong side.
Cowper, Tirocinium, l. 788.

3. Conferring or suitable for honor or distinction; creditable; reputable.

I'll to the court in the morning: we must all to the wars, and thy place shall be *honourable.*
Shak., 1 Hen. IV., ii. 4.

Nought is more *honourable* to a knight,
Ne better doth beseeme brave chevalry,
Then to defend the feeble in their right.
Spenser, F. Q., V. ii. 1.

Honourable wounds from battle brought. *Dryden.*

4. Consistent with or conformable to honor or reputation; honest; sincere; marked by probity or good faith: as, *honorable* intentions or motives; an *honorable* character.

If that thy bent of love be *honourable,*
Thy purpose marriage, send me word to-morrow.
Shak., R. and J., ii. 2.

All great & *honourable* actions are accompanied with great difficulties, and must be both enterprised and overcome with answerable courages.
Bradford, Plymouth Plantation, p. 26.

God send us an *honourable* Peace.
Howell, Letters, I. v. 27.

The dissensions between the Roman orders are on the whole *honourable* to both parties. It is possible to understand both sides, to enter into the feelings of both sides. *E. A. Freeman,* Amer. Lects., p. 297.

5. Held in honor; worthy of respect; free from shame or disgrace; respectable: as, *honorable* poverty.

I acknowledge that Marriage is an *honourable* condition.
Howell, Letters, I. vi. 60.

Seven happy years of health and competence,
And mutual love and *honourable* toil.
Tennyson, Enoch Arden.

6. Performed or accompanied with marks of honor or with testimonials of esteem: as, an *honorable* burial.

An *honourable* conduct let him have.
Shak., K. John, i. 1.

I kept my seat on the sopha, and when the person got up at the right hand of the Cashif, the Cashif call'd to me to take his place, and shew'd me great civility; which was more *honourable* than if I had placed myself lower at the table. *Pococke,* Description of the East, I. 57.

7. Of respectable quality or amount; adequate to requirement; sufficient: as, an *honorable* salary. [Obsolete or archaic.]

Dined with Lord Cornebury, now made L. Chamberlaine to the Queene; who kept a very *honorable* table.
Evelyn, Diary, May 24, 1666.

8. An epithet put before a person's name as a conventional title of respect or distinction. In Great Britain this title is bestowed upon the sons and daughters of peers below the rank of marquis, upon all present or past maids of honor, and upon many persons occupying official places of trust and honor, especially upon members of governments or of executive councils in India or the colonies. In the United States it is commonly given to persons who hold or have held any considerable office under the national or State government, particularly to members and ex-members of Congress and of State legislatures, to judges, justices, and some other judicial officers, as well as to certain executive officers. Abbreviated *Hon.*—**Honorable ordinary,** in *her.* See *ordinary.*—**Right Honorable,** in Great Britain, a title given to all peers below the rank of marquis, to all privy councilors, to some civic functionaries, as the mayors of London and Dublin, and in courtesy to sons and daughters of peers holding courtesy titles.

The *Right Honorable* gentleman is indebted to his memory for his jests and to his imagination for his facts.
Sheridan, Speech in Reply to Mr. Dundas.

=**Syn. 1.** *Honorary, Honorable.* See *honorary.*—**2.** Just, upright, conscientious, high-minded, magnanimous. See comparison under *honesty.*

II. *n.* **1.** An honored or distinguished person.

Ector full onestly that *onerable* thanket:
And yet the batell on bent was breme to behold!
Destruction of Troy (E. E. T. S.), l. 6709.

2. One who bears the formal or official title of *honorable.* [Colloq.]

honorableness, honourableness (on′ọr-a-bl-nes), *n.* **1.** The state of being honorable; dignity; distinction; eminence: as, *honorableness* of rank.

Honorablenesse is a noble ordering of weightie matters, with a lustie heart, and a liberall vsing of his wealth, to encrease of honour. *Sir T. Wilson,* Art of Rhetoric, p. 35.

2. Honorable conduct, character, or quality; reputableness; respectability.

The wages of labour vary with the ease or hardship, the cleanliness or dirtiness, the *honourableness* or dishonourableness, of the employment.
Adam Smith, Wealth of Nations, i. 10.

The Fijians, believing in the *honourableness* of murder, are regarded by us with astonishment.
H. Spencer, Study of Sociol., p. 260.

honorably, honourably (on′ọr-a-bli), *adv.* [< ME. *honourably;* < *honorable* + *-ly*[2].] In an honorable manner; in a manner conferring or consistent with honor.

When I am dead, speak *honourably* of me.
Fletcher, Valentinian, iv. 4.

honorancet, honourancet, *n.* [< ME. *honorance, honuraunce,* < OF. *honorance, onorance,* < *honorer,* honor: see *honor, v.*] An honoring; the act of paying homage, respect, or worship.

In ye *honuraunce* of ihesu crist of heuene, and of his der woryi moder seynt marie, and of ale halowene, and specialliker of yt blisful corsant seynt Nicholaus, yis fraternite is bygunnen. *English Gilds* (E. E. T. S.), p. 97.

As honour is in *honourance,* in him that honours rather than him that is honoured, so disgrace is in him that casts it, not in him that endures it. *South,* Works, VIII. ix.

honorarium (on-ọ-rā′ri-um), *n.*; pl. *honoraria* (-ä). [< L. *honorarium* (sc. *donum*), a present made on being admitted to a post of honor, neut. of *honorarius,* honorary: see *honorary.*] A fee for services rendered, especially by a physician or other professional person. In England, when used of the fee of a barrister, it has reference to the fact that at common law barristers had no legal right to recover compensation for their services. Also *honorary.*

Each of the directors must hold at least ten shares, and be elected by ballot of stockholders. While fixing the salaries of employes, they receive no *honorarium* themselves. *Harper's Mag.,* LXXVII. 930.

honorary (on′ọr-ā-ri), *a.* and *n.* [= F. *honoraire* = Sp. Pg. *honorario* = It. *onorario,* < L. *honorarius,* of or relating to honor, conferring honor, < *honor,* honor: see *honor.*] **I.** *a.* **1.** Done or made in token of honor; honoring.

Beside their real tombs, many have found *honorary* and empty sepulchres. *Sir T. Browne,* Urn-burial, iii.

I have near a hundred *honorary* letters from several parts of Europe. *Swift,* Bickerstaff Papers.

2. Conferring honor, or intended merely to confer honor, without customary requirements or obligations: as, an *honorary* degree or title. —**3.** Holding a title or place conferred as an honor. An honorary member of a society or an institution may or may not take an active part in its proceedings or the promotion of its objects, but has no share in its management. An honorary officer, as distinguished from the regular officers of the same body, renders services without compensation, or without the full power or obligations of the office.

To the justices in active service the Russian law adjoins others called *honorary,* who are also elected, and in the same way, but who can sit only in civil cases, and then only when requested to do so by the parties to the suit, or as assistants to the acting magistrates.
Harper's Mag., LXXVI. 924.

Honorary feud. See *feud*[2].—**Honorary service,** in *Eng. law,* a service incident to grand serjeanty and commonly annexed to some honor.=**Syn. 1** and **2.** *Honorary, Honorable.* *Honorary* refers to that which exists or is done for the sake of conferring honor: as, an *honorary* degree, *honorary* membership; *honorable,* to that which is worthy of honor, confers honor, or is consistent with the sentiment of honor: as, an *honorable* man (in two senses); an *honorable* alliance; an *honorable* motive.

II. *n.*; pl. *honoraries* (-riz). Same as *honorarium.*

In some universities, the salary makes but a part . . . of the emoluments of the teacher, of which the greater part arises from *honoraries* or fees of his pupils.
Adam Smith, Wealth of Nations, v. 1.

honor-court (on′ọr-kōrt), *n.* In *Eng. law,* a court held within an honor or seigniory.

honored, honoured (on′ọrd), *a.* In *her.,* same as *crowned.*

honorer, honourer (on′ọr-ėr), *n.* [< *honor, honour,* + *-er*[1].] One who honors.

Let us study dayly and diligently to shew our selues to be the true *honourers* and lovers of God.
Homilies, Sermon against the Feare of Death, iii.

I now have cancell'd all
The thoughts of her, and offer thee myself,
Myself thy perfect *honourer.*
Shirley, Love in a Maze, iii. 3.

honorific (on-ọ-rif′ik), *a.* and *n.* [= F. *honorifique* = Sp. Pg. *honorifico* = It. *onorifico,* < L.

honorificus, that does honor, honorable, < *honor*, honor, + *-ficus*, < *facere*, do, make.] **I.** *a.* Conferring honor; importing respect or deference.

Mr. Freeman (in his Comparative Politics, pp. 72, 73) has given a long list of *honorific* names belonging to classes or institutions, which indicate the value once set by advancing societies on the judgment of the old.
Maine, Early Law and Custom, p. 23.

A very eminent professor wrote a highly courteous and *honorific* letter to the papers.
Fortnightly Rev., N. S., XLIII. 51.

II. *n.* A word or syllable used as a mere honorific term: as, for example, in the languages of China and Japan, *kwei*, honorable, *kao*, eminent, *lao*, venerable, *go*, imperial, *o*, great or august, used for the second and third personal pronouns when speaking to or of another: as, *kwei kwoh*, your (honorable) country; *go sei mei*, your (imperial) name, etc.

Bailey remarks of the Veddahs that in addressing others "they use none of the *honorifics* so profusely common in Singhalese." *H. Spencer*, Prin. of Sociol., § 398.

The absolutely necessary personal references are introduced by *honorifics:* that is, by honorary or humble expressions. *The Atlantic*, LX. 517.

honorify (ō-nor'i-fī), *v. t.*; pret. and pp. *honorified*, ppr. *honorifying*. [< OF. *honorifier*, < ML. *honorificare*, < L. *honorificus*, that does honor: see *honorific*.] To do honor to; confer honor upon. [Rare.]

Making large statues to *honorify*
Thy name, memorial's rites to glorify.
Ford, Fame's Memorial.

honorless, honourless (on'ȯr-les), *a.* [< *honor*, *honour*, + *-less*.] Without honor; not honored.

The resdue, and the hugie heape of such as there lay slayne,
Both numbrelesse and *honourlesse* they burne.
Phaer, Æneid, ii.

And so, reciprocally, will an *honourless* king promote the worship of a fearless God. *Warburton*, Works, IX. xiv.

honor-man (on'ȯr-man), *n.* One who takes honors on graduation from a college or university.

The anxious classical *honour-man* could not scribble down a whole ode of Pindar without becoming aware of what he was doing. *Proc. Soc. Psych. Research*, II. 223.

honorous†, honourous†, *a.* [< OF. *honoros*, *onoros*, < L. as if **honorosus*, honorable, < *honor*, honor: see *honor*.] Honorable.

The Kyng armed was with fair Ermynee,
Hys swet doughter ful maydenly to vew,
Hys *honorous* fader with harnois new.
Rom. of Partenay (E. E. T. S.), l. 1321.

honor-point (on'ȯr-point), *n.* In *her.*, the point just above the center of the escutcheon or fesse-point.

hontet, *v.* and *n.* A Middle English form of *hunt*. *Chaucer*.

honved (hon'ved), *n.* [Hung., lit. 'defenders of the fatherland.'] The landwehr of Hungary, exclusive of artillery. The name was used in 1848–9 to denote, first the volunteers, and then the entire revolutionary army.

honyt, *n.* An obsolete spelling of *honey*.

hoo[1] (hö), *interj.* [A sonorous syllable, a var. of *ho*, *ha*, etc.: see *ho*[1]. Also redupl. *hoohoo*, q.v.] An exclamation variously used to express excitement, delight, contempt, etc., according to the mode of utterance.

Take my cap, Jupiter, and I thank thee:—*Hoo!* Marcius coming home! *Shak.*, Cor., ii. 1.

hoo[2]**†,** *n.* An obsolete form of *how*[2].

hoo[3] (hö), *pron.* A dialectal form of *he*[1], A and B.

hoobubt, *n.* An obsolete spelling of *hubbub*.

hood (hůd), *n.* [< ME. *hood*, *hod*, < AS. *hōd*, a ★hood, = OFries. *hōd* = D. *hoed* = MLG. *hōt*, LG. *hood*, a hat, = OHG. *huot*, *hōt*, MHG. *huot*, a hat, hood, helmet, G. *hut*, a hat; akin to *heed*, and more remotely to *hat:* see *heed*[1], *hat*[1].] **1.** A covering for the head, of soft or flexible material, as cloth, leather, or chain-mail (in a suit of armor), usually extending over the back of the neck and sometimes the shoulders, and often attached to a garment worn about the body: as, the *hood* of a monk; the *hood* of an academic gown. See also cut under *camail*.

A, hood of the middle ages; *B*, hood like *A*, but worn by fitting the face-opening around the head and twisting the cape of the hood into a wreath; *C*, hawk's hood with long tail, or tiroire; *D*, hawk's hood without the tail. (From Viollet-le-Duc's "Dict. du Mobilier français.")

His cote wad of a cloute that cary was y-called,
His *hod* was full of holes & his heer oute.
Piers Plowman's Crede (E. E. T. S.), l. 422.

On bad me by a *hood* to cover my head;
But for want of mony, I myght not be sped.
Lydgate, London Lackpenny.

They should be good men; their affairs as righteous: But all *hoods* make not monks. *Shak.*, Hen. VIII., iii. 1.

2. In *falconry*, a covering for the entire head of a hawk. It is usually adorned with a plume of feathers, and sometimes with small bells. Its especial purpose is to blind the hawk, and it is removed when the quarry is to be pursued.

3. A cover of a carriage for the protection of its occupants, made so that it can be folded or turned back, or removed.—**4.** Something that resembles a hood in form, position, or use, as the upper petal or sepal of certain flowers, a chimney-cowl, etc.; specifically, in *zoöl.*, a conformation of parts or an arrangement of color on or about the head, like or likened to a hood. See phrases under *hooded*.

A pair of very conspicuous white, black-edged spectacle-like marks on the expansible portion of the neck, called the *hood*. *Günther*, Encyc. Brit., XXII. 196.

As the quadrants or *hoods* dip under the water, they close one end of a division [of a gas-meter].
Sci. Amer., N. S., LV. 351.

5. The hooded seal, *Cystophora cristata*. [Newfoundland.]—**6.** In *ship-building*, the foremost and aftermost planks of a ship's bottom, both inside and outside.—**French hood,** a head-dress worn by women in the sixteenth century, of which the front band was depressed over the forehead and raised in folds or loops over the temples.

For these loose times, when a strict sparing food
More's out of fashion then an old *French hood*.
Herbert, Hygiasticon.

To fly out of the hood. See *fly*[1], *v. t.*—**To glaze one's hood†.** See *glaze*.—**To put a bone in any one's hood†.** See *bone*[1].—**To put an ape in one's hood†.** See *ape*.

hood (hůd), *v. t.* [< ME. *hooden*, *hoden*, cover with a hood, cover; from the noun.] **1.** To cover the head of with a hood; furnish with a hood: as, to *hood* a falcon; to *hood* a chimney.

When he [Scipio] was at Alexandria and disbarked, as he came first to land, he went *hooded*, as it were, with his robe cast over his head. *Holland*, tr. of Plutarch, p. 358.

I will assure you, he can sleep no more
Than a *hooded* hawk.
Beau. and Fl., Thierry and Theodoret, v. 2.

The friar *hooded*, and the monarch crown'd.
Pope, Essay on Man, iv. 198.

Some young shepherdess, in the linen cap and long white *hooded* cloak of Barbizon. *Nineteenth Century*, XXIV. 430.

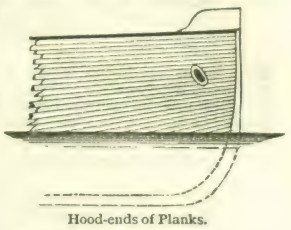
Hence—**2.** To cover; hide; blind.

I would to God that I were *hooded*, that I saw less; or that I could perform more. *Bacon*, Letters, ii.

While grace is saying, *hood* mine eyes
Thus with my hat, and sigh, and say amen.
Shak., M. of V., ii. 2.

The Spirit of intolerance, no longer *hooded* in the darkness of the cloister, now stalked abroad in all his terrors. *Prescott*, Ferd. and Isa., ii. 7.

-hood. [< ME. *-hode*, *-hod* (also, with mutation of vowel, *-hed*, *-hede*, > E. *-head*), < AS. *hād*, prop. state, condition, quality, also a person, sex; in comp., condition, quality (as in *cild-hād*, childhood, *werhād*, manhood, *preósthād*, priesthood, *mǣdenhād*, ME. *maidenhod*, *maidenhed*, E. *maidenhood*, *maidenhead*, etc.); = OS. *hēd*, condition, honor, = OHG. *heit*, condition, quality, sex, rank, MHG. *heit*, way, manner, = Icel. *heidhr* = Dan. *hæder* = Sw. *heder*, honor, = Goth. *haidus*, way, manner; as a suffix, = OS. *-hēd* = OFries. *-hēd* = D. *-heid* = MLG. *-heit*, LG. *-hed* = OHG. *-heit*, MHG. G. *-heit* and (after adjectives in *-lich* and *-ig*) *-keit* (Sw. *-het*, Dan. *-hed*, prob. after LG.); = Skt. *ketu*, brightness, appearance, < √ *kit*, perceive, know.] A suffix denoting 'state, quality, character,' as in *childhood*, *boyhood*, *manhood*, *maidenhood*, *fatherhood*, *brotherhood*, *sisterhood*, *knighthood*, *priesthood*, *Godhood*, etc. Such compounds, which are properly abstract, are sometimes used concretely with a collective sense, as *brotherhood*, *sisterhood*, *priesthood*, etc., meaning a body or an association of brothers, sisters, priests, etc. It is equivalent to *-head*, as in *maidenhead*, *Godhead*, the form *Godhead* being now usual in the concrete sense. The suffix, originally attachable to nouns only, is in Middle English and modern use sometimes found with adjectives, as in *falsehood*, and in pseudo-archaic forms like *drearihead*, *drowsihead*, *lustihead* (*-hed*), etc., used by Spenser and his imitators (Thomson, etc.).



hood-cap (hůd'kap), *n.* **1.** The hooded or bladder-nosed seal, *Cystophora cristata*. See cut under *Cystophorinæ*.—**2.** A close head-dress worn by women in the reign of Henry VIII. It was a close cap or bonnet covering the sides of the face.

The Versailles portrait of Katherine of Arragon is remarkable for the *hood-cap* of five corners.
★ *W. Thornbury*, Art Jour., N. S., XV. 137.

hood-cover (hůd'kuv″ėr), *n.* Same as *hood*, 3.

hooded (hůd'ed), *p. a.* **1.** Wearing, or covered or furnished with, a hood.—**2.** Specifically, in *zoöl.*, having on the head any formation of parts or arrangement of colors like or likened to a hood, as in mammals, birds, etc.; cucullate; capistrate.—**3.** In *bot.*, cucullate; having the apex or sides curved upward or arched over so as to resemble the point of a slipper or a hood, as the spathe of the Indian turnip or the lip of *Cypripedium* and *Cytherea*. See cut under *Cypripedium*.—**Hooded crow,** *Corvus cornix*. See *crow*[2]. Also called *hoodie-crow*, *Danish crow*, *Kentish crow*, *market-Jew crow*, *Northern or Norway crow*, *scald crow*, *Scremerston crow*.—**Hooded merganser,** an anserine bird of the family *Anatidæ*, the *Lophodytes cucullatus*.—**Hooded oriole,** a bird of the family *Icteridæ*, the *Icterus cucullatus*.—**Hooded seal,** the bladder-nosed seal, *Cystophora cristata*. See cut under *seal*.—**Hooded snake,** a snake in which the elastic skin of the neck is distended over elongated and very movable ribs, suggesting a hood or cowl, as in the cobra. These serpents belong to the family *Elapidæ* or *Najidæ*, and especially to the genus *Naja*, as the Indian cobra, *N. tripudians*, or the Egyptian asp, *Naja haje*. The hamadryad, *Ophiophagus elaps*, is also a hooded snake. See cut under *cobra-de-capello*.—**Hooded warbler,** an American bird of the family *Sylvicolidæ*, the *Myiodioctes mitratus*.

hood-end, hooding-end (hůd'end, hůd'ing-end), *n.* In *ship-building*, the end of a plank which fits into the rebate of the stem or the stern-post.

Hood-ends of Planks.

hood-gastrula (hůd'gas″trö-lä), *n.* An amphigastrula.

hoodie (hůd'i), *n.* Same as *hoodie-crow*. [Scotch.]

hoodie-crow, hoodie-craw (hůd'i-krō, -krâ), *n.* [Sc., also *hoddy-craw*, *huddit-craw*, *hoodit-craw*, i. e. hooded crow; also simply *hoodie*, *hoody*, *hoddy:* see *hoddy*.] The hooded crow, *Corvus cornix*. [Scotch.]

They are sitting down yonder like *hoodie-craws* in a mist.
Scott, Antiquary, viii.

On the rabbit burrows on the shore there gathered hundreds and hundreds of *hoodiecrows*, such as you see in Cambridgeshire. *Kingsley*, Water-Babies, p. 237.

hooding (hůd'ing), *n.* [Verbal n. of *hood*, *v.*] **1.** A covering.—**2.** The strip of leather that connects the two parts of a flail.

hooding-end, *n.* See *hood-end*.

hood-jelly (hůd'jel″i), *n.* A name of the *Hydromedusæ* or acalephs proper, such as jelly-fish and sea-nettles. *Haeckel*.

hoodless (hůd'les), *a.* [< ME. *hodles;* < *hood* + *-less*.] Having no hood.

hoodlum (höd'lum), *n.* [A word of no definite derivation, appar. originating in California in the slang of the ruffians of whom it has become the designation.] A young hectoring street rowdy; one of a gang of ruffians; a lounging, good-for-nothing, quarrelsome fellow; a rough. [Slang, western U. S.]

You at the East have but little idea of the *hoodlums* of this city [San Francisco]. They compose a class of criminals of both sexes, far more dangerous than are to be found in the Eastern cities. They travel in gangs, and are ready at any moment for the perpetration of any crime.
Boston Journal, August, 1877.

hoodman† (hůd'man), *n.* [< *hood* + *man*.] The person blindfolded in the game of hoodman-blind, now called *blindman's-buff*.

Re-enter Soldiers with Parolles.
Ber. A plague upon him! muffled. . . .
1 *Lord. Hoodman* comes. *Shak.*, All's Well, iv. 3.

hoodman-blind (hůd'man-blīnd'), *n.* A play in which a person blinded is to catch one of the others and tell his name; blindman's-buff.

What devil was 't
That thus hath cozen'd you at *hoodman-blind?*
Shak., Hamlet, iii. 4.

Here [at Bracebridge Hall] were kept up the old games of *hoodman blind*, shoe the wild mare, hot cockles, steal the white loaf, bob apple, and snap dragon.
Irving, Christmas Eve.

hood-mold, hood-molding (hůd'mōld, -mōl″ding), *n.* In *arch.*, the projecting molding of the arch over a medieval door or window, etc., whether inside or outside. Also called *label*, *drip*, *dripstone*, or *weather-molding*. See cuts under *dripstone*.

hoodock (hůd'ok), *a.* [Origin obscure.] Miserly. [Scotch.]

My hand-waled curse keep hard in chase
The harpy, *hoodock*, purse-proud race.
Burns, To Major Logan.

hoodoo (hö'dö), *n.* [An irreg. var. of *voodoo*, or so regarded.] **1.** Same as *voodoo*.

The prospect of pleasing his party and at the same time escaping a *hoodoo* must be irresistibly attractive.
New York Sun, March 20, 1889.

2. [From the verb.] A bewitchment; an occult cause of bad luck; hence, a person supposed to bring bad luck: opposed to *mascot*. [Colloq.] —3. A name given in the northwestern United States to certain grotesque columns, the products of volcanic action and erosion, left standing on the slopes of mountains and in deep gulches.

hoodoo (hö′dö), *v. t.* 1. Same as *voodoo*.—2. To bring or cause bad luck to, as a person or an enterprise. [Colloq.]

hood-sheaf (hůd′shēf), *n.* A sheaf used to cover other sheaves when set up in shocks.

hood-shy (hůd′shī), *a.* In *falconry*, afraid of the hood; unwilling to have the hood put on: said of a hawk.

hood-top (hůd′top), *n.* The hood or cover of a carriage. See *hood*, *n.*, 3.

hoodwink (hůd′wingk), *v. t.* [< *hood* + *wink;* prob. orig. in ref. to hooding a hawk: see *hood*, *n.*, 2.] 1. To blind by covering the eyes; blindfold.

We'll have no Cupid *hoodwink'd* with a scarf,
Bearing a Tartar's painted bow of lath.
Shak., R. and J., i. 4.

When the hawk was not flying at her game, she was usually *hood-winked*, with a cap or hood provided for that purpose, and fitted to her head.
Strutt, Sports and Pastimes, p. 91.

2. To cover; hide.

Had it pleased him not to *hoodwink* his own knowledge, I nothing doubt but he fully saw how to answer himself.
Hooker, Eccles. Polity, vi. 6.

For the prize I'll bring thee to
Shall *hoodwink* this mischance.
Shak., Tempest, iv. 1.

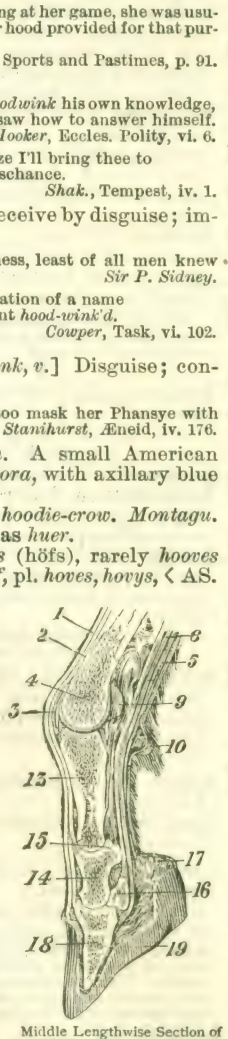
3. To blind mentally; deceive by disguise; impose upon.

He, *hoodwinked* with kindness, least of all men knew who struck him. *Sir P. Sidney.*

Some to the fascination of a name
Surrender judgment *hood-wink'd*.
Cowper, Task, vi. 102.

=Syn. 3. See *deceive*.

hoodwinkt, *n.* [< *hoodwink*, *v.*] Disguise; concealment. *Davies.*



No more dooth she laboure too mask her Phansye with *hudwinck*. *Stanihurst*, Æneid, iv. 176.

hoodwort (hůd′wėrt), *n.* A small American plant, *Scutellaria lateriflora*, with axillary blue flowers.

hoody (hůd′i), *n.* Same as *hoodie-crow*. *Montagu.*

hooer (hö′ėr), *n.* Same as *huer*.

hoof (höf), *n.*; pl. *hoofs* (höfs), rarely *hooves* ★(hövz). [< ME. *hoof*, *hof*, pl. *hoves*, *hovys*, < AS. *hōf* = OS. OFries. *hōf* = D. *hoef* = LG. *hōf* = OHG. MHG. *huof*, G. *huf* = Icel. *hōfr* = Sw. *hof* = Dan. *hov*, hoof. Cf. OBulg. Bohem. Pol. Russ. *kopyto*, hoof, referred to *kopati*, Russ. *kopate*, etc., dig; cf. Skt. *çapha*, a hoof, esp. a horse's hoof.] 1. The casing of hard horny substance which sheathes the ends of the digits or incases the foot in many animals. A hoof differs from a nail or claw only in being blunt and large enough to inclose the end of the limb; and almost every gradation is to be found between such structures as the human nails, or the claws of a cat, and the hoofs of a horse or an ox. The substance is the same in any case, and the same as horn, being modified and greatly thickened cuticle or epidermis. See *hoofed*.

Middle Lengthwise Section of Foot of Horse, showing the hoof-bones, etc.

1, 2, tendons of extensor muscles; 5, tendons of flexor perforatus muscle; 6, tendons of flexor perforans muscle; 10, fetlock; 29, hoof; 3, a synovial bursa in the fetlock-joint; 4, the middle metacarpal (or metatarsal), being the "cannon-bone"; 9, a sesamoid bone or "nut-bone" behind the fetlock-joint; 13, the proximal phalanx, fetter-bone, or great pastern; 14, the median phalanx, coronary, or small pastern; 15, interphalangeal articulation; 16, a sesamoid bone or nut-bone in tendon of flexor perforans, called the navicular bone by veterinaries, but not to be confounded with the navicular of anatomy in the tarsus or hock; 17, part of coronet; 18, the distal phalanx, or coffin-bone.

With the *hoofs* of his horses shall he tread down all thy streets. Ezek. xxvi. 11.

Whatsoever parteth the *hoof*, and is clovenfooted, . . . that shall ye eat.
Lev. xi. 3.

On burnish'd *hooves* his warhorse trode.
Tennyson, Lady of Shalott, iii.

2. A hoofed animal; a beast.

Our cattle also shall go with us; there shall not an *hoof* be left behind. Ex. x. 26.

He had not a single *hoof* of any kind to slaughter.
Washington.

3. In *geom.*, an ungula or part of a cylinder or cone cut off by a plane cutting both the base and the curved surface.—4. In *tortoise-shell manuf.*, one of the smaller plates of translucent shell forming the head.—**Cleft hoof, cloven hoof**, the pair of hoofs of cloven-footed ungulates, as the ruminants. Each half of the supposed hoof is a complete hoof for its own digit.—**False hoof**, the hoof of a functionless digit, on which an animal does not walk, as one of the pair behind and above the other hoofs of the ox, deer, pig, etc. —**On the hoof**, alive; not butchered: used by cattle-men and butchers.—**To show the cloven hoof.** See *cloven*.

hoof (höf), *v. t.* [< *hoof*, *n.*] 1. To walk, as cattle; foot: with an indefinite *it*. [Colloq. or slang.]

To *hoof it* o'er as many weary miles . . .
As e'er the bravest antler of the woods.
Scott, Ethwald, from Notes to L. of the L.

2. To kill (game) by shooting it on the ground. [Colloq., southern U. S.]

hoof-bound (höf′bound), *a.* In *farriery*, having a dryness and contraction of the hoof which occasions pain and lameness.

hoof-cushion (höf′kůsh″on), *n.* Same as *hoof-pad*.

hoofed (höft), *a.* [< *hoof* + *-ed*[2].] Having a hoof or hoofs; ungulate, whether artiodactyl or perissodactyl: distinguished from *clawed*.—**Hoofed quadrupeds**, the mammalian order *Ungulata*.

hoofing-place (höf′ing-plās), *n.* The place where a flock is herded. [Prov. Eng.]

Wherever he herds the lord's sheep, the several other shepherds are to give way to him, and give up their *hoofing-place*. *Hone's Every-day Book*, II. 22.

hoofless (höf′les), *a.* [< *hoof* + *-less*.] Having no hoof or hoofs.

hoof-mark (höf′märk), *n.* The mark or trace left by an animal's hoof in stepping.

hoof-pad (höf′pad), *n.* A protecting cushion fastened to a horseshoe or fixed to a horse's foot to prevent interference or injury, or to correct malformation.

hoof-pick (höf′pik), *n.* A curved hook or hooked knife-blade used to remove stones, balls of snow, etc., from the bottom of a horse's hoof.

hoof-shaped (höf′shāpt), *a.* Shaped like a horse's hoof.

hoof-spreader (höf′spred″ėr), *n.* A device fitted to the foot of a horse to correct narrowness or malformation.

hoofy (hö′fi), *a.* [< *hoof* + *-y*[1].] Belonging to a hoof. In the quotation there is an allusion to Hippocrene, a fountain near Helicon, said to have burst forth when the ground was struck by the hoof of Pegasus.

Then parte in name of peace, and softly on
With numerous feete to *Hoofy* Helicon.
Herrick, Appendix, p. 441.

hoohoo (hö′hö′), *interj.* [A redupl. of *hoo*[1].] An exclamation of excitement or delight, used to express approval or assent.

hoohoo (hö′hö′), *v. t.* [< *hoohoo*, *interj.*] To say "Hoohoo" to; approve by saying "Hoohoo": with reference to mobs or savages.

He was heartily *hoohooed*.
Assoc. Press Despatch, Sept. 1, 1887.

★**hook** (hůk), *n.* [< ME. *hok*, < AS. *hōc*, sometimes spelled (to show the long vowel) *hooc* = MD. *hoek*, *hoeck*, a hook, D. *hoek*, a hook, angle, corner, quarter, cape (> Dan. Sw. *huk*, a cape), = LG. *huk*, a hook, edge, corner; the kindred forms have a different vowel, and agree with AS. *haca*, a bolt or bar of a door, ME. **hake*, E. dial. *hake*, a hook: see *hake*[1], *hake*[2], *hatch*[1].] 1. A curved or angular piece of metal or other firm substance, either separate or forming part of another object, adapted to catch, hold, pull down, or sustain something: as, a fish-*hook*; the *hook* of a gate-hinge; a pot-*hook*; a crochet-*hook*; a cotton-*hook*; a car-*hook*; the *hooks* of the teasel.

I will put my *hook* in thy nose, and my bridle in thy lips.
Isa. xxxvii. 29.

His buckler prov'd his chiefest fence;
For still the shepherd's *hook*
Was that the which King Alfred could
In no good manner brook.
King Alfred and the Shepherd.

2. A curved instrument for cutting grass or grain; a sickle, especially one with a broad blade and a smooth edge; an instrument for cutting or lopping.

Make redie nowe iche nedeful instrument, . . .
The *hokes* that the fern awaie shall bite,
And billes all thees brerers [read *breres*] up to smyte.
Palladius, Husbondrie (E. E. T. S.), p. 42.

Great Kings and Consuls, who haue oft for blades
And glistering Scepters handled *hooks* and spades.
Sylvester, tr. of Du Bartas's Weeks, i. 3.

3. A projecting point or spit of land on the sea- or lake-coast, which ends with a recurved or hook-shaped form: as, Sandy *Hook*, near New York.

Hooks are of the highest importance, being sometimes the only natural harbor along low flat coasts.
Foster and Whitney's Lake Superior Report, II. 260.

4. In *musical notation*, a pennant attached to the stem of eighth-notes, sixteenth-notes, etc.: as, ♪ Hook. Also called *flag*.—5. One of the projecting points of the thigh-bones of cattle. Also called *hook-bone*.—6. In *ship-building*, same as *breast-hook*.—7. That which catches; a snare; a trap.

A shop of all the qualities that man
Loves woman for; besides, that *hook* of wiving,
Fairness, which strikes the eye.
Shak., Cymbeline, v. 5.

Mak sure the nooks
Of Maky's-muir crooks;
For the wily Scot takes by nooks, *hooks*, and crooks.
Fray of Suport (Child's Ballads, VI. 117).

8. A catch; an advantage. [Vulgar.]—9. In *agri.*, a field sown two years in succession. [Local, Eng.]—**Barbless hook**, a fishing-hook with no barb; a needle-point hook. Such hooks have been used by the Japanese for centuries, and have recently been introduced into America. They are much used by fish-breeders, in order to avoid injuring fish taken to be kept for spawning. —**Blunt hook**, a surgical instrument for seizing without piercing or tearing.—**By hook or by crook.** See *crook*.—**Calvarian hook.** See *calvarian*.—**Cross-eyed hook**, a hook used on trawl-lines, having the eye at the upper end of the shank at right angles to the direction of the point from the shank.—**Extension hook**, a kind of fish-hook; a trap-hook.—**Hook and butt**, a method of placing the ends of timbers so that they resist the tendency of tensile strain to part them. See *hook-scarf*.—**Hook and eye**, a metallic fastening for garments, consisting of a hook, commonly of flattened wire bent to the required shape, and an eye, usually of the same material, into which the hook fits. Under the name of *crochet and loop*, this form of fastening was in use as early as the fourteenth century.

The machinery of the frocks reminds one of the wedding morning in "Pickwick," when all the girls were crying out to be "done up," for they had *hooks and eyes* [on the back of their dresses], and the girls were helpless by themselves. *W. Besant*, Fifty Years Ago (1887), p. 106.

Hook-and-ladder company, a company of firemen provided with a carriage containing ladders and large hooked instruments for tearing down buildings.—**Hook of nets.** Same as *gang of nets* (which see, under *gang*).—**Kirby hook**, a kind of fish-hook having the point bent to one side of the axis of the shank. It is the form most used in the United States. There are two sorts, *long-shank* and *short-shank*.—**Limerick hook**, a fish-hook first made at Limerick, Ireland, better adapted for artificial flies than for use with bait.—**Needle-point hook**, a barbless hook. —**Off the hooks.** (*a*) Out of adjustment; unhinged.

He lives condemned to his share at Bruxels,
And there sits filing certain politic hinges,
To hang the states on he has heaved *off the hooks*.
B. Jonson, Staple of News, iii. 1.

(*b*) Disordered; disturbed; sick. [Slang.]

In the evening by water to the Duke of Albemarle, whom I found mightily *off the hooks* that the ships are not gone out of the river. *Pepys*, Diary.

(*c*) Out of existence; dead. [Slang.]

The attack was so sharp that Matilda was very near *off the hooks*. *Thackeray.*

And Achille cried, "Odzooks!
I fear, by his looks,
Our friend, François Xavier, has popp'd *off the hooks!*"
Barham, Ingoldsby Legends, II. 32.

On one's own hook, on one's own account or responsibility; by or for one's self. [Colloq.]—**Pulley-suspension hook**, an S-hook (a double hook in the form of the letter S) which can be caught above a beam or rafter to afford a hold for a pulley, as for the block of a hay-fork.—**Sponge-hook**, a hooked two-pronged iron tool at the end of a wooden pole, with which sponges are gathered from the bottom. [Florida, U. S.]—**Standing part of a hook**, that part of a hook which is attached to a block or chain by means of which power is applied to it. The opposite ★end is called the *point*.

hook (hůk), *v.* [< ME. *hoken;* from the noun.] I. *trans.* 1. To fasten with a hook or hooks; catch or seize with or as if with a hook: as, to *hook* a trout.

The harlot king
Is quite beyond mine arm, . . . but she
I can *hook* to me. *Shak.*, W. T., ii. 3.

At last I *hook'd* my ankle in a vine.
Tennyson, Princess, iv.

2. To attack with the horns; catch on the horns: as, to be *hooked* by a cow.—3. To catch by artifice; entrap; insnare.

Hook him, my poor dear, *hook* him at any sacrifice.
W. Collins, Armadale.

4. To steal by grasping; catch up and make off with. [Colloq. or slang.]

Is not this braver than sneak all night in danger,
Picking of locks, or *hooking* cloths at windows?
T. Tomkis (?), Albumazar, iii. 3.

I *hooked* the apples, leaped the brook, and scared the musquash and the trout. *Thoreau*, Walden, p. 219.

5. To attach by means of a hook, literally or figuratively.

The larboard galley, crippled but not daunted, swung round across his stern, and *hooked* herself venomously on to him. *Kingsley*, Westward Ho, xx.

II. *intrans.* **1.** To bend; be in or take the form of a hook.

Her bill *hooks* and bends downwards.
Sir T. Herbert, Travels in Africa, p. 383.

2. To become attached by means of a hook, or something resembling a hook: as, a chain that *hooks* on to the watch.

Fal. Go, with her, with her; [to Bardolph] *hook* on, *hook* on. *Shak.*, 2 Hen. IV., ii. 1.

3. To have a habit of attacking with the horns: said of a cow or other horned animal.—**4.** To turn away; depart; decamp: now (transitively) with an indefinite *it*, as a slang phrase.

Hokit out of havyn all the hepe somyn,
Hade bir at hor bake.
Destruction of Troy (E. E. T. S.), l. 4621.

[That is, 'All the heap (fleet) together *hooked* out of haven, had the wind at their back.']

Every school-boy knows that the lion has a claw at the end of his tail, with which he lashes himself into fury. When the experienced hunter sees him doing that, he, so to speak, *hooks it*. *H. Kingsley*, Ravenshoe, lx.

Hooka (a simple form).

hooka, hookah (hùk'ä), *n.* [E. spelling of Hind. and Pers. *huqqa*, a pipe for smoking, Pers. also a casket, < Ar. *huqqa*, a pipe for smoking, a casket, a box for pomatum; cf. Ar. *huqq*, a hollow place.] In India, the water-pipe for smoking. The smoke is drawn through water by means of a long flexible tube. The apparatus is commonly made of expensive materials and elaborately ornamented. Also spelled *hukah*. See *narghile*, *hubble-bubble*.

Sublime tobacco! . . .
Divine in *hookas*, glorious in a pipe,
When tipped with amber, mellow, rich, and ripe.
Byron, The Island, ii. 19.

The good old *hookah* days are past; cheroots and pipes have now usurped the place of the aristocratic silver bowl, the cut-glass goblets, and the twisted glistening snake with silver or amber mouth-piece.
W. H. Russell, Diary in India, I. 187.

hook-and-eye, *n.* See *hook and eye*, under *hook*.

hooka-stand (hö'kä-stand), *n.* A stand for supporting the bowl of the hooka at a convenient height from the ground.

hook-beaked (hùk'bēkt), *a.* Having a curved beak or bill; curvirostral.

hookbill (hùk'bil), *n.* [< *hook* + *bill*[1].] **1.** A curved or hooked bill or beak of a bird.—**2.** A spent male salmon whose jaws have become hooked.

hook-bill (hùk'bil), *n.* [< *hook* + *bill*[2].] A billhook with a curved end.

hook-billed (hùk'bild), *a.* Having a curved bill; hook-beaked.

hook-block (hùk'blok), *n.* A pulley-block fitted with a hook at one end.

hook-bolt (hùk'bōlt), *n.* A bolt having one end in the form of a hook.

hook-bone (hùk'bōn), *n.* Same as *hook*, 5.

hook-climber (hùk'klī″mėr), *n.* A plant that climbs by the aid of hooks, as those developed on *Rubus*, *Rosa*, *Ourouparia*, etc. The hooks, according to Darwin, do not circumnutate as do tendrils, but act by hooking over the supports on which they climb.

hooked (hùkt or hùk'ed), *a.* [< ME. *hoked*; < *hook* + *-ed*[2].] **1.** Bent like a hook; hook-shaped.

The bill is short, strong, and very much *hooked*.
Pennant, British Zoöl., The Peregrine Falcon.

He clasps the crag with *hooked* hands.
Tennyson, The Eagle.

2. Having a hook or hooks; furnished with hooks: as, a *hooked* stick; a *hooked* chariot (one having sharp hooks projecting outward for offensive purposes, as used in ancient war).

The *hooked* chariot stood,
Unstain'd with hostile blood.
Milton, Nativity, l. 56.

Hooked gearing. See *gearing*.—**Hooked tool.** (*a*) A tool with one end bent to form three sides of a square, one side being prolonged to serve as a handle. (*b*) A chisel with the end bent at an angle, used in marble-cutting where the square chisel cannot conveniently be employed. (*c*) A tool similar to a scorper, used in wood-turning. (*d*) A bent knife for paring hoofs.

hookedness (hùk'ed-nes), *n.* [< *hooked* + *-ness*.] The state of being bent like a hook; incurvation.

hooker[1] (hùk'ėr), *n.* [< *hook* + *-er*[1].] **1.** One who or that which hooks. Specifically—(*a*) One who fishes with hook and line; also, a fishing-vessel engaged in fishing with the hook: distinguished from *netter*. (*b*) In the *sponge-fishery*, one who hooks up sponges. [Florida, U. S.] (*c*) An iron rod bent more or less like a hook at one end, used to hook up or pull out racoon-oysters, or knock the bunches of them to pieces. [Georgia, U. S.] **2.** [Formerly *hoker*.] A thief; a filcher; a shoplifter.

A cunning filcher, a craftie *hooker*. *Florio.*

These sly theeues and night-*hookers* . . . committed such felonious outrages. *Holland*, tr. of Pliny, xix. 4.

hooker[2] (hùk'ėr), *n.* [Formerly also *howker* (= G. Dan. *huker*), < D. *hoeker*, < *hoek*, a hook. It was also called in D. *hoekboot*, MD. *hoeckboot*, a fishing-boat, < *hoek*, = E. *hook*, + *boot* = E. *boat*.] A two-masted Dutch vessel; also, a small fishing-smack used on the Irish coasts.

(*Hooker* or Howker).—A coast or fishing vessel—a small hoy-built craft with one mast, intended for fishing. *Hookers* are common on our coasts, and greatly used by pilots, especially off Irish ports. See Smyth's "Sailor's Word-Book." *N. and Q.*, 7th ser., IV. 420.

[Sometimes used in contempt for any ill-conditioned or disorderly vessel.

I was overjoyed to find that the old *hooker* actually made two and a half knots. *The Century*, XXVI. 945.

Something to set the old *hooker* creaking.
W. C. Russell, Jack's Courtship, xxviii.]

Hookeria (hù-kē'ri-ä), *n.* [NL., after the English botanist Sir W. J. *Hooker* (1785–1865).] A genus of pluricarpous mosses, the type of the tribe *Hookericæ*.

Hookerieæ (hùk-ę-rī'ę-ē), *n. pl.* [NL., < *Hookeria* + *-eæ*.] A tribe of pluricarpous mosses, typified by the genus *Hookeria*. They are characterized by having the calyptra conical or mitrate, and nearly entire at the base; the capsule suberect, horizontal, or pendulous, and usually long-pediceled; and the peristome double, of 16, usually lanceolate, teeth. The same as *Hookeriaceæ* of Müller and *Hookeriei* of other authors.

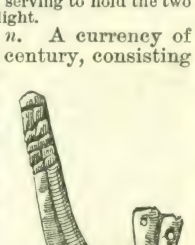
Hooker's green. See *green*[1].

Hooke's gearing. See *gearing*.

hookey[1] (hùk'i), *n.* Same as *hockey*[1].

★**hookey**[2], *n.* See *hooky*[2].

hookheal (hùk'hēl), *n.* The common labiate plant *Prunella* (or *Brunella*) *vulgaris*, the heal-all. Also called *hookweed*.



hooking-frame (hùk'ing-frām), *n.* A wooden frame fitted with hooks, on which fabrics may be hung for convenience in folding and measuring.

hook-ladder (hùk'lad″ėr), *n.* A ladder with a hook or hooks at the top for holding.

hook-land (hùk'land), *n.* Land plowed and sowed every year. [Eng.]

hooklet (hùk'let), *n.* [< *hook* + *-let*.] A small hook or hook-shaped process. Specifically—(*a*) In *ornith.*, a hamulus. (*b*) In *entom.*, one of the minute hook-shaped bristles found on the front edge of the posterior wings of many insects, and serving to hold the two wings of a side together during flight.

hook-money (hùk'mun″i), *n.* A currency of Ceylon in the seventeenth century, consisting of pieces of pure silver twisted into the form of fish-hooks. Similar "coins" of silver wire were made in Lar, Persia, and were called *larins*; specimens also circulated in the Maldive islands. Some of the larins bear a brief inscription in Arabic letters.

Hook-money, British Museum. (Size of the original.)

hook-motion (hùk'mō″-shon), *n.* In the steam-engine, a valve-gear which is engaged by V-hooks.

hook-nebbed†, *a.* [ME. *huke-nebbyde*; < *hook* + *neb* + *-ed*[2].] Having a hooked beak.

[He was] *huke-nebbyde* as a hawke, and [had] a hore berde.
Morte Arthure (E. E. T. S.), l. 1082.

hook-net (hùk'net), *n.* A fishing-net having a kind of pocket formed by an L-shaped continuation. *E. H. Knight.*

hook-nose (hùk'nōz), *n.* A nose with a pronounced curve, suggesting the beak of a hawk; an aquiline nose.

Mr. Barton was immediately accosted by a person well-stricken in years, tall, and raw-boned, with a *hook-nose*, and an arch leer, that indicated at least as much cunning as sagacity. *Smollett*, Humphrey Clinker.

He had a *hook nose*, handsome after its kind, but too high between the eyes. *Dickens*, Little Dorrit, i. 1.

hook-nosed (hùk'nōzd), *a.* Having a curvated or aquiline nose.

I may justly say with the *hook-nosed* fellow of Rome, I came, saw, and overcame. *Shak.*, 2 Hen. IV., iv. 3.

hook-pin (hùk'pin), *n.* A tapering iron pin with a hooked head, used for pinning the frame of a floor or roof together.

hook-rope (hùk'rōp), *n.* *Naut.*, a rope six or eight fathoms long, with a hook and thimble spliced at one end, and whipped at the other, used in dragging chain cables out of the lockers, etc.

hook-scarf (hùk'skärf), *n.* A method of uniting timbers endwise so that they lock into each other. See *scarf*. *E. H. Knight.*

hook-squid (hùk'skwid), *n.* One of the decapodous cephalopod mollusks of the family *Onychoteuthididæ* (allied to the common squids or calamaries), remarkable for the length of their tentacles, the clubbed extremities of which are armed with hooks having their bases furnished with suckers, which the animals employ to seize their prey. They are often of large size, some attaining the length of 6 feet, and are much dreaded by bathers. They occur in most seas.

hook-sucker (hùk'suk″ėr), *n.* A fish which takes a hook or bait by a sucking motion.

hook-swivel (hùk'swiv″l), *n.* The swivel of a gorge-hook, used by anglers to enable them to put on or take off the bait.

hook-tip (hùk'tip), *n.* One of certain moths, particularly those of the genus *Platypteryx*, of which the wings are tipped with hooks. The scalloped hook-tip is *P. lacertula*; the pebble hook-tip is *P. falculia*.

hook-tool (hùk'tōl), *n.* **1.** A hand-tool used in metal-turning, which is hook-shaped, and extends beyond the rest that supports it; a hanging-tool.—**2.** A bent tool for wood-turning, used in bottoming boxes, lids, or other hollow work.

hookum (hùk'um), *n.* [Hind. and Ar. *hukm*, a command, order, decree: see *hakim*.] In India, an order or instruction from a person in authority. Compare *hakim*.

We had no *hookum* from the commissioner or deputy, but Hay's chuprassie worked very hard in and about the valleys and high-road.
W. H. Russell, Diary in India, II. 226.

hookumpake (hùk'um-pāk), *n.* [Imitative of the bird's cry.] The American woodcock, *Philohela minor*. *G. Trumbull*, 1888. [Worcester county, Maryland, U. S.]

hookweed (hùk'wēd), *n.* Same as *hookheal*.

hook-wrench (hùk'rench), *n.* A spanner having a curved or hooked end for grasping a nut or coupling-piece on a hose.

hooky[1] (hùk'i), *a.* [< *hook*[1] + *-y*[1].] **1.** Full of hooks; pertaining to hooks.—**2.** Given to hooking: as, a *hooky* cow. [Colloq.]—**3.** Hooked. *Davies.*

A miniature sketch of his *hooky* nose.
Hood, Miss Kilmansegg, Her Courtship.

hooky[2] (hùk'i), *n.* [In allusion to *hook*, *v. i.*, 4.] A pupil absent from school without leave; a truant: only in the phrase *to play hooky*, equivalent to *to play truant*. Also *hookey*. [School slang.]

hool[1]†, *a.* A Middle English form of *whole*. *Chaucer.*

hool[2] (höl), *n.* An obsolete or dialectal (Scotch) form of *hull*[1].

hoolee (hö'lē), *n.* [Also *hooly*, *hoolee*, *huli*, prop. *holi*; < Hind. *holi*.] The great festival or carnival of the Hindus, held in the spring in honor of Krishna. The occasion is one of boisterous merry-making and fooling. Friends and strangers are pelted with red powder, or drenched with a yellow liquid from squirts. There is continual singing and dancing, more or less obscene, and tricks are played closely resembling the April-fooling of the English.

hoolock (hö'lok), *n.* [Also *hulock*, *yulock*, *yolock*; from a native name.] A species of *Hylobates* or gibbon, *H. hoolock*, inhabiting Assam in British India.

hooly (hùl'i), *a.* [Sc., also *huly*, in Aberdeen *heelie*, perhaps orig. **huvely*, < **huve*, *hufe*, *hove*, tarry, delay: see *hove*[1].] Slow; cautious; careful.

hooly (hùl'i), *adv.* [Sc., < *hooly*, *a.*] Slowly; cautiously; softly; carefully; moderately. Also *hoolie*.

Hooly and fairly, softly and smoothly; cautiously and moderately.

Hooly and fairly nun ride far journies.
Ferguson's Scottish Proverbs, p. 13.

Hoon (hön), *n.* Same as *Hun*[1]. *Sir W. Jones.*

hoondee (hùn'dē), *n.* [Anglo-Ind., repr. Hind. *hundī*, a bill of exchange.] An East Indian draft or bill of exchange drawn by or upon a native banker or shroff.

SUP.

SUPPLEMENT

D 3. (*a*) In *music:* (3) Also, the key-note of the minor key of one flat; in medieval music, the final of the Dorian and Hypodorian modes. (*b*) In *chem.*: (2) d- before certain compounds has reference to their behavior toward polarized light, namely, to their dextrorotation, as distinguished from their inaction (i-) or levorotation (l-). (*c*) In *math.*: (2) D is also used for the number denoting the deficiency of a curve (what its number of double points lacks of the maximum). —**4.** As an abbreviation: (*f*) In *law* (*D.*), an abbreviation of *Decree, Decret, Dictum.* (*g*) In *med.* (*d.*), an abbreviation of: (1) *diopter* or *dioptric;* (2) *dexter* (right); (3) *divide* (in prescriptions). (*h*) (*D.*) Of *Democrat, Deus* (God), *Dominus* (Lord), *Dutch;* (*d.*) of *daughter, delete* (cancel), *density.*—**5.** Short for *damn* (often printed *d*—).

> At last he flung out in his violent way, and said, with a *D*, 'Then do as you like.'
>
> *Dickens,* Great Expectations, xi.

6. Any mechanical device or appliance which resembles the letter **D**; specifically, in a harness, a loop of metal which has a straight bar joined at each end to a semicircular loop: used as a support for a strap. Also written *dee.* See ★*D-trap* and *D-valve.*—**Radium D.** See ★*radium.*—**The D,** the striking-balk in English billiards: so called because of its resemblance to the letter D turned half-way round. Of a smaller area, substantially the same thing in form and function is styled the *semicircle balk* in all three-ball games in America.

Da. The chemical symbol of *davyum.*

D. A. A. G. An abbreviation of *Deputy Assistant Adjutant-General.*

dab[1] (dab), *adv.* [Elliptic use of *dab,*[1] *v.*] With a dab; without hesitation; vigorously. *Ruskin.*

dab[2], *n.*—**Alaska dab,** *Limanda aspera,* a small flounder found in Alask.a.—**Mud dab,** *Limanda limanda,* a European flounder. See *dab*[2].

dabb (dob), *n.* [Also **dhabb, dhob;* < Ar. *dabb* (*dhabb*).] The palm-lizard, *Uromastix acanthurus,* of the family *Agamidæ,* found in northern Africa.

dabbler, *n.*—**Mud dabbler,** the common killifish, *Fundulus heteroclitus.*

da camera (dä kä'me-rä). [It.] 'Of the chamber': in *music,* applied to music (chamber music) so distinguished from music for the church or the opera-house.

dace, *n.*—**Black-headed dace.** Same as *blackhead,* 2. —**Black-nosed dace,** a small minnow, *Rhinichthys atronasus,* of the eastern United States.—**Horned dace,** a cyprinoid fish, *Semotilus atromaculatus,* found in the eastern United States.—**Long-nosed dace,** a small minnow, *Rhinichthys cataractæ* of the eastern United States. —**Red-bellied dace,** a small minnow, *Chrosmus erythrogaster,* of the Mississippi valley.

Dachstein (däch'stīn), *n.* [G. *Dachstein,* a mountain group in the Austrian Alps, named from the principal peak, *Dachstein.*] In *geol.,* a division of the Triassic formation in the northern and southern Alps, constituting the upper division of that formation and equivalent in whole or in part to the Rhætic beds of Germany.

dacion (dä-thē-ōn'), *n.* [Sp., < L. *datio*(*n-*), a giving: see *dation.*] In *Sp. law,* the actual effective delivery of a thing in the performance of a contractual obligation.

dacitic (dā-sit'ik), *a.* [*dacite* + *-ic.*] In *petrog.,* of or pertaining to dacite; having the mineral composition and the texture characteristic of dacite.

dacryocystosyringotomy (dak″ri-ō-sis″tō-sir-ing-got'ō-mi), *n.* [Gr. *δάκρυον,* tear, + *κύστις,* bag (sac), + *σῦριγξ,* pipe, + *-τομία,* < *ταμεῖν,* cut.] In *surg.,* the operation of opening the lacrymal sac and duct.

dacryocystotomy (dak″ri-ō-sis-tot'ō-mi), *n.* [Gr. *δάκρυον,* tear, + *κύστις,* bag (sac), + *-τομία,* < *ταμεῖν,* cut.] In *surg.*: (*a*) Incision into the lacrymal sac. (*b*) Division of a stricture of the lacrymal duct.

dacryolin (dak'ri-ō-lin), *n.* [Gr. *δάκρυον,* tear, + *-ol* + *-in*[2].] An albuminous component of tears.

Dacryomyces (dak″ri-om'i-sēs), *n.* [NL. (Nees, 1816), < Gr. *δάκρυον,* tear, a drop, + *μύκης,* a fungus.] A genus of fungi of the order *Dacryomycetales,* having gelatinous, sessile, flat or cushion-shaped irregular fructifications. The spores are ovate or cylindrical, simple at first, but becoming septate before germination. About 55 species have been described, occurring mostly on decaying wood. *D. abietinus* is a widely distributed species occurring on rotting conifers.

Dacryomycetales (dak″ri-ō-mī-set'ā-lēz), *n. pl.* [NL., < *Dacryomyces* (*-et-*) + *-ales.*] An order of basidiomycetous fungi named from the genus *Dacryomyces.* The basidia are undivided and the species are mostly small: some are flat and spreading, others more or less stipitate and forming flattened or irregular club-shaped fructifications. Also *Dacryomycetineæ.*

Dacryomycetineæ (dak″ri-ō-mī-se-tin'ē-ē), *n. pl.* [NL.] See ★*Dacryomycetales.*

dacryostenosis (dak″ri-ō-stē-nō'sis), *n.* [NL., < Gr. *δάκρυ,* tear, + *στένωσις,* narrowing.] Stricture of the lacrymal duct.

dacryosyrinx (dak″ri-ō-sir'ingks), *n.* [NL., < Gr. *δάκρυ,* tear, + *σῦριγξ,* pipe, syringe.] **1.** A syringe for injecting fluids into the lacrymal duct.—**2.** A lacrymal fistula.

dactyl, *n.* **6.** [Gr. *δάκτυλοι* 'Ιδαῖοι, 'fingers of Ida,' in Crete.] In *Gr. antiq.,* a mythological creature supposed to have the secrets of fire and of iron-working. The dactyls were associated with the worship of Rhea and Cybele. The basis is found in some sacred stones (bætyl-stones) found in Crete, and associated with the worship of Cybele.

> These bætyl-stones were called in Crete, *Dactyls.*
> *Jane E. Harrison,* in Jour. Hellenic Studies, XIX. 238.

Dactylagnus (dak-ti-lag'nus), *n.* [NL., < Gr. *δάκτυλος,* finger, + *ἀγνος,* name of a fish.] A genus of small fishes of the family *Dactyloscopidæ,* inhabiting coral sand in the tropics.

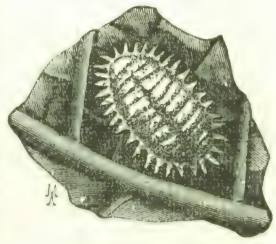
Dactylanthias (dak-til-an'thi-ąs), *n.* [NL., < Gr. *δάκτυλος,* finger, + *ἀνθίας,* name of a fish.] A genus of serranoid fishes found in the sea of Amboyna.

dactylate (dak'ti-lāt), *a.* [Gr. *δάκτυλος,* a finger, + *-ate*[1].] In *anat.,* having finger-like processes; digitate; fingered. A dactylate joint is one formed by the articulation of various long and rather slender processes.

Dactylifera (dak-ti-lif'ę-rä), *n. pl.* [NL., < Gr. *δάκτυλος,* finger, + L. *ferre,* bear.] An order of *Platyhelmia,* of the class *Temnocephaloidea.* They have the body produced into finger-shaped tentacular processes along the anterior margin, sometimes also along the lateral margins; the mouth situated anteriorly; the pharynx leading into a wide, nearly rectangular intestine which has no diverticula. It includes the families *Temnocephalidæ* and *Actinodactylellidæ.*

Dactylioida (dak″til-i-oi'dä), *n. pl.* [NL., < Gr. *δακτύλιος,* a finger-ring (< *δάκτυλος,* a finger: see *dactyl*), + *εἶδος,* form.] A group of the fossil ammonoid cephalopods or ammonites constituting a section of the suborder *Pachycampyli.* It includes umbilicated forms having the venter broader than the dorsum and ornamented with nodes and ridges without continuous median division.

dactylognathite (dak-ti-log'nạ-thīt), *n.* [Gr. *δάκτυλος,* finger, + *γνάθος,* jaw, + *-ite*[2].] In crustaceans, the terminal segment of a complete foot-jaw.



dactylogram (dak-til'ō-gram), *n.* [< Gr. *δάκτυλος,* finger, + *γράμμα,* a writing.] A finger-print.

Dactyloidites (dak″ti-loi-dī'tēz), *n.* [NL., < Gr. *δάκτυλος,* finger, + *εἶδος,* form.] A genus of organisms, found in the Cambrian slates, having a stellate form with rays thickened distally.

dactylolysis (dak-ti-lol'i-sis), *n.* [NL., < Gr. *δάκτυλος,* finger, + *λύσις,* dissolution.] In *pathol.,* loss, by disease, of fingers and toes. See *ainhum.*

dactylomegaly (dak″ti-lō-meg'ą-li), *n.* [Gr. *δάκτυλος,* finger or toe, + *μεγαλία,* largeness, < *μέγας,* great, large.] A condition in which the fingers or toes are abnormally large.

Dactylopius (dak-ti-lō'pi-us), *n. pl.* [NL., < Gr. *δάκτυλος,* finger, + *ὤψ,* eye, face.] An important genus of scale-insects including all of the so-called mealy bugs so abundant in greenhouses. Recent writers place most of the old species of *Dactylopius* in the genus *Pseudococcus.*

Dactylopius citri: female. (Comstock, U. S. D. A.) Five times natural size.

dactylorhiza, *n.* 2. The phenomenon of root-forking.

dactyloscopy (dak-ti-los'kō-pi), *n.* [Gr. *δάκτυλος,* finger, + *-σκοπία,* < *σκοπεῖν,* view.] The identification of individuals by means of examination of the lines on the tips of the fingers: a method employed for the identification of criminals, records of impressions of finger-tips being kept for this purpose.

dactylosternal (dak″ti-lō-stėr'nal), *a.* [Gr. *δάκτυλος,* finger, + *στέρνον,* breast-bone, + *-al*[1].] Having the lateral margins of the plastron dactylate, or provided with finger-like processes, which abut on the carapace and are often received in little depressions: said of some turtles. *Amer. Jour. Sci.,* Feb., 1904, p. 129.

dactylozoöid (dak″ti-lō-zō'oid), *n.* [Gr. *δάκτυλος,* finger, + E. *zoöid.*] One of the members of a colony of *Hydrozoa* whose function is to capture food for the gastrozoöids, or nutritive members of the colony.

dadangsi (dä'däng-sē), *n.* [Chamorro *dadangsi,* sticker, < *dangsi,* adhere.] On the island of Guam, the name applied to burweeds, especially to the dogsfoot-weed, *Urena sinuata,* a half-shrubby plant belonging to the mallow family, with deeply lobed palmate leaves having a nectar-gland on the lower surface of the midrib, and small rose-purple flowers; and to species of *Triumfetta,* belonging to the linden family, with cordate or 3-lobed leaves and cymes of small yellow flowers.

dadap (dä'däp), *n.* [Jav. *dadap,* Malay, *dādap,* also *dĕdap.*] Any one of several species of leguminous trees belonging to the genus *Erythrina;* especially *E. lithosperma* and *E. Hypaphorus,* natives of the East Indies. The dadaps are cultivated in the tropics, especially in Java and Ceylon, for shade in coffee-plantations and for the green manure afforded by their leaves.

dado-head (dā'dō-hed), *n.* See ★*dado-machine.*

dado-machine (dā'dō-mą-shēn″), *n.* In *woodworking,* a modification of a gaining-machine employing a special type of cutter-head, called a *dado-head* or *groover-head,* for forming square, ornamental balustrades, etc.

dædala (ded'ą-lä), *n. pl.* [Gr. *δαίδαλα,* pl. of *δαίδαλον,* a statue, neut. of *δαίδαλος,* wrought by art: see *dedal.*] In *Gr. antiq.*: (*a*) Crude archaic wooden figures. (*b*) A Bœotian festival described by Pausanias. The greater dædala occurred every sixtieth year; the lesser dædala every seventh. The characteristic features of both were certain little wooden figures which were distributed by lot among the cities of Bœotia.

Dæodon (dē'ō-don), *n.* [NL., irreg. < Gr. *δαίειν,* divide, + *ὀδούς,* tooth.] A genus of extinct ungulate mammals of the family *Titanotheriidæ.*

daer-stock (dā′ėr-stok), *n.* [MIr. *dāer*, OIr. *dōir*, *dōer*, base, servile, Ir. *daor*, captive, enslaved, guilty, = Gael. *daor*, enslaved (< *do-*, not, = Gr. *δυσ-*, ill (see *dys-*), + *fear*, man), + E. *stock*.] In *Ir. antiq.*, cattle or other stock granted by a chief to a tenant for his use, ownership still remaining with the chief. Sometimes used attributively: as, *daer-stock* tenancy.

The *Daer-stock* tenant, distinguished by the limited amount of stock which he received from the Chief, remained a freeman, and retained his tribal rights in their integrity. . . . The *Daer-stock* tenant [through accepting a large grant of stock from the Chief] had unquestionably parted with some portion of his freedom, and his duties are invariably referred to as very onerous.
Maine, Early Hist. of Institutions, p. 159.

daffy (daf′i), *a.* [*daff*[1] (still in dialectal use) + *-y*[1].] **1.** Like a silly person; silly; imbecile; 'soft.' [Prov. Eng. and U. S.]—**2.** Dry; insipid. [Prov. Eng.] *Eng. Dial. Dict.*

D. A. G. An abbreviation of *Deputy Adjutant-General.*

dag[2], *n.* **4.** A short tapering or pointed piece of metal like the point of a dagger, used to interlock timbers with each other, or to form the stabbing or piercing teeth on rolls for breaking coal.—**5.** The first antler of a buck, which is slender, almost straight, and without branches, thus resembling a dagger or dag.

dagesh, *n.* See *daghesh*.

dagga (däg′ä), *n.* [South African name, also rendered *dakka*, *dacka*.] In South Africa, *Cannabis Indica*, the Indian hemp, which is used by the natives as a narcotic. It is collected, dried, and smoked by the lower classes of Hottentots, who are rendered stupid and incapable of connected work while under the influence of it. See *hashish*, *deiamba*, and *Cannabis*.

dagger, *n.*—**American dagger**, a noctuid moth, *Apatela americana*, common in the Atlantic United States, where its larvæ feed on the foliage of maple, elm, and other forest and shade trees.—**Ocher dagger**, an American noctuid moth, *Apatela morula*, whose larvæ feed on the leaves of elm and basswood.—**Witch-hazel dagger**, an American noctuid moth, *Apatela hamamelis*, whose larvæ feed on the leaves of the witch-hazel, oak, and other forest trees.

dagger-head (dag′ėr-hed), *n.* A timber placed diagonally in the launching-ways of a ship and securing certain timber shores placed between the bottom of the vessel and the bilgeways.

dagger-moth (dag′ėr-môth), *n.*—**Gray dagger-moth**, an American noctuid moth, *Apatela interrupta*, whose larvæ feed on the foliage of the apple, pear, cherry, and plum.

dagmai (däg′mī), *n.* [Bisaya *dagmai*, *dagmay*.] In the Philippines, a name for *Caladium Colocasia*, also called *gabi*. See *taro*[1] and *Colocasia*.

dago[2] (dā′gō), *n.* [Chamorro *dago*, a yam.] In the island of Guam, the square-stemmed yam, *Dioscorea alata*, and other species of *Dioscorea* resembling it.

Daguerreotype etching, in *photog.*, a process for biting daguerreotypes by immersing the plate in dilute hydrochloric acid opposite a platinum plate, and passing a current from a couple of Grove's cells for a few seconds. Oxychlorid of silver is formed, which, when removed, leaves the plate sufficiently etched to be printed from. Devised by Sir W. R. Grove.

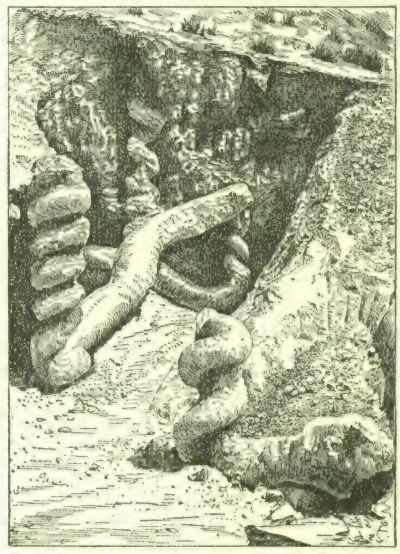
dahlia, *n.*—**Dahlia wartlet**, *Tælia crassicornis*, one of the commonest British sea-anemones.

dahllite (däl′īt), *n.* [Named after the brothers Tellef and Johann *Dahll*, Norwegians.] A mineral containing the phosphate and carbonate of calcium and occurring in yellowish-white fibrous crusts. It probably results from the alteration of apatite. Found at Bamle, Norway.

Dahoman (dä-hō′maṇ), *a.* and *n.* Same as ★*Dahomeyan*.

Dahomeyan (dä-hō′mi-aṇ), *a.* and *n.* **I.** *a.* Of or pertaining to Dahomey.
II. *n.* A native of Dahomey.

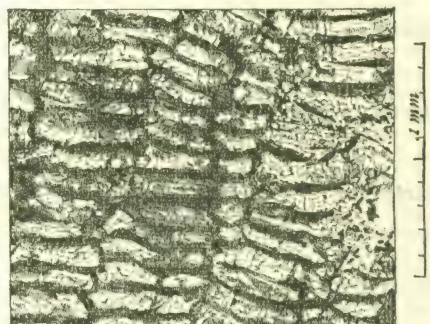
dahu (dä′hö), *n.* A large forest tree, *Artocarpus Lakoocha*, of India and Ceylon, belonging to the breadfruit family. It has simple leaves, glabrous and shiny above and softly downy beneath. The round, velvety, yellow, acid fruit is edible when ripe; the spadix of the male flowers is pickled, and is used in curry; the seeds are eaten; the roots yield a yellow dye, the bark a fiber suitable for cordage; and from the viscous latex a cement is prepared. In Bengal called *dephal* (which see).



Daikoku (dī-kō′kō), *n.* [More fully *Daikokŭten:* Sinico-Jap. *dai*, great, + *kokŭ*, black, + *ten*, deva, god; corresponding to Chin. *t'ai*, great, + *heh* (or *ho*), black, + *t'ien*, heaven, deva.] One of the seven gods of happiness of the Japanese; the god of wealth, whose image is found in every household. He is represented as a short, stout person, wearing a cap with the visor well drawn down; standing or sitting on bags of rice; carrying a mallet, the emblem of labor, in the right hand; and over the left shoulder a large sack (wealth), the mouth of which is grasped firmly with the left hand, thus controlling its expenditure.

daikon (dī′kŏn″), *n.* [Jap. *dai-kon*, < *Chin*, *tai*, great, + *kŭn*, root.] A large variety of radish, *Raphanus sativus*, one of the most important root-crops cultivated in Japan. It is eaten raw or boiled, and when pickled forms the chief relish of the people.

daimiate (dī′mi-āt), *n.* [*daimi(o)* + *-ate*[3].] The position, territory, or jurisdiction of a daimio.



daimioate, *n.* Same as ★*daimiate*.

Daimonelix (dī-mon′ē-liks), *n.* [NL., irreg. < Gr. *δαίμων*, demon, + *ἕλιξ*, spiral: see *helix*.] An erect, spiral, gigantic fossil found in great

Daimonelix in position, Arikaree formation. Sioux County, Nebraska. Average height six to seven feet.

numbers in the Arikaree sands (Loup Fork Tertiary) of northwestern Nebraska, chiefly in Sioux county, and also in eastern Wyoming and southern South Dakota. These anomalous fossils, thought by some to represent the burrows of tertiary rodents, consist throughout of intertwining plant fibers of roots of varying size, which, in section, invariably yield perfectly preserved plant-tissue, a fact which led the discoverer to assign them to the vegetable kingdom. Though of diverse form and varying size, two principal kinds are conspicuous, the one with, the other without, an

Photomicrograph of a thin section of *Daimonelix*, showing plant structure.

axis. *Daimonelix*, though known for years to the cowboys and ranchmen as the *devil's corkscrew*, was first definitely described by Erwin H. Barbour, State geologist of Nebraska, in 1891. Collections of specimens are now to be found in the large museums of the United States, notably that of the University of Nebraska, the Field Columbian Museum, the Carnegie Museum, and the United States National Museum.

daimonion (dī-mō′ni-on), *n.* [Gr. *δαιμόνιον*, prop. neut. of *δαιμόνιος*, adj., < *δαίμων*, demon.] Same as *demon*, 1: usually with reference to the demon of Socrates.

dainanago (dī-nä-nä′gō), *n.* [Jap. *Tainan*, a port of southern Formosa, + *anago*, eel.] A name of the conger-eel of Formosa, *Leptocephalus erebennus*.

dainty, *a.*—**Dainty sulphur**, an American pierid butterfly, *Nathalis iole*, of very small size and yellow color bordered and banded with black. Its larvæ feed on the marigold. It inhabits the southwestern United States and Mexico.

daira (dī′rä), *n.* [Ar. *dāira*, circle, household, private estate, < *dār*, go about.] The private estates of the Khedive of Egypt.

Dairy scales. See ★*scale*[2].

dairy-farmer (dā′ri-färm″ėr), *n.* A farmer who operates a dairy-farm.

dairy-farming (dā′ri-färm″ing), *n.* That branch of agriculture which is specially devoted to the production of milk and the manufacture of butter, cheese, and other milk products.

dais, *n.*—**Chamber of dais.** See ★*chamber*.

daisy, *n.* **4.** A kind of sea-anemone, *Actinia bellis*. [England.]—**Big daisy**, the oxeye daisy.—**Blue daisy**, (*b*) The chicory.—**Blue spring-daisy**, the robin's-plantain, *Erigeron pulchellus*, from its early flowering and the color of the rays. See *plantain*[1].—**Bull's-eye, butter-daisy** (*b*). Names for the oxeye daisy.—**Childing daisy, dicky-daisy**, the English daisy.—**Dog-daisy.** See ★*dog-daisy*.—**English, European, garden daisy.** See *daisy*, 1.—**Horse-daisy.** See ★*horse-daisy*.—**Red daisy**, the orange hawkweed. See *hawkweed*.—**Shasta daisy**, a perennial herb which bears very large white-rayed flowers resembling the white field-daisy in general form: originated by Luther Burbank, and apparently of hybrid origin. It is hardy in New York.—**White daisy**, the oxeye daisy, more commonly called whiteweed.—**Yellow daisy, yellow oxeye daisy**, the common cone-flower, *Rudbeckia hirta*.

daisy-fleabane (dā″zi-flē′bān), *n.* See *fleabane*.

Dajidæ (daj′i-dē), *n. pl.* [NL., < *Dajus* + *-idæ*.] A family of isopod crustaceans parasitic upon schizopods. *Dajus* is the typical genus.

Dajus (dā′jus), *n.* [NL. (*Kröyer*, 1846, G. spelling for **Daius*), < Gr. *δάϊος*, destructive.] The typical genus of the family *Dajidæ*.

Dak. An abbreviation of *Dakota*.

daka (dä′kä), *n.* [Also *dacca*, prop. *dhaka:* see def.] An East-Indian muslin of fine and delicate texture, made on the native loom in the district of Dhaka, or Dacca, Bengal.

dak-boat, dawk-boat (dâk′bōt), *n.* [Hind. *dâk*, a post, + Eng. boat.] A mail-boat. [Anglo-Indian.]

dakhuis (däk′hois), *n.* [D., < *dak*, roof, thatch, + *huis*, house.] A house thatched with straw or reeds. [South Africa.]

Dakota formation. See ★*formation*.

Dakotian (da-kō′ti-aṇ), *a.* Same as *Dakotan*. *L. H. Morgan*, Ancient Society, p. 154.

Daksha (däk′shä), *n.* [Skt. *Daksha*, lit. activity, capacity, power, as adj. able, active, dexterous: see *dexter*.] In *Hindu myth.*, a son of Brahma, of whom grotesque legends were told.

dal[2] (däl), *n.* [D., = E. *dale*[1].] A valley. [South Africa.]

dalaga (dä-lä′gä), *n.* [Tagalog *dalaga* = Pampanga *dalaga*, prob. < Skt. *dāraka*, boy, son, in dual two boys, or boy and girl. Cf. Malay *dāra*, maidenhood, *anak dāra*, a young woman, a maid, < Skt. *dārā*, a wife.] In Luzon, Philippine Islands, a young unmarried woman; a girl.

Dalarnian (da-lär′ni-aṇ), *a.* [Sw. *Dalarne*, 'the valleys,' otherwise *Dalecarlia*, a former province of Sweden: see *dale*[1].] In *geol.*, a series of Precambrian rocks in Sweden.

Dalatiidæ (dal-a-tī′i-dē), *n. pl.* [NL., < *Dalatias* + *-idæ*.] A family of sharks typified by the genus *Dalatias*, otherwise known as *Scymnus* or *Scymnorhinus*. The typical species is *D. licha* of the Old World.

daler (dä′lėr), *n.* [Sw.: see *dollar*.] A copper coin, of fictitious value, of Charles XII. of Sweden.

dalesfolk (dālz′fōk), *n. pl.* Dwellers in a dale or valley; dalesmen. *Mary Howitt*.

daleth (dä′leth), *n.* [Heb. *dāleth*, prop. *dālet:* see *delta*, *D*.] The fourth letter (ד) of the Hebrew alphabet, corresponding to the English *D*. Its numerical value is IV.

dali[2] (dä′lē), *n.* [Hind. *dālī*.] See *dolly*[4].

Dalibarda (dal-i-bär′dä), *n.* [NL., (Linnæus, 1753), named in honor of Thomas François *Dalibard* (1703–79), a French botanist.] A genus of plants of the family *Rosaceæ*, closely related to *Rubus*, but distinguished by the nearly dry drupelets inclosed at maturity by the connivent calyx lobes. The only species, *D. repens*, a native of northeastern North America, is a low perennial unarmed herb, with slender root-stocks bearing tufts of simple, cordate, crenate leaves, the scape-like peduncles bearing 1 or 2 delicate white flowers. It has much the habit of a strawberry. See ★*dewdrop*, 2.

dallastype (dal′as-tīp), *n.* [*Dallas* (D. C. Dallas, inventor of the method, 1875), + type.] A process used in the early days of photo-engraving: now superseded by more modern methods.

Dalmanites (dal-ma-nī′tēz), *n.* *pl.* [NL., ⟨ *Dalman*, a proper name, + *-ites*, E. *-ite*2.] A genus of trilobites of the family *Phacopidæ*, in which the test is distinctly divided into three subequal areas both longitudinally and horizontally. The glabellum is large, with prominent frontal lobe and three pairs of lateral lobes, the compound eyes very conspicuous and schizochroal, thorax with eleven grooved segments, pygidium large, with many segments and usually a caudal spine. It is very characteristic of the Silurian and Devonian formations.

dalmatic, *n.* **2.** The imperial mantle, resembling the ecclesiastical dalmatic, worn by kings and emperors at coronation and on other important occasions. The dalmatic worn by Queen Victoria when she was crowned in Westminster Abbey, June 28, 1838, was of cloth of gold.

dalo (dä′lō), *n.* [Fijian *dalo*, ⟨ Polynesian *taro*.] In Fiji, *Caladium Colocasia*, the roots and leaves of which are among the principal food-staples of the natives. See *taro*.

Daltonist (dâl′ton-ist), *n.* Same as *Daltonian*.

dam1, *n.* **5.** A fire-brick wall forming the front of the hearth or crucible of a blast-furnace, through which the tap-hole is formed. —**Bear-trap dam,** a species of movable dam used in the canalization of rivers for purposes of navigation. It consists of two large plates or leaves, each hinged above its lower edge, one pointing down-stream and the other up-stream. The distance apart of the hinged edges is such that when both are horizontal the leaf pointing down-stream overlaps the other leaf. When both are raised, the free edges of the two leaves approach one another and form a flat triangle nearly isosceles. In this position the two leaves form the barrier to dam back the water of the stream. When it is lying flat on the bottom of the river the dam does not obstruct the stream. It is lowered during high water and during those periods when the natural flow or depth of the stream is adequate for purposes of navigation. When it is desired to increase the depth artificially, the dam is raised. This is accomplished by admitting water through submerged culverts and sluices into the space under the two leaves from a pool artificially created at a short distance up-stream. The pressure of the water underneath the leaves raises them somewhat, and with them the level of the water above the dam. This still further increases the pressure of the water under the leaves, and under its influence the leaves continue to rise to any desired height within the limits of movement provided. The dam is lowered by closing the gates connecting the space under the dam with the upper pool of the river, and opening corresponding gates which connect the space under the leaves with the river below the dam. The internal pressure being thus diminished to a value less than the external pressure due to the load of water on the outside of the dam, the leaves gradually fall. The leaves move closely between abutments or piers at their ends, under which are the culverts and sluices for raising and lowering the dam. This type of dam was first devised in 1818 by Josiah White, a Philadelphia merchant, to meet the needs of coal navigation on the Lehigh river, in Pennsylvania, and was soon adopted extensively on logging-streams in Pennsylvania and Canada. Since 1880 it has received extensive study and its use has been much extended.—**Canvas dam,** a sheet of canvas or stout cloth, usually attached at the upper edge to a strip of wood, so arranged that it can be placed in an irrigation-ditch for the purpose of forcing the water out of the ditch upon the adjacent fields. See ★*tappoon*.—**Drop-head dam,** a dam with a mechanical device which can be dropped to permit the passage of water.—**Flood dam.** See ★*splash-dam*.—**Gravity dam,** a dam of which the cross-section is of such dimensions that the structure will resist the overturning action of water, that is, will stand against destructive forces because of its weight, and not be dependent upon bracing or arch-action against the sides.—**Hydraulic-fill dam,** a dam constructed of materials washed into place by a process similar to hydraulic mining.—**Rolling dam,** a dam for raising the water in a shallow stream. It has no sluiceways, but a smooth top of timber over which, under a sufficient head of water, logs may slide or roll.—**Self-loading dam.** See ★*rafter-dam*.—**To rip a dam,** to remove the plank which closes a splash-dam.

Dama, *n.* This, the generic name for the European fallow-deer, *Dama dama*, or *D. vulgaris*, was for a short time used for the American deer generally placed in the genus *Odocoileus* of Rafinesque, which has precedence over *Cariacus*.

damage, *n.* —**Contingent damages,** those given where the issues upon counts to which no demurrer has been filed are tried, before demurrer to one or more counts in the same declaration has been decided. *Bouvier*, Law Dict.—**General damages,** in *law*, damages which necessarily result from the commission of a wrong or breach of contract, and therefore need not be specially pleaded in the complaint or declaration.—**Intervening damages,** damages which arise after judgment or order: suffered by an appellee by reason of delay caused by an appeal from the judgment or order.

damalic (dą-mal′ik), *a.* [Gr. *δάμαλις*, fem. (*δάμαλος*, m.), a young cow, + *-ic*.] Derived from the cow.—**Damalic acid,** an organic substance found in the urine of the cow.

damaluric (dam-ą-lū′rik), *a.* [Gr. *δάμαλις*, a young cow, + *οὖρον*, urine, + *-ic*.] Derived from the urine of the cow.—**Damaluric acid,** an acid, $C_8H_{10}O_2$, said to occur in cows' urine.

damascenine (dā-mas′ēn-in), *n.* [NL. *damascena* (see def. + *-ine*2.] An alkaloid, $C_{10}H_{15}O_3N$, contained in the seed-coats of *Nigella Damascena L.* It melts at 27° C., boils at 168° C., and gives blue fluorescent solutions.

damask, *v. t.* **3.** To deface or destroy by stamping or marking: as, to *damask* seditious books.

Damaskeen texture, in *petrog.*, the interlaced, variegated, appearance of some varieties of obsidian, produced by differences in color of glass or of varieties of microlites.

dambosite (dam′bōs-it), *n.* Same as *dambonite*.

Damburneya (dam-bėr′nē′ya), *n.* [NL. (Rafinesque, 1838), named for L. A. *Dambourney* (1722–95), a French botanist.] A genus of dicotyledonous trees of the family *Lauraceæ*. See *Nectandra*.

dammar, *n.*—**Philippine dammar,** a resin obtained from *Dammara Philippinensis* (*Agathis loranthifolia* of Blanco, not of Salisbury), a large coniferous tree growing in the mountain districts of Luzon, Camarines, and several other of the Philippine Islands.—**Rock dammar,** the commercial name for the resin obtained in Burma from *Neisandra adorata*.

dammaran (dam′ą-ran), *n.* [*dammar* + *-an*.] A neutral resin, $C_{40}H_{62}O_6$, one of the constituents of Australian dammar-resin.

dammarol (dam′ą-rol), *n.* [*dammar* + *-ol*.] A volatile oil obtained by the distillation of Australian dammar-resin.

dammarone (dam′ą-rōn), *n.* [*dammar* + *-one*.] A volatile oil obtained by the distillation of Australian dammar-resin with lime.

dammar-pine (dam′ąr-pīn″), *n.* A tree, *Dammara alba*. See *Dammara*.

dammaryl (dam′ą-ril), *n.* [*dammar* + *-yl*.] A tasteless, odorless powder, $C_{45}H_{72}$, obtained from dammar-resin. It softens at 145° C. and melts at 190° C.

damnation, *n.*—**Legacy by damnation.** See ★*legacy*.

damnous (dam′nus), *a.* [L. *damnosus*, ⟨ *damnum*, hurt.] In *law*, of or pertaining to damage; causing loss or damage.

damnum fatale (dam′num fā-tā′lē). [NL.] In *civil law*, damages caused by reason of chance, that is, by the happening of an event which could not be foreseen or guarded against by the highest degree of prudence or care.

damp, *n.* **6.** The popular name of a disease which attacks young seedlings and succulent plants, causing them to rot off near the surface of the ground. An excessively moist atmosphere is particularly favorable for its development. *Pythium De Baryanum* is responsible for most of the "damp" in cucumbers, egg-plants, peas and similar plants while a species of *Rhizoctonia* causes this disease in cotton, and *Alternaria tenuis* produces the effect in tobacco. Also called *damping off*.

damp, *v.*—**Damped vibration.** See ★*vibration*.

dampener, *n.* **2.** In *laundry-work*, a machine for dampening collars, cuffs, and other garments previous to ironing. One type employs metal and rubber rolls for spreading a film of water over the collars or other pieces as they pass between the rolls.

dampening-press (damp′n-ing-pres″), *n.* A machine for pressing laundered garments that have already been sprinkled with water or otherwise dampened; a combined sprinkling-machine and press.

damper, *n.* **1.** (*c*) In *elect.*: (1) An attachment which makes a measuring-instrument aperiodic or dead-beat; that is, so that it assumes its final position without oscillation. It usually consists of vanes moving in a closed air-space or in a liquid, or of conductors moving in a magnetic field. (2) The appliance in a synchronous machine or motor used to prevent surging. See ★*amortisseur*.

damper-action (dam′pėr-ak″shon), *n.* In *pianoforte-making*, a collective term for all the parts which compose and control the dampers.

damper-flange (dam′pėr-flanj), *n.* In *pianoforte-making*, the wooden piece, fastened to the action-rail, to which the damper-lever is pivoted. See cut under *pianoforte*.

damper-head (dam′pėr-hed), *n.* In *pianoforte-making*, the padded head or cross-piece of a damper which is designed to check the vibrations of the strings when the key is released. See cut under *pianoforte*.

damper-lever (dam′pėr-lev″ėr), *n.* In *pianoforte-making*, the wooden piece that connects the damper-lifter with the damper-head. See cut under *pianoforte*.

damper-lifter (dam′pėr-lif″tėr), *n.* In *pianoforte-making*, the connective piece between the whip and the damper-lever; also called *spoon*, from its shape. See cut under *pianoforte*.

damper-spring (dam′pėr-spring), *n.* In *pianoforte-making*, the spring which presses the damper-head against the string when the key is released. See cut under *pianoforte*.

damper-wire (dam′pėr-wīr), *n.* In *pianoforte-making*, the wire that carries the damper-lever. See cut under *pianoforte*.

damping, *n.* **2.** (*b*) The stopping of the tendency to surge or hunt, in synchronous machines, as alternating-current generators or synchronous motors or converters, by means of closed low-resistance copper turns inserted in the pole-faces of the magnetic field. See ★*amortisseur*.— **3.** Premature decay in plants, especially young seedlings, attributed to excessive moisture. See ★*damp*, 6.

damping-coil (dam′ping-koil), *n.* In *elect.*, a coil of wire used to check the vibrations of the needle or moving parts of a galvanometer or dynamometer by means of the Foucault currents induced in the coil.

damping-machine (dam′ping-ma-shēn″), *n.* **1.** A machine used for dampening or moistening certain classes of wool fabrics, to render the fibers of the nap more flexible and susceptible of the quality of finish desired. Another form of damping-machine is sometimes used for cotton cloth, to improve its feel and appearance.

2. A mechanism used by printers for the quick dampening of paper to make it pliable under impression.

damping-off (dam′ping-ôf″), *n.* The decay of young plants, particularly of seedlings and cuttings, at the surface of the ground. See ★*damp*, *n.*, 6.

damp-proof (damp′pröf), *a.* Proof against damp: as, a *damp-proof* course of masonry.

damsel-bug (dam′zel-bug), *n.* Any heteropterous insect of the family *Nabidæ*, a group of small predatory bugs often included in the family *Reduviidæ*.—**Black damsel-bug,** a heteropterous insect, *Coriscus subcoleoptratus*, of the family *Nabidæ*, common in the northern United States. It is black in color and has yellowish legs, and usually rudimentary wings.—**Blonde damsel-bug,** a heteropterous insect, *Coriscus ferus*, of the family *Nabidæ*, a third of an inch long, and light yellow in color, dotted with brown. It is found in both Europe and North America, hiding in flowers to capture the small insects which frequent them.

damsel-fish (dam′zel-fish), *n.* A name in tropical regions of various species of the family *Pomacentridæ*, especially of those which have brilliant colors.

dan3 (dan), *n.* [Prob., like *dan*2, a rustic reduction of *dandy*1, applied to various mechanical appliances.] *Naut.*, a small buoy having a pole on which is displayed by day a flag and by night a lantern. It is used to indicate both the position of deep-sea fish-lines and a center around which a steam trawler is worked.

Dan.

Dan. An abbreviation of *Danish*.

Danæa (dā-nē′ą), *n.* [NL. (J. E. Smith, 1793), named in honor of Giovanni Pietro Maria *Dana*, professor of botany in Turin.] A genus of marattiaceous ferns which comprises about 20 species of similar appearance, restricted to the humid forests of the West Indies and tropical America. The sterile fronds are from 1 to 3 feet high and mostly once pinnate, the pinnæ opposite and articulate to the rachis, the veins mostly forked and parallel. The fertile fronds are of similar shape, but somewhat reduced, and the numerous sessile sporangia are borne along the free veins and fused into more or less sunken linear synangia which open eventually by apical pores. Most species have the stipes once or several times nodose. One of the best known is *D. alata*.

danaïdin (da-nā′i-din), *n.* [*dana-in* + *-id*, + *-in*2.] A resinous compound, $C_{22}H_{20}O_6$, obtained by the hydrolysis of danaïn.

danaïn (dan′ą-in), *n.* [NL. *Danais* (see def.) + *-in*2.] A glucoside, $C_{14}H_{14}O_5$, contained in the root of *Danais fragrans*.

danaine (dan′ą-in), *a.* and *n.* **I.** *a.* Of or belonging to the subfamily *Danainæ*.

II. *n.* A member of the subfamily *Danainæ*.

danaro (dä-nä′rō), *n.*; pl. *danari* (-ē). [It., ⟨ L. *denarius*: see *denarius*, *denier*2.] An Italian coin, the denier.

dance, *v.* **II.** *trans.* **4.** In the West Indies, especially Trinidad, to clean and polish (cacao) by treading it with the naked feet. The friction caused by the treading removes the mildew from the outside of the beans and at the same time polishes them.

dance, *n.*—**Green-corn dance,** a ceremonial connected with the ripening of Indian corn.—**Pyrrhic dance.** See *pyrrhic*1, *n.* 1.—**St. Guy's dance, St. John's dance,** chorea.

dance-fly (dans′flī), *n.* Any fly of the dipterous family *Empididæ*, or *Empidæ*: so named from the dance-like mode of flight.

dance-hall (dâns′hâl), *n.* A hall, usually in connection with, or as an annex to, a saloon, where dancing is carried on. [Chiefly U. S.]

dance-house (dâns′hous), *n.* **1.** A dance-hall. —**2.** A house in which ceremonial dances, or

religious ceremonials connected with dances, are performed.

dancer, *n.* 4. Same as *dandy-roller*.

dance-society (dans'sō-sī″e-ti), *n.* In *anthrop.*, a society which has the duty or the privilege of performing a certain religious ceremonial the chief outer expression of which is a dance.

On superficial examination various tribes appear to be organized according to identical principles, but fuller knowledge generally reveals differences among the similarities. From this it was concluded that such terms as gens, band, age-fraternity and *dance-society* have no stable or exact meaning and hence little descriptive value, detailed information being the great desideratum.
Science, May 31, 1901, p. 864.

dancette, *n.* 3. In *silver* and *metal work*, decoration relieved by the addition of twisted wire.

dancing-mania (dan'sing-mā″ni-ą), *n.* A form of saltatory chorea associated with religious ecstasy, occurring in wide-spread epidemics in the middle ages.

dancing-rattle (dan'sing-rat″l), *n.* A rattle used to accompany dances, particularly dances that form part of religious ceremonials. *Ratzel* (trans.), Hist. of Mankind, II. 274.

dancing-stilts (dan'sing-stilts), *n.* Stilts used in dances. Such stilts were used by the natives of the Marquesas Islands, and are also common in China.

dandie dinmont (dan'di din'mont), *n.* A small, long-bodied, short-legged, coarse-haired breed of terriers popular in Scotland, named after Andrew (Dandie) Dinmont, a character in Scott's novel "Guy Mannering," who possessed such a dog.

dandruf, dandrif, *n.* Simplified spellings of *dandruff, dandriff*.

dandy[1], *n.* 5. (*a*) A roller placed on a machine in advance of another, to perform a preliminary operation. (*b*) See *dandy-roller*.—6. An open-work basket or vessel, used either to carry fuel, or to confine fuel in a larger grate, or to hold pig-iron in a furnace-hearth for preliminary heating.

dandy-cart (dan'di-kärt), *n.* A kind of spring-cart, used by milkmen, etc. *N. E. D.*

dandyfunk (dan'di-fungk), *n.* *Naut.*, a kind of pudding formerly well known among seafaring men.

Pantiles, on occasion the only article of food, are what the self-satisfied landlubber would call biscuits. They are served with a liberal hand, but the stock is protected by their almost irrefragable character. Out of pantiles a delectable dish is to be made by vigorous pounding in a bag, followed by the admixture of some handy liquid, preferably old pea soup, with the addition of a little fat pork. When this creation is browned in the oven it becomes "dog's body." Should there be molasses to add, the result is "*dandy-funk*."
C. Protheroe, Life in the Mercantile Marine.

dandy-jack (dan'di-jak), *v. i.* To play the *jackadandy* (which see).

dandy-loom (dan'di-löm), *n.* Originally a hand-loom with a take-up mechanism for the woven cloth, invented by William Redeliffe, in England, in 1802. It was afterward adapted to operation by power.

dandy-rig (dan'di-rig), *n.* The rig of a kind of yawl or sloop known as a dandy. See *dandy*[4].

dandy-roll (dan'di-rōl), *n.* Same as *dandy-roller*.

Dane, *n.*—**Great Dane,** a breed of powerful, straight-haired dogs, standing from 24 to 30 inches high at the shoulders. The muzzle is rather pointed, the tail thin and wiry. The Danes are usually plain mouse-color, but there are spotted and brindled varieties.

Danebrog, *n.* 2. The Danish national flag—a white cross on a red ground. Also *Dannebrog*.

Danes' money. See ★*money*.

Danger ball. See *guilty* ★*ball*.

danger-line (dān'jėr-lin), *n.* A line, real or imaginary, marking the boundary between apparent safety and danger, as the fire-lines at a conflagration, or the line or level on a river-bank above which the rising waters of a river in flood may overflow, or burst the banks. *Monthly Weather Rev.*, Jan., 1902, p. 3.

dangersome (dān'jėr-sum), *a.* [*danger* + *-some*.] Dangerous. [Prov.]

dangle (dang'gl), *n.* One of the points, bobs, rings, or the like, that dangle from an object.

dangle-foot (dang'gl-fůt), *n.* The dropping of the anterior part of the foot in consequence of paralysis of the flexor muscles in the anterolateral part of the leg.

dangle-money (dang'gl-mun″i), *n.* An early Chinese bronze coinage, so called from its resemblance to and former use as dangles of a musical instrument. Also called *bridge-money*.

Danian (dā'ni-an), *n.* [L. *Dania*, Denmark, < *Dani*, Danes: see *Dane*.] In *geol.*, the uppermost division of the Cretaceous system in France and Belgium, wanting in the English series.

Dankali (dän-kä'lē), *n.* One of the dialects of Abyssinia, sometimes grouped with Galla, Somali, and other dialects in a 'Cushite' division of Hamitic languages.

Dantean, *a.* **II.** *n.* A student of Dante.

Danthonia (dan-thō'ni-ą), *n.* [NL. (De Candolle, 1805), named in honor of Etienne *Danthoine*, a French botanist.] A genus of grasses. There are about 100 species, belonging to the tropical and temperate regions of both hemispheres. *D. penicillata*, of Australia, widely distributed in that country and known as *wallaby-grass*, is valued for spring pasturage. *D. Californica* is an important element in the natural pasturage of the Pacific coast of the United States. *D. spicata*, known like other species as *wild oat-grass*, is a characteristic plant of worn-out pastures in the northeastern United States.

Danubian corn. See ★*corn*[1].

Dapedius (da-pē'di-us), *n.* [NL., < Gr. *δάπεδον*, any level surface.] A genus of ganoid fishes of the family *Dapedidæ*, having flattened ovate bodies with elongate dorsal and anal fins and an almost equally bilobed tail. It occurs in the Trias and Lias of Europe and India.

Daphnaceæ (daf-nā'sē-ē), *n. pl.* [NL. (St. Hilaire, 1805), < *Daphne* + *-aceæ*.] A family of dicotyledonous archichlamydeous (choripetalous or apetalous) plants of the order *Daphnales*, by some included in the order *Myrtales*, the mezereon family, typified by the genus *Daphne* (which see). See also *Thymelæaceæ*, by which name it was long known.

Daphnales (daf-nā'lēz), *n. pl.* [NL. (Lindley, 1833), < *Daphne* + *-ales*.] An order of dicotyledonous archichlamydeous plants, including 6 families, of which the *Daphnaceæ* and *Elæagnaceæ* are the most important. In Lindley's classification, of which it is the daphnal alliance, it included the *Proteaceæ* and *Lauraceæ*, which are now referred to different orders.

Daphnean (daf'nē-an), *a.* Of or pertaining to the nymph Daphne. *T. Hardy*.

Daphnephoria (daf-nē-fō'ri-ą), *n.* [Gr. *δαφνηφορία*, < *δαφνηφορεῖν*, *v.*, < *δαφνηφόρος*, laurel-bearing, < *δάφνη*, laurel, + *-φορος*, < *φέρειν*, bear.] In *Gr. antiq.*, a festival, a kind of May-pole ceremony, observed in Thebes, in ancient Greece. It occurred once in eight years, but was probably at first annual. A boy, richly dressed, and with his long hair let down, headed the procession. He was followed by his nearest relative carrying the decorated pole and a band of singing-girls holding olive-branches.

daphnetic (daf-net'ik), *a.* [*daphnet-in* + *-ic*.] Connected with daphnetin.—**Daphnetic acid,** a hypothetical acid, $(HO)_3C_6H_2CH{:}CHCOOH$, (2:3:4:1), known only in the form of salts and of its anhydrid, daphnetin.

daphniacean (daf-ni-ā'sē-an), *a.* and *n.* **I.** *a.* Resembling or pertaining to the *Daphniacea*.

II. *n.* One of the *Daphniacea*.

daphnite (daf'nīt), *n.* [Gr. *δάφνη*, laurel, + *-ite*[2].] A rare member of the chlorite group, occurring in green flexible laminæ aggregated in small spherical forms with concentric and radiated structure; it is characterized by the presence of ferrous iron with almost no magnesium.

dapicho (dap'i-chō), *n.* [Braz. *tapicho*, classed doubtfully as a Tupi word; compare Guarani *tapichá*, similar.] A South American name for the caoutchouc from the roots of *Siphonia elastica*. Also called *zaspis*.

Dappled butter. See *diseased* ★*butter*.

D. A. Q. M. G. An abbreviation of *Deputy Assistant Quartermaster-General*.

D. A. R. An abbreviation of *Daughters of the American Revolution*, a society of American women.

darapskite (da-rap'skīt), *n.* [Named after Dr. L. *Darapsky*.] A monoclinic salt consisting of the nitrate and sulphate of sodium: found in Atacama.

Darby and Joan seat. See ★*seat*.

dariole (dä-ri-ōl'), *n.* [F.; origin unknown.] A French cheese-cake.

dark[1], *a.*—**Cathodic dark space** or **Crookes's dark space.** Same as *Crookes's* ★*space*.—**Dark Continent,** a name applied to Africa by H. M. Stanley (1878), probably in allusion to the lack of knowledge with regard to it, as well as to the dusky complexion of its inhabitants.—**Dark lightning, radiation, segment.** See ★*lightning*[1], etc.—**Dark slide,** in *photog.*, the holder for the sensitized plate; plate-holder: single or double back.—**Dark star.** See ★*star*[1].

darkling, *a.* 4. Sitting in the dark.

As to Eusapia, in Appendix A (not Appendix B, as the notes say), Dr. Maxwell criticizes the Cambridge report on her deceptions. Dr. Hodgson deliberately allowed her to release her hand from his hold, informed the *darkling* company that phenomena were about to occur, and occur they did. *Athenæum*, June 3, 1905, p. 693.

dark-sighted (därk'sī″ted), *a.* In *psychol. optics*, adapted to light, and therefore seeing objects as if tinged with black.

If we pass, again, from light to dark, our eye is *dark-sighted*. *E. B. Titchener*, Exper. Psychol., I. i. 23.

Darluca (där-lū'kä), *n.* [NL. (Castagne, 1851), named after Michel *Darluc*, a French naturalist and physician.] A genus of sphæropsidaceous fungi having globose, superficial pycnidia and mostly spindle-shaped hyaline spores provided with polar appendages. Eight species have been described most of which are parasitic on rusts (*Uredinales*). *D. Filum* is a very common cosmopolitan species.

darning-egg (där'ning-eg), *n.* Same as *darning-ball*.

darning-needle, *n.*—**Eve's darning-needle.** Same as *Adam's needle and thread*, the *Yucca filamentosa*.

daroga (dä-rō'gä), *n.* [Also *darogha, daruga, droga*, etc.; < Hind. *dārōghah*.] An overseer; inspector; superintendent; governor: a title (originally Mongol) applied in India to various executive officers. *Yule and Burnell*.

darrein, *a.*—**Puis darrein continuance** (Since the last continuance), in *law*, a plea allowed to a defendant, after having already pleaded, by reason of some new matter arising after joinder of issue.

dart[1], *n.* 6. Plan; scheme. [Australian slang.]

Your only *dart* is to buy a staunch horse with a tip-cart. *Rolf Boldrewood*, Nevermore, iii.

7. Idea; 'style'; fancy: as, "strawberries and cream, eh!—that's my *dart*." [Australian slang.]

darter, *n.*, 3. (*a*) (2) Of these small brilliantly colored fishes of the fresh waters of the eastern United States about 50 species are known, the following being the most common: the black-sided darter, *Hadropterus aspero*; the blue darter, *Etheostoma cæruleum*; the blue-breasted darter, *Etheostoma camurum*; the fan-tailed darter, *Etheostoma flabellare*; the green-sided darter, *Dipleson blennioides*; the johnny darter, *Boleosoma nigrum*; the least darter, *Microperca punctulata*; the manitou darter, *Percina caprodes*, var. *zebra*; the tessellated darter, *Boleosoma olmstedi*.

dart-fish (därt-fish), *n.* A carangoid fish, *Trachynotus russelli*, inhabiting Australian waters.

dartman (därt'man), *n.*; pl. *dartmen* (-men). A warrior or soldier armed with darts or javelins.

dartwood (därt'wůd), *n.* A small rubiaceous tree of the West Indies, *Chomelia fasciculata*, used for darts and arrows.

darwinite (där'win-īt), *n.* [*Darwin* + *-ite*[2].] A mineral found in Chile. Same as *whitneyite*.

Darwin's point, process, tip. Same as *Darwin's tubercle* (which see, under *tubercle*).

das (das), *n.* [D. *das* = G. *dachs*, a badger.] Same as *dassy*.

dash, *n.*—**Black dash,** an American hesperiid butterfly, *Limochores pontiac*, blackish brown in color with yellow on the basal half of the fore wings: found from Massachusetts to Nebraska.—**Long dash,** an American hesperiid butterfly, *Thymelicus mystic*, occurring in the northeastern United States and feeding in the larval state on grass.

dash[2] (dash), *n.* [Also *dashee*; W. African.] A present or gratuity; a cumshaw. *N. E. D.*

dash-box (dash'boks), *n.* A dash-pot; a cylinder in which a partial vacuum is created by more or less withdrawing a piston. On the return of the piston by its weight or a spring, the air below is compressed and released through controlled openings, causing the valve to seat with less shock or with none.

dashee (dash'ē), *n.* [W. African.] Same as ★*dash*[2], *n.*

dash-foot (dash'fůt), *n.*; pl. *dash-feet* (fēt). An iron, fitted to receive and retain the dash-frame, attached to the inner side of the front panel or bar of a light carriage-body.

dash-molding (dash'mol″ding), *n.* A light metallic molding placed upon the top edge of a dash to protect the leather from being worn by the driving-reins.

dash-piston (dash'pis″ton), *n.* The piston which slides in a dash-pot. Sometimes, as in the case of a dash-pot on a governor, the piston does not fit closely in the pot, a passage being left for the oil with which the pot is filled. In the case of the dash-pots for closing the admission-valves of a Corliss engine, the piston fits tightly, and a vacuum is formed when it is drawn up, and compression occurs on the descent.

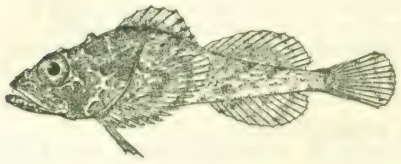
dash-plate (dash'plāt), *n.* A plate sometimes fixed in a marine boiler, over the fire-box, to prevent the crown-sheet from being left bare when the ship heels or rolls heavily. Such a plate holds the water from running to leeward as the ship rolls, and hence the crown-sheet does not get overheated. Also called *division plate*.

dash-rail (dash'rāl), *n.* A rail placed outside of the covered rails of the dash of a carriage.

Dasistoma (dą-sis'tō-mą), *n.* [NL. (Rafinesque), irreg. < Gr. *δασύς*, shaggy, + *στόμα*,

mouth: in allusion to the hairy throat of the corolla.] A genus of plants of the family *Scrophulariaceæ*. It is related to *Gerardia*, but differs in its yellow flowers, with the cells of the anthers awned at the base. There are about 8 species, natives of eastern North America, variously known as *false foxglove, yellow foxglove*, etc. One of them, *D. Virginicum*, is sometimes called *golden oak*, because of the shape of its leaves.

dastur (da-stör′), *n.* [Also *destour, destoor, dustoor;* Pers. *dastūr,* < Pahlavi *dastōbār,* chief councilor, chief priest. Compare *dustoor,* custom.] A chief priest.



Dasyatidæ (das-i-at′i-dē), *n. pl.* [NL., < *Dasyatis* + *-idæ*.] A family of sting-rays, typified by the common sting-ray of Europe, *Dasyatis pastinaca*. The rays of this family have small teeth and a slender tail usually provided with a strong serrated spine which may inflict a dangerous wound. The name of the family is usually *Tragonidæ*, but the name *Dasyatidæ* is older.

Dasyatinæ (das″i-ä-tī′nē), *n. pl.* [NL., < *Dasyatis* + *-inæ*.] A subfamily of sting-rays typified by the genus *Dasyatis*, characterized within the family by the slender tail.

Dasyatis (das-ī′a-tis), *n.* [NL. (Rafinesque, 1810), later corrected to *Dasybatis* and *Dasybatus*, < Gr. *δασύς*, thick, + *βατίς* (also *βάτος*), a ray or skate.] The typical genus of sting-rays, represented by numerous species on both sides of the Atlantic, in the South Seas, and about the East Indies. Usually called *Trygon*.

Dasybatus (da-sib′a-tus), *n.* [NL., < Gr. *δασύς*, thick, + *βάτος*, a ray or skate.] An emended form of ★*Dasyatis*.

Dasycottus (das-i-kot′us), *n.* [NL., < Gr. *δασύς*, shaggy, + *κόττος*, a fish (see *Cottus*).] A

Dasycottus setiger.
(From Bulletin 47, U. S. Nat. Museum.)

genus of small soft-bodied sculpins found in the deep waters of the North Pacific.

dasyphyllous, *a.* 2. Having thickly set leaves. —3. Having thick leaves.

dasyproctine (das-i-prok′tin), *a.* Relating to or like the agutis which belong to the genus *Dasyprocta*.

dasypygal (das-i-pī′gal), *a.* [Gr. *δασύς*, hairy, + *πυγή*, rump.] Having the posteriors covered with hair: said of the large anthropoid apes as distinguished from the gibbons and Old World monkeys, which have ischial callosities. [Rare.]

Dasyscopelus (das-i-skop′e-lus), *n.* [NL., < Gr. *δασύς*, rough, + *σκόπελος*(?), a peak, promontory.] A genus of lantern-fishes of the family *Myctophidæ*, characterized by the rough, firm scales. *D. spinosus* is a species from the mid-Atlantic.

Dasyscypha (da-sis′i-fä), *n.* [NL. (Nees, 1817), < Gr. *δασύς*, hairy, + *σκύφη, σκίφος*, cup.] A genus of discomycetous fungi, so named from the hairy ascomata which are sessile or stipitate. The spores are usually simple and hyaline. About 150 species have been described. They are distributed throughout the world and occur chiefly on decaying trunks and branches. *D. Willkommii* is said to produce a disease of the larch called *blister*. See *larch-★blister*.

datal (dā′tal), *a.* [*date*[1] + *-al*[1].] Chronological: of or pertaining to date: as, the facts are stated in *datal* order. *N. E. D.*

date[1], *n.*—**Of even date,** an expression commonly used in legal instruments to indicate that another instrument referred to was or is to be executed upon the same date.

date[3], *n.* 2. An occasional name in California of the fanleaf palm, *Neowashingtonia filamentosa*.—**Chinese date,** the fruit of a cultivated form of the Asiatic jujube, *Zizyphus Jujuba*. It is eaten either fresh or dried, and is often candied as a sweetmeat. See *Zizyphus*.—**Date coffee, honey.** See ★*coffee*, ★*honey*.—**Trebizond date,** the date-plum of the Mediterranean region, *Diospyros Lotus*. It is considered to afford the best stock for grafting persimmons.—**Wild date,** in California, one of the Spanish bayonets, *Yucca Mohavensis*. The fruit has somewhat the appearance of a date and has also a sweet and succulent flesh, eaten, fresh or dried, by the Indians.

date-fever (dāt′fē″vėr), *n.* Same as *dengue*. *Buck*, Med. Handbook, III. 400.

date-palm, *n.* The date-palm, introduced by the Mission Fathers and by American pioneers, has long existed in California, but in inferior seedling varieties. Good varieties have recently been introduced by the United States Government under auspices promising commercial success over limited areas in Arizona and California. The date-palm, to mature fruit, requires long-continued heat and dry air above, with an abundance of water at the roots, and is thus suited to hot deserts reclaimed by irrigation. It will bear alkali in the soil and will endure more frost than the orange, but less than the peach. It is dicœcious and in culture is usually pollinated artificially, one male tree sufficing for a hundred female. The varieties do not breed true by seed and are propagated by the suckers or offshoots put forth from the base of young trees. The tree dies if the terminal bud is destroyed. The plantations in the Sahara form a shelter for many fruit-trees which could not otherwise be grown. The fruits as grown by the Arabs are of three principal types, viz. soft dates (those known to the American market), which are very sugary; similar dates, but with a much lower sugar-content, usually eaten fresh from the tree; and dry dates, which are not at all sticky, are picked up as they fall, and are regarded by the Arabs as much better for food than the soft dates. One of the best of innumerable named varieties is the *deglet noor*. Some good seedling varieties have been developed in the southwestern United States.

dater, *n.* 3. An apparatus for stamping the date on receipts, orders, or other papers. In some complex forms the hour also can be indicated, a clock in the base of the instrument changing the hour as the day advances, without attention from the user.

datil (dă′tēl), *n.* [Sp. *dátil*, date (*Phœnix dactylifera*): see *date*[3].] 1. *Yucca baccata*. See *yucca*.—2. In South America, a name of several palms, especially of *Cocos Datil*, the leaves of which yield a fiber which is braided by the natives into hats, baskets, etc.

dating-machine (dā′ting-ma-shēn″), *n.* A machine having type-wheels and mechanism for printing dates on cards, tickets, etc.; a dater.

datiscaceous (dat-is-kā′shius), *a.* Belonging to the plant family *Datiscaceæ*. Also *datisceous*.

datiscetin (da-tis′e-tin), *n.* [*datisc-in* + *-et-* + *-in*[2].] A pale-yellow compound, $C_6H_4 < \overset{3,4}{\underset{O}{CO}} > C_6(\overset{5,6}{OH})_2(OCH_3)_2$, prepared by the action of sulphuric acid on datiscin. It crystallizes in needles, melting at 237° C.

Datism (dā′tizm), *n.* [Gr. *Δατισμός*, < *Δᾶτις*, Datis, the Median commander at Marathon, who spoke broken Greek.] Brokenness or incorrectness of speech natural to a foreigner, or an instance of this; a fault or mistake in speaking a foreign language.

We can understand that a small Athenian boy should commit a *Datism* in Latin.
Saturday Rev., Nov. 14, 1891, p. 554.

datival (dā-tī′val), *a.* Of or belonging to the dative case: as, *datival* terminations.

dato (dä′tō), *n.* [Also *datto, dattu;* Philippine Sp. *dato, datto,* < Sulu *datoh*, chief, < Malay *dātoḳ, dātuk*, a grandfather, the head of a family, hence a title of distinction, a chief, a petty prince.] A feudal lord or chief in Sulu and other Malayan countries. In Sulu the datos formed a council which governed the state. The sultan was merely the executive head of the council.

The Galas district is nominally under the charge of the *Dato*, Bentara, but he lives at Kota Bharu, as do all the chiefs. *Geog. Jour.* (R. G. S.), IX. 36.

datum, *n.*—**Ordnance datum.** See ★*ordnance*.

daturic (dā-tū′rik), *a.* [*datura* + *-ic*.] Of or pertaining to datura. Noting a colorless acid, $C_{17}H_{34}O_2$, isomeric with margaric acid, occurring as a glyceride in the seeds of *Datura stramonium*. It crystallizes in slender needles melting at 55° C.

daturinic (dā-tū-rin′ik), *a.* [*datura* + *-in* + *-ic*.] Same as ★*daturic*.

daturism (dā-tū′rizm), *n.* [*datura* + *-ism*.] Poisoning by datura or stramonium (Jamestown or jimson weed), or its active principle, daturine.

daub, *n.* 5. In coloring enameled leather, a thick black substance put on as a first coat to fill the surface in preparation for the final coloring. *Modern Amer. Tanning*, p. 265.

dauber, *n.* 2. A heavy round brush of ricc-root, sharpened to a round point, used for cleaning out the corners of a carriage.

daufin, *n.* A simplified spelling of *dauphin*.

daughter-chromosome (dâ′tėr-krō″mō-sōm), *n.* One of the two chromosomes which arise by the equal division of a single chromosome in a mother-cell.

daughter-cyst (dâ′tėr-sist″), *n.* A cyst formed on the interior of the mother-cyst in *Tænia echinococcus*, the cause of hydatids in man and in various domestic animals. From the walls of the daughter-cyst arise numerous tapeworm heads, or scoleces, which are readily detached; and if the organ containing the cyst be swallowed by the dog, the final host of the parasite, some of the scoleces are likely to develop into the adult form of the tapeworm.

daughter-nucleus (dâ′tėr-nū″klē-us), *n.* In *cytol.* and *embryol.*, one of two cell-nuclei derived by division from a single mother-nucleus, as in normal cell-division. See cut under ★*chromatin*.

daughter-segment (dâ′tėr-seg″ment), *n.* In *cytol.* and *embryol.*, either of two metameres, blastomeres, chromosomes, or other organic elements, derived by division from a single mother-element of the same kind.

daumont (dō-môn′), *n.* [Named from the Duc *d'Aumont*, who introduced this vehicle into France in the time of Napoleon I.] A carriage drawn by four horses, of which the two near ones are ridden by postilions, and having two footmen at the rear: noting a style of driving.

dauphin, *n.* 2. A billon coin struck, under Charles VII. of France, for Dauphiné.

Davallieæ (da-va-lī′ē-ē), *n. pl.* [NL., < *Davallia* + *-eæ*.] A tribe of mainly tropical polypodiaceous ferns. Its component genera are distinguished by usually terminal and marginal or submarginal sori, and by extrorse indusia. It includes among others the well-known genera *Davallia* and *Nephrolepis*, several species of which are commonly cultivated, those of the latter genus being known as sword-ferns.

davenport, *n.* 2. A large sofa or settee; a similar sofa convertible into a bed. [Trade use.]

David's harp. See ★*harp*.—**David's shield.** See *Zionist* ★*flag*.

Daviel's spoon. See ★*spoon*.

daviesite (dā′viz-īt), *n.* [Named after Thomas *Davies* of the British Museum.] A lead oxychlorid occurring in colorless prismatic crystals: from Atacama.

dawa (dä′wä), *n.* [Fijian name.] In the Fijian Islands, *Pometia pinnata*, a stately forest-tree which belongs to the *Sapindaceæ*. It has pinnate leaves, flowers in terminal panicles, and fruit containing a seed inclosed in a honey-like, glutinous, pulpy white aril which is edible and is esteemed by the natives. The bark is saponaceous, and the timber, though coarse-grained and porous, is suitable for cabinet-work. The tree is also found in New Hebrides, New Caledonia, and New Guinea.

dawk-boat, *n.* See ★*dak-boat*.

dawn, *n.*—**False dawn,** a transient light on the horizon about an hour before dawn; a phenomenon well known in the East.—**Liquid dawn,** in *ceram.*, a ruby-red color, obtained from copper. Also called *dawn-red*.

dawn-red (dân′red), *n.* Same as *liquid* ★*dawn*.

day[1], *n.*—**Affirmance day general.** See ★*affirmance*.—**Apparent solar day,** the interval between two successive meridian transits of the sun. On account of the sun's variable motion in right ascension, these apparent solar days vary slightly in length: December 23–24 is about 53 seconds longer than September 17–18.—**Borrowed days.** See ★*borrowed*.—**Change of day,** a change in one's reckoning in circumnavigating the world, in order to make it agree with the calendar. (See *gained* ★*day, lost* ★*day*.) This is accomplished when, on crossing the 180th meridian (or a conventional line which has been substituted for it in certain parts of its course), one day is dropped (the lost day) when sailing from east to west, or one day is reckoned twice when sailing from west to east. See *date-line*.—**Confederate memorial day,** a legal holiday in several of the southern United States: in Alabama, Florida, Georgia, and Mississippi, April 26; in North and South Carolina, May 10; and in Virginia, May 30.—**Day in, day out,** every day; all the time.—**Day of atonement.** See *Jewish* ★*fasts* and *Jewish* ★*festivals*.—**Days of devotion,** feast days, whose observance is a matter of devotion and not of obligation.—**Day terrors,** sudden attacks of fright with a confused mental state, sometimes occurring in children during their waking hours.—**Flag day,** the anniversary of June 14th, 1777, when Congress adopted the Stars and Stripes as the flag of the United States of America: now widely observed as a holiday.—**Gained day,** the day that is gained or reckoned twice when circumnavigating the world from west to east. See *date-line* and *change of* ★*day*.—**Labor day.** See *labor-day*.—**Lost day,** the day that is dropped out, at the date-line, in circumnavigating the globe from east to west, in order to make the traveler's reckoning agree with the calendar.—**Lunar day.** (*a*) The period of the moon's axial rotation. (*b*) The time during which the sun shines upon any specified point of the moon's surface: opposed to *lunar night*. (*c*) The interval between two successive transits of the moon across the meridian: sometimes called *tidal day*.—**Lustrical day,** in *Rom. antiq.*, the day on which a child was purified by sacrifice and received a name: for boys the ninth after birth, for girls the eighth.—**Making-up day.** Same as *contango* or *continuation day*.—**Midwinter day,** an old name for *Christmas day*.—**Primrose day,** April 19, the anniversary of the death of Benjamin Disraeli, Earl of Beaconsfield, celebrated by his admirers and followers, members of the *Primrose League* (which see, under *league*[1]).—**St. Barnabas's day.** Same as *Barnaby day* (which see, under *day*[1]).—**St. John's day.** (*a*) June 24, a festival observed in honor of St. John the Baptist: an important day in the history of freemasonry. (*b*) December 27, a festival observed in honor of St. John the evangelist and apostle.—**Seal days,** in *Eng. law*, days upon which motions were heard in the Court of Chancery. They were so named because each motion had to be stamped with the seal of the court, which was not in court on other court days.—**Tidal day,** the interval between two high tides, as distinguished from the length of the lunar day or the solar day. The tidal day results from the interferences of the great lunar and solar tidal waves.—**Treasury day,** pay-day. (Theatrical slang.)—**Year and day.** See ★*year*.

dayan (dä-yän′), *n.*; pl. *dayanim* (dä-yä′nēm). [Heb. *dayān*.] A judge. See ★*beth-din*.

day-blind (dā′blīnd), *a.* Able to see indistinctly or not at all in a bright light. See *hemeralopia*. *Buck*, Med. Handbook, IV. 628.

day-breeze (dā′brēz), *n.* A periodical light wind, occurring in open countries far from any special influences of oceans or mountains.

It is due to the descent of rapidly moving cool air replacing that which ascends when heated by sunshine. The corresponding night-breeze is due to the flow of air from adjacent hills or trees, where it has been cooled by nocturnal radiation.

day-coach (dā′kōch), *n.* In *railroading*, an ordinary passenger-car with ordinary double seats, as distinguished from a sleeping-car, drawing-room car, dining-car, or chair-car: not necessarily limited to day use.

day-dawn (dā′dân), *n.* Break of day; the dawn. *Coleridge.*

day-degree (dā′dē-grē″), *n.* In *phenology*, the unit by which an excess or deficit of effective heat is expressed; one degree of temperature per twenty-four hours. Thus the germination of a seed planted in the ground may require ten days at an average temperature of 50° F., or 500 day-degrees; or 80 day-degrees above 42° F. considered as the lower limit of vitality. The day-degree centigrade and the day-degree Fahrenheit are used in the metric and English systems respectively.

day-mosquito (dā′mus-kē″tō), *n.*—**Spotted day-mosquito**, the common name in the British West Indies for the yellow-fever mosquito, *Stegomyia fasciata.*

day-number (dā′num-bėr), *n.* A numerical datum used in calculating the corrections for aberration, precession, and nutation required in reducing the mean place of a star to its apparent place for any day of the year.

Independent *Day-Numbers* for the year 1903, as used at the Royal Observatory, Cape of Good Hope.
Geog. Jour. (R. G. S.), XVIII. 646.

day-stone (dā′stōn), *n.* A surface fragment.

day-student (dā′stū″dent), *n.* A non-resident student who attends college during the day.

day-ticket (dā′tik″et), *n.* A railway or other ticket good for only one day, usually the day of issue.

Dayton limestone. See ★*limestone.*

day-view (dā′vū), *n.* [A translation of G. *tagesansicht.*] The metaphysical system of Gustav Theodor Fechner, of which the principal points are that there is no absolutely unconscious matter, that all finite beings make up one sole infinite being, and that this is the only relation between the finite and the infinite.

dazement (dāz′ment), *n.* [*daze* + *-ment.*] A dazed state or condition.

The 'king relapsed' into his *dazement*, muttering, "It cannot be, it cannot be!"
L. Wallace, The Fair God, vii. 4.

D. B. An abbreviation of *Doomsday Book.*

D-bit (dē′bit), *n.* Same as *pod-bit.*

D. C. An abbreviation (*b*) of *direct current;* (*c*) of *District Court;* (*d*) of *District of Columbia;* (*e*) of *Deputy Consul;* (*f*) of *Divus Cæsar* (the divine Cæsar).

D. Ch. An abbreviation of *Doctor of Chemistry.*

D. C. S. An abbreviation of *Deputy Clerk of Session.*

D. E. An abbreviation of *Dynamical Engineer*, a degree conferred at the completion of a graduate course in mechanical engineering.

deacon, *n.* 4. A hunter's name for the young of the elk or wapiti, *Cervus canadensis.*

deacon-seat, *n.* The bench in front of the sleeping-bunks in a logging-camp.

Deacon's process. See ★*process.*

deactivation (dē-ak-ti-vā′shọn), *n.* [*de-* + *active* + *-ation.*] Loss of radioactivity: said of radium and its emanations, and of other radioactive substances.

Prof. Curie, in Comptes Rendus, gives the results of his experiments of the action taking place when radium is placed in an inclosure maintained at 450 deg. C. or at — 180 deg. C. He finds that the law of *deactivation* is still the same throughout this range of temperature.
Sci. Amer. Sup., Feb. 20, 1904, p. 23523.

dead, *a.* 19. In *golf*, said of a ball: (*a*) when it falls without rolling; (*b*) when it lies so near a hole that the player is "dead sure" to hole it; (*c*) when it lacks life or resiliency. —20. In *elect.*, said of a circuit which is not connected with any source of electric power, either directly, or indirectly, as by induction. —21. Said of molten metal when it is thick and sluggish, either from insufficient melting, or from having stood too long in a ladle. Dead metal does not pour well and is not suitable for making thin castings, although it may be successfully used for heavy castings.—**Dead end,** a closed end of a branch water-pipe, passage, etc., through which there is no flow or movement. —**Dead fin.** Same as *adipose fin.*—**Dead fingers,** coldness and pallor of the fingers due to defective circulation, a precursor, at times, of Raynaud's disease.—**Dead finish.** See ★*finish.*—**Dead full,** said of a contact at billiards when the exact center of the cue-ball hits the exact center of the first object-ball. *W. Broadfoot*, Billiards, p. 327.—**Dead lime.** See ★*lime*1.—**Dead loss.** See ★*loss.* —**Dead low water,** the lowest stage of ebb-tide.—**Dead space.** (*b, c, d*) See ★*space.*—**Dead time, water.** See ★*time*1, ★*water.*—**To be dead,** in *golf*, to lie so near the hole that a player is certain to put it in with his next stroke: said of a ball.

dead-bird (ded-bėrd′), *n.* A certainty; a foregone conclusion. [Australian slang.]

dead-bolt (ded′bōlt), *n.* In a lock, a bolt operated directly by the key.

dead-burnt (ded′bėrnt), *a.* Said of lime or plaster of Paris, heated so strongly in the burning as to have become incapable of promptly taking up water: the lime is thus prevented from slaking or the plaster from setting.

Under favorable conditions gypsum actually breaks up at 63°.5, and forms insoluble anhydrite found in nature and identical with *dead-burnt* gypsum.
Nature, Nov. 19, 1903, p. 64.

deadener, *n.* 2. In *lumbering*, a heavy log or timber, with spikes set in the butt-end, so fastened in a log-slide that the logs passing under it come in contact with the spikes and are retarded.

deadeye, *n.* 2. In *mech.*, a bearing made in a solid piece, and not split into halves or provided for taking up wear: used mostly in cheap and temporary work.

dead-finish (ded-fin′ish), *n.* Any one of several leguminous trees or shrubs of the genera *Acacia* and *Albizzia;* especially *Albizzia basaltica* and *Acacia Farnesiana*, which by their dense growth form such an obstruction to the traveler that he is brought to a 'dead finish' or halt.

dead-furrow (ded′fur″ō), *n.* In *agri.*, the furrow that remains open in the center of a 'land' or field in plowing. The dead-furrow is the last furrow made; it is really a double furrow, since the plow throws the furrow-slice either way in making the last "round."

dead-head, *n.* 4. In *lumbering*, a sunken or partly sunken log.

dead-lock, *n.* 3. A lock with a key-bolt, but with no latch-bolt, operated by a knob.—4. A lock in which the key-bolt must be moved by turning the key in each direction: distinguished from a spring lock.

dead-lock (ded′lok), *v. t.* To bring to a deadlock or standstill: as, "they have *dead-locked* the legislature," *The Nation*, Aug. 4, 1892, p. 81.

dead-lurk (ded′lėrk), *n.* Sneak-thieving; the entering of a dwelling during the absence of the family, for the purpose of robbery. [Slang. Chiefly Eng.]

dead-man (ded′man), *n.* In *lumbering*, a fallen tree on the shore, or a timber to which the hawser of a boom is attached.

dead-man's-thumb (ded′manz-thum″), *n.* The early orchis, *Orchis mascula* of England, so called from the color and shape of the tubers. Also called *dead-man's-hand.* [Prov. Eng.] *N. E. D.*

dead-plate, *n.* 2. The part of a cotton-scutching machine between the beater-grids and the dust-cages.

dead-roasting (ded′rōs″ting), *n.* Roasting of ores carried to the farthest practicable degree in the expulsion of sulphur. Also called *sweet-roasting.*

dead-stroke, *a.* **II.** *n.* A stroke in power hammers (as in those driven by steam or by belts) in which the hammer-head is not instantly withdrawn after striking and the blow is inelastic in effect and is not received on any cushioning device. This is the most effective blow, and is preferred except for fine finishing or planishing strokes. It is secured by having the mechanism which lifts the hammer after the blow overtake the hammer-head after the blow has been delivered.

dead-water, *n.* 2. The water which is below the level of the heating-surface in an internally fired steam-boiler, the circulation in this part of the boiler being very slow.

dead-weight, *n.* 4. In *railroading*, the weight of a car as distinct from its load (called the *live* or *paying weight*) whether it is a freight-car, a passenger-car, or a stock-car.

dead-wheel (ded′hwēl), *n.* A wheel or pulley which surrounds a sleeve or cylinder carrying or supporting a mechanism, but which cannot be used as a driving-pulley.

dead-wood, *n.* 5. In *card-playing*, the discards from the various players; cards which cannot be used again for any purpose during the hand then being played.—**Dead-wood fence,** a fence built of fallen tree-trunks cut into suitable lengths, laid side by side, and finished above with the smaller branches. [Australia.]

deaf, *a.*—**Deaf-and-dumb alphabet.** See *deaf-mute.* —**Deaf nut,** a nut without a kernel; figuratively, anything empty and worthless. *N. E. D.*

deaf-ears (def′ērz), *n. pl.* The ear-lobes of the domesticated fowl.

deafforest (dē-a-for′est), *v. t.* Same as *disafforest.*

deafforestation (de-a-for-es-tā′shọn), *n.* Same as *disafforestation.*

deaf-mutism, *n.* 2. A usage in speech or writing that is peculiar to deaf-mutes.

deafness, *n.*—**Cortical deafness,** deafness due to a lesion in the cortex of the brain.—**Labyrinthine deafness.** Same as *nervous deafness.*—**Mental deafness, psychical deafness,** a form of mental disorder in which sounds can be heard, but cannot be recognized or interpreted. It is supposed by Munk to be due to the destruction of the cortical centers in which auditory sensations are raised to the rank of perceptions.

The phenomena which make their appearance after destruction of the former [centers], he [Munk] names, in the case of the two higher senses, cortical blindness and cortical deafness; the disturbances which result from the extirpation of the centers of the second order, he terms mental blindness and *mental deafness.*
W. Wundt (trans.), Physiol. Psychol., I. 201.

Mind-deafness. Same as *mental* ★*deafness.*—**Paradoxical deafness,** deafness, due to disease of the middle ear, in which hearing is more acute in a noisy place, as the street or a railway train. Also called *paracusis of Willis.*—**Psychical deafness.** Same as *mental* ★*deafness.*—**Throat-deafness,** deafness resulting from a catarrhal process in the throat which leads to closure of the Eustachian tube.

deal1, *v. t.*—**To deal off,** in *poker*, to continue to deal until a jack-pot is opened.

deal2, *n.*—**Colonial deal.** Same as *native* ★*deal.*—**Native deal,** in Australia, the wood of the she-pine, *Nageia elata*, a large tree of the yew family. It is free from knots, soft, close and fine grained, and easily worked. It is tough and lasting, not readily attacked by termites and ship-worms.

dealate (dē-ā′lāt), *a.* [*de-* + *alate*2.] Deprived of wings: said of the queens of ants whose wings are shed after the nuptial flight.

dealated (dē-ā′lā-ted), *a.* Same as ★*dealate.*

I have found as many as fourteen *dealated* queens in a single shovelful of its nest-earth.
Biol. Bulletin, Oct., 1904, p. 245.

deal-ends (dēl′endz), *n. pl.* See *deal*2, *n.*, 1.

dealer, *n.* 3. In banking games, such as faro, the person who holds the cards which the players bet upon.

deal-yard (dēl′yärd), *n.* A yard where deals are stacked or sold.

deanthropomorphic (dē-an″thrō-pō-môr′fik), *a.* [Irreg. < *deanthropomorph*(*ism*) + *-ic.*] Of the nature of or tending to deanthropomorphism.

death, *n.*—**Local death,** the 'death' or cessation of vital action which is continually occurring among the cells of animals and plants as the result of metabolism.—**Molar death,** gangrene or necrosis in which a mass of tissue is destroyed.—**Molecular death,** ulceration or caries in which the tissues are destroyed gradually, as contrasted with *molar* ★*death.*—**Peril of death,** in *law*, the condition of apprehension of death in which a person must be in order to make a valid gift *causa mortis.*

death-adder, *n.* 2. The black-snake of Australia, *Pseudechis porphyriacus.* See *black-snake*, 1.

death-angle (deth′ang″gl), *n.* An angle in a military position made memorable by heavy losses. See *Bloody Angle*, in Cyc. of Names.

death-blast (deth′blâst), *n.* An unusually destructive wind or storm, or a blast of deadly gas. The destruction of St. Pierre, in Martinique, in 1902 was due to a death-blast of hot gases rolling down from the summit of Mont Pelé.

death-cup (deth′kup), *n.* The poisonous mushroom, *Amanita phalloides.* See *deadly* ★*agaric*, and *poison* ★*Amanita.*

death-duty (deth′dū″ti), *n.* In *law*, a tax levied upon the property of a decedent upon its transfer to heirs, legatees, or distributees. The expression is usually used in reference to the English law of 1894, in which year these taxes were largely increased. The corresponding American term is *direct* or *collateral inheritance-tax.*

death-grapple (deth′grap″l), *n.* A close desperate struggle with death or to the death; a desperate, relentless contest.

death-of-man (deth′uv-man″), *n.* The American water-hemlock or spotted cowbane, *Cicuta maculata:* so called from the poisonous properties of its root.

death-penny (deth′pen″i), *n.* The obolus which the ancients placed in the hand or mouth of the dead, as passage-money for Charon.

death-ring (deth′ring), *n.* A ring containing poison which is intended to be transmitted during the act of shaking hands. *W. Jones*, Finger-rings, p. 435. *N. E. D.*

death-wave (deth′wāv), *n.* Any great ocean wave which causes the destruction of vessels at sea or of property and lives on land. Such are the inundations on the Wexford coast; the great ocean-

waves, due to earthquakes, that devastate the eastern coasts of Japan; and the wave that washed over the city of Galveston during the height of the great storm of October, 1899.

death-weed (deth'wēd), *n.* An ambrosiaceous plant, *Iva axillaris*, giving trouble as a weed, particularly in northern Nevada and southern Oregon. It grows profusely in low alkali meadows and pastures, sometimes invading cultivated ground, and is very persistent by reason of its creeping rootstocks.

debarbarization (dē-bär″ba-rī-zā′shọn), *n.* [*debarbarize* + *-ation.*] The act of debarbarizing or the state of being debarbarized. *N. E. D.*

debarbarize (dē-bär'ba-rīz), *v. t.*; pret. and pp. *debarbarized*, ppr. *debarbarizing*. [*de-* + *barbarize.*] To free from barbarism: as, first *debarbarize*, then civilize. *De Quincey.*

debarrence (dē-bär'ens), *n.* [*debar* + *-ence.*] The address made by a Scotch-Presbyterian minister at the celebration of the Lord's Supper, describing the character of those who should partake, and debarring the unworthy. Also called *debarring.* See *to fence the tables*, under *fence.*

debarring (dē-bär'ing), *n.* Same as ★*debarrence.*

debash, *n.* See *dobhash.*

debilitative (dē-bil'i-tā-tiv), *a.* [*debilitate* + *-ive.*] That has a tendency to debilitate; that causes or tends to cause debilitation.

debloom (dē-blöm'), *v. t.* [*de-* + *bloom*[1].] To remove the bloom of. See ★*deblooming.*

deblooming (dē-blöm'ing), *n.* The removal or concealment of the bluish fluorescence of lubricating-oil from petroleum. Exposure for a long time to sunlight and air is said to be effective, and nitrobenzene or dinitronaphthalene may be added for the same purpose: these additions, however, render the oil corrosive of iron or steel.

debouchure (de-bö-shür'), *n.* [*debouch* + *-ure.*] A mouth, opening out, or outlet; specifically, the opening out of a stream as it emerges from a confined valley or gorge upon an open valley or broad plain, or the junction between the narrow and the broad portion of a valley: also applied to the zone of change from a mountain track of high gradient to a plains track of much lower gradient and consequent decrease of load.

Deposition at the *debouchure* of the valley follows the same principles as deposition elsewhere.
Chamberlin and Salisbury, Geol., I. 62.

debris-cone (de-brē'kōn), *n.* A mound or cone built up by the accumulation of erupted, fragmental products about the vent of a volcano. *Dana*, Manual of Geol., p. 269.

debrital (dē-brī'tạl), *a.* [Irreg. < *debris* (with assumed stem *debri-t-*) + *-al*[1]. Cf. *detrital.*] Of, pertaining to, or consisting of debris. *Geog. Jour.* (R. G. S), IX. 328.

debt, *n.* **Ancestral debt,** in *law*, a debt of an ancestor which survives him and which the law compels the heir to pay.—**Contingent debt,** in *Scots law*, a debt which is to become due upon the happening of a future event, as distinguished from a pure or a future debt.—**Future debt,** in *Scots law*, a debt which is to become due upon some definite future day, as distinguished from a pure or a contingent debt.—**Preferred debt,** a debt provable in bankruptcy, such as taxes, judgments, wages due a servant, workman, or other employee, up to a certain amount and earned during a certain limited period, a *bona fide* preference, etc., that shall be paid before any other debt or debts are paid.—**Pure debt,** in *Scots law*, a debt actually due, as distinguished from a future or a contingent debt.—**Writ of debt,** a writ which issues in favor of a party claiming the recovery of a certain and liquidated sum of money alleged to be actually due him.

debt-raiser (det'rā-zėr), *n.* One who undertakes to raise or succeeds in raising money to pay off a debt, such as the mortgage on a church, or the like.

début, *n.* 2. In *chess*, same as *opening*, 9. **Queen's Knight's début.** Same as *Vienna opening.*

dec. An abbreviation (*d*) of *declaration*; (*e*) of *declension*; (*f*) of *declination*; (*g*) of *decorative.*

decacanthous (dek-a-kan'thus), *a.* Having ten spines, as the dorsal fin of some fishes.

decacarbon (dek-a-kär'bọn), *n.* [Gr. *δέκα*, ten, + E. *carbon.*] A compound, usually of the aliphatic series, containing ten atoms of carbon.

decacere (dek'a-sēr), *n.* [NL. *Decacera.*] A ten-armed cephalopod, a member of the *Decacera*; a decapod.

decacyclene (dek-a-sik'lēn), *n.* [Gr. *δέκα*, ten, + *κύκλος*, circle, + *-ene.*] A dark-yellow crystalline compound, trinaphthylenebenzene, $(C_{10}H_6)_3C_6$, prepared by the fusion of acenaphthene with sulphur. It melts at 387° C. and contains ten closed chain-systems in its molecule.

decadactylous (dek-a-dak'ti-lus), *a.* [Gr. *δεκαδάκτυλος*, ten-fingered, < *δέκα*, ten, + *δάκτυλος*, finger.] Having ten finger-like projections or rays.

decadarch (dek'a-därk), *n.* [Gr. *δεκάδαρχος*, < *δεκάς*, a company of ten, + *ἀρχός*, ruler.] A commander of ten men; a decurion.

decadarchy (dek'a-där-ki), *n.* [Gr. *δεκαδαρχία*, < *δεκάδαρχος*, decadarch.] A body of rulers consisting of ten men.

decadary (dek'a-dā-ri), *a.* [*decad* + *-ary*[2].] Relating or pertaining to a decad of days; specifically pertaining to the periods of ten days into which each month of the French Revolutionary calendar of 1793 was divided.

decadent, *a.* **II.** *n.* One who or that which exhibits decadence or deterioration; specifically, one whose literary or artistic work is supposed to show the marks of national or general decadence: applied especially to a certain group of French writers and artists.

decadescent (dek-a-des'ent), *a.* [*decad(ent)* + *-escent.*] Tending to decay; in a decadent state.

decadic (dek'a-dik), *a.* [Gr. *δεκαδικός*, < *δεκάς*, the number ten: see *decad.*] Of or pertaining to tens; reckoning by tens; proceeding by or based on tens: as, the *decadic* system of numbers.

decafid (dek'a-fid), *a.* [Irreg. < Gr. *δέκα*, ten, + L. *-fidus*, < *findere*, divide.] Same as *decemfid.*

decagrade (dek'a-grād), *n.* [Gr. *δέκα*, ten, + L. *gradus*, step, degree.] Ten degrees of an arc or angle measured according to that French system in which the quadrant is divided into one hundred parts; a tenth of a quadrant.

decahydrate (dek-a-hī'drāt), *n.* [Gr. *δέκα*, ten, + *ὕδωρ* (*ὑδρ-*), water, + *-ate*[1].] In *chem.*, a compound containing 10 molecules of water, as crystallized sodium sulphate, $Na_2SO_4.10H_2O$.

Between 33° and 17°, however, it was found that in solutions containing but small amounts of sodium chloride and in contact with solid sodium sulphate, the equilibrium conditions were determined by the solid salt being in the form of the *decahydrate*, and the solubility curves for this decahydrate are very much flatter than the corresponding curves for the anhydrous salt.
Science, Jan. 24, 1902, p. 146.

decahydrated (dek-a-hī'drā-ted), *a.* In *chem.*, containing 10 molecules of water. *G. Lunge*, Sulphuric Acid, II. 22.

decalcomania.—**Vitrifiable decalcomania,** in *ceram.*, a colored design printed in mineral colors on paper, for transference to the surface of pottery or porcelain.

decalescence (dē-ka-les'ens), *n.* [*de-* + *calescence.*] The sudden absorption of heat by iron which is observed when that substance is heated to about 795° C.: opposed to *recalescence.*

decalobate (dek-a-lō'bāt), *a.* [Gr. *δέκα*, ten, + *λοβός*, lobe, + *-ate-*[1].] Ten-lobed.

decalog, *n.* A simplified spelling of *decalogue.*

decalvant (dē-kal'vant), *a.* and *n.* [L. *de*, away, + *calvans*, ppr. of *calvare*, make bald, < *calvus*, bald: see *callow.*] Same as *depilatory.*

decameral (de-kam'e-ral), *a.* [Gr. *δέκα*, ten, + *μέρος*, a part.] Divided into ten parts: as, the *decameral* radial symmetry in the calice of a coral.

decanting-jar (dē-kan'ting-jär), *n.* In *chem.*, a jar, commonly of porcelain or stoneware, having in the side a series of tubulatures at different levels for drawing off a liquid from above a solid sediment or deposit.

decap (dē-kap'), *v. t.*: pret. and pp. *decapped*, ppr. *decapping.* [*de-* + *cap*[1].] To remove the cap of. See ★*decapper.*

decapartite (dek-a-pär'tīt), *a.* Same as ★*decempartite.*

decapitate, *v. t.* 3. In *math.*, to strike out, as the highest number of the symbol, in the symbolic method of calculating seminvariants.—4. Of a word, to cut off the beginning.

decapitator (dē-kap'i-tā-tọr), *n.* [NL. *decapitator.*] 1. One who decapitates; a headsman.—2. In *surg.*, a hook with a sharp inner curve, used to decapitate the fetus in cases of obstructed labor.

decapod, *n.* 3. In *mech.*, a ten-wheeled locomotive; strictly, a locomotive having eight driving-wheels and a single truck: a type used for hauling heavy freight-trains. [Colloq.]

decapodan (de-kap'ọ̄-dạn), *a.* and *n.* Same as *decapod*, 1 and 2.

decappage (dē-kap'āj), *n.* The process of removing the outside surface of, or cleaning, a piece of metal preparatory to giving it a particular finish.

decapper (dē-kap'ėr), *n.* [*decap* + *-er*[1].] A device for removing exploded primers from the primer-seat of a cartridge-case.

decapsulation (dē-kap-sụ̄-lā'shọn), *n.* [*de-* + *capsulation.*] In *surg.*, the depriving of an organ of its investing membrane.—**Decapsulation of the kidney,** or **renal decapsulation,** the operation of stripping off the capsule of the kidney to a greater or less extent in order to relieve tension in cases of Bright's disease.

Decapterus (de-kap'tẹ-rus), *n.* [NL., < Gr. *δέκα*, ten, + *πτερόν*, wing.] A genus of mackerel-like fishes of the family *Carangidæ*, distinguished by the presence of the free finlet behind the dorsal and behind the anal. There are numerous species in all warm seas. *D. punctatus*, the cigar-fish or round-robin, is common on the Atlantic coast of the United States. See cut under *cigar-fish.*

decapterygian (de-kap-tẹ-rij'i-ạn), *a.* Same as ★*decapterygious.*

decapterygious (de-kap-tẹ-rij'i-us), *a.* [Gr. *δέκα*, ten, + *πτέρυξ* or *πτερύγιον*, wing, fin.] Having ten fins or finlets.

decarbonizing-furnace (dē-kär'bọ-nī-zing-fėr″nās), *n.* See ★*furnace.*

decarburation (dē-kär-bụ̄-rā'shọn), *n.* Same as *decarburization.*

decarch, dekarch (dek'ärk), *n.* [Gr. *δεκάρχης*, < *δέκα*, ten, + *ἀρχός*, a ruler.] A leader of ten; specifically, the head of the oligarchy of ten appointed by Lysander, after the battle of Ægospotami, in each of the leading Greek cities.

decarchy, dekarchy (dek'är-ki), *n.* [Gr. *δεκαρχία*, < *δεκάρχης*: see ★*decarch.*] An oligarchy of ten; specifically, one of those established by Lysander in the leading Greek cities after the battle of Ægospotami.

decarnate (dē-kär'nāt), *a.* [LL. *decarnatus*, pp. of *decarnare*, deprive of flesh, < L. *de*, from, + *caro* (*carn-*), flesh.] Stripped of flesh; divested of incarnation.

decaspermal (dek-a-spėr'mạl), *a.* In *bot.*, ten-seeded.

decasyllable (dek-a-sil'a-bl), *n.* [Gr. *δέκα*, ten, + *συλλαβή*, syllable.] In *pros.*, a line of ten syllables.

decatholicize (dē-ka-thol'i-sīz), *v. t.* [*de-* + *Catholicize.*] To divest of Catholicism or Catholic character.

decatize (dek'a-tīz), *v. t.*; pret. and pp. *decatized*, ppr. *decatizing.* [F. *décatir*, deprive (cloth) of its luster, < *de-* priv. + *catir*, press (cloth), < LL. **coactire* for *coactare*, compel, press together: see *coact.*] To subject, as tightly rolled cloth, to the action of steam in order to increase and fix its press-luster: a process in the finishing of woolen cloth.

decatoic (dek-a-tō'ik), *a.* [Gr. *δέκατος*, tenth, + *-ic.*] Containing ten carbon atoms.—**Decatoic acids,** the name given to the isomeric, aliphatic acids, $C_{10}H_{20}O_2$. The chief member is capric acid.

decaudate, *v. t.* 2. Of a word, to cut off the end.

decavolt (dek'a-vōlt), *n.* [Gr. *δέκα*, ten, + E. *volt.*] In *elect.*, an electromotive force equal to ten volts. [Rare.]

decay, *n.*—**Curve of decay.** See ★*curve.*

Deccan traps. See ★*trap*[3].

deceast, *p. a.* A simplified spelling of *deceased.*

deceiv, *v.* A simplified spelling of *deceive.*

deceive, *v. t.* 5. In *fencing*, to evade, as an attack or parry, thus causing an opponent to lose the contact or feel of one's foil.

decelerate (dē-sel'e-rāt), *v. i.*; pret. and pp. *decelerated*, ppr. *decelerating.* To decrease in velocity: opposed to *accelerate.*

deceleration (dē-sel-e-rā'shọn), *n.* [*de-* + *(ac)celeration.*] The decrease of velocity: opposed to *acceleration.*

December moth. See ★*moth.*

decemjugate (dē-sem'jū-gāt), *a.* [L. *decem*, ten, + *jugum*, yoke, + *-ate*[1].] Having ten pairs of leaflets or other organs.

decempartite (dē-sem'pär-tīt), *a.* [L. *decem*, ten, + *partitus*, parted (see *partite*).] Having ten parts or divisions.

decempedate (dē-sem'pē-dāt), *a.* [L. *decem*, ten, + *pes* (*ped-*), foot, + *-ate*[1].] Ten-footed; decempedal; decapod.

decemplex (dē-sem'pleks), *a.* [L. *decemplex*, < *decem*, ten, + *-plex*, -fold.] Tenfold. *Syd. Soc. Lex.*

decene (dē′sēn), *n.* [L. *dec(em)*, ten, + *-ene.*] A hydrocarbon, $C_{10}H_{20}$, belonging to the ethylene series. It is an oily liquid which boils at 172° C.

decenniad (dē-sen′i-ad), *n.* [*decennium* + *-ad*[1].] A period of ten years; a decennium.

decentered (dē-sen′tėrd), *a.* [*de-* + *center* + *-ed*[2].] Same as ★*decentrated.*

decentrated (dē-sen′trā-ted), *a.* [**decentrate* (< L. *de-* + **centratus*, < *centrum*, center) + *-ed*[2].] In *optics*, having the optical center not directly in front of the pupil: noting a lens which by this fact has a slightly prismatic action.

decentration (dē-sen-trā′shọn), *n.* [**decentrate* + *-ion.*] Removal from a center: as, *decentration* of a lens, in which the visual line does not pass through the center.—**Law of decentration**, the principle that any lens that is decentered one centimeter will produce as many prism dioptries as the lens has dioptries of refraction.

decentric (dē-sen′trik), *a.* [L. *de-* + *centrum*, center, + *-ic.*] That has been decentered, detached, or dissociated from a particular center or central object; considered or viewed apart from and without reference to some central notion or object.

> If touch, smell, voice, eye, . . . are the *decentric* series, we can see how now a change in fashion, now in manners, . . . may each be only a change of fetish groups.
> *G. S. Hall*, Adolescence, II. 115.

decenylene (dē-sen′i-lēn), *n.* [L. *decem*, ten, + *-en* + *-yl* + *-ene.*] A colorless liquid, $C_{10}H_{18}$, prepared from decylene bromide and alcoholic potassium hydroxid. It boils at 150° C. Also *decine.*

decerebrate (dē-ser′ē-brāt), *a.* [L. *de*, from, + *cerebrum*, cerebrum, + *-ate*[1].] Deprived of the cerebrum; associated with or consecutive to removal of the cerebrum.

> The *decerebrate* monkey exhibits "cataleptoid" reflexes. Father Kircher's experimentum mirabile with the fowl and the chaik line succeeds best with the *decerebrate* hen. *Encyc. Brit.*, XXXI. 744.

decerebrate (dē-ser′ē-brāt), *v. t.* Same as *decerebrize.*

decerebration (dē″ser-ē-brā′shọn), *n.* Removal of the brain.

Dechenella (dek-e-nel′ä), *n.* [NL., < G. *Dechen* (H. von Dechen, 1800–89, a German geologist) + dim. *-ella.*] A genus of Devonian trilobites of the family *Proteidæ.*

dechristianization (dē-kris″tiạn-ī-zā′shọn), *n.* The process of making non-Christian; a breaking down of Christianity.

> The Renascence was not, as has been said, a superficial revolution of people's souls; it was, for a narrow group of souls reared in the aristocracy of art and intellect, a profound *dechristianisation* which, underneath the Reformation, was to spread among us in the eighteenth century.
> *Tarde* (trans.), Laws of Imitation, p. 363.

Decian (dē′shi-ạn), *a.* Of or pertaining to the Roman emperor Decius or his reign (249–251): as, the *Decian* persecution of the Christians.

decidua, *n.*—**Ovular decidua.** Same as *decidua reflexa.*—**Placental decidua.** Same as *decidua serotina.*

deciduitis (dē-sid-ū-ī′tis), *n.* [NL., < *decidua* + *-itis.*] Inflammation of the decidua.

deciduoma (dē-sid-ū-ō′mä), *n.*; pl. *deciduomata* (-ma-tä). [NL., < *decidua* + *-oma.*] A tumor of the uterus resulting from overgrowth of a portion of the decidua which remains after abortion.—**Deciduoma malignum**, a cancerous tumor resulting from malignant degeneration of a deciduoma.

decifer, *v.* A simplified spelling of *decipher.*

decil, *n.* 2. In *math.*, an object or term occupying a place whose ordinal corresponds to 10 or to a multiple of 10. Also *decile.*

decilux (des′i-luks), *n.* [L. *deci(mus)*, tenth, + *lux*, light.] In *photom.*, one tenth of the illumination from a light-source having an intensity of one hefner and placed at a distance of one meter; one tenth of a lux.

decim. An abbreviation of *decimeter.*

decima, *n.* 3. A tenth part; a tithe or tax of one tenth.

decimal. **I.** *a.*—**Decimal candle.** See ★*candle.*—**Decimal degree.** (*a*) Of time, 0.1 of an hour. (*b*) Of an angle, one sixtieth of a right angle. (*c*) Of an arc, one two-hundredth-and-fortieth of a circumference.—**Decimal hour**, an hour divided into one-hundredth parts called *decimal minutes*, and into ten-thousandth parts called *decimal seconds.*—**Decimal minute.** (*a*) Of an angle, one six-hundredth of a right angle; 0.1 of a decimal degree. (*b*) Of time, 0.01 of an hour; 0.6 of an ordinary minute.—**Decimal second**, one one-hundredth part of a decimal minute.—**Decimal watch.** See ★*watch.*

II. *n.*—**Infinite decimal.** See *infinite.*—**Periodic decimal**, a recurring decimal.

decimillivoltmeter (des-i-mil-i-vōlt′mē″tėr), *n.* [L. *deci(mus)*, tenth, + *millivolt* + *meter*[3].] In *elect.*, a voltmeter reading to tenths of a millivolt.

decimo, *n.* (*c*) A silver coin of Chile, equivalent to 10 centavos. (*d*) A copper coin of La Plata, the tenth part of a medio.

decine (dē′sin), *n.* [L. *dec(em)*, ten, + *-ine*[2].] Same as ★*decenylene.*

decinormal (des-i-nôr′mạl), *a.* [L. *deci(mus)*, tenth, + *normalis*, normal.] 1. Having one tenth of a normal or usual strength.—2. In *phys. chem.*, said of a solution in which one liter contains one tenth of the gram-molecule or gram-equivalent of the dissolved substance. See ★*concentration* (*c*) and *normal* ★*solution.*

decipher, *n.* 2. A deciphered cipher; a translated version of a cipher.

deck, *v. t.* 5. To rig out: as, to *deck* the card-cylinder of a Jacquard loom.—**To deck up**, to pile (logs) upon a skidway.

deck, *n.* 2. The names given to the various decks in a vessel differ greatly at different times and in different localities. (*a*) The decks of United States war-ships, as officially defined, are as follows: The highest deck extending from stem to stern is called the *main deck.* A partial deck above the main deck at the bow is called the *forecastle-deck*; at the stern, *poop-deck*; amidships, *upper deck.* The name *upper deck* is also applied to a partial deck extending from the waist to either bow or stern, in which case the name *forecastle-deck* or *poop-deck*, as the case may be, is not used, though the terms *forecastle-* and *quarter-deck* may be used in a general way to designate the corresponding portions of such upper deck. When there is no deck above the main deck at the bow or stern, the terms *forecastle-* and *quarter-deck* may be used, in a general way, to indicate the portions of the main deck forward of the foremast or of the superstructure and aft of the mainmast or of the superstructure, respectively. A partial deck above the main deck amidships, the space under which is not inclosed or consists of small compartments, is called the *bridge-deck.* This term should not be applied to a simple connecting gangway between the forward and after bridges or between a bridge and the forecastle-deck or poop-deck. The working bridges are called the *bridge*, the *forward bridge*, the *after bridge*, the *upper bridge*, the *lower bridge*, according to circumstances. A connecting gangway between the forward and after bridges, or between a bridge and the forecastle-deck or poop-deck, is called the *fore-and-aft bridge.* The first deck below the main deck, which is used primarily for berthing purposes, and on which no guns, or light rapid-fire guns only, are carried, is called the *berth-deck.* This is usually the deck at or next above the water-line. A complete deck on which guns are carried between the main deck and the berth-deck is called the *gun-deck.* If there are two such decks, they are called the *gun-deck* and the *lower deck*, respectively. A deck of extra strength and thickness of plating worked for protective purposes is called the *protective deck.* Where such a deck is stepped a complete deck-height, the respective portions are called *middle protective deck* and *forward* (or *after*) *protective deck*, when it is desired to distinguish between them. The deck with sloping or curved sides in smaller vessels, worked similarly to a protective deck, but not of extra strength and thickness above structural requirements, is called the *water-tight deck.* A deck worked for protective purposes below a protective deck is called the *splinter-deck.* This applies to a separate construction only and not to plating worked on the lower side of protective-deck beams. A partial deck below the berth-deck, if situated on or above the protective deck or the water-tight deck, is called the *orlop-deck*; if below the protective deck or the water-tight deck, it is called the *platform.* If there are two platforms at different levels, they are called the *upper platform* and the *lower platform.* Where no protective deck or water-tight deck is fitted, the same nomenclature will be followed, the deck next below the berth-deck being called the orlop-deck. A deck that is stepped less than a deck-height is named as though it were continuous. Deck space, in general, takes the name of the deck above which it is situated. The space above a protective deck or water-tight deck is not, however, named from this deck, but receives its name from the actual use to which it is put. Thus, if the berth-deck coincides with the protective deck, the latter term is used only in referring to the structural features of the deck itself, but the space above it receives its name from the berth-deck. Similarly, an orlop-deck coinciding with a protective deck gives its own name to the deck space. When neither of these decks coincides with the protective deck, the space above the latter is called the *store-rooms*, the *upper coal-bunkers*, etc., as the case may be. (*b*) In the British navy the highest complete deck is called the *upper deck*, and the next deck below the *main deck*, these decks being thus a deck lower than the decks of the same name in the United States navy. The deck below these decks is called the *lower deck*, corresponding generally to the berth-deck in the United States navy, the term *berth-deck* not being used. (*c*) In merchant steamers the following names are generally used: The *upper deck* is the highest complete deck of full structural strength. If there are two decks, they are the *upper* and *lower decks.* If there are three decks, they are called *upper*, *main* or *middle*, and *lower decks.* In vessels carrying passengers as well as cargo, a deck of lighter construction may take the place of the upper deck and is called a *spar-deck.* In vessels where this deck is of still lighter construction, the deck is called an *awning-deck.* A light deck, the space under which is partly or entirely closed at the sides but more or less open at the ends, is called a *shelter-deck.* A *bridge-deck* is one of the same character, extending a comparatively short length amidships. A *shade-deck* is a deck not inclosed at the sides of the vessel, being supported by stanchions extending above an open rail. Such a deck does not usually extend the full length of the vessel. Very large passenger-steamers may have additional decks, as follows: A partial deck below the lower deck is called an *orlop-deck.* Decks above the upper deck receive various names, as *saloon-deck*, *hurricane-deck*, *promenade-deck*, and *boat-deck*, the last being usually the highest deck, of light construction, on which the lifeboats are carried. A short low deck at the bows is called an *anchor-deck* or *monkey-forecastle.* A *raised quarter-deck* is a part of the upper deck abaft the bridge-house, at a somewhat higher level than the upper deck forward. A *forecastle* is a deck above the upper deck at the bows. A *poop* is a similar deck at the stern. In a special British design of cargo-steamer, of which many have been built, the side, instead of meeting the main deck rectangularly, is rounded off so as to make a continuous curved surface with the deck. Inboard of this the side is again curved up. The space between the sides at the top is covered by a narrow deck called the *turret-deck*, the horizontal part on the main-deck level being called the *harbor-deck.* In a generally similar type of cargo-steamer, in which, however, the side is not rounded off, the narrow deck covering the central superstructure or trunk is called the *trunk-deck.* In a large Long Island Sound steamer, besides the important structural-steel lower and main decks, there are the following, from below upward: *saloon-*, *gallery-*, *hurricane-*, *break-*, and *dome-decks.* The *tonnage-deck* is that one from which the under-deck gross tonnage is measured. (See *tonnage.*) In vessels having three or more decks to the hull it is the second deck from below; in all others the upper deck of the hull is the tonnage-deck. (Sec. 4150, Revised Statutes.) A *flush deck* is one extending from stem to stern without break in continuity of surface.

7. In *car-building*, the roof of the clearstory of a passenger-car, often called *upper deck*; also, the sloping roof on either side of the clearstory, often called *lower deck.* The word is used in many compounds, such as *deck-hood*, a projecting shelter to keep the rain out of the deck-end ventilator of a street-car; *deck-lamp*, a gas-lamp suspended from the under side of the deck; *deck-sash*, a clearstory window.—**Deck side**, the vertical side, including sash, etc., of the clearstory of a car.—**Deck snatch-block.** Same as *plate* ★*snatch-block.*—**Deck ventilator**, one of the sashes at the deck side of a car, operated by a deck-sash opener.—**Protective deck**, in a war-ship, a deck in the vicinity of the water-line intended primarily to prevent the penetration of the enemy's projectiles into the vital parts of the ship beneath it. For location, see ★*deck*, 2. The deck is sometimes of an arched shape, the edge of it at the side being from 4 to 6 feet below the load water-line and usually rising to from 2 to 3 feet above it in the center. More frequently, however, the central part is flat and there is a sloping part at the side, as indicated in the cut under *frame.* This form of deck is used in most protected and armored cruisers and also frequently in battle-ships of recent design. In many battle-ships, however, the protective deck in the central parts is carried out level to the top of the armor-belt. In the British navy the main-deck plating is sometimes made extra heavy, forming a second protective deck above the first. In the French navy, in the largest ships, there is usually a second protective deck entirely below the water at the level of the bottom of the side armor. Protective decks are usually made in two or three thicknesses of plate, the upper thickness being of nickel-steel. The total thickness of steel on the flat parts varies from 1 to 3 inches, on the slopes from 1 to 6 inches. Also erroneously called *protected deck.*

deck-block (dek′blok), *n.* A block having one or more sheaves, and the sides and base cast in one piece and screwed to the deck. See *plate* ★*snatch-block.*

decker, *n.* 3. In *lumbering*, one who rolls logs upon a skidway or log-deck.

deck-erection (dek′ē-rek″shọn), *n.* In *ship-building*, any permanent structure projecting above the general line of the upper deck, as a deck-house, poop, or fore-castle. *White*, Manual of Naval Arch., p. 10.

deck-head, *n.* 2. The card exposed on the top of the pack; specifically, the turned trump in the game of spoil-five.

deck-hood (dek′hụd), *n.* See ★*deck*, 7.

decking-chain (dek′ing-chān), *n.* Same as ★*loading-chain.*

deck-lamp (dek′lạmp), *n.* See ★*deck*, 7.

deckle-edge (dek′l-ej), *n.* Same as *deckle* (*b*).

deck-light (dek′līt), *n.* A heavy piece of glass, of circular or rectangular prismatic form, set into a deck to give light below.

deck-line (dek′līn), *n.* In *ship-building*, the line formed by the intersection of the surface of the deck at the top of the beams with the central longitudinal plane; also, the intersection of the surface with the molded surface of the side of the vessel: called *deck-line at center* and *at side*, respectively.

deck-nail (dek′nāl), *n.* A kind of soft iron spike with a flat head, commonly made in a diamond form: used for decks where any projection of the head above the level surface would be objectionable.

deck-plating (dek′plā″ting), *n.* In *ship-building*, the steel or iron plates forming the covering of a deck, considered collectively.

deck-pot (dek′pot), *n.* A large iron pot or kettle used on whalers to receive scraps from the try-pots.

> The oil flows freely between their fingers into the pots, while the refuse, called "twitter," is thrown into another receptacle, called the *deck-pot*, or perhaps into scraptubs. *Sci. Amer. Sup.*, *March* 5, 1904, p. 23551.

deck-sash (dek′sash), *n.* See ★*deck*, 7.

deckt, *pp.* A simplified spelling of *decked.*

decl. An abbreviation (*b*) of *declination.*

declamation, *n.* 2. (*b*) A specially close or successful union of tones with words, as in a song or aria. (*c*) A work in which the text is read or spoken while a musical accompaniment or comment is played. Also called *melodrama*. See *melodrama*, 2.

declaration, *n.* 6. In *card-playing*, an announcement or meld; in *bridge*, specifically, the naming of the trump suit by the dealer. Sometimes called the *make*.—**Auburn Declaration,** a defensive statement of doctrine issued by a convention of the Presbyterian synods of Utica, Geneva, Genesee, and the Western Reserve (Auburn, New York, August 17, 1837), in answer to the acts of the General Assembly (May, 1837) exscinding the churches of the above synods for alleged heresies. The declaration was later (1868) indorsed by the General Assembly as having "all the fundamentals of the Calvinistic creed."—**Declaration of Paris,** a declaration signed by the duly authorized delegates of the powers to the Congress of Paris, in 1856, in regard to the rights of belligerents and neutrals in time of war. It includes four points: (1) Privateering is abolished; (2) the neutral flag covers enemy's goods, except when contraband; (3) neutral goods, except when contraband, are not liable to capture under an enemy's flag; (4) blockades to be binding must be effective. The United States refused to accept the first of these, but concurred in the others.—**Mecklenburg Declaration.** See *Mecklenburg Declaration of Independence*, in Century Cyclopedia of Names.

declare, *v. i.* 5. In *bridge*, to make or name the trump suit, or to announce the intention to play without a trump.

declass (dē-klȧs′), *v. t.* [F. *déclasser*, < *dé-*, L. *de*, from, + *classe*, class: see *class*, *n.*] To remove from one's or its class.

déclassement (dā-klȧs-mäⁿ′), *n.* [F., < *déclasser*, declass.] The breaking down of class distinctions in society.

The primary school . . . is rapidly leading to a general *déclassement*. *Kidd*, Social Evolution, App. iii.

declination, *n.*—**Circle of declination.** See ★*circle*.—**Declination axis, compass.** See ★*axis*[1], ★*compass*.—**Declination of a plane,** in *dialing*, the angle made by a vertical plane with the prime vertical or with the meridian plane.

declinatorium (dek″li-nā-tō′ri-um), *n.*; pl. *declinatoria* (-ä). In *phys.*, an instrument for measuring the magnetic declination; a circle of declination.

decline, *v. i.* 10. In *chess*, to refuse to take a piece or pawn offered.

decoagulate (dē-kō-ag′ū-lāt), *v. t.*; pret. and pp. *decoagulated*, ppr. *decoagulating*. [*de-* + *coagulate*.] To change from a coagulated condition: applied by Duclaux to the action of a diastatic ferment, found in malt, which converts starch into soluble dextrines.

decoction, *n.*—**Zittmann's decoction,** a decoction of sarsaparilla, containing calomel, cinnabar, and various aromatic substances, employed in the treatment of syphilis.

decoctor (dē-kok′tȯr), *n.* [L. *decoctor*, < *decoquere*, squander, waste, lit. boil down, boil away: see *decoct*.] In *Roman law*, an insolvent; a bankrupt; one who squandered public funds.

decode (dē-kōd′), *v. t.*; pret. and pp. *decoded*, ppr. *decoding*. [*de-* + *code*.] To turn or translate (a message or letter from a cipher code) into its original language or form. See *code*, 4.

Decodon (dek′ō-don), *n.* [NL., < Gr. *δέκα*, ten, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of ladyfishes or *Labridæ*, found in the waters about Cuba, remarkable for their bright colors. *D. puellaris* is the only species.

decohere (dē-kō-hēr′), *v. i.*; pret. and pp. *decohered*, ppr. *decohering*. In *elect.*, to increase in resistance, as a coherer in process of restoration to its normal condition of sensitiveness or as an anticoherer when acted upon by electric waves.

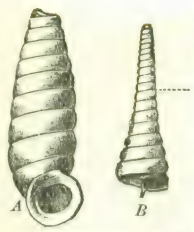
decoherence (dē-kō-hēr′ens), *n.* Decohering action. *Science Abstracts*, VI. § B, p. 128.

decoherer (dē-kō-hēr′ėr), *n.* Same as ★*anticoherer*.

decohesion (dē-kō-hē′zhon), *n.* [*de-* + *cohesion*.] The effect of decoherence.

After a short description of the single contact coherer used by him and an explanation of the so-called *decohesion*, he calculated how near the metallic surfaces must be brought together. *Science*, March 21, 1902, p. 466.

decoic (dē-kō′ik), *a.* [Gr. *δέκα*, ten, + *-o-* + *-ic*.] Noting an acid, the same as ★*decatoic* or *capric acid*.



decollate, *v. t.* 2. To remove the apex of, as of a shell.

decollation, *n.* 3. In *conch.*, the removal—by death, growth, or accident—of the upper whorls of a spiral shell after the animal has ceased to occupy them. See cut in middle column.

The coils may be lost by *decollation*, as in Cœcum, in which the spiral part drops off. *Sedgwick*, Text-book of Zoöl., I. 360.

decollator (dē-ko-lā′tȯr), *n.* Same as ★*decapitator*.

décolletage (dā-kol-täzh′), *n.* [F., < *décolleter*, cut low in the neck: see *décolleté*.] In *dressmaking*: (*a*) The state of being cut low in the neck: said of the bodice or waist of a dress. (*b*) The low-cut neck itself of a bodice.

A, decollated (adult) form, and *B*, perfect (young) form, of *Cylindrella nobilior* Ad., Jamaica; the dotted line shows where the decollation takes place. (From "Cambridge Natural History.")

decompensation (dē-kom-pen-sā′shon), *n.* [*de-* + *compensation*.] Failing compensation of the heart in valvular disease.

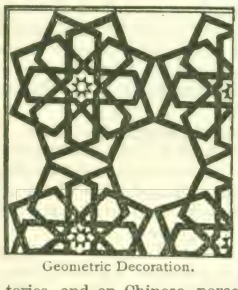
decompression (dē-kom-presh′on), *n.* [*de-* + *compression*.] Relief from pressure; specifically, relief from excessive atmospheric or hydrostatic pressure.

decongestive (dē-kon-jes′tiv), *a.* and *n.* [*de-* + *congestive*.] **I.** *a.* Tending to reduce congestion.

Treatment by physical agencies, by electricity in particular, restores general and local nutrition, has a *decongestive* local action, depurative in general, and anti-neoplastic in particular. *Med. Record*, Aug. 1, 1903, p. 167.

II. *n.* A remedy designed to reduce congestion.

deconsider (dē-kon-sid′ėr), *v. t.* [*de-* + *consider*.] To leave out of consideration; treat with scant consideration.



deconsideration (dē-kon-sid-ē-rā′shon), *n.* The act of deconsidering or the fact of being deconsidered.

deconstruct (dē-kon-strukt′), *v. t.* [*de-* + *construct*.] To take apart (what has been put together); undo the construction of; undo (what has been done).

deconstruction (dē-kon-struk′shon), *n.* [*de-* + *construction*.] The undoing of what has been constructed or done.

decorating-wheel (dek′ō-rā-ting-hwēl″), *n.* A small cylinder or disk of wood, baked clay, or metal which revolves on the end of a handle and usually carries a pattern in relief or in cavetto; a coggle: used for impressing ornamental bands around jars, etc., while they are in a plastic state. Also called *runner*.

decoration, *n.*—**Corn-flower decoration,** a style of ceramic ornamentation in which small blue fringed flowerets, with green leaves, are painted on porcelain or cream-colored ware: at one time extensively used by certain English, French, and American potters.—**Geometric decoration,** the arrangement of mathematical lines and figures in such a way as to produce an interesting pattern. The most perfect and elaborate examples are to be found in the various Arabic styles.—**Hawthorn decoration.** See ★*hawthorn*.—**Lowestoft decoration,** a peculiar style of ceramic embellishment erroneously supposed to have originated at Lowestoft, England, in the latter part of the eighteenth century. It consists of designs painted on porcelain or opaque white ware made at many English factories, and on Chinese porcelain which was carried to Holland, England, and the United States in large quantities by the East India Company. Its main characteristics are sprays of roses in pink and green, borders of latticework, and waving dotted lines, usually in brown or purplish red.—**Mural decoration,** the treatment of a wall-surface in an interesting way by the use of mosaic, fresco, oil-painting, or work in relief.—**Rice-grain decoration.** See ★*rice-grain*.

Geometric Decoration.

decorationist (dek-ō-rā′shon-ist), *n.* [*decoration* + *-ist*.] An expert or professional decorator. *Carlyle*.

decorporated (dē-kôr′pō-rā-ted), *a.* [L. *de*, from, + *corpus* (*corpor-*), body, + *-ate*[1] + *-ed*[2].] Deprived of a body: said, for example, of the head after its separation from the body by the guillotine.

decorticated (dē-kôr′ti-kā-ted), *p. a.* 1. Same as *decorticate:* applied most frequently to trunks of fossil trees of the coal-measures.—2. Having the periostracum, or the periostracum and the porcelanous layer, worn away, as a shell.

decorticator, *n.* 2. Any machine for removing hulls, bark, or other outer covering of seeds or parts of plants: as, a hemp-*decorticator*, or hemp-brake.

decortization (dē-kôr-tī-zā′shon), *n.* Decortication.

decostate (dē-kos′tāt), *a.* [*de-* + *costate*.] Having no ribs.

decoy, *n.* 4. A pond used to snare and entrap, and also to maintain and breed, waterfowl.—**Decoy letter,** a letter prepared and mailed for the purpose of detecting suspected violators of the postal and revenue laws and postal thieves, or for similar purposes.

decoyman (dē-koi′man), *n.* A man in charge of a decoy or of several decoys for luring birds, animals, etc.

decr. In *music*, an abbreviation of *decrescendo*.

decreative (dē-krē-ā′tiv), *a.* [*de-* + *creative*.] That tends or serves to hinder, reverse, or undo some creative act.

Development is upward, creative, and not *decreative*. *G. S. Hall*, Adolescence, II. 546.

decree, *n.*—**Decree of forthcoming,** in *Scots law*, the decree, made after the arrest of a debtor, by which it was adjudged that the debt be paid or the property of the debtor delivered to the creditor causing the arrest.—**Order of decrees,** the doctrine concerning the order of the divine decrees to create, to permit the fall of man, to provide salvation, and to secure acceptance of salvation to some. There are three forms of the doctrine, supralapsarianism, infralapsarianism, and sublapsarianism.

decrement, *n.*—**Logarithmic decrement,** the Napierian logarithm of the ratio of a preceding to a succeeding amplitude in a damped vibration.

decrepit, *a.* 2. In *geol.*, said of rivers that have reached the last stages of their existence, or of that portion of a drainage-course which has reached base-level and where deposition along the bed exceeds the amount removed by floods. *Dana*, Manual of Geol., p. 182.

decres. In *music*, an abbreviation of *decrescendo*.

decubital, *a.* 2. Relating to decubitus.

Thrombosis may take place in this area due also to the added weight of the *decubital* position. *Med. Record*, July 25, 1903, p. 131.

Decubital gangrene. Same as *bed-sore*.

Decubitus paralysis, pressure-paralysis due to lying for a long time in a faulty position.

deculor, deculorize. Simplified spellings of *decolor, decolorize*.

decumana (dek-ū-mā′nä), *n.* [L. (*porta*) *decumana*, adj. fem. of *decumanus*. See *decuman*.] One of the two gates of the typical Roman camp. See *decuman*, *a.*, 1. Opposite the porta decumana was the porta prætoria, the two being connected by the via prætoria, the principal street of the camp.

decuria (dē-kū′ri-ä), *n.*; pl. *decuriæ* (-ē). [L.: see *decury*.] A company of ten; specifically, in the Jesuit method of instruction, a minor division of a class in which chiefly memory lessons are heard.

decurion, *n.* 3. In *Rom. hist.*, a member of the senate of a colony or of a municipality; a town-councilor.—4. A member of the great council of an Italian city or town.

Decurtate pulse. See ★*pulse*[1].

decussation, *n.*—**Fillet decussation.** See ★*fillet*.—**Fontanal decussation.** Same as ★*fountain decussation*.

decylene (des′i-lēn), *n.* [L. *decem*, ten, + *-yl* + *-ene*.] Same as ★*decene*.

decylic (de-sil′ik), *a.* [L. *decem*, ten, + *-yl* + *-ic*.] Same as *capric*.

ded, *a.* A simplified spelling of *dedd*.

dedans (de-däⁿ′), *n.* [F. *dedans*, the interior, prop. prep., within, < *de* (< L. *de*), of, + *dans*, within: see *denizen*.] In *court-tennis*, that part of the penthouse at the service end which is netted off for spectators.

dedendum (dē-den′dum), *n.*; pl. *dedenda* (-dä). [NL. (contrasted with *addendum*), < L. *dedendum*, neut. fut. pass. part. of *dedere*, give up, < *de*, away, + *dare*, give.] That part of the tooth of a cog-wheel or gear which is inside the pitch-circle and is intercepted between the pitch-line and the circle which limits all the roots of the teeth and the spaces between them. The addendum of the teeth of the meshing-wheel enters into this space.

deditician (ded-i-tish′an), *n.* [L. *dediticius*, a captive, also as in def., < *deditus*, pp. of *dedere*, surrender, give up.] In *Rom. law*, a former slave who upon manumission was not admitted to full citizenship because of some offense committed during slavery.

dedly, *a.* A simplified spelling of *deadly*.

dedolomitization (dē-dō″lō-mit-i-zā′shon), *n.* [*de-* + *dolomitization*.] In *petrog.*, the change of a dolomite to some other rock.

dedolomitize (dē-dol′ō-mit-īz), *v. t.*; pret. and pp. *dedolomitized*, ppr. *dedolomitizing*. [*de-* + *dolomite* + *-ize*.] In *petrog.*, to change (a dolomite) into some other kind of rock, as by the formation of magnesian silicates or of magnesium hydrous oxids.

Deed of arrangement, in *Eng. law,* an instrument transferring the property of a debtor to a trustee for the benefit of his creditors.

deëducational (dē-ed-ū-kā′shon-al), *a.* [*de-* + *educational.*] As regards the hindering or undoing of education or educational work.

deëmanate (dē-em′a-nāt), *v. t.*; pret. and pp. *deëmanated,* ppr. *deëmanating.* [*de-* + *emanate.*] To deprive (a radioactive substance) of the power of giving off an emanation, or to reduce, by heating or other process, the rate of the escape of the emanation from such a substance.

deëmanation (dē-em-a-nā′shon), *n.* The process of depriving (a radioactive substance, such as radium) of the power of emitting emanation, or the reduction of the rate of such emission; the state or condition in which emanating power ceases or is reduced.

Thus *de-emanation* does not permanently destroy the power of thorium of giving out an emanation.
E. Rutherford, Radio-activity, p. 216.

deep-field (dēp′fēld), *n.* In *cricket:* (*a*) A fielder placed at or near the boundary somewhere behind the bowler. (*b*) The position of such a fielder.

deepsinker (dēp′sing-kėr), *n.* 1. A deep tumbler; a tumbler of the largest size as regards depth.—2. The drink or beverage served in such a tumbler. [Slang, Australia.]

deep-tank (dēp′tangk), *n.* In *ship-building,* a tank formed by partitions or bulkheads cutting off a part of the hold and specially constructed to hold water ballast. See ★*ballast-tank.* A *midship deep-tank* is in the middle of the length; the *forepeak* and *afterpeak tanks,* or *trimming tanks,* are at the ends of the vessel.

deer, *n.*—**Irish deer,** an extinct representative of the *Cervidæ, Cervus* or *Megaceros giganteus,* remarkable for its large size and great spread of palmate antlers, "which diverge at right angles from the plane of the frontals and

Skeleton of the Irish Deer (*Cervus giganteus*) from the Pleistocene of Ireland. (From Nicholson and Lydekker's "Palæontology," after Owen.)

have a distinct brow- and bez-tine and a small posterior tine on the opposite side of the beam to the bez-tine." (*Nicholson and Lydekker,* Manual of Paleont., p. 1134.) Its remains are found in the bogs of northern Europe, particularly of Ireland, and specimens have been found with a spread of more than 11 feet between the tips of the antlers. Also called *Irish Elk.*

deer-balls (dēr′bâlz), *n.* See *hart's-truffles.*

deer-brush (dēr′brush), *n.* One of several shrubs of the genus *Ceanothus* (*C. integerrimus, C. incanus,* and *C. velutinus*) which furnish shelter and browsing for deer.

deer-fern (dēr′fėrn), *n.* See ★*fern*[1].

deer-fly (dēr′flī), *n.* 1. A European hippoboscid fly, *Lipoptena cervi,* which lives on the European red deer.—2. An American hippoboscid fly, *Lipoptena depressa,* which occurs on *Cervus virginianus:* also called *deer-tick.*

deer-food (dēr′fōd), *n.* The water-shield or water-target, *Brasenia Schreberi,* supposed to be eaten by deer.

deer-foot (dēr′fůt), *n.* A V-shaped iron catch on the side of a logging-car in which the binding-chain is fastened.

deer-forest (dēr′for″est), *n.* A tract of land frequented by deer and used as a hunting-preserve.

deer-grass, *n.*—2. A bunch-grass, *Epicampes rigens,* found in the southwestern United States: it is of some forage value.—3. In Wyoming and Montana, the sheep's fescue, *Festuca ovina.*

deer-grasshopper (dēr′gràs″hop-ėr), *n.* A Malayan locustid insect, of the genus *Mecopoda,* which is enabled by its greatly developed hind legs to take enormous leaps. *Proc. Zool. Soc. London,* 1900, p. 854.

deerhorn (dēr′hôrn), *n.* 1. The horn of a deer; also, the bone which forms the antlers of a deer.—2. A large rough mussel, *Tritigonia* or *Unio verrucosa,* found in the Mississippi river, the shell being used in the manufacture of buttons. Also called *buckhorn.*

deerman (dēr′man), *n.* A member of one of the pastoral reindeer-raising communities of Siberia: opposed to the maritime fisherman of the same tribes.

deer-necked (dēr′nekt), *a.* Having the dorsal or upper margin of the neck concave instead of convex or at least straight; ewe-necked: said of a horse.

deer-park (dēr′pärk), *n.* A park in which deer live or are kept.

Deer parks . . . constitute a feature of considerable importance because of their area in the mountain regions of both the Eastern and Western portions of the United States. *Yearbook U. S. Dept. Agr.,* 1900, p. 585.

deer-stalker, *n.* 2. A lined cap of cloth or flannel, peaked before and behind with the same material, and sometimes having ear-flaps which are turned up over the crown and tied together at the top by laces. [Eng.]

deer's-tongue, *n.* 2. The white adder's-tongue, *Erythronium albidum.*—3. The rib-grass, *Plantago lanceolata.* In all the deer's-tongues the form of the leaf suggests the name.

deer-tick (dēr′tik), *n.* Same as ★*deer-fly.*

deer-weed (dēr′wēd), *n.* A handsome yellow-flowered Californian leguminous plant, *Lotus glaber.* Also called *wild broom.* See ★*broom*[1].

deer-yard (dēr′yärd), *n.* A winter pasture or browsing-ground of deer.

de-ethicize (dē-eth′i-sīz), *v. t.* To deprive of moral implications or tendencies.

def, *a.* A simplified spelling of *deaf.*

def. An abbreviation (*a*) of *defendant;* (*b*) of *defined;* (*c*) of *definite;* (*d*) of *definition.*

defaultant (dē-fâl′tant), *a.* [*default* + *-ant*[1].] Charged with or guilty of defaulting.

defaulter, *n.* 2. In the British service, a soldier accused of a military offense.

defector (dē-fek′tor), *n.* One who defects, falls away, deserts, or secedes, as from a religious body, a political party, or the like.

defemination (dē-fem-i-nā′shon), *n.* [L. *de-* + *femina,* woman, + *-ation.*] Deprivation of some of the characteristics of a woman, with or without the assumption of some of those of the male sex.

defeminize (dē-fem′i-nīz), *v. t.*; pret. and pp. *defeminized,* ppr. *defeminizing.* [L. *de-* + *femina,* woman, + *-ize.*] To deprive of feminine qualities and tastes; affect with masculine notions or a liking for mannish modes of life and pursuits or an aversion to domestic life. *Amer. Jour. Psychol.* XI. 546.

defendant. *n.*—**Defendant in error.** See ★*error.*

defender, *n.* 4. In *Irish hist.,* one of an association of Roman Catholics organized in the north of Ireland in the eighteenth century to oppose the Protestants who had organized as Peep-o'-day Boys or Orangemen.

defenestration (dē-fen-es-trā′shon), *n.* [NL. *defenestratio(n-),* ⟨ **defenestrare,* ⟨ L. *de,* from, + *fenestra,* window.] The act of throwing out of the window: as, the *defenestration* of Prague in 1618, when Bohemian insurgents broke up a meeting of imperial commissioners and threw two of their number out of the window, an act which preluded the Thirty Years' war.

defense, *n.*—**Berlin** or **Prussian defense,** in *chess,* the rejoinder 2 . . . Kt to KB3 to the King's Bishop's, opening. Also called *King's Knight's defense.*—**Damiano defense opening.** See ★*opening.*—**Defense to King's Knight's opening.** See ★*opening.*—**Hannekin defense.** Same as *Berlin* or *Prussian* ★*defense.*—**Italian defense,** in *chess,* a variation of an antiquated defense to the King's Bishop's opening.—**King's Knight's defense.** Same as *Berlin* ★*defense.*—**Lopez defense,** in *chess,* a variation arising in an antiquated form of the King's Bishop's opening.—**Paulsen's defense,** in *chess,* 5 Kt—K 5, B—Kt 2, an original defense to the Kieseritzki gambit, invented by the German player Louis Paulsen.—**Philidor's defense.** See *opening,* 9.—**Prussian defense.** Same as *Berlin* ★*defense* in the Ruy Lopez opening.—**Queen's Bishop's Pawn's defense,** in *chess,* 1 P—K 4, P—K 4; 2 B—B 4, P—QB 3, a defense to the King's Bishop's opening.—**Statement of defense,** a term sometimes used to denote the plea or answer of a defendant.—**Two Knight's defense.** See *opening,* 9.

Defensive circle, gland, proteid. See ★*circle,* ★*gland,* ★*proteid.*

deferent, *n.* 3. In *math.,* the locus of the centers of circles of which a bicircular quartic is drawn as the envelop.

deferentitis (def-e-ren-tī′tis), *n.* [NL., ⟨ *deferens* (*-ent-*) + *-itis.*] Inflammation of the vas deferens.

Deferred shoots, in *bot.* See ★*shoot.*

defervesce (dē-fėr-ves′), *v. i.*; pret. and pp. *defervesced,* ppr. *defervescing.* [L. *defervescere,* ⟨ *de-* + *fervescere,* boil: see *fervescent.*] To cease to boil; cool down; hence, to become more or less neglected or out of favor or regard.

defervescent (dē-fėr-ves′ent), *a.* and *n.* [L. *defervescens* (*-ent-*), ppr. of *defervescere:* see ★*defervesce.*] I. *a.* Causing or associated with a reduction of fever.

II. *n.* A remedy employed to produce defervescence.

Defforges's pendulum. See ★*pendulum.*

defilade (def-i-lād′), *n.* [*defile*[2] + *-ade.*] That arrangement of a fortification by means of which its interior is concealed from an adversary on a neighboring height.

definition, *n.*—**Constructive definition,** definition by stating the essential requisites for constructing an object having the defined character. Such definitions have been highly valued in geometry, but they do not always conduce to sound or philosophical development of the subject.—**Diagnostic definition,** a statement which, without attempting to analyze the essence of the object of a general term, undertakes to show that it may be distinguished from everything else.—**Genetic definition.** (*a*) and (*b*). See *genetic.* (*c*) Definition by describing a process for producing the object defined. It is often confounded with the constructive definition, which is a species of genetic definition. Thus if as a definition of Prussian blue it were said to be the substance precipitated on mixing aqueous solutions of partially oxidized green vitriol and yellow prussiate of potassa, this would be a so-called genetic definition; but it would fail altogether to mention one of the essential characters to which the name is due. Less excusable is a method of defining abstract conceptions which has been highly favored by German writers since Kant. It consists in saying that if from some familiar conception certain enumerated ingredients are omitted, what remains is the conception intended. This is no definition, and serves no other purpose than to lead the reader to mistake a vague feeling for an intellectual description and to produce a false illusion of scientific accuracy.—**Normal definition,** a definition of a class of objects as differing only accidentally from a certain norm with a distribution of frequency of given departures from it according to the law of probabilities.—**Pragmatistic definition,** a definition by means of characters that might conceivably influence rational conduct. Such would be the definition of a probable assumption as one which could safely be made the basis of a business enterprise.—**Scholastic definition.** Same as *Aristotelian definition.* See *definition,* 3 (1).—**Typical definition,** a definition of a group as being of a certain hierarchical order (species, genus, family, etc.) and as composed of individuals differing from a certain actual form (assumed as a standard 'type') by as much as individuals of a group of the named hierarchical order might be expected to differ, or to be connected with that type by a series of almost insensible gradations.

Definitive host, sporoblast. See ★*host*[2], ★*sporoblast.*

definitize (dē-fin′i-tīz), *v. t.*; pret. and pp. *definitized,* ppr. *definitizing.* [*definite* + *-ize.*] To make definite.

Hope and fear may be regarded as special forms of expectation. Expectation is indefinite. . . . Hope and fear *definitize* expectation.
W. Wundt (trans.), Human and Animal Psychol., p. 377.

definitor (dē-fin′i-tor), *n.* [L. *definitor,* ⟨ *definire,* define.] An officer in certain religious orders whose duty is to decide points of discipline.

deflate (dē-flāt′), *v. t.* [*de-* + *-flate,* as in *inflate.*] To remove the air from: the opposite of *inflate.*

deflation (dē-flā′shon), *n.* 1. The act of deflating.—2. In *geol.,* denudation by the action of the wind bearing solid particles. *Walther.*

deflectionization (dē-flek″shon-i-zā′shon), *n.* The act of deflectionizing; loss of inflections.

In Saxon this infinitive was a flexional one. It could not be otherwise, because there was no flexionless infinitive in the language. This variety then, which we call the Flat Infinitive, is a direct product of *deflectionization.*
Earle, Philol. Eng. Tongue, ¶ 569.

deflectionize (dē-flek′shon-īz), *v. t.*; pret. and pp. *deflectionized,* ppr. *deflectionizing.* [*de-* + *flection* + *-ize.*] To subject to flectional decay; deprive of inflections.

Flectional languages are called Synthetic, and *deflectionized* languages are said to be Analytic.
Earle, Philol. Eng. Tongue, ¶ 445.

deflector, *n.* 3. In general, something which deflects. Specifically—(*a*) A plate or board which is projected into a current of gas or air to cause it to flow to one side. (*b*) A partition or surface, plane or curved, by which the flames or hot gases in a boiler-setting are compelled to follow definite paths. (*c*) A similar partition to force circulating water to rise or descend in a boiler in definite directions and places. (*d*) A cone or vane in a ventilating-hood. (*e*) A board placed outside of a car-window, at right angles to the motion of the train, to keep smoke and cinders away from the open window.

4. See the extract.

Another conspicuous advantage arising from the use of compasses of this pattern is the readiness with which they admit of correction by the use of the "*deflector*," a simple instrument devised by Lord Kelvin for the measurement of directive force, the successful application of which to compass correction depends on the fact that, when the directive force is equalized on all points, the error of the compass is neutralized.
Encyc. Brit., XXXI. 108.

deflexibility (dē-flek-si-bil′i-ti), *n.* [**deflexible* (*-bil-*) + *-ity.*] Capability of being deflected. *Brougham.*

deflocculation (dē-flok-ū-lā′shon), *n.* [*de-* + *flocculation.*] The reversal of the process of flocculation (which see).

The removal of the finest particles from the surface soil is attributed to *deflocculation* induced by the use of sodium nitrate, and followed by the washing of the finest particles into the subsoil. *Nature*, July 7, 1904, p. 238.

deflorate (dē-flō′rāt), *v. t.*; pret. and pp. *deflorated*, ppr. *deflorating*. [L. *deflorare* (pp. *-atus*): see *deflower.*] To strip of flowers; deflower.

deflorence (dē-flō′rens), *n.* [L. *de-* + *flos* (*flor-*) + *-ence.*] The fading out of the eruption of an exanthematous disease.

defness, *n.* A simplified spelling of *deafness.*

deforest (dē-for′est), *v. t.* [*de-* + *forest.*] Same as *disafforest.*

deform[1], *v. t.*, **1.** (*b*) In *geom.*, to bend without stretching or tearing.

deformation, *n.* **5.** In *bot.*, any malformation or abnormal growth due to the attack of some parasite.—**6.** In *geol.*, the process whereby, under the influence of strains (usually compressive), individual strata, masses of rock, or larger portions of the earth's crust suffer change of form, as when massive rocks become schistose, flat strata are folded, or mountain-ranges are upheaved.

deformational (dē-fôr-mā′shon-al), *a.* Of or pertaining to deformation; tending to produce deformation.

Several *deformational* movements had affected this district. *Nature*, Feb. 12, 1903, p. 359.

deformity, *n.*—**Gun-stock deformity,** displacement of the forearm following fracture of the humerus.—**Silver-fork deformity,** the peculiar curve of the outline of the wrist characteristic of Colles's fracture of the lower end of the radius.

defraudation, *n.* **2.** In *Sp. law*, the offense of fraudulently avoiding payment of a public tax.

defrock (dē-frok′), *v. t.* [F. *défroquer;* as *de-* + *frock.*] Same as *unfrock.*

defrost (dē-frôst′), *v. t.* [*de-* + *frost.*] To remove the effects of frost or freezing from; restore to a sound unfrozen condition or state. [Colloq.]

Each year there is visible improvement in the methods of *defrosting* meats in European markets. Frozen mutton from the antipodes and from Argentina reaches the retail butcher shop in better form and appearance than formerly. *Yearbook, U. S. Dept. Agr.*, 1896, p. 26.

deg. An abbreviation of *degree.*

degelation (dē-je-lā′shon), *n.* [L. *de-* + *gelatio*(*n-*), *freezing.*] Melting; fusion; the change from the solid to the liquid phase or state; liquefaction: opposed to *congelation.* *N. E. D.*

degenerate, *a.* **II.** *n.* One who has retrograded from a normal type or standard, especially in moral nature and character, and exhibits certain morbid physical and mental traits and tendencies.

That which nearly all *degenerates* lack is the sense of morality and of right and wrong.
Nordau, Degeneration, iii. 18.

degeneration, *n.* **5.** A progressive departure of a family from the normal condition: shown in the first generation by a nervous temperament, moral depravity, and excesses; in the second by tendency to apoplexy and severe neuroses frequently with alcoholism; in the third by mental derangement, suicide, and intellectual weakness; and in the fourth by hereditary imbecility, deformities, arrested development, and sterility.—**6.** In *geol.*, disintegration produced by weathering.—**Adipose degeneration.** Same as *fatty degeneration.*—**Anemic degeneration.** Same as *polychromatophilic* ★*degeneration.*—**Angiolithic degeneration,** atheroma with abundant calcareous deposit.—**Ascending degeneration.** (*a*) Degenerative change in the spinal cord which progresses upward toward the brain. (*b*) Wallerian degeneration proceeding in a direction from the periphery toward the center.—**Bacony degeneration.** Same as *lardaceous disease* (which see, under *lardaceous*).—**Chitinous degeneration.** Same as *amyloid degeneration.*—**Comma degeneration.** See ★*comma.*—**Cystic degeneration,** degeneration associated with the formation of cavities or cysts in the part affected.—**Descending degeneration.** Wallerian degeneration advancing from the nerve-centers toward the periphery.—**Earthy degeneration.** Same as *calcareous degeneration.*—**Fibrous degeneration,** overgrowth of the connective-tissue framework of a part, which compresses and causes atrophy of the functionating cells.—**Gelatiniform degeneration.** Same as *colloid degeneration.*—**Keratoid degeneration,** transformation of the plasma of the cell into keratin.—**Method of degeneration,** in *math.*, a method of obtaining results by letting one dimension vanish.—**Partial reaction of degeneration,** the presence of reaction of degeneration in a muscle under direct galvanic stimulation, with preservation of normal reaction in the nerve supplying this muscle. See *reaction of degeneration,* under *reaction.*—**Physiological degeneration,** the atrophy of certain cells or tissues or organs that others may attain to perfect development. *Brinton*, Basis of Social Relations, p. 82.—**Polychromatophilic degeneration,** a condition of the red corpuscles of the blood, which is characterized by a simultaneous affinity of the cells for more than one dye, namely, for a basic as well as an acid dye.—**Quain's degeneration,** fibrous degeneration of the muscle of the heart.—**Senile degeneration,** fibrous degeneration occurring as a result of catabolic changes in the aged.—**Virchow's degeneration.** Same as *lardaceous disease* (which see, under *lardaceous*).

Degenerative juncture. See ★*juncture.*

degerm (dē-jėrm′), *v. t.* [*de-* + *germ.*] To extract or remove the germ from. See *degerminator.*

After *de-germing*, the maize is unhusked, wetted, submitted to a temperature sufficient to rupture the starch cells. *Encyc. Brit.*, XXVI. 363.

deglaciation (dē-glā-shi-ā′shon), *n.* [*de-* + *glaciation.*] The withdrawal of ice from a previously glaciated region. *Dana*, Manual of Geol., p. 969.

deglutible (dē-glö′ti-bl), *a.* [NL. **deglutibilis*, < L. *deglutire*, swallow: see *deglutition.*] Capable of being swallowed.

deglycerinize (dē-glis′ė-rin-īz), *v. t.*; pret. and pp. *deglycerinized*, ppr. *deglycerinizing.* [*de-* + *glycerin* + *-ize.*] To separate the glycerin from (a fat or oil) before using the fatty acids for the manufacture of soap. *Sadtler*, Handbook of Indust. Chem., p. 71.

degradand (deg′ra-dand), *n.* [ML. *degradandus*, fut. pass. part. of *degradare*, degrade: see *degrade.*] One who is to be degraded or reduced in rank. *R. W. Dixon*, Hist. Church of Eng., iv. 494. *N. E. D.*

degradation, *n.* **10.** In *organic chem.*, the resolution of the molecule of a compound into other substances of smaller molecular weight. It denotes the systematic elimination of one carbon atom after another from a compound, whereby we pass down a homologous series, step by step, from the more to the less complex.

A method of preparation of aldehydes and the systematic *degradation* of acids.
Nature, March 24, 1904, p. 504.

Degradation of energy, in *thermodynam.*, the transformation of energy from higher, or more available, to lower, or less available, forms. The most important case is that of the degradation of kinetic or potential energy into heat. The general doctrine of the degradation of energy is that the processes of nature are in general such as to convert energy from available to unavailable forms, so that the degraded forms, such as heat, constitute a greater and greater proportion of the total energy of the universe.—**Differential degradation,** in *geol.*, the varying degrees of erosion exhibited by a series of stratified rocks of different degrees of hardness and resistance.

degradator (deg-rā-dā′tor), *n.* [NL., < ML. *degradare*, degrade.] One who degrades; one who formally and with authority deprives of rank. *R. W. Dixon*, Hist. Church of Eng., iv. 494. *N. E. D.*

degrade, *v. t.* **8.** In *thermodynam.*, to convert from a form of greater to one of less availability: said of certain transformations of energy.

degraded, *p. a.* **5.** In *geol.*, worn down; leveled by erosion.—**6.** In *thermodynam.*, reduced to a form less available for further transformation: said of energy which as the result of transformations has been converted into heat.

dégraissant (dā-grā-säṅ′), *n.* [F., prop. ppr. of *dégraisser*, remove the grease from, < *dé-* + *graisse*, grease: see *degrease.*] Sand, or the like, mixed with potters' clay, to prevent it from cracking when fired.

dégras (dā-grä′), *n.* [F., for **degrais*, < *dégraisser*, degrease: see *degrease.*] A thick grease obtained as a by-product from wool, and also in the manufacture of some kinds of leather.

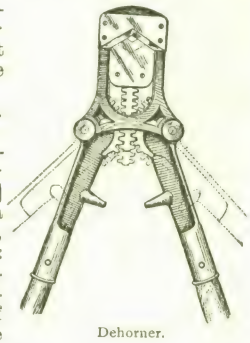
Dégras, which has been referred to in connection with the woolen industry as being obtained from wool grease, is also a by-product of great value in the leather industry, and a great demand for this material for currying purposes has led to the manufacture of it as a special industry. *Sci. Amer. Sup.*, Dec. 6, 1902, p. 22518.

dégras-former (dā-grä′fôr″mėr), *n.* A substance of brown color and resinous consistence, a constituent of tanners' dégras and sod-oil, the presence of which enables the fish-oils used in currying leather and in oil-tanning to form an emulsion with water.

degreasing (dē-grē′sing), *n.* The act or process of removing grease from a greasy object; specifically, the removal of fatty matter from raw sheep's wool by the solvent action of petroleum naphtha. *Sadtler*, Handbook of Indust. Chem., p. 310.

degree, *n.*—**Baumé degree,** a degree of the Baumé scale of specific gravity. See ★*scale*[3], *n.*—**Decimal degree.** See ★*decimal.*—**Degree of an equation.** See *degree*, 7.—**Degree of a surface,** the order of a surface. See *surface*, 2.—**Degree of freedom.** (*a*) See *freedom.* (*b*) In *phys. chem.*, the number of conditions of a thermodynamic system which can be changed independently of each other, without destroying the system by suppressing one of its phases. For example, a system composed of water existing in the two phases, liquid and solid, and depending for equilibrium on the two conditions, temperature and pressure, has one degree of freedom and only one: any desired temperature may be given to it within certain limits, but the pressure is thereby fixed; and any pressure may be established within certain limits, but the temperature is determined in so doing.—**Degree of saturation.** See ★*saturation.*—**Degrees of frost.** See ★*frost.*—**Geothermic degree,** the ratio between depth in the earth and increase of temperature equivalent to one degree. After passing below the outer zone of variable seasonal temperature, the usual ratio, as ascertained by data from deep wells and mine-shafts, is from 55 to 60 feet in depth to 1° F. *Dana*, Manual of Geol., p. 257.—**Lambeth degree,** a degree given by the archbishop of Canterbury. Although he can confer all degrees given by the two universities, the graduates have many privileges not shared by the recipients of his degrees. *Bouvier*, Law Dict.—**Mercury-in-glass degree,** a degree of the thermometric scale in which equal relative expansions of mercury in glass, as in the ordinary mercury thermometer, are taken to mark equal differences of temperature. The mercury-in-glass degree does not conform strictly to the degree of the gas-thermometer, because the relative expansion of mercury in glass with change of temperature is not strictly uniform.—**Number of degree,** in *hygrom.*, the difference between the temperature of the air and the dew-point.—**Platinum degree,** a degree of the thermometric scale in which equal changes in the electric resistance of a platinum wire are taken to correspond to equal changes of temperature. The platinum degree, like the mercury-in-glass degree of ordinary thermometers, does not agree precisely with the degree of the gas-thermometer because the change of resistance of platinum with temperature is not strictly uniform.—**Square degree,** the area included between two parallels of latitude one degree apart and two meridians of longitude one degree apart, which intersect them. *Geog. Jour.* (*R. G. S.*), XVIII. 92.

dehair (dē-hār′), *v. t.* [*de-* + *hair.*] To remove the hair or wool from, as hides or skins. *Modern Amer. Tanning*, p. 37.



dehalogenize (dē-ha-loj′e-nīz), *v. t.*; pret. and pp. *dehalogenized*, ppr. *dehalogenizing.* [*de-* + *halogen* + *-ize.*] In *chem.*, to deprive of one or more of the halogens chlorin, bromine, iodine, etc. *Jour. Soc. Chem. Industry*, II. 171.

dehematize (dē-hem′a-tīz), *v. t.*; pret. and pp. *dehematized*, ppr. *dehematizing.* [Also *dehæmatize;* < L. *de-*, from, + Gr. *αἷμα*(*τ-*), blood, + *-ize.*] To deprive of blood, either locally, by compression or the use of the Esmarch bandage, or generally, as in the 'salt frog'; render exsanguine. *Med. Record*, March 7, 1903, p. 362.

dehemoglobinize (dē-hem-ō-glō′bi-nīz), *v. t.*; pret. and pp. *dehemoglobinized*, ppr. *dehemoglobinizing.* To remove from the red blood-corpuscles their characteristic coloring matter, the hemoglobin. *Jour. Tropical Med.*, Nov. 2, 1903, p. 337.

dehorn (dē-hôrn′), *v. t.* [*de-* + *horn.*] **1.** To remove the horns from (domestic cattle). Two tools are used in the operation, a saw and a clipper. The saw has a narrow web held in a frame and resembles a butcher's saw; the clipper has a chisel-shaped knife which moves in guides and is operated by a rack and segments controlled by a pivoted handle.
2. To saw off the ends of logs bearing the owner's mark and to put on a new mark. [Kentucky.]

dehorner (dē-hôr′nėr), *n.* [*dehorn* + *-er*[1].] An instrument for cutting off the horns of cattle.

Dehorner.

Dehumanized virus. See ★*virus.*

dehydracetic (dē-hī-dra-set′ik), *a.* [*de-* + *hydr*(*ogen*) + *acetic.*] Noting an acid, a colorless compound, $CH_3COCH \cdot COCH : C(CH_3)OCO$, prepared by the prolonged boiling of ethyl acetoacetate (acetoacetic ether). It crystallizes in rhombic needles or plates, melts at 108.5–109° C. and boils at 269.9° C.

dehydrocholalic (dē-hī″drō-ko-lal′ik), *a.* [*de-* + *hydro*(*gen*) + *cholalic.*] Noting an organic acid, $C_{24}H_{34}O_5$, obtained on oxidation of cholalic acid.

dehydrogenate (dē-hī′drō-jen-āt), *v. t.*; pret. and pp. *dehydrogenated*, ppr. *dehydrogenating*. [*de-* + *hydrogen* + *-ate*[2].] Same as *dehydrogenize*.

dehydromorphine (dē-hī-drō-môr′fin), *n.* [*de-* + *hydro(gen)* + *morphine*.] A colorless compound, $(C_{17}H_{18}O_3N)_2$, contained in opium and prepared artificially by the oxidation of morphine. It crystallizes with $3H_2O$ and decomposes without melting. Also called *pseudomorphine* and *oxymorphine*.

dehypnotize (dē-hip′nō-tīz), *v. t.*; pret. and pp. *dehypnotized*, ppr. *dehypnotizing*. [*de-* + *hypnotize*.] To awaken from the hypnotic state.

deicidal (dē′i-sī-dal), *a.* [*deicide* + *-al*[1].] Of or pertaining to the slaying of a god. *P. J. Bailey*, Festus. *N. E. D.*

deictic, *a.* 2. Demonstrative.

The augment seems to have been originally a pronominal *deictic* particle. *Encyc. Brit.*, XXXI. 676.

deindividualization (dē-in-di-vid″ū-al-ī-zā′-shon), *n.* Destruction of individuality; hence, a social process destructive of individuality and self-dependence, and creative of dependence or pauperism.

There are social causes of *deindividualization* and desocialization. *Giddings*, Inductive Sociol., p. 263.

deindividualize (dē-in-di-vid′ū-al-īz), *v. t.*; pret. and pp. *deindividualized*, ppr. *deindividualizing*. [*de-* + *individualize*.] To destroy individuality.

The degraded are those who are both *deindividualized* and desocialized. They have lost both social instinct and self-respect. *Giddings*, Inductive Sociol., p. 263.

Deiphon (dē′i-fon), *n.* [NL.] An aberrant genus of trilobites, with the two lateral lobes of the entire animal much reduced and modified. The glabellum is globular and the fixed cheeks produced as long curved spines at the base of which are the eyes. The thoracic segments are nine and their pleura are entirely separated from each other; the pygidium is small and bears two pairs of curved spines. It is of Silurian age.

deipotent (dē-ip′ō-tent), *a.* [L. *deus*, god, + *potens*, having power.] Possessing divine power.

But Paul denounced a curse *deipotent*
Against him. *W. C. Wilkinson*, Epic of Paul.

Deister sandstone. See ★*sandstone*.

dejectile (dē-jek′til), *n.* [*deject* + *-ile*.] A missile hurled down upon an enemy.

dejection, *n.* 6. In *geol.*, volcanic debris; a sediment of volcanic origin.

dejector (dē-jek′tor), *n.* A medicinal agent which tends to produce evacuation of the bowels; an aperient.

déjeuner, *n.* 2. A breakfast service, usually consisting of a tray, cups and saucers, tea-pot, sugar-bowl, cream-jug, and slop-basin.

dekarch, dekarchy, *n.* See ★*decarch*, ★*decarchy*.

del[3], *n.* A simplified spelling of *dell*[1].

Del. An abbreviation (*a*) of *Delaware;* (*b*) [*l. c.*] of *delegate*.

delabrated (dē-lā′brā-ted), *p. a.* [★*delabrate* (L. *de-* + *labrum*, lip, + *-ate*[1]) + *-ed*[2].] Having the lips or edges removed: applied to volcanic craters of which the walls have been partly destroyed.

delaminate (dē-lam′i-nāt), *v. i.*; pret. and pp. *delaminated*, ppr. *delaminating*. [NL. *delaminare* (pp. *-atus*), < L. *de-* + *lamina*, a thin plate of metal: see *laminate*.] To split into separate layers or plates: used in embryology of the formation of the embryonic layers when one is derived from the other by splitting, and not, as usual, by invagination or cell-migration.

delaminate (dē-lam′i-nāt), *a.* [NL. *delaminatus*, *pp.*] Formed by splitting off from a layer or plate: said of the formation of the endoderm in certain cœlenterate embryos.

deleb (del′eb), *n.* [Ar.; cf. *dolb*, plane-tree.] A variety of the palmyra-palm, *Borassus flabellifer*, distributed from Senegambia through the Sudan and Central Africa to German East Africa and the Zambesi. The seeds are used as food, and from the leaves mats are made. See *palmyra*, 1, and *Borassus*.

delectus (dē-lek′tus), *n.* [L. *delectus*, a selection, < *deligere*, select: see *delectus personæ*.] A graduated selection of passages from Latin or Greek authors, usually with notes and a vocabulary, for translation by school-boys: as, a Latin *delectus;* Valpy's Greek *Delectus*.

delegant (del′ē-gant), *n.* [L. *delegans* (*-ant-*), pp. of *delegare*, assign: see *delegate*, *v.*] In *civil law*, a debtor who, to discharge his debt, assigns to his creditor a debt of a third party due to himself.

delegate, *n.*—**Apostolic delegate.** See ★*apostolic*.

delegatee (del-ē-gā-tē′), *n.* [*delegate* + *-ee*[1].] In *civil law*, the assignee of a delegant; one to whom a debtor is assigned in satisfaction of another's debt. See ★*delegant*.

delegator (del′ē-gā-tor), *n.* [LL. *delegator*, < L. *delegare*, delegate.] In *civil law*, same as ★*delegant*.

delestage (de-les-täzh′), *n.* In *French marine law*, the throwing overboard of ballast.

Delézinier's base. See ★*base*[2].

delf[2], *n.*—**Brislington delf,** stanniferous faience made at Brislington, near Bristol, England, in the eighteenth century. It is of coarse body and yellowish enamel and is frequently decorated with crudely painted copper-luster designs.—**Bristol delf,** stanniferous faience made at Bristol, England, in the eighteenth century, in imitation of Dutch delf, but possessing a body sufficiently hard to resist a steel point.—**Lambeth delf,** tin-enameled pottery produced at Lambeth, London, England, in the seventeenth century, in imitation of the delf ware of Holland. It is of a harder and denser paste than the Dutch product, and the blue color used in the decoration is of a paler tint.—**Liverpool delf,** tin-glazed pottery made at Liverpool, England, during the first half of the eighteenth century, in the manner of Holland delf. The decorations were frequently printed. The body is quite hard and of a pinkish tint.—**Staffordshire delf,** stanniferous enamel produced at several places in Staffordshire, England, in the seventeenth and eighteenth centuries. It was of a coarser body and ruder decoration than other English delf.

Delicate long-sting, an American braconid parasite, *Macrocentrus delicatus*, which destroys the codling-moth. *Saunders*, Insects Injurious to Fruits, p. 132.

delicatessen (del-i-ka-tes′en), *n. pl.* [G., < F. *delicatesse*, < *délicat*, delicate.] Delicacies; delicate or dainty articles of food, implying, in German use, sausages and the like.

delictum (dē-lik′tūm), *n.*; pl. *delicta* (-tä). [L.] In *civil* and *Scots law*, see *delict*.

deligate (del′i-gāt), *v. t.*; pret. and pp. *deligated*, ppr. *deligating*. [L. *deligatus*, pp. of *deligare:* see *deligation*.] To tie off; apply a ligature to. *N. E. D.*

delime (dē-līm′), *v. t.*; pret. and pp. *delimed*, ppr. *deliming*. [*de-* + *lime*[1].] To remove lime from, as skins. *Modern Amer. Tanning*, p. 50.

delimit, *v. t.*—**Delimiting curve,** a curve which separates two regions of the surface upon which it is drawn.

delimitate (dē-lim′i-tāt), *v. t.*; pret. and pp. *delimitated*, ppr. *delimitating*. To determine and lay down the boundaries of; delimit.

delimitation, *n.* 2. In *bot.*, same as ★*abjunction*.

delimitative (dē-lim′i-tā-tiv), *a.* [*delimitate* + *-ive*.] Having power to delimit: as, a *delimitative* commission has been named.

delineative (dē-lin′ē-ā-tiv), *a.* [*delineate* + *-ive*.] That serves to delineate; of or pertaining to delineation.

When, however, we encounter *delineative* elements or subjects employed in ornamental offices, we may reasonably assume that ideas were associated with them, that they were symbolic.
20th *An. Rep. Bur. Amer. Ethnol.*, 1898–99, p. 65.

delint (dē-lint′), *v. t.* [*de-* + *lint*.] To remove the fiber, or lint, from cotton or similar seeds.

delinter (dē-lin′tėr), *n.* [*delint* + *-er*[1].] A kind of cotton-gin for removing the short fibers, or lint, which remain on the cotton-seed after the first ginning; a linter.

deliquescent, *a.* 5. In *bot.*, becoming liquid at maturity, as certain agarics.

Delirium cordis ('aberration of the heart'), extreme irregularity in the movements of the heart.—**Delirium vesanicum** ('insane aberration'), the delirium of true insanity as distinguished from that associated with other conditions, such as acute fevers.—**Muttering delirium,** a condition, seen in acute fevers, in which the patient is unconscious of his surroundings and is quiet, but constantly mutters to himself.

deliverance, *n.*—**Second deliverance,** in *Eng. law*, a writ by which a plaintiff in replevin, having lost his suit by default or nonsuit, could have the same distress again delivered to him upon giving the same security as before.

delivery, *n.* 11. In a cotton-mill, the quantity of sliver delivered from a machine.—**Express delivery,** immediate and special delivery of mailed letters or parcels.—**Free delivery,** in *postal service*, the delivery of mail-matter, by carriers, within a town or city, or within a limited distance from a substation.—**General delivery,** (*b*) the department in a post-office where letters are kept (by direction of the senders) until called for.—**Rural free delivery,** delivery of mail-matter, by wagon, over long routes in rural districts: it includes the delivery and collection of letters and packages, the sale of stamps, the registry of letters, and the giving of receipts for money-orders.—**Rural free-delivery route,** the official route followed by a rural carrier. It is usually about 25 miles long and reaches about one hundred farms and isolated dwellings, and is supposed to be traversed by the carrier in one continuous trip in one day.—**Special delivery,** in *postal service*, the delivery, by special carrier or messenger, of any letter to which the sender has affixed an extra stamp, called a *special-delivery stamp*.

delivery-box (dē-liv′ėr-i-boks), *n.* A box or chamber into which a liquid is thrown by pumps and from which it is delivered to any desired point.

delivery-pipe (dē-liv′ėr-i-pīp), *n.* The pipe through which liquids pass away, or are ejected, from a pump; a discharge-pipe.

dellenite (del′en-īt), *n.* [*Dellen*, in Sweden, + *-ite*[2].] In *petrog.*, a name proposed by Brögger (1896) for rocks intermediate in composition between dacite and rhyolite. Dellenite is a porphyritic or non-porphyritic aphanitic rock, characterized by nearly equal amounts of potash feldspar and lime-soda feldspar, with quartz and subordinate amounts of other minerals.

delolepis (dē-lol′e-pis), *n.* [NL., < Gr. *δῆλος*, visible, + *λεπίς*, scale.] A genus of fishes of the family *Cryptacanthodidæ*, or wrymouths, found in Alaskan waters.

delomorphic (del-ō-môr′fik), *a.* [Gr. *δῆλος*, visible, + *μορφή*, form, + *-ic*.] Of appreciable size: noting those cells of the stomach-glands which supposedly secrete the hydrochloric acid. Also called *parietal* or *oxyntic cells*. *W. D. Halliburton*, Chemical Physiol. and Pathol., p. 633.

delomorphous (del-ō-môr′fus), *a.* [Gr. *δῆλος*, visible, + *μορφή*, form, + *-ous*.] Same as ★*delomorphic*.

Delphin blue. See ★*blue*, *n.*

Delsartian (del-sär′ti-an), *a.* Of or pertaining to François Delsarte (1811–1871), a French musician, or to a method of developing bodily grace and strength founded by him.

delt, *pp.* A simplified spelling of *dealt*.

Delta connection, moth, purpurin. See ★*polyphase*, *deltoid moth*, ★*purpurin*.

deltal (del′tal), *a.* [*delta* + *-al*[1].] Of or pertaining to a delta; of the nature of a delta.

delta-plain (del′tä-plān), *n.* The nearly level lowland portion of a delta, above water. *R. D. Salisbury*, Geol. Surv. of New Jersey, 1892, p. 101.

delta-plateau (del′tä-pla-tō″), *n.* A sand-plain; a delta formed at the front of a regional glacier.

For such topographic forms Professor Davis long since proposed the name of delta-plain or *delta-plateau*, instead of sand-plain, a designation which has also been employed by many others, being both suggestive and descriptive. *Amer. Geol.*, Sept., 1903, p. 163.

delta-ray (del′tä-rā), *n.* See ★*ray*[1].

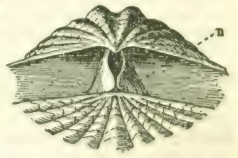
deltarium (del-tā′ri-um), *n.*; pl. *deltaria* (-ä). [NL., < Gr. *δέλτα*, the letter Δ, + *-arium*.] In the telotrematous *Brachiopoda*, the deltidial plates, taken as a single feature; the covering of the delthyrium in these organisms: contrasted with *deltidium* and *pseudodeltidium* (which see).

A part of the hinge of the brachiopod *Spirifer*, showing the deltarium, D. (After Hall and Clarke.)

Deltentosteus (del-ten-tos′tē-us), *n.* [NL., < Gr. *δέλτα*, delta, + *ἐντός*, within, + *ὀστέον*, bone.] A genus of small gobies found in the Mediterranean. *D. quadrimaculatus* is the typical species.

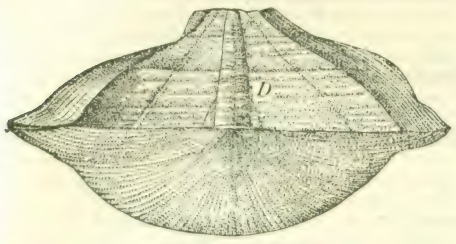
delthyrial (del-thir′i-al), *a.* [*delthyrium* + *-al*[1].] Of or pertaining to the delthyrium.

Delthyris (del′thi-ris), *n.* [NL. for **Deltathyris* (referring to the pedicle aperture), < Gr. *δέλτα*, the letter Δ, + *θύρα*, a door.] A subgenus of Paleozoic brachiopods, having the general characters of the genus *Spirifer*, but with the surface of the shell covered with fine concentric lamellæ.—**Delthyris limestone,** in the original nomenclature of the New York rock formations, a term applied to a division of the Helderberg series, taking its name from the abundance of the brachiopod *Delthyris* or *Spirifer;* also known as the *Delthyris* shaly limestone and the Catskill shaly limestone. The present geographic designation of the formation is the *New Scotland beds*.



delthyrium (del-thir′i-um), *n.*; pl. *delthyria* (-ä). [NL. for **deltathyrium*, < Gr. *δέλτα*, the letter Δ, + *θύριον*, a little door.] In the *Brachiopoda*, the triangular pedicle-opening in the cardinal area of the ventral valve, extending from the beak to the hinge-line. It may remain open

A part of the hinge of the brachiopod *Spirifer*, showing the delthyrium, Δ. (After Hall and Clarke.)



through life or become closed in early life by the growth of the deltidium or, in secondary stages when the deltidium is absent, by the development of the deltidial plates. See ★*deltidium*, ★*deltidial plates*, and ★*deltarium*.

deltidial (del-tid′i-ạl), *a.* [*deltidium* + *-al*1.] Of or relating to the deltidium.—**Deltidial plates**, in the *Brachiopoda*, the two symmetrical plates which, in advanced forms (*Telotremata*), cover the delthyrial opening or delthyrium. These plates are a secondary structure, appearing late in the phylogeny of the class. They grow from the sides of the delthyrium and sometimes becomecoalesced along the median line at which they meet, forming a structure similar in appearance and function to the deltidium, but very different therefrom in origin, and known as the *pseudodeltidium*.—**Deltidial tube**, in certain extinct *Brachiopoda*, an incomplete tube or syrinx formed on the inner surface of the deltidium.

A part of the hinge of the brachiopod *Spirifer*, showing the deltidial plates, *D*. (After Hall and Clarke.)

deltidium (del-tid′i-um), *n.*; pl. *deltidia* (-ạ). [NL., ⟨ Gr. *δέλτα*, the letter Δ, + dim. *-ιδιον*.]

Deltidium

A brachiopod (*Derbya Cymbula*) showing the deltidium, D. (After Hall and Clarke.)

In the *Brachiopoda*, the convex or concave single plate which covers the delthyrium or pedicle-passage. In the embryo this appears as a single plate on the dorsal side before the development of the ventral valve, with which it finally becomes fused (see *prodeltidium*), and characterizes certain of the *Protremata*; but in all advanced forms (*Telotremata*) the deltidium is absent, being replaced by the deltidial plates.

Deltistes (del-tis′tēz), *n.* [NL., ⟨ Gr. *δέλτα*, delta, + term. *-ιστης*.] A genus of suckers of the family *Catostomidæ*, found in the lakes of southeastern Oregon, characterized by very strong jaws and triangular teeth in the pharynx. *D. luxatus* is the typical species.

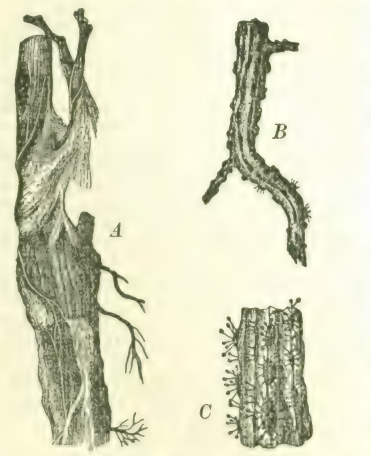
deltoid. I. *a.*—**Deltoid dodecahedron.** See ★*dodecahedron*.—**Deltoid eminence**, that part of the humerus where the deltoid muscle is attached.—**Deltoid plates**, in the blastoid *Echinodermata* or *Blastoidea*, the triangular interradial plates lying at the summit of the calyx.

II. *n.* 2. In *zoöl.*, a deltoid plate.—3. In *math.*, a symmetrical quadrilateral with a diagonal as axis.

Delusion of grandeur, insane belief in one's own importance, wealth, social rank, etc.—**Delusion of negation**, insane belief that some part of the body is lacking.—**Delusion of persecution**, insane belief that one is being pursued, watched, or slandered by secret enemies.

Delusional insanity. See ★*insanity*.

Dem. An abbreviation (*a*) of *Democrat*; (*b*) of *Democratic*.



demagnetizer (dē-mag′net-ī-zėr), *n.* One who or that which removes magnetic polarity, or which causes something to cease to exert magnetic attraction; specifically, a device for removing any polarity or tendency to exert magnetic attraction from articles which have touched or have been in the sphere of action of an electromagnet, as in chucks or clutches or lifting-apparatus where the grip has been by magnetic action. Demagnetization is usually effected by frequently reversing the polarity of the demagnetizing mass, while the object to be demagnetized is gradually withdrawn from the influence of that mass; or the object, if small, may be rapidly revolved in the radius of action of a mass of fixed polarity, and then gradually withdrawn while so revolving.

demand, *n.*—**Reciprocal demand**, the external demand for the products of one economic group induced by the demand of that group for the products of non-competing groups. Thus in international trade, through the tendency of imports to balance exports, one nation's demand for the products of other nations induces an equal reciprocal demand on the part of those nations for the products of the first nation. It was contended by Cairnes that this principle determines the relative valuation of products of groups within a nation when there is no free movement of labor and capital from group to group.—**Stale demand** or **claim**, in *law*, a claim or demand that has been allowed to lie dormant so long that, although not barred by the statute of limitations, it is not looked upon with favor by the law.

demareteion (dem″ạ-rē-tī′on), *n.* See *damareteion*.

Dematiaceæ (dem-ạ-ti-ā′sē-ē), *n. pl.* [NL.] Same as *Dematieæ*; the form now in use.

Dematophora (dem-ạ-tof′ō-rạ), *n.* [NL. (Hartig, 1883), ⟨ Gr. *δέμα*(*τ*-), a band, + *-φορος*, ⟨ *φέρειν*, bear.] A genus of fungi of doubtful relationship occurring commonly as sterile strands or layers of mycelium parasitic on the roots of plants. It sometimes forms tuberous black sclerotia from which bristle-like conidiophores may arise bearing ovoid hyaline conidia. Viola has also described what he regards as a perithecial condition of the fungus. *D. necatrix* is the best-known form. It attacks the roots of the grape and various fruit- and forest-trees. See ★*aubernage* and ★*root-rot*.

Dematophora necatrix.

A, a vine-stock affected by the fungus (after a prolonged stay in a moist chamber); *B*, a vine-root with rows of black sclerotia of the fungus exposed, and bearing bristle-like conidiophores; *C*, portion of *A* after the formation of conidiophores: enlarged. (From Tubeuf and Smith's "Diseases of Plants," after R. Hartig.)

demedication (dē-med-i-kā′shọn), *n.* [*de-* + *medication*.] See ★*cataphoretic demedication*.

démêlé (dā-mā-lā′), *n.* [F., ⟨ *démêler*, untangle, separate, discuss, ⟨ *dé-* + *mêler*, mix: see *mell*, *mêlée*.] Contest; contention; quarrel; squabble: as, an unfortunate *démêlé* with the cook; a *démêlé* with Russia.

demene, *n.* A simplified spelling of *demesne*.

dementholize (dē-men′thōl-īz), *v. t.*; pret. and pp. *dementholized*, ppr. *dementholizing*. [*de-* + *menthol* + *-ize*.] To deprive of menthol.—**Dementholized oil**, oil of peppermint from which the menthol has been removed.

démenti (dā-mäṅ-tē′), *n.* [F., ⟨ *démentir*, deny, ⟨ *dé-* + *mentir*, lie.] The giving of the lie (officially); denial.

Dementia præcox, a form of insanity occurring at puberty.—**Secondary dementia**, a form of chronic dementia which follows repeated acute attacks.

Demerara crystals. See ★*crystal*.

demeritorious (dē-mer-i-tō′ri-us), *a.* [*de-* + *meritorious* (with ref. to *demerit*).] Blameworthy as well as destitute of merit: the opposite of *meritorious*: as, *demeritorious* conduct.

Let us start from a particular case. I sign what I know to be a malicious libel. I am, then, a malevolent liar. My conduct proves that I am neither benevolent nor truthful. I deserve blame, and my conduct is *de-meritorious*.
Leslie Stephen, Science of Ethics, p. 279.

demersal (dē-mėr′sạl), *a.* [Irreg. L. *demersus*, pp. of *demergere*, immerse, + *-al*1.] Having so great a specific gravity as to sink in water: said of fish-eggs.

The eggs may be pelagic, *i. e.* so light as to float when laid, as in the Cod, Haddock, Turbot, Sole, &c., or *demersal*, *i. e.* so heavy as to sink to the bottom, as in the Herring. *Parker and Haswell*, Zoology, II. 225.

demi-bateau (dem″i-ba-tō′), *n.* One of the two small boats which when united form a pontoon-boat. Also called *demi-pontoon*.

demibranch (dem′i-brangk), *n.* [*demi-* + Gr. *βράγχιον*, gill.] In lamellibranchiates, one of the two gills on either side. *Philos. Trans. Roy. Soc.* (London), 1903, ser. B, p. 151.

demi-brigade (dem′i-bri-gād″), *n.* A small brigade of the Napoleonic era, consisting of three battalions.

demi-column (dem-i-kol′um), *n.* Same as *engaged column*: used especially when about half the shaft is engaged in the wall.

demicontrafagotto (dem-i-kon″tra-fa-got′tō), *n.* [It.] A form of bassoon intermediate in size and pitch between the ordinary bassoon and the double bassoon.

demidolmen (dem-i-dol′men), *n.* A megalithic table-stone resting with one end on one or two upright stones, while the other end rests on the ground.

demi-gross (dem′i-grōs), *n.* An English coin of the time of Edward III., of the value of two pence.

demi-kindred (dem′i-kin″dred), *n.* Persons related by either the paternal or the maternal blood.

demi-landau (dem′i-lan″dâ), *n.* A half-landau; a landaulet.

demilegato (dem″i-lā-gä′tō), *a.* [It.: see *demi-* and *legato*.] In *music*, noting a style of performance in which the tones in a phrase are slightly separated by a silence, but not enough to become fully detached. It is indicated roughly by staccato marks and a sweeping curve. See cut (*a*) under *staccato*.

demilitarize (dē-mil′i-tạ-rīz), *v. t.*; pret. and pp. *demilitarized*, ppr. *demilitarizing*. [*de-* + *militar-y* + *-ize*.] To convert from a military to a civil form of government; place under civil jurisdiction. *N. E. D.*

demimondaine (dem-i-mon-dān′), *n.* [F., ⟨ *demimonde*, demi-monde.] A member of the demi-monde. *N. and Q.*, May 27, 1905, p. 418.

demineralization (dē-min″ẹ-ral-i-zā′shọn), *n.* [*demineralize* + *-ation*.] Loss of mineral constituents: noting a process which occurs in softening of the bones (osteomalacia). *Med. Record*, June 27, 1903, p. 1047.

demi-piquet (dem-i-pēk′), *n.* A saddle with a peak about half as high as that of the military saddle.

His rider occupied his *demipique*, or war-saddle, with an air that showed it was his familiar seat.
Scott, Legend of Montrose, ii.

demi-plate (dem′i-plāt), *n.* In *Echinoidea*, one of the ambulacral plates which are cut off from the median suture by the union of adjoining plates behind. *Lankester*, Treatise on Zool., III. 288.

demi-pontoon (dem″i-pon-tön′), *n.* Same as ★*demi-bateau*.

demi-season (dem-i-sē′zn), *a.* Intermediate, as in style, etc., between two seasons: as, a *demi-season* costume. *N. E. D.*

demi-semi (dem-i-sem′i), *a.* Half of a half: applied contemptuously to a person (or thing) of no particular account or consequence: as, a *demi-semi* statesman. *N. E. D.*

demisemiquaver, *n.*—**Half demisemiquaver.** Same as *hemidemisemiquaver*.

demit (dē-mit′), *n.* An act of demission or transfer of membership, as from one masonic lodge to another; also, the letter which officially certifies to such a transfer.

demi-tasse (dem-i-täs′), *n.* [F., half-cup.] A small cup, as of coffee served after dinner.

democentric (dem-ō-sen′trik), *a.* Characterized by the idea that the people to which an individual belongs forms the center of the universe.

The heliocentric system was expanded out of an antecendent geocentric system, itself the offspring of a *democentric* system, which sprang from an earlier ethnocentric system born of the primeval egocentric cosmos of inchoate thinking.
W. J. McGee, Rep. Bur. Amer. Ethnol., 1897–98, p. 831.

democratic, *a.*—**Social Democratic Federation.** See ★*federation*.

demodectic (dem-ō-dek′tik), *a.* [Erroneously formed from *Demodex*.] Of or pertaining to *Demodex*.—**Demodectic acariasis**, a slowly spreading, not highly contagious infection of the hair-follicles with the hair-follicle mite (*Demodex folliculorum*). The best known and most dangerous variety of the disease is that which occurs in dogs. The bovine variety causes considerable injury to the hide, lowering its market value. In man demodectic acariasis is rather common, but rarely of importance. Other varieties occur in horses, goats, and sheep. Also called *follicular mange*.

demodicid (dem-ō-dis′id), *n.* and *a.* I. *n.* A member of the family *Demodicidæ*.

II. *a.* Having the characteristics of or belonging to the family *Demodicidæ*.

demogenic (dem-ō-jen′ik), *a.* [Gr. *δῆμος*, the people, + *-γενής*, -producing.] Creative of a people organized on a civic basis, as distinguished from a tribe or group of tribes organized on a basis of kinship. *Giddings*, Prin. of Sociol., p. 74.—**Demogenic sociology**, that part of social science which is concerned with the social life of peoples which have outgrown the tribal state and have developed a civic organization.

demographically (dem-ō-graf′i-kạl-i), *adv.* As regards vital and social conditions; with reference to demographic conditions.

Buénos-Ayres is a town which is altering *demographically* in two very sensible ways; there is a rapidly increasing population, together with improving sanitary and medi-

cal conditions, indicated by a falling death-rate and a decrease in the percentage of still-born children.
Biometrika, Jan., 1904, p. 100.

demoid (dē'moid), *a.* [Gr. *δημοειδής*, < *δῆμος*, the people (see *demos*), + *εἶδος*, form.] Characteristic of a region or period, or of a particular geological formation: applied to fossils that are so common as to be typical.

demolitionary (dem-ō-lish'ọn-ā-ri), *a.* [*demolition* + *-ary*.] Tending to demolish or ruin; destructive.

demological (dem-ō-loj'i-kạl), *a.* Of or pertaining to demology or demography. *Philos. Trans. Roy. Soc.* (London), 1895, ser. B, 186. 783.

demology (dē-mol'ō-ji), *n.* [Gr. *δῆμος*, the people, + *-λογία*, < *λέγειν*, speak.] Demography; originally, vital statistics, now expanded in meaning to denote the statistical study of population in extent, density, and composition. *Philos. Trans. Roy. Soc.* (London), 1895, ser. B, 186. 783.

demon, *n.* **5.** In *anthrop.*, a supernatural protector or helper. See *manito* and ★*nyarong*. —**Maxwell's demon,** an imaginary intelligent agent assumed by Maxwell in a discussion of the second law of thermodynamics. The function of the demon was to open and close a gate or valve in a partition separating the two halves of a reservoir of gas in such a manner as to allow only particles of high velocity to pass through in one direction and those of low velocity in the other. The result would be that, without the expenditure of work, the temperature of the gas would be raised on one side and lowered on the other, in contradiction of the second law of thermodynamics.

demonism, *n.* **2.** Specifically, in *anthrop.*, the belief in the existence of an intimate relation between a person and one or more supernatural beings who become his protectors and helpers. This form of belief includes the manito of the Algonkin, the nyarong of the Sea Dayak, and similar beliefs of many other tribes and peoples. Also called *manitoism*. Also *daimonism*.

The advantages of totemism are many, but most of them are social and benefit the special groups or the community at large. The hold that the manitu has on the individual consists in its personal relation: the man feels that he himself is helped, and I suspect this is the main reason why it supplants totemism. I believe Mr. Lang some years ago suggested the term manituism for this cult. If this name be not accepted I venture to propose the revival of the word 'daimon' (*δαίμων*) to include the manitu, nyarong, and similar spirit helpers, and '*daimonism*' as the name of the cult.
Rep. Brit. Ass'n. Advancement of Sci., 1902, p. 743.

demonolatrous (dē-mọn-ol'ạ-trus), *a.* Pertaining to or given over to demonolatry; devil-worshiping: as, *demonolatrous* tribes.

demonomaniac (dē″mon-ō-mā'ni-ak), *n.* An insane person believed by others, or by himself, to be possessed by a devil.

For the *demonomaniacs* of a hundred years ago—belated representatives of mediæval mysticism, who typify the ancient form of paranoia—are now substituted the modern paranoiacs.
C. Lombroso (trans.), Man of Genius, p. 173.

demonomy, *n.* **3.** The system of knowledge that pertains to human activities.

I use the term sociology to distinguish one of five coordinate sciences, esthetology, technology, sociology, philology, and sophiology; and I call all of these sciences *demonomy*.
J. W. Powell, Rep. Bur. Amer. Ethnol., 1898–99, p. lx.

demonophobia (dē″mọn-ō-fō'bi-ạ), *n.* [NL., < Gr. *δαίμων* demon, + *-φοβία*, fear.] Fear of demons; demonomania.

demonstrant (dē-mon'strạnt), *n.* One who takes part in a public demonstration, as of approval, hostility, or the like.

demonstration, *n.* **6.** In *Rom. law*, the formal statement of the plaintiff's claim in presenting his case to the court: somewhat analogous to the 'declaration' of the common law.—**Abstractional demonstration.** See ★*abstractional*.—**Demonstration by continuous identification,** a demonstration which assumes that phenomena are to be identified by those features which change indefinitely little in indefinitely short intervals of time.—**Demonstration by extreme cases,** a demonstration which proceeds by imagining limiting cases of the application of a principle assumed as general, as, for example, when the properties of a function are demonstrated by considering the cases in which one and the other variable becomes zero and becomes infinite.—**Demonstration by limits.** See *method of limits*.—**Demorganian demonstration,** a demonstration which virtually assumes that a collection to which it relates is finite.—**Dilemmatic demonstration,** a demonstration by enumerating all possible cases and by demonstrating the proposition for each possible case separately.—**Fermatian demonstration,** a mode of demonstration applicable to a collection of objects, say the Ns, provided it has the following character: Let the *ν*s be certain objects among the Ns, and let 'exhaustive step' be the designation of a definite mode of transition from one N to other Ns. Then, if the Ns be such that any N whatever can be reached by a finite number of exhaustive steps starting from some *ν*, a Fermatian demonstration will be applicable, and will proceed upon this assumption. Thus, if Q be any quality possessed by every *ν* and also possessed by every N which can be reached by a single exhaustive step from another N that has the quality Q, the statement of this will be a Fermatian demonstration that every N has the quality Q.—**Geminational demonstration,** a demonstration by imagining a moving object suddenly to separate as if it consisted of two or more coincident objects which at a certain moment begin to move along separate paths so as to generate wholly distinct parts of a new place.—**Generalizational demonstration,** a demonstration made by demonstrating a proposition which includes the proposition to be proved as a particular case.—**Projectional demonstration,** a demonstration which passes from imagining points or lines to imagining lines or surfaces through those points generated by the rectilinear motion of the former through a point; or which imagines the section of lines or surfaces by a plane, so as to give points or lines.—**Pullational demonstration,** a demonstration which supposes an object suddenly to begin to occupy a place of higher dimensionality, as when a particle occupying a mathematical point suddenly begins to occupy a continuously expanding spherical surface.

demonstrational (dem-ọn-strā'shọn-ạl), *a.* Of or pertaining to demonstration.

demonurgy (dē'mọn-ėr-ji), *n.* [Gr. *δαίμων*, demon, + *ἔργον*, work.] The practice of magic with the help of the devil or of demons.

demonymic (dem-ō-nim'ik), *a.* and *n.* [Gr. *δῆμος*, the people, + *ὄνυμα*, *ὄνομα*, name.] **I.** *a.* Bearing a name derived from the deme, or township, to which one (who was an inhabitant of ancient Attica) belonged.

II. *n.* The name itself.

demophil (dem'ō-fil), *n.* [Gr. *δῆμος*, the people, + *φίλος*, loving.] A friend of the people. *N. E. D.*

demophilism (dē-mof'i-lizm), *n.* [*demophil* + *-ism*.] Love of the people; regard for the masses.

On the "high mountain" where you [Gladstone] stand there is a demon, not of demagoguism, but of *demophilism*, that is tempting you sorely.
T. W. Reid, Life of Lord Houghton, II. 253.

demorphism (dē-môr'fizm), *n.* [*de-* + Gr. *μορφή*, form, + *-ism*.] In *petrog.*, the decomposition, disintegration, or weathering of rocks, as contrasted with their metamorphism or transformation into other rocks. *Von Lasaulx.*

demos, *n.* **3.** In *sociol.*, a people which has outgrown the tribal system and is organized on the basis of neighborhood and varied modes of coöperation instead of on the basis of blood-kinship; a social body which, since blood-relationships are no longer important, includes individuals of various lineages or nationalities. *Giddings*, Prin. of Sociol., p. 257.

Demospongiæ, *n. pl.* **2.** A class of *Porifera* consisting of the orders *Carnosa*, *Tetractinellida*, *Halichondrina*, *Hadromerina*, *Dictyoceratina*, *Dendroceratina*, and the *Myxospongida*. It is characterized by the rhagon type of canal system, and is the most widely spread group of sponges of the present day. It includes the most highly organized of the sponges.

demot (dē'mot), *n.* [Gr. *δημότης*, < *δῆμος*, the people.] A member of an old Attic deme, or hundred. *Grote.*

demote (dē-mōt'), *v. t.*; pret. and pp. *demoted*, ppr. *demoting*. [*de-* + (*pro*)*mote*.] To reduce to a lower grade or class: opposed to *promote*: as, to *demote* a boy for falling behind in his studies.

demotic, *a.* **2.** Pertaining to a people developed beyond the tribal stage and including individuals of various kindreds or nationalities. *Giddings*, Prin. of Sociol., p. 96.—**3.** Social.

It is convenient to denote the primary activities comprised in the domain of esthetology as pleasures, since they are largely physiologic in character, though, like other activities, chiefly *demotic* (or collective) in their manifestations; and the activities may be classed as ambrosial pleasures, decoration, athletic pleasures or sports, games, and fine arts.
J. W. Powell, Rep. Bur. Amer. Ethnol., 1898–99, p. xii.

Demotic composition, the combination of various elements of age, sex, nationality, and race in a social population or people; a demos. The intermingling of elements unlike in organic constitution, in age, and in sex, and of elements bred of different parent stocks and having therefore unlike qualities and habits, may be called the *demotic composition*.

Because genetic and congregate aggregation must develop together a population always has a *demotic* composition. *Giddings*, Prin. of Sociol., p. 96.

Demotic society, a society which has outgrown the tribal stage and which includes individuals of any lineage or kindred. *Giddings*, Elem. of Sociol., p. 190.

demotics (dē-mot'ikz), *n.* The scientific study of the common people; sociology.

demotion (dē-mō'shọn), *n.* (*de-* + (*pro*)*motion*.] Reduction in rank or relative position in any series or class: opposed to *promotion*.

This regimentation [of the members of an Indian family or tribe] is complicated by various factors, such as adoption, and (especially) what may be called promotion and *demotion*, i. e., advancement in "age" (rank) by common consent in recognition of prowess, etc., with correlative reduction in "age" as the penalty for cowardice, etc., so that the actual age relations may be completely lost.
Smithsonian Rep., 1901, p. 75.

demotist (dē-mot'ist), *n.* [*demot(ic)* + *-ist*.] A student of the ancient Egyptian form of writing known as *demotic* (which see).

Though demotic has not yet received serious attention at Berlin, the influence of that great school has made itself felt among *demotists*, especially in Switzerland, Germany, America, and England. *Encyc. Brit.*, XXVII. 726.

demurrant (dē-mėr'ạnt), *n.* [*demur* + *-ant*[1].] In *law*, a party to an action who puts in a demurrer.

demurrer-book (dē-mėr'ėr-bůk), *n.* A transcript containing a copy of all the pleadings in an action by which an issue of law, rather than of fact, has been joined.

demy, *n.* **5.** The gold half-lion of 20 grains of Robert II. of Scotland, the lion itself weighing 40, or more usually 38, grains.

denar (de-närʹ), *n.* [G., < L. *denarius*: see *denarius*.] A money of account of Breslau: one pound equals 288 denars.

denaturalization (dē-natʹū-rạl-i-zā'shọn), *n.* [*denaturalize* + *-ation*.] **1.** Deprivation of the status and rights of a citizen or subject; loss of citizenship.—**2.** Same as ★*denaturization*.

denaturalize, *v. t.* **4.** Same as ★*denaturize*.

The manufacture of *denaturalized* alcohol as a substitute for petroleum spirit. *Encyc. Brit.*, XXXI. 13.

denaturant (dē-nāʹtū-rant), *n.* [*denature* + *-ant*.] A substance added to alcohol or other material in order to unfit it for use in a particular way. See ★*denaturization*.

denaturate (dē-nāʹtū-rāt), *v. t.*; pret. and pp. *denaturated*, ppr. *denaturating*. [NL. ★*denaturare*: see ★*denature*.] Same as ★*denaturize*. *G. Lunge*, Sulphuric Acid, II. 14.

denaturation (dē-nā-tū-rā'shọn), *n.* [F. *dénaturation*; as *denaturate* + *-ion*.] Same as ★*denaturization*.

denature (dē-nāʹtūr), *v. t.*; pret. and pp. *denatured*, ppr. *denaturing*. [F. *dénaturer*, < NL. ★*denaturare*; as *de-* + *nature*.] Same as ★*denaturize*.

denaturization (dē-nāʺtūr-i-zāʹshọn), *n.* [*denaturize* + *-ation*.] **1.** The act or process of denaturizing (as salt, in Germany, or seed-oils, in Spain); specifically, the addition to alcohol of something which renders it unfit for use as a beverage (thus exempting it, under special legislation, as in England, France, Germany, and the United States, from taxation), so as to permit its economical use as a fuel or in the manufacture of varnishes, chemicals, etc. Wood-spirit, naphtha, and Dippel's animal oil are among the materials most employed for the denaturization of alcohol, but others are used.

2. A term introduced by Neumeister to designate a change effected in the physical or chemical properties of the albumins whereby they lose their individual characteristics and, if coagulated, can no longer be dissolved in their ordinary solvents. Denaturization can be brought about by heat, acids and alkalies, the salts of the heavy metals, etc.

denaturize (dē-nāʹtū-rīz), *v. t.*; pret. and pp. *denaturized*, ppr. *denaturizing*. [*de-* + *nature* + *-ize*.] To deprive (something) of its peculiar nature; specifically, to treat (alcohol or other material) so as to render it unfit for use in one way while leaving it capable of being used in another. See ★*denaturization*. *Trans. Amer. Inst. Elect. Engin.*, 1898, p. 139.

Denbighshire grits. See ★*grit*[2].

dendo (denʹdō), *n.* [Native name in Angola.] An evergreen tree of the ebony family, *Diospyros Dendo*, native to western tropical Africa. It yields a very black hard wood known commercially as *black ebony* or *Niger ebony*.

dendra, *n.* Plural of ★*dendron*.

dendraxon (den-drakʹson), *n.* [Gr. *δένδρον*, tree, + *ἀξων*, axis.] A neuron, or nerve-cell, the axis-cylinder process of which branches off immediately into dendrites. Also spelled *dendraxone*.

dendrite, *n.* **3.** In *neurol.*, one of the protoplasmic processes of a nerve-cell: opposed to ★*neurite*, the axis-cylinder. See cut at ★*neuron*.

dendritic, *a.* **3.** In *phys. geog.*, branching irregularly, in the form of a tree: as, *dendritic* drainage, streams, valleys.

The student should study also the well-developed *dendritic* drainage in Lebanon valley at the bottom of the map. *I. C. Russell*, Rivers of North America, p. 204.

Dendritic cancer. See ★*cancer*.

dendrobe (den'drōb), *n.* [NL. *dendrobium.*] A dendrobium. *N. E. D.*

Dendrobium, *n.* 3. [*l. c.*] A plant of the genus *Dendrobium.*

Dendrobranchiata (den″drō-brang-ki-ā'tä), *n. pl.* [NL.: see ★*dendrobranchiate.*] A division of macrurous decapod crustaceans in which the branchial plumes are divided in an arborescent manner. It includes the *Penæidæ* and the *Sergestidæ.* Contrasted with *Phyllobranchiata* and *Trichobranchiata. Spence Bate.*

dendrobranchiate (den-drō-brang'ki-āt), *a.* and *n.* [NL. *dendrobranchiatus,* < Gr. *δένδρον,* tree, + *βράγχια,* gills: see *branchiate.*] **I.** *a.* Having arborescent gills; of, or pertaining to, or resembling, the *Dendrobranchiata.*

II. *n.* One of the *Dendrobranchiata.*

Dendroceratina (den″drō-ser-a-tī'nä), *n. pl.* [NL., < Gr. *δένδρον,* tree, + *κέρας* (*κερατ-*), horn, + *-ina*[2].] One of the two orders of ceratose sponges (the other being *Dictyoceratina*) having the spongin fibers dendritic, arising from a basal plate of spongin, and not anastomosing. It includes the family *Aplysillidæ.*

dendroceratine (den-drō-ser'a-tin), *a.* Resembling or pertaining to the *Dendroceratina.*

dendrochemical (den-drō-kem'i-kal), *a.* [Gr. *δένδρον* + E. *chemical.*] Relating to chemistry as applied to the study of trees for industrial purposes: as, the *dendrochemical* laboratory of the Bureau of Forestry of the United States Department of Agriculture.

dendrodic (den-drō'dik), *a.* [Gr. *δενδρώδης,* same as *δενδροειδής,* tree-like (see *dendroid*), + *-ic.*] **1.** Same as *dendrōdont.*—**2.** Tree-like: said of ramifying structures seen in the sections of certain organs.

Dendroidea (den-drō-id'ē-ä), *n. pl.* [NL.: see *dendroid.*] A suborder of the graptolites characterized by tree-like mode of growth and differentiation of the zoöids and thecæ in budding, nourishing, and generative individuals. They extend from the Upper Cambrian into the Middle Devonian. Their most widely known genera are *Dictyonema* and *Dendrograptus.*

dendrolatry (den-drol'a-tri), *n.* [Gr. *δένδρον,* tree, + *λατρεία,* worship.] Tree-worship. *Jour. Amer. Folk-lore,* April-June, 1903, p. 132.

dendrolene (den'drō-lēn), *n.* [Gr. *δένδρον,* tree, + *-l-* + *-ene.*] A trade-name of a viscid petroleum product used to protect the bark of trees against insects.

dendron (den'dron), *n.*; pl. *dendra* (-drä). [NL., < Gr. *δένδρον,* tree.] Same as ★*dendrite,* 3.

dendrophil (den'drō-fil), *a.* and *n.* **I.** *a.* **1.** Tree-loving.—**2.** Dendrophilous.

II. *n.* A lover of trees.

dendrophilous (den-drof'i-lus), *a.* [Gr. *δένδρον,* tree, + *φιλειν,* love.] Tree-loving; pertaining to or characterized by an arboreal mode of life.

dendropsychosis (den″drop-si-kō'sis), *n.* [NL., < Gr. *δένδρον,* tree, + *ψύχωσις,* animation: see *psychosis.*] A supposed instinctive interest in trees, or impulse to climb trees: regarded as possibly a psychical vestige of prehuman life under arboreal conditions.

> The significant fact is that most of both the childish animisms and also of these specialised *dendropsychoses* fall away or end completely at puberty.
> *G. S. Hall,* Adolescence, II. 217.

Dendropupa (den-drō-pū'pä), *n.* [NL., < Gr. *δένδρον,* tree, + NL. *Pupa,* a genus of mollusks.] A genus of Carboniferous land-shells resembling *Pupa* but having no teeth in the aperture.

Dendrotrophe (den-drot'rō-fē), *n.* [NL. (Miquel, 1855), < Gr. *δένδρον,* tree, + *τροφή,* nourishment.] A genus of dicotyledonous plants, of the family *Santalaceæ,* often parasitic on trees. See *Henslowia.*

denegatory (dē-neg'a-tō-ri), *a.* [*denegate* + *-ory.*] Involving or implying a contradiction; contradictory: as, a *denegatory* declaration. *Bentham.*

denga (den'gä), *n.* [Russ. *deníga.*] A Russian copper coin of the value of half a copeck.

denier[2], *n.* **2.** A unit of weight in the French system, in use before 1812, equal to 19⅘ troy grains.—**3.** A unit of weight for silk yarns, equal to about 8½ troy grains.

denier[2] (de-nēr'), *v. t.* To obtain the fineness or size of (a silk thread) in deniers.

denigrate (den'i-grāt), *a.* Blackened; turned black.

denitratation (dē-nī-tra-tā'shon), *n.* Same as *denitration.*

denitrate, *v. t.* **2.** To remove the lower oxids of nitrogen from (nitrous vitriol), in the manufacture of sulphuric acid by the lead-chamber process, so that these oxids may not be lost, but returned to the lead-chambers.—**3.** To decompose (guncotton, nitroglycerin, or other nitric esters used as explosives), removing the nitric-acid radical and regenerating the cellulose, glycerin, etc., from which these were produced.

denitration, *n.* **2.** The process of removing the lower oxids of nitrogen from nitrous vitriol in making sulphuric acid. See ★*denitrate,* 2.—**3.** The process of removing the nitric-acid radical from guncotton or other nitric esters, regenerating cellulose, etc. See ★*denitrate,* 3.

denitrator (dē-nī'trā-tor), *n.* An apparatus for denitration.

denitrifier (dē-nī'tri-fī″er), *n.* **1.** That which destroys or prevents the formation of nitric acid or nitrates, as certain ferments in the decomposition of nitrogenous organic matter.—**2.** In *bacteriol.,* any micro-organism which is capable of breaking down nitrates into nitrites, and nitrites into ammonia compounds, or of liberating nitrogen from any of these.

denitrify, *v.* **II.** *trans.* In *bacteriol.,* to break down nitrates into nitrites, and nitrites into ammonia compounds, or to liberate nitrogen from any of these compounds by bacterial action.

denitrize (dē-nī'trīz), *v. t.*; pret. and pp. *denitrized,* ppr. *denitrizing.* [*de-* + *nitr*(*ogen*) + *-ize.*] Same as *denitrate.*

denizen, *n.* **3.** In *bot.,* a plant suspected to be of foreign origin, though behaving as if indigenous. *H. C. Watson.*

denkli (dengk'li), *n.* [Hind. *dhenklī.*] In India, a device for raising water, similar to the Egyptian shadoof (which see).

> The simplest and earliest form of water-raising machinery is the pole with a bucket suspended from one end of a crossbeam and a counterpoise at the other. In India this is known as the *denkli* or paecottah; in Egypt it is called the shadûf. *Encyc. Brit.,* XXIX. 592.

Dennett grass. See ★*grass.*

Dennstaedtia (den-stet'i-ä), *n.* [NL. (Bernhardi, 1801), named for August Wilhelm *Dennstaedt* (or *Dennstedt*) of Weimar, author of numerous botanical works.] A genus of polypodiaceous ferns, of the tribe *Davallieæ,* with slender creeping rootstocks and delicate solitary twice or thrice pinnate fronds 2 to 6 feet high. The globose sorus is terminal, the sporangia borne within a special cup-shaped indusium which is more or less adherent on the exterior side to the reflexed segment of the leaf margin. There are about 20 species, mostly tropical and subtropical; but one, *D. punctilobula,* the hay-scented fern, occurs in the United States and Canada. See *Dicksonia.*

denomination, *n.* **4.** In any system of reckoning, a class of units of one kind and having a specific name, as tens, hundreds, thousands, etc., in numbers; dollars or cents in values; pounds, hundredweights, tons, etc., in expressing quantity; inches, feet, yards, miles, etc., in measures of length, etc.: as, an issue of paper money of small *denomination.*

denotive (dē-nō'tiv), *a.* [*denote* + *-ive.*] Serving to denote; denotative; specifically, denoting by means of arbitrary terms, or by terms which have no natural association with the idea expressed: opposed to *connotive.*

> Among primitive peoples this *denotive* symbolism is not developed, and in lieu thereof an extensive and cumbrous system of connotive or associative symbols is employed. *Smithsonian Rep.,* 1892, p. xxiii.

denounce, *v. t.* **6.** In *diplomacy,* to announce the intention of abrogating (a treaty) in accordance with its provisions or arbitrarily.

dens, *n.* **3.** In *entom.,* the terminal point of a mandible.

dense, *a.* **6.** In *optics,* having a large index of refraction; capable of transmitting light at a less velocity than the velocity of light-waves in vacuo.

densification (den″si-fi-kā'shon), *n.* The act or process of rendering dense.

> The investigation of glass-pot clays, therefore, is restricted to the determination of plasticity, shrinkage, *densification* temperature, fusion point, and chemical composition. *U. S. Geol. Surv.,* 1897-98, p. 428.

densify (den'si-fī), *v. t.*; pret. and pp. *densified,* ppr. *densifying.* [*dense* + *-i-fy.*] To render dense. [Rare.] *U. S. Geol. Surv.,* 1897-98, p. 428.

densimetry (den-sim'e-tri), *n.* The use of the densimeter; specifically, the operation of determining the density of samples of gunpowder.

density, *n.* **4.** In *photog.,* opacity of the developed film of a negative.—**Density in phase,** in *statistical mech.,* the number of systems, in a very great ensemble of independent systems, which at a given moment have phases lying between specified (infinitesimal) limits.

> The *density-in-phase* is constant in time for the varying phases of a moving system; provided, that the forces of a system are functions of its coördinates, either alone or with the time. *J. W. Gibbs,* Statistical Mech., p. 9.

Dynamic density (of a population), the number of inhabitants per square mile taken in connection with their power to coöperate, as determined by concentration in cities and their means of communication.—**Flux density,** the lines of magnetic force per unit section, or the induction.—**Magnetic density,** the rate of distribution of lines of force in a magnetic field. The unit is the gauss or one c. g. s. line per square centimeter.—**Optical density,** the property by virtue of which transparent substances transmit light at velocities less than that of a light-wave in vacuo. Great optical density is associated with a large index of refraction, and vice versa: thus, glass is optically denser than water, and water than air.—**Stem density.** See ★*stem*[1].—**Vapor density,** the density of a gas or vapor, at a specified pressure and temperature, in terms of that of hydrogen, or sometimes of air, taken as a standard.

density-globe (den'si-ti-glōb), *n.* A glass globe having a capacity of from 30 to 2,000 cubic centimeters, used in accurate determinations of the density of gases. The globe is provided with a stop-cock sealed on the neck. *M. W. Travers,* Exper. Study of Gases, p. 121.

dent. An abbreviation (*a*) of *dental;* (*b*) of *dentist;* (*c*) of *dentistry.*

dental. **I.** *a.*—**Dental arteries,** arteries which supply the pulp-cavities of the teeth.—**Dental follicle, furnace,** etc. See ★*follicle,* ★*furnace,* etc.—**Dental processes.** Same as *alveolar processes* (which see, under *alveolar*).—**Dental prosthesis,** the supplying of missing teeth or parts of teeth by artificial substitutes.

II. *n.* **3.** *Dentex macrophthalmus,* a fish of the family *Lutianidæ,* found in the Mediterranean.

dentale (den-tā'lē), *n.*; pl. *dentalia* (-li-ä). [NL., neuter of L. *dentalis,* dental.] In *ichth.,* the dentary; the tooth-bearing or anterior bone of the lower jaw.

dentalize (den'tal-īz), *v. t.*; pret. and pp. *dentalized;* ppr. *dentalizing.* [*dental* + *-ize.*] To convert (a sound) into a dental, such as *d* or *t.*

dentary-splenial (den″ta-ri-splē'ni-al), *n.* The fused dentary and splenial bones, or a bone which takes the place of those two in forming the jaw.

Dentate fascia. See ★*fascia.*—**Dentate fissure.** Same as *hippocampal fissure* (which see, under *hippocampal*).—**Dentate gyrus.** See ★*gyrus.*—**Dentate nucleus.** Same as *dentate body* (which see, under *dentate*).

dentes. Plural of *dens.*

Denticete (den-ti-sē'tē), *n. pl.* [L. *dens,* a tooth, + Gr. *κῆτος* (pl. *κήτη*), a whale.] A suborder of *Cetacea* containing the toothed whales. *J. E. Gray,* 1864.

denticle, *n.* **3.** In the graptolites (*Hydrozoa*), one of the thecæ. See ★*theca,* 1 (*d*) (6).

denticular (den-tik'ū-lär), *a.* Resembling small teeth; tooth-like; denticulate.

denticulate-serrate (den-tik″ū-lāt-ser'āt), *a.* In *bot.,* between dentate and serrate, with the teeth very small.

denticuliform (den-tik'ū-li-fôrm), *a.* [L. *denticulus,* denticle, + *forma,* form.] Having the form of a small tooth or denticle.

dentification (den-ti-fi-kā'shon), *n.* [L. *dens* (*dent-*), tooth, + *-ficare,* < *facere,* make.] The formation of tooth-substance or dentin.

Dentigerous cyst. See ★*cyst.*

dentinasal (den-ti-nā'zal), *a.* and *n.* [L. *dens* (*denti-*), tooth, + *nasus,* nose: see *nasal.*] **I.** *a.* Dental and nasal: said of certain sounds, as the consonant *n.*

II. *n.* A dentinasal sound.

dentiparous (den-tip'a-rus), *a.* [NL. **dentiparus,* < L. *dens,* tooth, + *parere,* produce.] Producing teeth.

dentition, *n.*—**Cheek dentition,** the molar teeth: used chiefly by British writers.

dentology (den-tol'ō-ji), *n.* [L. *dens* (*dent-*), tooth, + Gr. *-λογία,* < *λέγειν,* speak.] Same as *odontology.*

dentonasal (den-tō-nā'zal), *a.* and *n.* An improper form for ★*dentinasal.*

denucleate (dē-nū'klē-āt), *v. t.*; pret. and pp. *denucleated,* ppr. *denucleating.* [NL. **denucleare,* < L. *de,* away, + *nucleus,* nucleus.] To deprive a cell of its nucleus. Also *enucleate.*

denudant (dē-nū'dant), *a.* and *n.* **I.** *a.* That denudes; denuding.

II. *n.* An agency or process which tends to denude a region. *J. Geikie,* The Great Ice Age, p. 259.

denudation, *n.* 3. In *surg.*, the state of a part which is deprived of its natural covering, as a bone of the periosteum.—**Chemical denudation,** in *geol.*, the process of removing the material of the land in solution. *I. C. Russell*, Rivers of North America, p. 81.—**Plain of marine denudation, plain of subaërial denudation.** See ★*plain*[1].

denudationist (den-ū-dā′shon-ist), *n.* One who emphasizes the influence of surface agencies in the production of relief forms, to the apparent neglect of deep-seated or subterranean agencies that may contribute to the same end.

> How much of a valley is due to original fracture and how much to subsequent erosion remains a matter of opinion. After all, it is largely a question of degree in most matters which are in dispute between the "convulsionists" and the "*denudationists.*"
> *Athenæum*, May 13, 1905, p. 595.

denudative (dē-nū′da-tiv), *a.* [*denudate* + *-ive.*] Of or pertaining to denudation; effective in causing denudation. [Rare.] *Smithsonian Rep.*, 1899, p. 279.

denumerable (dē-nū′me-ra-bl), *a.* Same as ★*denumeral.*

denumeral (dē-nū′me-ral), *a.* Enumerable; numerable; countable; capable of being put into one-to-one correspondence with the class of all natural numbers in their usual order.—**Denumeral collection.** Same as *denumerable set.* See ★*set*[1].

denumerantive (dē-nū′me-ran-tiv), *a.* [*denumerant* + *-ive.*] Pertaining to or like a denumerant. *Sylvester.*

denumerate (dē-nū′me-rāt), *v. t.*; pret. and pp. *denumerated*, ppr. *denumerating.* [*de-* + *numerate.*] 1. To count off or enumerate.—2. In *math.*: (*a*) To determine the number of individuals in a given class. (*b*) To determine the denumerant of an equation.

denumeration, *n.* 2. In *math.*: (*a*) Counting off, or enumeration. (*b*) The determination of the number of individuals in a given class. (*c*) In *theory of equations*, the determination of the denumerant.

denumerative (dē-nū′me-ra-tiv), *a.* [*denumerate* + *-ive.*] Of or pertaining to denumeration.

denunciation, *n.* 5. The act of denouncing a treaty.

Denver group. See ★*group*[1].

deoperculate, *a.* 2. Having an operculum that does not spontaneously separate from the sporophore, as certain mosses.

deoxidator (dē-ok′si-dā-tor), *n.* An agent or apparatus for deoxidizing.

deoxidize, *v. t.*—**Deoxidized bronze.** See *Tobin* ★*bronze.*

deoxygenization (dē-ok″si-jen-ī-zā′shon), *n.* [*deoxygenize* + *-ation.*] Same as *deoxygenation.*

deozonization (dē-ō″zōn-ī-zā′shon), *n.* [*deozonize* + *-ation.*] In *chem.*, deprivation or removal of ozone: usually applied to its reversion to the condition of ordinary oxygen gas. *Elect. World and Engin.*, Jan. 31, 1903, p. 205.

dep. An abbreviation (*b*) of *department;* (*c*) of *deponent.*

depancreatize (dē-pan′krē-a-tīz), *v. t.*; pret. and pp. *depancreatized*, ppr. *depancreatizing.* [*de-* + *pancreas* (*-at*) + *-ize.*] To deprive of the pancreas by a surgical operation. *Buck*, Med. Handbook, VIII. 39.

depart. An abbreviation of *department.*

department, *n.*—**Department of Labor,** an executive department of the United States government, created in 1913, in charge of a Secretary of Labor. It includes Bureaus of Immigration, Naturalization, and Labor Statistics, the Children's Bureau, etc.—**Staff department,** a collective name for the bureaus into which the United States Department of War is divided. The bureaus comprise the following: Office of the Adjutant-General, Inspector-General, Judge-Advocate-General, Chief of the Quartermaster Corps, Surgeon-General, Chief of Engineers, Chief of Ordnance, Chief Signal Officer, and Chief of the Bureau of Insular Affairs.

departmentalism (dē-pärt-men′tal-izm), *n.* [*departmental* + *-ism.*] Departmental methods or usages.

department-store (dē-pärt′ment-stōr), *n.* A large store or shop in which many different lines of retail business are carried on under one general management, such as the sale of fabrics, clothing, shoes, hats, jewelry, toys, household utensils, groceries, books, etc. [U. S.]

Departure in despite of court, in *old Eng. law*, failure of a tenant in a real action to reappear on demand after having once appeared and been present in court. *Rapalje and Lawrence*, Law Dict.

depasturage (dē-pas′tūr-āj), *n.* [*depasture* + *-age.*] Grazing; pasturage.

> From Lammas to March the lands are subject to the *depasturage* of stock. *Encyc. Brit.*, XXVII. 169.

depauperation (dē-pâ-pėr-ā′shon), *n.* [*depauperate* + *-ion.*] Impoverishment; depauperization. *Lindley.*

depauperize, *v. t.* 2. To impoverish or render poor; depauperate.

deperition (dep-e-rish′on), *n.* [NL. **deperitio(n-)*, < L. *deperire*, waste away, < *de*, away, + *perire*, waste away, perish: see *perish.*] A wasting away. *Bentham.*

depetalize (dē-pet′al-īz), *v. t.*; pret. and pp. *depetalized*, ppr. *depetalizing.* To deprive of petals; remove the petals from. *U. S. Dept. Agr.*, Div. Veg. Pathol., Bulletin 5, p. 40.

dephased (dē-fāzd′), *a.* [*de-* + *phase* + *-ed*[2].] In *elect.*, out of phase.

dephlegmatory (dē-fleg′ma-tō-ri), *a.* Of or pertaining to the removal of phlegm or watery matter from spirits and acids, or to the dephlegmator or condenser by which this is effected.

dephlogisticate, *v. t.* 2. In *med.*, to reduce inflammation in.

Dephosphorization process, a method of eliminating the phosphorus and sulphur from iron while converting it into steel. This is done by using magnesian limestone or dolomite, instead of the silicious ganister employed in the acid process, for lining the converter.

depict, *v. t.* 3. In *math.*, to represent; map.

depiction, *n.* 2. In *math.*, representation; mapping: as, conformal *depiction.*

depictive (dē-pik′tiv), *a.* [*depict* + *-ive.*] Having the quality of depicting or portraying; pictorial: as, the *depictive* character of Chinese writing.

depicture (dē-pik′tūr), *n.* [*depicture, v.*] Portrayal; pictured representation; depiction.

depigment (dē-pig′ment), *v. t.* [*de-* + *pigment.*] To deprive of pigment.

depigmentation (dē-pig-men-tā′shon), *n.* [*depigment* + *-ation.*] The loss or removal of pigment; decolorization; more particularly, the loss of pigment by which the white race became differentiated from all others.

> Such a climate perhaps directly produced, or, at any rate, favored, variation towards that lymphatism and *depigmentation* that thus came to be characteristic of the race. *Jour. Polit. Econ.*, Dec., 1900, p. 81.

depigmented (dē-pig′men-ted), *a.* [*depigment* + *-ed*[2].] Deprived of pigment. *Buck*, Med. Handbook, V. 485.

depigmentize (dē-pig′men-tīz), *v. t.*; pret. and pp. *depigmentized*, ppr. *depigmentizing.* [*de-* + *pigment* + *-ize.*] To cause loss of pigmentation in; decolorize. *Lit. Digest*, June 17, 1899, p. 699.

depilitant (dē-pil′i-tant), *n.* [Irreg. assumed from *depilatory*, as if from a L. **depilitare.* The proper form would be **depilant:* see *depilate.*] In *tanning*, material used to swell or distend the fibers of a skin, thus loosening the hair-roots and enabling the tanner to remove the hair. *C. T. Davis*, Manuf. of Leather, p. 161.

deplaster (dē-plās′tėr), *v. t.* [*de-* + *plaster.*] To purify (wines that have been treated with gypsum) by the removal of the plaster. See *plaster, v. t.*, 5.

deplenish (dē-plen′ish), *v. t.* [*de-* + *plenish.*] 1. To empty; deplete: as, to *deplenish* one's purse.—2. To dispose of the plenishing of; displenish: as, to *deplenish* one's home.

deploy, *v. i.* 2. To spread out, as the lower end of a valley glacier which extends out on a plain. *Chamberlin and Salisbury*, Geol., I. 241.

depolymerization (dē-pol″i-mer-ī-zā′shon), *n.* In *chem.*, separation of a more complex molecule into two or more simpler ones which are similar to each other, as the separation of one molecule of trioxymethylene into three of simple formic aldehyde.

deposit, *n.*—**Active deposit.** See ★*active.*—**Concentration deposit,** an accumulation of ore formed by the leaching of overlying or adjacent rock, the removal of disseminated matter in solution, and the precipitation of it in an enriched body. *Contrib. to Econ. Geol.*, U. S. Geol. Surv., 1902, p. 241.—**Deposit warrant.** See ★*warrant.*—**Glacial deposit,** the materials, such as terminal and ground moraines, brought together by glacial action.—**Irregular deposit,** in *law*, one in which money is deposited for safe-keeping. The depositary is not bound to return the money actually received, but only an equal sum.—**Phosphatic deposit,** a general term for an accumulation of calcium phosphate, such as is extensively worked for the production of fertilizers. Such a mass frequently consists in large measure of more or less altered remains of animals (bones, teeth, fecal matter, etc.), either of comparatively recent origin, as in phosphatic guano, or altogether fossil, as in the bone-breccia of South Carolina, in coprolites, etc.—**Quasi deposit,** in *law*, a deposit in which the depositary comes lawfully into the possession of another's goods, but with no intention of a deposit being made, as when goods are found and the finder is under an obligation to return them to their owner.

depositee (dē-poz-i-tē′), *n.* [*deposit* + *-ee*[1].] The person with whom a thing is deposited, as for safe-keeping, or as security, etc.

depositing-machine (dē-poz′i-ting-ma-shēn″), *n.* In *candy-making*, a machine for casting creams, gums, or other conserves in starch or other molds, or for depositing liquid candies upon paper. It consists of a steam-heated hopper for keeping the conserves liquid, combined with pumps for delivering the material under pressure to the dropping or depositing machinery, which delivers the right amount of liquid into each mold. The starch molds, placed in trays, pass under the machine on a traveling apron, or a paper band travels under the machine on which the liquid candy is delivered in drops. It is often combined with the starch-buck and the starch-printer to form one machine. In *cake-making*, a similar machine is used for making soft-dough cakes, etc. It consists essentially of a hopper and delivery-rolls for depositing semi-fluid dough in cakes on pans moving upon a conveyer under the machine.

deposition, *n.* 9. In *geol.*, the accumulation of sediments, or the precipitation of minerals (particularly ores) from solution.—**Secondary deposition,** accumulation by chemical alteration, or replacement, or precipitation within the body of an existing rock.

> In theoretical geology he first suggested that *secondary deposition* might be the genetic condition of the iron ore bodies. *Science*, March 22, 1901, p. 461.

depositional (dep-ō-zish′on-al), *a.* [*deposition* + *-al*[1].] Of or relating to deposition.

> Subordinate or local systems of crust-strains . . . are concentrated along old *depositional* and structural limits. *Geog. Jour.* (R. G. S.), XVI. 461.

depot, *n.* 3. *Milit.*: (*d*) A place where military prisoners are confined.

depotentiation (dē-pō-ten-shi-ā′shon), *n.* [L. *de-* + *potentia*, power, + *-ation.*] Deprivation of power or potency.

depot-wagon (de-pō′wag″on), *n.* Formerly a square-box wagon with a detachable top; now a rockaway with a trap-door at the rear end which can be converted into a baggage-rack. [U. S.]

depressant, *n.* 2. A therapeutic agent which is employed to reduce mental or physical strength.

II. *a.* Causing a lowering of the physical or mental forces.

depressibility (dē-pres-i-bil′i-ti), *n.* Capability of being depressed.

depression, *n.*—**Barometric depression.** (*b*) A region of low barometric pressure; a region of relatively low pressure; a region of pressure lower than the normal; a storm-center. (*c*) The difference between the low barometric pressure and the normal pressure for that locality; the departure of the pressure.—**Depression of the dew-point.** See ★*dew-point.*—**Depression range-finder.** See ★*range-finder.*—**V-shaped depression,** in *meteor.*, an area of low pressure whose isobars run to a point like the letter V, generally formed on the equatorial side of the trough of a cyclone, or the trough between two adjacent anticyclones. The wind accompanying the depression is usually a squall or squally.

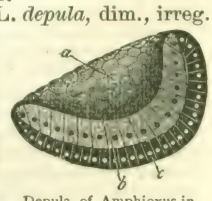
depressomotor (dē-pres-ō-mō′tor), *a.* and *n.* I. *a.* Causing a retardation of motor activity.

II. *n.* An agent which retards motor activity.

depressor, *n.* 4. In *elect.*, a device, consisting of a generator or other source of electromotive force, placed in the return circuit of an electric system and having the function of keeping the potential in that circuit approximately the same as that of the ground. Also called a *crusher.* A *depressor* or *crusher* is essentially of the same nature as a *booster*, but is applied to the regulation of the return circuit instead of the insulated circuit.—**Depressores capitis,** in the musculature of lepidopterous and other larvæ, the muscles which arise from the jugular plate or from the prosternum and are attached to the lower border of the occipital foramen; they operate in depressing the head.—**Depressores externi,** in the musculature of lepidopterous and other larvæ, the muscles which arise from the jugular plate, or from the prosternum, and are attached to the lower lateral border of the occipital foramen; they operate in depressing the head with a more or less lateral motion.—**Depressor substance,** a substance, formed in the pituitary body, the action of which is to produce a fall in blood-pressure.

deprint (dē-print′), *v. t.* [*de-* + *print.*] To print off (an article) with the same types, but in a separate form from the miscellany of which it forms a part; offprint.

deprint (dē′print), *n.* An article printed in the same types, but separately from the miscellany of which it forms a part; an offprint; a separate print.



dept. An abbreviation (*b*) of *deputy.*

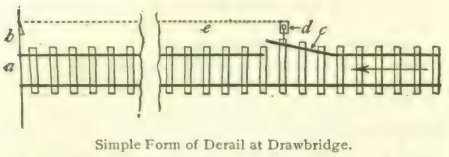
depth, *n.*—**Depth-perception,** in *psychol.*, the visual perception of the third dimension.—**Molded depth,** in *ship-building*, the interior depth of a vessel from the molded or exterior surface of the framing at the keel to the upper surface of the upper-deck beams. "The depth in one and two-decked vessels is to be taken from the upper part of the keel to the top of the upper deck beam

at the middle of the length, assuming a normal round up of beam of one-quarter of an inch to the foot of breadth. In spar-decked vessels and awning-decked vessels the depth is to be taken from the upper part of the keel to the top of the main deck beam at the middle of the length, with the above normal round up of beam." *Lloyd's Rules.*

depth-gage (depth'gāj), *n.* 1. An apparatus for measuring the depth of a hole or recess, or the distance from a plain surface to a projecting point.—2. An attachment to a drill or other boring-tool so adjusted that when the desired depth has been reached a rod rests on the surface of the work and prevents the cutter from entering farther.

depula (dep'ū-lä), *n.* [NL. *depula*, dim., irreg. < Gr. *δέπας*, a goblet, a chalice.] In *embryol.*, that stage in the development of the egg which succeeds the blastula and precedes the formation of the gastrula. *Haeckel.*

Depula of Amphioxus in Optical Section. (Enlarged.)
a, archenteron or gastrocœle; *b*, entoderm or hypoblast; *c*, ectoderm or epiblast. (From Marshall's "Vertebrate Embryology.")



der. An abbreviation (*a*) of *derivation;* (*b*) of *derivative;* (*c*) of *derived.*

deracialize (dē-rā'shal-īz), *v. t.*; pret. and pp. *deracialized*, ppr. *deracializing.* [*de-* + *racial* + *-ize.*] To break down the characteristic habits or qualities of a race or stock; diminish the relative influence of heredity as compared with that of environment. *Patten*, Develop. of Eng. Thought, p. 365.

deracination (dē-ras-i-nā'shon), *n.* [*deracinate* + *-ion.*] A plucking up by the roots; eradication; extirpation.

deradenitis (de-rad'e-nī'tis), *n.* [NL., < Gr. *δέρη*, neck, + *ἀδήν*, gland, + *-itis.*] Inflammation of the cervical lymphatic glands.

derail (dē-rāl'), *n.* [*derail, v.*] In *railroading*, a switch which is designed to divert or

Simple Form of Derail at Drawbridge.
a, draw, open position; *b*, lock on draw, open; *c*, derail; *d*, switch-rod, stand, and danger-signal; *e*, interlocking connection between draw-lock and derail, so that draw cannot be opened without opening derail and displaying danger-signal. Arrow shows direction of approach to derail.

throw a train or car from the track or to stop its further progress. Derails are placed on sidings to prevent a car from being moved from the siding to the line when the switch is closed; they are also used at drawbridges and at crossings. Any emergency obstruction on a track may serve as a derail. Derails on sidings are placed beyond the clearance-point of a switch.

derailer (dē-rā'lėr), *n.* A derailing switch. See ★*derail*, *n.*

deranencephalia (der-an″en-se-fā'li-ä), *n.* [NL., < Gr. *δέρη*, neck, + *av-* priv. + *ἐγκέφαλος*, brain.] The condition of being a monster with a rudimentary brain lying upon one of the upper cervical vertebræ; also, a monster exhibiting complete or nearly complete absence of the brain and the beginning of the spinal cord.

deranencephalus (der″an-en-sef'a-lus), *n.*; pl. *deranencephali* (-lī). [NL.] A monster characterized by deranencephalia.

derangement, *n.*—**Hey's internal derangement,** a form of partial dislocation of the knee attended by severe pain and spasmodic contraction of the muscles.—**Problem of derangements.** See ★*problem.*

derashah (de-rä'shä), *n.* [Heb., < *dārash*, seek, interpret, study.] A sermon or exposition of a scriptural or Talmudic theme in the synagogue on Sabbath or festival mornings. One who delivers the discourse is called *darshan*, that is, a preacher.

derationalize (dē-rash'on-al-īz), *v. t.*; pret. and pp. *derationalized*, ppr. *derationalizing.* [*de-* + *rationalize.*] To deprive of the power of reason or of reasoning; convert from a rational into an irrational being.

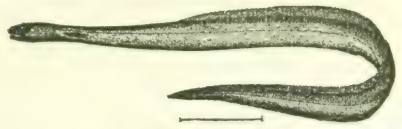
To call upon men to worship gravitation, and sing hallelujahs to the whirlwind, is to call upon them to *derationalize* themselves.
C. Hodge, Systematic Theol., I. 279.

derbio (dėr'bi-ō), *n.* [Sp. *derbion*, also *derbiso;* origin uncertain.] A carangoid fish, *Lichia glauca*, found in the Mediterranean.

derbylite (dėr'bi-līt), *n.* [Named for Dr. O. A. *Derby*, director of the geological survey of Brazil.] A ferrous antimoniate and titanate occurring in slender black prismatic crystals: found near Ouro Preto, Minas Geraes, Brazil.

Dercum's disease. Same as ★*adiposis dolorosa.*

derecho, *n.* 2. A strong wind or squall blowing straight forward, without any apparent cyclonic rotation. *G. Hinrichs*, in *Mo. Rev.*, Iowa Weather Service, 1885.



derencephalia (der″en-se-fā'li-ä), *n.* [NL., < Gr. *δέρη*, neck, + *ἐγκέφαλος*, brain.] Same as ★*deranencephalia.*

derencephalus (der-en-sef'a-lus), *n.*; pl. *derencephali* (-lī). Same as ★*deranencephalus.*

Derepodichthyidæ (der″e-pod-ik-thī'i-dē), *n. pl.* [NL., < *Derepodichthys* + *-idæ.*] A family of small blenny-like fishes found in the deep waters off British Columbia. They are characterized by the absence of scales and spines, the small size of the gill-openings, and the attachment of the slender ventrals below the eye.

Derepodichthys (der″e-po-dik'this), *n.* [NL., irreg. < Gr. *δέρη*, neck, + *πούς* (*ποδ-*), foot, + *ἰχθύς*, fish.] A genus of blenny-like fishes, of which the single known specimen was dredged by the "Albatross" off Queen Charlotte Island, British Columbia; the species is *D. alepidotus.*

Derichthyidæ (der-ik-thī'i-dē), *n. pl.* [NL., < *Derichthys* + *-idæ.*] A family of eels found in the deep waters of the Gulf Stream. They are characterized by the development of the bones of the jaws and by the slender neck to which the snake-like head is attached. The single species is *Derichthys serpentinus.*

Derichthys serpentinus.
(From Bull. 47, U. S. Nat. Museum.)

Derichthys (de-rik'this), *n.* [NL., < Gr. *δέρη*, neck, + *ἰχθύς*, fish.] A genus of eels, constituting the family *Derichthyidæ*, found in the depths of the Gulf Stream.

de rigueur (dę rē-gėr'). [F., 'of rigor' or strictness.] Strictly required, as by etiquette, usage, rule, etc.; essential; imperative: as, full dress is *de rigueur.*

derivant, *n.* 2. One who or that which is derived from another.

He sees quite clearly that neither the hide-bound empiricism of the traditional English school, nor the vaulting *a priori* dialectic of Hegel and his English-speaking *derivants*, suffice to philosophical salvation at present.
Pop. Sci. Mo., March, 1901, p. 552.

3. In *med.*, same as *derivative, n.*, 1.

II. *a.* 1. Deriving; derivative.—2. In *med.*, same as *derivative, a.*, 3.

derivative. I. *a.* 4. In *geol.*, derived from some other source; not native to the rock in which it is now found.

The shells which they occasionally contain are probably, in most cases, *derivative*—they do not occupy the positions in which the molluscs themselves lived.
J. Geikie, The Great Ice Age, p. 371.

Derivative rocks, in *geol.*, rock strata which have been formed mechanically by the abrasion of preëxisting rocks; generally speaking, the sedimentary rocks.

II. *n.*—**First, second, third, etc., derivative,** in *math.*, the derivative obtained by performing the operation of derivation upon the original function, upon its first, second, etc., derivative respectively.—**Partial derivative.** If x and y are independent in $z = f(x, y)$, the derivative of z with respect to x when x varies and y remains constant is called the *partial derivative of z with respect to x*, and is denoted by the symbol $\frac{\delta z}{\delta x}$.—**Total derivative,** a derivative obtained when all the variables of the function vary.

derive, *v. t.*—**Derived circuit, curve, function, group.** See ★*circuit*, ★*curve, function*, ★*group*1.

dermal, *a.*—**Dermal body,** one of the various structures having a glandular or sensory function, found in the dermis and to some extent in the epidermis of certain gephyreans, as *Sipunculus.*—**Dermal branchiæ, cortex, glands,** etc. See ★*branchiæ*, ★*cortex*, ★*gland*, etc.

dermalaxia (dėr-ma-lak'si-ä), *n.* [NL., for **dermomalaxia* or **dermatomalaxia*, < Gr. *δέρμα*, skin, + *μάλαξις*, softening.] Softening of the skin.

dermale (dėr-mā'lē), *n.*; pl. *dermalia* (-li-ä). [NL., neut. of *dermalis*, dermal: see *dermal.*] In sponges, one of the spicules which support the dermal or bounding membrane of the sponge. *Sedgwick*, Text-book of Zoöl., I. 92.

Dermanyssus (dėr-ma-nis'us), *n.* [NL. (De Geer, 1778), irreg. < Gr. *δέρμα*, skin, + *νύσσειν*, pierce.] A genus of mites. *D. gallinæ* is the chicken- or fowl-tick. It is not a true tick, but a mite belonging to the family *Gamasidæ*, and is one of the most persistent and injurious pests of the hennery. It also attacks man, horses, cattle, dogs, cats, and rabbits.

dermarticulare (dėr-mär-tik-ū-lā'rē), *n.*; pl. *dermarticularia* (-ri-ä). [NL., < Gr. *δέρμα*, skin, + NL. *articulare*, a bony element of the lower jaw: see *articular.*] A bony element lying on the posterointernal face of each ramus of the lower jaw of some reptiles. It may fuse with the articulare or remain distinct as in turtles. Also *dermarticular.*

For this dermal element, which in some reptiles is distinct throughout life, I have adopted the term *dermarticulare.* *J. S. Kingsley*, in Amer. Nat., Feb., 1905, p. 61.

dermatitis, *n.*—**Blastomycetic dermatitis.** See ★*blastomycetic.*—**Dermatitis calorica,** inflammation of the skin caused by heat (or by cold).—**Dermatitis congelationis,** frost-bite.—**Dermatitis exfoliativa,** any inflammation of the skin which is attended with an abundant desquamation.—**Dermatitis herpetiformis,** a grave chronic skin-disease with lesions of most varied character, marked by burning sensations and itching. Also called *Duhring's disease.*—**Dermatitis medicamentosa,** an inflammatory redness of the skin due to the action of certain drugs, such as quinine, in susceptible persons.—**Dermatitis venenata,** an inflammation of the skin caused by some poison or irritant, such as poison-ivy.—**Epidemic exfoliative dermatitis,** an epidemic skin-disease marked by an eruption of confluent reddish patches followed by an abundant desquamation.—**Malignant papillary dermatitis,** a parasitic disease of the skin surrounding the nipple, the tendency of which is to become cancerous. Also called *Paget's disease.*—**Röntgen-light** or **Röntgen-ray dermatitis,** a severe inflammation of the skin caused by exposure to the Röntgen rays. Also called *X-ray dermatitis.*—**X-ray dermatitis.** Same as *Röntgen-light* ★*dermatitis.*

Dermatobia (dėr-ma-tō'bi-ä), *n.* [NL., < Gr. *δέρμα*(*τ-*), skin, + *βίος*, life.] An important genus of Œstrid flies, containing one or more species (as *D. noxialis*) which attack human beings in tropical regions. The eggs are laid on the skin, the larva living in the connective tissue under the epidermis.

dermatocellulitis (dėr″ma-tō-sel-ū-lī'tis), *n.* [NL., < Gr. *δέρμα*(*τ-*), skin, + NL. *cellulitis.*] Inflammation of the skin and underlying cellular tissue.

dermatocyst (dėr'ma-tō-sist), *n.* [Gr. *δέρμα*(*τ-*), skin, + *κύστις*, bladder (cyst).] A cystic tumor of the skin.

dermatodynia (dėr″ma-tō-din'i-ä), *n.* [NL., < *δέρμα*(*τ-*), skin, + *ὀδύνη*, pain.] Same as *dermalgia.*

dermatograph (dėr'ma-tō-gräf), *n.* [Gr. *δέρμα*(*τ-*), skin, + *γράφειν*, write.] A device for marking upon the skin.

dermatographia (dėr″ma-tō-graf'i-ä), *n.* [NL., < Gr. *δέρμα*, skin, + *γράφειν*, write.] An irritable condition of the skin in which a raised line follows the drawing of a hard-pointed instrument across it.

dermatographism (dėr-ma-tog'ra-fizm), *n.* Same as ★*dermatographia.*

dermatol (dėr'ma-tōl), *n.* [Gr. *δέρμα*(*τ-*), skin, + *-ol.*] A trade-name for ★bismuthum subgallicum (which see).

Dermatolepis (dėr-ma-tol'e-pis), *n.* [NL., < Gr. *δέρμα*(*τ-*), skin, + *λεπίς*, scale.] A genus of large bass-like fishes found on both coasts of tropical America, characterized by the smooth embedded scales. The species are *D. inermis* of the West Indies, and *D. punctatus* of the west coast of Mexico.

dermatome (dėr'ma-tōm), *n.* [Gr. *δέρμα*, skin, + *-τομος*, < *ταμεῖν*, cut.] A knife with a very fine blade, used for removing certain skin-blemishes.

dermatomere (dėr'ma-tō-mēr), *n.* [Gr. *δέρμα*(*τ-*), skin, + *μέρος*, part.] In *embryol.*, one of the cleavage-cells or blastomeres which give rise to the integument or skin.

dermatomyositis (dėr″ma-tō-mī-ō-sī'tis), *n.* [NL., < Gr. *δέρμα*(*τ-*), skin, + (irreg.) *μυός*, gen. of *μῦς*, muscle, + *-itis.* The right form would be **dermatomyitis.*] Inflammation of the skin and underlying muscular tissue.

dermatoneurosis (dėr″ma-tō-nū-rō'sis), *n.* [NL., < Gr. *δέρμα*, skin, + *νεῦρον*, nerve, + *-osis.*] An affection of the skin due to a morbid state of the nervous system.

dermatopathia (dėr″ma-tō-path'i-ä), *n.* [NL., < Gr. *δέρμα*, skin, + *-πάθεια*, < *πάθος*, disease.] Same as *dermatosis*, 2.

dermatopathic (dėr″ma-tō-path'ik), *a.* Of or pertaining to disease of the skin.

dermatopathology (dėr″ma-tō-pā-thol'ō-ji), *n.* [Gr. *δέρμα*(*τ-*), skin, + E. *pathology.*] Pathology of the skin.

dermatopathy (dėr-ma-top'a-thi), *n.* [NL. *dermatopathia.*] Same as *dermatosis*, 2.

dermatophone (dėr′mą-tō-fōn), *n.* [Gr. *δέρμα(τ-)*, skin, + *φωνή*, sound.] A modified cylindrical stethoscope devised for dermatophony.

dermatophony (dėr′mą-tof′ō-ni), *n.* [Gr. *δέρμα(τ-)*, skin, + *φωνή*, sound, + *-y*³.] Auscultation of the sounds of the blood-stream in the vessels of the skin.

dermatoplasm (dėr′mą-tō-plazm), *n.* [Gr. *δέρμα(τ-)*, skin, + *πλάσμα*, anything formed.] The living protoplasm that is said to form an essential part of the cell-membrane in plants.

dermatoplasty (dėr′mą-tō-plas″ti), *n.* [Gr. *δέρμα(τ-)*, skin, + *πλαστός*, ‹ *πλάσσειν*, form.] Restoration of lost skin by grafting or sliding the integument from another part.

dermatopteran (dėr-mą-top′te-ran), *a.* and *n.* **I.** *a.* Of or belonging to the *Dermatoptera*.

II. *n.* A member of the *Dermatoptera*.

dermatopterous (dėr-mą-top′te-rus), *a.* Belonging to or resembling the *Dermatoptera*.

dermatoptic (dėr-mą-top′tik), *a.* [Gr. *δέρμα(τ-)*, skin, + *ὀπτικός*, of sight: see *optic*.] Relating to or having the faculty of perceiving variations of light by means of the skin alone, in the absence of definite organs of vision: as, *dermatoptic* perception in certain cœlenterates, mollusks, and other invertebrates. Also *dermatoscopic*.

dermatoscopic (dėr″mą-tō-skop′ik), *a.* [Gr. *δέρμα(τ-)*, skin, + *σκοπεῖν*, view, + *-ic*.] Same as ★*dermatoptic*. *Geog. Jour.* (R. G. S.), XII. 452.

dermatosome (dėr′mą-tō-sōm), *n.* [Gr. *δέρμα(τ-)*, skin, + *σῶμα*, body.] In *bot.*, one of the granular bodies which occur in rows, united and surrounded by protoplasm, forming the cell-wall. *Wiesner*.

Dermatostethus (dėr″mą-tō-stē′thus), *n.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + *στῆθος*, breast.] A genus of pipe-fishes of the family *Syngnathidæ*, found in the Gulf of California.

dermatosyphilis (dėr″mą-tō-sif′i-lis), *n.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + E. *syphilis*.] Syphilitic lesions of the skin.

dermatotherapy (dėr″mą-tō-ther′ą-pi), *n.* [Gr. *δέρμα(τ-)*, skin, + *θεραπεία*, treatment, cure.] Treatment of the skin and its diseases.

dermatotyloma (dėr″mą-tō-ti-lō′mą), *n.*; pl. *dermatotylomata* (-mą-tą). [Gr. *δέρμα(τ-)*, skin, + *τύλωμα*, a callus.] A callus.

dermatotylosis (dėr″mą-tō-ti-lō′sis), *n.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + *τύλωσις*, a making or becoming callous.] Same as ★*dermatotyloma*.

Dermatozoa (dėr″mą-tō-zō′ą), *n. pl.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + *ζῷον*, animal.] Animals that are parasitic on or in the skin: a general term, of no value in classification.

dermatozoan (dėr″mą-tō-zō′an), *a.* and *n.* **I.** *a.* Relating to or characteristic of the *Dermatozoa*.

II. *n.* One of the *Dermatozoa*, or any animal that is a skin-parasite.

dermatozoönosis (dėr″mą-tō-zō-ō-nō′sis), *n.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + *ζῷον*, animal, + *-osis*.] Any disease of the skin produced by animal parasites living on or in the skin, as psoriasis, acariasis, dracunculosis, ground-itch, etc.

dermatrophia (dėr-mą-trō′fi-ą), *n.* [NL., ‹ Gr. *δέρμα(τ-)*, skin, + *τροφή*, nourishment.] Atrophy of the skin.

dermatrophy (dėr-mat′rō-fi), *n.* Same as ★*dermatrophia*.

dermepenthesis (dėr-me-pen′the-sis), *n.* [NL., ‹ Gr. *δέρμα*, skin, + *ἐπένθεσις*, insertion: see *epenthesis*.] Skin-grafting.

dermitis (dėr-mī′tis), *n.* [NL., ‹ Gr. *δέρμα*, skin, + *-itis*.] Same as *dermatitis*.

dermoblast (dėr′mō-blast), *n.* [Gr. *δέρμα*, skin, + *βλαστός*, germ.] In *embryol.*, that portion of the mesoderm which gives rise to the derma, or true skin.

dermochrome (dėr′mō-krōm), *n.* [Gr. *δέρμα*, skin, + *χρῶμα*, color.] A colored illustration of the skin in health or disease. *Lancet*, May 9, 1903, p. 1308.

dermographism (dėr-mog′rą-fizm), *n.* [Gr. *δέρμα*, skin, + *γράφειν*, write, + *-ism*.] Same as ★*dermatographia*.

dermoid, *a.* **II.** *n.* A dermoid cyst.

dermol (dėr′mōl), *n.* [Gr. *δέρμα*, skin, + *-ol*.] A trade-name for bismuth chrysophanate.

dermophlebitis (dėr″mō-flē-bī′tis), *n.* [NL., ‹ Gr. *δέρμα*, skin, + *φλέψ* (*φλεβ-*), vein, + *-itis*.] Inflammation of the superficial veins.

dermophyte (dėr′mō-fīt), *n.* Same as *dermatophyte*.

dermoplasty (dėr′mō-plas-ti), *n.* Same as ★*dermatoplasty*.

dermostosis (dėr-mos-tō′sis), *n.* [NL., prop. **derm(at)osteosis*, ‹ Gr. *δέρμα*, skin, + *ὀστέον*, bone, + *-osis*.] The presence of a bone-like structure in the skin.

dermosynovitis (dėr″mō-sin-ō-vī′tis), *n.* [Gr. *δέρμα*, skin, + NL. *synovia* + *-itis*.] Inflammation preceding and accompanying perforating ulcer (which see, under *perforating*).

dermosyphilis (dėr-mō-sif′i-lis), *n.* Same as ★*dermatosyphilis*.

dermotrich (dėr′mō-trik), *n.* [Gr. *δέρμα*, skin, + *θρίξ* (*τριχ-*), hair.] A mesoblastic dermal fin-ray of fishes. *E. S. Goodrich*, Quart. Jour. Micros. Sci., March, 1904, p. 512.

dermotrichium (dėr-mō-trik′i-um), *n.*; pl. *dermotrichia* (-ą). Same as ★*dermotrich*. *Nature*, May 5, 1904, p. 13.

dernier, *a.* **II.** In *roulette*, a bet that one of the numbers from 25 to 36, inclusive, will win.

derodidymus (der-ō-did′i-mus), *n.*; pl. *derodidymi* (-mī). [Gr. *δέρη*, neck, + *δίδυμος*, twin.] A double-headed monster.

derotremate (der-ō-trē′māt), *a.* Same as *derotreme* and *derotrematous*.

derrick, *n.* **2.** The overhead framework used in drilling the holes for oil-wells, and which remains in place after the boring is completed and the drilling machinery is removed.—**Gin-derrick.** Same as *gin*⁴, 2 (c).—**Guy-derrick,** a derrick in which the upright post is stayed by three or more guy-ropes which extend to the ground on opposite sides and are there anchored to hold the derrick in position. Where, as in a quarry, several derricks are placed in reach of one another, horizontal guy-ropes may be used to join the tops of all the posts together and furnish a support against side strains, reducing the number of guy-ropes and giving more freedom to the booms of the derricks. Large floating derricks on tow-boats or scows sometimes use two booms on opposite sides of one large post having guy-ropes or staying-shrouds at the sides between the booms. In such derricks the post is fixed and the booms have only a limited swing to the right or left of the point of support.—**Hauling derrick,** a simple crab or windlass on a frame, which can be anchored where desired.—**Stiff-leg derrick,** a derrick in which two stiff rods of wood or iron take the place of guy-ropes. The legs are placed as close together as possible to give free room for the sluing of the boom, the usual position being one quarter of the whole circle in which the boom might turn if it were a guy-derrick. In large derricks the post and boom are supported upon a ★sluing-gear (which see).

derrick-crab (der′ik-krab), *n.*, The hoisting-gear and its frame at the foot of any hoisting-apparatus such as a crane or derrick, consisting of a drum on which the hoisting-rope may be wound, and the necessary reducing-gears and pinions.

derrick-elevator (der′ik-el″ē-vā-tọr), *n.* See ★*elevator*.

derricking (der′ik-ing), *a.* Of or pertaining or proper to the jib or boom of a crane or derrick or its inclination with regard to the post.—**Derricking motion** (of a crane), the radial motion of the jib when its inclination with regard to the post is altered in order to place a suspended weight nearer to or farther from the post, as distinguished from the lifting motion itself, or from a sluing or circular motion round the axis of the post.

derrid (der′id), *n.* [NL. *Derris* (*Derrid-*).] A tarry substance obtained from the bark of the root of *Derris* (*Pongamia*) *elliptica*, the active principle of a decoction used in Java for killing fish. One part of this substance in 5,000,000 parts of water is said to act instantly on large fish. *Jour. Soc. Chem. Industry*, X. 268.

derth, *n.* and *v.* A simplified spelling of *dearth*.

deruinate (dē-rö′i-nāt), *a.* [*de-* + *ruinate*.] Ruined; in a state of ruin.

Derwenter (dėr′wen-tėr), *n.* In Australia, a released convict, especially one from Hobart Town, Tasmania, where there was a convict settlement on the banks of the river Derwent: hence the name.

Desarguesian (dā-sär-gē′si-an), *a.* See ★*Arguesian*.

desaxonize (dē-sak′sn-īz), *v. t.*; pret. and pp. *desaxonized*, ppr *desaxonizing*. [*de-* + *Saxon* + *-ize*.] To divest of distinctively Saxon qualities and tendencies.

> That sometimes almost gives me to believe
> I might have been a poet, gives at least
> A brain *desaxonized!*
>
> *Lowell*, Cathedral.

descamisado (des-kä-mē-sä′dō), *n.* [Sp., lit. 'shirtless,' ‹ *des-* (‹ L. *dis-*) priv. + *camisado*, ‹ *camisa*, shirt.] In *Sp. hist.*, an extreme liberal and revolutionist in the turbulent period after 1820.

Descartes's formula. See ★*formula*.

descend, *v. i.* **7.** In *phys.*, to pass from higher to lower readings or values upon any scale: said specifically of the musical scale and of the thermometric scale.

descendancy, descendency (dē-sen′dan-si, -den-si), *n.* [*descendan(t)*, *-en(t)*, + *-cy*.] Descendants considered collectively. *Buck*, Med. Handbook, V. 36.

descendant, *n.* **3.** In *geol.*, a topographic feature carved from the mass beneath an older topographic form which has been removed.

descendental (dē-sen-den′tal), *a.* [*descendent* + *-al*¹.] Relating to inherited nature and ordinary conditions: humorously distinguished from *transcendental*.

> Square, lover of Plato and Molly Seagrim, with his brain full of transcendental morality, and his heart full of *descendental* appetites. *Whipple*, Essays and Rev., II. 342.

descensional, *a.* [*descension* + *-al*¹.] **2.** Specifically, in *geol.*, noting the disaggregation of the antecedent rock, the separation of unlike particles, and their final aggregation in beds; noting the breaking down of complex silicates, the solution of certain original components, and a gathering of the modified and assorted product into stratified deposits.

> Running hand in hand with this *descensional* process, there has always been a reascensional process by which the coherence, the crystallization, and in some measure the complex composition of the rocks are restored.
>
> *Chamberlin and Salisbury*, Geol., I. 412.

descensionist (dē-sen′shọn-ist), *n.* [*descension* + *-ist*.] One who holds some theory involving descending movement or action. See the extract.

> Three theories are maintained as to the course of the [subterranean] waters which deposit ores. Some hold that the waters doing the work are descending; others that they are laterally-moving; others that they are ascending . . . . But if we are *descensionists* . . . we may say that the waters which are doing the work are descending. *Science*, Nov. 15, 1901, p. 756.

description, *n.*—**The world of description.** See *the world of* ★*appreciation*.

descriptive, *a.* **2.** In *geom.*: (*a*) Pertaining to the projective methods of Monge. (*b*) Not containing the idea of quantity or measurement.

> Projective Geometry on the other hand, dealing with projective properties (i.e. such as are not altered by projection), is chiefly concerned with *descriptive* properties of figures.
>
> *C. Leudesdorf*, tr. of Cremona, Projective Geom., p. 50.

desectionalize (dē-sek′shọn-al-īz), *v. t.*; pret. and pp. *desectionalized*, ppr. *desectionalizing*. [*de-* + *sectional* + *-ize*.] To free from sectionalism in any sense or in any connection; widen in scope or spirit by the removal of whatever limits or divides; convert into one broad whole.

> This tendency to merging unification and *desectionalizing* is steadily pervading every human interest.
>
> *Elect. World and Engin.*, Jan. 2, 1904, p. 7.

desert¹, *n.* Specifically—(*b*) In *phytogeog.*, one of the three principal types of Schimper's climatic formations, the result of excessive drought or cold. In desert all surviving vegetation is stunted and the difference between woodland and grass-land (the other two grand types) is obliterated.—**Desert act.** Same as *Carey* ★*act*.—**Desert devil.** Same as ★*devil*, 15.—**Desert polish,** a smooth and shining surface imparted to rocks or other hard substances by the wind-blown sand and dust of desert regions. *Geikie*, Text-book of Geol., p. 436.—**Desert sandstone,** in *geol.*, the later Cretaceous formations of Australia.—**Desert varnish,** in *petrog.*, a hardened film of iron oxid or quartz on rocks and stones polished by wind-blown sand, found in deserts. *Gilbert*. See ★*case-hardening*, 2, and ★*desert polish*.

desertion, *n.* **5.** In *bot.* Same as *lipoxeny*.

desert-rod (dez′ėrt-rod), *n.* Any one of several species of herbs belonging to the genus *Eremostachys* of the mint family, natives of western and central Asia.

deserv, *v.* A simplified spelling of *deserve*.

desexualize (dē-sek′sū-al-īz), *v. t.*; pret. and pp. *desexualized*, ppr. *desexualizing*. [*de-* + *sexual* + *-ize*.] To deprive of sex or sexual characters; castrate.

Desiccating Tube.

desiccate, *v. t.*—**Desiccating tube,** a glass apparatus which permits air or gas to pass to and from an inclosed space through sulphuric acid or other desiccating material.

desiderant (dē-sid′ę-rant), *n.* and *a.* [L. *desiderans* (*-ant-*), ppr. of *desiderare*, desire: see *desire*.] **I.** *n.* One who desires a thing.

II. *a.* Desiring; of the nature of desire.

> When we ask what we know the soul to be, we can only answer: A sentient desire, or *desiderant* feeling, which, through its own effort after satisfaction, gradually differentiates itself into a world. *Thomas Davidson*, Rousseau, p. 243.

desiderium (dē-si-dē′ri-um), *n.*; pl. *desideria* (-ä). [L.: see *desire*.] A longing or ardent desire as for something once possessed and now missed; pain or regret on account of loss or absence.

All Conservatives . . . regard the memory of Lord Beaconsfield with a *desiderium* which has not been exhibited towards that of any English political leader.
Sat. Rev., April 21, 1883, p. 485.

desight (dē-sīt′), *n.* [*de-* + *sight*.] A disfigurement; an eyesore. *N. E. D.*

She had a box, . . . composed of three diamonds, three emeralds, three pearls, and one large rough pebble, which was such a *desight* to the others, that she carried the box to the smith.
Miss Yonge, Cameos Eng. Hist., ser. 2, vi. 68.

design, *n.* 9. Specifically, in *music*, either the melodic pattern, the harmonic process, or the rhythmic and metric form adopted in composition, by which a particular work or a class of works is made coherent and characteristic. In the evolution of artistic music the principles of design have been but slowly perceived and established.—**Arts of design.** See ★*art*2.

Designate individual, in *logic*, an individual object, known to exist (distinctions of time not being regarded) and so denoted as to exclude every other individual, that is, called by its well-known proper name (or a description, which amounts to a proper name in logic, since it is assumed to be applicable to nothing else): opposed to an indesignate or vague individual. Thus, Othello is a *designate* individual existing in the world of Shakspere's tragedy; so is 'earth's satellite' if the phrase is spoken by a person who knows, and to a person who knows, that there is but one; and so is 'quality' in a list of categories.

designingly (dē-zī′- or dē-sī′ning-li), *adv.* Intentionally; with crafty or evil design; for selfish ends.

design-paper (dē-zīn′pā-pėr), *n.* A drawing-paper printed in cross-lines and used in designing patterns for textile fabrics, and particularly in laying out the patterns to be transferred to the cards of a Jacquard loom.

desilicate (dē-sil′i-kāt), *v. t.*; pret. and pp. *desilicated*, ppr. *desilicating*. [*de-* + *silica* + *-ate*2.] In *chem.*, to remove silica from a substance which contains it, as, a rock.

desilication (dē-sil-i-kā′shọn), *n.* The act of desilicating or the state of being desilicated.

desinential (des-i-nen′shal), *a.* [NL., **desinentia*, desinence, + *-al*1.] Of or pertaining to a desinence; terminational; terminal; desinent: as, the *desinential* -it for -ed in dialectal English.

desipiency (dē-sip′i-ẹn-si), *n.* Same as *desipience*.

desk-book (desk′bůk), *n.* A book of reference for desk use; a hand-book for ready reference, as in matters of spelling or the like.

desma, *n.* 2. A ligament; formerly, a bandage.

desmactinic (des-mak-tin′ik), *a.* [Gr. *δέσμα*, band, + *ἀκτίς* (*ἀκτιν-*), ray.] Of sea-urchins, having the podia continued upward to the apical plates; opposed to ★*lysactinic* (which see).

Desmarestia (dez-mạ-res′ti-ä), *n.* [NL. (Lamouroux, 1813), named for A. G. *Desmarest*, a French naturalist.] A common genus of the *Phæophyceæ*, or brown algæ, occurring along the New England coast and in southern waters.

desmergate (des′mėr-gāt), *n.* [Gr. *δεσμός*, band, + *ἐργάτης*, a worker.] A worker ant which is intermediate in structure between the soldier or worker major, and the true worker or worker minor of the same species.

desmic (dez′mik), *a.* Resembling or pertaining to a desma.

desmodynia (des-mō-din′i-ä), *n.* [NL., < Gr. *δεσμός*, a band, + *ὀδύνη*, pain.] Pain in the ligaments.

desmogen (des′mō-jen), *n.* [Gr. *δεσμός*, band, + *-γενης*, -producing.] In *bot.*, the embryonic tissue of plants.—**Primary desmogen.** Same as *procambium*.—**Secondary desmogen,** tissue formed from the cambium and subsequently transformed into permanent vascular strands.

desmogenous (des-moj′e-nus), *a.* [Gr. *δεσμός*, a band, + *-γενής*, -produced.] Of ligamentous origin or causation.

desmohemoblast (des-mō-hē′mō-blȧst), *n.* [Gr. *δεσμός*, band, + *αἷμα*, blood, + *βλαστός*, germ.] Same as *mesenchyme*. Also *desmohæmoblast*.

Des Moines beds. See ★*bed*1.

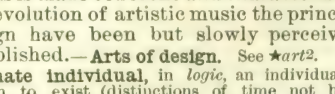
desmoma (des-mō′mä), *n.*; pl. *desmomata* (-ma-tä). [NL., < Gr. *δέσμωμα*, a fetter, < *δεσμοῦν*, bind, fetter, < *δεσμός*, a band, fetter.] Same as *desma*, 1.

desmon (des′mon), *n.* [NL., < Gr. *δεσμός*, a band, bond, chain.] Same as ★*amboceptor*.

desmopathy (des-mop′ạ-thi), *n.* [Gr. *δεσμός*, a band, + *-παθεια*, < *πάθος*, disease.] Disease of ligamentous structures.

desmorrhexis (des-mō-rek′sis), *n.* [NL., < Gr. *δεσμός*, a band, + *ῥῆξις*, a breaking, < *ῥηγνύναι*, break.] Rupture of a ligament.

desmosis (des-mō′sis), *n.* [NL., < Gr. *δεσμός*, a band, + *-osis*.] A disease of the connective tissue.



desmosite (des′mō-sīt), *n.* [Irreg. < Gr. *δεσμός*, a band, + *-ite*2.] In *petrog.*, a banded compact rock developed from shales and slates by contact-metamorphism induced by intrusions of diabase. *Zincken*, 1841.

Desmothoraca (des″mō-thō-rā′kä), *n. pl.* [NL., < Gr. *δεσμός*, a band, + *θώραξ* (*θώρακ-*), breastplate.] An order of *Heliozoa* having a stalked or unstalked shell perforated by numerous pores. It includes *Clathrulina* and *Orbulinella*.

desmotropic (des-mō-trop′ik), *a.* [Gr. *δεσμός*, a bond, + *τρόπος*, a turning, + *-ic*.] Pertaining to or characterized by desmotropism. *Nature*, June 26, 1902, p. 214.

desmotropism (des-mot′rō-pizm), *n.* [Gr. *δεσμός*, a bond, + *τρόπος*, turning, + *-ism*.] In *chem.*, a term proposed by Victor Meyer and Jacobsen, as a substitute for *tautomerism*, to signify an easily experienced shifting of the atoms in a molecule from one order of attachment to another, so that each of two isomeric substances readily changes into the other.

desmotroposantonin (des″mō-trop-ō-san′tō-nin), *n.* [*desmotrop-ic* + *santonin*.] A colorless dextrorotatory alkaloid,

isomeric with santonin, from which it is prepared by the action of concentrated hydrochloric acid. It crystallizes in small needles, melting at 260° C.

desmotroposantonous (des″mō-trop-ō-san′tō-nus), *a.* Derived from desmotroposantonin.—**Desmotroposantonous acid,** a colorless, levorotatory, crystalline compound, $HOC_{10}H_5(CH_3)_2CH(CH_3)COOH$, (3:1:4:6), prepared by the reduction of desmotroposantonin. It is isomeric with santonous acid and melts at 175° C.

desmotropy (des-mot′rō-pi), *n.* Same as ★*desmotropism*.

désobligeant (dā-zō-blē-zhoṅ′), *n.* [F., lit. 'disobliging': compare *sulky*, *n.*] A small chaise with accommodations for only one person: hence the name.

An old *Desobligeant*, in the farthest corner of the court, hit my fancy at first sight; so I instantly got into it.
Sterne, Sentimental Jour., p. 10.

desocialize (dē-sō′shal-īz), *v. t.*; pret. and pp. *desocialized*, ppr. *desocializing*. [*de-* + *social* + *-ize*.] To break down social instincts, habits, and relations; render non-social. *Giddings*, Inductive Sociol., p. 262.

désœuvré (dā-zė-vrā′), *a.* [F., < *dés-* priv. + *œuvre*, work, < L. *opera*, work.] Unemployed; unoccupied; idle.

Drowsy, dull, *désœuvré*, not having a book in press, and having given up smoking. *Life of Longfellow*, I. 336.

désœuvrement (dā-zėv-rẹ-moṅ′), *n.* [F.] A being unemployed; lack of occupation or work.

I have nothing to write you, and therefore, write for the pleasure of it, and from mere *désœuvrement*.
Life of Longfellow, II. 143.

desonation (dē-sō-nā′shọn), *n.* [*de-* + *sonation*.] The removal of sonant quality: as, "the *desonation* of final vowels," *Scripture*, Exper. Phonetics, p. 203.

desophistication (dē-sō-fis-ti-kā′shọn), *n.* The act of freeing or the fact of being freed from sophistication.

De Soto group. See ★*group*1.

desoxyalizarin (des-ok″si-a-liz′ạ-rin), *n.* Same as ★*anthrarobin*.

desoxycholalic (des-ok″si-ko-lal′ik), *a.* [*des-* for *dis-* + *oxy(gen)* + *cholalic*.] Noting an acid, a reduction-product of cholalic acid, $C_{24}H_{40}O_4$.

desoxycholic (des-ok-si-kol′ik), *a.* [*des-* for *dis-* + *oxy(gen)* + *cholic*.] Derived from cholic acid by loss of oxygen.—**Desoxycholic acid,** a crystalline acid, $C_{24}H_{40}O_4 + 1\frac{1}{2}H_2O$, formed in the putrefaction of ox-gall. It is bitter and melts at 185–190° C.

desoxydation (des-ok-si-dā′shọn), *n.* Same as *deoxidation*.

desoy† (de-soi′), *n.* A shortened form of *sergedusoy*. *A. M. Earle*, Costume of Colonial Times, p. 98.

despatcher, *n.* 2. A die with double numbers, such as two fives on opposite sides, instead of a deuce opposite the five: so called because it throws higher than the average and despatches the game quickly.

despecialization (dē-spesh″ạl-ī-zā′shọn), *n.* The act of advancing from a stage of specialization to one of greater generality. *Patten*, Heredity and Social Progress, p. 117.

despecialize (dē-spesh′ạl-īz), *v. i.*; pret. and pp. *despecialized*, ppr. *despecializing*. [*de-* + *specialize*.] To pass from a specialized to a more generalized condition or stage. *Patten*, Heredity and Social Progress, p. 61.

despiritualize (dē-spir′i-ṭū-ạl-īz), *v. t.*; pret. and pp. *despiritualized*, ppr. *despiritualizing*. [*de-* + *spiritualize*.] To deprive of spiritual character, power, or influence; affect with worldliness or materialism: as, to *despiritualize* Christianity.

despumation, *n.* 2. The mechanical removal of scum or foam from a liquid by skimming.

dessert-spoonful (de-zėrt′spōn″fůl), *n.* As much as a dessert-spoon will contain; about two drams.

destoor, *n.* See ★*dastur*.

destrictinic (dē-strik-tin′ik), *a.* [NL. *destricta* (see def.) + *-in* + *-ic*.] Noting an acid, an indigo-blue crystalline compound, extracted from the lichen *Cladina destricta*.

destroyer, *n.* 2. Specifically, a torpedo-boat destroyer. See *torpedo-boat*.

destructional (dē-struk′shọn-ạl), *a.* [*destruction* + *-al*1.] Pertaining to or formed by destructive agencies or processes; specifically, relating to or resulting from denudation.

The steep cliff is clearly in both cases a *destructional* surface from which material has fallen away.
Amer. Jour. Sci., Jan., 1904, p. 38.

destructionalist (dē-struk′shọn-ạl-ist), *n.* [*destructional* + *-ist*.] One whose aim is destruction or who is engaged in the devising or use of engines of destruction.

The torpedo (that ever verdant topic of the universal *destructionalist*). *Sci. Amer.*, lxxix. 322.

Destructive leaf-hopper. See ★*leaf-hopper*.

destructivity (dē-struk-tiv′i-ti), *n.* [*destructive* + *-ity*.] The ability to destroy; destructiveness: as, "seismic *destructivity* can be accurately expressed in mechanical units," *Encyc. Brit.*, XXVII. 609.

destructor-cell (dē-struk′tọr-sel), *n.* A unit or retort in a refuse- or garbage-incinerating plant. These furnaces are usually in pairs, straddling a common flue, and are maintained at a high temperature to diminish nuisance from odor.

destructuralize (dē-struk′tū-ral-īz), *v. t.*; pret. and pp. *destructuralized*, ppr. *destructuralizing*. [*de-* + *structural* + *-ize*.] To undo or take apart; disorganize. *N. E. D.*

desubstantiate (dē-sub-stan′shi-āt), *v. t.*; pret. and pp. *desubstantiated*, ppr. *desubstantiating*. [*de-* + *substantiate*.] To deprive of substance. *Mrs. Humphry Ward. N. E. D.*

desulphate (dē-sul′fāt), *v. t.*; pret. and pp. *desulphated*, ppr. *desulphating*. [*de-* + *sulphate*.] In *chem.*, to remove a sulphate or the radical of sulphuric acid from (a substance). *Jour. Brit. Inst. of Elect. Engin.*, 1899–1900, p. 474.

desulphation (dē-sul-fā′shọn), *n.* The process of desulphating. *Jour. Brit. Inst. of Elect. Engin.*, 1899–1900, p. 466.

desulphurizer (dē-sul′fū-rī-zėr), *n.* In *chem.*, a substance used to combine with and so remove sulphur from something else, as scrap-iron used in the reduction of metallic antimony from its sulphid.

desultor (dē-sul′tôr), *n.*; pl. *desultores* (-tō′rēz). [L.: see *desultory*.] A bareback rider in the Roman circus who rode two or more horses at once, leaping from one to another.

det, *n.* 2. A recent simplified spelling of *debt*.

det. An abbreviation of the Latin *detur*, 'let it be given.'

detaching-roller (dē-tach′ing-rō″lėr), *n.* On a cotton-combing machine, a steel roller with an intermittent motion, for detaching a tuft of cotton after it is combed.

Detachment of the retina. See ★*retina*.

detail, *n.* 5. The service on which one is detailed.—**Detail paper.** See ★*paper*.

detainer2, *n.* (*c*) In *law*, the fact of being detained or held in custody: as, a writ of habeas corpus may issue to inquire into the *detainer* of a prisoner.

detassel (dē-tas'l), *v. t.* [*de-* + *tassel.*] To remove the tassel of growing Indian corn. See ★*detasseling.*

detasseling (dē-tas'l-ing), *n.* The act or practice of removing the tassel (male inflorescence) from growing Indian corn. In breeding for improved stock, weak plants are detasseled to eliminate their pollen, and where cross-fertilization is sought the plants destined to bear the ears are thus treated. Detasseling has been performed experimentally on part of the rows in fields to observe the effect on the yield of grain and forage, with ambiguous results.

detector, *n.*—**Electrolytic detector,** a form of receiving apparatus used in wireless telegraphy. It consists of a small electrolytic cell the space between the terminals of which is bridged by a chain of deposited metallic particles. Electric oscillations break down this bridge and momentarily increase the resistance of the circuit.—**Electrothermal detector,** in *wireless telegraphy,* same as *thermal* ★*detector.*—**Magnetic detector,** a receiving apparatus used in wireless telegraphy. Its operation depends upon the fact that the sudden changes in the magnetization of the iron core of the receiver, caused by the electric oscillations, are capable of producing sounds in a telephone placed in circuit with a coil about the core.—**Mechanical detector,** in *elect.,* a device for the detection of electric waves based upon the tendency of a ring of wire, suspended near a resonator carrying electric oscillations, to turn into the position of minimum action. Such detectors were employed by Hertz in his study of the propagation of electric waves in conductors.—**Thermal detector,** a receiving apparatus, used in wireless telegraphy, the action of which depends upon the heating of a minute wire by the electric oscillations.

detector-bar (dē-tek'tor-bär), *n.* A secondary rail or bar placed beside the rails of a switch and intended to prevent its movement while a train is passing over it. The bar is pivoted to the switch in such a manner that when the switch is to be moved it rises above the level of the top of the switch-rail and then returns to its normal position. In rising it strikes the car-wheels, detects their presence, warns the switchman, and also prevents the movement of the switch until the last wheel of the train has passed. See *switch.*

detent-lock (dē-tent'lok), *n.* A lock, usually a spring-lock, in which the bolt has notches, into which may be slid a detent or catch operated by a knob or pin. One of these notches is so located that when the bolt is drawn back and the detent thrown in, the bolt is held back in the lock and does not project or operate to fasten the door. The other notch is opposite the detent when the bolt is thrust out, and then the bolt cannot be withdrawn by the turning of the key outside, and the door is secure even against pass-keys or the keys belonging to the lock.

detent-rod (dē-tent'rod), *n.* 1. A rod which carries a catch or detent.—2. A rod which controls the motion of a detent.

détenu (dā-te-nü'), *n.* [F., prop. pp. of *détenir,* detain.] One who is detained in custody; a prisoner: used especially in reference to English and French prisoners of war held by either country during the wars of 1793–1815.

deteriorationist (dē-tē″ri-ō-rā'shon-ist), *n.* One who holds that deterioration is the prevailing tendency or rule of things; a deteriorist.

deteriorator (dē-tē'ri-ō-rā-tor), *n.* One who or that which deteriorates or causes deterioration.

deteriorism (dē-tē'ri-ō-rizm), *n.* [L. *deterior,* worse, + *-ism.*] The doctrine that the general tendency of all things is to grow worse: opposed to *meliorism.*

Meliorism and the opposite theory, which we suppose must be called *deteriorism.* *Goldwin Smith. N. E. D.*

determinant, *n.* 4. In *biol.,* in Weismann's doctrine of germ-plasm, the material bearer of all the hereditary qualities of a cell, regarded as composed of as many biophores, or bearers of single hereditary qualities, as are to be possessed by the cell and its descendants.

I shall designate . . . the particles of the germ-plasm determining them [the cells] as the 'determining parts' or '*determinants.*' *Weismann* (trans.), Germ-plasm, p. 57.

Accessory determinant, according to Weismann, a determinant of the accessory germ-plasm. See ★*germ-plasm.*—**Doctrine of determinants,** in *biol.,* that part of Weismann's doctrine of germ-plasm which regards each cell as represented in the germ-plasm by a determinant. Often used as synonymous with the doctrine of germ-plasm.—**Heterodynamous determinant,** in Weismann's doctrine of germ-plasm, one of the determinants which are the bearers of the hereditary qualities of cells that are different in the two parents.—**Heterologous determinant,** in Weismann's doctrine of germ-plasm, one of the determinants which are the bearers of the hereditary qualities of cells that are not homologous in the parents, so that the cells which they control in the developing organism cannot exhibit the qualities of both parents in combination.—**Homodynamous determinant,** in Weismann's doctrine of germ-plasm, one of the determinants which are the bearers of the hereditary qualities of cells that are alike in the two parents.—**Homologous determinant,** in Weismann's doctrine of germ-plasm, one of the determinants which are the bearers of the hereditary qualities of homologous cells in both parents, so that the cells which they control in the developing organism may exhibit the qualities of both parents in combination.—**Leading term of a determinant,** in *math.,* the product of the elements (constituents) in the principal diagonal.—**Supplementary determinant,** according to Weismann, one of the determinants to which the identity between the constituent cells of a lost part of the body of an organism and the part that is regenerated in its place is due.—**Term of a determinant.** From the array choose *n* different elements (constituents) such that there is one and only one element from each row and column, multiply these elements together, the product will be a *term of the determinant.*

determinate, *a.*—**Determinate growth,** in *bot.* See ★*growth.*—**Determinate number.** See ★*number.*—**Determinate variation.** See ★*variation.*

II. *n.* In Weismann's doctrine of determinants, any cell which has distinctive hereditary qualities.

I shall designate the cells or groups of cells which are independently variable from the germ onwards as the 'hereditary parts' or '*determinates.*'

Weismann (trans.), Germ-plasm, p. 57.

determination, *n.* 14. In *bot.* and *zoöl.,* the identification, classification, and naming of specimens of plants or animals.

determine, *v. i.* 4. In Oxford and other universities, to take part in a solemn disputation preparatory to graduation as master of arts. See *determination,* 12.

deterrent, *n.* 2. A substance used in the manufacture of smokeless powder to moderate the violence of the explosion and to diminish sensitiveness to shock. Vaseline, camphor, etc., are so employed.

deterrently (dē-tėr'ent-li), *adv.* In a manner to deter; as a deterrent: as, the possibility of being called to account has acted *deterrently.*

deth, *n.* A simplified spelling of *death.*

dethyroidized (dē-thī'roi-dīzd), *p. a.* [*de-* + *thyroid* + *-ize* + *-ed*².] Deprived of the thyroid gland. *Buck,* Med. Handbook, VI. 410.

detin (dē-tin'), *v. t.*; pret. and pp. *detinned,* ppr. *detinning.* [*de-* + *tin.*] To remove the tin from (articles plated with tin).

detinning (dē-tin'ing), *n.* The operation of removing the tin from articles plated with tin, as tinware or tin scrap.

Detinue of goods in frank marriage, in *old Eng. law,* a writ which lay in favor of a wife who had obtained a divorce, to recover the property given with her in marriage.

Detonating fuse, oil, etc. See ★*fuse*², ★*oil,* etc.

detortion, *n.* 2. In *biol.,* the symmetry of a straight organism whose ancestors were twisted. [Rare.] *Encyc. Brit.,* XXX. 796.

detritus, *n.* 3. In *pathol.,* caseous or other disorganized material formed by the destruction of living tissue.

Detrusor urinæ, the muscular coat of the bladder, especially the longitudinal fibers.

detter, *n.* A simplified spelling of *debtor.*

deuteragonist (dū-tėr-ag'ō-nist), *n.* [Gr. *δευτεραγωνιστής,* < *δεύτερος,* second, + *ἀγωνιστής,* actor: see *agonist.*] In the *Gr. drama,* an actor who played the second part, after that of the protagonist.

deuteranope (dū'tėr-an-ōp), *n.* [See ★*deuteranopia.*] In *psychophys.,* one who is afflicted by the form of red-green blindness known as *deuteranopia.* *Baldwin,* Dict. of Philos. and Psychol., I. 274, II. 787.

deuteranopia (dū-tėr-an-ō'pi-ą), *n.* [NL., < Gr. *δεύτερος,* second, + NL. *anopia,* blindness.] In *psychophys.,* a form of red-green color-blindness; the so-called green-blindness.

deuterencephalon (dū-tėr-en-sef'a-lon), *n.* Same as ★*deutocerebrum.* *Encyc. Brit.,* XXIX. 499.

deutero-albumose (dū″te-rō-al'bū-mōs), *n.* One of a group of albumoses, also known as *secondary albumoses,* which are formed during the process of proteolytic digestion. During gastric digestion their formation is preceded by that of the *primary albumoses.* They can all be precipitated by saturation with ammonium sulphate, partly in neutral and partly in acid solution. The digestion of fibrin leads to the formation of at least four deutero-albumoses. See ★*albumose* and *digestion-products,* under ★*digestion.*

deutero-caseose (dū″te-rō-kā'sē-ōs), *n.* A deutero-albumose derived from casein.

deuterocladus (dū-te-rok'la-dus), *n.* [NL., < Gr. *δεύτερος,* second, + *κλάδος,* branch.] In sponge-spicules, an actine bearing branches of the second order.

deuterocone (dū'te-rō-kōn), *n.* [Gr. *δεύτερος,* second, + *κῶνος,* cone.] The inner and anterior cusp of an upper premolar.

deuteroconid (dū″te-rō-kon'id), *n.* [Gr. *δεύτερος,* second, + *κῶνος,* cone, + *-id*².] The inner and anterior cusp of a lower premolar.

deutero-elastose (dū″te-rō-ē-las'tōs), *n.* A deutero-albumose derived from elastin.

deuterofraction (dū″te-rō-frak'shon), *n.* One of the groups into which the deutero-albumoses, which result from the albumins on proteolytic digestion, can be separated: spoken of as *deuterofraction A, B, C,* etc.

deuterogamy, *n.* 2. In *bot.,* a form of nuclear fusion in certain cryptogams which is subsequent to the sexual act and superposed upon it. *P. Groom.*

deutero-Isaiah (dū″te-rō-ī-zā'yą, or -ī-zī'yą), *n.* The name applied by some modern critics to the author of chapters xl.–lxvi. of the book of Isaiah; also, this part of the book, which was probably written at the end of the Babylonian exile.

deutero-Nicene (dū″te-rō-nī'sēn), *a.* Pertaining to the second Nicene council. See *Nicene.*

deutero-Pauline (dū″te-rō-pâ'lin), *a.* The designation of certain writings similar in character to the epistles of Paul, but considered to be from another hand. Some critics so name the Epistle to the Hebrews and the Pastoral Epistles.

deuteroplasm (dū'te-rō-plazm″), *n.* [Gr. *δεύτερος,* second, + *πλάσμα,* anything formed.] Same as *deutoplasm.*

deuteroplasma (dū″te-rō-plaz'ma), *n.* [NL., < Gr. *δεύτερος,* second, + *πλάσμα,* anything formed.] Same as *paramitom.*

deuteroproteose (dū″te-rō-prō'tē-ōs), *n.* Same as ★*deutero-albumose.*

deuterosaurian (dū″te-rō-sâ'ri-an), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of *Deuterosaurus.*

II. *n.* A member of the genus *Deuterosaurus.*

Deuterosaurus (dū″te-rō-sâ'rus), *n.* [Gr. *δεύτερος,* second, + *σαῦρος,* a lizard.] A genus of extinct theromorphous reptiles of the family *Deuterosauridæ,* having double-headed ribs, large canine teeth serrated on the edges, no palatal teeth, and large lacrymal bones. It occurs in the Permian formation.

deuteroscopia (dū″te-rō-skō'pi-ą), *n.* [NL.] Same as *deuteroscopy.*

deuteroscopic (dū″te-rō-skop'ik), *a.* Of or pertaining to deuteroscopy or second sight: as, the *deuteroscopic* faculty.

deuterostrophy (dū-te-ros'trō-fi), *n.* [Gr. *δεύτερος,* second, + *στροφή,* turning.] In *phyllotaxy,* a spiral of the third degree.

deuterosystematic (dū″te-rō-sis-te-mat'ik), *a.* Of or pertaining to a second or secondary system.

deuterotokous (dū-te-rot'ō-kus), *a.* [Gr. *δεύτερος,* second, + *-τόκος,* < *τεκεῖν,* bring forth.] Of or pertaining to deuterotoky or the parthenogenic generation of both male and female offspring.

deuterotoky (dū-te-rot'ō-ki), *n.* [Gr. *δεύτερος,* second, + *-τοκία,* < *-τόκος,* < *τεκεῖν,* bring forth.] A form of parthenogenesis in which the virgin female gives birth to offspring of both sexes, as the so-called sexual generations in the *Aphididæ* and *Cynipidæ.* *Cambridge Nat. Hist.,* V. 141.

deuterotoxin (dū″te-rō-tok'sin), *n.* A derivative of a toxin which has a less marked affinity for the corresponding antitoxin than prototoxin.

deuterozoic (dū″te-rō-zō'ik), *a.* [Gr. *δεύτερος,* second, + *ζωή,* life, + *-ic.*] In *geol.,* a term proposed to designate the later Paleozoic formations (Devonian, Old Red Sandstone, and Carboniferous system) of Great Britain, in distinction from the earlier ones: not now in use.

deuthyalosome (dūt-hī-al'ō-sōm″), *n.* [Gr. *δεύτ(ερος),* second, + *ὕαλος,* glass, + *σῶμα,* body.] In *cytol.,* the nucleus remaining in the egg after the formation of the first polar body. *Van Beneden,* 1883.

deutobrochal (dū-tō-brō'kal), *a.* [Gr. *δεύτ(ερος),* second, + *βρόχος,* a noose, a mesh.] Noting one of the stages in the intra-ovarian development of the oöcyte, the chromatin being coarsely reticular and the nucleus showing one or two nucleoli. *Buck,* Med. Handbook, VI. 450.

deutocerebrum (dū-tō-ser'ē-brum), *n.*; pl. *deutocerebra* (-brą). [Gr. *δεύτ(ερος),* second, + L. *cerebrum,* brain.] That portion of the brain of an insect which comprises the antennal or olfactory lobes; the second lobe of an insect's brain. Also called *deuterencephalon.* *A. S. Packard,* Text-book of Entom., pp. 231, 237.

deutonephron (dū-tō-nef'ron) *n.*; pl. *deutonephra* (-rą). [Gr. *δεύτ(ερος),* second, + *νεφρός,* kidney.] The mesonephron or Wolffian body.

deutoplasm, *n.* 2. Same as ★*deuteroplasma.*

deutoplasmogen (dū-tō-plaz′mō-jen), *n.* [Gr. δεύτ(ερος), second, + πλάσμα, anything formed, + -γενής, -producing.] In *embryol.*, that portion of the egg-cytoplasm which forms or is converted into deutoplasm.

deutosomite (dū-tō-sō′mīt), *n.* The posterior of the two somites into which the segment in the *Hexapoda* and *Chilopoda* is more or less theoretically supposed to be divided. *Science*, March 27, 1903, p. 485.

devastative (dev′as-tā-tiv), *a.* Destructive; that wastes or ravages: as, *devastative* floods.

devastavit, *n.*—**Devastavit by direct abuse** or **direct devastavit,** in *law*, actual embezzlement of the property of an estate by an administrator, executor, or other trustee, or the conversion of the same to his own use; also the wilful release of a claim due the estate, or the surrender of a lease below its value; and generally any culpable act by which the property is actually wasted or lost.—**Devastavit by maladministration,** in *law*, payment, by an executor, administrator, or other trustee, of claims against an estate that are not actually due or owing, or payment out of the order in which claims ought to be paid, or payment of legacies prior to debts; and generally any disposition of the funds that may cause a loss to a preferred class, although not benefiting the trustee.—**Devastavit by neglect,** *in law*, a negligent act or omission, upon the part of an executor, administrator, or other trustee, which results in loss to the estate: for example, failure to sell goods at a fair price within a reasonable time, neglect to collect a doubtful debt that might with diligence be collected, etc.—**Writ of devastavit,** in *law*, a writ that lies against an executor, administrator, or other trustee to recover damages for a devastavit.

develop, *v. t.*—**To develop one's game,** in *chess*, to proceed in the line of one's intended tactics.—**To develop out,** to subject to a photographic process which requires the use of chemicals, usually in a dark place, for the production of the image: contrasted with to ★*print out*. See ★*print*.

developable, *a.* **3.** If, in the series given for a function by a development formula, the general expression for the error decreases indefinitely as we increase the number of terms, the sum will approach as its limit the value of the function, which is then said to be *developable*.

developing-machine (dē-vel′up-ing-ma-shēn′), *n.* A machine for developing photographic plates or rolls of films.

development, *n.* **3.** (*b*) The generation of a new living being considered inductively as a fact, without reference to the question whether it is to be regarded as evolution or unfolding, or as epigenesis or new formation; the subject-matter of the science of descriptive embryology or embryogeny.—**6.** (*c*) Specifically, in *music*, the second section of a movement in sonata form or the central portion of a fugue, in which the thematic material in the subject or subjects is unfolded and variously treated. Also called the *working-out* or the *development section*.—**7.** In *chess*, the movements by which a player in the early part of the game places his pieces in position for future action.—**Dislocation of development,** the development of embryonic organs out of their proper order or position.—**Induced development,** the generation of a new living being from an egg, considered as epigenesis or new formation and as the result of the reciprocal interaction between it and its environment. Embryologists and writers upon speculative biology commonly hold that the conception of inherent development or evolution or unfolding and the conception of induced development or epigenesis or new formation are contradictory and mutually exclusive; but there are many facts and theoretical considerations which show that the organism is neither inherent in the germ nor induced by the conditions of its existence and development, because it is in the reciprocal interaction between the two. The organism would not be what it is if either the constitution of the germ or the conditions under which its development takes place had been different. From this point of view it is as great an error to locate development, either individual or ancestral, in the conditions of existence as it is to locate it in germ-cells. It exists in neither, because it is in the relation between the two, and the prominence of the one or of the other in the mind of the investigator is dependent upon the purpose that he has in view in making the comparison. The contradiction between the notion of induced development and that of inherent development is not in germ-cells nor in living beings, but in the mental concepts of the biologist, who names, and tries to separate in his mind, what is not separable in fact. See *inherent* ★*development* and ★*innate*, 3.—**Inherent development,** the generation of a new living being through the unfolding or evolution or manifestation to sense of the organization which is held to have been invisible or latent or potential in the germ-cell. See ★*innate*, 3.—**Law of development toward opposites,** in *psychol.*, one of Wundt's three laws of psychical development. Feelings and impulses, at first of low intensity, gradually increase in intensity by contrast with feelings of opposite quality that have for a time been predominant, until finally they gain the ascendancy over the formerly predominant feelings, and are themselves for a longer or shorter time in control. *W. Wundt* (trans.), Outlines of Psychol., p. 327.—**Mosaic theory of development,** the theory that the fertilized egg contains localized representatives of the parts that are to arise from it, so that it may be regarded as a mosaic. *E. B. Wilson*, in Biol. Lectures, 1893.

developmental, *a.*—**Developmental mechanics,** experimental embryology. See ★*embryology*.

developmentalist (dē-vel-up-men′tal-ist), *n.* A believer in the theory of progressive development; an evolutionist. *N. E. D.*

developmentarian (dē-vel-up-men-tā′ri-an), *n.* One who adopts the evolutionary or development theory in philosophy, biology, anthropology, etc.

developoid (dē-vel′up-oid), *n.* [= It. *sviluppoide;* irreg. < *develop* + *-oid.*] Of a given primitive curve, a curve such that each of its tangents is cut by the primitive at an angle ω which is any function whatsoever of the coördinates of the point of intersection. When this angle is constant, the developoid is called *ordinary*. *Beltrami*.

devenerunt (dev-e-nē′runt), *n.* [L. *devenerunt*, '(they) have come.'] In *old Eng. law*, a writ which lay in favor of the king, to determine what lands and tenements 'have come' to the crown by escheat by reason of the death of a tenant *in capite*.

deviability (dē-vi-a-bil′i-ti), *n.* In *phys.*, the property of being capable of deflection from a path, as cathode rays, by the action of a magnet.

deviation, *n.*—**Angle of deviation.** See ★*angle*3.—**Standard deviation.** (*a*) In *biol.*, the index of variability. See *variability*.—(*b*) If the law of error be stated by the equation $z = \frac{1}{\sqrt{\pi}c} e^{\frac{-(x-d)^2}{c^2}}$, more conveniently written $(1/\sqrt{\pi}c)\ \exp -(x-d)^2/c^2$, then $c/\sqrt{2} = \sigma$ is called by Pearson the *standard deviation*. The square root of the average of the squared departures from the mean in both directions is a measure of variability called the *standard deviation*.

deviative (dē′vi-ā-tiv), *a.* [*deviate* + *-ive.*] Of, pertaining to, or producing deviation, deflection, or divergence. *Lockyer*.

deviator, *n.* **2.** An appliance for altering the course of a balloon by resistance against water. The appliance is suspended from the balloon by a cord and floats in the water. See the extract.

> A strap at each end carries a rope passing to the balloon. When the ropes are of unequal length the *deviator* takes an oblique position and gives a steering effect; when the ropes are equal the blades become parallel to the direction of movement and there is no deviation and but little resistance. This instrument is, in fact, a multiple rudder of the simplest form. Both these *deviators* have been designed to keep at a certain depth below the surface of the water. *Sci. Amer.*, Oct. 26, 1901, p. 266.

devil, *n.*, **9.** (*f*) A machine for unloading grain from the hold of a vessel. *N. E. D.*—(*g*) A small, portable charcoal-furnace used in foundries for drying molds. It is constructed of a light iron latticed frame and is usually suspended in the mold.

11. A junior counsel who assists his superior, usually without financial reward. [Eng.]—**12.** In *math.*, a curve whose equation is $y^4 - x^4 + ay^2 + bx^2 = 0$.—**13.** A 'literary' or professional 'hack'; one who does professional work for another who gets all the credit.—**14.** Gunpowder moistened with water or alcohol so as to destroy the granulation and form a paste: used as a sort of firework by boys, and as a priming or fuse.—**15.** A moving whirlwind carrying up columns of sand, such as are common in India, Persia, and countries having dry seasons: sometimes called *dancing-devil* or *desert devil*, and known in upper India by the local name *bagoola* (*Hind. bagūla*).—**16.** A highly seasoned dish of crabs, chicken, eggs, or the like, cooked together.—**Devil's bedposts.** See ★*bedpost*.—**Devil's coach-horse.** (*b*) *Ocypus olens*, a large European rove-beetle, of the family *Staphylinidæ*, of savage appearance and habits and foul odor. (*c*) The wheel-bug. Also called the *devil's riding-horse*.—**Devil's corkscrews.** See ★*Daimonelix*.—**Devil's darning-needle.** (*c*) A name commonly applied to any common species of dragon-fly. (*d*) The American or Virginia virgin's-bower, *Clematis Virginiana*, so named from its gossamer-like fruit.—**Devil's hop-vine,** the green-brier or cat-brier, *Smilax rotundifolia*.—**Devils on horseback,** a savory dish made of oysters fried or broiled with a small piece of crisply fried bacon astride of each.—**Devil's riding-horse.** Same as ★*devil's coach-horse*.—**Hickory horned devil,** the larva of an American ceratocampid moth, *Citheronia regalis*. See cut under *royal horned caterpillar*.

devil, *v.* **II.** *intrans.* To do professional work (literary or legal) for another who receives all the credit, and sometimes also the remuneration or fee; act as a literary or legal devil.

devil-dancer (dev′l-dān′sėr), *n.* In India, a person who believes himself inspired and who performs dances like the whirling dervishes. See *dervish*.

devil-dancing (dev′l-dān′sing), *n.* The performances of the devil-dancers of India.

devildom (dev′l-dum), *n.* [*devil* + *-dom.*] The realm, domain, or sway of the devil; diabolic power or its exercise. *Tennyson*, The Revenge.

> She meant a commination, or, at best,
> An exorcism against the *devildom*
> Which plainly held me.
> *Mrs. Browning*, Aurora Leigh, ii.

deviler (dev′l-ėr), *n.* **1.** One who operates a machine known in England as *devil* and in the United States as *rag-picker* or *shoddy-picker*.—**2.** One who attends a hard-waste breaker in a cotton-factory.—**3.** A rag-shaking machine.—**4.** One given to patient and laborious research. [Slang.]

devil-fish, *n.* (*d*) Any large cuttlefish, as an octopus or an architeuthis. (*e*) *Lacepedia cataphracta*, a fish found in Australian waters.

deviling[2] (dev′l-ing), *n.* Acting as a 'devil' or office hack; literary or legal hack-work: as, a young barrister engaged in *deviling*. [Colloq.]

Devillian (de-vil′i-an), *a.* and *n.* [*Deville*, a town of France.] **I.** *a.* In *geol.*, pertaining to the lowest division of the Cambrian system in the Ardennes mountains of Belgium.

II. *n.* The Devillian division.

devil's-apple (dev′lz-ap′l), *n.* **1.** See *apple*, 3.—**2.** The thorn-apple, *Datura Stramonium*.

devil's-bean (dev′lz-bēn), *n.* [West Indian.] Same as *bottle-cod*.

devil's-bite (dev′lz-bīt), *n.* The American hellebore or Indian poke, *Veratrum viride*.

devil's-bones (dev′lz-bōnz), *n.* The wild yam, *Dioscorea villosa*. See *wild yam* (*a*), under *yam*.

devil's-claw, *n.* **2.** In *bot.*, a small spiny tree, *Acacia Greggii*, of the southwestern United States and northern Mexico. It sometimes reaches 30 feet in height and a foot in diameter, and bears bright creamy-yellow flowers in spikes and long, crooked, pendent pods. The wood is hard, heavy, fine-grained, durable, and strong, and of a rich brown or red color. It is called *uña de gato* by the Mexicans, and shares with *A. Wrightii* the name of *cat's-claw*.

Devil's-claw (*Acacia Greggii*).
(From Sargent's "Manual of the Trees of North America.")

devil's-claws (dev′lz-klâz), *n.* The corn-crowfoot, *Ranunculus arvensis:* so called from its bur-like fruit.

devil's-fingers (dev′lz-fing′gėrz), *n.* The bird's-foot trefoil, *Lotus corniculatus*. Compare *crow-toe*.

devil's-flax (dev′lz-flaks), *n.* The toad-flax, *Linaria Linaria*.

devil's-flower (dev′lz-flou′ėr), *n.* The red campion, *Lychnis dioica*. Also called *adder's-flower*.

devil's-grandmother (dev′lz-grand′muᵀᴴ-ėr), *n.* The woolly elephant's-foot or tobacco-weed, *Elephantopus tomentosus*.

devil's-grass (dev′lz-gras), *n.* **1.** The joint-grass, *Paspalum distichum*.—**2.** The couch-grass, *Agropyron repens*.—**3.** The gum succory, *Chondrilla juncea*.—**4.** Same as *Bermuda grass*. See under *grass* and *Cynodon*, 1.—**5.** Same as *bur-grass*, 1.

devil's-greens (dev′lz-grēnz), *n.* Same as ★*devil's-grass*, 3.

devil's-grip (dev′lz-grip), *n.* The carpet-weed, *Mollugo verticillata*.

devil's-guts, *n.* **2.** The corn spurrey, *Spergula arvensis*.—**3.** In Australia, the dodder-laurel, *Cassytha filiformis*. See ★*dodder-laurel*.

devil's-hair (dev′lz-hâr), *n.* The American virgin's-bower, *Clematis Virginiana*.

devil's-head-in-a-bush (dev′lz-hed-in-a-bŭsh′), *n.* The bladder-ketmia or flower-of-an-hour, *Hibiscus Trionum*.

devil's-herb (dev′lz-ėrb), *n.* A trailing or climbing plant, *Plumbago scandens:* so called from the use of its root and leaves as a blistering agent. See *Plumbago*, 2.

devil's-horn (dev′lz-hôrn), *n.* Same as *stinkhorn*.

devil-shrimp (dev′l-shrimp), *n.* A slender crustacean with long-stalked eyes, of the genus *Lucifer*.

devil's-ironweed (dev′lz-ī′ėrn-wēd), *n.* The arrow-leaved lettuce, *Lactuca sagittifolia*, of eastern North America; also, less commonly, the wild lettuce, *L. Canadensis*.

devil's-needle (dev′lz-nē″dl), *n.* The salt-marsh mosquito of the Atlantic coast of the United States, *Culex solicitans.* [New Jersey.]

devil's-paintbrush (dev′lz-pānt″brush), *n.* The orange hawkweed or golden mouse-ear, *Hieracium aurantiacum,* from the pencil-like pappus. The name is also applied to the king-devil, *H. præltum,* which somewhat resembles the first-named plant: both have become pests in the United States.

Devil's-paint-brush (*Hieracium aurantiacum*). One fourth natural size.

devil's-pitchforks (dev′lz-pich″fôrks), *n.* The common beggar's-ticks or sticktight, *Bidens frondosa.* The bicuspidate fruit resembles the tines of a pitchfork.

devil's-plague (dev′lz-plāg), *n.* The wild carrot, *Daucus Carota,* which is a plague to farmers, especially in America. See *carrot* and *Daucus* (cut).

devil's-rattlebox (dev′lz-rat″l-boks), *n.* The bladder-campion, *Silene vulgaris,* the seeds of which when ripe rattle in the inflated pod.

devil's-root (dev′lz-röt), *n.* The lesser broom-rape, *Orobanche minor,* which is injurious to clover upon the roots of which they are parasitic. The name is also applied to the devil's-bit, *Scabiosa Succisa.*

devil's-tether (dev′lz-teᴛʜ″ėr), *n.* The black bindweed, *Polygonum Convolvulus.*

devil's-tongue (dev′lz-tung), *n.* **1.** The prickly-pear, *Opuntia,* especially *O. Opuntia* and *O. humifusa:* so called from the spiny tongue-shaped branches or joints.—**2.** See ★*Amorphophallus.*

devil's-trumpet (dev′lz-trum″pet), *n.* The jimson-weed, *Datura Stramonium:* so called from the trumpet-shaped flowers.

devil's-vine (dev′lz-vīn), *n.* The hedge-bindweed, *Convolvulus sepium.*

devil's-walking-stick (dev″lz-wâ′king-stik), *n.* The ailantus tree, *Ailanthus glandulosa.*

devil's-weed (dev′lz-wēd), *n.* Same as ★*devil's-ironweed.*

devirilize (dē-vir′il-īz), *v. t.*; pret. and pp. *devirilized,* ppr. *devirilizing.* [*de-* + *virile* + *-ize.*] To rob or deprive of virility or vigor; emasculate; deprive of vitality or force; weaken.

It would be difficult to find a better illustration of the *devirilizing* effects of transcendental and idealistic habits of thought, than in these pages [a book under review], which are so chastened and refined that all vitality seems to have gone out of them.

Amer. Jour. Psychol., XII. 277.

devize, *v.* Same as *devise.*

devolutive (dev-ō-lū′tiv), *a.* [*devolut(ion)* + *-ive.*] That is of the nature of, or involves, devolution. *N. E. D.*

devolv, *v.* A simplified spelling of *devolve.*

Devon (dev′on), *n.* The name of a shire (Devonshire) in England, applied specifically to a breed of dairy cattle noted for their docility and the quality of their milk. The color is red, varying from dark to pale chestnut, but there must be no mixture of black or white. The skin is yellow, the hair soft, and the general appearance symmetrical.

Devonia (dē-vō′ni-ạ), *n.* [NL. *Devonia,* Devon, Devonshire.] In *geol.*, the region of Devonian rocks, without regard to geographical limitation; the Devonian rocks.

Devonian, I. *a.* This term was first applied in geology by Sedgwick and Murchison to a series of rocks in North and South Devon and Cornwall in which fossils had been found which were recognized by Lonsdale as intermediate in character between Silurian and Carboniferous. The lower and upper limits of the formation were not defined in Britain, but were more precisely determined by the same geologists in the Rhineland. So uncertain, however, were the bounds assigned to the base of the formation that more recent study in various countries has added to the lower part of this system considerable beds that had before been assigned to the Silurian system. Strictly applied, the term *Devonian* implies the rocks bearing the marine faunas of that time and is contrasted with the Old Red Sandstone, which is a formation sometimes different lithologically and which represents the lake, lagoon, or delta deposits of the same age.

II. *n.* **1.** A native or inhabitant of Devonshire.—**2.** In *geol.*, the Devonian series.

Devonshire cream. See ★*cream*[1].

devotionalism (dē-vō′shọn-ạl-izm), *n.* [*devotional* + *-ism.*] Devotional character.

devotioner (dē-vō′shọn-ėr), *n.* One who belongs to a religious society of a devotional character. *N. E. D. De Vriesian.*

devulcanize (dē-vul′kạn-īz), *v. t.*; pret. and pp. *devulcanized,* ppr. *devulcanizing.* [*de-* + *vulcanize.*] To remove sulphur from, as vulcanized india-rubber, and restore to the condition of the original material. There have been numerous attempts to do this, but none of them has been effective, only partial restoration of plasticity having been attained.

dewberry, *n.*, **2.** The dewberry has now been improved to such an extent that it has become an important cultivated fruit. The improved forms are derived from native North American species. The most prominent garden kind is the Lucretia, derived from the wild *Rubus roribaccus.* The Bartel, another cultivated form, is derived from *Rubus invisus;* others, in the southern United States, from *Rubus trivialis;* others, in the western States, from *Rubus vitifolius.* The dewberries are trailing, blackberry-like plants. There are hybrids between the common wild dewberry of the northern United States, *Rubus procumbens,* and the high-bush blackberry (*R. nigrobaccus*). In cultivation, the dewberries are usually trained to stakes or trellises.—**California dewberry,** *Rubus vitifolius,* a somewhat trailing species with 3–5-foliate leaves, ovate to oblong coarsely toothed leaflets, and oblong, sweet berries: common in the coast ranges of California from San Diego county to the Fraser river, and also in Idaho.

dew-bit (dū′bit), *n.* A light breakfast taken very early, before the regular breakfast. [Eng. dial.]

dew-bow (dū′bō), *n.* A halo or rainbow seen on a surface covered with drops of dew. An analogous bow has occasionally been seen by reflection from drops of water, resting upon a layer of dust, which have been formed by the gentle fall of particles of fog. Both lunar dew-bows and solar dew-bows have been observed; and both principal and supernumerary dew-bows, analogous to the ordinary double rainbow, have been recorded.

dew-cap (dū′kap), *n.* A prolongation of a telescope-tube beyond the object-glass, intended to prevent deposition of dew, and also to exclude stray light. A small telescope should be provided with a dew-cap, bright without, but dead-black within, and having a length equal to twice its diameter.

dewdrop, *n.* **2.** In *bot.*, an American rosaceous plant, *Dalibarda repens,* related to the strawberry, with long-petioled, ovate-orbicular, cordate and crenate leaves, and white flowers on long peduncles. The fruit consists of several dry achenia inclosed in the enlarged calyx. It also bears cleistogamous flowers.

dew-flower (dū′flou″ėr), *n.* Same as *day-flower.*

dew-grass, *n.* **2.** The whitetop proper, *Agrostio alba.* Also called *white bent, English bent,* etc. When this grass has a purple or brown color, the redtop proper, it is called *summer dew-grass.*

dewlap, *n.* **5.** A brand or ownership-mark on the dewlap of an animal. [Western U. S.]

dew-leaves (dū′lēvs), *n. pl.* Upwardly inclined leaves adapted for the collection of dew.

dew-moth (dū′môth), *n.* An English collectors' name for a European moth, *Setina irrorata:* from its habit of flying in the early morning.

dew-point, *n.*—**Complement of the dew-point,** the number of degrees by which the temperature of the dew-point is below the temperature of the air.—**Depression of the dew-point.** Same as *complement of the* ★*dew-point.*—**Dew-point apparatus,** apparatus for determining the dew-point. That devised by Regnault consisted of a polished silver cup containing ether in the center of which was immersed the bulb of a delicate thermometer. A current of air blown through the ether hastened its evaporation, cooling it down until the outside of the silver cup showed a deposit of dew; the temperature corresponding was the desired dew-point. Modifications of this apparatus have been made by Alluard, Crova, Abbe, and others, in order to secure greater delicacy or freedom from disturbing currents of wind. The deposition of dew depends to a considerable extent upon the nature of the surface and the perfection of its polish. The deposition begins upon the points or spots where a slight roughness exists, but is detected soonest where the surface is polished.—**Trouton's electrical dew-point hygrometer.** See ★*hygrometer.*

dew-pond (dū′pond), *n.* A small and shallow pond, usually artificial, located on ridges or hills where no adequate supply of water is possible from surface-drainage or from springs. The water is collected by condensation from the air dew, which is prevented from rapid evaporation by the means employed. The practice of making dew-ponds is common in Berkshire, England. A wide, shallow hollow is made, dry straw is spread over it, and upon this is laid a layer of finely puddled clay, which is in turn closely strewn with stones. The pond then gradually fills with water.

We have no waters to delight
Our broad and brookless vales—
Only the *dew-pond* on the height
Unfed, that never fails.

R. Kipling, The Five Nations (Sussex).

dew-rake (dū′rāk), *n.* A rake for the surface of grass or stubble. *N. E. D.*

dew-snail (dū′snāl), *n.* A garden or other slug: so named because it is usually found while the dew is on the herbage.

dexiocardia (dek″si-ọ-kär′di-ạ), *n.* [NL., ‹ Gr. *δεξιός,* right, + *καρδία,* heart.] Same as *dextrocardia.*

dexiotrope (dek′si-ọ-trōp), *a.* Same as *dexiotropic.*

dexiotropic, *a.* **2.** Turning to the right hand or in a clockwise direction: said of the direction of cleavage in the eggs of certain invertebrates.

dexiotropically (dek″si-ọ-trop′i-kạl-i), *adv.* In a dexiotropic manner.

dexiotropism (dek-si-ot′rọ-pizm), *n.* The state of being dexiotropic.

Dexter aspect. See ★*aspect.*

dextraural (deks-trâ′ral), *a.* [L. *dexter,* right, + *auris,* ear, + *-al*[1].] Hearing more distinctly with the right ear than with the left.

dextrinase (deks′tri-nās), *n.* [*dextrine* + *-ase.*] In *chem.*, a supposed distinct enzym, forming part of the diastase of malt, believed to convert starch into maltodextrine.

dextrinate (deks′tri-nāt), *n.* [*dextrine* + *-ate*[1].] A compound of dextrine: applied specifically to a compound of iron and dextrine used in medicine.

dextrinize (deks′tri-nīz), *v. t.*; pret. and pp. *dextrinized,* ppr. *dextrinizing.* [*dextrine* + *-ize.*] To convert partially or wholly into dextrine. Various farinaceous foods for infants are thus transformed, usually by simple heating, and the product sometimes gains in digestibility by this treatment.

dextrinized (deks′tri-nīzd), *p. a.* Having the contained starch converted into dextrine: as, *dextrinized* bread.

dextrinous (deks′tri-nus), *a.* [*dextrine* + *-ous.*] Of or pertaining to dextrine.

dextrocamphene (deks″trọ-kam-fēn′), *n.* See ★*camphene.*

dextrocardial (deks-trọ-kär′di-ạl), *a.* [L. *dexter,* right, + Gr. *καρδία,* heart, + *-al*[1].] Having the heart on the right side.

dextrocerebral (deks″trọ-ser′ē-brạl), *a.* [L. *dexter,* right, + E. *cerebral.*] Having the right cerebral hemisphere functionally more active than the left.

dextrocular (deks-trok′ū-lär), *a.* [L. *dexter,* right, + *oculus,* eye, + *-ar*[3].] Possessing more acute vision in the right eye than in the left. *G. M. Gould,* in Pop. Sci. Mo., Aug., 1904, p. 361.

dextroduction (deks-trọ-duk′shọn), *n.* [L. *dexter,* right, + *ductio(n-),* leading.] Movement to the right.

dextroform (deks′trọ-fôrm), *n.* [*dextr(ine)* + *form(aldehyde).*] A compound of formaldehyde and dextrine used in surgery as a substitute for iodoform.

dextrogyral (deks-trọ-jī′rạl), *a.* Of or pertaining to right-handed rotation; having rotatory power in the direction of a right-handed screw: said of crystals or other optically active substances capable of turning the plane of polarization of light toward the right: opposed to ★*levogyral.*

dextromanual (deks″trọ-man′ū-ạl), *a.* [L. *dexter,* right, + *manualis,* of the hand: see *manual.*] Same as *right-handed.*

dextropedal (deks-trop′ē-dal), *a.* [L. *dexter,* right, + *pes* (*ped-*), foot, + *-al.*] Using the right foot and leg by preference in kicking, hopping, etc.

dextrorotation (deks-trọ-rō-tā′shọn), *n.* In *optics,* rotation (specifically of the plane of polarization of light) in a clockwise direction: opposed to ★*levorotation.*

dextrorotatory, *a.* **2.** In *bot.*, turning or twining to the right. See *right-handed,* 3.

dextrosinistral (deks-trọ-sin′is-tral), *a.* [L. *dexter,* right, + *sinister,* left + *-al.*] Passing, moving, etc., from right to left.

dextrosuria (deks-trō-sū′ri-ạ), *n.* [*dextrose* + Gr. *οὖρον,* urine.] Excretion of dextrose in the urine.

dextroversion (deks-trọ-vėr′shọn), *n.* [L. *dexter,* right, + *versio(n-),* turning.] The act of turning to the right side: said of the uterus.

dezinc (dē-zingk′), *v. t.* [*de-* + *zinc.*] To remove zinc from, as old galvanized iron.

dezincation (dē-zing-kā′shọn), *n.* Same as *dezincification.*

dezincify (dē-zingk'i-fy), *v. t.*; pret. and pp. *dezincified*, ppr. *dezincifying*. [*de-* + *zinc* + *-i-fy*.] To eliminate zinc from, as from an alloy or mixture: usually from lead, as in the Parkes process.

D. F. An abbreviation (*b*) of *Dean of the Faculty*.

D. F. M. S. An abbreviation of *Domestic and Foreign Missionary Society*.

dg. An abbreviation of *decigram*.

D. H. An abbreviation of *deadhead* or *deadheaded*.

dhan[2] (dän), *n.* [Hind. Hindi *dhān*, rice, = Pali *dhānnam*, < Skt. *dhānyā*, adj., cereal, n., grain, corn.] In India, a general term for rice in the husk.

dharma (där'mä), *n.* [Skt. *dharma*.] Established order, usage, custom, rule, duty, virtue, right, law, etc. In Buddhism, the law; the canon. Also *dhurma*.

dharna, dhurna (där'nä, dur'nä), *n.* [Hind. *dharnā*, put down, set down; *dharnā denā* (as in def.).] A coercive measure resorted to in the East Indies by a creditor, complainant, or claimant, who sits at the door of the debtor, without tasting food, until the debt is paid or the demand is complied with: as, to sit *dharna* (or in *dharna*).

dhotee, *n.* **2.** A striped cotton fabric woven in suitable lengths for winding about the loins. It is manufactured extensively in Great Britain for the East Indian trade; is woven in all widths from 22 to 50 inches, and in lengths of 40 yards.

dhurrin, *n.* See ★*durrin*.

D. Hy. An abbreviation of *Doctor of Hygiene*, a degree conferred by Durham College, England.

diabase, *n.*—**Ash-bed diabase,** a local term used on Keweenaw Point, Lake Superior, for an igneous rock resembling a conglomerate, but regarded by Wadsworth as a scoriaceous, amygdaloidal sheet into which much sand was washed during its early history.

diabetes, *n.*—**Bronzed diabetes,** a form of diabetes in which there is a discoloration of the skin, due to a deposit of blood-pigment, and usually also cirrhosis of the liver.—**Cerebral diabetes,** excretion of cerebrose in the urine.—**Diabetes alternans,** diabetes which alternates with gouty attacks.—**Pancreatic diabetes,** diabetes due to disease of the pancreas.—**Phlorizin diabetes,** excretion of sugar in the urine following the ingestion of phlorizin.—**Phosphatic diabetes,** a morbid condition in which there is a profuse excretion of urine containing phosphates, but not always sugar.—**Puncture diabetes,** excretion of sugar in the urine, experimentally produced in animals by puncture of the medulla oblongata.

Diabetic cataract, center, etc. See ★*cataract*, ★*center*[1], etc.

diabetogenic (dī″a-bē-tō-jen'ik), *a.* [*diabetes* + *-genic*, -producing.] Producing diabetes.

diablo (dē-ä'blō), *n.* [Cuban use of Sp. *diablo*, devil.] The Cuban name of the bat-fish, *Og, cocephalus vespertilio*. See cut under *bat-fish*.

diablotin (dē-ä-blō-tan'), *n.* [F., dim. of *diable*, devil.] **1.** An imp; a little devil. *Scott.* —**2.** (*a*) In the French West Indies, one of the petrels, *Œstrelata hæsitata*. (*b*) In Trinidad, the guacharo, *Steatornis caripensis*.

diabolatry (dī-a-bol'a-tri), *n.* [For ★*diabololatry*, < Gr. *διάβολος*, the devil, + *λατρεία*, worship.] Worship of the devil.

His infinite and illimitable charity of imagination could transfigure even the most monstrous historic representative of Christian or Catholic *diabolatry* into the likeness of a terribly benevolent and a tragically magnificent monomaniac. *Encyc. Brit.*, XXIX. 350.

diabolo (di-ä'bō-lō), *n.* [It. *diabolo, diavolo*, < L. *diabolus*, devil.] The game of the devil on two sticks. See *devil*.

diabolology (dī-ab-ō-lol'ō-ji), *n.* [Gr. *διάβολος*, the devil, + *-λογια*, < *λέγειν*, speak.] The sum of statements and beliefs concerning devils or the devil.

diabolonian (dī-ab-ō-lō'ni-an), *n.* [*Diabolus* (see def.) + *-on-* + *-ian*.] In Bunyan's 'Holy War,' one of the warriors of Diabolus (the Devil) in his attack on Mansoul (man's soul).

diabrosis (dī-a-brō'sis), *n.* [NL., < Gr. *διάβρωσις*, < *διαβιβρώσκειν*, eat through, < *διά*, through, + *βιβρώσκειν*, eat.] Erosion; ulceration; corrosion.

Diabrotica, *n.*—**Corn-root Diabrotica.** Same as ★*corn-root worm*.

diacalorimeter (dī-a-kal-ō-rim'e-tėr), *n.* [Gr. *διά*, through, + E. *calorimeter*.] A device for measuring the insulating power of liquids for heat.

diacanthous (dī-a-kan'thus), *a.* [Gr. *δι-*, two-, + *ἀκανθα*, thorn, spine.] Having two spines under each leaf. *Syd. Soc. Lex.*

diacathodic (dī-a-ka-thod'ik), *a.* [*dia-* + *cathode* + *-ic*.] Of or pertaining to rays obtained by the interposition of a perforated metallic screen or gauze, negatively electrified, in the path of cathode rays.

diacetic (dī-a-sē'tik), *a.* [*di-*[2] + *acetic*.] Acetoacetic.—**Diacetic acid,** an acid ($CH_3COCH_2CO_2H$) sometimes found in the urine under abnormal conditions, notably in diabetes. It is derived by oxidation from oxybutyric acid, and by loss of carbon dioxid gives rise to acetone. Also called *acetoacetic acid*.

diacetonuria (dī″as-ē-tō-nū'ri-ä), *n.* [NL., < *diacet(ic)* + *-on* + Gr. *οὖρον*, urine.] The excretion of diacetic acid in the urine. It may occur in the course of infectious fevers or of diabetes, in the latter case often preceding the appearance of coma. Also *diaceturia*.

diaceturia (dī″as-ē-tū'ri-ä), *n.* [NL., < *diacet(ic)* + Gr. *οὖρον*, urine.] Same as ★*diacetonuria*.

diacetyl (dī-as'e-til), *n.* [*di-*[2] + *acetyl*.] A yellow compound, $CH_3COCOCH_3$, the simplest member of the class of aliphatic 1, 2-diketones, prepared from isonitroso methyl-ethyl ketone. It boils at 88° C., has a pungent, sweet odor, and its vapor has the color of chlorin.

diaclase (dī'a-klās), *n.* [Gr. *διάκλασις*, a breaking in two (used in fig. sense of 'feebleness'), < *διακλᾶν*, break in two, < *διά*, apart, + *κλᾶν*, break.] In *geol.*, a joint: a name suggested by Daubrée. Compare ★*paraclase* and ★*lithoclase*.

Daubrée showed that the valley system of northern France follows a line of rectangular fractures, which he called *diaclases*.

J. W. Gregory, in Smithsonian Rep., 1898, p. 374.

diaclasite (dī-ak'la-sīt), *n.* [Gr. *διάκλασις*, a breaking apart, + *-ite*[2].] A partially altered enstatite.

diaclast (dī'a-klast), *n.* [Gr. **διάκλαστος*, < *διακλᾶν*, break in two, < *διά*, apart, + *κλᾶν*, break.] An instrument used in perforation of the fetal skull in craniectomy.

diaclastic (dī-a-klas'tik), *a.* [As *diaclast* + *-ic*.] Pertaining to or produced by diaclases.

The direction of the Greenland fiords is determined by a similar series of intersecting *diaclastic* fractures.

Geog. Jour. (R. G. S.), XIII. 236.

diaclinal (dī-a-klī'nal), *a.* [Gr. *διά*, through, + *κλίνειν*, bend.] In *geol.*, transverse to the axis of a fold.—**Diaclinal valley,** a valley which cuts across an anticline or syncline.

diacodion (dī-a-kō'di-on), *n.* Same as *diacodium*.

diacœlosis (dī″a-sē-lō'sis), *n.* [NL., < Gr. *διά*, through, + *κοίλωσις*, a hollow, lit. a hollowing, < *κοιλοῦν*, make hollow.] The division of the cœloma or body-cavity into sinuses and channels, as in leeches.

The cœlome is much restricted by a growth of connective tissue, which splits it up into sinuses and channels, a process termed *diacœlosis*.

Rolleston and Jackson, Forms of Animal Life, p. 579.

diaconics (dī-a-kon'iks), *n.* [Gr. *διακονικός*, of deacons, < *διάκονος*, deacon.] That branch of practical theology which treats of the science of the 'inner mission,' that is, the mission to the community already Christianized, as distinguished from the 'outer mission,' which reaches out to the unconverted world. It is the study of pastoral duty to the sick, the unfortunate, and the fallen.

diacranterian, *a.* **2.** Having a tooth in the hinder portion of the jaw longer than the other teeth. This type of dentition is found in some snakes, the common hog-nosed viper, *Heterodon*, being a good example: opposed to *isodont*.

II. *n.* A snake having a tooth in the hinder part of the jaw longer than the other teeth.

diacrinous (dī-ak'ri-nus), *a.* [Irreg. < Gr. *διακρίνειν*, separate, + *-ous*.] A term applied to gland-cells which permit their secretion or excretion to pass out directly as from a filter: opposed to ★*ptyocrinous*. The kidneys are good examples of diacrinous glands.

diacrisis (dī-ak'ri-sis), *n.* [NL., < Gr. *διάκρισις*, separation, < *διακρίνειν*, separate: see *diacritic*.] **1.** A disease characterized by a morbid state of the secretions.—**2.** A critical discharge or excretion, as sweating in pneumonia.

diacritical, *a.*—**Diacritical current,** in *elect.*, a magnetic current which will produce in an iron coil diacritical magnetization, or a magnetization equal to one half saturation.

diacromyodous (dī″a-krō-mī-ō'dus), *a.* [Gr. *δι-*, two,- + *ἀκρον*, extremity, + *μυώδης*, musselike, < *μῦς* (*μυ-*), muscle.] In *ornith.*, having the syringeal muscles attached to both the upper and the lower ends of the bronchial half-rings.

diactin (dī-ak'tin), *n.* [Gr. *δί-*, double, + *ἀκτίς* (*ἀκτιν-*), a ray.] In the nomenclature of the spicular elements of sponges, a straight or curved spicule with two arms.

diactinism (dī-ak'tin-izm), *n.* [*diactin-ic* + *-ism*.] The property, possessed by certain substances, of transmitting chemically active rays.

Diadectidæ (dī-a-dek'ti-dē), *n. pl.* [NL., < *Diadectes* + *-idæ*.] A family of anomodont *Reptilia*, founded on genera from the Permian formation and including *Diadectes, Empedias*, and some others. The teeth are transversely elongated and divided by a median ridge. Cope has regarded this peculiar type of tooth as indicative of herbivorous diet.

diadem, *n.* **6.** In *embryol.*, a term applied to certain eggs in the blastula stage.

Diadematoidea (dī-a-dēm″a-tō-id'ē-ä), *n.* [NL., < Gr. *διάδημα*(*τ-*), diadem, + *εἶδος*, form.] An order of *Euechinoidea* or sea-urchins, having an actinal central peristome and an abactinal periproct situated within the dorsocentral system, internal and external branchiæ, jaws and teeth and a continuous perignathic girdle, and ambulacral plates continued beyond the peristome or as separate buccal plates.

Diademina (dī″a-de-mī'nä), *n. pl.* [NL. for **Diadematina*, < Gr. *διάδημα*, diadem, + *-ina*[2].] A group or suborder of regular ectobranchiate *Echinoidea*, of the order *Diademoida*, having the ambulacral plates of varying degrees of complexity. It includes the *Orthopsidæ*, *Diadematidæ*, *Pedinidæ*, and other families.

Diademoida (dī-a-de-moi'dä), *n. pl.* [NL. for *Diadematoida*, < Gr. *διάδημα*, diadem, + *-oida*.] An order of regular ectobranchiate *Echinoidea*. They have the mouth and anus both central and opposite, the latter opening in the center of the apical system; the external branchiæ passing out through the buccal clefts; a dental apparatus present; no interambulacral plates on the peristomial membrane; and the ambulacral plates generally compound. It includes the *Arbaciidæ*, *Diadematidæ*, *Strongylocentrotidæ*, and other families.

diaderm (dī'a-dėrm), *n.* [Appar. < Gr. *διά*, through, + *δέρμα*, skin.] In *embryol.*, a collective term for both ectoderm and entoderm.

diadochokinesia (dī-ad″ō-kō-ki-nē'si-ä), *n.* [NL., < Gr. *διαδοχή*, succession, + *κίνησις*, motion.] The power of executing, in alternation, antagonistic movements, as those of flexion and extension of a limb.

diadromous (dī-ad'rō-mus), *a.* [Gr. *διάδρομος*, running through, < *διά*, through, + *-δρομος*, < *δραμεῖν*, run.] In *bot.*, having all the nearly equal nerves proceeding in a fan-like manner from the summit of the petiole to the margin of the leaf, as in the maidenhair-tree.

diadumenos (dī-a-dū'men-os), *n.* [Gr. *διαδούμενος*, middle, ppr. of *διαδεῖν*, bind around: see *diadem*.] In Gr. *antiq.*, a fillet-binder: a name applied to a class of antique marble and bronze statues representing an athlete binding a fillet about his head. They are supposed to be based upon a famous bronze original by the sculptor Polyeletus.

diæne (dī'ēn), *n.* [Gr. *δι-*, two, + *-αινα*, the termination of *τρίαινα*, a trident]. In the nomenclature of the spicular elements of sponges, a triæne in which one of the cladisks has been atrophied.

diafanous, *a.* A simplified spelling of *diaphanous*.

diaforetic, *a.* and *n.* A simplified spelling of *diaphoretic*.

diafragm, *n.* A simplified spelling of *diaphragm*.

diagenesis (dī-a-jėn'e-sis), *n.* [NL., < Gr. *διά*, through, + *γένεσις*, birth.] In *geol.*, the action of heated waters upon clastic sediments at the time of their deposition, assumed to explain the origin of crystalline schists: proposed by Gümbel (1888); employed by Walther to embrace those physical and chemical modifications which take place in a sediment from the time of its deposition to the time when it is modified by orogenic or volcanic forces, when it undergoes metamorphism.

diagenetic (dī-a-jē-net'ik), *a.* Caused by or characteristic of diagenesis.

diagenic (dī-a-jėn'ik), *a.* [*diagen(esis)* + *-ic*.] Pertaining to or resulting from the processes of diagenism.

To sum up, metamorphism may be considered as presenting itself under these phases, 1. Static metamorphism or diagenism, the product being *diagenic* rocks.

A. W. Grabau, in Amer. Geol., April, 1904, p. 236.

diagenism (dī-aj'e-nizm), *n.* [*diagen(esis)* + *-ism*.] A term used by Johannes Walther to include all the physical and chemical changes

which a rock mass undergoes after deposition, aside from those caused by pressure during orogenic disturbances or by igneous activity. *Amer. Geol.*, April, 1904, p. 236.

diagnosable (dī-ag-nō′sa-bl), *a.* [*diagnose* + *-able.*] Capable of being diagnosed.

diagnosis, *n.*— **Clinical diagnosis,** diagnosis made from the symptoms alone.— **Diagnosis by exclusion,** diagnosis based upon a comparison of all the affections which have various symptoms in common, and the rejection of one after another as certain essential signs are found to be lacking, until only one disease, which answers all the tests, remains.— **Pathological diagnosis,** diagnosis made by an examination of the morbid changes present.— **Physical diagnosis,** diagnosis based upon information obtained by auscultation, percussion, and palpation.— **Serum diagnosis,** diagnosis by means of serums. Among the various antibodies (see ★*immunity*) which have been discovered, the agglutinins and precipitins are of special interest: the first, because their formation facilitates not only the diagnosis of certain bacterial infections, but also the recognition of the corresponding organisms; the second, on account of their special biological and medicolegal significance, the modern blood-test being based upon their formation. (*a*) As regards the *agglutinins*, Gruber and his pupil Durham first showed that cholera bacilli and typhoid bacilli when suspended in an inert fluid lose their motility and collect in little clumps (see ★*agglutination*, 4) upon the addition of homologous blood-serum, that is, of blood-serum derived from an individual infected with the corresponding organism.

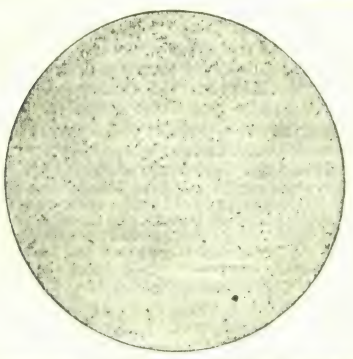


Figure showing uniform Distribution of Bacilli, before the Action of the corresponding Agglutinins. (From Cabot's "Guide to the Clinical Examination of the Blood.")

Further research then led to the recognition of the fact that within certain limitations the action of the agglutinins is specific, that is, that the blood-serum from a typhoid patient, for example, does not agglutinate the common colon bacillus, the cholera bacillus, streptococci, staphylococci, etc., and *vice versa.* But it was also

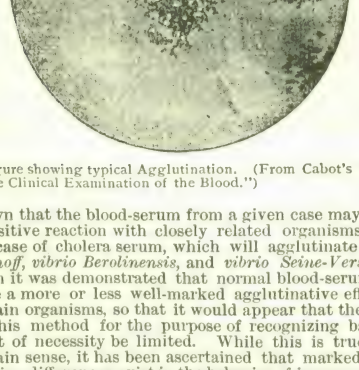

Figure showing typical Agglutination. (From Cabot's "Guide to the Clinical Examination of the Blood.")

shown that the blood-serum from a given case may cause a positive reaction with closely related organisms, as in the case of cholera serum, which will agglutinate *vibrio Ivanoff, vibrio Berolinensis,* and *vibrio Seine-Versailles.* Then it was demonstrated that normal blood-serum may have a more or less well-marked agglutinative effect on certain organisms, so that it would appear that the value of this method for the purpose of recognizing bacteria must of necessity be limited. While this is true, in a certain sense, it has been ascertained that marked quantitative differences exist in the behavior of immune blood-serums to micro-organisms in general, and that it is possible to obtain a positive and exclusive reaction between a given organism and its corresponding serum if the latter is strongly diluted. Normal human blood-serum, for example, will not agglutinate the typhoid bacillus in dilutions exceeding 1:10, while with typhoid serum a positive reaction can still be obtained with dilutions of 1:50, 1:200, and more. The clinical significance of the principle of bacterial agglutination was first pointed out by Widal, who showed that the reaction can be obtained with typhoid blood-serum quite early in the course of the disease, namely, at a time when the other clinical symptoms often leave the diagnosis in doubt. For this reason Widal's name has been coupled with the reaction. It should, however, be termed the *Gruber-Widal reaction,* or, still better, the *Gruber-Grünbaum-Widal reaction,* for Grünbaum had fully realized the clinical import of Gruber's discovery before Widal, but did not publish his results, owing to the scarcity of his material, until after Widal's first paper had appeared. At the present time the method is fully recognized as one of the most important in the diagnosis of typhoid fever especially, and is extensively utilized in clinical work. In other diseases, such as dysentery, Malta fever, bubonic plague, cholera, pneumococcus infections, etc., the method is at times also applicable for diagnostic purposes, but the clinical value of the reaction is here diminished to a certain extent, owing to the comparatively late date of its appearance. For the recognition of the corresponding organisms, however, it is invaluable. The clinical examination may be conducted as follows: A large drop of blood is received on a glass slide and allowed to dry. In this form the material is conveniently brought to the laboratory. Here the blood is soaked off with sterile bouillon, or distilled with water, using 15–25 drops for the one drop of blood. This gives a dilution of 1:15:25, as the case may be. One drop of this fluid is placed on a cover-glass and mixed with a drop of a bouillon culture of the typhoid organism not more than 24 hours old. In this manner a final dilution of 1:30:50 is secured. The cover-glass is mounted on a cupped slide and set aside for 30 minutes. If at the expiration of this time the bacilli have lost their motility and have gathered in clumps, as shown in the accompanying illustration, the reaction is positive. Numerous modifications of this method have been described, which are all alike in principle. A new departure, however, has been made of late in the use of dead cultures, which are agglutinated in the same manner. This is an important discovery, since it makes the test more readily applicable for the general practitioner, doing away with the necessity of keeping an actively motile culture on hand. The reaction is obtained in fully 96 per cent. of all cases of typhoid fever at some stage in the course of the disease. (*b*) As regards the *precipitins,* these bodies are formed as the result of immunization of animals with albuminous substances derived from individuals of a different species. When the resultant antiserums are then brought together with solutions of the albumins used in immunization, precipitates result. This phenomenon has been notably investigated by Tchistowitsch, Bordet and Wolf, Wassermann, and Uhlenhuth, and the underlying principle utilized in forensic blood-diagnosis. To this end the material in question (stains on clothes, wood, weapons, etc.) is first examined for the presence of blood by the usual methods (hemin test, spectroscopic behavior, etc.). If the presence of blood has thus been demonstrated, the question whether it is of human origin or not is next investigated by mixing a filtered solution of the material under examination with a small amount of blood-serum obtained from a 'humanized' rabbit, that is, a rabbit in which precipitin formation has been previously provoked by repeated injections of human blood-serum (hydrocele fluid). The mixture is kept in an incubator, at the temperature of the body, for a number of hours and is then examined. If a precipitate results, the blood-stains are presumbly human. The differentiation of animals of closely related species is, however, not possible in this manner, and the blood of a humanized rabbit will thus not only precipitate the serum of the human being, but likewise that of the anthropoid apes. In this manner the close relationship existing between different species can be demonstrated, a fact which renders the precipitins of signal interest also to the biologist. See also ★*agglutination test.*

diagnosticum (dī-ag-nos′ti-kum), *n.*; pl. *diagnostica* (-kä). [NL.] A means of diagnosis. — **Ficker's diagnosticum,** a dead culture of the typhoid bacillus which, in suspected cases of typhoid fever, can be used in the agglutination test, in the place of the living organisms. See ★*agglutination test.*

Diagonal line, the line through the middle points of the three diagonals of a complete quadrilateral; specifically, in *naval arch.*, a curved line formed by the intersection of a diagonal plane with the surface of a vessel. The diagonal plane intersects the central longitudinal plane in a horizontal line and is thence inclined downward and outward. A *rabatted diagonal* is a diagonal shown in its true form, by turning the diagonal plane up to the horizontal about its intersection with the central longitudinal plane as a hinge. See *rabattement.* Diagonal lines are much used in obtaining smooth, fair forms for a vessel's lines, and the harpings usually follow the diagonals. See cut under *harping,* 2 (*b*). Also *diagonal.*— **Diagonal symmetry.** See ★*symmetry.*— **Diagonal trigram.** See ★*trigram.*

diagram, *n.*— **Argand diagram,** a plane figure representing imaginary quantities of the form $x + yi$, by points having for orthogonal coördinates x and y. In such a diagram it is necessary to consider the parts of the plane at infinity to be one point.— **Entropy diagram,** the diagram of a thermodynamic cycle involving changes of entropy.— **Euler's diagram,** a graphic representation of logical relations first given by the mathematician Leonard Euler, in his "Letters to a German Princess." Circles, or ovals, are used to represent each by its contained surface the aggregate of possible individuals to which a certain predicate applies.— **Hertz's diagram,** a graphic presentation of the temperature, pressure, and moisture of a unit mass of moist air when undergoing adiabatic changes of volume.— **Metacentric diagram.** See ★*metacentric.*— **Neuhoff's diagram,** a diagram, analogous to that of Hertz, used for the purpose of determining more accurately the condition of the moisture in air ascending to a given altitude or pressure.— **Puiseux diagram,** a diagram of unit points, like the intersections of the horizontal and vertical lines of squared paper, introduced by the French geometer Puiseux, for the treatment of functions.— **Strain-diagram,** a figure or diagram drawn (as a rule automatically) by the mechanism of a testing-machine, in which the abscissæ are the pounds of stress applied to the test-piece and the ordinates are the strains or the amount of deformation, in pounds or tons, of the specimen under that load. The paper on which the diagram is drawn is moved in abscissa by the weighing apparatus, while the specimen in changing its form under stress describes the ordinate by means of a multiplying mechanism attached to it for the purpose.— **Variation-diagram,** an indicator-diagram which records the diagrams for enough successive strokes of the engine to determine whether the governor is acting properly, or whether it is unable properly to control the steam admission.— **Volume-entropy diagram,** a thermodynamic diagram expressing the relation between the volume of a substance, such as a gas or vapor, and its entropy.— **Volume-pressure diagram,** a thermodynamic diagram expressing the relations between the volume and pressure of a gas or vapor.

diagram-factor (dī′a-gram-fak″tor), *n.* The ratio of the actual mean effective pressure, measured from an indicator-diagram, to the mean effective pressure of a diagram in which the various operations of admission, expansion, release, and compression are carried on under assumed ideal conditions. *Trans. Amer. Soc. Mech. Engin.*, XXIV. 751.

diagramic (dī′a-gram-ik), *a.* Same as *diagrammatic.*

Diagramma (dī′a-gram-ä), *n.* [NL.: see *diagram.*] The name of a genus of grunt-fishes, of the family *Hæmulidæ,* found in the East Indies.

diahydric (dī-a-hī′drik), *a.* [Gr. *διά,* through, + *ὕδωρ* (*ὑδρ-*), water.] Passing through or conveyed by water: as, a *diahydric* sound.

diakathodic, *a.* See ★*diacathodic.*

diakinesis (dī″a-ki-nē′sis), *n.* [NL., < Gr. *διά,* through, + *κίνησις,* movement.] In *cytol.*, the segmented spireme stage in the primary oöcyte or spermatocyte. This stage follows synapsis and is characterized by the persistence of the chromosomes for some time in the form of double rods.

dial[1], *n.*— **Lunar dial.** Same as *night* or *nocturnal dial.*

dial[2] (dī′al), *n.* [Origin not ascertained.] The commercial name for the best grade of kauri-gum.

dial. An abbreviation (*a*) of *dialect;* (*b*) of *dialectal, dialectic,* or *dialectical.*

dialdane (dī-al′dān), *n.* [*di-*[2] + *ald(ehyde)* + *-ane.*] A colorless crystalline compound, $OCHCH_2CH(OH)CH{:}CHCH_2CH(OH)CHO$, prepared by the action of hydrochloric acid on a mixture of aldehyde and water. It melts at 130° C. and may be distilled under reduced pressure.

dialdanic (dī-al-dan′ik), *a.* [*dialdane* + *-ic.*] Derived from dialdane.— **Dialdanic acid,** a colorless compound, $C_8H_{14}O_4$, prepared by the action of potassium permanganate on dialdane. It forms monoclinic crystals, melting at 80° C. and boiling at 193° C. under 20 millimeters pressure.

dial-feed (dī′al-fēd), *n.* In *sheet-metal work,* a feed-motion adapted to multiple-die presses which perform one or more operations upon a single blank or shell. It consists essentially of a circular plate, called the *dial,* which revolves horizontally under the upper dies of the press. Two types are in use. In one the dial is a flat plate on which the shells are placed by hand. As it revolves the shells are carried under the single upper die, each being brought to the right position by stationary guides above the dial. The dial can also be used to carry the shells to a second feed-motion which carries each in turn under a gang of dies that perform a series of operations upon each shell. See ★*multiple-press* (with cut). In the other type the dial carries a number of female dies placed in a ring upon the plate. The blanks or shells are fed to these as they pass the front and are carried by the rotation of the dial under one or more upper dies in turn. The press may have three upper dies and perform an equal number of similar operations, or it may have two or three different dies and perform a series of consecutive operations upon each blank in turn. Presses having a dial feed-motion are called *dial-presses.*

diallagic (dī-al′a-jik), *a.* [*diallage* + *-ic.*] Of, or of the nature of, the mineral diallage.

dialog, *n.* and *v.* A simplified spelling of *dialogue.*

Dialommus (dī-a-lom′us), *n.* [NL., < Gr. *διαλύειν,* separate, + *ὄμμα,* eye.] A genus of blennies from the Galápagos Islands, characterized by having the eyes divided each by a horizontal partition. *D. fuscus* is the only known species.

dial-press (dī′al-press), *n.* A press having a dial-feed motion. See ★*dial-feed.*— **Horizontal dial-press,** a dial-press employing a vertical dial fitted with a number of female dies, placed in a horizontal position, the single opposing die moving in horizontal guides. The shells are fed to the revolving dies by hand.

dial-recorder (dī′al-rē-kôr″dėr), *n.* A clock combined with a dial recording mechanism for registering the time of arrival and departure of employees.

dialurate (dī-a-lū′rāt), *n.* [*dialur-ic* + *-ate*[1].] A salt of dialuric acid.

dialuric (dī-a-lū′rik), *a.* [*dial(ysis)* + *uric.*] Noting an acid, a colorless compound, $CO<\begin{matrix}NHCO\\NHCO\end{matrix}>CHOH$, prepared by the reduction of alloxan. It crystallizes in short, tetragonal prisms. Also called *tartronyl-urea.*

dial-writer (dī′al-rī″tėr), *n.* A form of writing- or printing-machine of the type-writer class, in which the letters are arranged on a dial like the figures on a clock-face and a pointer or arm is moved to the desired letter, or the

whole dial is turned on its center to bring the desired letter to the point where the impression is to be made.

dialycarpel (dī″ạ-li-kär′pel), *n.* [Irreg. < Gr. *διαλύειν*, part asunder, + NL. *carpellum*, carpel.] A fruit with separate carpels. *Syd. Soc. Lex.*

dialycarpic (dī″ạ-li-kär′pik), *a.* Same as *dialycarpous*.

dialydesmy (dī″ạ-li-des′mi), *n.* [Irreg. < Gr. *διαλύειν*, part asunder, + *δεσμός*, band, + *-y*³.] In *bot.*, the breaking up of the axial cylinder into separate bundles each with its own sheath.

dialyneurous (dī″ạ-li-nū′rus), *a.* [Irreg. < Gr. *διαλύειν*, part asunder, + *νεῦρον*, nerve, + *-ous*.] Characterized by dialyneury: as, the *dialyneurous* nervous system of certain gasteropods. *Proc. Zool. Soc. London*, 1901, II. 466.

dialyneury (dī″ạ-li-nū′ri), *n.* [*dialyneur-ous* + *-y*³.] The condition of the nervous system among rhipidoglossal *Mollusca*, characterized by the anastomosis of each pleural ganglion with the opposite half of the visceral commissure by means of the pallial nerve.

dialysator (dī′al-i-zā-tọr), *n.* [*dialyse* + *-ator*.] In *phys. chem.*, a dialyzer. [Rare.]

dialysis, *n.* 7. In *bot.*, the separation of parts normally united, especially the parts of a whorl.—8. In *petrog.*, transformation of rocks by weathering and processes of disintegration: in contrast to processes of metamorphism.

dialystaminous (dī-ạl-i-stam′i-nus), *a.* [Irreg. < Gr. *διαλύειν*, part asunder, + NL. *stamen*, stamen.] In *bot.*, having the stamens separate. *N. E. D.*

dialystely (dī″ạ-li-stē′li), *n.* [Irreg. < Gr. *διαλύειν*, part asunder, + *στήλη*, a pillar.] In *bot.*, the condition in which the axial cylinder consists of several plerome strands or steles which remain for the most part separate throughout their course.

dialytic, *a.* 4. In *biol.*, noting an evolutionary stage or condition in which the divergent characters of inbred varieties do not combine or average in the hybrids but follow one or the other of the parental lines, as discovered by Mendel. Compare ★*catalytic*, 2, ★*hemilytic*, and ★*prostholytic*. *O. F. Cook.*

dialytically (dī-ạ-lit′i-kạl-i), *adv.* By dialysis; specifically, in *math.*, by dialytic elimination (which see, under *dialytic*).

dialyzation (dī-al-ī-zā′shọn), *n.* Same as *dialysis*.

diam. An abbreviation of *diameter*.

diamagnetic, *a.* 2. Of lower permeability than air. See *magnetic* ★*circuit*.

diamantine, *a.* II. *n.* A trade-name for boron in the crystallized state and in fine powder, used as an extremely hard abrasive and polishing material.

diamba (dē-am′bạ), *n.* [Native name.] Same as *deiamba*.

diameter, *n.* 3. The diameter (see def. 2) of the object observed, taken as a convenient measure of linear magnification used in microscopy and in telescopic work.

> A magnification of 15 *diameters* or more is easy.
> *D. P. Todd*, Stars and Telescopes, p. 320.

Coccygeopubic diameter. See ★*coccygeopubic*.—**Conjugate diameter of the pelvis**, a diameter of the brim of the pelvis measured from the promontory of the sacrum to the symphysis pubis.—**Diameter limit**, the diameter, usually breast-high, which defines the size to which trees are to be measured or used for any given purpose. Also *cutting limit*.—**Intertuberal diameter**, in *anthrop.*, the inner diameter of the pelvis measured between the sciatic notches.

diameter-tape (dī-am′e-tėr-tāp), *n.* A tape for ascertaining the diameter of trees, so graduated that the diameter corresponding to the girth of a tree is read directly from the tape.

Diametral curve. See ★*curve*.—**Diametral plane.** (*b*) See ★*plane*.

diamide (dī-am′id), *n.* [*di-*² + *amide*.] 1. Same as *hydrazine*.—2. The name of a class of organic compounds containing two univalent amido groups, -CONH; they are derived from dibasic acids.

Diamine azo-blue, black, etc. See ★*azo-blue*, ★*black*, etc.—**Diamine colors**, the direct cotton coal-tar colors: named because many of them are diamines. For specific diamine colors see ★*blue*, ★*red*, ★*green*, etc.

diaminogen (dī-ạ-min′ō-jen), *n.* [*diamine* + *-gen*.] A direct cotton coal-tar color of the disazo type, prepared by combining diazotized acetyl-naphthylamine-diamine with *α*-naphthylamine, diazotizing the product and combining again with *β*-naphthol-sulphonic acid, and finally saponifying with sodium hydroxid. It dyes unmordanted cotton a dark blue in a salt bath. By subsequently diazotizing and combining with *β*-naphthol, indigo-blue shades are obtained; when combined with metadiamines, fast blacks are produced.

diaminuria (dī-am-i-nū′ri-ạ), *n.* [*diamine* + Gr. *οὖρον*, urine.] The elimination of diamines in the urine. This is notably observed in association with cystinuria, where putrescine and cadaverine have been repeatedly met with.

diamond. I. *n.* 2. The diamond has been artificially reproduced by Moissan, though as yet only in extremely small crystals, by dissolving amorphous carbon in molten iron at the very high temperature of an electric furnace and suddenly cooling the metal by dropping it into water or mercury, which causes crystallization to take place under the pressure due to the contraction of the exterior of the mass upon the interior portion. By dissolving away the iron with an acid the minute diamond crystals are isolated. The recent discovery of minute diamonds in the meteoric iron of Cañon Diablo, Arizona, gives a peculiar interest to these experiments of Moissan. The diamond-mines in South Africa, which were comparatively unproductive during the Boer War, with its close rapidly returned to normal activity. This region has been enormously productive, the mines near Kimberley having yielded, according to one estimate, rough diamonds to a value of approximately $250,000,000, during the period from 1889 to June 30, 1903. It has also produced some very large diamonds: the Jubilee diamond, found at Jagersfontein, in 1893, weighed 972 carats, and the Cullinan diamond, found at the Premier mine January 25, 1905, weighed 3,025 carats, or one and one third pounds. The latter stone measured 4x2¼x2 inches, and was bounded in part by natural octahedral faces and in part by cleavage planes. The original stone before fracture had probably nearly double the weight given.—**Brazilian diamond**, a name given to small spherical or rounded crystals of diamonds, in contradistinction to the Indian type—the octahedral form.—**Cape May diamonds, Lake George diamonds**, clear, well-formed quartz crystals fancifully supposed to resemble diamonds.—**Indian diamond**, the octahedral form of diamond.—**Irish diamond**, a name originally applied to rock-crystal cut in diamond form, but more recently applied to a paste imitation of a diamond when sold by Irish dealers.—**Rose diamond.** See *rose-cut*.—**Writing diamonds**, minute pointed cleavages of diamonds, secured in steel or copper holders, used for making minute marks, letters, or inscriptions on glass or similar substances.

II. *a.* **Diamond brown, cement, flavin**, etc. See ★*brown*, etc.—**Diamond cotton.** (*b*) A cotton diaper into which a small diamond figure is woven.—**Diamond draw-plates, photograph.** See ★*draw-plate*, ★*photograph*.

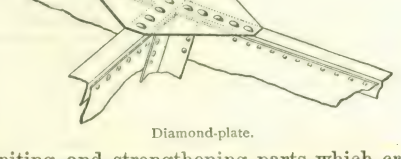
diamond-black (dī′ạ-mọnd-blak″), *n.* 1. The trade-name of a very fine lampblack, almost absolutely pure carbon, made in Ohio by the smothered combustion of natural gas: used in the preparation of printers' ink.—2. A mordant acid coal-tar color of the disazo type, derived from salicylic acid. It dyes wool in an acid bath a black which becomes exceedingly fast when after-treated with potassium bichromate. It may also be applied upon chromium-mordanted wool.

diamond-field (dī′ạ-mọnd-fēld), *n.* An area which yields diamonds from its superficial deposits: as, the *diamond-fields* of South Africa.

diamond-fig (dī′ạ-mọnd-fig″), *n.* Same as ★*diamond-plant*.

diamond-fish (dī′ạ-mọnd-fish″), *n.* Any of the garpikes (*Lepidosteidæ*): so named on account of its diamond-shaped scales.

diamond-flounder (dī′ạ-mọnd-floun″dėr), *n.* A large flounder, *Hysopsetta guttulata*, found on the Pacific coast of the United States.



diamond-frame (dī′ạ-mọnd-frām), *n.* In a bicycle, the truss made of hollow steel tubing, brazed at the joints, by which the weight of the rider is transferred to the axles of the wheels. Its shape is approximately that of the lozenge on a playing-card called the *diamond*. See *bicycle*.

diamond-grain (dī′ạ-mọnd-grān″), *n.* See *carat*, 4.

diamondiferous (dī″ạ-mọn-dif′ẹ-rus), *a.* [*diamond* + L. *-fer*, < *ferre*, bear, + *-ous*.] Diamond-producing: as, *diamondiferous* earth; a *diamondiferous* country; diamantiferous.

diamond-plant (dī′ạ-mọnd-plant), *n.* The ice-plant, *Mesembryanthemum crystallinum*. See *ice-plant*.

diamond-plate, *n.* 2. In *iron ship-building*, a piece of plate of conventional diamond shape

Diamond-plate.

uniting and strengthening parts which cross each other at the same level.

diamond-point, *n.* 2. In *railroading*, a crossing where two tracks cross obliquely instead of at a right angle. [Eng.]—**Diamond-point tool.** (*a*) A pointed tool which takes a light chip, used by pattern-makers for turning internal surfaces. (*b*) A tool which has a V-shaped point, used for turning and grooving metal.

diamond-sparrow (dī′ạ-mọnd-spar″ō), *n.* One of the honey-suckers, *Dicæidæ*, *Pardalotus affinis*, which is spangled with red, yellow, white, and black. Also called *diamond-bird*. [Australia.]

diamond-spot (dī′ạ-mọnd-spot), *n.* A British collectors' name for a European pyralid moth, *Botys trigonalis*.

diamond-truer (dī′ạ-mọnd-trö″ėr), *n.* A hand-tool consisting of a short rod of steel with a wooden handle, and having a black diamond inserted in the point of the bar: used in dressing and truing emery-wheels.

diamond-willow (dī′ạ-mọnd-wil″ō), *n.* See *willow*¹.

diamorphosis, *n.* 2. In *physiol.*, growth into normal shape.

diamylene (dī-am′i-lēn), *n.* [*di-*² + *amyl* + *-ene*.] A colorless compound, $(CH_3)_2C{:}C(CH_3)C(CH_3)_2CH_2CH_3$, prepared by the action of sulphuric acid on trimethylethylene. It boils at 154–156° C.

Diana fritillary. See ★*fritillary*.—**Tree of Diana.** See ★*tree*.

diancister (dī-an-sis′tėr), *n.* [NL. *diancistron*, < Gr. *δι-*, double, + *ἄγκιστρον*, a fish-hook.] In the nomenclature of the spicular elements of sponges, a monaxial C- or S-shaped rhabd with the ends sharply bent and with a central excision.

diandrous, *a.* 2. In *ornith.*, having two male mates.

dianil (dī-an′il), *n.* [*di-*² + *anil*.]—**Dianil black, blue.** See ★*black*, ★*blue*.

dianine (dī-an′in), *n.* [*dian(il)* + *-ine*².] The trade-name of a photographic developer consisting of diaminoresorcinol.

dianisidine (dī-a-nis′i-din), *n.* [*di-*² + *anisidine*.] An organic compound formed by the condensation of two molecules of anisidine with the elimination of two atoms of hydrogen.—**Dianisidine blue.** See ★*blue*.

dianium (dī-ā′ni-um), *n.* [NL., < L. *Diana*, Diana.] A name proposed by Von Kobell for a supposed new element obtained from the mineral columbite as found in Bavaria. It has been shown to be the same as niobium.

Dianol red. See ★*red*¹.

dianthine (dī-an′thin), *n.* [Appar. < NL. *Dianthus*, pink, + *-ine*².] A direct cotton coal-tar color of the disazo type, derived from diamidoazoxy-toluene, which dyes unmordanted cotton red in an alkaline salt bath. Also called *rosophenine*, *rock scarlet*, *St. Denis red*, and *Trona red*.—**Dianthine B** and **G**, two coal-tar colors of the xanthene type, similar in properties and composition to erythrosin.

diap. An abbreviation of *diapason*.

diapalma (dī-ạ-pal′mạ), *n.* [Gr. *διά*, through (cf. *diachylon*, *diacodium*, etc.), + L. *palma*, palm.] A drying and cleansing plaster formerly composed of palm-oil, litharge, and sulphate of zinc, but now generally made of white wax, diachylon plaster, and sulphate of zinc.

diapason, *n.*—**Bell diapason**, in *organ-building*, an open diapason stop of which the pipes are flared or belled at the top, which produces a slight increase in the reedy quality of the tone.—**Diapason clock.** See ★*clock*².

diapause (dī′ạ-pâz), *n.* [Gr. *διά*, through, + *παύσις*, stopping: see *pause*.] In *embryol.*, the stage of quiescence which separates two blastokinetic movements in the insect embryo. *Wheeler*, 1893.

diapensiaceous (dī″ạ-pen-si-ā′shius), *a.* Belonging to the plant family *Diapensiaceæ*.

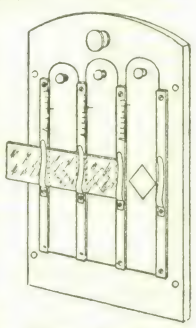
diaphanie (dē-ä-fa-nē′), *n.* [F., < *diaphane*, diaphanous.] A process for the imitation of painted or stained glass. *N. E. D.*

diaphanoscope, *n.* 2. An illuminating apparatus employed in diaphanoscopy.

diaphanoscopy (dī″ạ-fạ-nos′kọ̄-pi), *n.* [*diaphanoscope* + *-y*³.] Examination of a cavity, such as the antrum of Highmore, or of a hollow organ, such as the stomach, by means of transillumination, an electric light being placed behind or within the part.

diapherin (dī-af′ẹ-rin), *n.* [Gr. *διαφέρειν*, differ, + *-in*².] An amber-colored compound of asepterol, $HOC_6H_4SO_2NHC_9H_6O$, (1:2), used in surgery as a powerful antiseptic. It forms hexagonal crystals which melt at 85° C.

diaphery (dī-af′ẹ-ri), *n.* The calycine synthesis of two flowers. *Morren.*



diaphoric (dī-ạ-for′ik), *a.* [Gr. *διαφορά*, difference, + *-ic.*] Of or pertaining to differences. —**Diaphoric function.** See ★*function.*

diaphotoscope (dī-ạ-fō′tō-skōp), *n.* [Gr. *διά*, through, + *φῶς* (*φωτ-*), light, + *σκοπεῖν*, view.] Same as ★*diaphanoscope.*

diaphragm, *n.*, **2.** (*c*) A thin ring or plate, pierced with a hole which is usually, but not always, circular. A series of these is attached to the inside of the tube of a telescope or other optical instrument for the purpose of preventing reflections of light from the inner walls of the tube. (*d*) A sheet or disk of flexible material, confined at the edges, but free to yield to pressure on one side or the other: used in regulating-devices where pressure is one element, and to operate valves by a pressure from a distance. (*e*) In tunnel-work, a partition separating the working-face from the first chamber.— **6.** In *statistical mech.*, a portion of space, separating two ensembles of systems of molecules, such that there is no interchange of particles between the two.

This independence of the systems determined physically by forces which prevent particles from passing from one system to the other, or coming within range of each other's action, is represented mathematically by infinite values of the energy for particles in a space dividing the systems. Such a space may be called a *diaphragm.*
J. W. Gibbs, Statistical Mech., p. 196.

7. In *pathol.*, a membranous structure which partly or completely closes the lumen of a tube or cavity: as, inherited *diaphragm* of the larynx. *Med. Record*, Jan. 17, 1903, p. 111.— **Aubert diaphragm,** in *psychophys.*, an instrument for controlling and varying the amount of light admitted to a dark room. It consists essentially of two strips of blackened metal which slide upon each other in grooves; the inner end of each strip is cut out in the form of a right-angled triangle, so that the opening of the diaphragm is always a square. —**Diaphragm process,** a process for the electrolytic production of caustic soda and chlorin from a solution of common salt, in which the products, separated at the two opposite electrodes, are prevented from mixing by the interposition of a porous diaphragm. *Electrochem. Industry*, Sept., 1903, p. 453.— **Pericardial diaphragm.** Same as *pericardial septum* (which see, under *pericardial*).— **Secondary diaphragm,** the transverse mesocolon.

Three Aubert diaphragms, mounted side by side in a wooden frame, for insertion in the wall of a dark room. The grooves carry scales, and the upper metal strips carry corresponding marks, so that the size of the square openings can be read off. The grooves also carry clips for holding strips of ground or colored glass. A glass strip is shown in position over the two smaller openings.

diaphragm (dī′ạ-fram), *v. t.* To interpose in the path of a beam of light, or in the field of an optical instrument, a screen containing an aperture; specifically, in *photog.*, to reduce the aperture of an objective by the use of a diaphragm.

Generally speaking it would be an advantage to *diaphragm* the objective during the day.
Smithsonian Rep., 1890, p. 137.

Diaphragmatic hernia, tic. See ★*hernia*, ★*tic.*

diaphragmatically (dī″ạ-frag-mat′i-kạl-i), *adv.* By means of the diaphragm: as, to breathe *diaphragmatically.*

diaphragm-furnace (dī′ạ-fram-fėr″nās), *n.* A furnace for roasting or oxidizing ores. It has successive levels or shelves on which the ore is placed, the ore becoming gradually hotter as it drops from level to level toward the fire at the bottom.

diaphragm-valve (dī′ạ-fram-valv″), *n.* **1.** A valve whose opening and closing are controlled by the motion of a diaphragm.—**2.** A valve to which a plate or diaphragm is attached which will move when the pressure of a liquid in contact with one side of it reaches a certain point.

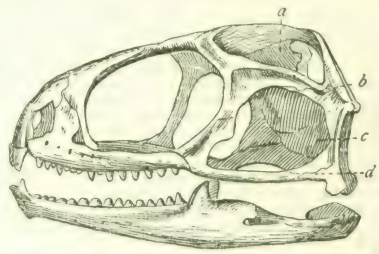
diaphtherin (dī-af′the-rin), *n.* [Appar. < Gr. *διαφθείρειν*, destroy (?) + *-in*[2].] Same as ★*oxyquinaseptol.*

diaphthol (dī-af′thōl), *n.* [*diapth* (*erin*) + *-ol.*] The same as ★*quinaseptol.*

Diaphus (dī′ạ-fus), *n.* [NL., erroneously for **Diaphōs*, < Gr. *διά*, across, + *φῶς* (*φωτ-*), light.] A genus of lantern-fishes of the family *Myctophidæ*, characterized by having luminous spots each divided by a cross-line (as in the Greek letter theta, *θ*). *D. theta* is found on the coast of California.

diaphyllous (dī-af′i-lus), *a.* Same as *dialyphyllous.*

diaphysitis (dī″ạ-fi-sī′tis), *n.* [NL., < *diaphysis* + *-itis.*] Inflammation of the shaft of a long bone.



Diaporthe (dī-ạ-pôr′thē), *n.* [NL. (Nitschke, 1870), irreg. < Gr. *διαπορθεῖν*, destroy, < *διά*, through, + *πορθεῖν*, destroy.] A genus of pyrenomycetous fungi having the membranaceous perithecia buried in a more or less distinct stroma which may be either valsoid or effuse, and consists of the slightly blackened substance of the host. The spores are uniseptate and hyaline and sometimes appendiculate. Over 400 species have been described, occurring on a great variety of plants throughout the temperate regions. *D. parasitica* causes chestnut-blight or canker, a destructive disease in the eastern United States. See *oak* ★*canker.*

diapositive (dī-ạ-poz′i-tiv), *n.* [*dia-* + *positive.*] In *photog.*, a transparent positive picture (such as a lantern-slide), made from a negative.

If one of these views be printed as a *diapositive*, and superposed on the other negative, a composite picture will be produced. *Sci. Amer.*, June 25, 1904, p. 494.

diapsid (dī-ap′sid), *a.* [Gr. *δι-*, two-, + *ἀψίς* (*ἀψιδ-*), arch: see *apse.*] Having two temporal arches like the members of the reptilian subclass *Diapsida.*

Diapsida (dī-ap′si-dạ), *n. pl.* [NL., < Gr. *δι-*, two-, + *ἀψίς*, arch.] A subclass of *Reptilia* which contains those forms with (primarily) two temporal arches, a relatively small squamosal, large quadrate, and coracoid and procoracoid early coalescing, or the procoracoid degenerate: contrasted with ★*Synapsida. Osborn*, 1903.

Skull of Hatteria (*Sphenodon punctatum*), a typical diapsidan reptile.

a, supratemporal fossa; *b*, superior temporal arch or arcade; *c*, infra- or laterotemporal fossa; *d*, inferior temporal arch or arcade. The specimen figured is young, the teeth of an old hatteria being fused in one mass.

diapsidan (di-ap′si-dạn), *a.* Relating to or having the characters of the reptilian subclass *Diapsida:* as, *diapsidan* types of shoulder-girdle.

Diaptosauria (dī-ap-tō-sâ′ri-ạ), *n. pl.* [NL., in allusion to the double temporal arch, < Gr. *δι-*, two-, + *ἀψίς*, arch (< *ἅπτειν*, fasten), + *σαῦρος*, lizard.] A superorder of primitive reptiles established by Osborn to include those having a skull with two temporal arches and vertebræ typically amphicœlous. Hypocentra may be present throughout the vertebral column or lacking in the dorsal region; abdominal ribs or plastron always present. There are several orders included in the group. The hatteria, *Sphenodon*, is a typical and the only living member of the group.

diarch (dī′ärk), *a.* [Gr. *δι-*, two-, + *ἀρχή*, beginning.] In *bot.*, having two protoxylem groups, as the steles of roots.

The *diarch* roots of a Sphenophyllum have been described by Renault, who has also investigated the leaves.
Encyc. Brit., XXXI. 412.

diaremia, diaræmia (dī-ạ-rē′mi-ạ), *n.* [NL. *diarræmia* and *diarrhæmia* (?), appar. irreg. formed from *διαρρεῖν*, flow through: see *diarrhea.*] A watery condition of the blood, with an excessive transudation of serum through the walls of the blood-vessels, frequently seen in sheep which are severely infested with parasites.

diarrhea, *n.*—**Camp diarrhea,** a bowel disturbance, often dysenteric in character, which affects bodies of troops in camp.—**Cochin China diarrhea,** a form of chronic diarrhea which occurs endemically in Cochin China. *Jour. Exper. Med.*, VI. 87.—**Diarrhea alba.** Same as *white diarrhea.*—**Summer diarrhea,** a diarrhea occurring in hot weather, believed to be caused by ptomaines in food which is undergoing the first stages of decomposition.—**Vicarious diarrhea,** watery intestinal discharges occurring as a result of nature's efforts to remove excrementitious matter which is accumulating in consequence of impaired action of the kidneys or the skin.

diaschistic (dī-ạ-skis′tik), *a.* [Gr. **διάσχιστος*, < *διασχίζειν*, separate.] In *petrog.*, a term used by Brögger (1894) to designate rocks derived by differentiation from a common magma prior to their eruption.

diaspid (dī-as′pid), *n.* [Gr. *δι-*, two-, + *ἀσπίς* (*ἀσπιδ-*), shield.] In the nomenclature of the spicular elements of sponges, a monaxial short rhabd with expanded flattened ends.

diasporometer (dī″ạ-spō-rom′e-tėr), *n.* [Gr. *διασπορά*, dispersion, + *μέτρον*, measure.] A device for producing and measuring the dispersion of light.

diastase, *n.*—**Taka diastase,** a diastase, derived from the fungus *Aspergillus oryzæ*, discovered by the Japanese chemist Takamine. It does not give the reaction for peroxydases, but shows to a high degree the power of decomposing hydrogen dioxid. It is a medicinal preparation.

diastasic (dī-as-tā′sik), *a.* [*diastase* + *-ic.* Cf. *diastatic.*] Of or pertaining to diastase. *U. S. Dept. Agr., Rep.* 68, p. 16.

diastasimetry (dī″ạ-stā-sim′e-tri), *n.* [Gr. *διάστασις*, difference (see *diastase*), + *-μετρία*, < *μέτρον*, a measure.] The determination of the diastatic power of a substance, that is, of its capability of converting starch into dextrose.

diastema, *n.* **3.** In *cytol.*, the pale region in the cytoplasm or area of sparser protoplasmic fibrillæ which foreshadows the division-plane in karyokinesis, or indirect cell-division.

diastematic (dī-as-tē-mat′ik), *a.* [Gr. *διάστημα*(*τ-*), interval, + *-ic.*] Pertaining to or of the nature of a diastema.

diastematomyelia (dī-ạ-stē″mạ-tō-mī-ē′li-ạ), *n.* [NL., < Gr. *διάστημα*(*τ-*), interval, + *μυελός*, marrow.] A congenital condition in which the spinal cord is in two separate lateral halves.

diastoloscope (dī-ạ-stol′ō-skōp), *n.* Gr. *διαστολή*, separation, distinction, + *σκοπεῖν*, view.] An eyepiece for the microscope which, in place of lenses, has two cones on a common axis.

Diastoma (dī-as′tō-mạ), *n.* [NL., < Gr. *διά*, through (?), + *στόμα*, mouth.] A genus of platypodous gastropods of the family *Pyramidellidæ.* They have turreted shells with flat whorls transversely ridged and spirally lined, and the aperture separate from the body whorl. The species occur in Cretaceous and Tertiary rocks.

diastral (dī-as′tral), *a.* [NL. **diastrum*, diaster, + *-al*[1].] Relating or pertaining to a diaster: as, the *diastral* stage in the division of a single cell-nucleus into two.

diastrome (dī-as′trōm), *n.* [Gr. *διά*, through, + *στρῶμα*, layer.] In *geol.*, the splitting of sedimentary rocks along their bedding-planes.

diastrophic (dī-as-trof′ik), *a.* [Gr. *διαστροφή*, distortion, + *-ic.*] Pertaining to upheavals or displacements in the earth's crust; of the nature of diastrophism.

It is desirable that a boring be made, as deep as possible, in a plutonic rock. A mass should be selected which is of great age and which has not for many geologic periods been subjected to *diastrophic* changes.
Rep. Carnegie Inst., 1902, p. 285.

Diastrophic geology, that branch of geology which treats of upheavals and dislocations in the earth's crust.

diastrophism (dī-as′trō-fizm), *n.* [Gr. *διαστροφή*, distortion, + *-ism.*] In *geol.*, a general term suggested by J. W. Powell for all the varieties of deformation of the earth's crust. As elaborated by G. K. Gilbert, it is of two varieties: orogeny, or the upheaval of mountains, and epeirogeny, or the production of continents. *U. S. Geol. Surv.*, Monograph 1, pp. 3, 340.

diathermanosity (dī″ạ-thėr-mạ-nos′i-ti), *n.* Same as *diathermance.*

The *diathermanosity* of water and certain solutions.
Nature, LXVII. 425.

diathesis, *n.*—**Uric-acid diathesis,** a theoretical condition in which uric acid is formed in abnormal amount within the body and tends to be deposited in the tissues.

diatomaceous, *a.* **2.** Containing or made up of diatoms: as, *diatomaceous* earth. See *infusorial earth*, under *infusorial.*

diatome (dī′ạ-tōm), *n.* Same as *diatom.*

diatomean (dī′ạ-tō′mē-ạn), *n.* Same as *diatom.*

diatom-earth (dī′ạ-tom-ėrth″), *n.* A sedimentary deposit composed of the abandoned frustules of diatoms; infusorial earth. *Geikie*, Text-book of Geol., p. 179.

diatom-ooze (dī′ạ-tom-öz″), *n.* An extremely fine deep-sea deposit consisting of the abandoned frustules of diatoms. *Geikie*, Text-book of Geol., p. 179.

Diatonic interval. See *interval*, 5.

diatropic (dī-ạ-trop′ ik), *a.* [Gr. *διά*, across, + *-τροπος*, < *τρέπειν*, turn, + *-ic.*] In *bot.*, transverse to the direction of the stimulus or operating force: said of organs so placing themselves.

Diatrypaceæ (dī″ạ-tri-pā′sē-ē), *n. pl.* [NL., < *Diatrype* + *-aceæ.*] A family of pyrenomycetous fungi, named from the genus *Diatrype.*

Diatrype (dī'a-trīp), *n.* [NL. (Fries, 1849), irreg. < Gr. *διατρυπᾶν*, bore through, < *διά*, through, + *τρυπᾶν*, bore.] A genus of pyrenomycetous fungi having the perithecia sunken in a dark-colored flattened effuse stroma which is at first covered by the outer bark of the host. The ostiola perforate the surface of the stroma at maturity, a fact to which the name refers. The spores are simple, allantoid, and hyaline or yellowish. About 70 species have been described; they occur chiefly on the branches of various trees. *D. Stigma* is a common species on the oak.

diaulic (dī-â'lik), *a.* [Gr. *δίαυλος*, a double pipe or course, < *δι-*, two-, + *αὐλός*, a pipe.] 1. Of or pertaining to the diaulos, or double course in ancient Greek racing.—2. In *zoöl.*, divided into two ducts, as the hermaphrodite duct from the ovotestis of gastropodous mollusks. *Sedgwick*, Text-book of Zoöl., I. 378.

diaxial (dī-ak'si-al), *a.* [Gr. *δι-*, two-, + L. *axis*, axis, + *-al*[1].] Same as *biaxial*.

diaxon (dī-ak'son), *n.* [NL., < Gr. *δι-*, two-, + *ἄξων*, axis.] A neuron, or nerve-cell, having two axis-cylinder processes.

diazeuxis, *n.* 2. A disjunctive proposition: so called, it would appear, by the immediate successors of Aristotle in his school.

diazin, diazine (dī-az'in), *n.* [*di-*[2] + *azine*.] The name of a class of cyclic organic compounds containing two nitrogen atoms in the ring. See ★*azin*.—**Diazin black, blue,** etc. See ★*black*, ★*blue*, etc.

Diazo black, blue, etc. See ★*black*, ★*blue*, etc.

diazoacetic (dī-az″ō-a-set'ik), *a.* [*diazo-* + *acetic*.] Noting an ether, a lemon-yellow oil, $\begin{matrix}\text{N}\\\|\\\text{N}\end{matrix}\!>\!\text{CHCOOC}_2\text{H}_5$, prepared by the action of nitrous acid on ethyl aminoacetate. It crystallizes at low temperatures, melts at −22° C., boils at 84° C. under 61 millimeters pressure, has a characteristic penetrating unpleasant smell, and explodes in contact with concentrated sulphuric acid or after prolonged boiling. It is more correctly termed *ethyl diazoacetate*, and is used in organic syntheses.

diazoamino (dī-az″ō-am'in-ō), *n.* [Detached use of *diazamino-*, < *diazo-* + *amine*.] The name of a class of organic compounds containing the group RN:NNHR′. These substances are often incorrectly termed *diazoamido* derivatives; they are readily converted into aminoazo compounds, many of which are dyes.

diazobenzene (dī-az″ō-ben'zēn), *n.* [*diazo-* + *benzene*.] A univalent organic radical, $\text{C}_6\text{H}_5\text{N}:\text{N}-$ or $\text{C}_6\text{H}_5\text{N}-$. Derivatives of both $\begin{matrix}\|\|\\\text{N}\end{matrix}$ forms are known, those of the latter being termed *benzenediazonium* compounds.—**Diazobenzene imide,** a pale-yellow oily compound, $\text{C}_6\text{H}_5\text{N}<\begin{matrix}\|\|\\\text{N}\end{matrix}$, prepared by the action of hydrazin on benzene diazonium sulphate. It has an aromatic ammoniacal odor, and boils at 73.5° C. under 22–24 millimeters pressure. The vapor causes a flow of tears. Also called *triazobenzene* and *phenylcyclotriazin*.

diazoic (dī-a-zō'ik), *a.* [*diazo-* + *-ic*.] Noting a class of organic aromatic acids containing the radical RNHNO_2 or the tautomeric form $\text{RN}:\text{NO}.\text{OH}$.

diazonium (dī-a-zō'ni-um), *n.* [*diazo-* + *-n-* + *-ium*.] A basic organic radical, $\text{RN}\begin{matrix}\|\|\\\text{N}\end{matrix}$. Some of the diazonium compounds are regarded as tautomeric forms of diazo compounds.

diazotate (dī-az'ō-tāt), *n.* [*di-*[2] + *azote* (see *diazo-*) + *-ate*[1].] A salt of an acid, $\text{RN}\begin{matrix}\|\|\\\text{N}\end{matrix}$:NOH. It may be regarded as a tautomeric form of a diazonium hydroxid RNOH, and must not be confused with salts of diazoic acid.

diazotization (dī-az″ō-tī-zā'shon), *n.* [*diazotize* + *-ation*.] The operation of treating an amido compound with sodium nitrite and hydrochloric acid for the production of a diazo compound.

diazotize (dī-az'ō-tīz), *v. t.*; pret. and pp. *diazotized*, ppr. *diazotizing*. [*di-*[2] + *azote* + *-ize*.] In *chem.*, to treat an aromatic amido compound with nitrous acid so as to introduce the diazo-group of two united atoms of nitrogen which together behave as a dyad radical. By this reaction various brilliant dyestuffs are obtained. *Sadtler*, Handbook of Indust. Chem., p. 488.

diazotype (dī-az'ō-tīp), *n.* In *photog.*, a method of photographic dyeing and printing, in which derivatives of the aromatic hydrocarbons serve for the production of a positive image capable of development in color. Paper, calico, silk, or wool is impregnated with a solution of one of a group of dyestuffs of which primulin, the sodium sulphonate of a complex amido base, is typical, and washed in cold water, and the dyestuff is diazotized by the action of a cold solution of sodium nitrite sharply acidified by hydrochloric, sulphuric, or other acid. After washing in cold water, the tissue is exposed behind a photographic positive, a drawing, or some natural object. The image is then developed by the use of a weak solution of a suitable phenol or amine, as an alkaline solution of β-naphthol for red, of phenol for yellow, or of eikonogen for blue. The picture is then washed. Also known as the *primulin process*.

diazurin, diazurine (dī-az'ū-rin), *n.* [*di(azo-)* + *azure* + *-in*[2].] A direct coal-tar color of the disazo type, derived from dianisidine. It dyes unmordanted cotton a dull violet in a salt bath, but for the best results subsequent diazotizing and development with β-naphthol are necessary. Upon development it gives a navy blue.

dibasicity (dī-bā-sis'i-ti), *n.* [*diabasic* + *-ity*.] In *chem.*, the character of being dibasic: the character of an acid as containing two atoms of hydrogen replaceable by a more basic or electropositive element or radical.

dibatag (dib'a-tag), *n.* [E. African.] A peculiar antelope, *Ammodorcas clarkei*, found in Somaliland. It resembles the gazelles, but has a long, slender neck, somewhat like that of the gerenuk. The females are hornless; the horns of the males are recurved and ringed at the base.

The most striking feature of the report of the Field Columbian Museum for 1902–3 is formed by two plates representing groups—the one of the *dibatag*, or Clarke's gazelle, and the other of the spotted hyæna—mounted in the museum. *Nature*, Sept. 8, 1904, p. 458.

dibble[1], *n.* 2. A planting implement which carries the seed in the handle and drops it from the point by means of a slide, when inserted in the earth. [Great Britain.]—3. A pair of wheels drawn by a horse, and furnished with cogs which make holes for seed: used in cotton-planting. [Southern U. S.]

dibbling[2] (dib'ling), *n.* The act of planting with a dibble. See *dibble*[1], *v. t.*

Dibbling is not a method suited for sowing large areas, but is useful in filling up blanks.
R. H. Wallace, Agriculture, p. 181.

dibenzoyl (dī-ben'zō-il), *n.* [*di-*[2] + *benzoyl*.] 1. Same as *benzil*.—2. A combining form used in organic chemistry to indicate the presence of two benzoyl radicals ($\text{C}_6\text{H}_5\text{CO}-$) in the molecule of a compound.

dibenzyl (dī-ben'zil), *n.* [*di-*[2] + *benzyl*.] A colorless compound, $\text{C}_6\text{H}_5\text{CH}_2\text{CH}_2\text{C}_6\text{H}_5$, prepared by the action of sodium on benzyl chlorid. It forms monoclinic crystals melting at 51.5–52.5° C., and boils at 284° C. Also called *symmetrical diphenylethane*.

diblastic (dī-blas'tik), *a.* [Gr. *δι-*, two-, + *βλαστός*, germ.] Composed of two germ-layers; having the character of or being in the condition of a diblastula. See *diblastula*.

Dibothridiata (dī-bō-thrid-i-ā'tä), *n. pl.* [NL., < Gr. *δι-*, two-, + NL. *bothridium* + *-ata*[2].] A group of *Cestoidea*. The scolex is provided with only two suckers, or bothria, these being situated respectively on the dorsal and the ventral aspect, and the uterus communicates with the exterior. It includes the order *Pseudophyllidea*. The majority of the members of this group are parasitic in fresh-water fishes, though certain ones are found in birds and in man.

Dibothriocephalus (dī-both″ri-ō-sef'a-lus), *n.* [Gr. *δι-*, two-, + *βοθρίον*, dim. of *βόθρος*, a pit, + *κεφαλή*, head.] The older name of the genus *Bothriocephalus* (which see).

dibotryoid (dī-bot'ri-oid), *a.* [*di-*[2] + *botryoid*.] Compoundly botryoid; having the secondary branches botryoid, as in a compound umbel, a panicle, etc.

dibranchious (dī-brangk'i-us), *a.* [Gr. *δι-*, two-, + *βράγχια*, gills, + *-ous*.] Having two branchiæ.

Dibranchus (dī-brang'kus), *n.* [NL., < *δι-*, two-, + *βράγχος*, for *βράγχιον*, gill.] A genus of deep-sea frogfishes of the family *Ogcocephalidæ*. *D. atlanticus* abounds in the abysses of the Gulf Stream.

dibrom-, dibromo-. [*di-*[2] + *brom(ine)*.] A combining form used in organic chemistry to indicate the presence of two bromine atoms in the molecule of the compound.

dibromide (dī-brō'mid), *n.* [*di-*[2] + *brom(ine)* + *-ide*[2].] In *chem.*, a compound containing two atoms of bromine united to a dyad element or radical: as, ethylene *dibromide*.

dibutyl (dī-bū'til), *n.* [*di-* + *butyl*.] Same as ★*octane*.

dicacodyl (dī-kak'ō-dil), *n.* [*di-*[2] + *cacodyl*.] A colorless highly poisonous compound, $(\text{CH}_3)_2\text{AsAs}(\text{CH}_3)_2$, prepared by the action of zinc on cacodyl chlorid. It melts at −6° C., boils at 170° C., has an offensive smell, and inflames spontaneously in the presence of air or chlorin. Also called *tetramethyldiarsenide*.

dicalcic (dī-kal'sik), *a.* [*di-*[2] + *calc(ium)* + *-ic*.] In *chem.*, containing, as a salt, two atoms of calcium. Dicalcic phosphate ($\text{Ca}_2\text{H}_2(\text{PO}_4)_2$) forms the chief part of the so-called 'reverted phosphate' in fertilizers which by keeping have lost the soluble character of the original monocalcic phosphate or superphosphate of lime ($\text{CaH}_4(\text{PO}_4)_2$).

dicarbonic (dī-kär-bon'ik), *a.* [*di-*[2] + *carbonic*.] Containing two carbonic-acid radicals, —O.CO.OH, in the molecule. Sometimes incorrectly used for *dicarboxylic*.

dicarboxylic (dī-kär″bok-sil'ik), *a.* [*di-*[2] + *carboxyl* + *-ic*.] Containing two carboxyl groups, —CO.OH, in the molecule, as an organic compound.

dicastic (dī-kast'ik), *a.* [*dicast* + *-ic*.] Of, pertaining to, or characteristic of a dicast or the dicasts: as, the *dicastic* assembly; the *dicastic* badge.

dicefalous, *a.* A simplified spelling of *dicephalous*.

Dicellocephalus (dī-sel-ō-sef'a-lus), *n.* [Also *Dikellocephalus*. NL., < Gr. *δικέλλα*, a two-pronged hoe, a mattock, + *κεφαλή*, head.] A widely distributed genus of Cambrian trilobites having a large crescentic cephalon with conate, transversely grooved glabellum, 9 thoracic segments, and a fan-like pygidium bearing spiniform extensions at the sides.

dicephalus (dī-sef'a-lus), *n.*; pl. *dicephali* (-lī). [NL., < Gr. *δικέφαλος*, two-headed, < *δι-*, two-, + *κεφαλή*, head.] A double-headed monster.

Diceratidæ (dis-e-rat'i-dē), *n. pl.* [NL., < *Diceras* (*-cerat-*) + *-idæ*.] A family of extinct teleodesmaceous pelecypods of which *Diceras* is the typical genus.

dice-top (dīs'top), *n.* A top with numbers on its sides, one of which will be uppermost when the top comes to rest after being spun; a teetotum.

dicetyl (dī-set'il), *n.* Same as ★*dotricontane*.

dichamphitriæne (dī-kam″fi-trī'ēn), *n.* [Gr. *δίχα*, in two, + *ἀμφί*, on both sides, + *τρίαινα*, trident.] In the nomenclature of the spicular elements of sponges, an amphitriæne in which the cladisks are bifurcated.

Dichapetalaceæ (dik″a-pet-a-lā'sē-ē), *n. pl.* [NL. (Engler, 1896), < *Dichapetalum* + *-aceæ*.] A family of dicotyledonous choripetalous or sometimes sympetalous plants of the order *Geraniales*, typified by the genus *Dichapetalum*, and characterized by regular 5-merous flowers borne from a scaly involucre or cup-shaped disk. There are 3 genera and about 89 species, natives of tropical Africa and America and Madagascar. They are trees, shrubs, or woody vines with alternate entire coriaceous leaves and small flowers in compound cymes in the axils or apparently on the petioles of the leaves. See ★*Dichapetalum*.

Dichapetalum (dik-a-pet'a-lum), *n.* [NL. (Thouars, 1806), in allusion to the two lobes of the petals, < Gr. *δίχα*, in two, + *πέταλον*, leaf (petal).] A genus of plants, type of the family *Dichapetalaceæ*. There are about 70 species, chiefly natives of Africa and Madagascar. One of these is known as *rat-poison*.

dichlorbenzene (dī-klôr-ben'zēn), *n.* [*di-*[2] + *chlor(ine)* + *benzene*.] One of three compounds with the formula $\text{C}_6\text{H}_4\text{Cl}_2$, distinguished by the prefixes *ortho-*, *meta-*, *para-*. All are colorless; the first two are liquids, and the last is a crystalline solid melting at 53° C. and boiling at 172° C. The others boil at 179° C. and 172° C. respectively.

dichoblastic (dī-kō-blas'tik), *a.* [Gr. *δίχα*, in two, + *βλαστός*, germ, + *-ic*.] In *bot.*, sympodially dichotomous. *Celakovsky*.

dichocaltrop (dī-kō-kal'trop), *n.* [Gr. *διχῶς* (*δίχα*), in two, + E. *caltrop*.] In the nomenclature of the spicular elements of sponges, a caltrop with bifurcate arms. See ★*caltrop*, 4.

dichogamism (dī-kog'a-mizm), *n.* [Gr. *δίχα*, in two, + *γάμος*, marriage.] Complete hermaphroditism, or the presence of the accessory reproductive organs as well as of the gonads of both sexes. *G. H. Lewes*.

dichogamy, *n.* 2. In *zoöl.*, the maturation in hermaphroditic animals of the ova and sperm at different times so as to preclude self-fertilization.

dichogeny (dī-koj'e-ni), *n.* [Gr. *δίχα*, in two, + *-γενής*, -producing.] The normal development of cells and tissues in an organism in

different ways, in accordance with normal changes in the conditions to which they are exposed.

Dichograptus (dī-kō-grap′tus), *n.* [NL., ‹ Gr. *δίχα*, in two, + *γραπτός*, written, engraved (see *graptolite*).] A genus of Silurian graptolites in which the hydrosome consists of 8 simple monoprionidian arms originating from the funicle, the latter enveloped in a circular disk.

dichophyllotriæne (dī-kō-fil-ō-trī′ēn), *n.* [Gr. *δίχα*, in two, + *φύλλον*, leaf, + *τρίαινα*, trident.] In the nomenclature of the spicular elements of sponges, a phyllotriæne in which the flattened cladisks are forked.

dichopterous (dī-kop′tėr-us), *a.* [Gr. *δίχα*, in two, + *πτερόν*, wing.] In *entom.*, having cut or emarginate wings. *Syd. Soc. Lex.*

dichoptic (dī-kop′tik), *a.* [Gr. *δίχα*, in two, + E. *optic.*] Having the eyes distinctly separated, not joined together above, as with many insects. Opposed to ★*holoptic*. *Cambridge Nat. Hist.*, VI. 440.

Dichorisandra (dī″kō-ri-san′drą), *n.* [NL. (Mikan, 1820), irreg. ‹ Gr. *δι-*, two, + *χωρίζειν*, separate, + *ἀνήρ* (*ἀνδρ-*), a male (anther).] A genus of plants of the family *Commelinaceæ*. There are about 30 species, natives of tropical America, some of which are grown in choice glass-houses for their striking habit and foliage. The flowers, usually not very showy individually, are blue, and grow in large panicle-like clusters. The best-known species in cultivation is *D. thyrsiflora* from Brazil. It has large lanceolate green leaves. Another horticultural favorite is *D. mosaica*; it has variegated foliage.

dichost (dī′kost), *n.* [Gr. *δίχα*, in two, + *ὀστέον*, bone.] In *ichth.*, a bone anterior to the bones above the myodome; the basisphenoid. It is very improbable that the bone named basisphenoid in fishes is the homologue of the basisphenoid of the higher vertebrates. *T. Gill.*

dichotic (dī-kot′ik), *a.* [Gr. *δίχα*, in two, + *οὖς* (*ὠτ-*), ear, + *-ic.*] Involving the use of both ears for the simultaneous hearing of tones of different pitch: opposed to *diotic*: as, *dichotic* audition; a *dichotic* experiment.

dichotomistic (dī-kot-ō-mis′tik), *a.* Of or pertaining to dichotomy or dichotomists: as, the *dichotomistic* principle of classification.

dichotomized (dī-kot′ō-mīzd), *p. a.* Divided in half: said of the moon or of one of the inferior planets at the moment when exactly half of the disk is illuminated.

dichotomy, *n.*—**Bostrychoid dichotomy.** Same as *helicoid dichotomy* (which see, under *helicoid*).—**Law of dichotomy,** Mendel's law of ancestral inheritance. See ★*inheritance*. *Davenport*, in Science, Jan. 15, 1905.

dichotriænic (dī″kō-trī-ē′nik), *a.* Resembling a dichotriæne, or characterized by a possession of dichotriænes.

dichotrider (dī-kō-trī′dėr), *n.* [Gr. *δίχα*, in two, + *τρίσειρος*, three-necked (see ★*trider*).] In the nomenclature of the spicular elements of sponges, a trider having three arms dichotomous. See ★*trider*.

dichotypy (dī′kō-tī-pi), *n.* [Gr. *δίχα*, in two, + *τύπος*, type, + *-y*[3].] The occurrence of two different forms of the same organ on the same plant or stock.

dichoxytriæne (dī-kok-si-trī′ēn), *n.* [Gr. *δίχα*, in two, + *ὀξύς*, sharp, + *τρίαινα*, trident.] In the nomenclature of the spicular elements of sponges, a dichotriæne in which the divided branches are acute.

dichroiscope (dī-krō′i-skōp), *n.* Same as *dichroscope*.

dichroitic (dī-krō-it′ik), *a.* Same as *dichroic*, 1.

dichromat, dichromate (dī-krō′mat), *n.* [Gr. *δι-*, two-, + *χρῶμα* (*τ-*), color.] One who possesses only two of the three normal primary color-sensations; a red-blind or green-blind person. The term presupposes the correctness of the Young-Helmholtz theory of color-vision.

dichromated (dī-krō′mā-ted), *a.* In *photog.*, acted on with a bichromate.

dichromic, *a.* 2. In *optics*, having the property of dichroism; dichroic.—**Dichromic acid.** Same as ★*pyrochromic acid* or ★*anhydrochromic acid* ($H_2Cr_2O_7$).

dichromism (dī′krō-mism), *n.* [Gr. *δίχρωμος*, two-colored, ‹ *δι-*, two-, + *χρῶμα*, color, + *-ism.*] Color-blindness as regards one of the three so-called primary colors of the Young-Helmholtz theory.

dichronous, *a.* 2. In *bot.*, having two periods of growth in one year. *Syd. Soc. Lex.*

dichroöscope (dī-krō′ō-skōp), *n.* [Gr. *δι-*, two, + *χρόα*, color, + *σκοπεῖν*, view.] An instrument for the blending of colors, devised by Heinrich Dove. Beams of colored light are produced by transmission through stained glass and the proportion of their admixture is regulated by a polarizing arrangement.

dick-a-Tuesday (dik-ą-tūz′dā), *n.* The ignis fatuus; will-o'-the-wisp; jack-o'-lantern.

dickcissel (dik-sis′el), *n.* [Said to be imitative.] The black-throated bunting, *Spiza americana*, a small member of the sparrow family. It is abundant in many parts of the eastern United States, ranging west to Nebraska and south to Arizona. The male has a black patch on the throat and some yellow markings, but the general color above is grayish brown. See *Spiza*, with cut.

Dickensesque (dik″enz-esk′), *a.* Resembling or peculiar to the style of Charles Dickens, the novelist.

Dickensian (di-ken′zi-ąn), *a.* Of or pertaining to Charles Dickens, the novelist (1812–70), or to his writings or style: as, *Dickensian* characters.

Dickensiana (dik″enz-i-ā′nä), *n. pl.* [*Dickens* + *-i-* + *-ana.*] Collections of sayings, anecdotes, relics, manuscripts, books, editions, works, etc., relating to or connected in any way with Charles Dickens, the novelist.

An important Dickens Exhibition will be held at the Memorial Hall, Farringdon Street, on March 25th, 26th, and 27th, under the auspices of the Dickens Fellowship. This is the first exhibition of *Dickensiana* ever held in London. *Athenæum*, Feb. 21, 1903, p. 243.

dickpfennig (dik′pfen″ig), *n.* [G., 'thick penny.'] A billon coin of Strassburg in Alsace in the seventeenth and eighteenth centuries, equal to 6 batzen.

Dicksonieæ (dik-sō-nī′ē-ē), *n. pl.* [NL., ‹ *Dicksonia* + *-eæ.*] One of the three tribes comprising the family of ferns *Cyatheaceæ*. It is distinguished from the other two by having the indusium extrorse and formed at least in part by the more or less modified opposed leaf-segment, and further by having the ring of the sporangium provided with a stomium of thinner cells. It includes among others the important genera *Cibotium* and *Dicksonia*. See ★*Cyatheaceæ*.

dickthaler (dik′tä″lėr), *n.* [G., 'thick dollar.'] A small and thick Austrian silver coin of the year 1484, bearing a portrait of the Archduke Sigismund.

dicky[1], *n.*—**Dicky Sam,** a nickname for a native of Liverpool, England.

dicky[3] (dik′i), *a.* [Attrib. use of *Dicky*, dim.] Poor in quality or condition; 'sorry'; 'queer': as, a *dicky* lot; a *dicky* concern. [Slang.]

dicky-daisy (dik′i-dā″zi), *n.* See ★*daisy*.

Diclonius (dī-klō′ni-us), *n.* [NL., ‹ Gr. *δι-*, two-, + (it is said) *κλόνις*, the sacrum.] A genus of dinosaurian reptiles described by Cope as having elongated skulls with extended and very broad snout, very large nostrils, and subrectangular orbits. The teeth are closely arranged in an alveolar groove opening inward, the successional teeth forming several tectiform series. It occurs in the Cretaceous rocks and is generally regarded as synonymous with *Hadrosaurus* and *Trachodon*.

dicœlious (dī-sē′li-us), *a.* Same as *dicœlous*.

dicondylic (dī-kon-dil′ik), *a.* [Gr. *δι-*, two-, + *κόνδυλος*, a knob, condyle.] Same as *dicondylian*. [Rare.]

diconic (dī-kon′ik), *a.* Noting an acid, a colorless compound, $C_9H_{10}O_6$, prepared by the action of concentrated hydrochloric acid on citric acid at 200° C. It forms small crystals, probably of the monoclinic system, and melts at 199–200° C.

dicot (dī′kot), *n.* A colloquial reduction, among botanists, of *dicotyledon*.

dicotyl (dī-kot′il), *n.* [Gr. *δι-*, two-, + *κοτύλη*, socket (see *cotyledon*).] Same as *dicotyledon*.

The main development of the early *Dicotyls* and other plants constituting the best horizon markers took place in the late Jurassic. *Amer. Jour. Sci.*, Dec., 1903, p. 416.

dicotyledonary (dī-kot-i-lē′dọn-ą-ri), *a.* [*dicotyledon* + *-ary*[1].] Pertaining or relating to dicotyledons. *N. E. D.*

Dicranaceæ (dī-krā-nā′sē-ē), *n. pl.* [NL., ‹ *Dicranum* + *-aceæ.*] A large family of acrocarpous mosses of the order *Bryales*. It is typified by the genus *Dicranum* (which see), and characterized by erect stems, awl-shaped or bristle-shaped leaves, a simple peristome of 16 teeth, and 1-celled spores. There are 48 genera, chiefly of the temperate zones (only 2 occurring in the tropics), growing in low, moist ground and forming sod or turf.

dicranobranchiate (dī-krā-nō-brang′ki-āt), *a.* and *n.* **I.** *a.* Relating to or characteristic of the *Dicranobranchia*, or possessing plumose dorsal gills.

II. *n.* One of the *Dicranobranchia*.

Dicranopteris (dī-krą-nop′tę-ris), *n.* [NL. (Bernhardi, 1806), ‹ *Dicranum* + Gr. *πτερίς*, a fern.] A genus of gleicheniaceous ferns. They are scandent trailing or semi-erect and of mostly indeterminate growth, the pinnatifid pinnæ opposite and wholly lateral, borne in pairs far apart upon the wiry, more or less naked, di- or trichotomously branched rachides. The genus is one of the most abundant of tropical ferns, often forming impassable thickets in open or half-cleared ground. The species are imperfectly known. See *Gleichenia*.

Dicromita (dī-krom′i-tą), *n.* [NL., ‹ Gr. *δίκροος*,

Dicromita agassizi.
(From Bull. 47 U. S. Nat. Museum.)

forked, + *μίτος*, thread.] A genus of deep-sea fishes of the family *Brotulidæ*.

Dict. An abbreviation of *dictionary*.

Dictæan (dik-tē′an), *a.* [L. *Dictæus*, ‹ Gr. *Δικταῖος*, ‹ *Δίκτη*, L. *Dicte*, a mountain in Crete. Cf. *dictamnus* and *dittany*.] Of or pertaining to Mt. Dicte (or Dikte) in eastern Crete, where Zeus is said to have been reared.

dictational (dik-tā′shọn-al), *a.* [*dictation* + *-al*[1].] Of or relating to dictation: as, *dictational* experiences.

The popular mind . . . has retreated from its uncomfortable *dictational* attitude and thrown the whole matter over to the States of the South.
G. W. Cable, in The Century, Jan., 1885, p. 409.

dictative (dik-tā′tiv), *a.* [*dictate* + *-ive.*] Of the nature of dictation; characteristic of one who is in the habit of speaking with authority.

He uttered . . . such other *dictative* mandates as were necessary. *J. F. Cooper*, Pioneers, xxiii.

dictatorialism (dik-tą-tō′ri-al-izm), *n.* [*dictatorial* + *-ism.*] The methods or manner of a dictator or dictatorial person.

Dictionary catalogue. See ★*catalogue*.

Dictyoceratina (dik″ti-ō-se-rat′i-nä), *n. pl.* [NL., ‹ Gr. *δίκτυον*, a net, + *κέρας* (*κερατ-*), horn, + *-ina*[2].] One of the two orders of ceratose sponges (the other being *Dendroceratina*) having the spongin skeleton in the form of a network of anastomosing fibers. It includes the families *Spongidæ*, *Spongeliidæ*, and *Aplysinidæ*.

dictyodrome (dik′ti-ō-drōm), *a.* [Gr. *δίκτυον*, a net, + *-δρομος*, ‹ *δραμεῖν*, run.] Netted-veined, the nerves soon disappearing in the parenchyma of the leaf. See *nervation*, (*a*) (5).

dictyodromous (dik-ti-od′rọ-mus), *a.* Same as ★*dictyodrome*.

dictyoid (dik′ti-oid), *a.* [Gr. *δικτυοειδής*, net-like, ‹ *δίκτυον*, net, + *εἶδος*, form.] Having the form of a net; reticulate; specifically, having both longitudinal and transverse septa: applied to the spores of certain fungi. Same as *muriform*[1] and ★*fenestrate*. See ★*Fenestella*.

dictyonale (dik-ti-ō-nā′lē), *n.*; pl. *dictyonalia* (-liä). [NL., neut. of **dictyonalis*, adj., irreg. ‹ Gr. *δίκτυον*, a net.] In sponges, one of the parenchymal spicules which become fused to form the continuous skeletal framework of the *Dictyonina*.

Dictyonema, *n.* This hydrozoan genus is commonly regarded as closely allied to the *Graptoloidea*, but the fronds are funnel- or fan-shaped and the branches connected by transverse bars or dissepiments, the thecæ or cells being usually quite obscure. It is wholly fossil and ranges from the uppermost beds of the Cambrian into the Devonian.

dictyopteran (dik-ti-op′tę-ran), *a.* and *n.* **I.** *a.* Of or belonging to the *Dictyoptera*.

II. *n.* A member of the *Dictyoptera*.

Dictyopteris, *n.* 2. A genus of the *Phæophyceæ*, or brown algæ, separated from the other members of the family *Dictyotaceæ* by the presence of a midrib.

Dictyosiphon (dik″ti-ō-sī′fon), *n.* [NL. (Greville, 1830), from the tubular, reticulately branching thallus; ‹ Gr. *δίκτυον*, a net, + *σίφων*, a tube.] A genus of the *Phæophyceæ*, or brown algæ, occurring in both the North Atlantic and southern oceans. Seven species and varieties are found on the New England coast. Reproduction, as far as known, is only by unilocular sporangia.

Dictyospongia (dik″ti-ō-spon′ji-ą), *n.* [NL., ‹ Gr. *δίκτυον*, net, + *σπογγιά*, sponge.] A genus of extinct hexactinellid silicious sponges, typical of the family *Dictyospongidæ* and characterized by its obconical form and the smooth exterior of its reticulum. It is of Devonian age.

Dictyospongidæ (dik″ti-ō-spon′ji-dē), *n. pl.* [NL., ‹ *Dictyospongia* + *-idæ.*] A family of silicious hexactinellid sponges, comprising genera of obconical form and growing as simple individuals, in which the reticulum is principally composed of vertical and horizontal strands and the exterior is variously orna-

mented with nodes, tufts, and fringes. The family is closely allied to the living *Euplectella*, but is regarded as wholly of Paleozoic age.

Dictyosporæ (dik-ti-os′pō-rē), *n. pl.* [NL., < Gr. *δίκτυον*, net, + *σπορά*, seed (spore).] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, to include the genera which have spores both transversely and longitudinally septate.

Dictyotales (dik-ti-ō-tā′lēz), *n. pl.* [*Dictyota* + *-ales.*] An order of the *Phæophyceæ* or brown algæ, containing the single family *Dictyotaceæ* (which see).

dictyotic (dik-ti-ot′ik), *a.* [Gr. *δικτυωτός*, made in net fashion, < *δίκτυον*, net.] Pertaining to or characteristic of a network.—**Dictyotic moment,** in certain *Radiolaria*, the period during which the skeleton is formed. Also called *lorication moment. Haeckel.*

dicyanide (dī-sī′a-nid), *n.* [*di-*[2] + *cyanide.*] The name of a class of compounds containing two cyanogen radicals, –CN, in the molecule.

dicycle (dī′si-kl), *n.* [Gr. *δίκυκλος*, two-wheeled, < *δι-*, two-, + *κύκλος*, circle.] A form of two-wheeled vehicle constructed on the plan of the bicycle, but with the two wheels parallel instead of in line.

dicyclic (dī-sik′lik), *a.* [Gr. *δίκυκλος*, two-wheeled: see ★*dicycle.*] 1. In two cycles: said of the calyx-base of the *Crinoidea* when there are two rings of plates between the topmost joint of the column and the first cycle of plates situated in the projection of the ambulacra or arms: contrasted with *monocyclic.*—2. Noting organic compounds the atoms of which form two closed chains, each having one or more atoms in common. Also *bicyclic.*—3. In *bot.*: (*a*) Forming or disposed in two whorls, as a perianth or other series of organs. *Jackson*, Glossary. (*b*) Biennial: said of hapaxanthous herbs which require two seasons to mature. *Pound and Clements.*

dicyclist (dī′si-klist), *n.* [*dicycle* + *-ist.*] One who rides a dicycle. See ★*dicycle. N. E. D.*

dicyemid (dis-i-em′id), *n.* One of the *Dicyemidae.*

dicymose (dī-sī′mōs), *a.* Doubly cymose.

Didache (did′a-kē), *n.* [Gr. *διδαχή*, teaching, < *διδάσκειν*, teach.] The Teaching of the Twelve Apostles, an apocryphal writing discovered in a manuscript of the year 1056 at Constantinople in 1873. The date of its composition was about the end of the first century A. D. It consists of two parts, the first of general ethical teaching, the second relating to church polity and liturgy.

The metropolitan Ph. Bryennios, who discovered and edited the *Didache.* *Encyc. Brit.*, XXXI. 384.

Didachist (did′a-kist), *n.* The unknown author or editor of the Didache. Also called *Didachographer.*

Didachographer (did-a-kog′ra-fėr), *n.* [Gr. *διδαχή*, teaching, + *-γραφος*, < *γράφειν*, write.] Same as ★*Didachist.*

didascalics (did-as-kal′iks), *n.* Matters to be taught: subjects of teaching.

Did not the Athenians, the wisest of nations, . . . give to melopœia, choregraphy, and the sundry forms of *didascalics*, the precedence of all other matters, civil and military? *Peacock*, Crotchet Castle, vi.

didascaly (dī-das′ka-li), *n.*; pl. *didascalies* (-liz). [Gr. *διδασκαλία*, earlier *περὶ διδασκαλιῶν*, '(treatise) concerning (dramatic) productions,' the word meaning teaching, and hence the rehearsing or production of a play, < *διδάσκειν*, teach.] 1. A catalogue of the ancient Greek dramas: such catalogues were prepared by Aristotle, Callimachus, Aristophanes of Byzantium, etc., but are now lost. They contained the names of the dramas and their writers, with dates and other details.—2. A bill or poster, hung in an ancient theater, containing a short notice of the play and performers.

diddle-dee (did-l-dē′), *n.* In the Falkland Islands, a shrub of the antarctic regions, *Empetrum rubrum.* It is used for fuel. See *Empetrum.*

didelphine (dī-del′fin), *a.* Resembling or having the characters of the *Didelphia;* didelphian.

Didelphis, *n.* Same as *Didelphys* and the preferred (though erroneous) form, under the rule of priority.

didelphous (dī-del′fus), *a.* Resembling or having the characters of the *Didelphia* or *Marsupialia.*

didigonal (dī-dig′ō-nal), *a.* [Gr. *δι-*, two-, + E. *digonal.*] In *mineral.*, noting a type of symmetry characterized by a dyad axis (that is, one of two-fold symmetry) in which two planes of symmetry intersect. See ★*symmetry.*

di-diurnal (dī-dī-ėr′nal), *a.* [*di-*[2] + *diurnal.*] Twice a day: as a *di-diurnal* visit. *N. E. D.*

didle (dī′dl), *n.* [Also *didal, didall, dydle, dydel.*] 1. A triangular spade used for ditching.

A sickle to cut with, a *didall* and crome
for draining of ditches, that noies thee at home.
Tusser, Good Husbandrie, p. 38.

2. A scoop or dredge on the end of a long pole, used for clearing watercourses or channels. [Prov. Eng. in both uses.]

didodecahedron (dī-dō″dek-a-hē′drọn), *n.* [*di-*[2] + *dodecahedron.*] A diploid.

didonia (dī-dō′ni-ạ), *n.* [NL., < L. *Dido* (*Didon-*), Dido. The allusion is to her trick with the hide: see *dido.*] Of the isoperimetric curves on a given surface, that one which contains the maximum area.

didromic (dī-drō′mik), *a.* [*didrom-* *y* + *-ic.*] Doubly twisted, as the awns of some grasses.

didromy (did′rọ-mi), *n.* [Gr. *δι-*, two-, + *-δρομος* < *δραμεῖν*, run, + *-y*[3].] In *bot.*, double torsion.

diductor (dī-duk′tọr), *n.* [NL., < L. *diducere*, draw apart, < *dī-*, apart, + *ducere*, draw.] In the articulate orders of the *Brachiopoda*, one of a pair of muscles which by contraction open the valves. These muscles originate in a broad base on the anterior part of the muscular area of the ventral valve and are inserted on the cardinal process of the dorsal valve. There is also a pair of small accessory diductors inserted on the cardinal process and originating on the posterior part of the ventral muscular area.

Didymæa (did-i-mē′ạ), *n. pl.* [NL., < Gr. *Διδύμαια*, neut. pl. of *Διδύμαιος*, a name of Zeus, < *Δίδυμα*, Didyma, near Miletus.] In *Gr. antiq.*, a festival in honor of Zeus and Apollo held at Didyma, near Miletus, in Asia Minor: known only by late coins and inscriptions.

Didymæum (did-i-mē′um), *n.* [NL., < Gr. *Διδυμαῖον*, prop. neut. of *Διδυμαῖος*: see ★*Didymæa.*] A temple or shrine sacred to Zeus and Apollo at Didyma, near Miletus. There was a sacred way leading to it which was built for an earlier temple on the site, and which was bordered by a series of archaic seated figures now in the British Museum. The later building, of which remains still exist, probably dates from about 334 B. C. It was dipteral, with the cella open to the sky.

didymalgia (did-i-mal′ji-ạ), *n.* [NL., < Gr. *δίδυμοι*, the testicles, + *ἄλγος*, pain.] Pain in the testicle.

Didymaspis (did-i-mas′pis), *n.* [NL., < Gr. *δίδυμος*, double, + *ἀσπίς*, a shield.] A genus of fossil fishes from the Old Red Sandstone, having a cephalic shield in two pieces and no cornua at the sides.

didymate, didymated (did′i-māt, -mā-ted), *a.* Same as *didymous.* [Rare.]

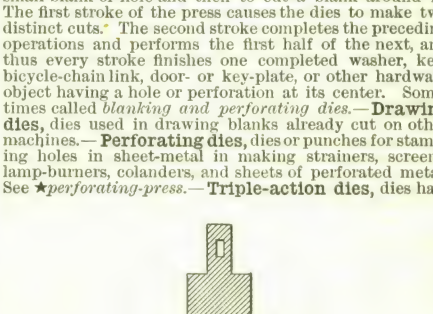
didymia (dī-dim′i-ạ), *n.* [NL., < *didymium.*] In *chem.*, didymium oxid.

Didymitidæ (did-i-mit′i-dē), *n. pl.* [NL., < *Didymites* + *-idæ.*] A family of Triassic ammonites with globose conchs having broad bifid sutural saddles.

didymitis (did-i-mī′tis), *n.* [NL., < Gr. *δίδυμοι*, testicles, + *-itis.*] Same as *orchitis.*

didymoclone (dī-dim′ō-klōn), *n.* [Gr. *δίδυμος*, twin, + *κλών*, a twig.] In the nomenclature of the spicular elements of sponges, a short straight spicule with thickened ends bearing forked branches.

didymoid (did′i-moid), *a.* [Gr. *δίδυμος*, twin, + *εἶδος*, form.] Having two (twin) cells: applied to the spores of certain fungi.



Others [spores] by a cross-partition become twin or 2-celled (*didymoid*); others by further parallel cross-partitions become a row of cells (phragmoid).
Underwood, Moulds, Mildews and Mushrooms, iii.

Didymozoön (did″i-mō-zō′on), *n.* [NL., < Gr. *δίδυμος*, twin, + [*ζῷον*, animal.] The typical genus of the family *Didymozoönidæ. Taschenberg*, 1879.

Didymozoönidæ (did″i-mō-zō-on′i-dē), *n. pl.* [NL., < *Didymozoön* + *-idæ.*] A family of trematoid *Platyhelminthes*, of the order *Malacocotylea* (or *Digenea*). They have an anterior sucker only, mouth within the sucker, and the genital pore terminal, in front of the oral sucker. The worms are hermaphroditic and live in pairs in cysts. They are found on the integument or in the mouth and branchial cavity of marine fishes. The family includes the genera *Didymozoön* and *Nematobothrium.*

die[3], *n.* 9. A hard-metal former or working-face for shaping, cutting, or impressing: usually used in pairs. See defs. 5 and 6. Specifically—(*a*) One of a pair of formers, each with an intaglio

design, between which is introduced the blank of a coin or medal, and by which, under pressure, a relief is stamped on both sides of the blank. (*b*) One of a pair of formers on one of which is an intaglio and on the other the complementary cameo. When a sheet of metal is placed between them, the common design is pressed when the dies come together. (*c*) One of a pair of formers in each of which one half the desired design is incised as an intaglio. The stock to be shaped is introduced between them, and when the dies are brought together, the shape and design are impressed upon the stock. This process of die-forging of stock is in very wide use for the parts of guns, sewing-machines, wrenches, bicycles, and manufactured articles generally. The pressure is secured by the drop-press and the fall of a tup or hammer carrying the upper die on its face. (*d*) One of a pair of formers for stamping spoons, tinware, or brass from the sheet, cutting the blank from the stock, and molding it in one or more operations. Such dies are often quite complex, and involve drawing the metal and stripping it from the female die after forming. (*e*) A surface or anvil to support the stock against the blow and shearing action of a punch, and to allow the punch to pass into a hole or recess in it after the shear is completed. Such dies must have the hole slightly larger than the punch. (*f*) A special shape of cutting-edge and the complementary recess for cutting soles, uppers, or cards of irregular shape. (*g*) A hardened steel roller, engraved with a design in intaglio, used to raise the pattern on the blank by rolling it under pressure. (*h*) The acting face of a power-hammer, even if smooth. Die-forging for articles to be made in large quantities has practically replaced hand-forging in the United States.—**Blanking and perforating dies.** Same as *double* ★*dies.*—**Combination and double-action die,** a die that cuts and bends a blank and continues the work by bending it or drawing it into still another form. See *double-action* ★*dies.*—**Combination die,** a die used first to cut the blank and then to turn or bend its edges into some simple form. It is used in making box-covers, bottoms of cans, toys, lamp-burners, pans, and other shallow ware or the parts of other objects. It is sometimes used with a punch to cut a hole in the blank, as in making fruit-can covers with a fruit-can combination die.—**Cutting and drawing dies.** Same as *double-action* ★*dies.*—**Die-sinking machine,** a milling-machine adapted to the work of milling or cutting out the dies used in drop-hammers.—**Disk-cutting die,** a die used in an armature-disk ★cutting-press (which see).—**Double-action dies,** dies of which the upper one is in two parts, one outside of and moving independently of the other. The outer cuts the blank and pushes it downward into the lower die. Then, by a dwell or pause in its movement, it clamps the blank by the rim, holding it firmly between the upper and the lower die. The smaller inside die is timed to touch the blank just as it is clamped, and, pushing downward, draws or stretches the blank into the center of the lower die. The blank, having been drawn into its permanent form, is left behind by the rising of the upper die and is stripped off the dies by striking the stripping edge of the lower die, dropping through it out of the press. In some dies the finished ware is discharged upward by the rising through the lower die of a push-out plate, that ejects it from the press. Double-action dies are sometimes called *cutting and drawing dies.*—**Double dies,** dies which cut two blanks, one small and one large, side by side, or a small hole and a blank next to it. By feeding the sheet-metal to a press fitted with double dies it is thus possible first to cut a small blank or hole and then to cut a blank around it. The first stroke of the press causes the dies to make two distinct cuts. The second stroke completes the preceding operations and performs the first half of the next, and thus every stroke finishes one completed washer, key, bicycle-chain link, door- or key-plate, or other hardware object having a hole or perforation at its center. Sometimes called *blanking and perforating dies.*—**Drawing dies,** dies used in drawing blanks already cut on other machines.—**Perforating dies,** dies or punches for stamping holes in sheet-metal in making strainers, screens, lamp-burners, colanders, and sheets of perforated metal. See ★*perforating-press.*—**Triple-action dies,** dies having the upper die in two parts moving independently and, in addition, a third die moving upward through the fixed lower die.

Triple-action Dies.

a, the lower die; *b*, the upper cutting and holding die; *c*, the inner drawing die; *d*, the embossing die rising on plunger *f* through sleeve *g*, and meeting die *c*; *e*, supporting-bolster: *i*, stripping-edge; *h*, bed of press.

die[3], *v. t.*—**Dieing-out machine,** in *shoe-manuf.*, a power-machine for stamping out, by means of dies, leather to form the soles or other parts of boots and shoes. It is essentially a stamping-press with a cutting or shaping die and a wooden block on which the leather stock is placed to be cut.

die-back (dī′bak), *n.* A disease of the orange-tree and other citrous fruits, limited to Florida.

The exact cause is unknown, but it is probably due to malnutrition or the excessive use of nitrogenous fertilizers.

Dieb. alt. An abbreviation of the Latin *diebus alternis*, every other day.

die-block (dī′blok), *n.* A heavy block of cast-iron which supports the die in a press or punch. The heavier such a block is made, the better it takes up the shock when the punch strikes the work.

Dieb. tert. An abbreviation of the Latin *diebus tertiis*, every third day.

die-chuck (dī′chuk), *n.* A chuck for holding work that is to be turned or bored in a lathe. It consists of a disk having two or more radial slots, in which steel jaws slide, the sliding motion being imparted by screws which can either be worked independently or together, so that the work can be chucked centrally or eccentrically.

diectasis (dī-ek′tā-sis), *n.* [NL., < Gr. *διέκτασις*, a stretching, < *διεκτείνειν*, stretch, < *διά*, through, + *ἐκτείνειν*, stretch: see *ectasis*.] In *pros.*, lengthening by the insertion of a syllable. See *ectasis*.

From the scientific point of view there is, of course, not a word to be said in favour of such grammatical monsters as *ἔης* and *ἐρίασθε*. But it is perfectly easy to see how they arose from a misunderstanding of the 'Epic *diectasis*.'
Athenæum, Dec. 29, 1894, p. 884.

die-forging (dī′fōr″jing), *n.* The process of forging metal parts in dies: drop-forging. It is done by means of a die, made usually in two pieces, which is fastened in a hammer or press. In one part of the die a piece of hot metal is placed, which is squeezed into the shape of the die when the latter is closed. Forgings which are to be duplicated many times are usually made by this process. See ★*die*³.

die-hole (dī′hōl), *n.* The hole in a punching or drawing die. In punching, the die-hole must be large enough to admit the punch and leave a little clearance; in drawing, it must admit the punch and the material which is being worked.

dieidism (dī-id′izm), *n.* [Gr. *δι-*, two-, + *εἶδος*, form, + *-ism*.] The assumption of two different forms during successive stages in the life-history of an organism. *Sir J. Lubbock*, 1874.

Dielasma (dī-ē-las′mä), *n.* [Gr. *δι-*, double, + *ἔλασμα*, a metal plate.] A genus of Paleozoic terebratuloid *Brachiopoda* having a short brachial loop and a long free hinge-plate which carries the muscles of the dorsal valve.

Dielectric constant, hysteresis, strength. See ★*constant*, ★*hysteresis*, *disruptive* ★*strength*.

dielectrically (dī-ē-lek′tri-kal-i), *adv.* By dielectric action: as, *dielectrically* polarized bodies.

die-nut (dī′nut), *n.* A square nut of hardened steel, in which grooves are cut as in a die, which is used for cleaning the threads of bolts or studs which have been damaged.

die-plate (dī′plāt), *n.* In *steam-* or *gas-fitting*, a screw-plate; a screw-cutting die.

dieresilia (dī″er-ē-sil′i-ä), *n.* [Irreg. < Gr. *διαίρειν*, to separate, divide, + L. *sili(qua)*, pod.] Same as *carcerule* (*b*). *Mirbel*.

dieresilian (dī-er-ē-sil′i-an), *a.* [*dieresilia* + *-an*.] Of or pertaining to a diereselia.

dieresis, *n.* **5.** In crustaceans, the division in the outer branch of the last pleopods.

Dies Iræ (dī′ēz ī′rē). Day of Wrath: the opening words, and hence the name, of a celebrated Latin hymn of the middle ages. It was probably written by Thomas of Celano in the thirteenth century. The Roman Catholic Church still uses it in the funeral service.

Diestian group. See ★*group*¹.

diet¹, *n.*—**Tufnell diet,** a diet containing very little liquid or succulent food.

diethene (dī-eth′ēn), *a.* [*di-*² + *eth(yl)* + *-ene*.] Containing two ethylene groups: as, *diethene* diamine, $NH\langle^{CH_2CH_2}_{CH_2CH_2}\rangle NH$.

diethenic (dī-e-then′ik). *a.* Same as ★*diethene*. —**Diethenic alcohol.** Same as *diethene* ★*glycol*, $CH_2OH.CH_2.O.CH_2CH_2OH$.

dietheroscope (dī-ē-ther′ō-skōp), *n.* [Gr. *δι-*, two-, + *αἰθήρ*, ether, + *σκοπεῖν*, view.] An apparatus adapted to the accurate measurement of the refractions that occur in mirage. It consists of a telescope within which mirrors, or total reflecting prisms, or additional lenses, are so arranged as to cause two images of any object to appear in the field of view. When used without the telescope the dietheroscope can be arranged as a dipleidoscope or sun-dial; the two images of the sun overlap each other and coincide when the sun centers on the meridian.

diethyl (dī-eth′il). *n.* [*di-*² + *ethyl*.] **1.** Same as ★*butane*.—**2.** A combining form used to indicate the presence of two ethyl radicals in the molecule of an organic compound.

diethylamine (dī-eth-il-am′in), *n.* [*di-*² + *ethyl* + *amine*.] A colorless inflammable liquid, $(C_2H_5)_2NH$, prepared by the action of ammonia on ethyl iodide and formed during the putrefaction of fish. It melts at −40° C., boils at 55.5° C., and forms salts with acids similar to those of ammonia.

dietzeite (dēt′sē-īt), *n.* [Named for A. *Dietze*, who first described it.] A mineral consisting of the iodate and chromate of calcium, occurring in yellow prismatic crystals and fibrous masses: found in the soda-nitrate deposits of Atacama.

diff. An abbreviation of *difference*, *different*, or *differs*.

difference, *n.*—**Contact difference of potential.** See ★*potential*.—**Difference hypothesis,** in *psychophys.*, the hypothesis that equal stimulus ratios correspond to equal sensation differences. As an interpretation of the facts of Weber's law, the difference hypothesis is opposed to the ratio hypothesis, which makes equal stimulus ratios correspond to equal sensation ratios.—**Difference limen,** differential limen; in *psychophys.*, the just noticeable stimulus difference; the increment of stimulus which, if all errors of observation were ruled out, would be sufficient to make the resulting sensation just different, with maximal attention, from the original sensation; or the increment of stimulus which, under ordinary conditions of observation after elimination of constant errors, enables the two sensations to be distinguished in 50 per cent. of a large number of comparisons.

With an area of contact of 1 mm. diameter, the *difference limen* on the index finger of the right hand was $\frac{1}{16}$ to $\frac{1}{30}$. *O. Kuelpe* (trans.), Outlines of Psychol., p. 160.

Difference of potential. (*b*) In a social population, more or less capacity for progress, "manifested chiefly in the crossing of cultures."—**Frequency difference,** in *phys.*, the numerical quantity obtained by subtracting one frequency of vibration, such as that belonging to a given wave-length in a line spectrum, from another.—**Method of just noticeable differences, method of least differences, method of minimal differences,** in *psychophys.*, one of the four classical methods of sensation measurement. In its later and more perfect forms the method is usually known as the *method of minimal changes* or as the *method of limits*. The essential feature of the procedure is that one stimulus is kept constant, while another, taken at first as sensibly like or sensibly different from the standard, is varied by minimal steps until a judgment of difference or of lapse of difference is attained. *O. Kuelpe* (trans.), Outlines of Psychol., p. 57.—**Phase difference,** in *elect.*, the difference in time or in angle, when representing a cycle by 360 degrees, between two electric waves, as an alternating current and electromotive force.—**Resting difference,** an electromotive current which is found to exist on comparing the cross-section of a nerve with its longitudinal section. Also called *nerve current* and *demarcation current*.—**Second differences,** in *math.*, the differences between successive terms of a series of first differences. In the same way the differences between the second differences give *third differences*, and so on.

Thus we may say that unity which appears in the first column is the *first difference* of the numbers in the second column; the *second difference* of those in the third column; the *third difference* of those in the fourth, and so on.
Jevons, Prin. of Science, I. ii. 9.

To split the difference, to come to agreement by compromise, the difference between the two parties being divided equally; give and take equally in coming to an agreement.

difference-tone (dif′ẹ-rens-tōn), *n.* A third tone set up by the sounding of two simple tones, whose pitch-number is the difference between the pitch-numbers of the two primary tones, or between some multiples of these pitch-numbers; one of the two forms of combinational tone.—**First difference-tone,** in *acoustics*, a combinational tone produced by the simultaneous sounding of two musical tones which differ in pitch. It has a frequency, *f*, expressed by the formula: $f = u - l$, where *u* is the frequency of the higher and *l* of the lower of the two tones.—**Second difference-tone,** in *acoustics*, a difference-tone having a frequency $f = 2l - u$, where *l* and *u* are the frequencies of the lower and upper tones producing the combination.

differentiability (dif-ẹ-ren″shi-a-bil′i-ti), *n.* The property of being differentiable.

differentiable, *a.* **2.** In *math.*, having a determinate finite or determinate infinite derivative.

differential. I. *a.* **4.** In *mech.*: (*a*) So constructed that the resulting motion is the algebraic sum of two unequal motions in opposite directions. The resistance moves through a path which is the difference of two velocities impressed by the applied force. Hence a slow motion of the resistance is the consequence of the moving force acting through a considerable space, and a small moving force overcomes great resistance. Used in hoisting-pulleys, double screws, and similar devices.

(*b*) Having differing velocities, as automobile driving-shafts when rounding corners and curves, and rollers for grinding grain.—**5.** Selective; having different effects upon different kinds of material: as, *differential* weathering.

The facts collected pointed to the conclusion that this type of valley was due to *differential* preglacial decay.
Geog. Jour. (R. G. S.), XV. 652.

Differential brake, count, counter-shaft, etc. See ★*brake*³, ★*count*¹, ★*counter-shaft*, etc.—**Differential winding.** (*b*) A winding consisting of two sections, which are excited by two different currents, as a shunt and a series current, in such a manner that their magnetic effects are in directions opposite to each other.—**Exact differential equation.** See ★*equation*.

II. *n.*—**Differential of a function,** the increment of a function so changed or 'doctored' that its ratio to the increment of the independent variable equals the limit of the ratio of the unchanged increments.—**Exact differential.** If $\delta M/\delta x = \delta N/\delta y$, then $Mdy + Ndx$ is an *exact differential*.—**Second differential.** Since the differential of a function is, from its definition, usually a new function of the independent variable, its differential may be taken, and is called the *second differential*. The second differential of *y* is written d^2y. In the same way we get the *third differential*, d^3y; etc.

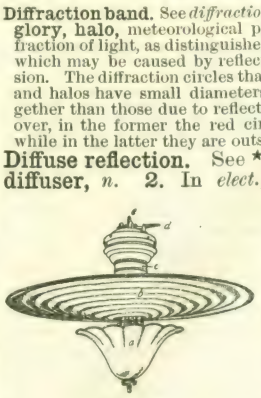
differentiant, *n.* **II.** *a.* Of or pertaining to a discontinuous variation, sport, mutation, or inherited change in the type of a race or species.

Of course Mr. Bateson may say that there is really differentiation there; it is he, however, who identifies "*differentiant*" diversity and "discontinuous variation."
Biometrika, April, 1903, p. 332.

Differentiant variation. See ★*variation*.

differentiate, *v. t.* **5.** In *hist.* and *cytol.*, to reveal or resolve structures in (a cell, tissue, or organ) by treating with some stain or reagent.

differentiation, *n.* **5.** In *geol.*, the general process by which a parent mass of molten rock of intermediate composition, standing in a reservoir for long periods of time, breaks up or differentiates into several fractional derivatives both more acidic and more basic. While the process is obscure and inadequately understood, it accounts for the contrasted lavas which often come from the same eruptive center at different times. *Geikie*, Textbook of Geol., p. 710.—**Induced differentiation,** in *biol.*, the opinion that the process of cell-multiplication and divergent specialization which takes place during the development of the organism, and to which its characteristics of form and structure are due, is the effect of the conditions under which the development takes place: as contrasted with the opinion that it is innate or inherent in the constitution, organization, or architecture of the egg. See *inherent* ★*development* and ★*innate*, 3.—**Inherent differentiation,** in *biol.*, the process of cell-multiplication and divergent specialization which takes place during the development of the organism, and to which its characteristics of form and structure are due, regarded as the effect of the constitution, organization, or architecture of the egg. See *induced* ★*differentiation*, *induced* ★*development*, *inherent* ★*development*.—**Law of differentiation,** the law, formulated by Herbert Spencer, that society in its evolution, like the cosmos and the living organism, passes from the homogeneous to the heterogeneous.—**Logarithmic differentiation,** the method of passing to logarithms before differentiating.—**Magmatic differentiation,** the differentiation of molten masses of rock, which are technically called magmas. See ★*differentiation*, 5.—**Precocious differentiation,** the presence, in an egg or embryo, of latent or imperceptible organization before it exhibits visible organization.



diffidation (dif-i-dā′shọn), *n.* [ML. *diffidatio(n-)*, < *diffidare*, renounce, defy: see *defy*.] Formal relinquishment or renunciation of faith, allegiance, or amity: solemn defiance of an enemy; declaration of hostilities: as, to send a letter of *diffidation*.

The primeval legislation of the Teutons permitted to the vassal . . . the right of *diffidation*—he might undo his faith.
Sir F. Palgrave, Hist. of Normandy and Eng., II. i.

Diffraction band. See *diffraction*.—**Diffraction corona, glory, halo,** meteorological phenomena caused by diffraction of light, as distinguished from similar phenomena which may be caused by reflection, refraction, or dispersion. The diffraction circles that occur in coronas, glories, and halos have small diameters and are much closer together than those due to reflection and dispersion; moreover, in the former the red circles are within the blue, while in the latter they are outside of the blue.

Diffuse reflection. See ★*reflection*.

diffuser, *n.* **2.** In *elect.*, a reflector placed above an arc-lamp for the purpose of more uniformly distributing its light.—**Concentric diffuser,** a diffuser containing a number of concentric rings or waves, shaped so as to distribute the light uniformly over the lower hemisphere, and enameled with a color tinged slightly yellow, so as to compensate for the bluish light of the arc.

Diffuser.

a, outer globe; *b*, concentric diffuser; *c*, case; *d*, cut-out switch; *e*, suspension-hook.

diffuser - chamber (di-fū′zėr-chām″bėr), *n.* A box or chamber in which a spray of water, oil, or other liquid is spread out into very fine particles.

diffusibility, *n.* **2.** Capability of spreading widely: as, the *diffusibility* of scarlet fever.

diffusion, *n.*—**Anodal diffusion,** dialysis effected by means of galvanism.—**Coefficient of diffusion.** See ★*coefficient*.—**Diffusion constant.** See ★*constant*.—**Diffusion process,** an important method of extracting sugar in aqueous solution from beet-roots cut into slices: sometimes applied also to sugar-cane.—**Fractional diffusion.** Same as *atmolysis*.—**Law of diffusion.** (*a*) In *phys.*, the law, formulated by Fick, that in a mixture

of salt and water, so distributed that the layers of equal density are horizontal, the number of grams of salt which will pass in unit time through unit area of a horizontal plane is $R\frac{dn}{dx}$; where n is the number of grams of salt per cubic centimeter in the layer in which the plane is located, x is the height (above a fixed plane) of the layer, and R is a constant called the *diffusivity*. (*b*) In *psychol.*, the law, formulated by A. Bain, that "according as an impression is accompanied with feeling, the aroused currents diffuse themselves freely over the brain, leading to a general agitation of the moving organs, as well as affecting the viscera." *Emotions and Will*, p. 4.—**Thermal diffusion.** See *diffusion of heat*, under *diffusion*.

diffusionist (di-fū′zhọn-ist), *n.* One who believes or adheres to some theory of diffusion, as the *diffusion of taxes* (which see, under *diffusion*).

diffusivity, *n.* 2. Specifically, in *phys.*, a physical constant expressing the rate of diffusion of a dissolved substance in the solvent. The diffusivity (R) is defined by the equation: $a = R\frac{dn}{dx}$, in which a is the number of grams of the dissolved substance which will pass in unit time through unit area of a horizontal plane, n the number of grams of the substance per cubic centimeter of the layer in which the plane lies, and x is the height of the layer above a fixed plane. Horizontal layers in the solution are everywhere of equal density.—**Thermal diffusivity,** the quantity $\frac{k}{cp}$, in which k is the conductivity for heat of the substance, c its specific heat, and p the density. Also called *thermometric conductivity*.

dig-dig (dig′dig), *n.* Same as ★*dik-dik*.

digeny (dij′e-ni), *n.* Digenous reproduction. *Syd. Soc. Lex.*

digestant (di-jes′tant), *a.* and *n.* [*digest* + *-ant*[1].] **I.** *a.* Aiding or improving digestion.

II. *n.* An agent used to promote digestion.

digesting-flask (di-jes′ting-flȧsk), *n.* In *chem.* and *bacteriol.*, a flask used to contain liquids which are to be maintained at a desired temperature for a longer or shorter time.

Digestion products. (*a*) *The products of albuminous digestion.* The first step in the process of proteolytic digestion depends upon the reaction of the digestive medium. If this is acid, acid albumin results; if it is alkaline, alkaline albuminate results. Coincidently the denaturization of the albuminous molecule is effected, whereby the individual physical characteristics of the different members of the group are destroyed. This is followed by the formation of albumoses, of which two classes are recognized, namely, primary and secondary forms. Conjointly the albumoses may be viewed as cleavage-products of the original albumins, and some of their characteristics no doubt are referable to the smaller size of the molecule. As a class they are much more soluble than the albumins, and some members of the group are not altogether indiffusible. Three primary products are recognized, namely, a *heteroalbumose*, a *proto-albumose*, and a *gluco-albumose*. The first mentioned is an antibody (in the sense of Kühne), the second a hemibody; the third is an exclusive carrier of the carbohydrate group. The secondary products, or *deuteroalbumoses*, result from the primary forms on further digestion, and are divided into three groups, according to their behavior toward ammonium sulphate. These are termed the *deuterofractions A*, *B*, and *C*. Of these *A* and *B* are composed of at least two albumoses each. One member of the *A* fraction is known as *thio-albumose*, from the large amount of sulphur which it contains. As regards the subsequent fate of the albumoses, it was formerly thought that peptic digestion led to an end-product, a peptone, in which the hemi- and anti-groups of the albuminous molecule were still united (Kühne's amphopeptone), while on tryptic digestion this complex was broken down, with the formation of hemipeptone and antipeptone. The hemipeptone was characterized by the supposed readiness with which it was further decomposed by trypsin into leucin, tyrosin, and other crystalline products; but as a matter of fact the substance itself has thus far had only a hypothetical existence. Kühne's antipeptone, on the other hand, could be isolated apparently as a chemical unity. It can be obtained from a mixture of digestive products, after removal of the soluble albumins and albuminates and after salting out the albumoses with ammonium sulphate in neutral, acid, and ammoniacal solution, by precipitation with absolute alcohol. The investigation of this antipeptone within recent years has shown that the substance is not a unity, however, but a mixture of different products, some of which still give the biuret reaction (peptones), while others are further removed in structure from the original albumins and no longer show the characteristic color-change of the 'peptones' (the peptoids). The various components of the antipeptone fraction have not all been isolated as yet, but it appears from Kutscher's researches in the case of fibrin antipeptone that this contains considerable amounts of arginin, lysin, and histidin. The antipeptone of Kühne, in the original meaning of the term, has thus no existence, and further researches have shown that an essential difference, as far as the end-products are concerned, does not exist between peptic and tryptic digestion, and that in either case proteolysis leads to the production of crystalline bodies, which partly belong to the mono-amido acids and partly to the diamido acids, while still others exist which are as yet but little known. Of the manner in which the cleavage of the albumoses to the end-products of proteolytic digestion occurs, and of the intermediary bodies which are formed during the process, our knowledge is still imperfect. But it appears from the researches of E. Fischer and his pupils that the cleavage may take its course over products in which amido-acid radicals are united with one another in gradually diminishing numbers. Such bodies are designated *dipeptides*, *tripeptides*, and *polypeptides*, according to the number of amido-groups which are present in combination. Bodies of this order have been synthetically produced, and have also been demonstrated among the products of peptic and tryptic digestion, such as Siegfried's kyrin, obtained from glutin, which apparently consists of one molecule of arginin, one of lysin, one of glutaminic acid, and two of glycocoll. While formerly only two proteolytic ferments were known to be concerned in the digestion of albumins, Cohnheim has recently shown that a third ferment of this order is found in the mucous membrane of the intestinal tract. This is known as *erepsin*. In its general behavior and the rapidity of its cleavage-action this ferment resembles trypsin, but it differs from this in its inability to attack the native albumins, while acid albumins and albumoses are readily broken down to end-products which no longer give the biuret reaction. All these data suggest that the older concept of the restitution of the albumins from relatively complex bodies in the intestinal mucous membrane must be abandoned and that the reconstruction of the molecule takes place from much simpler bodies. Where this occurs is as yet a matter of speculation, but there are reasons to believe that it may take place beyond the intestinal barrier, and possibly in the tissues of the body at large. (*b*) *The products of carbohydrate digestion.* Carbohydrate digestion is effected by the inverting ferments of the saliva, the pancreatic juice, and the enteric juice. The effect is quite analogous to what occurs in the case of the albumins, that is, there is a cleavage of the more complex bodies to relatively simple substances. The number of these end-products, owing to the smaller size of the molecule of the original material, is, however, much smaller, and all belong to one group, the monosaccharides, of which dextrose (glucose) and levulose are familiar examples. These are derived from corresponding disaccharides, which can be compared to the dipeptides, and in which two monosaccharine molecules still exist in combination. The most notable representatives of this order are maltose, which on further digestion yields two molecules of dextrose; lactose, which breaks up into dextrose and galactose; and cane-sugar, which similarly gives rise to dextrose and levulose. The disaccharides, in turn, result from the complex polysaccharides, with the intermediary formation of bodies which are comparable to the albumoses. Starch, which is the most important food-stuff belonging to this order, is thus first transformed into erythrodextrine, this into achroödextrine, and this in turn into the disaccharides maltose and isomaltose. Absorption of polysaccharides and disaccharides as such does not take place in the gastro-intestinal canal. (*c*) *The products of fat-digestion.* The digestion of fats is effected by the lipase or steapsin of the pancreatic juice and the enteric juice. This is quite analogous to the digestion of albumins and carbohydrates, and also leads to the liberation of the essential radicals of the original food-material. The end-products are glycerin and the fatty acids which enter into the construction of the fat-molecule, which latter, accordingly, vary with the nature of the fat ingested, the most important being palmitic acid, stearic acid, and oleic acid. In this form the fats are absorbed and then reconstructed from the component radicals.—**Primary digestion,** conversion of the food into chyle.—**Secondary digestion,** assimilation of food after its digestion in the stomach and intestine.

Digestive pocket, digestive sac, in *bot.*, an investment of the secondary rootlets which pass through the primary root to the exterior.—**Digestive fever.** See ★*fever*[1].

digger, *n.* 4. One who digs for gold; a gold-miner. [Australia.]

diggerdom (dig′ėr-dum), *n.* Gold-diggers collectively. [Australia.]

digging, *n.*—**Bar diggings,** gold-washing claims on a bar or shallow bank in a river.

digital. I. *a.*—**Digital variation.** See ★*variation*.

II. *n.* 4. One of those primaries, or quill-feathers, most commonly four in number, which are attached to the phalanges of the second and third digits of a bird's wing.

digitaleïn (dig-i-tā′lē-in), *n.* [*digitalis* + *-e-in*[2].] A colorless glucoside, $C_{32}H_{38}O_9$, contained in the leaves of *Digitalis purpurea* and *D. lutea*. It forms rounded microscopic granules and is narcotic in its physiological action.

digitalinic (dij″i-ta-lin′ik), *a.* [*digitalin* + *-ic*.] Derived from digitalin.—**Digitalinic acid,** a colorless crystalline compound, said to be formed by boiling digitalin with sodium hydroxid.

digitally (dij′i-tal-i), *adv.* With, or by means of, the fingers; with respect to the fingers.

digitate-pinnate (dij′i-tāt-pin″āt), *a.* Digitate with pinnate leaflets, as the sensitive plant.

digitation, *n.* 3. Finger-action; use of the fingers; fingering; manipulation with the fingers.

digitato-pinnate (dij″i-tā-tō-pin′āt), *a.* Same as *digitately pinnate* (which see, under *digitately*).

digitigrady (dij′i-ti-grā-di), *n.* [As *digitigrade* + *-y*[3].] The state or condition of being digitigrade or of walking on the toes, as do cats and dogs; digitigradism: contrasted with ★*plantigrady*.

digitin (dij′i-tin), *n.* [*digit(alis)* + *-in*[2].] An inert crystalline constituent of the leaves of the foxglove, *Digitalis purpurea*.

digitinervate (dij″i-ti-nėr′vāt), *a.* [L. *digitus*, finger, + *nervum*, nerve, + *-ate*[1].] Same as *digitinerved*.

digitinervous (dij″i-ti-nėr′vus), *a.* Same as *digitinerved*.

digitipartite (dij″i-ti-pär′tīt), *a.* [L. *digitus*, finger, + *partitus*, parted.] In *bot.*, digitately parted. See *digitate*, 1, and *parted*, 3.

digitipinnate (dij″i-ti-pin′āt), *a.* [L. *digitus*, finger, + *pinnatus*, pinnate.] Same as *digitately pinnate* (which see, under *digitately*).

digitogenin (dij-i-toj′e-nin), *n.* [*digit(alis)* + *-gen* + *-in*[2].] A colorless compound, $C_{15}H_{24}O_3$, formed by the action of dilute hydrochloric acid on commercial digitalin. It crystallizes in needles which soften at about 250° C.

digitonin (dij-i-tō′nin), *n.* [*digit(alis)* + *-one* + *-in*[2].] A colorless levorotatory glucoside, $C_{27}H_{46}O_{14}5H_2O$, found in commercial digitalin. It crystallizes in slender needles which soften and turn yellow at 235° C.

digitophyllin (dij″i-tō-fil′in), *n.* [*digit(alis)* + Gr. *φύλλον*, leaf, + *-in*[2].] A crystalline glucoside, $C_{22}H_{52}O_{10}$, a powerful heart-poison contained in foxglove, *Digitalis purpurea*.

digitoplantar (dij″i-tō-plan′tär), *a.* [L. *digitus*, finger, toe, + *planta*, sole.] Relating to the sole of the foot and to the toes.

digitoxigenin (dij-i-tok′si-je-nin), *n.* [*digitox(in)* + *-gen* + *-in*[2].] A colorless crystalline compound, $C_{22}H_{32}O_4$, formed by the action of alcoholic hydrochloric acid on digitoxin. It melts at 230° C.

digitoxose (dij-i-tok′sōs), *n.* [*digitox(in)* + *-ose*.] A colorless dextrorotatory sugar, $C_6H_{12}O_6$, formed, together with digitoxigenin, by the action of alcoholic hydrochloric acid on digitoxin. It crystallizes in prisms or plates and melts at 102° C.

diglossia (dī-glos′i-ą), *n.* [NL., < Gr. *δίγλωσσος*, two-tongued, < *δι-*, two-, + *γλῶσσα*, tongue.] A condition of having a double tongue.

diglottism (dī-glot′izm), *n.* [*diglot* + *-ism*.] The use of two languages among a people, or of words derived from two languages.

> Words run much in couples, the one being English and the other French. . . . In the following . . . from [Chaucer's] Prologue, there are two of these *diglottisms* in a single line:—
>
> 'Trouthe and honour, fredom and curteisye.'
>
> . . . 'Trouthe' is 'honour,' and 'fredom' is 'curteisye.'
>
> *J. Earle*, Philol. Eng. Tongue, ¶ 78.

diglottist (dī-glot′ist), *n.* One who speaks two languages.

diglyoxaline (dī-glī-ok′sa-lin), *n.* Same as ★*glycosine*.

diglyphic (dī-glif′ik), *a.* [Gr. *δι-*, two-, + *γλυφή*, a carving, + *-ic*.] Having two siphonoglyphs, as certain polyps: contrasted with ★*monoglyphic*.

dignathus (dig′na-thus), *n.*; pl. *dignathi* (-thī). [NL., < Gr. *δι-*, two-, + *γνάθος*, jaw.] In *teratol.*, a monster having a double lower jaw.

dignitarial (dig-ni-tā′ri-al), *a.* [*dignitary* + *-al*[1].] Of, belonging or peculiar to, a dignitary: as, the perversity of the *dignitarial* mind.

digonal (dig′ō-nal), *a.* [Gr. *δι-*, two-, + *γωνία*, angle, + *-al*[1].] Noting an axis of binary or twofold symmetry; specifically, one of the six axes of an isometric crystal normal to the dodecahedral faces. See ★*symmetry*.

Digonopora, *n. pl.* 2. A section of hermaphrodite mollusks in which there are separate orifices for the male and female organs: opposed to *Monogonopora*. It contains the *Linnæidæ*, *Vaginulidæ*, *Onchidiidæ*, and many opisthobranchs, including all the *Pteropoda*.

digraphic, *a.* 2. Written in two distinct alphabets or characters, such as longhand and shorthand: as, a *digraphic* copy-book.

> This was a bilingual (or *digraphic*, as both inscriptions are in the same language), published by De Vogué.
>
> *Scribner's Monthly*, June, 1880, p. 205.

digrediency (dī-grē′di-ęn-si), *n.* In *math.*, the relation of digredient sets of variables.

digredient (dī-grē′di-ęnt), *a.* [L. *digrediens*, ppr. of *digredi*, digress: see *digress*.] In *math.*, said of two sets of variables if on replacing the variables of the first set by linear functions of themselves, those of the second set become also replaced by *different* linear functions of themselves.

digressionary (di-gresh′ọn-ā-ri), *a.* [*digression* + *-ary*.] Of the nature of a digression; digressive.

digynious (dī-jin′i-us), *a.* In *bot.*, belonging to the *Digynia*, in the Linnæan classification. See *Digynia*.

dihalogen (dī-hal′ō-jen), *a.* [*di-*[2] + *halogen*.] In *chem.*, containing two atoms of a halogen element, replacing two atoms of hydrogen, as in dichlorbenzene, $C_6H_4Cl_2$, or chlorbrombenzene, C_6H_4ClBr.

dihedral, *a.* **II.** *n.* In *geom.*, a pair of consecutive faces of an angloid.

dihexagonal, *a.* 2. In *crystal.*, noting a type of symmetry characterized by a hexad axis

(that is, one of six-fold symmetry) in which six planes of symmetry intersect. See ★*symmetry*.

dihydrate (dī-hī′drāt), *n.* [Gr. *δι-*, two-, + *ὑδωρ*, water, + *-ate*[1].] In *chem.*, a compound containing two molecules of water, commonly of water of crystallization.

dihydrated (dī-hī′drā-ted), *a.* In *chem.*, containing two molecules of water, commonly of water of crystallization. Thus, alabaster is *dihydrated* calcium sulphate, $CaSO.2H_2O$. *G. Lunge*, Sulphuric Acid, II. 21.

dihydric (dī-hī′drik), *a.* [Gr. *δι-*, two-, + *ὑδωρ* (*ὑδρ-*), water, + *-ic.*] In *chem.*, containing two atoms of basic or easily replaceable hydrogen: as, sulphuric acid is a *dihydric* acid (H_2SO_4).

dihydriodide (dī-hī′dri-ō-did or -dīd), *n.* [*di-*[2] + *hydr(ogen)* + *iod(ine)* + *-id* [1].] In *chem.*, a compound formed by union with the elements of two molecules of hydriodic acid.

dihydrobromide (dī-hī-drō-brō′mid or-mīd), *n.* [*di-*[2] + *hydro(gen)* + *brom(ine)* + *-ide*[2].] In *chem.*, a compound formed by union with the elements of two molecules of hydrobromic acid.

dihydrochlorid (dī-hī-drō-klō′rid), *n.* [*di-* + *hydro(gen)* + *chlor(ine)* + *-ide*[1].] In *chem.*, a compound formed by union with the elements of two molecules of hydrochloric acid.

dihydrolutidin (dī-hī-drō-lū′ti-din), *n.* A ptomaïne ($C_7H_{11}N$) found in cod-liver oil.

dihydroxy-acid (dī-hī-drok″sī-as′id), *n.* In *chem.*, an acid containing two combining units of the radical hydroxyl (HO), as tartaric acid. *T. E. Thorpe*, Dict. Applied Chem., I. 666.

dihydroxyl (dī-hī-drok′sil), *a.* [*di-*[2] + *hydroxyl.*] In *chem.*, containing two combining units of the radical hydroxyl (HO): as, tartaric acid is a *dihydroxyl* acid.

dihydroxytartaric (dī-hī-drok″si-tär-tar′ik), *a.* [*di-*[2] + *hydr(ogen)* + *oxy(gen)* + *tartaric.*] Noting an acid, a colorless crystalline compound, $HOOCC(OH)_2C(OH)_2COOH$, formed by the oxidation of dihydroxymalic acid. It melts at 98° C. Also *dioxytartaric*.

diiodide (dī-ī′o-did), *n.* [*di-*[2] + *iodide.*] In *chem.*, a compound containing two atoms of iodine.

diiodocarbazol (dī-ī″ō-dō-kär′ba-zol), *n.* [*di-*[2] + *iod(ine)* + *carbazol.*] A yellow odorless crystalline compound, $C_{12}H_6I_2.NH$, obtained by adding iodine to boiling carbazol. It is antiseptic, insoluble in water, but easily soluble in ether, chloroform, and hot alcohol.

diiodoform (dī-ī′ō-dō-fôrm), *n.* [*di-*[2] + *iodoform.*] A bright-yellow crystalline compound, $C_2H_2I_2$, obtained by the action of iodine on acetylene diiodide. It is an antiseptic.

diiodosalol (dī-ī″ō-dō-sal′ol), *n.* [*di-*[2] + *iod(ine)* + *salol.*] An odorless, tasteless crystalline compound, $C_6H_2I_2(OH)CO_2C_6H_5$, obtained by condensation of diiodosalicylic acid with phenol. It is an antiseptic. Also called *phenyl ester of diiodosalicylic acid*.

diionic (dī-ī-on′ik), *a.* [*di-*[2] + *ion* + *-ic.*] In *phys. chem.*, producing two ions by electrolytic dissociation. *Physical Rev.*, Dec., 1904, p. 370.

diisatogen (dī-is′a-tō-jen), *n.* [*di-*[2] + *isat(in)* + *-gen.*] A red compound, $C_{16}H_8O_4N_2$, prepared by the action of sulphuric acid on dinitro-diphenyl-diacetylene. It crystallizes in needles, and is readily converted into indigo by reducing agents.

Diisoteria (dī″i-sō-tē′ri-ä), *n. pl.* [Gr. Διασωτήρια, neut. pl., ⟨ Ζεύς (g. Διός), Zeus, + σωτήρ, savior.] In *Gr. antiq.*, an Attic festival held at about the fourteenth day of the month Scirophorion (June) in honor of Zeus Soter and Athena Soteira.

Dika almonds, butter. See ★*almond*, ★*butter*[1].

dik-dik (dik′dik), *n.* [Also *dig-dig;* African.] A small African antelope, *Madaqua phillipsi*.

> No game here at this season, except the little *dik dik;* all is silent and desolate. *Geog. Jour.* (R. G. S.), XI, 28.

dike *n.*—**Blue dike,** a bluish-gray clay soil. [New Brunswick and Nova Scotia.] See the extract.

> Near the edge of the upland, it [the soil] passes into a gray or bluish-gray clay called '*blue dike.*'
> *Dawson*, Acadian Geol., iii. 25.

Composite dike, in *petrog.*, a dike formed by intrusions of two different rocks at different times into one fissure. —**Corky dike.** See ★*corky.*—**Intersecting dikes,** in *geol.*, dikes which cross each other, the later one being always continuous as compared with the older one which is cut by it. See *dike*, 5.—**Multiple dike,** in *geol.*, several parallel dikes which essentially form one whole yet are separated by intervening masses of other rock. See *dike*, 5.—**Sand-dike,** a name given by the miners in the Scottish coal-fields to a former stream-course filled with sand.—**Sandstone dike,** sandstone filling a fissure and resembling an intrusive dike. The fissure is generally believed to have been formed during an earthquake and to have been filled with an uprising emulsion of sand and mud which has afterward hardened.

diketone (dī-kē′tōn), *n.* [*di-*[2] + *ketone.*] One of a class of organic compounds the molecules of which contain two carbonyl radicals, neither of which is linked to hydrogen or hydroxyl. The diketones are subdivided, according to the degree of proximity of the carbonyl groups, into 1, 2 or *α*-diketones, having the complex RCOCOR; 1, 3 or *β*-diketones, $RCOCH_2COR$; 1, 4 or *γ*-diketones, $RCOCH_2CH_2COR$; etc.

dil. An abbreviation of the Latin *dilutus*, dilute.

dilactic (dī-lak′tik), *a.* [*di-*[2] + *lactic.*] **1.** Of or pertaining to dilactic acid.—**2.** Noting a compound which contains two univalent lactyl radicals, $CH_3CHOHCO$, in the molecule.—**Dilactic acid,** a hypothetical acid, $HOCOCH(CH_3)OCOCH(OH)CH_3$, known only in the form of its esters and other derivatives, which are obtained from ethyl chlorpropionate and ethyl sodium lactate.

dilapidation, *n.* **3.** In *eccles. law*, the amount charged against an incumbent for damages incurred during his incumbency.—**4.** In *geol.*, the process by which exposed ledges become diminished or destroyed through the falling away of fragments of rock; also, the material broken off.

dilatant, *n.* **3.** In *phys.*, the liquid or gas, within a dilatometer, the expansion of which is to be measured.

dilatation, *n.* **5.** In *elasticity*, change of volume under stress.

dilatational (dil-ā-tā′shọn-ạl), *a.* Of or pertaining to dilatation.

dilatometer (dil-ā-tom′e-tėr), *n.* [Irreg. ⟨ L. *dilatare*, expand (see *dilate*), + Gr. *μέτρον*, a measure.] An instrument for the determination of the changes of volume of a substance or for the measurement of its linear expansion. The form used for the determination of the relative expansion of liquids is essentially a thermometer with a greatly enlarged bulb. The bulb, including a portion of the neck, is filled with the liquid the expansion of which is to be measured, and the position of the end of the liquid column in the neck is noted at different temperatures. Fig. 1 shows such a dilatometer used in the

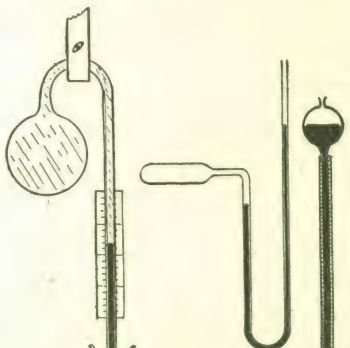


Fig. 1. Fig. 2.

determination of the coefficient of expansion of liquids containing gases in solution. The neck is bent vertically downward and the open end is submerged in a vessel of mercury. Upon cooling the liquid within the bulb the mercury column rises in the neck, and its position is noted upon a scale attached to the neck for that purpose. For the measurement of the expansion of gases an instrument similar to the air-thermometer is employed. The dilatometer in this case consists of a glass bulb (fig. 2) the neck of which is connected with a mercury manometer. The gas may thus be maintained at constant pressure and its change of volume observed, or the pressures may be varied in such a way as to keep the gas at constant volume. For the measurement of the cubic expansion of solids a modification of the dilatometer for liquids has been employed by Dulong and Petit, Regnault, Kopp, and others. In such determinations the solid is inclosed in a glass bulb or tube (fig. 3) the opening of which is then drawn out to form a capillary neck. The space within the bulb not occupied by the solid is completely filled with mercury. When the dilatometer is heated a certain amount of mercury is driven out by the combined expansion of the solid and of the liquid. This is weighed, and from its volume the expansion of the material is computed. The linear expansion of solids is measured in some cases by the direct observation, through microscopes, of parallel lines drawn upon the surface of the test-piece. This method, known as that of Roy and Ramsden, can be employed only when expansion to be measured is that of a long bar, and even for such purposes it has been superseded by more delicate methods. In one form of dilatometer for more refined measurements of the linear coefficient of expansion the bar is fixed at one end, while to the other

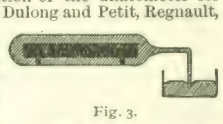

Fig. 3.

end, which is free to move with the change of length of the bar, is attached a device for tipping a small mirror. By observing the movement of the image of a scale seen in this mirror, very minute changes in the length of the bar may be detected. The most refined form of dilatometer for the measurement of the linear expansion of solids, and that which is usually employed for this purpose (especially in cases where the size of the test-piece is small, as in crystals), depends upon the interference of light. This extremely sensitive method, in which expansion is measured in the terms of wave-length of light, was first employed by Jamin, whose device, further perfected and developed by Michelson, has become one of the most important of optical instruments, the ★*interferometer* (which see). A special form of interferometer adapted for the rapid and accurate measurement of the linear expansion of solids is the *Abbe dilatometer*, the principle of which is indicated in fig. 4. In this instrument a glass plate, *gg*, is mounted above the specimen, S. Both surfaces are plane, but not parallel, so that a thin wedge of air lies between them. A ray of monochromatic light from above is in part reflected from the lower face of *gg*, and in part from the surface of the specimen. These two reflected rays interfere, and a system of straight parallel interference-bands is formed. Expansion of S diminishes the thickness of the layer of air and consequently the difference of path of the interfering light. From the resulting movement of the fringes the expansion is computed in terms of the wave-length of the light employed. Neither the observing telescope nor the devices for illumination are shown in the diagram. Various other forms of interferometer are employed as dilatometers.

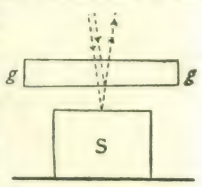

Fig. 4. Abbe Dilatometer.
g, *g*, glass plate; *S*, specimen.

dilatometric (dil-ā-tọ-met′rik), *a.* Of or pertaining to the measurement of expansion; relating to or determined by means of the dilatometer. *Nature*, July 2, 1903, p. 216.

dilatory, *a.* **II.** *n.* In *law*, a plea or other proceeding in a suit which is intended to delay the suit without reference to its merits.

Dilemmatic demonstration. See ★*demonstration*.

Dilephila, *n.*—**Dark-veined Dilephila,** a cosmopolitan sphingid moth, *Dilephila gallii*, found in Europe, Asia, and North America. Its larvæ feed on grape and purslane.

dilettante (dil-e-tän′te), *v. i.*; pret. and pp. *dilettanted*, ppr. *dilettanting*. [*dillettante, n.*] To play the dilettante.

dilettantist (dil-e-tän′tist), *a.* [*dilettante* + *-ist.*] Affected with or characterized by dilettantism: as, *dilettantist* philanthropy.

dilettantize (dil-e-tän′tiz), *v. i.*; pret. and pp. *dilettantized*, ppr. *dilettantizing*. [*dilettante* + *-ize.*] Same as ★*dilettante*.

Diligence against the heritage, in *Scots law*, an execution in favor of a creditor against the real property of his debtor.—**Diligence against the person,** in *Scots law*, an execution by which a creditor proceeds against the person of his debtor.—**Diligence against witnesses,** in *Scots law*, a process by which the attendance of witnesses is compelled.—**Diligence incident,** in *Scots law*, a process to cite witnesses and examine havers, similar to the English subpœna for witnesses and order for taking testimony and for interrogatories.—**Diligence to examine havers.** Same as ★*diligence incident.*—**Second diligence,** in *Scots law*, a second execution or process issued when the first has been disregarded or disobeyed, similar to the English attachment for contempt.—**Summary diligence,** in *Scots law*, an execution or process issued in a summary manner.

dilituric (dī-li-tū′rik), *a.* Noting an acid, a compound. $CO(N_2H_2)C_3H(NO_2)O_2.3H_2O$, formed by the action of fuming nitric acid on barbituric acid. It crystallizes in quadratic plates or prisms which dissolve in water or dilute alkali with an intensely yellow color. Many of the salts explode when heated. Also *nitrobarbituric*.

dilli, *n.* See ★*dilly*[4].

dill-water (dil′wâ″tėr), *n.* An aromatic carminative water prepared from the volatile oil of dill or by distilling dill fruit with water.

dilly[4] (dil′i), *n.* [Also *dilli;* said to be native Australian.] A bag woven of grasses or of fur twisted into cord; a small bag of any material. [Australia.]

dilly-bag (dil′i-bag), *n.* Same as ★*dilly*[4].

diloph (dī′lof), *a.* [Gr. *δίλοφος*, of two crests, ⟨ *δι-*, two-, + *λόφος*, a crest.] Having two arms dichotomous, as in the spicules of sponges. A diloph tetraclone is a four-armed spicule with two of the arms thus bifurcated.

dilophous (dil′ọ-fus), *a.* [Gr. *δίλοφος*, of two crests, + *-ous.*] In sponge-spicules, having two of the rays forked or branched.

dilution, *n.* **3.** In *homeopathy*, the diffusion of a given quantity of a drug in ten or one hundred times the same quantity of water. A given quantity of this solution is again diffused in ten or one hundred times the quantity of water. Each of these processes is called a *dilution*, and the resulting preparation is said to be of the tenth, fifteenth, etc., decimal or centesimal dilution according to the number of times the operation was repeated and as the quantity of water in each operation was ten or one hundred

times that of the dissolved drug.—**Heat of dilution,** the heat developed by adding to a solution, containing a gram-molecule of the dissolved substance, an amount of the solvent sufficient to double the volume.—**Ostwald's dilution law,** in *phys. chem.*, the law that if v is the number of liters of a solution which contains a gram-molecule of the dissolved electrolyte, and m that fraction of the gram-molecule of the electrolyte which is electrolytically dissociated into ions, the equation $\frac{m^2}{(1-v)m}$ = constant is true for certain classes of electrolytes. Good electrolytes do not obey the law, the reason for this being unknown. For good electrolytes empirical relations have been suggested; one is *Rudolphi's dilution law* or *formula*, $\frac{m^2}{(1-v)\sqrt{v}}$ = constant; another is *Van t'Hoff's dilution law*, $\frac{m^{\frac{3}{2}}}{(1-v)\sqrt{v}}$ = constant.

Diluvian epoch, a subdivision of geologic time following the culmination of the glacial epoch and embracing the retreat and melting of the great ice-sheet with the attendant floods.

diluvium, *n.*—**Alpine diluvium,** the loose material from an alpine glacier rearranged by water.

dim. An abbreviation (*b*) of *diminutive;* (*c*) of the Latin *dimidius,* one half.

dimagnesic (dī-mag-nē′sik), *a.* [*di-*[2] + *magnes(ium)* + *-ic.*] In *chem.*, containing two atoms of magnesium.

dimanganous (dī-mang′ga-nus), *a.* [*di-*[2] + *mangan(ese)* + *-ous.*] In *chem.*, containing two atoms of manganese.

Dime museum. See ★*museum.*

Dimension lines, shingle, stone. See ★*line*[2], ★*shingle*[1], ★*stone.*—**Equation of dimensions.** See ★*equation.*—**Four dimensions,** length, breadth, thickness, and a fourth analogous in character. For exhibiting the relations between any three magnitudes, x, y, z, it is convenient to regard them as the coördinates of a point in space; similarly any four magnitudes may be regarded as the coördinates of a point in space of four dimensions. Lagrange said mechanics may be conceived as a geometry of four dimensions, in which time serves as fourth coördinate.—**Fourth dimension,** a dimension of like character added to length, breadth, and thickness; in *math.*, an (assumed) unknown direction extending in two senses, 'apo-' and 'eiso-', from every particle of a cube, and such that the slightest infinitesimal motion of the cube in this direction would take it completely out of itself. In four-dimensional space a right hand can become a left hand by simple movement.

Prophetic and well-timed were the parting words to the speaker of the illustrious Tchebicheff: "Take to Kinematics, it will repay you; it is more fecund than geometry; it adds a *fourth dimension* to space." So also said Lagrange.

Sylvester, Discoveries Mech. Conver. of Motion, p. 17.

If it became necessary to assume the existence of five atoms at equal distances from one another in a molecule, there would be evidence of a *fourth dimension.*

C. H. Hinton, in Harper's Mag., July, 1904, p. 232.

Rough dimensions, dimensions which are not exact, but which are larger than the finished measurement will be.

Dimensional equation, formula. See ★*equation,* ★*formula.*

dimere (dī′mēr), *n.* [Gr. *διμερής,* of two parts, < *δι-,* two-, + *μέρος,* a part.] In the skeletons of the reticulate hexactinellid sponges, a mesh of the second order, made by the intersection of the secondary spicular bands of a primary quadrule.

dimeric (dī-mer′ik), *a.* [*dimer(ous)* + *-ic.*] **1.** Bilateral, or having a right and a left side, as in most animals: contrasted with ★*polymeric.*

Comparison of bilateral or *dimeric* animals with rotate or polymeric animals.

L. H. Bailey, Smithsonian Rep., 1897, p. 455.

2. In *bot.*, same as *dimerous.*

Dimerosporium (dī″mer-ō-spō′ri-um), *n.* [NL., < Gr. *διμερής,* of two parts, + *σπορά,* seed (spore).] A genus of epiphytic fungi of the family *Perisporiaceæ,* having membranous or subcarbonaceous perithecia seated upon a subiculum of brown mycelium. The spores are hyaline or brown, and have two cells, as the name indicates. About 60 species have been described, occurring mostly on living leaves in tropical or subtropical regions. *D. mangiferum* causes the black blight of the mango. See *black* ★*blight* (*a*).

dimery (dim′e-ri), *n.* [NL. **dimeria,* < Gr. *διμερής,* of two parts.] In *bot.*, the condition of being dimerous.

In the pentamery and *dimery* of Dicotyledones there is usually a posterior sepal with a pair of lateral prophylls.

Encyc. Brit., XXV. 433.

dimetaphosphate (dī″met-a-fos′fāt), *n.* [*di-*[2] + *metaphosphate.*] In *chem.*, a salt which contains the radical P_2O_6, resulting from the coalescence of two combining units of the radical PO_3 of a metaphosphate: as, potassium *dimetaphosphate,* $K_2P_2O_6$.

dimethyl (dī-meth′il), *n.* [*di-*[2] + *methyl.*] **1.** Same as ★*ethane.*—**2.** A combining form used in organic chemistry to indicate the presence of two methyl-groups in the molecule of a compound.

dimethylacetal (dī-meth-il-as′e-tal), *n.* A colorless ethereal liquid compound, $CH_3.CH(OCH_3)_2$, obtained by the oxidation of a mixture of ethyl and methyl alcohol. It is anesthetic.

dimethylamine (dī-meth-il-am′in), *n.* A colorless gas, $(CH_3)_2NH$, present in herring-brine, and formed by the putrefaction of fish, gelatin, and proteid material in general. It is prepared by the action of sodium hydroxid on nitrosodimethylaniline, boils at 7.2–7.3° C., and resembles ammonia in its odor and in the constitution of its salts.

Dimethylaniline orange. See ★*orange*[1].

dimethylarsine (dī-meth-il-är′sin), *n.* A colorless mobile liquid, $(CH_3)_2AsH$, prepared by the action of zinc and hydrochloric acid on cacodyl chlorid. It boils at 36° C., has the odor and poisonous properties characteristic of cacodyl derivatives, and burns spontaneously in air. Also called *cacodyl hydrid.*

dimethylpyrazin (dī-meth″il-pī-raz′in), *n.* See ★*glycoline.*

dimethylpyrone (dī-meth-il-pī′rōn), *n.* [*di-*[2] + *methyl* + *pyrone.*] A colorless compound, $CO\langle\begin{matrix}CH:C(CH_3)\\CH:C(CH_3)\end{matrix}\rangle O$, prepared by the action of hydriodic acid on dehydracetic acid. It forms crystals which melt at 132° C. and boil at 248–249° C. Also called *a a′-dimethyl-γ-pyrone.*

dimethylxanthin (dī-meth-il-zan′thin), *n.* [*di-*[2] + *methyl* + *xanthin.*] Same as *theobromine:* found in tea.

Dimetian (di-mē′shian), *a.* In *geol.*, noting crystalline rocks in Pembrokeshire which have been regarded by some English geologists as of Precambrian age, but by others, and especially by Geikie, as eruptives intruded into Cambrian strata.

dimetient (di-mē′shi-ent), *a.* [L. *dimetiens* (*-ent-*), ppr. of *dimetīri,* measure: see *dimension.*] In *math.*, characterizing the dimensionality. *De Morgan.* [Rare.]

dimetria (dī-mē′tri-ạ), *n.* [NL., < Gr. *δι-,* two-, + *μήτρα,* womb: see *matrix.*] Congenital abnormality consisting in the presence of a double uterus.

diminish, *v. i.* **2.** To taper, as a column.—**Law of diminishing returns.** See ★*law*[1].

Diminished column, stile. See ★*column,* ★*stile*[1].

diminishing-rod (di-min′ish-ing-rod), *n.* A device on a cotton-roving machine for giving the bobbin of roving its conical ends. *Nasmith,* Cotton Spinning, p. 207.

diminution, *n.*—**Figure of diminution,** in *musical notation,* a numeral, usually with a curve inclosing the notes affected, signifying that the latter are to be performed as a group with less than their normal time-value. Such groups are the *duole, triplet, quartole, quintole, sextole,* etc., the signs for which are ②, ③, ④, ⑤, ⑥, etc., respectively.

dimity, *n.* **2.** A thin cotton fabric, either white or colored, resembling muslin, distinguished by raised threads or cords which run lengthwise of the cloth.—**Dimity ruffling,** dimity cloth plaited longitudinally in weaving.

dimmer (dim′ėr), *n.* In *elect.*, an adjustable reactive coil used for reducing the amount of light of incandescent lamps.

dimolecular (dī-mō-lek′ū-lạr), *a.* [*di-*[2] + *molecular.*] Same as ★*bimolecular.*

Since that time Piloty has practically completed the proof of the dependence of the green or blue color upon the monomolecular condition and of the white or colorless form upon the *dimolecular* condition.

Amer. Chem. Jour., Aug., 1903, p. 111.

dimorphism, *n.* **6.** In *petrog.*, modifications produced within the magma of an igneous rock by mineralizing or crystallizing agents before its solidification. *Delesse,* 1858.

dimorphobiotic (dī-môr″fō-bī-ot′ik), *a.* [Gr. *δι-,* two-, + *μορφή,* form, + *βίωσις* (*βιωτ-*), way of life, + *-ic.*] Exhibiting alternation of generations and having a parasitic and a non-parasitic stage in the course of the complete life-history. *Jour. Exper. Med.,* VI. 79.

Dimorphoceratidæ (dī-môr″fō-se-rat′i-dē), *n. pl.* [NL., < *Dimorphoceras* (*-cerat-*) + *-idæ.*] A family of Carboniferous ammonoid cephalopods or goniatites with discoidal shells and digitate lobes.

dimple, *n.*—**Capillary dimple,** a slight depression in a liquid surface; specifically, that made by bringing the ivory or glass zero-point of a barometer or manometer into contact with the mercury in the tube or cistern. The point has its proper position when the capillary dimple is barely visible.

Dimyaria, *n. pl.* **2.** A group or branch of *Nemertini* in which the dermal musculature consists of an external coat of circular muscles and an internal coat of longitudinal muscles. It includes the anoplous forms belonging to the orders *Protonemertini, Mesonemertini,* and *Metanemertini.* Contrasted with ★*Trimyaria.*

dimyaric (dim-i-ā′rik), *a.* [*Dimyaria* + *-ic.*] Having the character of the *Dimyaria,* that is, having two muscle-layers: as, *dimyaric* nemertines.

Dimylidæ (dī-mil′i-dē), *n. pl.* [NL., < *Dimylus,* the type genus, + *-idæ.*] A family of small insectivorous mammals comprising extinct species from the Tertiary of Europe. *Schlosser,* 1887.

din[2] (dēn), *n.*; pl. *dinim* (dē′nēm). [Heb.] **1.** (*a*) A judgment. (*b*) A law suit; a plea or cause. (*c*) A law or precept. There are four rabbinical codes containing all the dinim (precepts), ecclesiastical and secular, by which every dayan, or judge, is guided.

2. See ★*pahad.*

Dinantian (di-nan′shian), *n.* [*Dinant,* a city and district in Belgium, + *-ian.*] In *geol.*, the lower division of the Carboniferous system in Europe. Equivalent to the Culm or Calcaire carbonifère.

dinaphthyl (dī-naf′thil), *n.* [*di-*[2] + *naphth(alene)* + *-yl.*] One of three isomeric compounds, $(C_{10}H_7)_2$: they are colorless, and are prepared by passing naphthalene and stannic-chlorid vapor through a red-hot tube. They are distinguished as *α,α-, α,β-,* and *β,β*-dinaphthyl or binaphthyl. The first crystallizes in rhombohedral plates melting at 154° C. and boiling at 360° C.; the second crystallizes in hexagonal plates melting at 79–80° C.; the third forms fluorescent plates melting at 187° C.

dinar, *n.* **2.** A money of account in Persia, equal to one ten thousandth of the tuman.—**3.** A current silver coin of Servia, equal to 100 paras or about 20 United States cents.

Dinarian (di-nā′ri-ạn), *n.* [*Dinara,* a mountain in Dalmatia, + *-ian.*] In *geol.*, a division of the Triassic rocks in the Mediterranean province, as recognized by Austrian geologists. It lies above the Scythian series, which is the lowest member of this formation, and below the Tirolian.

Dinaric (di-nar′ik), *a.* [*Dinara,* a mountain in Dalmatia, + *-ic.*] Noting a region of the Alps.—**Dinaric race,** a European type, found along the coast of the northern Adriatic sea, characterized by being tall, very short-headed, with long dark wavy hair, delicate, straight, or aquiline nose, and slightly tawny skin.

Deniker, Races of Man, p. 333.

Dinaritidæ (din-ạ-rit′i-dē), *n. pl.* [NL., < *Dinarites* (< *Dinara:* see ★*Dinarian*) + *-idæ.*] A genus of Triassic ammonoid cephalopods, allied to *Ceratites,* but having fewer and simpler lobes. See *Ceratites,* 1.

dinder (din′dėr), *n.* [A dial form of **dinner,* AS. *dinor* (OF. *denier*), < L. *denarius:* see *denier*[2], *dinar, denarius.*] A local name in some parts of England, particularly in Shropshire, for one of the small coins, called *denarii* by the Romans, frequently found on the sites of old Roman settlements. [Prov. Eng.]

Dinematichthys (dī-nem-a-tik′this), *n.* [NL., < Gr. *δι-,* two-, + *νῆμα* (*τ-*), thread, + *ἰχθύς,* fish.] A genus of small fishes of the family *Brotulidæ,* inhabiting the coral reefs.

dinergate (dī-nėr′gāt), *n.* [Gr. *δεινός,* terrible (large) + *ἐργάτης,* a worker.] A general term for a worker major, or 'soldier,' among species of ants with polymorphic workers.

dinerillo (dē-nä-rēl′yō), *n.* [Sp., dim. of *dinero,* penny.] A small copper coin of Philip III. and Philip IV. of Spain, and of Louis XIII. and Louis XIV. of France, struck for Valencia in the seventeenth century.

dinero, *n.* **2.** A Spanish coin, the denier.

dingar (ding′gär), *n.* [E. Ind.] The giant East Indian honey-bee, *Apis dorsata. Cambridge Nat. Hist.,* VI. 70.

ding-dong (ding′dông), *v.* **I.** *intrans.* To sound with the regularity of the ding-dong of a bell.

II. *trans.* To assail or pester with a continual succession of complaints, requests, taunts, gibes, or the like. See *ding*[2], *v. t.*

dinge (dinj), *v. t.* [Also *dindge* (obs.): a var. of *ding, v.* Cf. *sing* and *singe.*] To dent, or make a depression or hollow on the surface of, as by a knock or blow; dint; bash: as, a *dinged* silk hat. [Prov. Eng.]

dinge (dinj), *n.* [Also *dindge* (obs.), < *dinge, v.*] A dent or depression made by a blow; a bruise or bash: as, a *dinge* on a copper kettle; a hat full of *dinges.* [Prov. Eng.]

dingle[1], *n.*, **2.** (*b*) The roofed-over space between the kitchen and the sleeping-quarters in a logging-camp, commonly used as a storeroom.

Dingle beds. See ★*bed*[1].

dingle-bird (ding′gl-bėrd), *n.* Same as *bell-bird,* 2.

dinic (din′ik), *a.* and *n.* **I.** *a.* Same as *dinical.* **II.** *n.* A medicinal remedy for giddiness.

Dinichthys (dī-nik′this), *n.* [Gr. *δεινός*, terrible, + *ἰχθύς*, a fish.] A genus of gigantic arthrodirous Devonian fishes, regarded as pertaining to the family *Coccosteidæ*, in which the head-shield is comprised of one large median occipital plate, and three pairs of lateral and two pairs of anterior plates, the trunk also being plated. The dental plates are movable, without teeth, but both the mandibles and the maxillæ are sharpened to a cutting edge which may be cuspidate. The species are characteristic of the Devonian black shales in Ohio and New York, and European species are also known. Head-shields have been found in Ohio which measure nearly 4 feet in length.

Diniferida (din-i-fer′i-dä), *n. pl.* [NL., < Gr. *δῖνος*, a whirl, + L. *ferre*, bear, + *-ida.*] An order of *Dinoflagellidia* having two transverse furrows. It includes the families *Peridinidæ* and *Dinophysidæ.*

dining-car (dī′ning-kär), *n.* A railway-car fitted up as a dining-room or restaurant, and supplied with a kitchen, pantry, refrigerator, etc.

dining-coach (dī′ning-kōch), *n.* Same as ★*dining-car.*

dining-hall (dī′ning-hâl), *n.* A large dining-room, as in a hotel or college.

dining-table (dī′ning-tā″bl), *n.* The table in a dining-room, dining-hall, or saloon on shipboard, round which people gather to dine; a dinner-table.

dinitrobenzene (dī-nī″trō-ben′zēn), *n.* [*di-*[2] + *nitro(gen)* + *benzene.*] A compound, $C_6H_4(NO_2)_2$, derived from benzene by the substitution of two nitro-groups for two hydrogen atoms. *Orthodinitrobenzene* is formed in small quantity when a mixture of sulphuric and nitric acids acts on benzene. Its crystals melt at 117.9° C. *Metadinitrobenzene* is the chief product obtained from the action of a mixture of sulphuric and nitric acids on benzene. Its yellow crystals melt at 91° C. At the same time a little *paradinitrobenzene* is formed. Its crystals melt at 171–172° C.

dinkel (ding′kel), *n.* [G.] The one-grained wheat, *Triticum monococcum.* See *wheat.* Also called *einkorn.*

dinky (ding′ki), *a.* and *n.* [Also *dinkey;* a prov. word of imitative nature, in effect a var. of *dicky*, as applied to small things.] **I.** *a.* **1.** Small and neat; trim; tidy; nice. [Prov.]—**2.** Small but pretentious; small and insignificant. [Prov.]

II. *n.*; pl. *dinkies* (-kiz). **1.** Something small or insignificant. [Colloq.]—**2.** An apparatus of smaller size than the usual standard, as a pony- or donkey-engine for doing work which requires small horse-power.—**3.** A pair of wheels on an axle used to carry the weight of a beam or pole in erecting structures or wire lines. The axle is usually curved upward in the middle, with a lever affixed, so that the weight can first be raised off the ground, in a sling, and then wheeled to the desired point.

dinner-pad (din′ėr-pad), *n.* A pad placed over the region of the stomach during the application of a plaster-of-Paris or other jacket. After the jacket has hardened the pad is removed, thus allowing room for distention of the stomach when it receives food.

dinner-pail (din′ėr-pāl), *n.* A tin pail, with a cover, in which working-men carry, or are supposed to carry, their 'dinner' or midday meal to their work. "A full dinner-pail" for the working-man figures in party rhetoric. [U. S.]

dinner-pair (din′ėr-pār), *n.* In parliamentary usage, a pair formed by two members of opposite parties during the dinner-hour, the vote of the one balancing the vote of the other in case of a division while both are absent, that is, from 7 to 10 P. M. [Eng.]

dinner-party (din′ėr-pär″ti), *n.* A party of guests invited to dinner and for social intercourse or entertainment.

dinner-ring (din′ėr-ring), *n.* Same as ★*banquet-ring.*

dinner-set (din′ėr-set), *n.* A set of dishes of the same pattern for use on the dinner-table: as, a *dinner-set* of Limoges ware.

Dinobolus (dī-nob′ō-lus), *n.* [Gr. *δεινός*, terrible, + *ὀβολός*, an obol.] A genus of atrematous *Brachiopoda*, of the family *Trimerellidæ*, having thick-shelled subcircular valves with interior muscular platforms slightly excavated for the viscera. They are of Silurian age.

dinoceratous (dī-nō-ser′a-tus), *a.* Belonging or related to the *Dinocerata*, a group of fossil perissodactyl mammals.

dinomania (din″ō-mā′ni-ä), *n.* [NL., < Gr. *δῖνος*, whirling, + *μανία*, madness.] Same as ★*dancing-mania.*

Dinoperca (dī-nō-pėr′kä), *n.* [NL., < Gr. *δεινός*, terrible (large) + *πέρκη*, perch.] A genus of serranoid fishes found on the coasts of Baluchistan and Sind. Only one species, *D. petersii*, is known.

Dinophilea (dī-nof-i-lē′ä), *n. pl.* [NL., < *Dinophilus* + *-ea.*] A class of *Trochelminthes*, represented by a minute worm-like organism, *Dinophilus*, inhabiting salt or brackish water. The body is composed of from 5 to 8 segments, and bears a head or prostomium and a short ventral tail. The surface of the body bears cilia distributed uniformly or in rings. The genus *Dinophilus* is sometimes regarded as belonging to the *Archiannelida.*

Dinophis (din′ō-fis), *n.* [Gr. *δεινός*, terrible, + *ὄφις*, a serpent.] A fossil marine serpent, from the North American Eocene, which attained a length of 30 feet: probably synonymous with *Palæophis.*

dinopid (din′ō-pid), *n.* and *a.* **I.** *n.* A member of the family *Dinopidæ.*

II. *a.* Having the characteristics of or belonging to the family *Dinopidæ.*

dinornithid (dī-nôr′ni-thid), *n.* One of the *Dinornithidæ.*

dinornithine (dī-nôr′ni-thin), *a.* [NL. *dinornis* (*-ornith-*) + *-ine*[2].] Pertaining to or having the characters of the extinct genus *Dinornis* and its allies.

dinornithoid (dī-nôr′ni-thoid), *a.* Allied to or resembling *Dinornis* or the *Dinornithidæ.*

dinos (dī′nos), *n.*; pl. *deinoi* (*-noi*). [Gr. *δῖνος*, *δεῖνος*, a name of various round vessels.] In *Gr. antiq.*, a large bowl without a foot.

dinosaur, *n.*—**Chambered dinosaur,** the extinct reptile *Camarosaurus:* so named from the cavities in its vertebræ.—**Duck-billed dinosaur,** the dinosaurian reptile *Trachodon* or *Hadrosaurus*, characterized by the broad, beak-like snout on the skull.

Duck-billed Dinosaur (*Hadrosaurus mirabilis*).
After a restoration by Knight.

dinotherioid (din-ō-thē′ri-oid), *a.* and *n.* **I.** *a.* Related to or having the characters of the extinct ungulate *Dinotherium.*

II. *n.* An ungulate mammal related to *Dinotherium.*

Dinotherium sand. See ★*sand*[1].

diobely (dī-ob′ė-li), *n.* [Gr. *διωβελία*, < *δι-*, two-, + *ὀβολός*, obol.] In *Gr. antiq.*, an allowance of two obols a day to each citizen present during the Athenian festivals, to pay for seats in the theater.

diodangium (dī-ō-dan′ji-um), *n.*; pl. *diodangia* (-ä). [NL., < Gr. *διοδος*, a passage, + *ἀγγεῖον*, a vessel.] A sporangium in the *Archegoniatæ. Van Tieghem.*

diode[1] (dī′ōd), *a.* [Gr. *δι-*, two-, + *ὁδός*, way.] Of two ways; in *elect. teleg.*, same as *duplex.*

diode[2] (dī′ōd), *n.* [Gr. *δίοδος*, a way through, a passage, < *διά*, through, + *ὁδός*, way.] In *bot.*, the rudimentary or transition body in vascular plants which develops into the prothallium. *Van Tieghem.*

diodogone (dī-od′ō-gōn), *n.* [Gr. *δίοδος*, a passage, + *γόνος*, generation.] In *bot.*, a sporangium in the *Spermatophyta* which generates diodes; the embryo-sac and pollen-sac. *Van Tieghem.*

diodophyte (dī-od′ō-fīt), *n.* [Gr. *δίοδος*, a passage, + *φυτόν*, plant.] A plant which produces diodes; any vascular plant. *Van Tieghem.*

dicœciodimorphic (dī-ē-shiō-di-môr′fik), *a.* In *bot.*, same as *heterogonous*, which see.

dicœciodimorphous (dī-ē-shiō-di-môr′fus), *a.* Same as ★*dicœciodimorphic.*

dicœciopolygamous (dī-ē″shiō-pō-lig′a-mus), *a.* In *bot.*, dicœciously polygamous, that is, having some individuals unisexual and others hermaphrodite.

dicestrous (dī-ēs′trus), *a.* [Gr. *δι-*, two-, + *οἶστρος*, stimulus.] **1.** Relating to the first of two successive periods of sexual desire.—**2.** Relating to the brief interval between two successive periods of sexual desire.—**Dicestrous cycle,** the first of two successive periods of sexual desire, plus a brief interval of rest (*dicestrum*).

dicestrum (dī-ēs′trum), *n.*; pl. *dicestra.* [NL.: see ★*dicestrous.*] A brief interval (from 6 to 14 days) between two periods of sexual desire in animals.

Diogenodonta (dī-oj″e-nō-don′tä), *n. pl.* [NL., < Gr. *διογενής*, sprung from Zeus, + *ὀδούς*, (*ὀδοντ-*), a tooth.] A group of advanced and modern pelecypod mollusks in which the hinge has lateral and cardinal teeth on a true hinge-plate, the former not exceeding two and the latter three in number.

dionine (dī′ō-nin), *n.* A trade-name of ethyl morphine hydrochlorid. It is employed as an ocular anesthetic in place of cocaine.

Dionysian, *a.* **4.** Of or pertaining to (*a*) Dionysius the Areopagite, mentioned in Acts xvii. 34, who is said to have been made bishop of Athens in the year 50 by the Apostle Paul; or (*b*) a pseudo-Dionysius who, about 360–450 A. D., wrote several ecclesiastical works attributed by some to the Areopagite.

Dionysic (dī-ō-nis′ik), *a.* Same as *Dionysiac.*

Diopsidæ (dī-op′si-dē), *n. pl.* [NL., < *Diopsis* + *-idæ.*] A family of acalyptrate *Diptera* of which *Diopsis* is the type. They are small black flies, rather stout, with stout front thighs and the head much widened. They are found in shady wooded places.

dioptometry (dī-op-tom′e-tri), *n.* [Gr. *διά*, through, + *ὀπτ(ικός)*, of seeing, + *μέτρον*, measure.] Measurement of the power of accommodation and of the refraction of the eye.

dioptral (dī-op′tral), *a.* Same as *dioptric.*

dioptric, I. *a.*—**Dioptric curve.** Same as *Cartesian oval.*—**Dioptric globe.** See ★*holophane.*—**Dioptric micrometer.** See ★*micrometer.*

dioptry, *n.*—**Prism dioptry,** a unit of the deflecting power of prisms; a deflecting power equivalent to that of a prism which displaces the transmitted ray through an angle subtended by one centimeter at a distance of one meter: used chiefly by oculists.

dioscorine (dī-os′kō-rin), *n.* [*Dioscorea* + *-ine*[2].] A greenish-yellow, crystalline, very poisonous bitter alkaloid, $C_{13}H_{19}O_2N$, contained in Java gadung, *Dioscorea hirsuta.* It melts at 43.5° C., and acts on the central nervous system like picrotoxin, but is less energetic.

diose (dī′ōs), *n.* [*di-*[2] + *-ose.*] Same as ★*biose.*

The first volume deals with the monosaccharides, the chief subheads being: *dioses*, trioses, tetroses and methyl derivatives. *Jour. Phys. Chem.*, Oct., 1904, p. 509.

diosmin (dī-os′min), *n.* [Gr. *δι-*, two-, + *ὀσμή*, odor, + *-in*[2].] Same as ★*barosmin.*

diosphenol (dī-ō-sfē′nōl), *n.* [*dios(min)* + *phenol.*] A crystalline phenol-like body, $C_{10}H_{18}O_2$, found in buchu-oil from *Parapetalifera betulina* (*Barosma betulina* of Bartling and Wendland). It melts at 82° C. Also called *Barosma camphor*, and *Buchu camphor.*

Diospyraceæ (dī-os-pi-rā′sē-ē), *n. pl.* [NL. (Drude, 1879), < *Diospyros* + *-aceæ.*] A family of dicotyledonous sympetalous plants of the order *Diospyrales*, the ebony family: long known by the name *Ebenaceæ* (which see). It is typified by the genus *Diospyros*, and includes 7 genera and about 318 species, by far the larger number of which belong to *Diospyros.* See *Diospyros, Maba*, and *Royena.*

Diospyrales (dī-os-pi-rā′lēz), *n. pl.* [NL., < *Diospyros* + *-ales.*] An order of dicotyledonous sympetalous plants embracing the families *Sapotaceæ, Diospyraceæ, Styracaceæ*, and *Symplocaceæ.* They are trees or shrubs with simple leaves and often valuable wood.

diota (dī-ō′tä), *n.*; pl. *diotæ* (-tē). [L. *diota*, < Gr. *δίωτος*, two-eared, < *δι-*, two-, + *οὖς* (*ὠτ-*), ear.] A Greek vase with two ears or handles, similar to the amphora.

diotic (dī-ot′ik), *a.* [Gr. *δίωτος*, two-eared, < *δι-*, two-, + *οὖς* (*ὠτ-*), ear, + *-ic.*] Involving the use of both ears in the perception of a single tone or clang: opposed to ★*dichotic.*

Diotocardia (dī″ō-tō-kär′di-ä), *n. pl.* [NL., < Gr. *δίωτος*, two-eared, + *καρδία*, heart.] A division of the gastropod *Mollusca* based on the presence of two auricles in the heart: contrasted with ★*Monotocardia.*

dioxine (dī-ok′sin), *n.* [*di-*[2] + *ox(ygen)* + *-ine*[2].] Same as ★*gambine B.*

dioxogen (dī-ok′sō-jen), *n.* A trade-name for a 3-per-cent. solution of hydrogen peroxid in water.

dioxybenzol (dī-ok-si-ben′zōl), *n.* [*di-*[2] + *oxy(gen)* + *benzol.*] A diatomic phenol which results from benzene on the substitution of two hydroxyl groups for two hydrogen atoms, for example, pyrocatechin, resorcin, and hydroquinone.

dioxytartaric (dī-ok″si-tär-tar′ik), *a.* [*di-*[2] + *oxy(gen)* + *tartaric.*] Same as ★*dihydroxytartaric.*—**Dioxytartaric acid.** Same as ★*dihydroxytartaric acid.*

dip, *v.* **I.** *trans.* **8.** To submerge (an animal, as sheep, except the head) in a warm decoction of sulphur, tobacco, or the like, for the destruction of injurious parasites and germs of skin-diseases.

II. *intrans.* **4.** In the manufacture of turpentine, to gather resin from boxes or cups. [U. S.]

dip, *n.,* **5.** (*c*) In *ceram.,* a preparation of colored slip for decorating pottery. See ★*dip-ware.*

7. A small dumpling made of batter dropped into boiling water a spoonful at a time and boiled for about five minutes. Usually in the plural. [Australia.]—**8.** Vertical distance below a given level.—**9.** A depression or sink on the surface of the earth.—**10.** Crude turpentine. [U. S.]—**11.** Among stock-breeders, 'tinge' or 'touch,' that is, a slight strain, of another breed or variety.—**12.** The depth to which anything is submerged, as a floating vessel, the floats or buckets of a paddle-wheel, etc.—**Unconformability of dip,** in *geol.,* the lack of correspondence in the dip of strata produced when a later series of sediments is deposited upon the upturned edges of an older and tilted series.

dipa (dē-pä′), *n.* [Tagalog *dipá* = Bisaya *dopá.*] In the Philippine Islands, a measure of length; a fathom.

dipartite (dī-pär′tīt), *a.* [L. *di-,* apart, + *partitus,* parted.] Divided into various parts: as, *dipartite* writings. *Ruskin.*

dipartition (dī-pär-tish′ọn), *n.* [*dipartite* + *-ion.*] Sundering; division: as, the *dipartition* of the sheep from the goats on the judgment-day.

dipentene (dī-pen′tēn), *n.* [*di-*[2] + Gr. *πέντε,* five, + *-ene.*] A terpene, $C_{10}H_{16}$, found in a great variety of volatile oils: it boils at 181° C. and is optically inactive. According to its origin, it has been called by a great variety of names.

dipeptide (dī-pep′tid), *n.* [*di-*[2] + *pept(ic)* + *-ide*[1].] A condensation-product of the anhydrids of two amido-acids which are derived from the albuminous molecule. See ★*digestion products.*

dip-fault (dip′fâlt), *n.* A fault in inclined strata which runs in the direction of their dip and across their strike.

Small *dip-faults* were seen in the sea-cliff. Greater *dip-faults* of considerable but unknown throw cut off the entire series along the axis of the "tickle" and again at a point about 370 meters to the southeast of the headland at the sea-chasm. *Amer. Geol.,* Aug., 1903, p. 68.

dip-glaze (dip′glāz), *n.* In *ceram.,* a liquid glaze preparation into which the biscuit ware is dipped. Compare ★*vapor-glaze.*

diphase (dī′fāz), *a.* [Gr. *δι-,* two-, + *φάσις,* phase.] In *elect.,* same as ★*quarterphase.*

diphasic (dī-fā′zik), *a.* [Gr. *δι-,* two-, + *φάσις,* phase, + *-ic.*] Having two phases. *Buck,* Med. Handbook, III. 105.

diphenol (dī-fē′nol), *n.* [*di-*[2] + *phenol.*] One of several isomeric compounds. The most important is the diorthoderivative $HOC_6H_4C_6H_4OH$(2:2), prepared by heating fluorin with potassium hydroxid at 400° C. It forms crystals melting at 98° C.

diphenyl (dī-fē′nil), *n.* [*di-*[2] + *phenyl.*] A colorless compound, $C_6H_5C_6H_5$, found in coal-tar, and prepared by passing benzene vapor through a red-hot tube. It is volatile with steam, crystallizes in large lustrous monoclinic plates, melts at 70.5° C., and boils at 254° C. Also called *biphenyl.*—**Diphenyl blue, brown,** etc. See ★*blue,* ★*brown,* etc.

Diphenylamine-orange. See *orange*[1].

diphenylethanolone (dī-fē″nil-eth-an′ọ̄-lōn), *n.* Same as ★*benzoin,* 3.

diphenylimide (dī-fē-nil-ī′mid), *n.* [*diphenyl* + *imide.*] A colorless crystalline substance, $(C_6H_5)_2$–NH, formed when diphenylamine vapors are conducted through a tube heated to redness. It also occurs in crude anthracene.

diphenylketone (dī-fē-nil-kē′tōn), *n.* [*di-*[2] + *phenyl* + *ketone.*] Same as ★*benzophenone.*

diphosphate (dī-fos′fāt), *n.* [*di-*[2] + *phosph(orus)* + *-ate*[1].] In *chem.,* a compound containing two combining units of the radical of phosphoric acid. The name has been incorrectly applied to a phosphate containing two atoms or combining units of a metal united to this radical, as *diphosphate* of soda instead of disodic phosphate.

Diphragmida (dī-frag′mi-dä), *n. pl.* [NL., ⟨ Gr. *δι-,* double, + *φράγμα,* a partition.] In Hyatt's classification of the *Cephalopoda,* a group of primitive Lower Silurian nautiloids in which the siphuncle is divided by transverse tabulæ alternating with the septa of the shell.

Diphragmoceras (dī-frag-mos′e-ras), *n.* [Gr. *δι-,* double, + *φράγμα,* a partition, + *κέρας,* a horn.] The typical and only genus of the cephalopod group *Diphragmida.*

diphrophoros (dī-frof′ọ̄-ros), *n.*; pl. *diphrophoroi* (-roi). [Gr. *διφροφόρος,* ⟨ *δίφρος,* a seat, stool, + *-φορος,* ⟨ *φέρειν,* bear.] In *Gr. antiq.,* a stool-carrier: especially applied to two figures in the center of the frieze on the eastern side of the Parthenon at Athens, 31 and 32 Michaelis.

diphtheria, *n.* Diphtheria is caused by a specific bacillus, called *Bacillus diphtheriæ,* or the Klebs-Loeffler bacillus, which usually can readily be detected in the exudate by microscopical methods. The search for this organism has become a routine measure in doubtful cases of inflammation of the upper air-passages, and often a positive diagnosis of such conditions can be made only in this way. The disease begins with swelling and redness of the throat, fever, and loss of strength. The false membrane appears early and may be confined to the tonsils or may spread to the mucous membrane of the nose, pharynx, or larynx. When the larynx is involved, the breathing becomes difficult, and suffocation may ensue. Formerly the only means of saving life in this complication was tracheotomy, but this has been almost entirely superseded by intubation. The disease may be followed by paralysis, by weakness of the heart, or by disease of the kidneys. Treatment, both curative and preventive, consists in the subcutaneous injection of diphtheria antitoxin—one of the earliest instances, and still the most effective instance, of serum therapy. See cut under *Klebs-Loeffler* ★*bacillus.*—**Diphtheria bacillus.** See ★*bacillus,* with cut.

diphtherial (dif- or dip-thē′ri-ạl), *a.* [*diphtheria* + *-al*[1].] Same as *diphtheritic. Med. Record,* Feb. 28, 1903, p. 350.

diphtheric (dif- or dip-ther′ik), *a.* [*diphtheria* + *-ic*] Same as *diphtheritic.*

Diphtheritic croup, paralysis. See ★*croup*[1], ★*paralysis.*

diphtheroidal (dif- or dip-thē-roi′dạl), *a.* Same as *diphtheroid.*

diphtherotoxin (dif-thē″rō-tok′sin), *n.* Toxin elaborated by the bacillus of diphtheria.

diphthong (dif′- or dip′thông), *v. t.* To sound as a diphthong; diphthongize.

Isolative *diphthonging* or 'vowel-clearing' mainly affects long vowels, evidently because of the difficulty of prolonging the same position without change.
H. Sweet, Eng. Sounds, § 63.

diphthongia (dif-thong′gi-ä), *n.* [NL., ⟨ Gr. *δίφθογγος,* having two sounds: see *diphthong.*] A condition in which, owing to partial paralysis of the larynx, two sounds of different pitch are produced simultaneously.

diphthongous (dif′thông-gus), *a.* Same as *diphthongal.*

Diphya limestone. See ★*limestone.*

diphygenic (dif-i-jen′ik), *a.* [Gr. *διφυής,* of double form, + *-γενης,* -producing.] In *embryol.,* producing two different embryos: said of the *Dicyemidæ:* opposed to ★*monogenic.*

diphyletic (dī-fī-let′ik), *a.* [Gr. *δι-,* two-, + *φῦλον,* tribe.] In *zoöl.,* having two sets of ancestors; derived from two distinct groups of animals.

The *diphyletic* origin of the birds as represented by the Ratitæ and Carinatæ is regarded as an untenable assumption by Fürbringer, who argues for the racial unity of the whole group. *Amer. Nat.,* Jan., 1903, p. 74.

Diphyletic arrangement, a system of classification in which the divisions are arranged in accordance with the view that a given group of animals has been derived from two sources.

diphyletically (dī-fī-let′i-kạl-i), *adv.* In a diphyletic manner.

Diphyllidea, *n. pl.* **2.** An order of tetrabothridiate *Cestoidea.* They have a scolex with a long head-stalk armed with several longitudinal rows of hooklets, the head consisting of a retractile armed rostellum and 4 (apparently only 2) phyllidia, with projecting, slightly mobile margins. The order contains but one family, the *Echinobothridæ,* and one genus, *Echinobothrium,* parasitic in selachians.

diphyodontism (dif-i-ọ̄-don′tizm), *n.* [*diphyodont* + *-ism.*] The state or condition of being diphyodont or having two sets of teeth, as is the case with the majority of mammals.

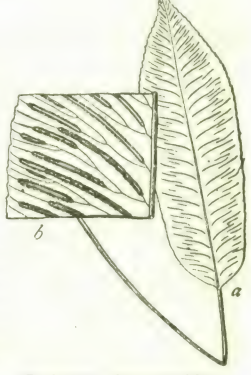
Diphyphyllum (dif-i-fil′um), *n.* [NL., irreg. ⟨ Gr. *διφυής,* double, + *φύλλον,* a leaf.] A genus of Paleozoic tetracorals of the family *Cyathophyllidæ.* They grew in compound stocks, the individual corallites having no columella and not being connected with each other except by the epithecal wall.

dip-joint (dip′joint), *n.* A joint in inclined strata which runs in the direction of the dip. *Geikie,* Text-book of Geol., p. 660.

dipl. An abbreviation (*a*) of *diplomat;* (*b*) of *diplomatist.*

diplacanthid (dip-la-kan′thid), *n.* One of the *Diplacanthidæ.*

diplacusis (dip-la-kū′sis), *n.* [NL., ⟨ Gr. *διπλόος,* double, + *ἀκουσις,* hearing, ⟨ *ἀκούειν,* hear.] In *psychol. acoustics,* double hearing: applied usually to the hearing of the same tone in a different pitch by the two ears (*diplacusis binauralis*), but also to the arousing of two tonal sensations in the same ear by a single stimulus.

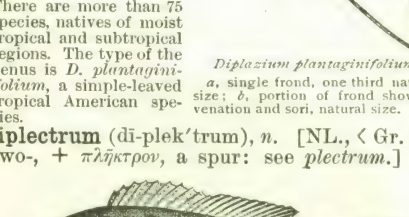


The abnormality (*diplacusis*) may be restricted to a single ear, may be transitory or chronic, and may be confined to definite parts of the tonal scale or coextensive with it. *O. Külpe* (trans.), Outlines of Psychol., p. 299.

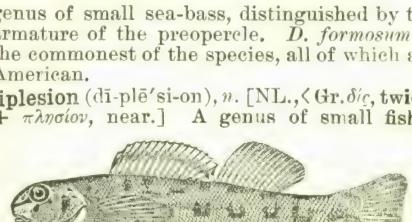
Dipladenia (dip-la-dē′ni-ä), *n.* [NL. (Alphonse de Candolle, 1844), ⟨ Gr. *διπλόος,* double, + *ἀδήν,* gland. The name alludes to the pair of nectar-glands which alternate with the two ovaries.] **1.** A genus of plants of the family *Apocynaceæ.* They are shrubs, chiefly twining, all South American, and mostly from Brazil. Several of the 20 species are in cultivation in glass houses, where they are prized for their showy, mostly rose-colored or purple funnel-form flowers. *Dipladenia atropurpurea, D. Boliviensis, D. urophylla,* and *D. splendens* are the prominent species. Other species are in cultivation, and all the kinds are prized for their very brilliant floral display, and for their attractive habit.

diplanar (dī-plā′när), *a.* [Gr. *δι-,* two-, + L. *planus,* plane, + *-ar.*] Pertaining to or of two planes.

diplarthry (dip-lär′thri), *n.* [Gr. *διπλόος,* double, + *ἄρθρον,* joint.] Having the bones of the tarsus and carpus arranged in a more or less alternating manner: contrasted with *taxeopody.*



diplasmatic (dī-plaz-mat′ik), *a.* [Gr. *δι-,* two-, + *πλάσμα,* anything formed.] In *cytol.,* containing substances besides protoplasm, such as pigment, fat, etc.: said of the cell-cytoplasm.



Diplazium plantaginifolium.
a, single frond, one third natural size; *b,* portion of frond showing venation and sori, natural size.

Diplazium (dī-plā′zi-um), *n.* [NL. (Swartz, 1801), ⟨ Gr. *διπλάζειν,* to double or be doubled, in allusion to the double sori.] A genus of free-veined polypodiaceous ferns. They are nearly allied to *Asplenium,* but are distinguished in external characters by having all or part of the linear sori borne in pairs upon the same vein, the indusia being extrorse. There are more than 75 species, natives of moist tropical and subtropical regions. The type of the genus is *D. plantaginifolium,* a simple-leaved tropical American species.

Diplectrum (dī-plek′trum), *n.* [NL., ⟨ Gr. *δι-,* two-, + *πλῆκτρον,* a spur: see *plectrum.*] A genus of small sea-bass, distinguished by the armature of the preopercle. *D. formosum* is the commonest of the species, all of which are American.

Diplectrum formosum.
(From Bulletin 47, U. S. Nat. Museum.)

Diplesion (dī-plē′si-on), *n.* [NL., ⟨ Gr. *δίς,* twice, + *πλησίον,* near.] A genus of small fishes

Diplesion blennioides.
(From Bulletin 47, U. S. Nat. Museum.)

of the Mississippi valley, living in clear brooks. *D. blennioides*, the green-sided darter, is the common species.

dipleurogenesis (dī-plū-rō-jen′ē-sis), *n.* [Gr. *δι-*, two-, + *πλευρά*, side, + *γένεσις*, genesis.] **1.** Historical progress or evolution through the acquisition and elaboration of bilateral symmetry. [Rare.]—**2.** The two-sided, bilateral, or dimeric type of form assumed by the higher members of the animal creation: distinguished from *centrogenesis*. *L. H. Bailey.*

dipleurula (dī-plū′rū-lä), *n.*; pl. *dipleurulæ* (-lē). [NL., < Gr. *δι-*, two-, + *πλευρά*, side, + L. dim. *-ula*.] A hypothetical ciliate, swimming, bilateral ancestor of the echinoderms, which is supposed to be recapitulated in the swimming larvæ of modern echinoderms. See ★*pelmatozoic theory*.

diplobacillus (dip″lō-ba-sil′us), *n.*; pl. *diplobacilli* (*-i*). [NL., < Gr. *διπλόος*, double, + NL. *bacillus*.] Any bacillus in which the cells occur in pairs.

The occurrence of acid-resisting diplococci or *diplobacilli* and of drumstick forms has been already referred to. *D. M. Cowie*, in Jour. Exper. Med., Oct. 25, 1900, p. 213.

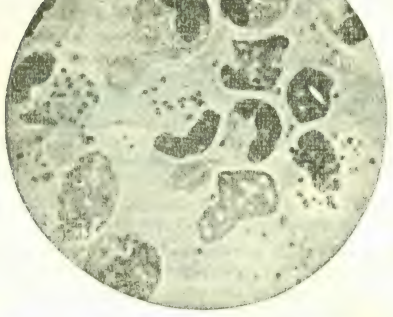
Diploblastica (dip-lō-blas′ti-kä), *n. pl.* [NL., < Gr. *διπλόος*, double, + *βλαστός*, germ.] In *zoöl.*, those animals which develop from only two germ-layers (ectoderm and entoderm), such as the *Cœlenterata:* distinguished from the *Triploblastica*.

diplocaulescent (dip″lō-kâ-les′ent), *a.* [Gr. *διπλόος*, double, + E. *caulescent*.] In *bot.*, having stems or axes of the second order.

diplocephalous (dip-lō-sef′a-lus), *a.* In *teratol.*, double-headed: a term applied to monstrous embryos.

diplocephalus (dip-lō-sef′a-lus), *n.*; pl. *diplocephali* (-lī). [NL., < Gr. *διπλόος*, double, + *κεφαλή*, head.] A two-headed monster.

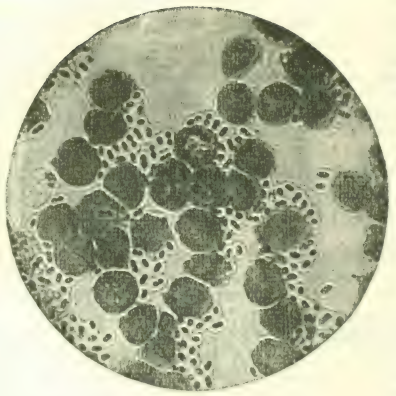
diplocephaly (dip-lō-sef′a-li), *n.* [NL. ★*diplocephalia*, < *diplocephalus*.] Monstrosity in which two heads are attached to the same body.



diplochlamydeous (dip″lō-kla-mid′ē-us), *a.* [Gr. *διπλόος*, double, + *χλαμύς* (*χλαμυδ-*), mantle.] In *bot.*, having two floral envelops, calyx and corolla, or a double perianth, as many monocotyledons.

diplochoanitic (dip″lō-kō-a-nit′ik), *a.* [Gr. *διπλόος*, double, + *χόανος*, a funnel, + *-it-ic*.] In the siphuncles of the ammonoid *Cephalopoda*, having both funnels and forwardly directed collars where the siphuncle penetrates the septum: contrasted with ★*monochoanitic*.

diplococcal (dip-lō-kok′al), *a.* Produced by or pertaining to diplococci. *Med. Record*, June 27, 1903, p. 1047.

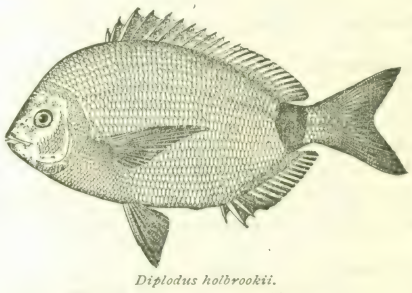


diplococcic (dip-lō-kok′sik), *a.* Same as ★*diplococcal*. *Buck*, Med. Handbook, IV. 398.

diplococcus, *n.* **2.** [*cap.*] A generic name erroneously applied by some writers to certain species of *micrococcus* in which the cells occur in pairs.—**Diplococcus intracellularis meningitidis,** the pathogenic micro-organism of epidemic cerebrospinal meningitis. Also called *Weichselbaum's micrococcus* and *meningococcus*.—**Diplococcus pneumoniæ,** the pathogenic micro-organism of acute croupous pneumonia. Also called *micrococcus lanceolatus, pneumococcus*, and *Fraenkel's pneumococcus*. See cut in middle column.

Diplococcus intracellularis meningitidis (Meningococcus).
The large bodies are disintegrating pus cells. Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

diploconical (dip-lō-kon′i-kal), *a.* [Gr. *διπλόος*, double, + *κωνικός*, conic, + *-al*[1].] Doubly conical; in the form of a double cone.



Diplococcus pneumoniæ in blood.
The large bodies are red blood corpuscles. Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

diplocoria (dip-lō-kō′ri-ä), *n.* [NL., < Gr. *διπλόος*, double, + *κόρη*, pupil of the eye.] The presence of two more or less complete pupils in one eye.

Diplodia (dī-plō′di-ä), *n.* [NL. (Fries, 1834), < Gr. *διπλόος*, double, + *εἶδος*, form. Cf. *diploid*.] A genus of sphæropsidaceous fungi having separate black carbonaceous pycnidia formed beneath the epidermis of the host and breaking through at maturity. The name refers to the spores, which are two-celled and dark-colored. About 450 species have been described, many of which are imperfectly known. They are mostly saprophytic on woody plants.

Diplodontidæ (dip-lō-don′ti-dē), *n. pl.* [NL., < *Diplodus* (*-odont-*) + *-idæ*.] A family of teleodesmaceous *Pelecypoda* including thin-shelled orbicular and convex genera with small but well-defined hinge-teeth.

Diplodus (dip′lō-dus), *n.* [NL., < Gr. *διπλόος*, double, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of sparoid fishes found in the Atlantic. They are silvery in color, with black spots on the tail. Several species occur in the Mediterranean. *D. holbrookii* occurs on the Atlantic coast of the United States: known in Spanish and Portuguese as *Sargo*.

Diplodus holbrookii.
(From Bulletin 47, U. S. Nat. Museum.)

diplogenesis, *n.* **2.** In *biol.*, the process by which a change in the environment which produces a change in an organism produces a similar change in the germ-cells that are contained in its body, so that descendants in later generations are born with an inherited adaptation for meeting and responding to this specific change in the environment. *Cope.*

[To] suppose that a modification of either the male or the female parent affects potential variation in the spermatozoön or the ovum, is merely to re-state, in other words, that a change of environment which affects the parent likewise affects the generative products; and such a statement is nothing more or less than Cope's theory of *Diplogenesis*. *Natural Science*, Nov., 1896, p. 288.

diplogenetic (dip″lō-jē-net′ik), *a.* **1.** Relating to diplogenesis.—**2.** Same as *diplogenic*.

Diploglossa (dip-lō-glos′ä), *n. pl.* [Gr. *διπλόος*, double, + *γλῶσσα*, tongue. The tongue is not forked, but the anterior portion can be withdrawn into the posterior, like the parts of a telescope.] A superfamily of *Lacertilia*, containing the glass-snakes, *Anguidæ*, and related forms: correlated with *Pachyglossa* and *Leptoglossa*. *Cope*, 1864.

diploglossate (dip-lō-glos′āt), *a.* Having the anterior portion of the tongue retractile within the posterior part, like a two-jointed telescope.

diplographic (dip-lō-graf′ik), *a.* [*diplograph-y* + *-ic*.] Of or pertaining to 'double-writing,' or to the diplograph, the machine by which it is produced.

diplographical, *a.* Same as ★*diplographic*.

diplography (di-plog′ra-fi), *n.* [Gr. *διπλόος*, double, + *-γραφία*, < *γράφειν*, write.] The art of writing double, or the use of the diplograph.

diplohedral (dip-lō-hē′dral), *a.* [*diplohedr-on* + *-al*[1].] Of or pertaining to a diplohedron.

diplohedron (dip-lō-hē′dron), *n.* [NL., < Gr. *διπλόος*, double, + *ἕδρα*, seat, base.] A diploid.

diploid. II. *a.* In *biol.*, having double cells. Said of higher organisms the somatic cells of which represent a condition of prolonged sexual fusion and have two nuclei or two sets of chromosomes, one from each parent, persisting unfused throughout the life of the individual. Contrasted with ★*haploid*.

diploidal (dip′loi-dal), *a.* [*diploid* + *-al*[1].] **1.** Of or pertaining to a diploid.—**2.** Noting a class of symmetry, belonging to the isometric system, of which the diploid is the characteristic form. See ★*symmetry*.

Diploma in public health, a certificate or diploma given to one who has passed an examination in public health. London University grants certificates in this department. Abbreviated *D. P. H.*

diplomate (dip′lō-māt), *n.* [*diplomate, v.*] One who holds a diploma.

diplomyelia (dip″lō-mī-ē′li-ä), *n.* [NL., < Gr. *διπλόος*, double, + *μυελός*, marrow (medulla).] A condition in which the spinal cord is double, or is made to appear so by a deep fissure which separates it into two distinct halves.

diplonephridium (dip″lō-nē-frid′i-um), *n.*; pl. *diplonephridia* (-ä). [NL., < Gr. *διπλόος*, double, + NL. *nephridium*.] A nephridium in the formation of which both ectoderm and mesoderm have taken part, the peritoneal funnel becoming connected with an ingrowth of the ectoderm, as in *Polychæta* generally.

diploneural (dip-lō-nū′ral), *a.* [Gr. *διπλόος*, double, + *νεῦρον*, sinew, nerve.] Having a double nerve-supply, each from a separate source: as, a *diploneural* muscle. *Encyc. Brit.*, XXV. 395.

diploperistomic (dip″lō-per-i-stom′ik), *a.* [Gr. *διπλόος*, double, + E. *peristome* + *-ic*.] In mosses, having a double peristome.

diplophonia (dip-lō-fō′ni-ä), *n.* [Gr. *διπλόος*, double, + *φωνή*, sound.] Same as ★*diphthongia*.

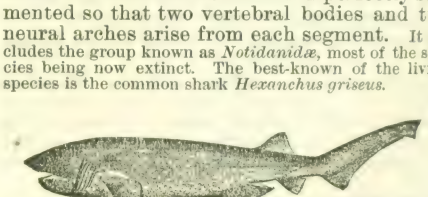
diplopia, *n.*—**Crossed diplopia.** In this form the image on the left side belongs to the right eye, and conversely: called also *heteronymous diplopia*.—**Diplopia monophthalmica,** double vision affecting one eye.—**Direct diplopia,** the form of double vision in which the image belongs to the eye of the same side. This occurs in convergent squint. Also called *homonymous diplopia*.—**Heteronymous diplopia.** Same as *crossed* ★*diplopia*.

diplopodic (dip-lō-pod′ik), *a.* [*diplopod* + *-ic*.] In *entom.*, like a diplopod.

diplopore (dip′lō-pōr), *n.* [Gr. *διπλόος*, double, + *πόρος*, passage.] A term denoting the pairs of more or less vertical canals that pierce the thecal plates in the order *Diploporita* of the *Pelmatozoa*.

diploporite (di-plop′ō-rīt), *a.* and *n.* **I.** *a.* Pertaining to, or having the characters of the order *Diploporita*.

II. *n.* A member of the *Diploporita*.



diplopterygous (dip-lop-ter′i-gus), *a.* Belonging to or resembling the *Diplopteryga*.

Diplosoma, *n.* **2.** [*l. c.*] Same as ★*diplosome*.

diplosome (dip′lō-sōm), *n.* [NL. *diplosoma*, < Gr. *διπλόος*, double, + *σῶμα*, body.] In *cytol.*, a double centrosome, or one that has divided into two daughter-centrosomes which have not yet moved apart to form the poles of a karyokinetic spindle.

diplospire (dip′lō-spīr), *n.* [Gr. *διπλόος*, double, + *σπεῖρα*, a spire.] A double spiral, as the spiral brachial supports of some extinct *Brachiopoda*, in which the secondary spirals are formed by the production of the branches of the jugum between the lamellæ of the primary spiral cones. Diplospires occur in the genera *Kayseria, Diplospirella, Thecospira*, and some others.

Diplospondyli (dip-lō-spon′di-lī), *n. pl.* [NL., < Gr. *διπλόος*, double, + *σπόνδυλος*, vertebra.] A suborder of sharks including those forms in which the vertebral column is imperfectly segmented so that two vertebral bodies and two neural arches arise from each segment. It includes the group known as *Notidanidæ*, most of the species being now extinct. The best-known of the living species is the common shark *Hexanchus griseus*.

Hexanchus griseus.
(From Bulletin 47, U. S. Nat. Museum.)

diplospondylous (dip-lō-spon'di-lus), *a.* Of or pertaining to the suborder *Diplospondyli.*

diplospondyly (dip-lō-spon'di-li), *n.* Same as *diplospondylism.*

diplostichous (di-plos'ti-kus), *a.* [Gr. *διπλόος,* double, + *στίχος,* row.] Having a double layer of cells, separated by a membrane, beneath the lens of the central eyes, as in the king crab, *Limulus.* Contrasted with *monostichous.*

diplostreptococcus (dip″lō-strep-tō-kok'us), *n.*; pl. *diplostreptococci* (-sī). [NL., ‹ Gr. *διπλόος,* double, + NL. *streptococcus.*] A form of streptococcus in which the chains of cells occur in pairs.

The Portuguese describe a *diplo-streptococcus,* which they state they have found constantly in the cerebro-spinal fluid at the post-mortem examination of their cases.
Jour. Trop. Med., June 1, 1903, p. 167.

Diplostylus (dip-lō-stī'lus), *n.* [Gr. *διπλόος,* double, + *στῦλος,* a pillar.] A genus of amphipods of the Carboniferous period.

diplotegis (dip-lot'ē-jis), *n.* Same as *diplotegia.*

diplotegium (dip-lō-tē'ji-um), *n.* Same as *diplotegia.*

diplumbic (dī-plum'bik), *a.* [Gr. *δι-,* two-, + L. *plumbum,* lead.] Having two atoms of lead in the molecule.—**Diplumbic arseniate,** lead arseniate containing two atoms of lead in the molecule. It has been used as an insecticide.

Diporidium (dī-pō-rid'i-um), *n.* [NL. (Wendland, 1825), ‹ Gr. *δι-,* two-, + *πόρος,* pore, + dim. *-ιδιον.* The name alludes to the two apical pores by which the anthers of some species dehisce.] A genus of dicotyledonous plants of the family *Ochnaceæ.* See *Ochna,* 2.

dipped (dipt), *p. a.* In *ceram.*, immersed in a color-preparation so as to tint only the surface: applied to the superficially colored white jasper body of pottery manufactured by Josiah Wedgwood, in distinction from the solid jasper which was uniformly colored throughout its substance.

Dippel's animal oil. See ★*oil.*

dipper, *n.* **11.** In *ceram.*, a workman who dips ware in the glazing or coloring preparation: See ★*dipped.*—**12.** Any of the gastropod mollusks of the genus *Bulla.*

dipping-machine (dip'ing-ma-shēn″), *n.* In *candy-making,* a machine for coating with chocolate the prepared candies cast from the depositing-machine by dipping wire-work trays filled with them in hot chocolate, removing the surplus, and hardening and drying. It makes finished chocolates that exactly resemble those dipped by hand. See ★*depositing-machine* and ★*starch-buck.*

dip-pump (dip'pump), *n.* A device for elevating water or other liquid by dipping it in any manner. Some dip-pumps consist of a pair of barrels for raising the water, one barrel being lowered as the other is hoisted.

Diprion (di-prī'on), *n.* [NL., ‹ Gr. *δι-,* two-, + *πρίων,* a saw.] A name given by Barrande to graptolites with two rows of thecæ on the rhabdosome.

Diprionidæ (dip″ri-on'i-dē), *n. pl.* [NL., ‹ *Diprion* + *-idæ.*] A suborder of the graptolites comprising forms which have two to four vertical rows of thecæ placed back to back, as in the genera *Diplograptus* and *Phyllograptus.*

dipropargyl (dī-prō-pär'gil), *n.* A colorless, volatile, pungent liquid, $CHiCCH_2CH_2CiCH$, prepared by the action of potassium hydroxid on diallyltetrabromide. It readily polymerizes and is a homologue of acetylene, which it resembles in general properties. It melts at — 6° C., boils at 86–87° C., and is also called 1, 5-*hexadiene.*

dipropylketone (dī″prō-pil-kē'tōn), *n.* See ★*heptanone.*

dips, *n. pl.* See ★*dip,* *n.*, 7.

dip-section (dip'sek-shon), *n.* In *geol.*, a section across inclined strata in the direction of the dip.

dipsesis (dip'sē-sis), *n.* [NL., ‹ Gr. *δίψησις,* thirsting, ‹ *διψᾶν,* feel thirst, ‹ *δίψα,* thirst.] Pathological thirst.

dipsetic, *a.* **II.** *n.* A substance that produces thirst. *Syd. Soc. Lex.*

dip-side (dip'sīd), *n.* The side in the direction of dip, the low side: used with reference to the attitude of rock formations in underground workings.

dip-slope (dip'slōp), *n.* A natural slope of the surface of the ground which is parallel to the dip of the underlying strata.

Its [the Arun's] course was determined by the original *dip-slope* of the Wealden dome.
Geog. Jour. (R. G. S.), XV. 220.

dipteraceous (dip-tē-rā'shius), *a.* Same as ★*dipterocarpaceous.*

dipterid (dip'tē-rid), *n.* One of the *Dipteridæ.*

dipterocarp (dip'tē-rō-kärp), *n.* A plant of the family *Dipterocarpaceæ. Nature,* Jan. 1, 1903, p. 198.

dipterocarpaceous (dip″tē-rō-kär-pā'shius), *a.* Belonging to the plant family *Dipterocarpaceæ.*

dipterocarpous (dip″tē-rō-kär'pus), *a.* In *bot.*, belonging to the genus *Dipterocarpus* or to the family *Dipterocarpaceæ.*

dipterygian (dip-tē-rij'i-an), *a.* Two-finned, as certain fishes.

dip-turner (dip'tėr″nėr), *n.* A workman in a pottery who decorates ware with a dip-compound, or colored slip. See ★*dip-ware.*

dip-ware (dip'wār), *n.* Earthenware decorated with a dip-compound, or colored slip. See the extract.

In the manufacture of this ware [*dip-ware*], the body or paste having been prepared as usual, is handed over to the "dip-turner." . . . Having coloured clays of the consistency of cream in a vessel with a spout that can be varied in form, he blows into this vessel through another tube, and thus forces the creamy clay out of the first-mentioned spout upon the piece of clay turning slowly on the lathe. In this manner rings of coloured clay can be deposited on the revolving piece of ware. . . . The arborescent or dendritic forms may also be produced by the "dip-turner," who, after covering the turned piece of the original paste or body with an evenly-spread coating of his "dip" compound in its creamy condition, drops upon it, before it becomes dry, another kind of "dip" compound, having a greater density than the first, and thus, by holding the piece so that the heavier compound or colour can descend amid the moist first-spread "dip" he permits it to disseminate its particles in an arborescent form.
Handbook Brit. Pottery and Porcelain, Mus. Prac. Geol., [p. 32.

dip-well (dip'wel), *n.* A well or spring from which water is obtained by dipping.

Dipylon vases. See ★*vase.*

dipyridine (dī-pir'i-din), *n.* [*di-*[2] + *pyridine.*] Same as ★*nicotyrine.*

Dir. An abbreviation of *director.*

diradiation, *n.* **2.** Same as *hypnotism. Syd. Soc. Lex.*

Dircæan (dėr-sē'an), *a.* Of or pertaining to the fountain of Dirce, in Bœotia, sacred to the Muses: applied by Horace in one of his Odes to Pindar, the lyric poet, whom he styled the *Dircæan Swan.*

direct, *a.* **8.** In *math.*, according to the natural order or correlation: in contradistinction to *inverse.*

In every other mathematical operation the inverse process is far more difficult than the *direct* process, subtraction than addition, division than multiplication, evolution than involution; but the difficulty increases vastly as the process becomes more complex.
Jevons, Prin. of Science, I. vii.

directable (di-rek'ta-bl), *a.* [*direct* + *-able.*] Capable of being directed or steered; dirigible: as, a *directable* balloon.

direct-connected (di-rekt'kō-nek″ted), *a.* Said of a machine, as an electric generator, in which the revolving generator or armature is borne on the shaft of the engine without any belt or other transmission device being required. Also called *direct-coupled.*

direct-coupled (di-rekt'kup″ld), *p. a.* In *mech.*, mounted upon a common shaft or upon shafts having the same axis and coupled so as to turn as one: said of the driving and driven portions of any mechanical system that are thus connected so that they revolve as a unit, without the intervention of belts or other devices for the transmission of motion.

direct-driven (di-rekt'driv″n), *p. a.* In *mech.*, driven without the use of belts or other devices for the transmission of power, the driving and driven parts being on a common shaft or direct-coupled: as, a *direct-driven* dynamo.

direct-geared (di-rekt'gērd″), *a.* Having no intermediate transmission-train of wheels or transforming mechanism intervening between the power-shaft and that which it drives: used of motor-cycles when a toothed wheel on the motor crank-shaft meshes into the gear fastened to the rear or driving-wheel. See also ★*direct-connected.*

direction, *n.*—**Converse directions,** in *astrol.*, directions made in the reverse order of the signs, as when a planet in Pisces is directed to another in Capricorn.—**Direct directions,** in *astrol.*, directions made according to the succession of the signs, as when a plane in Capricorn is directed to one in Pisces.—**Equation of arcs of direction,** in *astrol.*, the method of turning directions into time, to ascertain at what period they will operate. The measure most commonly adopted is Ptolemy's, which allows a year for every degree.—**Line of direction.** (*c*) In *psychol. optics,* the straight line connecting a luminous point in space with the nodal point of the reduced eye, and continued thence to the retina. **Primary directions,** in *astrol.*, calculations of the motions of the heavenly bodies in forming aspects with one another, as in the ascendant and mid-heaven.—**Ray of direction,** in *psychol. optics,* the parts of the line of direction that lie before the cornea and behind the lens.—**Secondary directions,** in *astrol.*, calculations of the times of events derived from the aspects formed by the sun and moon after birth, allowing each day to represent a year of the native's life.

Directional calculus. Same as ★*calculus of extension.*

direction-word (di-rek'shon-wėrd″), *n.* Same as *catchword,* 1.

directive. **I.** *a.*—**Directive action, force,** etc. See ★*action,* ★*force,* etc.

II. *n.* 1. In *gram.*, a syntactic case expressing direction toward an object: also called *transitional.*—**2.** In a sea-anemone or coral polyp, a mesentery which forms one of the boundaries of the intermesenteric space at one of the poles of the principal axis.

directivity (di-rek-tiv'i-ti), *n.* The character of being directive. *Science,* July 31, 1903, p. 140.—**Theory of Directivity,** an attempt to explain the creation and growth of living things, by means of a vital power which gives origin to them and determines their manner of growth. It is opposed to any mechanical explanation of organic nature.

director, *n.*, **2.** (*c*) In *geom.*, a fixed guiding line. (*d*) The small printed or written letter inserted as a guide in the space to be afterward filled by the designer or illuminator of the large initial.—**Director of an original line,** in *persp.*, the straight line which passes through the directing point of the original line and the eye or projection-vertex.—**Director of the eye,** in *persp.*, the intersection of the directing-plane with a plane through the eye perpendicular to the original plane and that of the picture, and hence also perpendicular to the directing and vanishing planes.

director-plane (di-rek'tor-plān″), *n.* In *math.*, a plane director, or given plane used in the description of a surface.

director-tube (di-rek'tor-tūb″), *n.* A tube with sights, or a telescope, by which a torpedo is aimed at the object attacked.

directrix, *n.* **4.** The first line traced on the ground in laying out a fortification.

directum (di-rek'tum), *n.*; pl. *directa* (-tä). [L., neut. of *directus,* straight: see *direct.*] A straight line.—**In directum,** costraight, that is, in one straight line.

diremption, *n.* **3.** In *veg. teratol.*, the abnormal displacement of leaves. See ★*displacement,* 6. *Masters,* Vegetable Teratol., p. 87.

dirhombohedron (dī-rom-bō-hē'dron), *n.*; pl. *dirhombohedra* (-drä). [NL., ‹ *di-* + *rhombohedron.*] A solid having the geometric form of a double hexagonal pyramid, but consisting in fact of two complementary rhombohedrons; a quartzoid.

dirigible. **II.** *n.* A dirigible balloon; an airship.

Dirina (di-rī'nä), *n.* [NL. (Fries, 1825), ‹ Gr. *δειρή,* a ridge of a hill, lit. neck, + *ina*[1].] A genus of lichens, the type of the family *Dirinaceæ,* having simple crustaceous thalli, disciform or elongate apothecia, and hyaline, spindle-shaped, 4- to 8-celled spores. The species occur on tree-trunks and rocks and are widely distributed.

Dirinaceæ (di-ri-nā'sē-ē), *n. pl.* [NL., ‹ *Dirina* + *-aceæ.*] A small family of gymnocarpous lichens named from the genus *Dirina.*

dirinoid (dir'i-noid), *a.* [*Dirina* + *-oid.*] Resembling the genus *Dirina.*

dirt, *n.*—**To cut dirt,** to make off; take one's departure. *Haliburton.* [Slang, U. S.]

dirt-bar (dėrt'bär), *n.* A grid-bar, in a cotton-opening machine, so arranged in relation to the beater as to free the cotton from dirt. Also called *dirt-grid.*

dirt-grid (dėrt'grid), *n.* Same as ★*dirt-bar.*

dirt-line (dėrt'lin), *n.* A thin stratum of dirt and debris which has collected on the surface of a glacier and been preserved under the seasonal fall of snow. *J. Geikie,* The Great Ice Age, p. 30.

dirt-roller (dėrt'rō″lėr), *n.* A small cylinder, covered with card-clothing, on a roller-and-clearer cotton-carding machine, situated above the feed-rolls, designed to remove from the main cylinder heavy impurities, such as motes, etc.

dirt-stop (dėrt'stop), *n.* A strainer; a form of foot-valve placed at the end of a feed-pipe to prevent solid matter from getting into the feed-pump or injector.

dis[2] (dēs), *n.*; pl. *disir* (-ir). [ON. *dís,* a sister, a female guardian spirit, etc.] In *Norse mythol.*, a guardian spirit.

dis. (*b*) In *printing,* an abbreviation of *distribution,* that is, dead type which is to be distributed into the various boxes of the type-case. See *distribution,* 3, and *distribute, v. i.*, 2.

Disa (dī'sạ), *n.* [NL. (Berg, 1767), of unknown derivation.] A large genus of terrestrial orchids, mostly native to tropical and south

Disa uniflora, one fourth natural size.

Africa, characterized by free sepals, the upper sepal galeate and spurred, the petals small and joined to the column. Only one species, *Disa uniflora* (*D. grandiflora* of Linnæus), is cultivated to any extent; but this is very handsome and is sometimes called *flower-of-the-gods*. The flowers are several, large, rose-colored, crimson, and carmine-red in their various parts.

disabusal (dis-ạ-bū'zạl), *n.* [*disabuse* + *-al*[1].] The act of disabusing. *Mrs. Whitney.*

disaccharid, disaccharide (dī-sak'ạ-rid or rīd), *n.* Same as ★*biose.*

disaccord (dis-ạ-kôrd'), *n.* [*disaccord, v.*] Want of accord; disagreement; lack or absence of harmony. *Southey.*

disacrone (dis-ak'rōn), *n.* [Gr. *δίς*, twice, + *acr(olein)* + *-one.*] An old name for ★*disacryl.*

disacryl (dis-ak'ril), *n.* [Gr. *δίς*, twice, + *acr(olein)* + *-yl.*] An amorphous, resinous product formed by the spontaneous polymerization of acrolein.

disappearing (dis-ạ-pēr'ing), *p. a.* That disappears; vanishing.—**Disappearing gun.** See ★*gun*[1], *gun-carriage.*

disapprobative (dis-ap'rō-bā-tiv), *a.* That expresses disapprobation: as, a *disapprobative* frown.

disarm, *v. t.* **5.** To press (the lips of a horse) outward so that they may not be bruised on the toothless portions, or bars, of the lower jaw.

Give your horse a bit with a cannon coupe, or cut, which will *disarm* his lips. *T. Wallis*, Farrier's Dict.

disartete (dis-ärt'tēt), *a.* [Appar. < L. *dis-*, apart, + Gr. **ἀρτητός*, < *ἀρτᾶν*, hang, suspend.] Said of fishes in which the palatine cartilage or its derivates are attached to both the preethmoid and the par-ethmoid cornua rather than confined to the former, as is the case in the acrartete type of fishes.

The other Percesoces examined by him, as well as the Cyprinodonts, are *disartete* (the attachment being at the par-ethmoid and pre-ethmoid cornua); but the character is so indistinctly defined in some adult Cyprinodonts, that I feel some diffidence in making use of this character for systematic purposes in the present state of our knowledge. *Annals and Mag. Nat. Hist.*, March, 1904, p. 174.

disarticulator (dis-är-tik'ū-lā-tọr), *n.* [*disarticulate* + *-or*[1].] One who or that which disarticulates or disjoints.

disassemble (dis-ạ-sem'bl), *v. t.*; pret. and pp. *disassembled*, ppr. *disassembling.* [*dis-* + *assemble.*] To take apart.

disassimilate (dis-ạ-sim'i-lāt), *v. t.*; pret. and pp. *disassimilated*, ppr. *disassimilating.* [*dis-* + *assimilate.*] To cause retrograde metamorphosis or disassimilation in.

disassimilation (dis-ạ-sim-i-lā'shọn), *n.* The opposite of assimilation; specifically, the same as *retrograde metamorphosis* (which see, under *metamorphosis*) or *catabolism.*

disassimilative (dis-ạ-sim'i-lā-tiv), *a.* In *physiol.*, of the nature of catabolism (which see); resulting from disassimilation or catabolism: as, *disassimilative* products.

disattaint (dis-ạ-tānt'), *v. t.* [*dis-* + *attaint.*] To free from attainder. See *attaint, v.*, 4.

disazo- (dis-az'ō). A combining form used in organic chemistry to indicate the presence of two azo radicals, RN_2R, in the molecule of a compound. Compare *diazo-*.

disburdenment (dis-bėr'dn-mẹnt), *n.* The act of disburdening; relief from the burden of something oppressive. *Bentham.*

disbursable (dis-bėrs'ạ-bl), *a.* Capable of being disbursed or expended; retailable.

Anecdotes also are portable, unlike the lightning-flash, which will not go into the pocket; they can be carried home, they are *disbursable* at other tables.
G. Meredith, Diana, xiv.

disbury (dis-ber'i), *v. t.*; pret. and pp. *disburied*, ppr. *disburying.* [*dis-* + *bury*[3].] To disinter; resurrect: as, *disburied* secrets. *Bulwer.*

discal, *a.* **3.** In *bot.*, located on the surface of a frond; superficial: applied to ferns. *J. Smith.*

discalenohedron (dī-skā-lē″nō-hē'drọn), *n.*; pl. *discalenohedra* (-drạ). [*di-*[2] + *scalenohedron.*] A double twelve-sided (dihexagonal) pyramid, whose faces belong to two complementary scalenohedrons.

Discalia (dis-kā'li-ạ), *n.* [NL., < Gr. *δίσκος*, disk.] The typical genus of the family *Discalidæ*. *Haeckel*, 1888.

Discalidæ (dis-kal'i-dē), *n. pl.* [NL., < *Discalia* + *-idæ.*] A family of disconectous *Siphonophora* inhabiting the deep sea. They have an exumbrella without crest, gonostyles without mouth, pneumatocyst divided into a central chamber surrounded by 8 radial chambers, a circumferential arrangement of 5 to 10 concentric ring-chambers, and tentacles with cnidospheres. It includes the genera *Discalia* and *Disconalia.*

discard, *n.*, **1.** (*c*) In *poker*, the pile of cards made up by the hands which are abandoned without being bet upon, and the cards which have been laid off so as to get others in exchange for them.

discarnate, *a.* **2.** Disembodied; disincarnate.

We ought to expect a priori that a *discarnate* memory should be defective in its communications from a transcendental world.
J. H. Hyslop, in Proc. Soc. Psychical Research, XVI. 216.

discept (di-sept'), *v. i.* [L. *disceptare*, decide, judge, dispute, < *dis-*, apart, + *captare*, take.] To dispute; take exception; differ: as, allow me to *discept*. *Peacock.*

discerptor (di-sėrp'tọr), *n.* One who discerps, dismembers, or disjoins.

The first *discerptor* [of the genus Cimex] was Fabricius, who, in a perfectly straightforward manner, removed our species [lectularius] from Cimex to form a part of his new genus Acanthia. *Nature*, March 17, 1904, p. 464.

dis. ch. In *chess*, an abbreviation of *discovered* ★*check.*

discharge, *v. t.* **9.** In *law*, to make an end of; annul; cancel: as, to *discharge* a rule to show cause.

discharge, *n.*—**Brush discharge**, in *elect.*, the brush-like electric discharge issuing from a high potential conductor, especially from its points or edges. It is accompanied by a bluish or pink glow, is either silent or produces a hissing noise, and frequently precedes disruptive sparks. See *electric spark*, under *spark*[1].—**Coefficient of discharge.** See ★*coefficient.*—**Electrodeless discharge**, the glow excited in the vapor within an exhausted glass tube or bulb having no electrodes, when the tube is placed within the oscillatory field of a Tesla coil or other device for the production of oscillatory electrical discharges of high frequency.

The *electrodeless discharge* is more simple in appearance and in constitution than the better known discharge in vacuum tubes between electrodes.
B. Davis, in Physical Rev., xx. 129.

Law of nervous discharge, in Spencer's *psychol.*, the principle that "every feeling, peripheral or central, sensational or emotional, is the concomitant of a nervous disturbance and resulting nervous discharge, that has on the body both a special effect and a general effect." (H. Spencer, Prin. of Psychol., ii., § 495).—**Tesla discharge**, in *elect.*, the disruptive electric discharge of high frequency obtained from a Tesla coil. See *Tesla* ★*coil.*—**White discharge** an electric discharge through vacuum tubes, obtained when the tubes contain dry air or certain other gases, as carbon dioxid, under certain pressures. It is characterized by a bright glow of white light which fills the tube.

The *white discharge* may be produced in all the gases with which I have experimented.
B. Davis, in Physical Rev., XX. 149.

discharge-pipe (dis-chärj'pīp″), *n.* Same as ★*delivery-pipe.*

discharger, *n.* (*c*) In *transportation*, a machine or appliance used in discharging freight, coal, grain, or other material in bulk, from a carrier, conveyer, or elevator. The most simple form is an opening at the end or bottom, at any point of the trough of a conveyer through which the load is pushed by the screw or the flights of the conveyer machine (see ★*conveyer*). In open carriers, belt-conveyers, and elevators the discharger may be the end wheel over which the belt or series of buckets passes, the change in direction (assisted by the momentum) serving to discharge the load upon a table or into a bin, hopper, spout, or another conveyer. Dischargers are divided into stationary machines that trip, upset, or invert the buckets of a horizontal conveyer and cause them to discharge their loads at a fixed point, and machines that travel along the line of the conveyer and automatically discharge the loads at any desired point. Also called *automatic dumper.* (*d*) In *mining* and *industrial railroading*, a device for unloading skips, ore-cars, etc., upon inclined roads or slopes. One device consists of an open abrupt change in the grade of the track, whereby the forward end of the car, to which the hauling-cable is attached, is tilted up and the load discharged through a gate at the rear. Another device employs two tracks at the dumping-point, and a skip with four wheels of which the rear pair have a wider tread than the forward pair. The skip is hauled by a cable attached to a link pivoted at the rear end of the skip; and when the discharger is reached the forward wheels follow the inside or narrow tracks, which here run in a horizontal direction, while the rear wheels continue on the inclined rails. This causes the skip to be tilted up, discharging the load at the front and open end. When empty, the skip runs back down the incline in its normal or loaded position.

discharge-water (dis-chärj'wâ″ter), *n.* The water discharged by a pump: specifically water which is discharged after passing through a condenser.

discharm (dis-chärm'), *v. t.* [*dis-* + *charm*[1].] To deprive of charm or the power of charming; deprive of the protecting influences of charms; disenchant.

Brave Luther answered YES: that thunder's swell
Rocked Europe, and *discharmed* the triple crown.
Lowell, To W. L. Garrison, st. 5.

dischromatopsy (dis-krō'ma-top-si), *n.* [Gr. *δι-*, two-, + *χρῶμα(τ-)*, color, + *ὄψις*, view.] Color-blindness.

disciferous, *a.* **2.** In *zoöl.*, provided with a disk.

discigerous (di-sij'ẹ-rus), *a.* [L. *discus*, disk, + *gerere*, bear, + *-ous.*] Disk-bearing: as, *discigerous* woody tissue.

discin (dis'in), *n.* [Gr. *δίσκος*, disk, + *-in*[2].] The albuminous component of the jelly of *Medusæ:* possibly an albuminoid.

Discinidæ (di-sin'i-dē), *n. pl.* [NL., < *Discina* + *-idæ.*] A family of neotrematous *Brachiopoda* having chitinous, subcircular plano-convex shells with an open pedicle-notch in early life which becomes inclosed as a long narrow slit partially covered behind or near the apex by a listrium.

Discinisca (dis-i-nis'kạ), *n.* [NL., < *Discina* + dim. *-isca*, < Gr. *-ισκος.*] A genus of *Brachiopoda* resembling *Discina*, but having an internal septum behind which is an elevated area about the pedicle-opening. See *Discina.*

disciplinability (dis″i-plin-ạ-bil'i-ti), *n.* The quality of being disciplinable.

Marro lays chief stress upon *disciplinability* and sociability. *G. S. Hall*, Adolescence, I. 299.

disciplinatory (dis'i-plin-ạ-tō″ri), *a.* Promotive of discipline: as, *disciplinatory* educational methods.

discipline, *n.*—**Jamaica discipline**, a former buccaneer or pirate law, to the effect that all prizes should be divided among the captors and not shared by those who take no part or risk in the capture.—**Prefect of discipline**, in the Jesuit schools, one who has charge of the disciplinary regulations for the students.

discipular (di-sip'ū-lär), *a.* [L. *discipulus*, disciple, + *-ar*[3].] Pertaining to or characteristic of a disciple: as, *discipular* patience. *N. E. D.*

discission, *n.*—**Space of discission**, in *geol.*, a crevice or space of dynamic origin; a separation of walls that had been in contact: used in contrast with *space of* ★*dissolution.*

Formerly I called such spaces (with reference mainly to the accompanying fault-phenomena) "Spaces of Dislocation" but I believe the term "*Spaces of Discission*" . . . would be more suitable.
F. Pósepný, in Trans. Amer. Inst. Min. Engin., XXIII. 208.

disclaimant (dis-klā'mạnt), *n.* [*disclaim* + *-ant.*] A disclaimer; specifically, one who enters a disclaimer in a patent case. See *disclaimer, n.*, 3 (*d*).

disclassed (dis-klàst'), *p. a.* Same as *declassed, a.*

disclassify (dis-klàs'i-fī), *v. t.* [*dis-* + *classify.*] To abolish classificatory distinctions in regard to; do away with the classification of.

The process of levelling, *disclassifying*, making everybody like everybody else.
Grote, Utilit. Philos., xix. *N. E. D.*

disclosure, *n.* **3.** The hatching of the young from the egg, as in birds and reptiles, or the escape of insects from the pupa-case.

discloze, disclozure. Simplified spellings of *disclose, disclosure.*

discobolic (dis-kob'ō-lik), *a.* [*discobolus* + *-ic.*] Of or pertaining to a discobolus; quoit-throwing.

He gave loose to the full torrent of his indignation, by seizing . . . a vast dish of beef, more than fifty ancient yeomen could eat, and whirled it like a coit, in terrorem, over the head of the friar, to the extremity of the apartment,

Where it on oaken floor did settle,
With mighty din of ponderous metal. . . .

But . . . his *discobolic* exploit proved the climax of his rage, and was succeeded by an immediate sense that he had passed the bounds of legitimate passion.
T. L. Peacock, Maid Marian, v.

Discocampyli (dis-kō-kam′pi-lī), *n. pl.* [NL., ⟨ Gr. *δίσκος*, a disk, + *καμπύλος*, crooked.] In Hyatt's classification of the ammonites, a suborder characterized by the rounded outline of the saddles of the septal sutures while the lobes become greatly divided, as exemplified in the genus *Ceratites* (which see, with cut). In highly advanced forms even the discocampylic saddle becomes much divided.

discocampylic (dis-kō-kam′pi-lik), *a.* Of or pertaining to the *Discocampyli*; having rounded saddles, as the *Discocampyli*.

discocellular (dis-kō-sel′ū-lär), *a.* [L. *discus*, disk, + NL. *cellula*, cell, + *-ar*3.] Of or pertaining to the discal cell in the wings of lepidopterous insects.

discoctaster (dis-kok-tas′tėr), *n.* [NL., ⟨ Gr. *δίσκος*, disk, + *ὀκτώ*, eight, + *ἀστήρ*, star.] A sponge-spicule with eight rays, each terminating in a disk, the position of each of which corresponds to one of the eight corners of a cube.

Discocytis (dis-kos′i-tis), *n.* [Gr. *δίσκος*, a disk, + *κυτίς*, a box.] A genus of Cretaceous *Bryozoa* forming obconic and cup-shaped zoaria the upper side of which has a decidedly radial structure.

discodactylous (dis-kō-dak′ti-lus), *a.* [Gr. *δίσκος*, a disk, + *δάκτυλος*, a finger.] Having the toes ending in disks, as some tree-frogs. This enables these animals to cling to smooth surfaces.

discodepula (dis-kō-dep′ū-lä), *n.* [NL., ⟨ Gr. *δίσκος*, a quoit, disk, + NL. *depula*.] The depula that develops from a discogastrula. *Haeckel.*

discoglossoid (dis-kō-glos′oid), *a.* Resembling the *Discoglossidæ*, a family of toads.

Discohelix (dis-kō-hē′liks), *n.* [NL., ⟨ Gr. *δίσκος*, a disk, + *ἕλιξ*, a spiral.] A genus of rhipidoglossal gastropods of the family *Euomphalidæ*, having flat discoidal shells and rectangular whorls. The species occur in rocks from the Triassic to the Tertiary.

discohexact (dis-kō-heks′akt), *n.* [Gr. *δίσκος*, disk, + *ἕξ*, six, + *ἀκτίς*, ray.] Same as *discohexaster*.

discohexactine (dis″kō-hek-sak′tin), *n.* [Gr. *δίσκος*, a disk, + *ἕξ*, six, + *ἀκτίς* (*ἀκτιν-*), a ray.] In the nomenclature of the spicular elements of the sponges, a hexactine which bears at the end of each arm or ray a rosette or serrated umbel.

Discoidal stone. See ★*stone*.

Discoidea, *n. pl.* **3.** A family of peripylarian *Radiolaria* having the shell and central capsule discoid or lenticular. It includes *Cenodiscus*, *Phacodiscus*, *Coccodiscus*, and other genera.

discolichen (dis-kō-lī′ken), *n.* [NL. *discolichen*, ⟨ Gr. *δίσκος*, disk, + *λειχήν*, lichen.] Any one of the lichens which belong to the division *Discolichenes*.

Discolichenes (dis″kō-lī-kē′nēz), *n. pl.* [NL., pl. of *discolichen*: see *discolichen*.] A division of the *Ascolichenes* in which the fructification is in the form of open disk-like apothecia. Compare *Pyrenolichenes*.

discolith, *n.* **2.** A disk-shaped coccolith convex on one side and concave on the other.

Discomedusæ, *n. pl.* **2.** Same as *Octomeralia*.

discomfort, *n.*—**Curve of discomfort.** See ★*curve*.

discomposedly (dis-kom-pōz′ed-li), *adv.* In the manner of one who is discomposed, perturbed, or disturbed in mind.

Disconanthæ (dis-kō-nan′thē), *n. pl.* [NL., appar. erroneously for **Discoanthæ* or **Discanthæ*, ⟨ Gr. *δίσκος*, disk, + *ἄνθος*, flower.] A suborder of *Siphonophora*; equivalent to *Disconectæ*. Contrasted with *Siphonanthæ*.

disconanthous (dis-kō-nan′thus), *a.* Having the characteristics of, or relating to, the *Disconanthæ*.

Disconectæ (dis-kō-nek′tē), *n. pl.* [NL., ⟨ Gr. *δίσκος*, disk, + *νήκτης*, swimmer.] A suborder or section of *Siphonophora*. The body, or cœnosome, is formed by the umbrella of the original octoradial medusa and includes an apical chambered pneumatophore, without nectophores or bracts, on the lower surface of which occur the individuals consisting of a central gastrozoöid surrounded by concentric rings of blastostyles and dactylozoöids. The larva is called a *disconula*. The group includes the families *Discalidæ*, *Porpitidæ* and *Velellidæ*. Equivalent to *Disconanthæ*.

disconectous (dis-kō-nek′tus), *a.* Of or pertaining to the *Disconectæ*.

disconfidence (dis-kon′fi-dens), *n.* Lack of confidence.

He [an Indian chief] always treated me with a certain *disconfidence*, as is customary among the Indians, even in contact with their friends.
Geog. Jour. (R. G. S.), XII. 64.

disconform (dis-kon-fôrm′), *a.* Not conformable (to) or in conformity (with): as, the work is *disconform* to the specifications. [Scotch.]

disconnective (dis-kō-nek′tiv), *a.* Disjunctive; that disconnects or serves to disconnect.

disconsider (dis-kon-sid′ėr), *v. t.* To leave out of consideration; set aside as not worth consideration or respect.

As the man was now *disconsidered* and as good as deposed, we might reduce his proportion of the plunder.
R. L. Stevenson, Master of Ballantrae, iii.

disconsideration (dis-kon-sid-e-rā′shon), *n.* The state of being disconsidered; disrepute.

I have now arrived at such a pitch of *disconsideration* that . . . I do not know a soul that I can face.
R. L. Stevenson, The Dynamiter, p. 190. *N. E. D.*

discontiguity (dis-kon-ti-gū′i-ti), *n.* Lack of contiguity or continuity. *Dr. H. More.*

discontinuity, *n.*—**Polar discontinuity,** a discontinuity of a function consisting of its assuming, in the environs of the point $x=a$, values differing little from $\frac{Fx}{(x-a)^m}$ where Fx varies regularly in that part. The exponent m is the order of the polar discontinuity.

discontinuous, *a.*—**Improperly discontinuous group.** See ★*group*.

disconula (dis-kon′ū-lä) *n.*; pl. *disconulæ* (-lē). [NL., irreg. dim. of Gr. *δίσκος*, a disk.] The octoradial larva of disconanthous *Siphonophora*.

discoperipheral (dis″kō-pe-rif′e-ral), *a.* [Gr. *δίσκος*, disk, + *περιφέρεια*, periphery, + *-al*1.] Arranged in a disk-like manner around the mouth, as the teeth and sucking-disk of the lampreys.

discoplacental, *a.* **2.** Relating to, or having the characters of the group of mammals known as *Discoplacentalia* from the character of the placenta.

discoplacentalian (dis-kō-plā-sen-tā′li-an), *a.* and *n.* **I.** *a.* Relating to or resembling the *Discoplacentalia*.

II. *n.* A member of the *Discoplacentalia*.

discoplanula (dis-kō-plan′ū-lä), *n.*; pl. *discoplanulæ* (-lē). [NL., ⟨ Gr. *δίσκος*, disk, + NL. *planula*.] The discoidal blastoderm of an egg with a large unsegmented food-yolk, at the stage of development which is comparable with the blastula-stage of an egg that undergoes total segmentation.

discoplasm (dis′kō-plazm), *n.* [NL. *discoplasma* (Ehrlich), ⟨ Gr. *δίσκος*, disk, + *πλάσμα*, anything formed.] The structural portion of the red blood-corpuscles in contradistinction to the hemoglobin. *Ehrlich.*

discopodous (dis-kop′ō-dus), *a.* [Gr. *δίσκος*, disk, + *πούς* (*ποδ-*), foot.] Having a disk-shaped foot, as certain gastropods.

Discopyge (dis-kō-pī′jē), *n.* [NL., ⟨ Gr. *δίσκος*, disk, + *πυγή*, rump.] A genus of numb-fishes or torpedoes of the family *Narcobatidæ* found in the Panama region. *D. tschudii* is the common species.

discord, *n.* **2.** A discord is said to be *prepared* when the dissonant tone is first introduced in its voice-part as a consonance and then is held over into a dissonant relation by that part, or even when it is reached by its voice-part through a diatonic step: but it is *unprepared* when introduced by a skip or abruptly. See *preparation*, 9.

discordance, *n.* **3.** In *geol.*, a lack of parallelism or complete conformity in associated strata.

Discordant feeling, in Wundt's *psychol.*, a contrast feeling, exemplified among the sense-feelings by tickling, among the intellectual feelings by doubt, and among the elementary esthetic feelings by dissonance.

The oscillatory and the *discordant feelings* are, perhaps, the most instructive examples of these complex affective states
W. Wundt (trans.), Human and Animal Psychol., p. 219.

Discordant valley. See ★*valley*.

discorhabd (dis′kō-rabd), *n.* [Gr. *δίσκος*, disk, + *ῥάβδος*, rod.] In the nomenclature of the spicular elements of the sponges, a monaxial straight rhabd with one sharp and one blunt end and girdled with concentric rings.

discouple (dis-kup′l), *v. t.*; pret. and pp. *discoupled*, ppr. *discoupling*. To separate (couples) into units; uncouple.

We entered through the cleft, one before the other, ascending the steps whose narrowness *discouples* those who mount.
W. S. Dugdale, Dante's Purgatorio, xxv.

discourse, *n.* **6.** That sort of mental operation, performed by one person or by several, in which a line of thought is followed out. In either case, it is conducted by signs which are in part general, or typical, in their own mode of being, usually ordinary language; in part diagrams or other iconic signs; and in part indices, such as individual signs representing the typical signs. A sign in functioning as such must be interpreted, or be translated into thought signs, and must be addressed to some interpreter. In the case of inward discourse, the person alternately places himself in different attitudes of mind, and addresses the self of a moment later. Discourse, in this sense, is not, like that of 2, restricted to ratiocination.
G. F. Stout, Analyt. Psychol., I. 87.

discover, *v. t.*—**To discover check.** See ★*check*1.

discovery, *n.*—**Bill of discovery.** See ★*bill*3.

discreate (dis-krē-āt′), *v. t.*; pret. and pp. *discreated*, ppr. *discreating*. To cause (that which has been created) to return to its original nothingness or to chaos.

discreation (dis-krē-ā′shon), *n.* The act of discreating.

discrepate (dis-krep′āt), *v. i.*; pret. and pp. *discrepated*, ppr. *discrepating*. [L. *discrepare*, differ, discriminate: see *discrepant*.] To discriminate; distinguish.

discriminability (dis-krim″i-na-bil′i-ti), *n.* The property of being discriminable; the character of that which may be discriminated.

Clearness implies a maximal *discriminability* or separability from other processes.
E. B. Titchener, Exper. Psychol., I. ii. 189.

discriminant. I. *n.*—**Discriminant of f (x) = 0,** the product of the squares of all the differences between any two roots of the equation.

II. *a.* **2.** Discriminating.

discriminate, *v. i.*—**Discriminating circle, cubic.** See *circle*, ★*cubic*, *n.*

Discrimination reaction, discriminative reaction, in *psychophysics*, a reaction in which the movement of response is delayed until an act of discrimination has been performed, that is, until the reactor has identified the given stimulus as some one of two or more stimuli previously known and agreed upon.

In the *discrimination reaction*, he [the subject] moves when he has apperceived some one of two or more familiar stimuli.
E. B. Titchener, Primer of Psychol., p. 260.

Law of discrimination. Same as *Weber's law* (which see, under *law*1).—**Sensible discrimination,** in *psychophysics*, a term introduced by Fechner to cover the experiencing of mental processes, alike or different, and the report of their likeness or difference. It is used more especially of the methodical comparison of sensations, with a view to the determination of the difference-limen. The German term, *unterschiedsempfindlichkeit*, has been variously translated *difference sensibility*, *differential sensitivity*, *discriminative sensibility*, and *sense discrimination*. J. M. Baldwin's Dict. of Philos. and Psychol. (ii. 517) recommends *sense discrimination*; E. B. Titchener (Exper. Psychol., II.) uses *differential sensitivity* (abbreviated *D. S.*).

The instrument of this analysis [of sensations] was denominated by Fechner *sensible discrimination*.
O. Külpe (trans.), Outlines of Psychol., p. 31.

discrimination-time (dis-krim-i-nā′shon-tīm), *n.* In *psychophysics*, the total duration of the discrimination reaction, or, more commonly, this time minus the duration of the simple reaction.

By subtracting the previously determined simple time from this longer time we get a *discrimination time*.
W. Wundt (trans.), Human and Animal Psychol., p. 279.

Discriminative limen, threshold. See ★*limen*.

disct. A contraction of *discount*.

disculor, *v. t.* and *a.* A simplified spelling of *discolor*.

disculus (dis′kū-lus), *n.*; pl. *disculi* (-lī). [NL., dim. of *discus*, a disk: see *disk*.] In *Hepaticæ*, the occasional adventitious inflated lower lobe. See *auricle*, 3, (*c*). *Spruce.*

discumfort, *v. t.* and *n.* A simplified spelling of *discomfort*.

discurage, *v.* and *n.* A simplified spelling of *discourage*.

discurteous, discurtesy. Simplified spellings of *discourteous*, *discourtesy*.

discuver, discuvery. Simplified spellings of *discover*, *discovery*.

disdiaclasis (dis-dī-ak′la sis), *n.* [Gr. *δίς*, twice, + *διάκλασις*, taken as 'refraction': see *diaclasis*.] In *optics*, double refraction.

disease, *n.*—**Acarine diseases.** See ★*acarine*, *n.*—**Adams-Stokes disease.** Same as *Stokes-Adams* ★*disease*.—**Adenoid disease.** See ★*adenoid*.—**Almond-disease.** See ★*leaf-blight*.—**American coffee-disease,** circular whitish blotches occurring on the leaves, shoots, and berries of the coffee plant in America: said to be due to the fungus *Stilbum flavidum*.—**Association disease.** See ★*association*.—**Baelz's disease of the lip.** See ★*lip*.—**Banana-disease,** a disease of banana-stems in the West Indies, attributed to the fungus *Marasmius semiustis*.—**Banti's disease,** an affection marked by enlargement of the spleen with cirrhosis of the liver, anæmia, abdominal dropsy, and sometimes jaundice.—**Barcoo disease,** an affection, occurring in the elevated regions of South Australia, characterized by gastric disturbances, bulimia, and an eruption followed by extensive desquamation and sometimes sloughing of the subcutaneous tissues. Also called *Barcoo vomit* and *Barcoo rot*.—**Barlow's disease,** infantile scurvy.—**Bazin's disease,** tuberculous ulceration of the leg; psoriasis of the mouth; molluscum contagiosum.—**Bechterew's disease,** gen-

eral muscular atrophy with extreme stiffness of the spine. —**Bermuda lily disease,** a disease of the cultivated lily characterized by spotting and distortion of the leaves and flowers and usually a stunting of the whole plant. It is believed to be caused by digging and using the bulbs before they have ripened.—**Bottom disease.** See ★*crotalism.*—**Brindle disease.** Same as *mosaic* ★*disease.*—**Brown disease,** a disease which affects potatoes, causing the fibrovascular bundles to turn brown. It is attributed to the fungus *Stysanus stemonites.*—**Brown-Séquard's disease,** paralysis of one side of the body with anæsthesia of the other side.—**Buhl's disease,** a disease of newborn infants, marked by fatty degeneration of the liver, edema, purpura, and other morbid conditions.—**Cabbage seedling disease,** a disease of seedlings of cabbage, caused by the fungus *Olpidium Brassicæ,* which attacks the stem near the surface of the soil and kills the plant.—**Cacao-disease,** dark dead patches on the cortex of *cacao,* which are doubtfully attributed to species of *Nectria.*—**Cacao-pod disease,** a disease of cacao-pods, due to the fungus *Phytophthora omnivora.*—**Calico disease.** Same as *mosaic* ★*disease.*—**California vine-disease,** a serious disease of the grape in California, characterized by the imperfect development of the flowers and fruit and finally the death of the plant. Its cause is unknown.—**Canna-disease,** a disease of canna-leaves, due to *Uredo Cannæ,* which causes orange spots at first and finally the death of the leaf.—**Carnation disease,** a disease of carnations following the attacks of aphides.

More recent researches by Woods go to show the correctness of his conclusion that aphides alone are responsible for the *carnation-disease. Encyc. Brit.,* XXVI. 60.

Carrot-disease, a disease characterized by brownish, sunken spots on the root of the carrot, caused by *Phoma sanguinolenta.* It also attacks the stem and prevents the formation of seed.—**Cattle-and-game disease,** a fatal infectious disease of cattle, deer, and other animals, due to a minute polar-stained micro-organism of the swine plague group, which gains access to and multiplies in the blood. Also called *hemorrhagic septicemia.*—**Chestnut disease,** an obscure disease of plants in which they die backwards from the top.—**Climacteric disease.** See ★*climacteric.*—**Climatic disease,** any disease supposed to be caused by a change of climate, as the so-called fever of acclimatization of the tropics.—**Coffee-disease,** a serious disease of the coffee-plant in India and other portions of the Old World. It is caused by one of the rust-fungi, *Hemileia vastatrix,* which attacks the leaves causing yellow discoloration and death.—**Coffee-leaf disease.** Same as *coffee-*★*disease.*—**Colocasia-disease,** a disease caused by *Peronospora trichotoma,* which attacks the roots of *Caladium Colocasia* in the West Indies.—**Conifer seedling disease,** a disease of conifers, especially of spruce and silver fir, caused by the fungus *Pestalozzia Hartigii,* which attacks the young plant at the surface of the soil and kills it.—**Coral-spot disease,** canker-like cracks or excrescences on the branches of various trees, associated with the bright red fungus, *Nectria cinnabarina.*—**Cretinoid disease.** Same as *myxedema.*—**Darier's disease.** Same as ★*keratosis follicularum.*—**Dercum's disease.** Same as ★*adiposis dolorosa.*—**Divers' disease.** Same as *caisson-disease.*—**Drooping disease,** a disease of the peony caused by a fungus, *Sclerotinia Pæoniæ,* which attacks the plant at the surface of the soil causing it to wilt and die.—**Dubois's disease.** Same as *Dubois's* ★*abscesses.*—**Duhring's disease,** dermatitis herpetiformis.—**Echinococcus disease,** a morbid condition which results from the presence in the body of the encysted *Tænia echinococcus.* See *hydatid.*—**Elevator disease,** a form of pneumonoconiosis, or dust-disease, which affects those who run elevators in coal-mines.—**Family disease,** an hereditary disease, especially of the nervous system.—**Fan disease.** Same as ★*serch.*—**Fig-tree disease,** canker-like cracks in the bark of the fig, attributed to the fungus *Libertella ulcerata.*—**File-cutters' disease,** lead-poisoning from inhalation of particles of lead arising from the leaden bed upon which the file rests while being cut.—**Flint-disease.** Same as *chalicosis.*—**Focal disease,** a localized affection of the central nervous system.—**Fourth disease,** a mild eruptive fever which presents some of the characteristics of measles, German measles, and scarlet fever, but is believed to be distinct from all these diseases.—**Frenching disease.** Same as *mosaic* ★*disease.*—**Friedreich's disease.** Same as *Friedreich's ataxia* (which see, under *ataxia*).—**Glénard's disease.** Same as ★*enteroptosis.*—**Gum disease.** Same as ★*foot-rot,* 2.—**Hair-combers' disease,** anthrax or malignant pustule.—**Hodgson's disease,** aneurism of the aorta.—**Hollyhock-disease,** a disease of hollyhocks, due to the fungi *Puccinia malvacearum* and *Colletotrichum Althææ.*—**Hoof-and-mouth disease.** Same as *foot-and-mouth disease* (which see, under *foot*).—**Hop-disease,** a mildew occurring on the leaves of the hop-plant, due to *Podosphæra Castagnei;* also the black fungus, *Capnodium salicinum,* which covers the leaves and stems.—**Innate disease,** congenital disease, not necessarily hereditary.—**Lily-disease,** a disease of *Lilium candidum* characterized by brown spots on the stem, leaves, and buds, which are said to be produced by a species of *Botrytis.*—**Little's disease,** muscular rigidity of congenital nervous origin.—**Marie's disease,** acromegaly; also hereditary cerebellar ataxia and pulmonary osteo-arthropathy.—**Mastoid disease.** Same as *mastoiditis.*—**Match-makers' disease,** necrosis of the jaw, due to phosphorus poisoning.—**Ménière's disease.** Same as *auditory vertigo* (which see, under *vertigo*).—**Mignonette-disease.** See *leaf-blight of mignonette* under ★*leaf-blight.*—**Miners' disease.** Same as ★*ankylostomiasis.*—**Mongrel-disease.** Same as *mosaic* ★*disease.*—**Mosaic disease,** a disease which affects the leaves of certain plants, especially the tobacco-plant. It is characterized by the formation of numerous light-colored spots scattered over the surface of the leaf, giving it a mosaic appearance. It is attributed to an abnormal activity of the oxydizing enzymes of the cells.—**Mottled-top disease.** Same as *mosaic* ★*disease.*—**Mulberry-root disease,** a disease which attacks and kills the roots of the mulberry in Japan: attributed to the fungus *Helicobasidium mompa.*—**Mummy disease,** a fungous disease of the guava produced by *Glæosporium Psidii,* which causes the fruit to shrivel and decay.—**Mushroom-disease,** a disease of the cultivated mushroom occasioned by species of *Verticillium* and other fungi.—**Navicular disease,** in *vet. surg.,* an inflammation and caries of the navicular bone, starting usually as an inflammation of the lower portion of the great sesamoid sheath and causing severe intermittent lameness: seen exclusively in the horse.—**Oak-seedling disease,** a disease of the roots of seedling oaks due to the pyrenomycetous fungus *Rosellinia quercina.*—**Paget's disease.** Same as *malignant papillary* ★*dermatitis.*—**Pandanus-disease,** a disease which attacks the trunk and branches of the screw-pine, *Pandanus,* attributed to the fungus *Melanconium Pandani.*—**Parchment disease.** Same as *parchment-skin.*—**Parrot's disease,** a syphilitic inflammation of the articular ends of the long bones, giving rise to pseudoparalysis.—**Pearly disease,** a form of tuberculosis in cattle.—**Potato-disease.** (*b*) Same as *potato late* ★*blight.*—**Recklinghausen's disease,** an affection marked by the occurrence of fibrous growths on the nerves, of skin tumors resembling molluscum fibrosum, of pigmentation of the skin, and of pains in the joints.—**Red disease,** a former name in some parts of England of hog-cholera and swine-plague, on account of the red patches which appear on the skin of affected animals. See *hog-cholera* under *cholera.*—**Reichmann's disease,** hypersecretion of the gastric juice.—**Riga's disease,** a form of ulcerative inflammation of the mucous membrane of the under surface of the tongue and floor of the mouth.—**Sacred disease,** a name formerly applied to epilepsy.—**Sacro-iliac disease,** chronic tuberculous inflammation of the sacro-iliac joint.—**Savill's disease,** an epidemic inflammation of the skin accompanied by exfoliation of the epidermis.—**Screw-pine disease.** Same as *Pandanus* ★*disease.*—**Scythian disease,** a form of insanity occurring in adult males, preceded by atrophy of the sexual organs and impotence.—**Silver-fir leaf-disease,** a disease of *Abies Picea,* caused by the pyrenomycetous fungus, *Acanthostigma parasiticum,* which covers the under surface of the leaves and stems with a yellow-brown mycelium.—**Sleeping disease.** Same as *sleepy* ★*disease.*—**Sleepy disease,** a disease of tomatoes which attacks the roots and causes the plant to wither and die. It is caused by *Fusarium Lycopersici,* according to Massee.—**Soil-disease,** any disease the contagium of which is derived from the soil.—**Sore shin disease,** a disease which attacks cotton seedlings near the surface of the soil and causes their death. It is attributed to an undetermined fungus.—**Spot-disease,** any disease of plants which produces spots on the leaves, particularly the disease of the leaves of the violet caused by *Alternaria Violæ.* See ★*leaf-spot.*—**Steppe disease,** the Russian cattle-plague.—**Still's disease,** an affection in children in which there is enlargement of the spleen and lymphatic glands associated with an inflammatory state of many of the joints.—**Stokes-Adams disease,** a slowly progressive form of degeneration of the heart muscle, marked by attacks of fainting, dizziness, or convulsions, dropsy, slow pulse, and shortness of breath.—**Sutton and Gull's disease.** Same as *arteriosclerosis.*—**Talma's disease,** an affection marked by tonic muscular spasms, similar to those of Thomsen's disease, but coming on in later life and not congenital as is this affection.—**Thomsen's disease.** See *Thomsen.*—**Tsetse-fly disease,** a disease of animals in South Africa, caused by the presence in the blood of *Trypanosoma,* inoculation with which is effected by means of the tsetse-fly.—**Vagabond's disease** or **pigmentation,** a brownish discoloration of the skin of tramps caused by dirt, the irritation from scratching, and the action of the weather.—**Violet-disease.** Same as ★*leaf-spot of violet.*—**Water-borne disease,** a disease the pathogenic germ of which is transmitted mainly through the medium of the water-supply; among such diseases are typhoid fever, cholera, and dysentery.—**Weir Mitchell's disease.** Same as *erythromelalgia.*—**White face and foot disease,** redness and inflammation of the white face or white limbs of an animal on account of the decreased resistance of the non-pigmented areas of the skin to irritant influences.—**Wilt-disease,** a serious disease which attacks the roots of the cotton, the watermelon, and the cow-pea, causing the plants to wilt and die. It is caused by a pyrenomycetous fungus *Neocosmospora vasinfecta.* See ★*wilt* for other wilt diseases.—**Yellow disease of the hyacinth.** Same as ★*bacteriosis of the hyacinth.*

disease-fungus (di-zēz′ fung-gus), *n.*; pl. *disease-fungi* (-ī). A fungus capable of producing disease in either animals or plants.

disease-proof (di-zēz′ pröf), *a.* In *bot.,* proof against disease. See ★*resistant,* I. 2.

diseme (dī′sēm), *n.* [L. *disēmus,* < Gr. *δίσημος,* of doubtful quantity (having two possible quantities), < *δι-,* two-, + *σῆμα,* a mark, taken in sense of *σημεῖον,* a mark, sign, unit of time, mora.] In *anc. pros.,* a syllable containing two moræ or units of time. See *disemic.*

disenactment (dis-e-nakt′ment), *n.* [*disenact* + *-ment.*] The repeal of an enactment. *S. Smiles.*

disengagement-gear (dis-en-gāj′ment-gēr), *n.* A releasing-gear; a device for disengaging a catch from the notch or pin with which it is engaged. Such a gear is used in Corliss engines to let the admission-valve close at the right time.

disengagement-governor (dis-en-gāj′ment-guv″ėr-nor), *n.* A governor which works by disengaging the valve-gear when the speed is too high, thus closing the regulating-valve, and by engaging the valve-gear when the speed is too low and so opening the regulating-valve. When the engine runs normally the governor runs free.

disenmesh (dis-en-mesh′), *v. t.* To free from entanglements or entangling meshes.

> As ye behold this web of circumstance
> Deepen the more for every thrill and throe,
> Convulsive effort to disperse the films
> And *disenmesh* the fame o' the martyr.
> *Browning,* Ring and Book, xii. 565.

disentailment (dis-en-tāl′ment), *n.* The act of destroying an entail, or an estate in fee tail.

disentombment (dis-en-töm′ment), *n.* The act of disentombing. *S. Smiles.*

disequilibrate (dis-ē-kwi-lī′brāt), *v. t.*; pret. and pp. *disequilibrated,* ppr. *disequilibrating.* To disturb or destroy the balance or equilibrium of; throw out of balance either physically or mentally.

disequilibration (dis-ē″kwi-lī-brā′shon), *n.* An unbalanced condition: as, a *disequilibration* of the organism.

disequilibrium (dis-ē-kwi-lib′ri-um), *n.* [*dis-* + *equilibrium.*] An imperfect equilibrium, as of intellectual and moral faculties. *Smithsonian Rep.,* 1890, p. 648.

disfaith (dis-fāth′), *n.* Lack of faith; distrust. *Kingsley.*

disfever (dis-fē′vėr), *v. t.* To free from or allay fever. *G. Meredith.*

disforestation (dis-for-es-tā′shon), *n.* 1. Same as *disafforestation.*—2. The act of deforesting, or of clearing of woods and forests; the destruction of forests.

disfrock (dis-frok′), *v. t.* To unfrock or deprive of the clerical office or character. *Carlyle.*

disgorger, *n.* 2. In the manufacture of effervescing wine, the workman who temporarily removes the cork from a bottle of wine which has undergone secondary fermentation, thus allowing the yeasty sediment to be blown out of the neck of the bottle by the accumulated gas as it escapes. *Sadtler,* Handbook of Indust. Chem., p. 207.

disgregation, *n.* 2. In *thermodynamics,* the transformation-value of configuration of a body or system. The disgregation added to the transformation-value of the heat contained in a system equals the entropy of the system. *J. W. Gibbs,* Statistical Mech., p. 69.

disguize, *v. t.* and *n.* A simplified spelling of *disguise.*

dish, *n.* 3. In *mining:* (*c*) A small rough vessel used in diamond and gold washing: sometimes used attributively: as, he obtained good *dish* prospects after crudely crushing up the quartz.—**Petri dish,** a shallow glass dish with a cover, used for making separation-cultures of bacteria and other micro-organisms by means of the poured-plate method: named for the inventor R. J. *Petri,* a German bacteriologist. See *poured* ★*plate* and *poured-plate* ★*culture.*

dish, *v.* **I.** *trans.* 5. To form with a concave center, as a disk, a wheel, a running track, or a racing-track.

II. *intrans.* 2. In *trotting,* to throw the feet outward, moving them forward with a circular motion instead of in a straight line. Also *paddle.*

dishallucination (dis-ha-lū-si-nā′shon), *n.* The act of disillusionizing or the fact of being disillusionized; a freeing from hallucination. *R. Buchanan.*

disharmonism (dis-här′mō-nizm), *n.* Same as *disharmony. Ripley,* Races of Europe, p. 39.

disharten, *v. t.* A simplified spelling of *dishearten.*

dished (disht), *p. a.* Concave, as a dish; hollowed out.—**Dished face.** The face of an animal that is decidedly concave in profile.

> There was a time when swine-breeders had a delusion for "*dished faces*" and heavy jowls.
> *Rep. Kan. State Board Agr.,* 1901–02, p. 52.

Dished hoof. See *hoof.*

dish-faced, *a.* 1. (*b*) Said of a horse in which the profile of the face is concave.

dish-feed (dish′fēd), *n.* A device for feeding cotton into a carding-machine. It consists of a roller and a flat-plate, the latter curved upward at the delivery end. Also called *shell-feed.*

dish-keel (dish′kēl), *n.* A keel composed of a broad horizontal plate bent up slightly at the edges to give a connection with the side plating.

dish-machine (dish′ma-shēn″), *n.* In *wood-working,* a power-machine for cutting thin shallow dishes or platters from wood. The block of wood, previously steamed to soften it, is placed in the machine, firmly clamped to the feeding mechanism, and presented to the cutting-tools which cut off thin veneers of the required shape. It will cut 7,000 veneers $\frac{1}{16}$ of an inch in thickness, in an hour. The dishes when cold retain their dish-like form.

dishome (dis-hōm′), *v. t.*; pret. and pp. *dishomed,* ppr. *dishoming.* To deprive of a home; render homeless.

dishouse (dis-hous′), *v. t.*; pret. and pp. *dishoused,* ppr. *dishousing.* 1. To expel from a house; evict.—2. To clear of houses, as in widening a street or in making other public improvements.

dishumanize (dis-hū′man-īz), *v. t.*; pret. and pp. *dishumanized*, ppr. *dishumanizing*. To dehumanize; deprive of human powers or attributes.

dish-washer, *n.* **4.** A machine for cleaning and washing plates, dishes, etc. It consists essentially of a large vessel kept full of boiling water charged with soap-powder. The crockery is placed in a large galvanized wire basket suspended by a chain from a crane and lowered into the water. Power is applied to large revolving paddles or agitators that keep the hot soapy water in violent motion through the basket, completely washing the contents. The soiled water is removed and clean water added as fast as required. The machine has a capacity of many hundreds of dishes an hour. When the dishes are washed the basket is raised out of the water, swung round on the crane and lowered for a moment into clean, hot water. On taking the basket out of the rinsing water the dishes dry quickly from the heat to which they have been subjected.

disilluminate (dis-i-lū′mi-nāt), *v. t.*; pret. and pp. *disilluminated*, ppr. *disilluminating*. To deprive of light; obscure; darken.

> The gods are heavy on me, and all the fates
> Shed fire across my eyelids mixed with night,
> And burn me blind, and *disilluminate*
> My sense of seeing.
>
> *Swinburne*, Atalanta.

disillusive (dis-i-lū′siv), *a.* Tending to disillusion or to disillusionize.

> A long line of *disillusive* centuries has permanently displaced that [Hellenic idea of life].
>
> *T. Hardy*, Return of the Native, iii. 1.

disimagine (dis-i-maj′in), *v. t.*; pret. and pp. *disimagined*, ppr. *disimagining*. To imagine not to be; cease to imagine; banish from the imagination.

> Truth, whose centre is everywhere and its circumference nowhere, whose existence we cannot *disimagine*.
>
> *Emerson*, Letters and Social Aims, Progress of Culture.

disimitate (dis-im′i-tāt), *v. t.*; pret. and pp. *disimitated*, ppr. *disimitating*. To cease to imitate and to undo the results of imitation.

Tarde (trans.), Laws of Imitation, p. 20.

disimmure (dis-i-mūr′), *v. t.*; pret. and pp. *disimmured*, ppr. *disimmuring*. To free from immurement or confinement within prison walls; release; liberate.

disimprisonment (dis-im-priz′on-ment), *n.* Release from imprisonment; liberation.

Browning.

disincarnate (dis-in-kär′nāt), *a.* Disembodied; freed from the trammels of the flesh, as the souls of the dead. *F. T. Palgrave*, Death in the Forest.

> On the hypothesis already explained, these appearances would be caused by the action of the *disincarnate* upon the living mind.
>
> *A. Lang*, in N. Y. Evening Post, Jan. 12, 1901.

disinfector, *n.* **2.** A machine or apparatus for disinfecting and cleaning garments, bedding, etc., by means of hot water, steam, chemicals, or the fumes of burning materials. One type employs a steam-tight drum in which the articles are either boiled or washed by the aid of chemicals, steam, or hot water. Another form is a gas-tight closet in which the things are submitted to disinfecting fumes.

disinfeudation (dis-in-fū-dā′shon), *n.* In *law*, the act of freeing from the obligations of a feudal tenure.

disinheritation (dis-in-her-i-tā′shon), *n.* Disinheritance.

disintegrant (dis-in′tē-grant), *n.* Whatever disintegrates or tends to disintegrate. *H. Spencer.*

disintegration, *n.*—**Boulders of disintegration,** rounded masses of rock which are produced by weathering from fragments originally angular. Granites and other massive varieties which are much cut up by joints are often covered by these boulders, which closely simulate water-worn specimens.—**Disintegration-product,** a substance formed by the breaking down or chemical disintegration of another. In radioactivity the idea of disintegration is extended to the elements, helium being regarded as a disintegration-product of radium.—**Disintegration theory,** in *radioactivity*, the theory that certain elements, as radium, thorium, actinium, and uranium, undergo successive spontaneous changes with the production of a series of new substances called disintegration-products.

disintegrationist (dis-in-tē-grā′shon-ist), *n.* An advocate of disintegration or of some theory of disintegration.

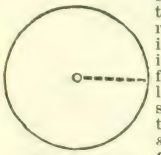
disintegrator, *n.* **2.** See ★*sand-mixer*. — **Carr disintegrator,** an impact crushing-machine consisting of a series of concentric cages revolving in opposite directions at high speed.

disintensify (dis-in-ten′si-fī), *v. t.*; pret. and pp. *disintensified*, ppr. *disintensifying*. To render less intense; tone down.

> And all-subduing black,—black's soul of black
> Beyond whites' power to *disintensify*.
>
> *Browning*, Ferishtah's Fancies, Bean-Stripe.

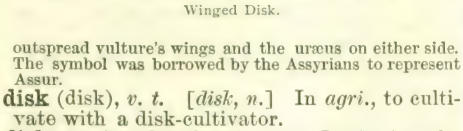
disjected (dis-jek′ted), *p. a.* Torn or wrenched apart; dismembered; sundered; disconnected; scattered: as, a *disjected* series of lectures; *disjected* members.

disjunction, *n.* **2.** In *logic:* (*b*) a term consisting of two or more terms united by the conjunction *or* or its equivalent.—**3.** In *biol.*, the separation or alternative inheritance of the parental characters in crosses between inbred varieties or strains of domesticated plants and animals. Called also the *law of disjunction*, or *Mendel's law*. See ★*inheritance*.



Disjunctive absorption, term. See ★*absorption*, ★*term*.

disjunctor, *n.* **2.** In *bot.*, the minute spindle-shaped cellulose body formed in the middle lamella between each pair of conidia of certain fungi.



> These *disjunctors* serve as points of application for the elastic push of the swelling spore-ends, and as the connecting outer lamella of the cell wall suddenly gives way, the spores are jerked asunder.
>
> *Encyc. Brit.*, XXVIII. 557.

disk, *n.*, **5.** (*d*) In *Echinodermata*, the central part of the body from which the arms radiate. (*e*) In crinoids, that part of the theca which lies above the origins of the free arms. Also called *tegmen* and *vault*. See *dorsal* ★*cup*. (*f*) In *Rotifera*, that portion of the head which bears the ciliary wreath. (*g*) In mollusks, the lower surface of the foot or part used in locomotion, as in gastropods. (*h*) In some cœlenterates, the oral aspect of the body.

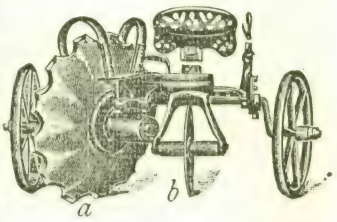
8. A small medicated gelatin tablet about $\frac{1}{25}$ of an inch thick, which contains a small amount of glycerin to prevent it from becoming hard and brittle: a simple means of applying accurately adjusted quantities of mydriatic, myotic, and anesthetic alkaloids such as atropin, physostigmine, and cocaïne to the eye.—**Acoustic disk.** See ★*acoustic*.—**Anangioid disk.** See ★*anangioid*.—**Central disk,** a secondary chitinous extension between the bases of the branches of the rhabdosomes in some graptolites, notably the *Dichograptidæ*. It consists of two layers and serves partly as a basal support for the branches and partly as an organ of fixation.—**Hensen's disk,** a light band in the center of a Bowman's disk.—**Interfusion disk,** the disk formed by the interfusion and mingling of the rays which pass through the objective of an optical instrument. In a telescope it is the image of the object-glass formed by the eyepiece.—**Lagrange disk.** Same as *interfusion* ★*disk*.—**Masson's disk,** in *exper. psychol.*, a disk of white cardboard along one of whose radii is drawn an interrupted black line of even thickness. On rotation, the disk shows a series of gray rings, dark near the center and lightening to imperceptibility toward the periphery. The disk has been much used for the determination of the difference limen of brightness, and also for the study of fluctuation of the visual attention. *Annales de Chimie et de Physique*, XIV. 150.—**Middle disk of Engelmann.** Same as *Hensen's* ★*disk*.—**Primary disk,** the disk of adhesion or fixation by which the sicula and young rhabdosomes of certain graptolites were attached. It was of tenuous structure and was frequently replaced by a secondary (central) disk. See *central* ★*disk*.—**Ramsden disk.** Same as *interfusion*-★*disk*.—**Retractile disk,** a flattened disk-shaped organ at the aboral pole of certain polyzoan larvæ, such as those of *Bugula*.—**Strobic disk,** a disk upon which concentric circles or wheels are drawn: so called because the circles appear to spin when the disk is moved rapidly through a circular path before the eye. See *strobic circles*, under *strobic*.—**Stroboscopic disk,** a disk, with equidistant openings or alternate open and closed sectors, used for stroboscopic observations of periodic phenomena. See *stroboscope*.—**Sun disk.** Same as *winged* ★*disk*.—**Winged disk,** in *Egyptian art*, the symbol of the sun, a complete circle, is represented with outspread vulture's wings and the uræus on either side. The symbol was borrowed by the Assyrians to represent Assur.

Masson's Disk.

Winged Disk.

disk (disk), *v. t.* [*disk*, *n.*] In *agri.*, to cultivate with a disk-cultivator.

disk-carrier (disk′kar″i-ėr), *n.* In *photom.*, the support of a disk or screen which is movable along or fixed to the photometer-bench, according to the style of the photometer.



disk-cultivator (disk′kul″ti-vā-tor), *n.* A cultivator in which the part applied to the soil consists of sharp-edged disks placed vertically and rolling with the progress of the cultivator. Its use is to cut the weeds and pulverize the soil. See ★*cultivator*.

disk-cutter (disk′kut″ėr), *n.* A tool used by potters for cutting out disks of clay for making pie-plates. It consists of a wooden arm supported on one end by a small foot or block of wood, of circular or rectangular form, in which the arm revolves; at the other end is a metal point, usually a common horse-shoe nail, passing through the arm at a right angle, with the point down. The foot or block is placed on the rolled sheet of clay and held in place while the arm is revolved by the hand of the workman, the metal point cutting out a perfect disk. This is afterward shaped over a convex mold to form the concave pie-plate.

disk-flower (disk′flou″ėr), *n.* A flower of the disk of a composite plant. See *disk*, 4 (*c*).

disk-jelly (disk′jel-i), *n.* A sea-blubber; a discomedusan.

disk-plow (disk′plou), *n.* A plow having revolving disks, resembling those in a disk-harrow, in place of plow-shares. The action of this tool is not precisely that of the plow, since the disks break up and tear apart as well as turn over the soil.

Rear View of Sulky Disk-plow. *a*, Cut-away plow disk in position for turning at end of furrow; *b*, straight disk.

disk-saw (disk′sâ), *n.* A saw in the form of a disk, used for cutting rails or beams in the rolling-mill. Its cutting rim is either toothed or toothless. It is set in rapid rotation and the friction of the contact produces a heat sufficient to fuse the metal in contact with the disk as it revolves, even if the disk is softer in quality than the metal to be sawed. Also called *fusion-disk*.

disk-shell (disk′shel), *n.* The shell of certain brachiopods, as *Discina*.

disk-valve, *n.* **2.** Any valve in which the opening is closed by a disk, as in the ordinary stop-valve.

disk-wheel, *n.* **2.** A type of wheel for cars or motor-vehicles in which the hub is connected to the rim by a continuous web or plate, instead of by spokes with open intervals between. Such wheels appear to be solid disks. In car-wheels of this pattern the plates are of steel, bumped or dished to give lateral stiffness; or the plate is double with compressed card-board between. In motor-vehicles the disk is of thin steel, concaved to give elasticity by slight flexure of the plate under shock. Such wheels at high speed raise less dust than spoked wheels, and do not hum in moving through the air.

dislevelment (dis-lev′el-ment), *n.* Deviation from the level: as, a correction for *dislevelment* was made.

dislocation, *n.* **4.** The territorial distribution of an army.—**Dislocation of the lens,** displacement of the crystalline lens of the eye.

dislocatory (dis-lok′a-tō-ri), *a.* Involving dislocation or dislocations: as, *dislocatory* movements of the earth's crust.

disloyalist (dis-loi′al-ist), *n.* A disloyal or disaffected person.

dismal, *n.* **6.** *pl.* The blues; the dumps; a state of gloominess or despondency: as, to be in the *dismals*.

dismantlement (dis-man′tl-ment), *n.* The act of dismantling or the state of being dismantled.

dismarket (dis-mär′ket), *v. t.* To deprive (a market) of its status and privileges.

dismissible (dis-mis′i-bl), *a.* Liable to be dismissed or discharged from office; removable.

dismountable (dis-moun′ta-bl), *a.* That may be dismounted.—**Dismountable gun.** See ★*gun*1.

disobeyal (dis-ō-bā′al), *n.* [*disobey* + *-al*.] An act of disobedience: as, *disobeyal* of an order of the court.

disobliger, *n.* **2.** An English vehicle which was developed into the American track-sulky of the high-wheeled, springless type.

disodic (dī-sō′dik), *a.* [*di-*[2] + *sod*(*ium*) + *-ic*.] In *chem.*, containing two atoms of sodium, as the common phosphate of soda of commerce, $Na_2HPO_4.12H_2O$.

disomus (dī-sō′mus), *n.*; pl. *disomi* (-mī). [NL., < Gr. *δίσωμος*, having two bodies, < *δι-*, two-, + *σῶμα*, body.] A monster with two bodies.

disorder, *n.* **7.** In *logic*, disagreement with every conceivable general rule whatever. It is impossible for a finite collection of objects to be in disorder in this sense, nor is it possible for a continuum to be in disorder. Whether or not it is possible for an infinite discrete collection to be in disorder is a question that has not been solved.

disorderly, *a.* **II.** *n.* A person accused or guilty of disorderly conduct.

disorientation (dis-ō″ri-en-tā′shon), *n.* [*dis-* + *orientation*.] Loss of the ability to determine direction or to estimate correctly time and space. *Lancet*, June 25, 1904, p. 1808.

disoxidize (dis-ok′si-dīz), *v. t.*; pret. and pp. *disoxidized*, ppr. *disoxidizing*. [*dis-* + *oxidize*.] Same as *deoxidize*.

disp. An abbreviation of *dispensatory*.

dispansive (dis-pan′siv), *a.* [L. *dispansus*, pp. of *dispandere*, spread out: see *dispand.*] In *optics.*, serving to dispand or spread out: applied to a system of lenses which has a negative focal distance. Opposed to *collective.*

disparate, *a.* 2. In the psychology of sensation, belonging to or derived from different senses (said of sensations); appealing to different senses (said of stimuli).

Diversion of the attention by *disparate* stimuli, when it occurs, is probably the more effective.
O. Külpe (trans.), Outlines of Psychol., p. 410.

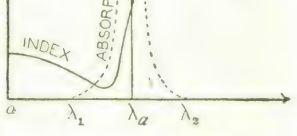
Disparate points. See ★*point*[1].

dispendious (dis-pen′di-us), *a.* [L. *dispendiosus*, expensive, < *dispendium*, expense, loss, < *dispendere*, expend: see *dispend.*] Costly; expensive; extravagant; lavish: as, 'a *dispendious* use of material may in the end be true economy.' *A. J. Beresford-Hope*, Eng. Cathedrals, ii.

dispense, *v. t.* 5. To put up (a medical prescription).

dispermic (dī-spėr′mik), *a.* [Gr. *δι-*, two-, + *σπέρμα*, seed, + *-ic.*] Affected with or pertaining to dispermy: said of eggs containing two spermatozoa.

dispermin (dī-spėr′min), *n.* [Gr. *δι-*, two-, + *σπέρμα*, seed, + *-in*[2].] Same as ★*piperazin.*



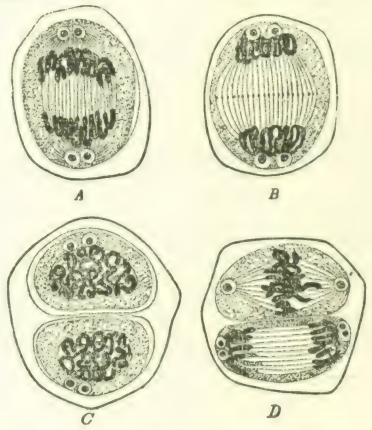
dispermy (dī-spėr′mi), *n.* [Gr. *δι-*, two-, + *σπέρμα*, seed, + *-y*[3].] The entrance of two spermatozoa into a single egg.

disperse, *v. t.* 6. In *optics*, to refract by amounts which vary with the wave-length of the refracted ray; separate a composite beam of light, into its components, forming a spectrum. See *dispersion*, 3.

dispersion, *n.* 3. (*b*) In *physiol. optics*, the blurring of the retinal image due to faulty accommodation.

The *dispersion* images indicate the position of the object as before or behind the object of distinct vision.
O. Külpe (trans.), Outlines of Psychol., p. 353.

6. In *bot.*, the distribution of seeds and of plants by various means, as by the wind, by birds and animals, etc.—**Anomalous dispersion,** dispersion of light in which the direction is reversed, the refraction increasing with the wave-length instead of diminishing, as in ordinary cases. Anomalous dispersion is an accompaniment of selective absorption (see *selective*). It manifests itself only in the case of media having a large absorption coefficient, and in that region of the spectrum which is occupied by the absorption-band. In transparent substances the frequency of the light-wave does not coincide with the natural frequency of vibration of the ions or particles of the refracting medium. In such cases the index of refraction in general diminishes as the wave-length of the light increases, and the result is normal dispersion in which the shorter waves are most strongly bent from their path. Whenever, however, the frequency of the light-wave coincides with the vibration-frequency of the particles of the medium, there is a disturbance of this relation. In the case of bodies having strong selective absorption, such as fuchsin, there is a marked diminution of the index of refraction with an increase of wave-length as the frequency of the light wave approaches the natural frequency of the particles of the substance (that is to say, as the absorption-curve is approached on the side toward the violet), followed by a sudden and very great rise in the value of the index for wave-lengths corresponding to the absorption-band. On the side toward the red the values of the index of refraction are very great, but they diminish again rapidly as the wave-length increases. The variations in the index of refraction which occur in anomalous dispersion are shown graphically in the figure, in which the dotted curve shows the values of the coefficient of absorption of the substance. The region inclosed by this curve is that of the absorption-band of the substance which has its maximum at the wave-length λ_a represented by the vertical line in the diagram. For those portions of the spectrum lying between o and λ_1 and also beyond λ_2, where the values of the absorption coefficient are small, dispersion follows its normal course, the index of refraction diminishing with increasing wave-length. Within the absorption-band, between λ_1 and λ_2, occurs the sudden change in the value of the index shown in the curve, and it is in this region that anomalous dispersion is observed. Anomalous dispersion occurs not only in certain solids having strong and well-marked absorption-bands, but likewise in certain vapors. Sodium vapor, for example, which is opaque to light of the wave-length of the yellow sodium lines .589 μ, exhibits the phenomenon in this region.—**Atmospheric dispersion,** the formation of a spectrum when a ray of white light is refracted by the atmosphere or by any part of it. A bright star seen near the horizon appears as a vertical spectrum band by reason of atmospheric dispersion.—**Dispersion-apparatus,** in *optics*, any optical system for producing a spectrum, as a spectroscope.—**Dispersion circle, lens, photometer.** See ★*circle*, ★*lens*, ★*photometer.*—**Law of dispersion.** (*a*) In the theory of errors, the law of the distribution of errors of observation as regards size, but without reference to size or direction. (*b*) The tendency of material particles or bodies, including conscious individuals, to go apart, as from a center; hence, in the phenomena of population, the continual breaking down and dispersing of aggregations, counteracting a tendency toward concentration. See *law of* ★*aggregation.* *L. F. Ward*, Dynamic Sociol., I. 249.—**Sellmeier's theory of dispersion,** a theory of dispersion based upon the assumption that the particles of the refracting substance partake of the vibratory motion of the ether. This theory, proposed by Sellmeier in 1870 was subsequently further developed by Helmholtz, Lommel, Ketteler, and others.



Anomalous Dispersion.

dispetal (dis-pet′al), *v. t.*; pret. and pp. *dispetaled*, *dispetalled*, ppr. *dispetaling*, *dispetalling.* [*dis-* priv. + *petal.*] To strip (a flower) of its petals.

Here all is sunny, and when the truant gull
Skims the green level of the lawn, his wing
Dispetals roses.
R. L. Stevenson, Underwoods, I., Son. xxxv.

disphenoid (dī-sfē′noid), *n.* [*di-*[2] + *sphenoid.*] A crystalline form of the sphenoid group of the tetragonal system, bound by eight similar isosceles triangles in symmetrical pairs; a tetragonal scalenohedron. See *sphenoid*, 1.

dispireme (dī-spī′rēm), *n.* [Also *dispirem*; < Gr. *δι-*, two-, + *σπείρημα*, *σπείραμα*, a thing wound or coiled, a spire.] In *cytol.*, the stage of karyokinesis during which the chromosomes unite to form two skeins, one for each of the daughter-nuclei.

Division of pollen-mother-cells in the lily as described by Guignard.

A, anaphase of the first division, showing the twelve daughter-chromosomes on each side, the interzonal fibers stretching between them, and the centrosomes, already double, at the spindle-poles; *B*, later stage, showing the cell-plate at the equator of the spindle and the daughter-spiremes (dispireme-stage of Flemming); *C*, division completed, double centrosomes in the resting-cell; *D*, ensuing division in progress, the upper cell at the close of the prophases, the chromosomes and centrosomes still undivided, lower cell in the late anaphase, cell-plate not yet formed. (From Wilson's "The Cell.")

dispirous (dī-spī′rus), *a.* [Gr. *δι-*, two-, + *σπεῖρα*, coil, spiral.] Having double spirals: applied to the elaters of the *Hepaticæ*. *Spruce.*

displacement, *n.* 3. In *naval arch.*, displacement is the total weight of a vessel and of everything on board, which, in accordance with the laws of hydrostatics, is equal to the weight of the volume of water displaced by the vessel when afloat. It is usually given in long tons, and is ascertained by calculation, from the plans, of lines of the vessel for a series of mean drafts, in accordance with certain rules. The results of the calculations are then plotted in curves of displacement. See ★*curve.* *Light displacement* is that of the vessel without water, stores, provisions, ammunition, coal, or cargo. *Load displacement* is that of the ship fully loaded. *Normal load displacement*, or *normal displacement*, in a warship, is that fixed by the designer as the average condition and includes the weight of coal, stores, ammunition, etc., considered to be the average amount to be carried. *Deep load displacement* is that which corresponds to the full amount of coal, stores, ammunition, etc., which can be placed in the bunkers, storerooms, holds, and ammunition-rooms.

6. In *veg. teratol.*, a malformation, in leaves, due to abnormal cohesion or fusion of parts which results in dislocation and other apparent changes in the form. Thus two fused leaves may appear like a single lobed leaf, a whorl may be reduced to two opposite leaves, etc. *Masters.*—**Angles of displacement,** in *physiol. optics*, angles employed to determine the position of the foremost line of regard. The angle of *vertical displacement* measures the divergence of the plane of regard, up or down, from the primary position; the angle of *lateral displacement* is included between the foremost line of regard and the median line of the plane of regard.—**Curve of displacement.** See ★*curves of ship calculations.*—**Displacement lubricator, pump.** See ★*lubricator*, ★*pump*[1].—**Law of displacement,** in *phys.*, the law of the shifting, with temperature, of the wave-length of the maximum of the energy-curve for the emission-spectrum of a black body. Also called *Paschen's law.*—**Wave of displacement.** See ★*wave*[1].

displacement-tonnage (dis-plās′ment-tun″āj), *n.* In *ship-building*, the displacement of a vessel measured in tons weight: distinguished from *register-tonnage* which is measured in conventional tons of 100 cubic feet.

Displacer piston. See ★*piston.*

display, *n.* 2. In *printing*, the art of selecting and arranging types of unequal size, as in a title-page or advertisement, so as to make certain parts emphatic and the whole likely to attract attention.

display-man (dis-plā′man), *n.* An employee of the United States Weather Bureau whose duty is to display the weather flag-signals, storm-signals, or other warnings.

display-pipe (dis-plā′pīp), *n.* In *organ-building*, a pipe set in the front of the case and usually ornamented. Such pipes are sometimes those which sound, and sometimes mere dummies. Also *show-pipe.*

displezure, *n.* A simplified spelling of *displeasure.*

displuviate (dis-plū′vi-āt), *a.* [L. *displuviatus*, < *dis-*, apart, + *pluvia*, rain.] Protected from rain; provided with channels to carry off rain.—**Displuviate atrium.** See ★*atrium.*

dispope (dis-pōp′), *v. t.* To deprive of the popedom; depose as pope; unpope. *Tennyson.*

Disporea (dī-spō′rē-ą), *n. pl.* [NL., < Gr. *δι-*, two-, + *σπορά*, seed (spore).] A group of *Myxosporidia* in which only 2 spores are produced in each trophozoite. They are parasitic forms, living freely as amœboid organisms in the bile or urine of fishes and frogs. Also called *Disporocystidæ.*

disporous (dī-spō′rus), *a.* [Gr. *δι-*, two-, + *σπορά*, seed (spore).] Having 2 spores: said of certain *Coccidia*; producing only 2 spores, as some *Myxosporidia.*

disposability (dis-pō-zą-bil′i-ti), *n.* The quality of being disposable: as, the *disposability* of one's time, one's property, or the like.

disposition, *n.* 10. Specifically, in *organ-building*: (*a*) the plan or specification in accordance with which the whole instrument is built; (*b*) the arrangement of the visible parts of the instrument, as of the display-pipes, the case, the desk or console, the stops, etc.—**Bond and disposition in security.** See ★*bond*[1].—**Physiological disposition,** a tendency of certain organs or tissues to respond in definite ways to certain actions upon them.—**Psychical disposition,** a natural tendency of the mind to present certain definite kinds of phenomena under definite kinds of circumstances.—**Psychophysical disposition,** a tendency to the production of a certain kind of consciousness in response to certain kinds of physical stimulation; also a tendency to the production of certain physical effects in response to certain mental activities.

dispossessory (dis-po-zes′sō-ri), *a.* [*dispossess* + *-ory.*] Relating to or involving dispossession or eviction: as, a *dispossessory* warrant.

dispriest (dis-prēst′), *v. t.* To deprive of the status of priest. Same as *unfrock.* *N. E. D.*

disputably (dis-pū′tą-bli), *adv.* With some possibility of dispute; with less certainty; questionably.

Linus and Thamyris, and, more *disputably*, Orpheus, are . . . precursors of Homer. *Bulwer*, Athens, I. 279.

disquiparant (dis-kwip′ą-rant), *a.* and *n.* [*dis-* + (*e*)*quiparant.*] **I.** *a.* Belonging to a disquiparance.

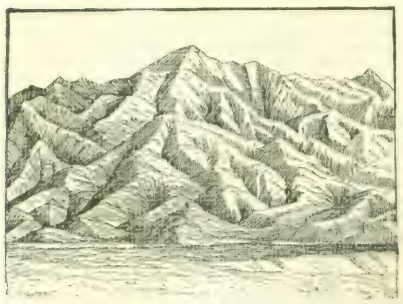
II. *n.* An object so related to a second that the latter is in a different relation to it. Thus, a husband is a disquiparant, a spouse an equiparant.

disquisitionist (dis-kwi-zish′on-ist), *n.* The author of a disquisition. *Bagehot.*

disquisitor (dis-kwiz′i-tor), *n.* The author of a disquisition: a disquisitionist.

disregardant (dis-rē-gärd′ant), *a.* That pays no heed or attention; disregardful. *Ruskin.*

disruptionist (dis-rup′shon-ist), *n.* [*disruption* + *-ist.*] One who disrupts or favors disruption; specifically, one of those who seceded from the Established Church of Scotland in 1843 and founded the Free Church of Scotland. See *disruption of the Scottish Church*, under *disruption.*



Disruptive strength. See ★*strength.*

disruptment (dis-rupt′ment), *n.* [*disrupt* + *-ment.*] The process of breaking off; disruption.

disruptor (dis-rup′tor), *n.* A high explosive: so named because the effect of such explosives is to separate forcibly surrounding matter into small particles rather than to propel it to a distance.

diss. An abbreviation of *dissertation.*

dissect, *v. t.* 4. In *geol.*, to cut up or erode (a plateau, mountain, etc.) into numerous irregu-

A Dissected Mountain-range, Utah.

lar valleys or ravines: as, a *dissected* plateau; a *dissected* mountain-range.

An excellent illustration of a well *dissected* upland is found in the Ozark plateau of southern Missouri.
W. M. Davis, Elem. Phys. Geog., p. 278.

To dissect out, in *surg.*, to remove entire by a process of dissection without injuring or removing any of the surrounding tissues.

dissecting-knife (di-sek′ting-nīf), *n.* A scalpel.

dissecting-wound (di-sek′ting-wönd), *n.* Same as *dissection-wound* (which see, under *wound*.)

dissection, *n.* **5.** In *bot.*, the condition of being dissected. See *dissected.*—**6.** In *geol.*, the erosion of a land-surface into numerous irregular valleys. See ★*dissect*, 4.—**Dissection tubercle.** Same as *anatomical tubercle* (which see, under *tubercle*).

disseizin, *n.*—**Fresh disseizin,** in *law*, a disseizin accomplished within the time in which the disseizee might of his own accord and by his own power, without the assistance of the king, or legal process, reënter and defeat the disseizin.

disseminule (di-sem′i-nūl), *n.* [Irreg. ‹ L. *dissemin-are*, disseminate, + *-ule*.] In *phytogeog.*, the body by which a plant is propagated, whether seed, spore, offshoot, etc., or the whole plant.

Disseminules designed to pass through a resting period are often brought into conditions where they germinate at once. *F. E. Clements*, Bot. Surv. Neb., VII. 51.

dissentientism (di-sen′shent-izm), *n.* The principles or conduct of a dissentient.

Dissentis type. See ★*type*.

dissight (dis′sīt), *n.* [*dis-* + *sight*.] An unsightly thing; an eyesore. *Southey*. [Rare.]

dissimilar, *a.* **2.** In *bot.*, having different forms in the same individual, as the anthers in the genus *Cassia*.

dissimilate, *v. t.*—**Dissimilated gemination.** See ★*gemination*.

dissimilatory (di-sim′i-la-tō-ri), *a.* Produced by dissimilation. *Scripture*, Exper. Phonetics, p. 203.

dissimulative (di-sim′ū-lā-tiv), *a.* Relating to or characterized by pretense or dissimulation: as, a *dissimulative* life; *dissimulative* arts.

Dissipation of energy. See ★*energy*.

dissipator (dis′i-pā-tor), *n.* One who or that which dissipates.—**Electric dissipator,** an instrument devised by Elster and Geitel for showing the relative number of electrified particles or electrons in the atmosphere at any place. It consists of a metallic body connected with the gold-leaf electroscope or equivalent electrometer. The metal body is first charged with a definite charge of electricity from some independent source. The rate at which this charge is neutralized by atmospheric electricity or free electrons is shown by the index of the electroscope.

dissociality (di-sō-shi-al′i-ti), *n.* The quality of being dissocial or unsocial. *Carlyle*.

dissociant (di-sō′shi-ant), *a.* and *n.* [L. *dissocian(t-)s*, ppr. of *dissociare*, dissociate.] **I.** *a.* In *chem.*, producing dissociation: as, the *dissociant* temperature. *Trans. Amer. Inst. Elect. Engin.*, Jan.–July, 1902, p. 284.

II. *n.* That which dissociates; a dissociating agent.

Dissociants in order of power: water, formic acid, methyl alcohol, ethyl alcohol. There are other *dissociants*, but the above are among the most common and generally employed. *Sci. Amer. Sup.*, Dec. 31, 1904, p. 24,242.

dissociate, *v.* **II.** *intrans.* To undergo dissociation; of an electrolyte in solution, to separate into ions some possessing positive and some negative electric charges, and capable of conveying an electric current by their motion through the solution with these charges.

With the exception of some bare statements to the effect that the yellow oxide, on heating, changes to the red, and that it *dissociates* at a lower temperature, the foregoing is all that has come to my notice which in any way bears on the subject.
Amer. Chem. Jour., April, 1903, p. 321.

dissociation, *n.* **3.** In *psychol.*: (*a*) The disjunction of an associative connection, as by lapse of memory or by intercurrent associations, by the selective process of active attention, etc.

What is associated now with one thing and now with another tends to become dissociated from either. . . . One might call this the law of *dissociation* by varying concomitants. *W. James*, Prin. of Psychol., I. 506.

The part played by *dissociation* is evident. If there were no such breaking up of representations, imagination would be simply memory.
J. M. Baldwin, Handbook of Psychol., I. 218.

(*b*) A minor degree of the disintegration or disaggregation of consciousness, as it is termed, which culminates in the phenomena of dual or multiple personality.

If we . . . seek for some quality common to all the various states in which hallucinations occur, we shall find that their most striking characteristic is the *dissociation* of consciousness.
E. Parish, Hallucinations and Illusions, p. 71.

Arrhenius's theory of electrolytic or ionic dissociation. During the earlier half of the nineteenth century it was supposed that the electropositive and electronegative atoms in a dissolved compound were definitely combined, and that in electrolysis they did not part company until they were forcibly torn apart by the electric current. About the middle of the century it was found that if we eliminate the complication of polarization at the electrodes, a current through an electrolyte can be obtained by using even the smallest electromotive force; it was therefore obvious that the current is not concerned with tearing apart firmly combined ions. Clausius accordingly made the assumption that in a solution of an electrolyte an exchange of atoms between neighboring molecules is constantly going on, in such a way that some free ions constantly exist in solution; that is, that dissociation into ions exists, the amount of which was considered to be very small. The hypothesis of Arrhenius is, that a considerable number of the molecules of an electrolyte in aqueous solution are at all times dissociated into ions, and he supported this hypothesis with considerations derived from facts of two different kinds. One is the fact that, if we make a solution containing a certain number of molecules of a non-electrolyte (say one hundred molecules of sugar) and another solution of the same volume from the same number of molecules of an electrolyte (say one hundred molecules of common salt), the solution of the common salt gives an osmotic pressure which indicates that the hundred molecules of the solid have become nearly or quite two hundred molecules when dissolved. Similar statements can be made of the lowering of the freezing-point, the lowering of vapor pressure, and the raising of the boiling-point, of the solutions. The other fact is, that in the body of the solution electrolysis does no reversible work such as would be required to separate ions from each other, but is entirely expended in forcing ions against frictional resistance. Whatever freedom of the ions must be assumed in order to explain this phenomenon of electrolytic conduction exists whether the electric current is passing or not; that is, the molecules of the salt have been more or less dissociated into ions by going into solution. It is believed that at infinite dilution all the molecules of an electrolyte are dissociated into ions; at less dilution, according to Arrhenius's hypothesis, the degree of dissociation can be determined by comparing the osmotic pressure, or the conductivity, calculated from that at infinite dilution, with the observed osmotic pressure or conductivity.—**Dissociation coefficient.** Same as *dissociation* ★*constant*.—**Dissociation constant, isotherm.** See ★*constant*, ★*isotherm*.—**Electrolytic dissociation,** in *phys. chem.*, the separation of the molecules of a dissolved (or fused) electrolyte into ions bearing opposite electrical charges and capable of carrying an electric current through the electrolyte.—**Ionic dissociation.** See *electrolytic* ★*dissociation*.

dissociation-point (di-sō-shi-ā′shon-point″), *n.* In *phys. chem.*, the lowest temperature at which a heated gas or vapor perceptibly dissociates into simpler molecules.

dissoconch (dis′ō-konk), *n.* [Gr. *δισσός*, twofold, + *κόγχη*, a shell.] The shell of a veliger or larval mollusk.

dissogeny (di-soj′e-ni), *n.* [Gr. *δισσός*, twofold, + *-γενης*, producing.] In *zoöl.*, a form of reproduction among the *Ctenophora*, characterized by the presence of two periods of sexual maturity, one in the larval, the other in the adult form of the same individual.

dissogonous (di-sog′ō-nus), *a.* [NL. **dissogonus*, ‹ Gr. *δισσός*, twofold, + *γόνος*, offspring.] Same as *pedogenetic*.

dissogony (dis-sog′ō-ni), *n.* [NL. **dissogonia*, ‹ **dissogenus*: see *dissogonous*.] Same as *pedogenesis*.

dissolution, *n.*—**Space of dissolution,** in rocks, a cavity or space formed by the solvent action of circulating water or other corroding agent: contrasted with *space of* ★*discission*.

dissolutionism (dis-ō-lū′shon-izm), *n.* Anarchism or nihilism.

Coarseness is contrary, vulgarity is contradictory to elegance just as in politics the monarchical principle is contrary, but the principle—if any such principle there be—of disunionism, *dissolutionism*, or communalism, . . . is contrary to the republican principle.
Swinburne, in The Forum, Oct., 1891, p. 180.

dissolutionist (dis-ō-lū′shon-ist), *n.* One who advocates or aims at dissolution or dissolutionism.

dissolutive, *a.* **2.** Pertaining to or characterized by dissolution or disintegration.

Much of the content is certainly rubbish, matter that Myers calls *dissolutive*, stuff that dreams are made of, fragments of lapsed memory, mechanical effects of habit and ordinary suggestion.
W. James, in Proc. Soc. Psychical Research, XVII. 20.

dissolv, *v.* A simplified spelling of *dissolve*.

dissolver, *n.* **2.** In *paper-making* and other industries, a machine for dissolving, purifying, freeing from acids, and otherwise treating salts, chemicals, clays, colors, and paper pulp in water or other liquids. It consists of a large metal vessel having a bowl-shaped bottom and fitted with a horizontal turbine supported by an upright spindle passing through the bottom of the vessel. The clay, colors, chemicals, or other materials to be treated are placed in the vessel with the required amount of water to give the desired mixture or solution. By means of a belt to a pulley on the spindle the turbine is revolved at a high speed. This sets up a rapid motion in the liquid, drawing it downward in the center into the turbine and throwing it violently outward from the turbine against the sides of the vessel. The concave sides cause the liquid to move upward in a spiral path till again swept downward through the wheel. The rapid motion and attrition against the sides of the vessel disintegrate and dissolve the material, insoluble matter falling to the bottom and the solution being then drawn off.

dissonance, *n.*—**Pure dissonance,** in *acoustics*, dissonance in which the relation of the frequencies of the dissonant tones is such that the harshness due to rapid tonal beats is absent.

dissonate (dis′ō-nāt), *v. i.* [L., *dissonare*: see *dissonant*.] To be dissonant or harsh: said of sounds.

dissonating (dis′ō-nāt-ing), *p. a.* Same as *dissonant*.

dissophyte (dis′ō-fīt), *n.* [Gr. *δισσός*, double, + *φυτόν*, plant.] In *phytogeog.*, a plant of which the subterranean parts are adapted to mesophytic or even hydrophytic conditions, and the aërial parts to xerophytic conditions.

Such plants grow on alpine gravel-slides, sand-bars, strands, etc. *F. E. Clements*, Bot. Surv. Neb., VII. 24.

dissophytic (dis-ō-fit′ik), *a.* [*dissophyte* + *-ic*.] Having the character of or in some way related to dissophytes. *F. E. Clements*.

dissymmetrically (dis-si-met′ri-kal-i), *adv.* In a dissymmetric way.

dissymmetry, *n.* **2.** Symmetry between two objects, with respect to a plane of symmetry, as between the right and left hands, or between right and left crystals of tartaric acid.

distaf, *n.* A simplified spelling of *distaff*.

distaff, *n.*—**Descent by distaff,** maternal descent. See *distaff side*, under *distaff*.—**Frigg's distaff** [Sw. Friggerocken], a former Swedish name for the constellation of Orion.

Distal ligation. See ★*ligation*.

distalia (dis-tā′li-ă), *n. pl.* [NL., neut. pl. of **distalis*, distal.] A collective term for the bones of the third or distal, row of the carpus and tarsus.

distance, *n.* **9.** In *psychol.*, extension in the third dimension; spatial depth.

An object is before us, and our perception of it as an object is at once associatively supplemented by the idea of its *distance*.
E. B. Titchener, Outline of Psychol., p. 204.

10. In *painting*, remoteness of objects as indicated by increased delicacy and harmony of color.

If Philip de Koninck is his [Jacob van Rüysdael's] equal in the presentment of immensity of *distance*, he is left far behind by Rüysdael's atmospheric achievements.
Burlington Mag., II. 59.

Distance circle, scale, sense. See ★*circle*, ★*scale*3, ★*sense*1.—**Interobjective distance,** the distance between the centers of the pupils of the two eyes in the primary position: to this distance opera-glasses and other binocular instruments are set.—**Intercular distance,** the distance between the eyepieces of a binocular instrument, as a field-glass.—**Out of distance,** beyond reach; too far away.—**Principal distance.** See *perspective*, *n.*, 3.—**Striking distance,** the distance through which a disruptive discharge will pass. See *electric spark*, under *spark*.—**To know one's distance,** to know what distance should be kept in one's relations or intercourse with others.

distance-flag (dis′tans-flag), *n.* In *horse-racing*, the flag held by the man stationed at the distance-post. See *distance*, 3.

distance-language (dis′tans-lang″gwāj), *n.* A mode of communicating with distant persons or places.

Man [in the evolution of language] . . . from signs went on to sounds—he invented the telephone. By all the traditions of Evolution this marvellous instrument ought to be, and is even now on the verge of becoming, the vehicle of the *distance-language* of the future.
H. Drummond, Ascent of Man, p. 183.

distance-measurer (dis′tans-mezh″ūr-ėr), *n.* An instrument for determining distances; an angulometer or a telemeter.

distance-rod (dis′tans-rod), *n.* A reach-rod; a rod which holds two parts of a machine a fixed distance apart.

distance-stand (dis'tans-stand), *n.* The stand at the distance-post of a race-course.

distannic (dī-stan'ik), *a.* [*di-*[2] + L. *stannum*, tin, + *-ic.*] In *chem.*, containing two atoms of tin: as, *distannic* tetraethides ($Sn_2(C_2H_5)_4$).

distater (dī'stā-tėr), *n.* [Gr. *δι-*, two-, + *στατήρ*, stater.] An ancient Greek gold coin of the value of 2 staters.

distearoglycerophosphate (dī-stē″a-rō-glis″ė-rō-fos'fāt), *n.* [*di-*[2] + *stear(ic)* + *glycer(inė)* + *phosphate.*] Glycerin-phosphoric acid in which two of the glycerin-hydroxyl groups are replaced by two stearic-acid radicals. In combination with choline, namely, as distearyl lecithin, distearoglycerine phosphoric acid is found as the predominating glycerophosphate of the animal lecithins.

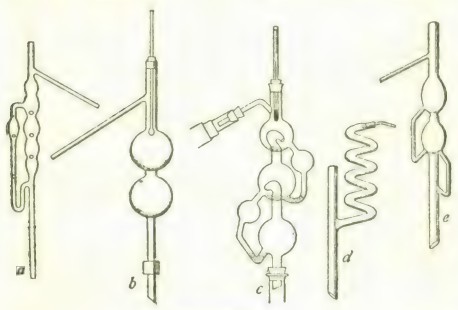
distearyl (dī-stē'a-ril), *a.* [*di-*[2] + *stearyl.*] Noting a substance that contains two stearyl groups.

distegous (dis'tē-gus), *a.* [Gr. *δίστεγος*, of two stories, < *δι-*, two-, + *στέγος*, cover, roof.] Said of fishes in which a myodome is present, and the cranial cavity is thus double-floored.

distemper[1], *n.*—**Choking distemper,** a disease of horses thought to be produced by eating musty hay. See *forage* ★*poisoning.*

distensile (dis-ten'sil), *a.* [L. *distensus*, pp. of *distendere*, distend, + *-ile.*] Same as *distensible.* *Encyc. Brit.*, XXXI. 560.

distichal (dis'ti-kal), *n.* [As *distich* + *-al.*] One of the first duplicating plates of the radial series in the calyx of a crinoid, preceded below by the costals and followed by the palmars.



distigmatic (dī-stig-mat'ik), *a.* [Gr. *δι-*, two-, + *στίγμα*, mark: see *stigma.*] In *bot.*, having two stigmas.

distillation, *n.*—**Vacuum distillation,** in *phys. chem.*, the distillation of a substance under diminished pressure, so as to lower the temperature required for ebullition: often used to prevent decomposition of the substance by the higher temperature required for ebullition at atmospheric pressure.

Perhaps the two greatest aids to manufacturing pharmacy are *vacuum distillation* and centrifugal extraction. The former has long been in use, but the latter has only come into general use in this country during the past fifteen years. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22,631.

distiller, *n.* 2. An apparatus for distilling water. On shipboard such apparatus is used to supply fresh water for drinking and washing, and for use in the boilers. A coil of boiler steam is placed in a tank of seawater and the distillate caught and cooled. The deposited salt is removed at intervals as the solution of seawater grows concentrated. For drinking, the distilled water is subsequently aërated.

distilling-tube (dis-til'ing-tūb″), *n.* An apparatus adapted to the fractional distillation

Distilling-tubes.

a, Glinsky's distilling-tube; *b*, Wurtz's distilling-tube; *c*, Volney's distilling-tube; *d*, Hart's distilling-tube; *e*, Lebel and Henninger's distilling-tube.

of liquids, permitting only the vapor of that one to pass over whose boiling-point is shown by the thermometer. Such tubes are also frequently used to prevent spray from passing over.

distinctive, *a.* **II.** *n.* A distinctive mark; specifically, in *Heb. gram.*, a distinctive accent. There are 26 of these—18 disjunctive and 8 conjunctive.

distingué (dis-taṅ-gā'), *a.* [F., pp. of *distinguer*, distinguish.] Distinguished, especially in appearance or bearing; characterized by an air of distinction.

distinguished, *p.a.*—**Distinguished Service Order.** See ★*order.*

Distoma lanceolatum, a fluke occasionally found in the bile-ducts of herbivorous animals and of man.—**Distoma pulmonale** or **Ringeri,** a fluke which infests the bronchial tubes, causing a severe pulmonary disease, in the natives of Northern China, Korea, and Japan.—**Distoma westermanni,** a fluke which occasionally infests the lungs of domestic animals, and, very rarely, of man.

Distomatidæ (dis″tō-mat'i-dē), *n. pl.* [NL., < *Distomum* (*Distoma* (*distomat-*)), + *-idæ.*] A family of trematoid *Platyhelminthes*, of the order *Malacocotylea.* They are digenetic forms with 2 suckers, the posterior being on the ventral surface, and the genital opening usually median, ventral, and in the anterior third of the body. The forms included are parasitic in the alimentary canal and its appendages and in the blood-vessels of vertebrates. The family consists of the genera *Distoma*, *Rhopalophorus*, *Kœlikeria*, and *Bilharzia.*

distomatosis (dis″tō-ma-tō'sis), *n.* [NL., < *Distoma(t-)* + *-osis.*] In *med.*, infection with trematoid worms. In man this occurs in four chief forms: *hepatic distomatosis*, with secondary pancreatic and intestinal infections in some cases, caused by *Fasciola*, *Dicrocœlium*, and *Opisthorchis*; *intestinal distomatosis*, caused by *Fasciolopsis*, *Heterophyes*, *Gastrodiscus*, and *Balanorchis*; *pulmonary distomatosis*, with secondary cerebral symptoms in some cases, caused by *Paragonimus westermani*; *venal distomatosis*, caused by *Schistosoma.*

distomatous (dī-stom'a-tus), *a.* [Gr. *δι-*, two- + *στόμα(τ-)*, mouth, + *-ous.*] Provided with two mouth-like structures, like *Distoma* among the trematode worms.

distome (dis'tōm), *n.* An individual of the genus *Distoma* or of the family *Distomidæ.*—**Eye distome,** *Agamodistomum ophthalmobium* (Diesing, 1850), an immature, probably erratic distome, reported as parasitic in the human eye.

Distomea, *n. pl.* 2. A group or tribe of mastigophorous *Protozoa*, of the order *Polymastigida*, having the flagella separated into two symmetrical groups, with a mouth-area at the base of each group (whence the name). It includes the genera *Trigonomonas*, *Hexamitus*, *Trepomonas*, *Spironema*, and *Urophagus.*—3. Same as ★*Malacocotylea.*

distomian (dis-tō'mi-an), *n.* One of the ★*Distomidæ.*

distomiasis (dis″tō-mi-ā'sis), *n.* [NL. *distoma* + *-iasis.*] A morbid state which results from the presence in the body of one of the species of *Distoma* or flukes. See ★*distomatosis.*

distomid (dis'tō-mid), *n.* A ★*distome.*

distomoid (dis'tō-moid), *a.* [Gr. *δι-*, two-, + *στόμα*, mouth, + *εἶδος*, form.] Same as ★*distomatous.*

distortional (dis-tôr'shon-al), *a.* [*distortion* + *-al*[1].] Of or pertaining to distortion or change of form under stress.—**Distortional wave,** a wave in an elastic solid due to the sudden application of a shearing or torsional stress.

distortionist (dis-tôr'shon-ist), *n.* A contortionist.

distortionless (dis-tôr'shon-les), *a.* [*distortion* + *-less.*] Free from the phenomena of distortion.

distraction, *n.* 11. In *surg.*, the act of pulling upon the segments of a limb so as to cause a separation of the opposing joint-surfaces.

distrainee (dis-trā-nē'), *n.* In *law*, one whose property has been taken *by distress.*

distrib. An abbreviation (*a*) of *distributed*; (*b*) of *distributive.*

distribuend (dis-trib-ū-end'), *n.* [L. *distribuendus*, gerundive of *distribuere*, distribute.] That which is to be distributed. *H. Sidgwick.*

distributary, *a.* **II.** *n.* In *phys. geog.*, an outflowing branch of a river, such as occurs characteristically on a delta.

distribute, *v. t.*—**Distributed vector.** See ★*vector.*—**Distributing post-office.** See ★*post-office.*

distributee (dis-trib-ū-tē'), *n.* [*distribute* + *-ee*[1].] In *law*, one legally entitled to a share of the personal estate of an intestate.

distributer, *n.* 2. In *printing*, the appliance in a linotype machine which returns to the magazine for re-use the matrices which have just been used in composition and casting.—3. In *elect.*, a panel, pillar or small switchboard by means of which the various circuits for a building or suite of rooms are connected to the mains.

distributer-bar (dis-trib'ū-tėr-bär), *n.* In *printing*, a bar in a linotype machine which has a series of tracks and combinations upon which the used matrices are carried to their proper position for distribution in the magazine. Also called *distributing-bar.*

distributing-bar (dis-trib'ū-ting-bär), *n.* Same as ★*distributer-bar.*

distributing-table (dis-trib'ū-ting-tā″bl), *n.* In *printing*, a surface of metal upon which inking-rollers distribute printing-ink. It is usually a part of the printing-machine. For the hand-press it is a separate attachment.

distribution, *n.*—**Bipolar distribution,** the occurrence in both polar regions of organisms, mostly marine, which are not known to occur in the tropics.—**Bipolar theory of distribution of species.** See ★*bipolar.*—**Canonical distribution.** See ★*canonical.*—**Combinational distribution,** the distribution obtained in the combinations presented by games of chance.—**Curve of distribution.** Same as *Quételet's* ★*curve.*—**Discontinuous distribution,** the occurrence in widely separated regions or geological formations of organisms or of the

remains of organisms which are not known to inhabit the intervening area, nor the intervening formations. See ★*bipolarity.*—**Geological distribution,** the vertical range, through successive rock strata, of extinct faunas and floras, or of the species constituting such assemblages: contrasted with *geographical distribution* or the contemporaneous distribution of such organisms, living or extinct.—**Horizontal distribution,** the distribution of organisms considered as ranging over the earth or through the sea horizontally, as distinguished from their distribution in altitude.—**Microcanonical distribution,** in *statistical mech.*, the limiting distribution in phase of part of a canonical ensemble when the difference of the limiting energies is indefinitely diminished.

From a certain point of view the *microcanonical distribution* may seem more simple than the canonical.
J. W. Gibbs, Statistical Mech., p. 116.

Normal distribution, the conformity of statistical events to the mathematical law of error.

The regression curve between pairs of blood relations... is within the limits of random sampling *linear.* This had already been suggested by Galton on the basis of the theory of *normal distribution.*
Biometrika, Nov., 1903, p. 395.

Vertical distribution, the distribution of organisms in altitude on the one hand from sea-level to the tops of mountains and on the other from the sea-level to the bottom of the sea; bathymetrical as distinguished from horizontal distribution.

Distributional area, the entire territory over which a given animal, or group of animals, is distributed. It need not be a continuous distribution: thus southern Europe is the distributional area of the chamois, although the animal is confined to a few mountain ranges which form its *station.*

distribution-valve (dis-tri-bū'shon-valv″), *n.* The main slide-valve in an engine which has a double valve or Meyer valve. It is so named to distinguish it from the expansion-valve which rides on the back of the main or distribution-valve.

Distributive fault, justice. See ★*fault,* ★*justice.*

district, *n.* 3. A subdivision of an English county with its own elective council charged chiefly with jurisdiction in sanitary matters. These districts are classed as 'urban' and 'rural' according as they lie within or without a borough or city.—**District formation.** Same as *climatic* ★*formation.*—**Forecast district,** in *meteor.*, a district for which a weather forecast is made. The United States is divided into forecast districts, with rather arbitrary boundaries, for the convenience of the official forecasters. These are New England, the West Gulf district, the North Central district, the Rocky Mountain district, the South Pacific district, and the North Pacific district. Regions not included in these belong to the Washington forecast district. The forecasts emanating from the forecast division at Washington are sent to the district forecasters at Boston, New Orleans, Chicago, Denver, San Francisco, and Portland, Oregon, and distributed by telegraph, telephone, and mail, daily, through these respective forecast districts.

disturbance, *n.* 6. In *astron.*, same as *perturbation*; the deviation of a body from the elliptical orbit it would otherwise pursue, caused by the attraction of bodies other than the primary.—**Disturbance of patronage,** in *old Eng. law*, the act of a patron by which he sought to prevent the presentation of his clerk to a benefice.

disturbant, *a.* **II.** *n.* In *law*, same as *disturber.*

disturnpike (dis-tėrn'pīk), *v. t.*; pret. and pp. *disturnpiked*, ppr. *disturnpiking.* [*dis-* + *turnpike, n.*] To convert (a turnpike) into an ordinary highway by the legal removal of tollgates; free (a road) from tolls.

distylous (dī-stī'lus), *a.* [Gr. *δι-*, two-, + *στῦλος*, pillar: see *style*[2].] In *bot.*, having two styles.

disubstituted (dī-sub'sti-tū-ted), *a.* [*di-*[2] + *substituted.*] Noting compounds in which two hydrogen atoms are replaced by other atoms or radicals. See *substitution*, 6.

disulphid, *n.*—**Carbon disulphid.** See *bisulphid of carbon.*—**Hydrogen disulphid.** See ★*hydrogen.*

disulphonic (dī-sul-fon'ik), *a.* [*di-*[2] + *sulph(ur)* + *-n-* + *-ic.*] In *chem.*, containing the sulpho group of atoms, HSO_3 or $HO.SO_2$, twice in union with carbon: as, anthraquinone *disulphonic* acid, $C_{14}H_6O_2(HSO_3)_2$, used in the manufacture of artificial alizarin.

disulphuret (dī-sul'fū-ret), *n.* [*di-*[2] + *sulphuret.*] Same as *bisulphuret.*

disulphuryl (dī-sul'fū-ril), *a.* [*di-*[2] + *sulphur* + *-yl.*] In *chem.*, containing the group of atoms known as sulphuryl, SO_2, twice: as, *disulphuryl* chlorid or oxychlorid, $(SO_2)OCl_2$.

disunite, *v.* **II.** *intrans.* Of a horse, in galloping, to move the left hind leg immediately after the right fore leg, or vice versa.

disvulnerability (dis-vul″ne-ra-bil'i-ti), *n.* [*disvulnerable* + *-ity.*] The quality possessed by some persons of a rude physical type of being comparatively difficult to wound seriously, that is, of recovering easily from wounds or injuries.

This insensibility shows itself also in *disvulnerability*, or rapid recovery from wounds, first pointed out by Benedikt, which appears to be a frequently observed phenomenon among criminals. *H. H. Ellis*, The Criminal, p. 113.

disvulnerable (dis-vul'ne-ra-bl), *a.* [*dis-* + *vulnerable.*] Possessing the faculty of being difficult to wound severely, that is, of being able to recover easily from wounds; not easily vulnerable (as to consequences of wounds).

Defectives are lacking in sympathy partly, at least, because they are insensitive, analgesic, and more or less *disvulnerable.*
Amer. Jour. Relig. Psychol. and Educ., May, 1904, p. 34.

dita (dē'tä), *n.* [Tagalog *dita.*] In the Philippines, a tree, *Pala scholaris*, belonging to the *Apocynaceæ*, which yields a valuable medicinal bark. See *devil-tree* and *dita-bark.*

ditaine (dē'ta-in), *n.* [*dita* + *-ine*[2].] A colorless, bitter alkaloid, $C_{22}H_{28}O_4N_2.4H_2O$, contained in dita-bark, *Echites scholaris* L. (*Alstonia scholaris* Brown), from the Philippines, which crystallizes in thick, glassy, lustrous prisms. It is used as a febrifuge. Also called *echitamine.*

ditamine (dit'a-min), *n.* [*dita* + *amine.*] An amorphous alkaloid, $C_{19}H_{19}NO_2$, contained in dita-bark from the Philippines. It melts at 75° C.

ditch, *n.*—**Behind-the-Ditch, The Devil's Ditch or Dike.** See *The* ★*Ditch.*—**The Ditch,** a large prehistoric embankment near the race-course of Newmarket, England. It is 4 to 5 miles long, 18 to 20 feet high, and 100 feet broad on top, and has a slope of 50 feet on the southwest side. It separates the race-course proper from another, known as "Behind-the-Ditch," where certain races are also run. Also known as the *Devil's Ditch* or *Dike.*—**To put under the ditch,** to intersect with ditches or trenches for irrigation purposes. [U. S.] **2.** A ditch-machine.—**3.** In *lawn-bowls*, a ball which runs off the field of play into the surrounding gutter or ditch.

ditching-plow (dich'ing-plou), *n.* A strong, heavy plow used in loosening the earth at the bottom of ditches.

ditch-machine (dich'ma-shēn″), *n.* A machine for digging ditches or excavating trenches.

ditch-moss (dich'môs), *n.* The water-weed or water-thyme, *Philotria Canadensis.*

ditch-rider (dich'rī″dėr), *n.* A man, who is employed to ride along and inspect all parts of an irrigation-canal or ditch and to give especial attention to the distribution of water and the prevention of waste. *F. H. Newell*, Irrigation in U. S., p. 107.

diterebene (dī-ter'ē-bēn), *n.* Same as ★*diterpene.*

diterpene (dī-tėr'pēn), *n.* A terpene having the formula $C_{20}H_{32}$.

ditesseral (dī-tes'e-ral), *a.* [Gr. *δι-*, two-, + L. *tessera*, a small square or cube: see *tessera.*] Having two small squares or cubes: noting certain symmetry classes belonging to the isometric system. See *symmetry.*

ditetragonal (dī-te-trag'ō-nal), *a.* [*di-*[2] + *tetragonal.*] In *crystal.*: (*a*) Twice four-angled or twice four-sided: said of the eight-faced prism and eight-faced pyramid (or double pyramid) of the tetragonal system. (*b*) Noting a type of symmetry characterized by a tetrad axis (that is, one of tetragonal or fourfold symmetry) in which four planes of symmetry intersect. See ★*symmetry.*

dithallious (dī-thal'i-us), *a.* [*di-*[2] + *thalli-um* + *-ous.*] In *chem.*, containing two atoms of the metal thallium.

dithionate (dī-thī'ō-nāt), *n.* [*dithion(ic)* + *-ate*[1].] In *chem.*, a salt of dithionic acid: as, sodium *dithionate*, $Na_2S_2O_6$ (formerly called *hyposulphate*).

Dithyrocaris (dith″i-rō-kā'ris), *n.* [Gr. *δι-*, double, + *θύρα*, a door, + *καρίς*, (prob.) a shrimp.] A genus of crustaceans of the order *Phyllocarida*, having a bivalved carapace ridged medially and at the sides, and several free segments, the last bearing two cercopods articulated to the telson. It occurs in the Devonian and Carboniferous formations.

ditokous, *a.* **2.** Producing two kinds of young, as some worms.

di-tri-. An elliptic combination of *di-* + *tri-*, meaning either '*di-* or *tri-*' or '*di-* and *tri-*': as, *di-trichotomous* (= 'dichotomous or trichotomous'), *di-trimerous*, etc.

ditrichotomously (dī-trī-kot'ō-mus-li), *adv.* In a ditrichotomous manner.

ditrichotriæne (dī″trik-ō-trī'ēn), *n.* [Gr. *δι-*, double, + *τρίχα*, threefold, + *τρίαινα*, a trident.] In the nomenclature of the spicular elements of sponges, a trichotriæne in which the subsidiary branches are also forked.

ditriglyphal (dī-trī'gli-fal), *a.* Same as ★*ditriglyphic.*

ditriglyphic (dī-trī-glif'ik), *a.* [*ditriglyph* + *-ic.*] Pertaining to or characterized by the presence of ditriglyphs: said of an arrangement of the Doric order which, by widening the intercolumniation, necessitates the use of two triglyphs between the columns instead of one. See *ditriglyph.*

ditrigonal, *a.* **2.** Noting a type of symmetry characterized by a trigonal axis (that is, one of threefold symmetry), in which axis three planes of symmetry intersect. See ★*symmetry.*

ditrigonally (dī-trig'ō-nal-i), *adv.* In a ditrigonal manner.

ditties (dit'ez), *n. pl.* [Detached from *ditty-bag.*] Any fabrics suitable for making ditty-bags for sailors' use: used only in the plural.

dittogram (dit'ō-gram), *n.* [Gr. *διττός*, double, + *γράμμα*, a writing.] Same as ★*dittograph.*

dittograph (dit'ō-graf), *n.* [Gr. *διττός*, double, + *γράφειν*, write.] An instance of dittography; a letter, syllable, word, or series of words, mechanically and unconsciously repeated by a copyist. Also *dittogram.*

dittographic (dit-ō-graf'ik), *a.* Of the nature of a dittograph.

Dittrich's plugs. See ★*plug.*

diureide (dī-ū'rē-id), *n.* [*di-*[2] + *ureide.*] One of a class of organic compounds, such as uric acid, which contain two ureide radicals in the molecule. These substances are of interest in connection with the metabolism of birds and reptiles, which excrete their nitrogenous material largely in the form of diureides.

diuretic, *n.*—**Cardiac diuretic,** a remedy which produces diuresis indirectly by increasing the force and efficiency of the heart-beats.—**Saline diuretic,** a salt of sodium or potassium which increases the urinary secretion.

diuretin (dī-ū-rē'tin), *n.* [*diuret-ic* + *-in*[2].] The proprietary name of a compound of sodium salicylate and sodium theobromine which possesses marked diuretic properties.

Diurnal revolution, sleep, variation. See ★*revolution*, ★*sleep*, ★*variation.*

diurnule (dī-ėrn'ūl), *n.* [L. *diurnus*, daily, + *-ule*, as in *granule.*] A granule containing a fractional part of the daily dose of a drug, the size of the fraction denoting the number of granules that must be taken at even intervals in the course of twenty-four hours.

Diuturnal revolution of the earth, a phrase used by William Andrews (1899) to describe an imagined spiral revolution of the earth in the course of which "the north terrestrial polar point is taken within 30° of the south sidereal polar point, and returned to within 60° of the point under the North Star from whence it started."

div[2] (dēv), *n.* [Pers. *dīv*, *dīw*, formerly *dēv*, < Zend *daēva*, an evil spirit, = Skt. *dēva*, god: see *deva.* For the descent of meaning compare the history of *demon.*] In *Persian myth.*, an evil spirit or demon; a devil; an evil genius.

div. An abbreviation (*a*) of *dividend*, much used in exchange quotations with *cum* or *ex:* as, *cum div.*, with the dividend; *ex div.*, without the dividend; (*b*) of *division.*

divagate (dī-vā'gāt), *v. i.*; pret. and pp. *divagated*, ppr. *divagating.* To wander about, as from place to place or from subject to subject; stray; digress.

divalence (dī'va- or div'a-lens), *n.* The state of being divalent.

divalency (dī'vā- or div'a-len-si), *n.* Same as ★*divalence.*

Divers' disease, divers' palsy. Same as *caisson-disease.*—**Florentine diver,** one of the globes or human figures used in the experiment with Ferdinand's globes. See ★*globe.*

divergence, *n.* **4.** In *bot.*, gradual separation during the process of lengthening, as in the pods of *Asclepias.*

divergent, *a.* **4.** In *bot.*, gradually separating with growth. See ★*divergence*, 4.

diverginervate (di-vėr-ji-nėr'vāt), *a.* [Irreg. < *diver(gent)* + *nervate.*] In *bot.*, having divergent nerves.

divergingervous (di-vėr-ji-nėr'vus), *a.* Same as ★*diverginervate.*

diversicolored (di-vėr-si-kul'ord), *a.* Of various or varied colors.

diversiflorate (di-vėr-si-flō'rāt), *a.* [L. *diversus*, diverse, + *flos* (*flor-*), flower.] Same as *diversiflorous.*

diversifoliate (di-vėr-si-fō'li-āt), *a.* [L. *diversus*, diverse, + *folium*, leaf.] Same as *diversifolious.*

diversional (di-vėr'shon-al), *a.* [*diversion* + *-al*[1].] Relating, pertaining to, or used in diversion: as, *diversional* contrivances.

The uses to which the earthenware of the aborigines was applied were numerous and important; they may be classed roughly as domestic, industrial, sacerdotal, ornamental, and trivial or *diversional.*
Rep. Bur. Amer. Ethnol., 1898-99, p. 24.

Diversion weir. See ★*weir.*

diversisporous (di-vėr-si-spō'rus), *a.* [L. *diversus*, different, + Gr. *σπορά*, seed (spore).] Having different kinds of spores.

diverter, *n.*—**Electrical diverter,** a form of combined lightning guard and fuse for telephonic and other electrical apparatus. It consists essentially of a coil of fine copper wire the inductance of which serves to divert sudden surges of current to a neighboring ground-plate. The terminals of the coil, which are of fusible metal, afford protection from heavy currents.

divertibility (di-vėr-ti-bil'i-ti), *n.* The capability of being diverted into other channels: as, the *divertibility* of trade.

Diverticular hernia. See ★*hernia.*

diverticularization (di-vėr-tik″ū-lär-i-zā'shon), *n.* In *embryol.*, the act of forming diverticula, evaginations or pockets during development.

diverticulate (di-vėr-tik'ū-lāt), *a.* Same as *diverticulated.*

diverticulum, *n.* **2.** Any short side passage of the nature of a cul-de-sac or blind alley.

Four or five feet below the entrance was a *diverticulum*, or short side passage . . . probably used as a place in which to turn around when the animals come back to take a look at the intruder before finally disappearing in the bottoms of their burrows.
Yearbook U. S. Dept. Agr., 1901, p. 261.

3. In *algol.*, a protrusion of protoplasm communicating with the fused procarp cells and the placenta.—**False diverticulum,** a diverticulum of the intestine caused by a protrusion of the mucous membrane through a rent in the muscular wall.—**Meckel's diverticulum,** a diverticulum from the ileum resulting from non-obliteration of the ductus vitellinus in the embryo.—**Pulsion diverticulum,** a diverticulum caused by a protruding force acting from within. *Jour. Exper. Med.*, Jan. 15, 1901, p. 328.—**Traction diverticulum,** a diverticulum caused by a pulling force from without, as by the contraction of fibrous adhesions.—**True diverticulum,** a diverticulum of the intestine formed by a protrusion of the entire thickness of the wall: opposed to *false* ★*diverticulum* (which see).

divertimento (di-ver-ti-mān'tō), *n.* [It., < *divertire*, divert.] In *music*: (*a*) A dance interpolated in an opera; an entr'acte. (*b*) A piece of chamber music, made up of several movements rather loosely combined; a suite or sonata (in the older sense). (*c*) A potpourri or fantasia. (*d*) A free episode in a fugue.

divertisement, *n.* **3.** Same as ★*divertimento* (*a*): in this sense usually in the French form *divertissement.*

dives (dī'vēz), *n.* [L. *dives*, rich.] A rich man: [*cap.*] usually regarded as the proper name of the rich man of the parable in Luke xvi.—**Dives costs,** in *law.* See *cost*[2].

Divesian (dī-vē'si-an), *a.* [*Dives* in France.] In *geol.*, noting a division of the Jurassic system in the vicinity of Dives and elsewhere in France, in part equivalent to the Kellaways rocks or Middle Oolites of Britain.

divestitive (di-ves'ti-tiv), *a.* Having the power or property of divesting.

divide, *v. t.* **12.** In *billiards*, to divide balls (mentally) into sixteenths, eighths, quarters, halves, and three quarters of their diameters, in order to insure certain deviations. Strokes are divided into quarter-follows, half-draws, half-spread, and so on.

divide, *n.*—**Continental divide,** a water-parting between river systems that flow into different oceans.—**Great Divide,** specifically, the Rocky Mountain water-parting.

divided, *p. a.* (*d*) In *phonol.*, applied to a consonant, as *l*, formed with the mouth-passage divided in the middle by the tongue pressed against the gum or palate.—**Divided harmonically,** divided internally and externally into segments having the same ratio.—**Divided internally,** divided, as a sect AB, by a point P upon it.—**Divided self, divided will.** See ★*self.*

dividend, *n.*—**Cumulative dividend,** a dividend with regard to which it is agreed that if at any time it is not paid in full, the difference shall be added to the following payment. Thus if a cumulative dividend is 5 per cent., and only 4 per cent. is paid, the amount due at the next payment is 6 per cent.—**Preferential dividend,** a dividend on preferred stock.

A cumulative *preferential dividend* is sometimes said to be "guaranteed," and *preferential dividends* payable by all companies registered under the [British] Companies Acts, 1862 to 1900, are cumulative unless stipulated to be otherwise. *Encyc. Brit.*, XXVII. 471.

dividing-motion (di-vī'ding-mō″shon), *n.* An apparatus for dividing a straight line or circle into a given number of equal parts. It is commonly used on gear-cutters for spacing the teeth.

dividing-plate (di-vī'ding-plāt), *n.* A plate having series of holes spaced at proper inter-

vals to be used in dividing circles or distances into a given number of equal parts; an index-plate.

dividual, *a.* 2. Divided; separate; distinct.

Me-and-Thee: some *dividual* Existence or Personality distinct from the Whole
Fitzgerald, Notes to Rubaiyat, st. 32.

3. Divisible; capable of being divided into parts: as, "a *dividual* essence in Truth," *Lowell.*

dividualism (di-vid′ū-al-izm), *n.* The opposite of individualism or subsistence as a distinct entity. See *individualism* and *individuality.*

We see in a general way that a condition of the presentation of visions lies in the over-sensitiveness of certain tracks or domains of brain action and the under-sensitiveness of others, certain stages in a mental process being represented very vividly in consciousness while the other stages are unfelt; also that individualism is changed to *dividualism.* *Francis Galton,* Human Faculty, p. 169.

dividuality (di-vid-ū-al′i-ti), *n.* [*dividual* + *-ity.*] The opposite of *individuality.* See the extract.

Dividuality [in dreams] replaces individuality, and one portion of the mind communicates with another portion as with a different person.
Francis Galton, Human Faculty, p. 207.

divinatorial (di-vin-a-tō′ri-al), *a.* [*divinatory* + *-al*[1].] Based on conjecture; conjectural: as, *divinatorial* criticism.

diving-lamp (dī′ving-lamp), *n.* An electric lamp specially arranged for use by submarine divers.

divinify (di-vin′i-fī), *v. t.*; pret. and pp. *divinified,* ppr. *divinifying.* [*divine* + *-i-fy.*] To render divine; ascribe divine attributes or powers to; regard as divine.

Divisible offense. See ★*offense.*

division, *n.,* 5. (*e*) In *railroads,* the longest undivided part of a line: distinguished from the smaller subdivisions called ★*sections.*

10. In *biol.,* the breaking up of an organism, either naturally or artificially, into two or more parts which restore what is lacking and become new organisms of the typical form, as contrasted with reproduction by buds, which begin as small parts of the parent organism and gradually increase in size until they attain the typical form.

For instance, the delevopment of a new individual at the side of the body of hydra is a typical example of budding, while the breaking up of lumbriculus or of a planarian into pieces that form new individuals is a typical example of *division.*
T. H. Morgan, Regeneration, p. 149.

Cassini division, in *astron.,* the principal division in Saturn's ring, discovered by Cassini in 1675.—**Chesapeake division,** in *geol.,* a division of the Miocene Tertiary developed along the Atlantic coast.—**Heterotype division.** See ★*heterotype.*—**Homographic division,** in *math.,* projective division; the partition of a straight line or of two straight lines by two projective ranges or point-rows.—**Postreduction division,** a reduction division of the chromosomes in the secondary oöcyte or secondary spermatocyte, following an equation division in the primary oöcyte or primary spermatocyte.—**Prereduction division,** a reduction division of the chromosomes in the primary oöcyte or primary spermatocyte, preceding an equation division in the secondary oöcyte or secondary spermatocyte.

divisional, *a.* 3. Fractional.

II. *n.* An aliquot part; a sub-multiple.—**Divisional plane.** See ★*plane*[1].

division-center (di-vizh′ọn-sen″tėr), *n.* Same as ★*centrosome.*

division-engineer (di-vizh′ọn-en-ji-nēr″), *n.* The chief engineer having charge of the maintenance of way for a division of a railroad.

division-peg (di-vizh′ọn-peg), *n.* A hardened steel peg which is used with a division-plate. The peg is attached to an arm, the turning of which feeds the work in the machine into position for the next cut. When the arm has been turned the correct distance, the peg is pushed into a hole in the division-plate and holds the work steadily while the cut is being taken.

division-plane (di-vizh′ọn-plān), *n.* A joint in a rock which facilitates the separation of blocks of stone.

division-superintendent (di-vizh′ọn-sū-pėr-in-ten″dẹnt), *n.* The chief officer in charge of the traffic of a division of a railroad.

divisor, *n.*—**Essential divisor of the discriminant,** a divisor unaffected by birational transformations.—**Unessential divisor of a discriminant,** a perfect square which, multiplied by an essential divisor, gives the discriminant.

divisory (di-vī′zō-ri), *a.* [NL. **divisorius,* < L. *divisor,* divisor.] Relating to or concerned with the division of something and the distribution of the parts among a number: as, *divisory* actions in law; *divisory* contracts.

divorcé (dē-vôr-sā′), *n.* [F.] A divorced man.

divorced (di-vôrst′), *p. a.* Separated by legal decree from the bonds of matrimony; repudiated by a formal act of divorce.

divorcee (di-vôr-sē′), *n.* [*divorce* + *-ee*[1], after the F. forms (which are also often used in Eng.), *divorcé,* m., *divorcée,* f.] A person who has been divorced. The term is more commonly applied to a woman.

divorcée (dē-vôr-sā′), *n.* [F.] A divorced woman.

divot, *n.* 2. In *golf,* a piece of turf cut out with a club in playing a stroke.

divvy (div′i), *n.* [*divi(dend).*] A dividend; an amount to be divided or shared by the members of a party or ring. [Slang.]

divvy (div′i), *v. i.*; pret. and pp. *divvied,* ppr. *divvying.* To go shares.—**To divvy up,** to pay up the share that ought to come to one. [Slang.]

dix (dēs), *n.* [F., ten; OF. *dis,* < L. *decem,* ten: see *ten.*] The lowest trump in games such as penuchle, bezique, sixty-six, etc. It can be exchanged for the turned-up trump at any time, the holder of it scoring ten points.

Dixa (dik′sạ), *n.* [NL. (Meigen, 1818), < Gr. *διξός,* Ionic for *δισσός,* double.] A genus of midges typical of the family *Dixidæ.* They are minute and inhabit damp places in forests. The larvæ are aquatic and resemble those of mosquitos. Less than ten species are known to inhabit the United States, and four are found in Great Britain.

dixeny (dik′se-ni), *n.* [Gr. *δι-,* two-, + *ξένος,* host.] The inhabiting by fungi of hosts of two different species. *De Bary.* See ★*polyxeny,* ★*monoxeny.*

dixid (dik′sid), *n.* and *a.* I. *n.* A member of the dipterous family *Dixidæ.*

II. *a.* Of or belonging to the family *Dixidæ.*

Dixidæ (dik′si-dē), *n. pl.* [NL., < *Dixa* + *idæ.*] A family of midges intermediate between the *Culicidæ* and the *Tipulidæ* and consisting of the single genus *Dixa.*

dizoic (dī-zō′ik), *a.* [Gr. *δι-,* two- + *ζῷον,* animal.] Producing two young: as, a *dizoic* spore; specifically, producing two falciform bodies or sporozoites, as the spores of certain *Coccidiidea. Labbé.*

dizziness, *n.*—**Purkinje's dizziness,** in *psychol.,* an illusion of rotation, due to involuntary movements of the eyes. If one twirls upon one's heels until the surrounding objects seem to be moving in the opposite direction, and then stops, the surrounding objects will appear to continue their movement: this is Purkinje's dizziness. If the eyes are watched during the illusion, it will be seen that they execute slow movements in the direction of the original rotation, alternating with rapid movements in the opposed direction. *E. C. Sanford,* Exper. Psychol., p. 42.

dl. An abbreviation of *deciliter.*

D. L. An abbreviation (*a*) of *Deputy Lieutenant;* (*b*) of *Doctor of Law,* a degree equivalent to D. C. L.; (*c*) of *Doctor of Literature,* a degree equivalent to D. Lit.

D. L. D. An abbreviation of *Doctor of Letters and Didactics,* a degree conferred by some institutions.

D. Lit. or **D. Litt.** An abbreviation of *Doctor of Literature* or *Letters.*

D. L. O. An abbreviation of *Dead Letter Office.*

D. L. S. An abbreviation of *Doctor of Library Science,* a degree conferred by the University of the State of New York.

dm., dm.[2], **dm.**[3] Abbreviations of *decimeter, square decimeter, cubic decimeter.*

D. M. 2. In *astron.,* an abbreviation for ★*Durchmusterung* (which see). It usually refers to Argelander's Bonn Durchmusterung of the northern heavens, more properly referred to as B. D. M. or simply B. D.

3. Same as *M. D.* (which see).—4. An abbreviation of *Doctor of Mathematics.*

D. M. D. An abbreviation (*a*) of *Doctor of Dental Medicine;* (*b*) of *Doctor of Mathematics and Didactics:* degrees conferred by certain institutions.

D. N. P. P. An abbreviation of the Latin *Dominus noster Papa Pontifex,* 'our lord the Pope and Pontiff.'

do- or **dom-** (dō-, dom-). [*dom(inantly).*] In *petrog.,* in the quantitative system of classification (see ★*rock*[1]), a prefix used in forming words, denoting that one constituent or group of constituents dominates another within the ratios $< \frac{7}{1} > \frac{5}{3}$.

do[1], *v. t.*—**To do the block.** See ★*block*[1].

D. O. An abbreviation (*a*) of *Doctor of Oratory;* (*b*) of *Doctor of Osteopathy.*

Doassansia (dō-a-san′si-ạ), *n.* [NL. (Cornu, 1883), named for Emile *Doassans,* a French botanical chemist.] A genus of smut-fungi of the order *Ustilaginales,* having the spore-masses inclosed in a layer of sterile cells and embedded in the tissue of the host, producing leaf-spots. About 16 species have been described, mostly occurring on aquatic or marsh plants. *D. Alismatis* is frequently found on the leaves of the water-plantain, *Alisma Plantago-aquatica.*

dob[2] (dob), *n.* [Dial. var. of *dab*[1].] A small piece of anything; a lump. [Prov. Eng.]

dobash, *n.* See *dobhash.*

dobber (dob′ėr), *n.* [*dob*[2] + *-er*[1].] 1. A piece; a lump: a big lump.—2. A large heavy taw or marble.—3. The cork or float of a fishing-line. [U. S.]

He floated on the waves like a merman, or like an angler's *dobber,* until he landed safely on a rock.
Irving, Knickerbocker, ii. 5.

dobbin-cart (dob′in-kärt), *n.* An Irish four-wheeled carriage used for traveling, and generally drawn by two horses. *N. E. D.*

dobby, *n.*—**Center-shed dobby,** a form of dobby-loom chiefly used in weaving cotton fabrics the structure of which (as that of gauze) precludes high speed, or for which closed shedding is essential.

dobby-loom (dob′i-lōm), *n.* Same as *dobby-machine.*

dobby-shedding (dob′i-shed″ing), *n.* A method of operating the harnesses of a loom for patterns beyond the range of tappets and too limited to be economically produced by a Jacquard loom.

doblon (dō-blōn′), *n.* [Sp.] A gold coin of Spain, the double escudo: same as *doubloon.*

doc (dok), *n.* A colloquial form of *doctor,* as a title of address.

doc.; pl. **docs.** Abbreviations of *document,* pl. *documents.*

docalcic (dō-kal′sik), *a.* [*do(minantly)* + *calcic.*] In *petrog.,* dominantly calcic: used in the quantitative classification of igneous rocks (see ★*rock*[1]) to describe divisions of igneous rock-magmas characterized by a dominance of calcium oxid over contrasted constituents. In Classes I, II, III, docalcic rangs are those in which lime preponderates over potash and soda, in the salic constituents within the ratio $\frac{K_2O' + Na_2O'}{CaO'} < \frac{3}{5} > \frac{1}{7}$.

In Classes IV, V, docalcic sections of rangs are those in which lime preponderates over magnesia and ferrous iron in the femic constituents within the limits $\frac{MgO + FeO}{CaO''} < \frac{3}{5} > \frac{1}{7}$.

docetically (dō-sē′ti-kal-i), *adv.* According to the doctrines of the Docetæ (which see).

docetize (dō-sē′tīz), *v. t.*; pret. and pp. *docetized,* ppr. *docetizing.* [*Docetæ* + *-ize.*] To represent according to the doctrines of the Docetæ.

dochmiasis (dok-mi-ā′sis), *n.* [NL., < *Dochmius* + *-iasis.*] Same as ★*ancylostomiasis.*

docil, *a.* A simplified spelling of *docile.*

docimasy, *n.*—**Pulmonary docimasy,** a method of determining whether or not air has entered the lungs of a dead infant, by which an indication is furnished whether the child was born alive or dead.

dock[1], *n.*—**Bloody dock,** *Rumex sanguineus.* Also called *red-veined dock* and *bloodwort.* See *bloodwort* (*a*).—**Blunt-leaved** or **broad-leaved dock,** the bitter dock, *Rumex obtusifolius.*—**Butterfly-dock.** Same as ★*butter-dock,* 1.—**Can-dock.** See *canadock,* 2, and *water-can.*—**Clustered dock,** *Rumex conglomeratus,* an Old World species naturalized in the United States from Virginia to South Carolina and in California: peculiar in having the small green flowers in whorls along the stems and branches.—**Cuckold-dock,** the burdock, *Arctium Lappa.*—**Dropseed dock,** *Rumex hastulatus,* a native American species ranging from New York to Florida and west to Kansas and Texas: it has winged fruit which early drops away. Also called *Engelmann's sorrel.*—**Golden dock.** (*a*) See *dock*[1], 1. (*b*) *Rumex persicarioides,* an American species long confounded with the golden dock of the Old World, found on sandy shores from New Brunswick to Virginia and westward to Kansas and New Mexico, and also on the Pacific coast.—**Pale dock,** the white dock, *Rumex salicifolius;* also the peach-leaved dock, *R. altissimus,* and sometimes the great water-dock, *R. Britannica.*—**Peach-leaved dock,** *Rumex altissimus,* a tall American species, sometimes 4 feet high, found along streams and in swamps from Massachusetts to Maryland and westward to Nebraska and Texas. The pale-green lanceolate leaves suggest the name, and it is also quite as appropriately called *tall dock.*—**Prairie dock.** See ★*prairie-dock.*—**Red-veined dock.** Same as *bloody* ★*dock.*—**Sharp dock, sorrel-dock, sour-dock,** any one of several docks with more or less acid juice, as *Rumex Acetosa, R. Acetosella, R. crispus,* and *Oxyria digyna.*—**Tall dock.** Same as *peach-leaved* ★*dock.*—**Water-dock.** See ★*water-dock.*

dock[2], *v. t.* 5. In *biscuit-* (*cracker-*) *making,* to prick holes in (each biscuit) before it is put in the oven, to provide for the escape of moisture.

dock[3], *n.* Docks are distinguished broadly as *wet docks,* or those consisting of an inclosed water-space or basin in which ships lie to take in or discharge cargo, and which cannot be pumped dry; and *dry-docks,* in which vessels can be taken entirely clear of water. The latter are divided into *excavated* or *graving-docks, slip-docks, lifting-docks,* and *floating docks.* A *basin dock* is a wet dock whose entrance is continually open to the tide; a *closed dock,* one whose entrance is closed by a lock, caisson, or gate so as to maintain the interior water-level approximately constant. A *slip-dock* is one in which a vessel is partially hauled out on a marine railway in a slip provided with gates which are closed at low tide, excluding the water from the vessel. A *lifting-dock* is one in which a submerged platform on which the ship is landed on blocks and

is then raised vertically clear of the water with the ship by hydraulic power. An *off-shore dock* is a floating dock with a bottom and one side wall, maintained in an upright position by means of upper and lower parallel booms attached to the side wall and to strong vertical columns built on the foreshore. A *box-dock* is a floating dock whose ends can be closed by caissons or gates after the entrance of the vessel, the interior space being then pumped out as in a graving-dock. A *balance-dock* is the ordinary type of floating dock with open ends, in which the side walls are utilized as ballast compartments to maintain the dock in level balance. A *self-docking floating dock* is one so arranged in detachable sections that all its underwater parts can be successively docked by the remaining parts for examination and repairs.

2. In *railroading*, a track at a siding or in a freight yard, having a raised platform on each side for convenience in loading at the level of the car door. [U. S.]—**Bureau of yards and docks.** See ★*bureau*.—**Portable dock,** a dock, built on the principle of the caisson, which can be towed to a vessel needing repairs.—**Ship-building dock,** any dry-dock or caisson within which the hull of a vessel may be built, and the use of cradle-construction and ways be avoided.

dock-cress (dok'kres), *n.* See *cress* and *Lapsana*.

docker[2] (dok'ėr), *n.* [*dock*[3] + *-er*[1].] **1.** An inhabitant of Devonport, England (formerly Plymouth Dock).—**2.** A laborer in the docks: as, a trades-union for *dockers* was formed.—**3.** A case secured by a lawyer from a prisoner after his arrest or upon arraignment. [Eng. law-slang.]

docking[2] (dok'ing), *n.* [*dock*[3], *v.*, + *-ing*[1].] The operation of placing a vessel in a dry-dock for cleansing, inspection, painting, and repairs.

docking-keel (dok'ing-kēl), *n.* In *ship-building*, one of a pair of exterior side keels secured under the bottom of a large armored warship, usually about half-way between the main keel and the turn of the bilge, to support the ship when in dry-dock. The lower surface of each of the docking-keels is parallel to that of the main keel and of about the same width, to give good bearing surface on the blocks in the bottom of the dock on which the ship is landed.

docmac (dok-mäk'), *n.* [Ar. *doqmāq*, *duqmāq*, a mallet, ‹ *daqq*, knock, smash.] A catfish, *Bogrus docmac*, of considerable size, found in fresh waters in Egypt.

docoglossan (dok-ō-glos'an), *a.* [*Docoglossa* + *-an*.] Relating to the *Docoglossa*.

docosane (dok'ō-sān), *n.* A colorless compound, $CH_3(CH_2)_{20}CH_3$, found in paraffin from brown coal and prepared by the reduction of the chlorid $C_{22}H_{44}Cl_2$. It melts at 44.4° C. and boils at 224.5° C. under 15 millimeters pressure.

doctor, *n.* **10.** In *angling*, a name applied to several artificial flies: as, the blue *doctor*, the silver *doctor*, etc.—**11.** A boiler feed-pump such as has been preferred on the western rivers of the United States. It is a vertical steam-pump, with a fly-wheel between the steam-cylinder and water-cylinder, and is said to be especially reliable. In case of need it can be operated by turning the fly-wheel by hand.

12. The cook of a merchant vessel; also, the cook of a lumber-camp. [Slang.]—**Doctors of the church,** the designation of certain fathers of the early church, eminent for their knowledge and teaching of theology. The title is applied to four of the Greek fathers: Athanasius, Basil, Gregory, and Chrysostom; and to a number in the Latin church including Ambrose, Augustine, and Jerome. Some of the great schoolmen of the middle ages are also so designated. The title is still used in the Greek Church.

doctor-bird (dok'tor-bėrd), *n.* A local West Indian name for various humming-birds of the genera *Eulampis* and *Lampornis*: probably given on account of their dark plumage.

doctor-knife (dok'tor-nīf), *n.* The stationary blade in a roller cotton-gin. *Taggart*, Cotton Spinning, I. 32.

doctor-shears (dok'tor-shērz), *n.* In *calico-printing*, two pieces of metal that clamp, by means of pinching screws, the doctor-blade on a cylinder printing-machine.

doctrin, *n.* A simplified spelling of *doctrine*.

doctrinairism (dok-tri-nãr'izm), *n.* Same as *doctrinarianism*.

doctrinism (dok'tri-nizm), *n.* [*doctrine* + *-ism*.] Adherence to doctrine or doctrinal preaching.

document, *n.*—**Document of title,** in *commercial law*, a bill of lading, or other paper which confers upon the holder possession or right of possession of the goods therein described.—**Judicial documents,** in *law*, the papers required to be filed which make up the record of an action or special proceeding. They include the writs, pleadings, intermediate orders, and papers upon which they are founded, affecting the proceedings, documentary evidence, inquisitions, verdicts, judgment, and decrees.

documentarily (dok-ū-meu'tą-ri-li), *adv.* As a document.

documentary, *a.* **2.** Educational; instructional.

We now approach the time when for a century and a half French held a recognized position [in England] as the language of education, of society, of business, and of administration. Long before 1250 we get traces of the *documentary* use of French, and long after 1350 it was continued. Trevisa says it was a new thing in 1349 for children to construe into English in the grammar schools, where they had been used to do their construing into French.

Earle, Philol. Eng. Tongue, ¶ 52.

Documentary theory, same as *documentary hypothesis*.

documentation, *n.* **2.** The preparation of records or documents for use or for filing.—**3.** Formal or authoritative instruction.

Remonstrances arose against their perverse and narrow-minded devotion to "truth," or rather to minute exactitude, their pedantry and affectation of *documentation*; sometimes derived from some old colourists who had not renounced their former ideal, sometimes from younger men impelled unconsciously by literature, which had as usual preceded art in the revolt.

Encyc. Brit., XXXII. 443.

dodder[1], *n.* The various dodders are named, for the most part, from their principal host or from some leading character, and the specific names are usually translations of vernacular ones or vice versa. See the following phrases.—**American dodder.** See *glomerate* ★*dodder*.—**Beaked dodder,** *Cuscuta rostrata*, a species of the Alleghany region from Maryland southward, growing on various herbs and shrubs.—**Button-bush dodder,** *C. Cephalanthi*, which grows on the button-bush, but also on other plants, and has a very wide range in North America.—**Clover-dodder,** the thyme-dodder, *C. Epithymum*, injurious to clover. See *dodder*[1].—**Dodder-cake plant,** the false flax or gold-of-pleasure, yielding dodder-seed, from which the oil is expressed and made into cakes.—**Field-dodder,** *C. arvensis*, one of the most common species, found in both North and South America.—**Flax-dodder,** *C. Epilinum*, an Old World species introduced in the United States, injurious to flax.—**Glomerate dodder,** *C. paradoxa*, chiefly confined to the Mississippi valley, peculiar from its dense clusters of flowers. It grows mainly on composite plants. Sometimes called *American dodder*.—**Gronovius's dodder,** *C. Gronovii*, a large, showy American species, very common in the Atlantic States, and ranging from Nova Scotia to Florida and Texas. It grows on many herbs and shrubs.—**Hazel-dodder,** *C. Coryli*, growing on the hazel and other shrubs, and ranging from Connecticut to Virginia and west to Nebraska and Arkansas.—**Lesser dodder,** the thyme-dodder, *C. Epithymum*.—**Lucerne-dodder,** the thyme- or clover-dodder, which is also injurious to lucerne.—**Smartweed-dodder,** *C. Polygonorum*, which grows chiefly on species of *Polygonum*, a large-fruited American species of the Mississippi valley, ranging eastward to Pennsylvania and Delaware. It is very common in the Potomac valley where it forms large yellow mats on the water-willow and other plants.—**Thyme-dodder,** *C. Epithymum*, growing on thyme in Europe, but most injurious to clover. See *clover*-★*dodder* and *dodder*[1] (cut).

dodder-laurel (dod'ėr-lâ″rel), *n.* A dodder-like plant, *Cassytha filiformis*, of the laurel family, found in the warm maritime regions of the world. Compare *scrub vine*, under *vine*.

doddy[1], *n.* **2.** Specifically, a local name for the Aberdeen-Angus polled cattle.

dodecafid (dō-dek'a-fid), *a.* [Gr. *δώδεκα*, twelve, + L. *-fidus*, ‹ *findere*, divide.] Divided into twelve parts.

dodecahedron, *n.*—**Deltoid dodecahedron,** a crystalline form of the tetrahedral group of the isometric system embraced by twelve similar quadrilateral faces; the analogous form of the holosymmetric group is the trigonal trisoctahedron. Also called a *tetragonal tristetrahedron*.

dodecameral (dō-de-kam'e-ral), *a.* [Gr. *δώδεκα*, twelve, + *μέρος*, division, + *-al*[1].] Divided into twelve parts or series of twelves, as in the septal divisions of the *Hexacoralla*.

dodecanaphthene (dō″dek-a-naf'thēn), *n.* [Gr. *δώδεκα*, twelve, + E. *naphthene*.] A colorless liquid, $C_{12}H_{24}$, found in Baku petroleum. It boils at 197° C.

dodecane (dō-dek'ān), *n.* [Gr. *δώδεκα*, twelve, + *-ane*.] A colorless hydrocarbon, $CH_3(CH_2)_{10}CH_3$, prepared by the action of hydriodic acid and phosphorus on lauric acid. It melts at −12° C. and boils at 214.5° C.

dodecant (dō'de-kant), *n.* [Gr. *δώδεκα*, twelve, + *-ant*[1].] One of the twelve divisions of a hexagonal crystal formed by the lateral axial plane with the three planes which pass through the vertical and each of the lateral axes.

dodecapartite (dō″dek-a-pärt'īt), *a.* [Gr. *δώδεκα*, twelve, + L. *partitus*, parted.] Made up of twelve segments; dodecafid.

dodecapharmacum (dō″dek-a-fär'ma-kum), *n.* [NL., ‹ Gr. *δώδεκα*, twelve, + *φάρμακον*, drug.] Same as *apostles' ointment* (which see, under *apostle*).

dodecarch (dō'de-kärk), *n.* [Gr. *δωδεκάρχης*, ‹ *δώδεκα*, twelve, + *ἄρχειν*, rule.] One of a ruling body of twelve.

Psammetichus I., one of the *dodekarchs*, and the legitimate heir of the crown. *Schaff*, Relig. Encyc., I. 707.

dodecatoic (dō″dek-a-tō'ik), *a.* [Gr. *δωδέκατος*, twelfth, + *-ic*.] Noting the isomeric fatty acids, $C_{12}H_{24}O_2$. The most important ones are the lauric and hordeic acids.

dodecylene (dō-des'i-lēn), *n.* [Gr. *δώδεκα*, twelve, + *-yl* + *-ene*.] A general name for isomeric, olefinic hydrocarbons. The normal compound is a colorless liquid, $CH_3(CH_2)_9CH{:}CH_2$, prepared by the distillation of palmitic acid under 600 millimeters pressure. It melts at −31.5° C. and boils at 96° C. under 15 millimeters pressure.

dodge, *v. t.* **3.** In *change-ringing*, to change the place or order of (a bell) in the series used.

dodge, *n.* **2.** Of a bell in *change-ringing*, a change in its place or order in the series used.

Doegling oil or **train-oil.** See ★*oil*.

doeskin, *n.* **3.** An enameled cloth finished on one side to resemble leather in color.

dof, *v.* A simplified spelling of *doff*.

dofelic (dō-fel'ik), *a.* [*do*(*minantly*) + *felic* (‹ *fel*(*dspar*) + *-ic*).] In *petrog.*, dominantly felic: used to describe divisions of igneous rock magmas characterized by a dominance of normative feldspar over normative quartz or lenads (= nephelite, leucite, sodalite) within the limits $\frac{Q \text{ or } L}{F} < \frac{3}{5} > \frac{1}{7}$. See ★*rock*.

dofemane (dō-fem'ān), *n.* [*do*(*minantly*) + *fe*(*rro*)*m*(*agnesian*) + *-ane*.] In *petrog.*, the name of the fourth class of igneous rocks in the quantitative classification (see ★*rock*[1]); a rock in which the femic (ferromagnesian) normative minerals preponderate over the salic minerals, that is, normative quartz, feldspars, feldspathoids (lenads), and corundum, within the limits $\frac{Sal}{Fem} < \frac{3}{5} > \frac{1}{7}$. The salic and femic minerals used in determining the class are calculated from a chemical analysis of a rock. The dofemanes include rocks poor in feldspar or free from it, such as many peridotites, pyroxenites, some gabbros, and chemically similar lavas.

dofemic (dō-fem'ik), *a.* [*do*(*minantly*) + *femic* (‹ *fe*(*rro*)*m*(*agnesian*) + *-ic*).] In *petrog.*, dominantly femic. Used to describe divisions of igneous rocks, in the quantitative system (see ★*rock*[1]), characterized by a dominance of ferromagnesian normative minerals over salic minerals, that is, normative quartz, feldspars, feldspathoids (lenads), and corundum, within the limits $\frac{Sal}{Fem} < \frac{3}{8} > \frac{1}{7}$.

doferrous (dō-fer'us), *a.* [*do*(*minantly*) + *ferrous*.] In *petrog.*, in the quantitative system (see ★*rock*[1]), noting divisions of igneous rocks characterized by a dominance of ferrous oxid over magnesia, within the limits $\frac{MgO}{FeO} < \frac{3}{8} > \frac{1}{7}$. These divisions are subrangs in classes IV, V.

doffer-brush (dof'ėr-brush), *n.* An auxiliary device, on a cotton-combing machine, for keeping the comb-needles free from dirt.

doffer-comb (dof'ėr-kōm), *n.* A thin plate of steel, serrated on one of its edges, for combing, by an oscillating movement, the fibrous fleece, as cotton or wool, from the doffer-cylinder of a carding-machine.

doffer-cylinder (dof'ėr-sil″in-dėr), *n.* Same as *doffing-cylinder*.

doffer-roll (dof'ėr-rōl), *n.* The small roll in advance of the principal one in a calendering- or ironing-machine, or in a mangle, by which the fabric is stripped off and delivered to the receiving-table, instead of being allowed to follow around the pressing-roll.

doffing-motion (dof'ing-mō″shon), *n.* Any mechanical arrangement for removing a product from a machine, as a hank from a reel in a textile-mill.

dog, *n.*, **9.** (*m*) A short, heavy piece of steel, bent and pointed at one end and with an eye or ring at the other. It is used for many purposes in logging, and is sometimes so shaped that a blow directly against the line of draft will loosen it. Also called *tail-hook*. (*n*) In *agri.*, an implement for dragging brush, roots, and poles out of the ground; a brush-puller. [Eng.]—**Big dog,** in *poker*, a hand which is ace high and nine low, with some one card of the sequence missing, as A K Q 10 9. When played, it beats a straight or little dog and loses to a flush.—**Borzor dog,** the Russian wolfhound, practically a large, long-haired greyhound, somewhat like the staghound, but with a soft, silky coat.—**Cape hunting-dog.** See cut and description under *Lycaon*.—**Coon-dog.** See ★*coon-dog*.—**Dog's letter.** See *dog-letter* and *R*, 1.—**Heel dog,** a dog that follows at heel.—**Hunting dog.** (*c*) *pl.* In *astron.*, a northern constellation closely following *Ursa Major*; *Canes Venatici*.—**Limit dog,** one that may be exhibited, or may compete for prizes, in a class limited to dogs that have certain required qualifications.—**Little dog,** in *poker*, a hand which is deuce low and seven high, with some one card of the sequence missing, as 2 4 5 6 7. When played, it beats a straight, but loses to a big dog or a flush.—**St. Bernard dog,** a variety of the dog, of large size and powerful build, named from the hospice of St. Bernard in the Alps. The breed was formerly used for searching out and aiding travelers. The original race died of distemper about 1814. There

Dog, 9 (*m*).

are two varieties, the long- and the short-haired, but both have heavy, square heads. The color is tawny, orange and white, or grizzled.—**Straight-tailed dog,** a form of dog or driver for cylindrical stock to be turned in the metal-working lathe, in which the projection to engage the face-plate is straight, and intended to be acted on by a pin or bolt projecting from the face-plate. The other and more usual form, in small sizes, has the projecting arm L-shaped, the end of the L engaging in a slot or against a shorter stud on the driving face-plate.

dogberry, *n.* **3.** *Ribes Cynosbati.* See *wild* ★*gooseberry*, 1.

dog-boat (dog′bōt), *n.* See ★*rigging-sled.*

dog-bolt[2] (dog′bōlt), *n.* [*dog, n.*, 9 + *bolt*[1].] The bolt which is used in connection with a dog, for holding a bonnet or a manhole or hand-hole cover in place.

dog-bur (dog′bėr), *n.* The wild comfrey, *Cynoglossum Virginicum;* less properly, the hound's-tongue or dog's-tongue, *C. officinale.*

dog-buttons (dog′but-nz), *n. pl.* The seeds of the *nux vomica.* Also called *quaker buttons.*

Dog-cart phaëton. See ★*phaëton.*

dog-chuck (dog′chuk), *n.* A device which is clamped to a piece of work for the purpose of driving it while it is being machined. A tail, which is sometimes straight and sometimes bent at right angles, is provided on this device for catching in a face-plate or against a stop.

dog-crab (dog′krab), *n.* A swift-running crab, *Cancer caninus,* said by Rumphius to burrow under houses and to enter them.

dog-daisy, *n.* **2.** The mayweed or dog's-fennel, *Anthemis Cotula.*—**3.** The oxeye daisy.

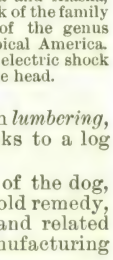
dog-dance (dog′dans), *n.* A ceremony of some North American Indian tribes; the ritual of one of the age-fraternities, embracing warriors of approximately the same age, who form a semi-religious society.

dog-dandelion (dog′dan″dē-lī-on), *n.* The fall dandelion or hawk-bit, *Leontodon autumnale.*

Dog-day locust. See ★*locust*[1].

dog-fall (dog′fâl), *n.* In *wrestling,* a fall in which both wrestlers strike the ground together.

dogfish, *n.*, **1.** (*a*) In Australasia, the name of various fishes of distinct families, chiefly sharks. In Australia it is used for *Scylliorhinus lima,* of the family *Scyliiidæ.* In New South Wales it is *Scylliorhinus maculatus* Blainv. The *spine dogfish* of New Zealand is *Squalus maculatus,* of the family *Squalidæ;* the *spotted dogfish* of New South Wales, *Scylliorhinus analis;* the *dusky dogfish* of New South Wales, *Chiloscyllium modestum* Günther; and there are others in Tasmania and Australia. *Austral English.*—**California dogfish,** a species of dogfish found on the coast of California and Alaska, *Squalus sucklii.*—**Dogfish shark,** any shark of the family *Squalidæ.*—**Electric dogfish,** any fish of the genus *Astroscopus,* inhabiting both shores of tropical America. These fishes have the power of giving an electric shock from an electric organ situated on top of the head.



dog-flea (dog′flē), *n.* See *Pulex.*

dogger[3] (dog′ėr), *n.* [*dog* + *-er*[1].] In *lumbering,* one who attaches the dogs or hooks to a log before it is steam-skidded.

dog-grease (dog′grēs), *n.* The fat of the dog, once considerably used as a household remedy, but now replaced by petrolatum and related products: also used in glove-manufacturing to some extent.

dog-hobble (dog′hob″l), *n.* [*dog* + *hobble, n.*, 3.] One of the calfkills, *Leucothoë Catesbæi:* so called because its dense growth arrests dogs in the hunt. Also called *dog-laurel.*

dog-hook, *n.* **3.** In *lumbering,* a hook on the end of a haul-up chain of a size to permit it to be hooked into a link of the chain when the latter is looped around an object.

Dog-hook, 3.

dog-iron (dog′ī″ėrn), *n.* A short bar of iron or steel, bent near its ends at right angles into the shape of a square Z or a capital E, and pointed at the ends so that it may be driven into timber or logs: used as a cramp.

dog-laurel (dog′lâ″rel), *n.* Same as ★*dog-hobble.*

dog-leg (dog′leg), *n.* A name given to a number of things which have a bent form resembling that of a dog's hind leg. See *dog-legged.*—**Dog-leg fence,** a fence composed of rough timber piled up and stayed by crossed stakes called *dog-legs.* [Australia.]

dog-lily (dog′lil″i), *n.* The common pond-lily or spatter-dock, *Nymphæa advena.*

dog-line (dog′līn), *n.* The trace by which the harness of a sledge-dog is connected with the sledge.

dogmaticism (dog-mat′i-sizm), *n.* [*dogmatic* + *-ism.*] The quality of being dogmatic.

dog-mint (dog′mint), *n.* The basil-weed or horse-thyme, *Clinopodium vulgare.*

dog-nail (dog′nāl), *n.* A railroad-spike, having a spreading or wide head. [Eng.]

dog-nap (dog′nap), *n.* A short nap while in a sitting posture. *W. Phillips.*

dog-nettle (dog′net″l), *n.* The dead-nettle, *Lamium purpureum;* also, the hemp-nettle, *Galeopsis Tetrahit.*

dog-pole (dog′pōl), *n.* One of the poles of a dog-travail. See *travail*[2].

dogs-and-cats (dogz′and-katz′), *n.* The field-clover, *Trifolium arvense.*

dog's-bane, *n.*—**Bitter dog's-bane.** Same as *dog's-bane,* 1. Also called *bitter-root.*—**Clasping-leaved dog's-bane,** *Apocynum hypericifolium,* the upper leaves of which are clasping. Its range is well northward from Ontario to British Columbia, but it is found in Ohio, Illinois, and New Mexico.—**Climbing dog's-bane.** Same as *Virginia silk* (which see, under *silk*).—**Dog's-bane family,** the plant family *Apocynaceæ.*—**Spreading dog's-bane.** Same as *dog's-bane,* 1.

dog's-dinner (dogz′din″ėr), *n.* Same as *poverty-plant.*

dog's-fennel, *n.* **2.** *Eupatorium capillifolium,* an anomalous species having the leaves pinnatifid with filiform segments: found in fields from Virginia to Florida and in the West Indies.—**False dog's-fennel,** the fetid marigold (which see, under *marigold*).—**Yellow dog's-fennel,** *Helenium tenuifolium* of the southern United States. See *Helenium* and *sneezeweed.*

dog's-finger (dogz′fing″gėr), *n.* The foxglove, *Digitalis purpurea.*

dogsfoot-weed (dogz′fůt-wēd), *n.* A burweed, *Urena sinuata,* widely distributed in the tropics, having a tough fibrous bark. The leaves are more or less like a dog's foot in shape. See *Urena.*

dog's-head (dogz′hed), *n.* An American pierid butterfly, *Zerene cæsonia,* occurring abundantly in the southern United States. The wings are lemon-yellow bordered with black. The outlines of the yellow of the fore wings suggests the head of a dog. The larval food-plant is clover.

dog-sledge (dog′slej), *n.* A sledge designed to be drawn by dogs. Such sledges are used by the Eskimos and in northern Asia.

dog's-mouth (dogz′mouth), *n.* The great snapdragon, *Antirrhinum majus.*

dog-snapper (dog′snap″ėr), *n.* A fish, *Lutjanus jocu,* known from the Florida Keys to Brazil. See *snapper.*

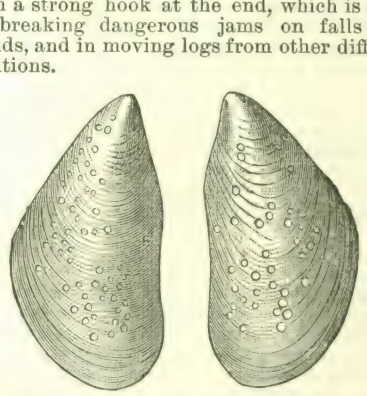
dog's-rib (dogz′rib), *n.* The rib-grass or English plantain, *Plantago lanceolata.*

dog's-thistle (dogz′this″l), *n.* The Canada thistle. See *thistle.*

dog's-tongue, *n.* **2.** Same as *deer's-tongue.* See *Trilisa.*

dog-stopper (dog′stop″ėr), *n.* *Naut.,* a stopper or heavy rope put on to relieve the regular stopper when at anchor in a heavy sea, or to bitt the cable or fleet the messenger.

dog-strop (dog′ strop), *n.* A strop of rope passed around a yard for the purpose of hooking a block into it for lifting a weight.



dog-throw (dog′thrō), *n.* The worst possible throw in a dice-game, such as hazard or craps.

dog-tie (dog′tī), *n.* A metal cramp or short anchor, used in stonework.

dog-toes (dog′tōz), *n.* The plantain-leaved or mouse-ear everlasting, *Antennaria plantaginifolia.* Also called *pussy-toes.*

dog-tooth (dog′tōth), *v. t.* To ornament (an arch or other part of a building) by applying dog-tooth molding. See *dog-tooth, a.* and *n.*

dog-warp (dog′wârp), *n.* In *lumbering,* a rope with a strong hook at the end, which is used in breaking dangerous jams on falls and rapids, and in moving logs from other difficult positions.

Two valves of *Mytilus edulis* L., representing diagrammatically the approximate position of the holes bored by the dog-winkle (*Purpura lapillus*) in about 100 specimens of *Mytilus,* gathered at Newquay, Cornwall. (From "Cambridge Natural History.")

dog-wedge (dog′wej), *n.* In *lumbering,* an iron wedge with a ring in the butt. It is driven into the end of a log, and a chain is hitched in the ring for skidding the log by horse-power. It is also used in gathering up logs on a drive. A rope is run through the rings of several logs, and they are dragged through marshes or partly submerged meadows to the channel.

dog-winkle (dog′wing″kl), *n.* A marine gastropod, *Purpura lapillus,* noted for its destruction of mussels by boring through the shell and devouring the mollusk, and for yielding the dye known as *Tyrian purple.*

dogwood, *n.*, **3.**—Also, in Australia, the sugar-tree, *Myoporum platycarpum,* a tall shrub or small tree yielding a beautifully mottled and grained wood, suitable for veneering and cabinet-work, and possessing a pleasant perfume when freshly worked. It also yields a very sweet exudation or manna, of a whitish or pinkish color, eagerly sought after and eaten by the aborigines, and a resin used by them as a substitute for pitch and wax.—**Alder-dogwood,** the alder-buckthorn, *Rhamnus Frangula.*—**Alternate-leaved dogwood.** Same as *blue* ★*dogwood.*—**American dogwood,** the flowering dogwood, *Cornus florida.*—**Bastard dogwood.** (*a*) *Ateleia Cubensis,* a small leguminous tree of Cuba. (*b*) *Pomaderris apetala,* a small rhamnaceous tree of Tasmania, yielding a beautiful satiny wood suitable for carving and turning. See *Pomaderris.*—**Black dogwood.** See *dogwood,* 3.—**Blue dogwood,** *Cornus alternifolia,* a small tree of eastern North America, sometimes 30 feet high and 8 inches in diameter, with cymes of cream-colored flowers and dark blue-black subglobose fruit: found from Nova Scotia to Georgia and Alabama, and westward in the northern range to Minnesota. The wood is similar to that of the flowering dogwood. Also called *alternate-leaved* and *purple dogwood.*—**California** or **Californian dogwood,** *Cornus Nuttallii,* a tree of the Pacific slope, 40–60 (or exceptionally 100) feet high and

California or Californian Dogwood (*Cornus Nuttallii*). (From Sargent's "Manual of the Trees of North America.")

1 to 2 feet in diameter. It is of the type of the flowering dogwood and is often so called. The involucral bracts are sometimes 3 inches long, narrowed at the base, and white or tinged with pink. The wood is very hard, strong, and fine-grained. It ranges from California to Vancouver Island, and east to the Sierra Nevada.—**Dwarf dogwood,** the bunch-berry or dwarf cornel. See *bunch-berry,* 1, *cornel,* and *Cornus.*—**False dogwood.** Same as striped maple (which see, under *maple*1).—**Florida dogwood,** the flowering dogwood, *Cornus florida.*—**Flowering dogwood.** See *Cornus* and *California* ★*dogwood.*—**Green-osier dogwood.** Same as *round-leaved* ★*dogwood.*—**Jamaica dogwood,** *Ichthyomethia Piscipula.* See *Piscidia* and *fish-poison.*—**Male dogwood,** the cornelian cherry, *Cornus mas.* See *cornel* and under *cherry.*—**Pacific dogwood.** Same as *California* ★*dogwood.*—**Poison-dogwood,** the poison-sumac, *Rhus Vernix.*—**Pond-dogwood,** the button-bush, *Cephalanthus occidentalis,* the leaves of which resemble those of the dogwood, and which grows around ponds and swamps.—**Purple dogwood.** Same as *blue* ★*dogwood.*—**Red-osier dogwood.** See *red osier,* under *osier.*—**Rough-leaved dogwood,** *Cornus asperifolia,* of eastern North America, the twigs and leaves of which are rough-pubescent.—**Round-leaved dogwood,** *Cornus circinata,* the leaves of which are orbicular. Its range is well north from Nova Scotia to Manitoba, not extending farther south than Virginia and Missouri.—**Striped dogwood.** Same as *striped maple* (which see, under *maple*1).—**Swamp-dogwood.** (*a*) The silky cornel, *Cornus Amomum.* (*b*) The poison sumac, *Rhus Vernix.* (*c*) The hop-tree, *Ptelea trifoliata.*—**Virginia dogwood,** the flowering dogwood, *Cornus florida.*—**Western dogwood.** Same as *California* ★*dogwood.*—**White dogwood.** (*a*) The guelder-rose, *Viburnum Opulus.* (*b*) Same as *Jamaica* ★*dogwood.*

dog-wrench (dog′rench), *n.* A spanner having a handle so that it can be turned like a crank.

dohemic (dō-hem′ik), *a.* [*do*(*minantly*) + *hemic* (< *he*(*matite*) + *m*(*agnetite*) + *-ic*).] In *petrog.,* dominantly hemic. Used in the quantitative classification (see ★*rock*[1]) to describe divisions of igneous rocks characterized by having hemic minerals (normative magnetite, hematite) dominant over tilic minerals (normative titanite, ilmenite, perofskite), within the limits $\frac{H}{T} < \frac{7}{1} > \frac{5}{3}$.

dolang (dō′läng), *n.* [Tagalog *dolang,* a table, = Bisaya *dolang,* a tray, pan, trough.] In the Philippine Islands, a low table, used to eat from.

dolcan, *n.* **2.** In *organ-building,* a very soft stop of the flute class, having pipes wider at the top than at the bottom. Also *dulcan.*

dolcian (dol′si-an), *n.* [See *dolciano.*] In *organ-building,* a reed-stop. Also *dulcian.*

Dolcinist (dol-sē′nist), *n.* In *eccles. hist.,* an adherent of the party of Dolcino, a leader of the sect called the *Apostolic Brethren.*

dolcissimo (dōl-chēs′si-mō), *n.* [It., superl. of *dolce,* < L. *dulcis,* sweet.] In *organ-building,* a very soft stop of the flute or string class.

dole[6] (dōl), *v. t.* [F. *doler*, pare, OF. *doler*, hew, plane, < L. *dolare*, hew, plane.] To pare and thin (leather or skins). *N. E. D.*

dolenic (dō-len′ik), *a.* [*do*(*minantly*) + *lenic* (< *le*(*ucite*) + *n*(*ephelite*) + *-ic*).] In *petrog.*, dominantly lenic. Used in the quantitative classification (see ★*rock*1), to describe divisions of igneous rocks having the lenads (normative leucite, nephelite, and the sodalites) dominant over normative feldspar, within the limits $\frac{L}{F} < \frac{1}{3} > \frac{5}{8}$.

dolente (dō-len′te), *a.* [It., < L. *dolens* (*dolent-*): see *dolent.*] In *music*, sad, plaintive.

dolerine, dolerin (dō′le-rin), *n.* [Gr. *δολερός*, deceptive (< *δόλος*, deceit), + *-ine*2.] A name given by Jurine to a talc-schist, found in the Alps, containing feldspar and chlorite as essential constituents.

dolerite, *n.*—**Concretionary dolerite.** Same as *pillow* ★*basalt.*

dolfin, *n.* A simplified spelling of *dolphin.*

dolichellipsoid (dol″ik-e-lip′soid), *n.* [Gr. *δολιχός*, long, + E. *ellipsoid.*] In *anthrop.*, an elongated cranium of ellipsoid form. *G. Sergi* (trans.), Var. of the Human Species, p. 49.

dolichocephal (dol″i-kō-sef′al), *n.* A dolichocephalous person.

dolichocercic (dol″i-kō-sėr′sik), *a.* [Gr. *δολιχός*, long, + *κερκίς*, radius of the arm.] Having the forearm disproportionately long in relation to the arm. Also written *dolichokerkic.*

dolichocerous (dol-i-kos′e-rus), *a.* [Gr. *δολιχός*, long, + *κέρας*, horn.] 1. Having long 'horns' or antennæ.—2. Of or belonging to the *Dolichocera*, a subtribe of *Muscides* in Latreille's classification. *Syd. Soc. Lex.*

dolichocnemic (dol″i-kok-nē′mik), *a.* [Gr. *δολιχός*, long, + *κνήμη*, the leg, tibia.] Having long legs. *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 173.

dolichofacial (dol″i-kō-fā′shial), *a.* [Gr. *δολιχός*, long, + L. *facies*, face, + *-al*1.] Having a long face: same as *leptoprosopic. Jour. Anthrop. Inst.*, XVIII. 23.

dolichohieric (dol″i-kō-hī-er′ik), *a.* [Gr. *δολιχός*, long, + *ἱερόν*, sacrum.] Characterized by a disproportionately long sacrum.

dolichokerkic, *a.* Same as ★*dolichocercic.*

dolicholekanic (dol″i-kō-le-kan′ik), *a.* [Gr. *δολιχός*, long, + *λεκάνη*, dish (pelvis), + *-ic.*] Same as ★*dolichopelvic. Turner.*

dolichopellic (dol″i-kō-pel′ik), *a.* [Gr. *δολιχός*, long, + *πέλλα*, a basin (taken, like L. *pelvis*, a basin, in a modern sense 'pelvis').] Same as ★*dolichopelvic.*

dolichopelvic (dol″i-kō-pel′vik), *a.* [Gr. *δολιχός*, long, + L. *pelvis*, basin (pelvis), + *-ic.*] Characterized by a pelvis which has a disproportionately long anteroposterior diameter.

dolichopodous (dol-i-kop′ō-dus), *a.* [Gr. *δολιχόπους*, < *δολιχός*, long, + *πούς* (*ποδ-*), foot.] Having disproportionately long feet.

dolichoprosopous (dol″i-kō-prō-sō′pus), *a.* [Gr. *δολιχός*, long + *πρόσωπον*, face.] Same as ★*dolichofacial.*

Dolichosauria, *n. pl.* 2. A group of *Pythonomorpha*, or mosasauroid reptiles, containing those with the rami of the jaw united by sutural symphysis. Variously considered as a superfamily, suborder, or order. Also *Dolichosauri.*

dolichosaurian (dol″i-kō-sâ′ri-an), *a.* and *n.* **I.** *a.* Related to or having the characters of the *Dolichosauria.*

II. *n.* One of the *Dolichosauria.*

Dolichosoma (dol″i-kō-sō′mä), *n.* [NL., < Gr. *δολιχός*, long, + *σῶμα*, body.] A genus of stegocephalous *Amphibia* from the Carboniferous and Permian formations, having a relatively small triangular skull with tapering snout and over 150 vertebræ.

dolichotmema (dol″i-kot-mē′mä), *n.*; pl. *dolichotmemata* (-ma-tä). [NL., < Gr. *δολιχός*, long, + *τμῆμα*, section.] In *bryol.*, a filiform cell which ruptures and sets free the gemma of a moss. *Correns.*

dolicho-uranic (dol″i-kō-ū-ran′ik), *a.* Same as ★*dolichuranic. F. Russell*, in Amer. Anthropologist, Jan.-March, 1901, p. 42.

dolichuranic (dol″i-kū-ran′ik), *a.* [Gr. *δολιχός*, long, + *οὐρανός*, palate.] Having a long palate; that is, in *craniom.*, having a palatomaxillary index less than 110. *Turner.*

dolina (dō-lē′nä), *n.* [Russ. *dolina*, dim. of *dolŭ*, a dale, valley.] A vertical cavity, usually leading into a cave, dissolved out of some soluble rock, such as limestone, by descending waters. *Geikie*, Text-book of Geol., p. 477.

doll[2], *n.* 2. A simple contrivance on a Jacquard loom which indicates to the weaver that something is wrong with the action of the pattern-card cylinder. Also called *detector* and *blockhead-board.*

dollar, *n.*—**Bell dollar.** See ★*bell*1.—**British dollar,** a silver dollar struck at the branch of the British Mint

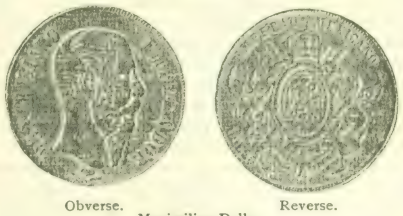
Obverse. Reverse.

British Dollar.
Two thirds size of original.

established at Hongkong in 1866. It was current for a few years at the same value as the Mexican dollar which it was intended to supersede.—**Cannon dollar,** a Mexican or other pillar dollar.—**Carolus dollar,** the old pillar dollar of Spain. This dollar remains the standard

Obverse. Reverse.

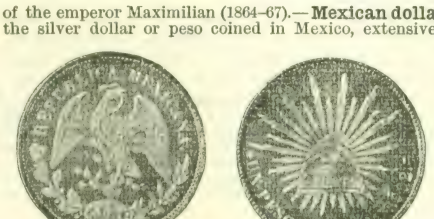
Carolus Dollar.
Two thirds size of original.



coin of the Malay states.—**Conant dollar,** the new silver dollar struck for the Philippine Islands in 1904: so called from Charles A. Conant, financial adviser of the Philippine Commission.—**Dog dollar,** an English name for the lion dollar of Holland (see *dollar*), the chief metallic currency of Maryland in 1701.—**Dollar of Scotland,** a silver coin of Charles II., struck in 1676.—**Globe dollar,** the Spanish-American silver piece of eight, with the device of two globes resting on the waves

Obverse. Reverse.

Globe Dollar.
Two thirds size of original.



between the pillars; it first appeared in 1728.—**Holey dollar,** a Spanish silver dollar from which a small circular piece, called a *dump*, had been struck. It was circulated by order of the government of New South Wales in 1813, the object being to keep the silver coins in the colony. It was also current in Tasmania. [Australia.]—**Independent dollar,** a silver dollar or peso of Chile, coined in 1817.—**Maximilian dollar,** the Mexican dollar or peso

Obverse. Reverse.

Maximilian Dollar.
Two thirds size of original.

of the emperor Maximilian (1864–67).—**Mexican dollar,** the silver dollar or peso coined in Mexico, extensively

Obverse. Reverse.

Mexican Dollar.
Two thirds size of original.

used as a circulating medium in the Far East, and having a present weight of about 417.5 grains, or 377.25 grains of fine silver.—**Morelos dollar,** a silver dollar or peso coined in Mexico in 1812–13 by the republican general Morelos.—**Pillar dollar.** See *pillar.*—**Republican dollar,** the dollar struck in Mexico without the king's head, after 1810.—**Rigsbank dollar,** a silver coin issued by the National Bank of Denmark in 1813, with a nominal value of about 48 cents; also, a silver coin issued by the same bank in 1841, weighing 222.936 grains, 875 fine.—**Ring dollar,** a silver dollar from which a planchet was cut in order to keep the piece in local circulation, as in St. Vincent and the Leeward Islands. See *holey* ★*dollar.*—**Sand dollar,** a Mexican dollar molded in sand from a Spanish dollar, 1808–11.—**Scale dollar,** the Mexican silver dollar with the device of a pair of scales, first struck in 1868–69.—**Sicilian dollar,** a Sicilian silver coin, the *oncia d'argento*, which came into Malta subsequent to the time of the British protectorate in 1797, and had a real value of about 4 shillings sterling.—**Sun dollar,** the Mexican silver dollar or peso coined at Guanajuato, which is preferred by the Chinese of the northern ports of China. Also known as the *Shanghai dollar.*

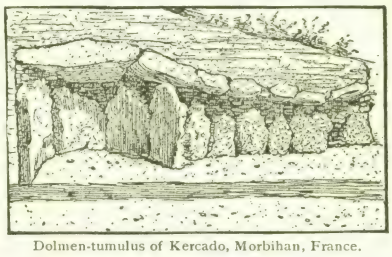
dollar-fish, *n.* 3. A flat, disk-shaped echinoderm, *Echinarachnius parma*, found along the Atlantic coast. Also known as *cake-urchin* and *sand-dollar.*—4. The John-dory, *Zeus australis:* so called from the mark on its side. The fishermen of Roman Catholic countries hold this fish in special respect, as they recognize in a black round spot on its side the mark left by the thumb of St. Peter, when he took the piece of money from its mouth. *Günther*, Study of Fishes, p. 451.

dollar-leaf (dol′är-lēf), *n.* The round-leaved wintergreen, *Pyrola rotundifolia:* so called from the shape and size of the leaf.

dollfish (dol′fish), *n.* A species of butterfly-fishes, *Chætodon humeralis.* [Panama region.]

dolly[2], *n.*—**Dolly catch.** See ★*catch*1.

dolly[3], *n.* 5. A machine for washing pieces of cloth. The pieces are sewn together into an endless band, which is then passed through a detergent liquor and afterward wrung between two heavy rollers.



dolly-car (dol′i-kär), *n.* A small car attached to a cable, which is used for drawing cars up an incline. The dolly-car is placed behind the cars to be drawn up, and, being attached to the cable, pushes the cars up the incline.

dolly-pedal (dol′i-ped″al), *n.* A foot-treadle to hold down the upper or forming die of the forming-tool used in welding up links of hand-made wrought-iron chain.

dolly-tub (dol′i-tub), *n.* 2. A tub in which a dolly is used. See *dolly*3, 4.

Dolly Varden. 3. A large hat with a brim overloaded with flowers, worn at one time by women.

dolmen-tumulus (dol′men-tū″mū-lus), *n.* A dolmen, or cell composed of large stones, covered by a mound of earth. Probably many dolmens

Dolmen-tumulus of Kercado, Morbihan, France.

were originally so covered, but gradually were denuded by tillage of the surface soil and by erosion.

dolomedine (dol-ō-mē′din), *a.* Of or belonging to the araneid genus *Dolomedes.*

dolomite, *n.*—**Bertie dolomite** [*Bertie* township in Ontario], a stage of the New York series of formations represented by magnesian limestones, constituting a final phase in the Silurian of the Appalachian region. The formation is characterized by its remarkable profusion of merostome crustaceans of the genera *Eurypterus, Pterygotus, Eusarcus*, etc., and has commonly been known as the *Eurypterus beds*, corresponding in position to similar fossiliferous beds of Great Britain and the Baltic provinces.—**Gashed dolomite,** one in which there are narrow cavities resembling gashes. *Amer. Jour. Sci.*, April, 1905, p. 291.—**Guelph dolomite,** in *geol.*, a division of the Upper Silurian rocks highly developed in the Province of Ontario and notable for its profusion of fossils. The fauna extends eastward into New York where it is found in dolomites intercalated among the layers of the Lockport limestone. It is also represented in the Silurian dolomites of Wisconsin, Ohio, Indiana, and Iowa.—**Knox dolomite,** a mass of dolomite in Tennessee, the lower 2,000 feet of which are referred to the Upper Cambrian, while the upper part contains typical Beekmantown fossils.—**Little Falls dolomite.** See *Beekmantown* ★*limestone.*—**Mendola dolomite,** a division of the Triassic rocks of the Alps and the Tyrol.—**Namur dolomite,** a division of the Carboniferous limestone in Belgium, lying below the Visé limestone and above the Dinant limestone.—**Plate dolomite,** any dolomite rock which breaks into thin plates; specifically, the middle member of the upper Zechstein Permian formation of Hesse, Germany, consisting of massive or honeycombed plate dolomites, included between the lower and upper gypsum-bearing clay members.—**Portlandian dolomite,** a division of the Jurassic rocks in the Jura Mountains, and equivalent, as a part to a whole, to the Portland sands of the Portland Islands.—**Schlern dolomite,** a division of the Triassic rocks in the southern Alps.

dolomitize (dol′ō-mī-tīz), *v. t.*; pret. and pp. *dolomitized*, ppr. *dolomitizing.* [*dolomite* +

-ize.] To convert (limestone) into dolomite. *Rep. Brit. Ass'n Advancement of Sci.*, 1900, p. 400.

Doloneia (dō-lō-nē'yä), *n.* [Gr. Δολώνεια, < Δόλων, Dolon, < δόλος, deceit: see *dole*[3].] The story of the spy Dolon, which is the main subject of the tenth book of Homer's Iliad. It is supposed by many critics not to be part of the original poem, but a later interpolation.

dolose (dō'lōs), *a.* [L. *dolosus*, < *dolus*, deceit: see *dole*[3].] Deceitful; crafty: involving criminal intent.

dolphin, *n.* **10.** In *lumbering*, a cluster of piles to which a boom is secured. [U. S.]—**11.** Same as *dolphin-fly.*—**Black dolphin.** Same as *collier* ★*plant-louse.*—**Green dolphin,** *Nectarophora pisi.*—**Small dolphin,** the smaller of the two species of dolphin, *Coryphæna equisetis.* See *Coryphena.*

dolus (dō'lus), *n.* [L.: see *dole*[3].] In *civil law*, malicious or criminal intent; fraud; deceit: same as *dole*[3].

Dom. An abbreviation of *Dominion.*

D. O. M. An abbreviation (*a*) of the Latin *Datur omnibus mori,* 'it is given unto all to die'; (*b*) of the Latin *Deo Optimo Maximo,* 'to the best and highest God.'

domagnesic (dō-mag-nē'sik), *a.* [*do*(*minantly*) + *magnesia* + *-ic.*] In *petrog.*, dominantly magnesic; used in the quantitative system (see ★*rock*[1]), to describe divisions of igneous rocks in which magnesia is dominant over ferrous iron within the limits $\frac{MgO}{FeO} < \frac{7}{1} > \frac{5}{3}$.

domain, *n.* **8.** In *math.*: (*a*) A set of numbers when the sums, differences, products, and quotients of any numbers in the set (excluding only the quotients of division by 0) always yield as results numbers belonging to the set. (*b*) The space within which a given function is developable in a series in powers of $z-a$: termed the *domain of the point,* $z=a$.—**9.** In *function-theory*, the region of the z-plane within a circle about a as center with any radius less than the distance from a to the nearest critical point: called the *domain of its center* a. For a power series (that is, a series of ascending positive integral powers, $a_0 + a_1x + a_2x^2 + \ldots$) if there is a frontier value R such that when $|x| < R$ there is absolute convergence but when $|x| > R$ there is divergence, the open region (R) [points within a circle whose center is at O and radius R] is called the *domain of the series.*—**Domain of rationality.** Same as ★*domain,* 8 (*a*).—**Galois domain.** If $f(x)=0$ is an equation in the domain Ω and of the nth degree with distinct roots $a, a_1, \ldots a_{n-1}$, then the domain $\Omega(a, a_1, \ldots, a_{n-1})$, obtained by the adjunction of all its roots to Ω, is called the *Galois domain* of the equation $f(x)=0$. Thus the roots of the cubic $x^3+3x^2-2x-6=0$ are $-3, \pm\sqrt{2}$; hence its Galois domain is $\Omega(1, \sqrt{2})$.

domalkalic (dō-mal-kal'ik), *a.* [*do*(*minantly*) + *alkalic.*] In *petrog.*, dominantly alkalic. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks having alkalis dominant over lime in the salic minerals (normative feldspars and feldspathoids), and other divisions having alkalis dominant over magnesia, ferrous iron, and lime in the femic (normative ferromagnesian) minerals, within the limits $\frac{K_2O' + Na_2O'}{CaO'} < \frac{7}{1} > \frac{5}{3}$ and $\frac{MgO + FeO + CaO''}{K_2O'' + Na_2O''} < \frac{3}{5} > \frac{1}{7}$, respectively. The first are rangs of classes I, II, III; the second rangs of classes IV and V.

domatic (dō-mat'ik), *a.* [Gr. *δωματικός, < δῶμα(τ-), house: see *dome,* *n.*] Of or pertaining to a dome: as, *domatic* cleavage: the *domatic* class of crystals: see ★*clinohedral* and ★*symmetry.*

domatium (dō-mā'ti-um), *n.*; pl. *domatia* (-ä). [NL., < Gr. δωμάτιον, dim. of δῶμα, a house.] A shelter formed on certain tropical plants for the protection of beneficial insects, especially mites and ants. See ★*acarodomatium.*

The acarodomatia are found at the angles of the veins on the back of the leaves and are hollowed out in the tissue of the nerves. The ant-shelters occur in the internodes which are hollow at a part only of their length; the internodes are fusiform, and the *domatia* in the part at the greatest diameter where there are one or two openings which at first are circular, but in the older and woody shoots become elongated and may reach a length of 3 cm.

Jour. Roy. Microsc. Soc., Aug., 1904, p. 427.

domatophobia (dō″ma-tō-fō'bi-ä), *n.* [NL., < Gr. δῶμα(τ-), house, + -φοβία, fear.] A morbid repugnance to, or actual fear of, remaining within the four walls of a room.

dome[1], *n.* **6.** In *geol.*, an anticlinal fold whose axis equals or approximates a point; an anticlinal fold with quaquaversal dip. Domes are most commonly produced by laccoliths, but they may be due to intersecting folds.

It will be too great a digression to discuss here whether the Weald *dome* was breached by a branch of the Rhine running from the area of the channel toward the North Sea, or by the lower Rhine emptying into the Atlantic through the English Channel.

Geog. Jour. (R. G. S.), IX. 537.

Dome volcano. See ★*volcano.*—**Whispering-dome,** a cupola whose surface is such as to produce a very perfect echo, a person at one point hearing what is said even in a low tone at the opposite point. Compare *whispering-gallery,* under *gallery.*

dom. econ. An abbreviation of *domestic economy.*

dome-kiln (dōm'kil), *n.* A form of lime-burning or coke-making retort in which the roof is formed by a spherical arch or dome, as distinguished from the simple shaft-kiln and the ring-kiln.

Domestic piracy, science. See ★*piracy,* ★*science.*

domesticable (dō-mes'ti-ka-bl), *a.* [NL. **domesticabilis*, < ML. *domesticare*, domesticate.] Capable of being domesticated: as, *domesticable* animals.

domesticator (dō-mes'ti-kā-tor), *n.* One who domesticates plants and animals.

Taking the gifts of nature: Man is then a quarryman or miner, a gleaner, a fisherman, a hunter, and later a *domesticator.* *Smithsonian Rep.*, 1895, p. 643.

dome-top (dōm'top), *n.* The topsheet of the steam-dome on a boiler.

domicil, *v. t.* A simplified spelling of *domicile.*

domicile, *n.* **3.** The place at which a bill of exchange is payable.

domicile, *v. t.* **2.** To make payable, as a bill of exchange, at a specified place.

domiciliaris (dom″i-sil-i-ā'ris), *n.*; pl. *domiciliares* (-rēz). [NL., < L. *domicilium*, domicile.] An animal which uses another merely as a domicile, and does not prey upon it or share its food. The most common examples are sponges which attach themselves to, and bore into, shell-fish. [Rare.]

They are, more definitely, *domiciliares,* and excavate their burrows . . . solely for the purpose of a residence or domicile. *Smithsonian Rep.*, 1886, i. 320.

dominance, *n.* **2.** In *biol.*, the visible manifestation by a cross-bred organism and by some of its descendants of one or two mutually antagonistic parental characters to the exclusion of the other.

In each of these cases more or less definite *dominance* of one character has been found.

Bateson and Saunders, Rep. Evol. Com. Roy. Soc., I. 139.

dominant. I. *a.* **3.** Having the crown free to light on all sides because of greater height. See *crown* ★*class.*—**4.** Characterized by or exhibiting dominance. See ★*dominance,* 2.—**Dominant character,** one of the antagonistic or mutually incompatible characters of the parents of a cross-bred organism, that is exhibited or visibly manifested by the cross-bred organism and transmitted to descendants. See ★*inheritance.*—**Dominant estate.** Same as *dominant tenement* (which see, under *dominant*).—**Dominant group.** See *subdominant* ★*group.*—**Dominant harmony, idea.** See ★*harmony,* ★*idea.*

II. *n.* **2.** In *biol.*, when the cross-bred offspring of parents with antagonistic or mutually exclusive characters visibly exhibits a character of one parent, while it does not visibly exhibit but is able to transmit to descendants the antagonistic character of the other parent, then the character (*a*) which is manifested, and the cross-bred organism (*b*) which exhibits it, and (*c*) those of its descendants which exhibit it, and (*d*) the parental character, and (*e*) the parent that exhibits it, are all called *dominants.* On the other hand, the parental character which is not visibly manifested by the cross-bred organism, but is transmitted to and visibly manifested by some of its descendants and their descendants, is called a *recessive,* as are also the organisms that exhibit it. See ★*inheritance.*

3. The greatest of a set of numbers without regard to sign.—**4.** In *petrog.*, in the quantitative classification (see ★*rock*[1]), a factor which dominates over another between the ratios $\frac{7}{1}$ and $\frac{5}{3}$.—**Extracted dominant,** in *biol.*, a dominant of pure blood; one that does not exhibit nor transmit the corresponding recessive character.—**Under dominant,** in *music,* the fifth below the key-note, that is, the same as *subdominant.* See ★*undertone,* 4, and *under* ★*scale.*—**Upper dominant,** in *music,* same as *dominant,* when it is to be distinguished from the *under dominant;* also, *over dominant.*

domine (dō'mi-nā), *n.* [Sp., a teacher of Latin, = E. *domine, dominie.*] A name applied to a fish, the black escolar, *Epinnula magistralis,* in the West Indies.

doming (dōm'ing), *n.* [*dome, v.,* + *-ing*[1].] Producing an anticlinal fold whose axis is a point and whose sides dip in all directions: the reverse of ★*basining* (which see).

They sometimes disturb the prevailing dip of the sediments and cause local *doming,* as on the divides to the southeast and southwest of Bald Mountain.

Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 38.

Dominique (dom-i-nēk'), *n.* Name of a West Indian island: applied to an old American breed of fowls having barred plumage resembling that of the Plymouth Rock.

Domino loo. See ★*loo*[2].

domiric (dō-mir'ik), *a.* [*do*(*minantly*) + *mir* (< *m*(*agnesium*) + *ir*(*on*)) + *-ic.*] In *petrog.*, dominantly miric. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks having magnesia and ferrous iron dominant over lime in the femic (normative ferromagnesian) minerals, within the limits $\frac{MgO + FeO}{CaO''} < \frac{7}{1} > \frac{5}{3}$. Sections of rang in classes IV and V.

domirlic (dō-mėr'lik), *a.* [*do*(*minantly*) + *mirl* (< *m*(*agnesium*) + *ir*(*on*) + *l*(*ime*)) + *-ic.*] In *petrog.*, dominantly mirlic. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks in which magnesia, ferrous oxid, and lime are dominant over potash and soda in the femic (normative ferromagnesian) minerals, within the limits $\frac{MgO + FeO + CaO''}{K_2O'' + Na_2O''} < \frac{7}{1} > \frac{5}{3}$. Rangs in classes IV and V.

domitic[2] (dō-mit'ik), *a.* [*do*(*minantly*) + *mit* (< *m*(*agnetite*) + *i*(*lmenite*) + *t*(*itanite*)) + *-ic.*] In *petrog.*, dominantly mitic. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks in which mitic minerals (normative magnetite, hematite, ilmenite, titanite, etc.) are dominant over polic minerals (normative pyroxene, olivin, akermanite), within the limits $\frac{PO}{M} < \frac{3}{8} > \frac{1}{4}$. Order 4 in classes IV and V.

domoid (dōm'oid), *a.* [*dome* + *-oid.*] Somewhat dome-shaped.

domolic (dō-mol'ik), *a.* [*dom*(*inantly*) + *ol*(*ivin*) + *-ic.*] In *petrog.*, dominantly olic. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks in which normative olivin and akermanite are dominant over normative pyroxene, within the limits $\frac{P}{O} < \frac{3}{8} > \frac{1}{4}$. Sections of orders in classes IV and V.

Dom. Proc. An abbreviation of the Latin *Domus procerum,* 'house of peers,' or 'house of lords,' the upper branch of the British parliament.

don[3] (don), *n.* [A dial. variant of *dan*[2].] In *sea-fishing*, a buoy used to mark a fishing-ground.

When productive ground is discovered a "*don,*" or buoy, is placed in the sea, with a red or black flag by day and a white globe light close to the surface at night.

Sci. Amer. Sup., Sept. 26, 1903, p. 23182.

donaciform (dō-nas'i-fôrm), *a.* [NL., *Donax* (*Donac-*) + L. *forma*, form.] Having the form of the pelecypod genus, *Donax.*

donarium (dō-nā'ri-um), *n.* [NL., appar. in allusion to L. *donarium*, a votive gift: see *donary.*] A supposed new chemical element, announced by Bergmann in 1851, shown afterward to be thorium.

doncella[2] (don-sel'ä), *n.* [Porto Rican Sp.: see *damsel.*] Either of two trees of the genus *Byrsonima* of the family *Malpighaceæ, B. spicata* and *B. lucida,* especially the former. They yield hard, useful woods. See *surette.*

Donders' law. See ★*law*[1].

Dondia (don'di-ä), *n.* [NL. (Adanson, 1763), named in honor of Giacomo di *Dondi* (1298–1359), a physician and botanist of Venice.] A genus of dicotyledonous plants of the family *Chenopodiaceæ.* See *Suæda.*

donga (dong'gä), *n.* [S. African.] In South Africa, a channel formed by the action of water; a ravine; a gully.

dongola (don'gō-lä), *n.* [Appar. named from *Dongola* in Nubia, N. E. Africa.] A general term for leather made from goatskins or sheepskins with either a bright or a dull finish.—**Dongola process, race.** See ★*process,* ★*race.*

dongon (dông-ōn'), *n.* [Also *dungon;* < Bisayan *dongon.*] In the Philippine Islands, a tall tree, *Tarrietia sylvatica,* of the family *Sterculiaceæ,* with keeled fruit. It yields logs 50 feet long and 20 inches square, which are used in the construction of buildings and bridges and as keels for vessels.

doni[2] (dō'ni), *n.* In Guam, a name of several species of *Capsicum,* especially of varieties of *Capsicum annuum* and *C. frutescens.*

donium (dō'ni-um), *n.* [NL., appar. < L. *donum,* a gift: see *donate.*] A supposed new chemical element, announced by Richardson in 1836, but afterward shown to be beryllium.

donkey, *n.* **3.** In *mech.*, a subsidiary apparatus for carrying a weight or load, or coming into action to steady and support a primary element.—**4.** A driving-frame or truck acting as a tractor on rails, to pull or haul a weight or load.

The turntable is 70 ft. long and is operated by a 10-hp, direct-current motor of the street railway type geared to an independent traction wheel, the driving combination being supported in a pivoted frame, or "*donkey*," which rests with all its weight upon the turntable track, even when the table is tipped by a locomotive.
Elect. World and Engin., Feb. 21, 1903, p. 333.

Bull donkey, in *lumbering*, a large donkey-engine which, by drum and cable, drags logs from the place where they are yarded.—**Road donkey,** a donkey-engine, mounted on a heavy sled, which drags logs along a skid-road by winding a cable on a drum. It has a second drum for the haul-back.—**Spool donkey,** a donkey-engine equipped with a spool or capstan, instead of a drum, for winding cable.—**Yarding donkey,** a donkey-engine, mounted upon a heavy sled, used in yarding logs by drum and cable.

donkey-boiler (dung′ki-boi″lėr), *n.* 1. A small boiler, usually upright, employed when only a small power is required.—2. *Naut.*, a small boiler which furnishes steam when there are no fires in the main boilers.

donkey-drop (dung′ki-drop), *n.* In *cricket*, a ball bowled very slowly, which seems easy to hit. [Slang.]

donkey-party (dung′ki-pär-ti), *n.* An entertainment in which the chief amusement is a game in which the players attempt to pin, blindfolded, a paper tail, in the right place, upon the picture of a tailless donkey.

donkey's-eye (dung′kiz-ī), *n.* Same as *horse-eye*, a sea-bean, *Muscuna urens*.

donnée (don-nā′), *n.* [F., a thing given, a condition, datum; pp. fem. of *donner*, give.] The motif or fundamental idea of a literary or dramatic composition.

Another story, a very good story, . . . arrests attention for a reason irrelevant to its goodness, and that is the resemblance of its "*donnée*" to Mr. Kipling's "His Private Honor." *N. Y. Times, Sup.*, July 30, 1904.

Donop's attack. See ★*attack*.

donzella (don-zel′ä), *n.* [It.] A damsel; a young lady: as, a 'beautiful *donzella*.' *Carlyle*.

doodle-bug (dö′dl-bug), *n.* 1. The larva of any cicindelid beetle. [Southern U. S.]—2. The larva of certain species of the neuropterous genus *Myrmeleon*, which build pits in the sand for the capture of ants and other insects. Called also *ant-lion*.

doog (dög), *n.* [E. African (Somali).] The native name of a tabanid fly, *Pangonia tricolor*, common in Somaliland where it swarms on camels and other domestic animals, constantly drawing blood. *Proc. Zool. Soc. London*, 1900, I. 9.

doom, *n.*—**To false a doom**†, in *Scots law*: (*b*) To bring an action to set aside a decree.

doom-ring (döm′ring), *n.* A ring of stones, within which the primitive Norse courts of justice were held. *N. E. D.*

door, *n.*—**Charging door,** the door through which the charge is introduced into a furnace or cupola. In a reverberatory furnace the charging door is at one side; in a blast-furnace or cupola, it is near the top, on a level with the charging platform, and the fuel, as well as the ore or metal to be melted, is introduced through it.—**Dutch door,** a door divided in two horizontally, so that one half may be open while the other is closed.—**The open door,** commercial intercourse and opportunities for all nations on the same terms: a very modern phrase applied particularly to foreign trade with China when there was danger that the Chinese government was about to grant to some of the powers exclusive control of certain ports and sections of the empire; hence, the '*open door* policy' advocated by Great Britain, the United States, and Japan.—**Underwriters' door,** a door so made as to conform to certain requirements of the fire-insurance companies: as, a wooden door covered on both sides and all edges with tin-plate carefully soldered. *Underwriters' floor* and other similar terms are in use.—**Venetian door,** a doorspace fitted with a door much smaller than itself, the place reserved on either side (and usually above) being filled with glass.

door-cam (dōr′kam), *n.* A device for retaining the window in a carriage-door at any height, or for preventing it from rattling.

door-chain (dōr′chān), *n.* A short chain used in fastening a door, usually so that it can be opened only a few inches.

door-check (dōr′chek), *n.* A combined spring and pneumatic device for controlling the closing of a door, especially a car-door. The door when left open is automatically closed by the spring, the movement being controlled by a piston which moves in a cylinder filled with compressed air: the air, first compressed by the movement of the door when opened, slowly escaping through a small opening, allows the piston to move, and, through suitable connections, permits the spring to close the door gently and without jar or noise. The movement of the piston is controlled by valves that may be set at any pressure required.

door-fastener (dōr′fȧs″nėr), *n.* Any appliance for fastening a door; specifically, a fixture attached to a door to prevent it from being opened beyond the length of a short chain. When the end of the chain is placed in a slot in the fixture it cannot be drawn out until the door is closed. Often called *door-chain*.

door-grass (dōr′gras), *n.* Same as *doorweed*.

door-handle (dōr′han″dl), *n.* Same as *door-knob*.

door-holder (dōr′hōl″dėr), *n.* A spring-catch placed on the floor or wall behind a car-door and designed to catch the door when it is opened and hold it open.

door-key (dōr′kē), *n.* A key for locking and unlocking a door.

door-man (dōr′man), *n.*; pl. *door-men* (-men). An officer or attendant stationed at a door to guard it, maintain order, etc.; a doorkeeper.

door-money (dōr′mun″i), *n.* The money taken at the door or entrance to any place of entertainment where an entrance-fee is charged. Compare *gate-money*.

doornboom (dōrn′bōm), *n.* [D. *doornboom*, 'thorntree.'] In South Africa, a thorny mimosa, *Acacia horrida*, growing as a shrub or small tree, very common along the course of the Karoo rivers, and very often used for hedges. The leaves and pods are eaten by goats and sheep in times of scarcity. Like many other mimosas this species is rich in tannin and yields a gum somewhat like that of gum arabic, but of an amber color. The bark is much used for tanning in South Africa. See *karoo thorn*, under *thorn*1.

door-roller (dōr′rō″lėr), *n.* A contrivance for making a sliding door run easily; generally a wheel which runs on a rail at the top or the bottom of the door. There are also patented antifriction rollers.

door-stop, *n.* 3. A strip of carriage-lace, or metal, used to prevent a carriage-door from opening beyond a fixed point.

door-track (dōr′trak), *n.* A rail secured to a plank or joist to receive the rollers of a sliding door.

door-valve (dōr′valv), *n.* A flat valve hinged at one edge and opening to allow passage of fluid by pressure from below, as a trap-door is lifted. Called also a *flap-* or *clack-valve*. Two door-valves, back to back, form a *butterfly-valve*.

doorwa (dōr′wä), *n.* [Skt. *dūrvā*, whence Pali *dubbā*, Hind. *dūb*, E. *doob*.] Same as *doob*.

dop3 (dop), *n.* [Cape D. *dop*, a tin cup in which vineyard workers receive, several times a day, their rations of wine; lit., a shell: see *dop*2.] Cape brandy of a peculiarly fiery type. Also called *cape smoke*.

The Naval Brigade . . . went for the bottles like a cartload of bricks. Blessed if they weren't *Dop!* "Never mind," says the Naval Brigade, "if the quality ain't up to Admiralty pattern, we'll have to issue a double ration"—and he did—so help me!
J. Ralph, in War's Brighter Side, p. 170.

dope, *n.* 3. In the manufacture of dynamite, to be used as an explosive agent, the liquid nitroglycerin, which is the most important ingredient, is absorbed by a solid material in fine powder; such absorbent is called the *dope*, and it may be inert as regards explosion, or active—in the latter case simply combustible, or itself explosive. 4. Opium, especially the thick treacle-like preparation used in opium-smoking. [Slang.]—5. Any drug, such as opium, laudanum, morphine, cocaïne, hydrate of chloral, hashish, etc., which has the property of inducing sleep or of stupefying; a narcotic. [Slang.]—6. A person under the influence of, or addicted to the use of, some dope. [Slang.]

dope (dōp), *v.*; pret. and pp. *doped*, ppr. *doping*. I. *trans.* To drug; stupefy with drugs, such as 'knock-out drops' (hydrate of chloral), or the like: as, to *dope* a race-horse. [Slang.]

II. *intrans.* To indulge habitually in the use of opium or other drugs either for the pleasurable sensations produced or as anesthetics. [Slang.]

dope-book (dōp′bůk), *n.* A miscellaneous collection of racing information. [Racing slang.]

dope-fiend (dōp′fēnd), *n.* A habitual user of drugs, such as opium or cocaïne. [Slang.]

dope-sheet (dōp′shēt), *n.* A list of race-horses, giving the record of their performances in previous races. [Racing slang.]

dopey (dō′pi), *a.* See ★*dopy*.

dopolic (dō-pol′ik), *a.* [*do*(*minantly*) + *pol* (< *p*(*yroxene*) + *ol*(*ivine*)) + *-ic*.] In *petrog.*, dominantly polic. Used in the quantitative classification (see ★*rock*1), to describe divisions of igneous rocks in which polic minerals (normative pyroxene, olivin, akermanite) are dominant over mitic minerals (magnetite, ilmenite, titanite) within the limits $\frac{PO}{M} < \frac{7}{1} > \frac{5}{3}$.

dopotassic (dō-po-tas′ik), *a.* [*do*(*minantly*) + *potassic*.] In *petrog.*, dominantly potassic. Used in the quantitative classification (see ★*rock*1), to describe divisions of igneous rocks in which potash is dominant over soda in the salic minerals (normative feldspars and feldspathoids) within the limits $\frac{K_2O}{Na_2O} < \frac{7}{1} > \frac{5}{3}$.

doppel-flöte (dop″l-flē′te), *n.* [G., 'double flute.'] In *organ-building*, a stop of the flute class, the pipes of which have two mouths, giving a peculiarly sonorous tone.

doppio (dop′piō), **doppia** (dop′piä), *a.* [It., masc. and fem., < L. *duplus*, *dupla*, double: see *double*.] In *music*, double: as *doppio movimento*, *doppio tempo*, double movement, double time (twice as fast); *doppio valore*, double value (twice as slow), *pedale doppio*, with two parts for the pedals; *lira doppia*, a double or bass lyre: and so for other instruments.

doppione (dop-piō′ne), *n.* [It.: see *doubloon*.] 1. A gold coin of Louis XII. of France, during his occupation of the Milanese (1500–12).—2. A gold coin of 10 scudi, struck by the Duke of Savoy in 1641, during the siege of Coni.

Dopplerization (dop″lėr-i-zā′shon), *n.* The application of Doppler's principle that from a source of waves, approaching or approached, the waves reach the receiver in greater number than when the source and receiver are relatively at rest, and vice versa. See *Doppler's* ★*principle*.

If the point-source is in motion, the pan-potential requires *Dopplerisation* as well as the ordinary potential.
Nature, Jan. 1, 1903, p. 203.

Doppler's effect, principle. See ★*effect*, ★*principle*.

dopy (dō′pi), *a.* [Also *dopey*; < *dope* + *y*1.] Stupid, as if under the influence of some drug; dull; heavy. Also *dopey*. [Slang.]

The patients are said to be "*dopey*"; they are markedly prostrated, indifferent to their surroundings, and want only to be left undisturbed.
Buck, Med. Handbook, VI. 686.

dopyric (dō-pī′rik), *a.* [*do*(*minantly*) + *pyr* (< *pyr*(*oxene*)) + *-ic*.] In *petrog.*, dominantly pyric. Used in the quantitative classification (see ★*rock*1), to describe divisions of igneous rocks in which normative pyroxene is dominant over normative olivin and akermanite, within the limits $\frac{P}{O} < \frac{7}{1} > \frac{5}{3}$.

doquaric (dō-quâ′rik), *a.* [*do*(*minantly*) + *quaric* (< *quar*(*tz*) + *-ic*).] In *petrog.*, dominantly quaric. Used in the quantitative classification (see ★*rock*1), to describe divisions of igneous rocks in which normative quartz is dominant over normative feldspar, within the limits $\frac{Q}{F} < \frac{7}{1} > \frac{5}{3}$. Orders of classes I, II, III.

dor3 (dôr), *n.* [Gr. *δόρυ*, a shaft, a spear: see *tree*.] In the nomenclature of the spicular elements of sponges, a monaxial lance-shaped or curved rod, one end of which is sharply pointed while the other has a two- or three-edged blade.

Dor. An abbreviation of *Doric*.

dorab (dō′rab), *n.* A fish, *Chirocentrus dorab*, of the family *Chirocentridæ*, which ranges from the Red Sea to the Malay Archipelago.

doradilla (dō-rä-dēl′yä), *n.* [Sp., dim. of *dorado*, gilded.] 1. In Spain, the rustyback, or stone-fern, *Ceterach Ceterach*, formerly considered a valuable remedy for diseases of the spleen. See ★*Ceterach*, 2.—2. In Mexico, a name of several species of *Selaginella*, also called *flor de piedra*, or stone-flower, which grow on the bare, stony sides of cañons. The fronds of these plants roll up when dry so as to form a ball, and remain dormant until rain falls. The dried plants are offered for sale in the markets of San Luis Potosí and other Mexican cities, and are used as remedies for diseases of the liver and for other maladies. See *resurrection-plant* (*b*).

Doratonotus (dor″a-tō-nō′tus), *n.* [NL., < Gr. *δόρατος*, gen. of *δόρυ*, spear, + *νῶτος*, back.] A genus of small bright green labroid fishes found in the West Indies. *D. megalepis* is the common species.

Dorcas society (dôr′kas sō-sī′e-ti). A society of women of a church whose work it is to provide clothing for the poor: so called in allusion to Dorcas, a disciple at Joppa who was "full of good works and almsdeeds which she did" (Acts ix. 36), including the making of "coats and garments" (ix. 39).

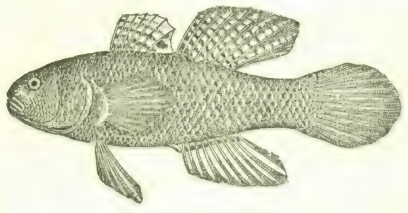
dorcastry (dôr′kas-tri), *n.*; pl. *dorcastries* (-triz). [Irreg. < *Dorcas* + *-t-ry*.] Same as ★*Dorcas society*.

Dordonian (dôr-dō′ni-an), *n.* [F. *Dordogne*, a river (a conflux of the rivers Dor and Dogne) and a department of southwest France.] In *geol.*, a division or substage of the uppermost Cretaceous in France.

Doridiidæ (dō-ri-dī′i-dē), *n. pl.* [NL., < *Doridium* + *-idæ*.] A family of tectibranchiate gastropods, having the shell completely internal, the mantle with 2 posterior lobes and a caudal filament, and the epipodia reflected. It contains the single genus *Doridium*.

doridioid (dō-rid'i-oid), *a.* Of or pertaining to the *Doridioidea*.

Doridioidea (dō-rid-i-oid'ē-ä), *n. pl.* [NL., < *Doridium* + *-oidea*.] A group of nudibranchiate gastropods. The liver is unbranched; the anus median and posterior, generally dorsal, and surrounded by branched appendages which are cerata or gills; and the mantle contains spicules. The group includes the families *Polyceridæ*, *Dirididæ*, *Phyllidiidæ*, *Doridopsidæ*, and *Corambidæ*.



Doridium (dō-rid'i-um), *n.* [NL.; formation uncertain; appar. dim. of Gr. *δόρυ*, tree, shaft, spear.] The typical genus of the family *Doridiidæ*. *Meckel*, 1809.

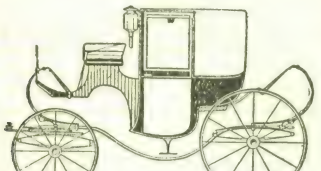
Dorm pennies. See ★*penny*.

dormant, *a.* **5.** In *bot.*, not active or growing. —**Dormant buds, dormant eyes,** potential buds; buds which do not shoot unless specially stimulated.—**Dormant mine, scale.** See ★*mine*2, ★*scale*2.—**Dormant state,** the inactive state of a plant or organ, as in winter or a protracted dry season.

dormeuse (dôr-mēz'), *n.* [F., fem. of *dormeur*, sleeper, < *dormir*, sleep.] A coach designed to convey invalids. It had a curtained coach-top and was fitted with a cot so arranged that the passenger could either sit up or recline.

Dormitator (dôr-mi-tā'tor), *n.* [NL., < L. *dormitator*, sleeper.] A genus of gobies found

Dormitator maculatus.
(From Bulletin 47, U. S. Nat. Museum.)



in the streams of the West Indies and Mexico, characterized by the robust body and small scales. *D. maculatus*, the common species, has been found as far north as the Carolinas.

dormy (dôr'mi), *a.* [*dorm* + *-y*1.] In *golf*, noting the condition of a player when he is as many holes ahead of his opponent as there remain holes to be played.

dorsal, *a.* **3.** In *phonol.*, pronounced with the back or middle upper surface of the tongue raised to the palate.—**4.** In *bot.*, relating to the back of an organ. See *back*1, 3 (*h*).—**Dorsal canal, cup, eye,** etc. See ★*canal*, etc.

dorsalis (dôr-sā'lis), *n.*; pl. *dorsales* (-lēz). [NL.: see *dorsal*.] A blood-vessel or nerve which supplies the dorsum of any part: as, *dorsalis linguæ*, an artery in the dorsum of the tongue.

d'Orsay (dor-sā'), *n.* [Named after Count *d'Orsay* (?).] A coupé or brougham, suspended

Modern d'Orsay.

upon four elliptic and four C-springs, and formerly without a driver's seat, the horses being guided by postilions.

D'Orsay bit. See ★*bit*1.

dorse1, *n.* **3.** The back of a book or of a folded document.

dorsibranch (dôr'si-brangk), *n.* An animal having gills upon the back, as certain annelids.

dorsicolous (dôr-sik'ō-lus), *a.* [L. *dorsum*, back, + *colere*, inhabit.] Inhabiting the back of another organism. [Rare.]

dorsiferous, *a.* **2.** In *bot.*, borne on the back, as the sori of most ferns.

dorsiflex (dôr'si-fleks), *v. i.* [L. *dorsum*, back, + *flexus*, pp. of *flectere*, bend.] To bend toward the dorsum: noting movement of the foot. *Buck*, Med. Handbook, IV. 223.

dorsiflexion (dôr-si-flek'shon), *n.* [L. *dorsum*, back, + *flexio*(*n-*), bending.] Movement toward the dorsum, as in approximation of the toes to the anterior surface of the leg. *Philos. Trans. Roy. Soc.* (London), ser. B., 1893, p. 48.

dorso-anterior (dôr″sō-an-tē'ri-or), *a.* Having the back directed anteriorly: noting the position of a child during birth, in relation to the mother.

dorsocaudad (dôr-sō-kâ'dad), *adv.* On the dorsal surface and the anal half of the body.

There is a pair of well-developed, brownish-colored setæ arising from caudal margin, and extending *dorsocaudad*, as in pupa-case.
U. S. Dept. Agr., Div. Entom., Techn. Ser. 8, 1900, p. 39.

dorsocentral (dôr-sō-sen'tral), *a.* and *n.* [L. *dorsum*, back, + *centrum*, center, + *-al*1.] **I.** *a.* Being toward the back and central.

II. *n.* The undermost plate in the calyx of the *Crinoidea*, usually obscured in the adult condition of stalked forms, but exposed in the stalkless genus *Uintacrinus*, and seen also in the larval stages of the recent *Antedon:* by some authors regarded as the topmost segment of the stalk. Also termed *centrodorsal*.

dorsocephalic (dôr″sō-se-fal'ik), *a.* Relating to the back and head collectively; situated on the back, or dorsal region, near the head.

dorsonasal (dôr-sō-nā'zal), *a.* Relating to the bridge of the nose.

dorsonuchal (dôr-sō-nū'kal), *a.* Relating to the back and the neck.

dorso-occipital (dôr″sō-ok-sip'i-tal), *a.* Relating to the back of the head and the body.

dorsoposteriad (dôr″sō-pos-tē'ri-ad), *adv.* On the back and behind.

dorsoposterior (dôr″sō-pos-tē'ri-or), *a.* [L. *dorsum*, back, + *posterior*, posterior.] In *obstet.*, descriptive of the position of the child during birth, when its back is directed toward the back of the mother.

dorsoradial (dôr-sō-rā'di-al), *a.* [L. *dorsum*, back, + E. *radial*.] Relating to the radial (outer) side of the back of the forearm, wrist, hand, or fingers.

dorsoscapular (dôr-sō-skap'ū-lär), *a.* [L. *dorsum*, back, + *scapula*, scapula.] Relating to the posterior surface of the scapula.

dorso-ulnar (dôr-sō-ul'när), *a.* Relating to the ulnar (inner) side of the back of the forearm, wrist, hand, or fingers.

dorsoventrad (dôr-sō-ven'trad), *adv.* From the back toward the ventral side.

dorsoventrality (dôr″sō-ven-tral'i-ti), *n.* The condition or quality of being dorsoventral.

dorsum, *n.*, **2.** (*b*) In the ammonite cephalopods, the inner or umbilical margin of the conch.—**4.** In *bot.*: (*a*) Same as *back*1, 3 (*h*). (*b*) The convex side of the girdle of a diatom.

dory1, *n.*—**Bastard dory.** (*a*) A fish, *Antigonia capros*, widely distributed in both the Atlantic and the Pacific oceans. (*b*) An Australian fish, *Zeus australis*, of the family *Zeidæ*, the Australasian representative of *Zeus faber*, the European 'John-dory.' [New Zealand.] (*c*) A broad-bodied, rough-scaled, bass-like fish, *Histiopterus recurvirostris*.

Dorycrinus (do-ri-krī'nus), *n.* [Gr. *δόρυ*, a tree, + *κρίνον*, a lily (see *crinoid*).] A genus of camerate *Crinoidea* from the Devonian and Carboniferous rocks having a corrugated calyx, thick calyx plates, and strongly elevated tegmen.

Doryichthys (dō-ri-ik'this), *n.* [NL., < *δόρυ*, spear, + *ἰχθύς*, fish.] A genus of pipe-fishes, of the family *Syngnathidæ*, found mainly in the Pacific. They sometimes ascend rivers.

dorylid (dor'i-lid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Dorylidæ*.

II. *a.* Of or belonging to the *Dorylidæ*.

dorylophilous (dō-ri-lof'i-lus), *a.* [NL. *Dorylus* + Gr. *φιλεῖν*, love.] Fond of the *Dorylidæ:* said of the guest-insects which inhabit the nests of ants of that family.

There are guests of the "indifferent type," e.g. Myrmedonia, which retain more or less of the form of their non-*dorylophilous* relatives, and are connected by incipient and half-way transformations with one or other of the three preceding types.
Jour. Roy. Micros. Soc., April, 1903, p. 173.

doryphory (dō-rif'o-ri), *n.* [Gr. *δορυφορία*, a guard, < *δορυφόρος*, one of a guard, lit. a spearman, spear-bearer, < *δόρυ*, spear, + *φέρειν*, bear.] In *astrol.*, a guard of planets attending the sun and moon.

Dorypterus (dō-rip'te-rus), *n.* [NL., < Gr. *δόρυ*, a shaft, a tree, + *πτερόν*, wing (fin).] A scaleless ganoid fish from the Permian rocks of Germany, having an unossified skeleton and a very high dorsal fin.

dos (dōs), *n.* [L. *dos* (*dōt-*), dower: see *dower*, *dotal*.] In *civil law:* (*a*) Property brought to a husband by his wife, upon marriage. See *dotal* ★*property*. (*b*) A common-law dower. See *dower*2, 2.

dosalane (dō-sa-lān'), *n.* [*do*(*minantly*) + *sal* (< *s*(*ilica*) + *al*(*umina*)) + *-ane*, the termination of the names of classes.] In *petrog.*, the name of the second class of igneous rocks in the quantitative classification. (See ★*rock*.) Rocks of this class have a preponderance of salic minerals (normative quartz, feldspars, or feldspathoids) over femic (normative ferromagnesian) minerals within the limits $\frac{sal}{fem} < \frac{7}{1} > \frac{9}{5}$. They include many granites, diorites, gabbros, syenites, and nephelite-syenites, with their aphanitic equivalents.

dosalic (dō-sal'ik), *a.* [*do*(*minantly*) + *sal* (< *s*(*ilica*) + *al*(*umina*)) + *-ic*.] In *petrog.*, dominantly salic. Used in the quantitative classification (see ★*rock*), to describe that division of igneous rocks in which the salic minerals (normative quartz, feldspars, feldspathoids) are dominant over the femic (normative ferromagnesian) minerals within the limits $\frac{sal}{fem} < \frac{7}{1} > \frac{9}{5}$. This is class II, dosalane.

dose, *n.*—**Fractional doses,** doses of medicine which are below the normal amount but are given at shorter intervals than are customary.

dose, *v. t.* **4.** To divide into proper quantities for a dose; calculate the amount of (a drug) that should be prescribed for a dose.

In other words, we cannot exactly *dose* the application. Great as is the difficulty in *dosing* an X-ray exposure, it is vastly greater when we undertake to utilize the radio-active substances that at present are furnished commercially. *Med. Record*, March 7, 1903, p. 365.

dosimetric (dō-si-met'rik), *a.* [*dosimetr-y* + *-ic*.] Of or pertaining to dosimetry.

dosimetrician (dō″si-mē-trish'an), *n.* [*dosimetric* + *-ian*.] One who practises dosimetry.

For, as we have seen, the vulgar, called upon to choose between the mattoid and the man of genius, never hesitate to sacrifice the latter. Even at the present day, many practitioners who take the *dosimetricians* seriously, laugh at homœopathy.
C. Lombroso (trans.), The Man of Genius, p. 221.

dosimetrist (dō-sim'e-trist), *n.* [*dosimetr-y* + *-ist*.] Same as ★*dosimetrician*.

dosimetry (dō-sim'e-tri), *n.* [Gr. *δόσις*, dose, + *-μετρία*, < *μέτρον*, a measure.] **1.** The accurate measurement of the doses of medicines. —**2.** A system of therapeutics in which treatment is directed chiefly toward the symptoms and consists in the administration of alkaloids in the form of granules at definite intervals, each granule containing a single dose of the remedy of proper amount for administration at the prescribed interval.

dosodic (dō-sō'dik), *a.* [*do* (*minantly*) + *sodic*.] In *petrog.*, in the quantitative system of classification (see ★*rock*1), dominantly sodic: said of divisions of rock magmas in which the ratio of the soda to the potash is greater than 5 to 3 and less than 7 to 1.

dosootee (dō-sō'tē), *n.* [Also *dosooty;* < Hind. *dosūtī*, *dusūtī* (also *dosūtā*), < *do*, *du*, two, + *sūt*, a thread (see *sutra*, *sew*1).] In India, a kind of cheap cotton cloth woven with threads doubled. *Yule*.

dossier (dos-iā'), *n.* [F., < *dos*, back.] A bundle of writings or documents relating to some one matter or subject, inclosed in a wrapper and briefed on the back; the 'papers in the case.'—**The secret dossier,** certain documents which in the trial of Captain Alfred Dreyfus, for treason, in France in 1894, were illegally and secretly presented as evidence against him. These documents were said to have been shown to the jury at a time when the court was not in session, and largely upon the strength of this evidence Dreyfus was convicted.

dot1, *n.* **1.** (*f*). In *bot.*: (1) One of the small, usually circular and pellucid oil receptacles in certain leaves, as of *Hypericum*. (2) A pit in a cell-wall.

2. In *projective geom.*, one of the system of *n* coplanar points which determine a polystigm.

In each *dot* intersect (n–1) connectors, going through the remaining (n–1) *dots*.
Merriman and Woodward, Higher Mathematics, p. 75.

Double dot, in *musical notation*, see *dot*1, 1 (*c*) (1).—**On the dot,** at the precise moment; with punctuality and regularity: as, to begin work *on the dot*.

dotted (dot'ed), *p. a.* **1.** Marked with a dot or dots; spotted: as, a *dotted* pattern, the *dotted* i.—**2.** Consisting of dots, as, a *dotted* line.—**Dotted bar.** See ★*bar*1.

Dotal property. See ★*property*.

dotational (dō-tā'shon-al), *a.* [*dotation* + *-al*1.] Having the nature of a gift for the good of others; altruistic. [Rare.]

Natural selection thus becomes altruistic or *dotational*. *J. A. Ryder*, Biol. Lectures, 1895, p. 36.

dote3 (dōt), *n.* Decay or rot in timber. [Lumbermen's term.]

dothideaceous (dō-thid-ē-ā'shius), *a.* Belonging to the *Dothideaceæ*, a family of fungi.

Dothideales (dō-thid-ē-ā'lēz), *n. pl.* [NL., < *Dothidea* + *-ales*.] An order of pyrenomycetous fungi, containing the single family *Dothideaceæ*, and having the same general characters. See *Dothideaceæ*.

dotilic (dō-til′ik), *a.* [*do(minantly)* + *til* (< *t(itanite)* + *il(menite)*) + *-ic.*] In *petrog.*, dominantly tilic. Used in the quantitative classification (see ★*rock*[1]), to describe divisions of igneous rocks in which tilic minerals (normative titanite, ilmenite) are dominant over hemic minerals (normative magnetite, hematite), within the limits $\frac{H}{T} < \frac{2}{3} > \frac{1}{2}$.

dotriacontane (dot-ri-ạ-kon′tān), *n.* Same as ★*dotricontane*.

dotricontane (dot-ri-kon′tān), *n.* A colorless crystalline hydrocarbon, $C_{32}H_{66}$, of the methane series, prepared by the action of sodium amalgam on cetyliodide and contained in petroleum. It melts at 70.5° C., and boils at 310° C. under 15 millimeters pressure: also called *dotriacontane* and *dicetyl*.

dotter, *n.* 2. In naval use, an apparatus used to train gun-pointers to aim accurately at a target. The apparatus carries a miniature target close to the muzzle of the gun. The target is given a vertical oscillating motion to imitate the effect of the rolling of a vessel at sea; the pointer follows the motion of the target with his gun by means of the gun-sight, and when he judges he is aiming at the center of the target he presses a firing-key as he would in actually firing the gun. The electric apparatus worked by the firing-key makes a dot at the point on the target at which he was actually aiming when he pressed the firing-key.

dotting-wheel (dot′ing-hwēl), *n.* A dotting-pen or tracing-wheel (which see).

dotty[1] (dot′i), *a.* [*dot*[1] + *-y*[1].] Having dots; covered or characterized by dots: as, a low, *dotty* underwood. *R. L. Stevenson.*

dotty[2] (dot′i), *a.* [Dial. var. of *doty.*] 1. Of unsteady gait; feeble and tottering, as from stiffness or lameness: as, to be a little *dotty* on one's feet.—2. Feeble-minded; silly. [Colloq.]

dot-work (dot′wėrk), *n.* Dot-painting. See ★*pointillism*.

douanier (dwän-yā′), *n.* [F., < *douane*, custom-house: see *douane*.] A custom-house officer.

double. I. *a.*—**Double algebra.** (*c*) An algebra of coplanar vectors. See the extract.

All the symbols which in single algebra denote numbers or magnitudes, in *double algebra* denote lines, and not merely the lengths of lines, but their directions.
A. De Morgan, Trig. and Double Algebra, p. 117.

Double ax, a pictographic and decorative type common in the prehistoric remains of the Levant. It is found in Hittite hieroglyphics, on Cypriote cylinders, and on Mycenæan objects, on which it has some connection with Zeus Labrandeus. It is the most important of the Cretan pictographic symbols. Also called *labrys*.

Double Ax.

The most constantly recurring of these, indeed, is the labrys or *double ax* already referred to—the special symbol of the Cretan Zeus.
A. J. Evans, in Smithsonian Rep., 1901, p. 436.

Double chant, concerto, consciousness, counterpoint, court. See *chant* (*c*), *concerto* (*c*), ★*consciousness*, *counterpoint*[2], 3 (*c*), ★*court*.—**Double flute,** etc. See ★*flute*, etc.—**Double fugue.** See *fugue*.—**Double green.** Same as *methyl green* (which see, under *green*[1]).—**Double pedal-point.** See *pedal-point*.—**Double pedro.** See ★*cinch*, 4.—**Double points of a homographic transformation.** See ★*point*[1].—**Double quartet.** See *quartet*.—**Double shake** or **trill.** See *shake*, 5.—**Double sharp, slit, suspension.** See *sharp*, ★*slit*[1], *suspension*, 5.

II. *n.* 14. In *printing:* (*b*) Same as *mackle*.—16. In *lawn-tennis*, two successive faults in serving.—17. In *base-ball*, a play in which a fielder, either alone or with assistance, puts out two runners before the ball is returned to the pitcher for delivery.—18. In *astron.*, two stars which seem one to the unaided eye, but which are seen separated through the telescope. *Optical doubles*, probably very rare, are composed of two stars nearly in line with the observer, one of them far beyond the other, each having its own proper motion. *Physical doubles* are actually near together, and revolve around their common center of gravity; also, and more usually, called *binaries*. A *spectroscopic double* or *binary* is one in which the stars are too close to be separated by the telescope, but of which the duplicity is shown by the periodic doubling or shifting of lines in the spectrum. *Visual doubles* are pairs of stars near each other, but not so near as to require a telescope to separate them; *α* Capricorni and *θ* Tauri are typical examples.

19. *pl.* Sheet-iron plates, from 0.020 to 0.035 of an inch thick, which are ready for tinning. The term is also applied to plates which have already received an extra thick coating of tin and which have, besides, been hammered to make the tin adhere more firmly to the iron.—**Double and twist,** two strands of yarn twisted together; a two-ply thread.

double, *v.* I. *trans.* 8. In the manufacture of spirituous liquors, to distil a second time (the low wines or weak spirit obtained in the first distillation), thus producing a liquid of increased alcoholic strength. *Sadtler*, Handbook of Indust. Chem., p. 225.—9. In *shipbuilding*, to cover (a surface, particularly part of a deck or of the exterior of a vessel), with two thicknesses of plating or planking.—**To double pawns,** in *chess*, to play so that two pawns of the same color are placed on the same file or row.—**To double rooks,** in *chess*, to place both rooks on the same file or row.

II. *intrans.* 6. *Milit.*, to move with the double-quick step.

The Garrison Artillery lined the parapet . . . and cheered themselves hoarse as the British Infantry *doubled* along the road to the main Gate of the City.
R. Kipling, Soldiers Three, p. 399.

7. In *printing:* (*a*) In *type-setting*, to repeat words or lines through negligence. (*b*) In *presswork*, to make a second impression over the first.—8. In *billiards*, to cause an object-ball, almost invariably the first, to go to and return from a cushion, either for pocketing or for caroming.—9. In *base-ball*, to put out two men on one play. See ★*double*, *n.*, 17.

double-bowed (dub′l-boud), *a.* *Naut.*, said of a vessel in which both ends are alike, so that it is able to move in one direction or its opposite with equal facility without turning, as a ferryboat. *White*, Manual of Naval Arch., p. 699.

double-claw (dub′l-klâ), *n.* The unicorn-plant. See *Martynia*.

double-cropping (dub′l-krop″ing), *n.* The raising of two or more crops on the same land in one season. This is accomplished by means of companion crops and succession crops (see ★*crop*).

doubled (dub′ld), *p. a.* 1. Made double; duplicated.—2. In *music*, reinforced by its octave: said of a tone in a melody or a chord.—**Doubled pawn, rook.** See *to double pawns, to double rooks*, under ★*double*.

double-double (dub′l-dub″l), *n.* A multiple star composed of two pairs. Epsilon Lyræ is perhaps the best example. Each pair is itself binary, and the two pairs (probably) revolve around their common center of gravity in a much longer period.

double-ender, *n.* 3. A locomotive having either a truck or a pilot at each end: intended to haul trains in either direction without being turned.—4. A double-pointed file.

double entente (dö′bl oṅ-toṅt′). [F., 'double meaning.'] See *double entendre*.

double-ganger (dub′l-gang″ėr), *n.* [G. *doppelgänger*.] The apparition of a living person; a double; a wraith.

Either you are Hereward, or you are his *double-ganger*.
Kingsley, Hereward, xix.

double-geared (dub′l-gērd), *p. a.* Having two changes of the speed by means of gears, as in the back-gears of a lathe. This term is applicable only to the number of gear reductions, and not to the amount of change in the acting force which depends on the ratios of the diameters of the gears.

double-header, *n.* 2. In *lumbering*, a place from which it is possible to haul a full load to the landing, and where partial loads are topped out or finished to the full hauling capacity of teams.

double-jacketed (dub′l-jak″et-ed), *p. a.* Fitted with two walls. The cavity between the walls may be filled with steam while the outer layer is covered with a non-conducting covering, or the double jacket may be of two layers of poor conductors of heat.

They are fitted with a strong bottom hoop and bands round the sides, and can be *double-jacketed* for steam-heating if required. *Encyc. Brit.*, XXVII. 358.

double-leaf (dub′l-lēf), *n.* Any plant of the genus *Ophrys*. Also called *twayblade* (which see).

double-lop (dub′l-lop), *a.* Having the ears bent directly downward: said of a rabbit.

The ears . . . hang down by the side of the head like a *double-lop* rabbit. *Encyc. Brit.*, X. 709.

double-opposed (dub′l-ọ-pōzd″), *a.* In *mach.*, composed of two parts which are opposed to each other either in position or in action. A double-opposed engine is one having two cylinders which are placed on opposite sides of the shaft and hence tend to balance each other when running.

double-ply (dub′l-plī), *a.* Made up of two layers or thicknesses: said of manufactured articles, such as hose or rubber belting, in which layers of canvas alternate with layers of rubber fabric. In double-ply hose there are two layers of canvas and three layers of rubber.

double-ported (dub′l-pōr″ted), *a.* Having two ports which open simultaneously so as to give a large opening with small motion: said of engine-valves.

double-riveted (dub′l-riv″et-ed), *a.* Having two rows of rivets in each joint. In lap-riveting this necessitates only two rows of rivets, while for butt-joints two rows are needed on each side of the butt, making four rows in all.

double-spar (dub′l-spär), *n.* Same as *doubly refracting spar*. See *calcite*.

double-standard (dub″l-stan′därd), *a.* That may be registered in two classes: applied to cattle. Thus the double-standard polled Durhams may be registered as shorthorns or as polled Durhams.

double-suspension (dub″l-sus-pen′shọn), *a.* Having a perch gear and the body suspended upon four elliptic and four C-springs, leather braces connecting the body to the C-springs: said of a coach.

doublet, *n.* 1. (*e*) In *billiards*, the doubling of a ball. See ★*double*, *v.* II. 8.

5. In *organ-building*, a two-feet stop, or fifteenth. See *stop*[1], 6.—**Doublet game.** See ★*game*[1].—**Photographic doublet,** a combination of four simple lenses arranged in pairs separated from each other by a distance equal to about three times the diameter of the lenses. This combination is used in astronomical photography, and possesses the advantage over other types of lenses used in this work, and also over reflecting mirrors, that it covers a comparatively large field.

double-thong (dub′l-thông), *v. t.* To strike or lash with the doubled thong of a whip: as, to *double-thong* the off-wheeler, in driving.

double-threaded (dub′l-thred″ed), *a.* 1. Having or sewing with two threads, as a sewing-machine having both needle and shuttle.—2. Having two screw-threads which start at points 180 degrees apart and have each twice the pitch which appears from measuring from the tip of one thread to the tip of the next parallel to the axis. Double-threaded screws give very rapid motion to the nut.

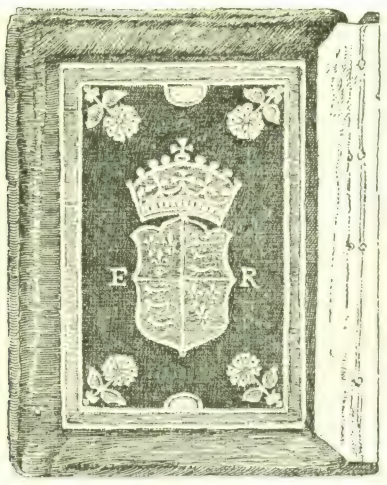
doubleton (dub′l-tọn), *n.* [*double* + *-ton*, as in *simpleton*.] In *whist* and *bridge*, a two-card suit.

double-tongue, *n.* 2. A kind of dwarf butcher's-broom, *Ruscus Hypoglossum*, of southern Europe: so called from the appearance of the cladodes. See *Ruscus*.

double-tooth (dub′l-töth), *n.* The nodding bur-marigold or water-agrimony, *Bidens cernua*, translating the genus name.

double-touch, *n.* 2. In *organ-building*, an adjustment of the keyboard action by which different effects are produced when the keys are depressed partially or wholly, so as to permit of a decided differentiation between simultaneous tones.

doubling, *n.*, 2. (*d*) In *ship-building*, a second thickness of plating or planking covering a surface, particularly part of a deck or of the exterior of a vessel.



7. (*a*) In *textile-manuf.*, any process of combining two (or more) slivers and drawing them into a single sliver of smaller size than any of the separate ones, for the purpose of making more uniform roving. (*b*) In *weaving*, the process of winding two threads or rovings upon a spool or bobbin.—8. In *biol.*, same as *reduplication:* said of the chromosomes and centrosomes of the cell when they undergo fission.—9. In *bridge*, the act of doubling the value of the trick points after the dealer's side has declared. See ★*bridge*[2].—10. In the production of metallic antimony from its ore, the remelting of the singles, or lumps of crude metal first obtained, and the mixing, in due proportion, of those containing surplus iron and those containing unseparated sulphur. The product of this second fusion is called *bowl-metal* because poured out into and solidified in a bowl of cast-iron.—11. In *bookbinding*, the thickening of the covers of a book by the addition of thick paper or thin boards.—**Doubling in balk,** in *billiards* and some kinds of *pool*, a mode of pocketing by first driving the object-ball to a cushion, this ball and the cue-ball being within the string-line.

doubling-frame, *n.*—**Flier doubling-frame,** a modified form of a throstle spinning-machine for the twisting together of two or more threads.

doublure (dub-lūr′), *n.* [F. *doublure*, a lining, < *doubler*, double, *v.*] 1. The ornamental lining on the inner covers of a sumptuous book. The simpler styles are of silk, velvet, or brocade. Highly decorated books have linings of thin leather, with borders or centerpieces hand-tooled in gold. See cut on page 392.

One of Edward's books, however, has actually the first instance in an English book of a decorated "*doublure*," the name by which we understand the inner side of the boards of a book.
C. Davenport, in Portfolio, N. S., XXX. 28.

2. In *paleon.*, the reflexed inferior margin of the carapace in the *Trilobita*, specially noticeable on the cephalon and pygidium.

Doublure of Prayer-book of Edward VI.

douche (dösh), *v. t.* [*douche, n.*] To apply a douche to.

doucin (dö-saṅ′), *n.* [F.] A variety of dwarf apple-tree on which other kinds are grafted or budded when it is desired to secure a tree of small stature. Dwarf apple-trees are usually regarded as of two general types or tribes, the paradise and the doucin. The paradise is the smaller of the two; the doucin is used when a tree of intermediate stature is desired. Dwarf apple stocks are propagated by layers; any variety of apple can be grafted on them.

dough, *n.* 4. Money; 'boodle.' [Slang, U. S.] — **Sour dough,** in Germany, the leaven used in making black rye bread. It consists of old dough which has been exposed to the air in a moist condition and has entered upon both alcoholic and lactic-acid fermentation.

dough-bag (dō′bag), *n.* A money-bag, especially one full of money for corrupt purposes; a corruption fund. [Slang, U. S.]

dough-belly (dō′bel″i), *n.* The steel-back chub, *Campostoma anomalum.* (Indiana). See cut, under *Campostoma.* [Local, U. S.]

dough-boy, *n.* 2. An infantry soldier. [Colloq., U. S.]

dough-day (dō′dā), *n.* A day shortly before an election, on which the 'dough,' or money, for use (chiefly in purchasing votes) in the election is distributed to the 'workers' of a party. [Slang, U. S.]

dough-divider (dō′di-vī″dėr), *n.* A machine for cutting dough; a doughing-machine (which see). There are two sizes made: one for cutting the dough into thirty pieces, used for making rolls, biscuits, etc.; the other for cutting it into fifteen pieces, used for bread-loaves.

dough-head (dō′hed), *n.* A blockhead; a stupid fellow; a fool. [Slang, U. S.]

dough-mixer (dō′mik″sėr), *n.* A machine for mixing dough. — **Screw dough-mixer,** a dough-mixer which is operated by means of an iron or steel screw on a horizontal shaft. The dough is mixed and pressed through a circular iron box on to a platform.

dough-molder (dō′mōl″dėr), *n.* A machine for rolling and molding dough to prepare it to be placed in pans.

dough-trough (dō′trôf), *n.* A long box made of wood or iron, about 2 feet wide, 1½ deep, and from 8 to 12 long, in which dough is mixed by hand and left to prove or rise. It is also used to receive dough from the doughing-machine.

douglasite (dug′las-īt), *n.* [*Douglashall,* near Stassfurt, + *-ite*2.] A hydrated chlorid of potassium and ferrous iron found at Stassfurt, Germany.

Douglas's fold, ligament, or **line.** See ★*fold*1.

Douglas's fossa. Same as *rectovaginal pouch* (which see, under *pouch*).

Doukhobor (dö′kō-bôr), *n.* See *Dukhobortsi.*

douma, *n.* See ★*duma.*

douping (dou′ping), *n.* [**doup,* *v.* (< *doup, n.*) *-ing*1.] In weaving gauze or leno fabrics, the arrangement of the doup-threads in the heddles and reed for crossing or twisting about others.

douping-warp (dou′ping-wârp), *n.* Same as ★*whip-thread.*

doup-thread (doup′thred), *n.* In *weaving,* a thread having a doup or loop at the end.

dourine (dö-rēn′), *n.* [Origin not ascertained.] A disease of horses, affecting chiefly the genitals and hind legs, thought to be due to the presence of a protozoan parasite, *Trypanosoma equiperdum.*

dourra (dö′rä), *n.* See *durra.*

dout, doutful. Simplified spellings of *doubt, doubtful.*

douzain (dö-zaṅ′), *n.* [F.: see *dozen.*] 1. A stanza of twelve lines. — 2. A French plated or billon coin, the twelfth of the franc d'argent under the Valois kings and the twelfth of the silver écu d'argent under Louis XIII. and his successors.

douzaine (dö-zān′), *n.* [F.: see *dozen.*] An administrative council of twelve elected men. [Channel Islands.]

douzainier, douzenier (dö-zān-yēr′), *n.* [F., < *douzaine.*] A member of a body of an administrative council of twelve. [Channel Islands.]

Dove of Noah, *Columba Noachi,* a small modern constellation south of Lepus and close to the feet of Canis Major. — **Scaled dove, scaly dove.** See *scale-dove.*

dove-petrel (duv′pet″rel), *n.* Any of the small petrels of the genus *Prion,* especially the type species *P. turtur,* common in southern seas. The name was suggested by the size and color of the bird.

dove-pox (duv′poks), *n.* An infectious disease of doves identical with pigeon-pox. See ★*pigeon-pox.*

dover2 (dō′vėr), *n.* A clasp-knife of a kind originally made by a cutler named Dover. [Australia.]

Dove's law of the rotation of the winds. See ★*wind*1.

dovetail, *n.* 2. *pl.* Two irons, one with a flange, the other with a recess, cut to a taper: used to hold carriage-doors in position.

dovetail-fish (duv′tāl-fish), *n.* A fish, *Abudefdul taurus,* of the family *Pomacentridæ:* found on the coast of Barbados.

dovetailing-machine (duv′tāl-ing-ma-shēn″), *n.* A machine for making the recesses which are to receive a dovetail-shaped tenon. The stock is cut away by a rapidly revolving cutter-head of the desired section, fed in against the end of the piece to be jointed and regulated for depth and for distance apart by cams and feed-devices. The tenons can be similarly cut, and will be standard and duplicates of each other.

dove-tick (duv′tik), *n.* A cosmopolitan tick, *Argas reflexus,* which inhabits dove-cotes and sucks blood for nourishment, but which is capable of living for at least two years without food. Also called *pigeon-tick.*

dove-weed (duv′wēd), *n.* The spotted spurge or milk-purslane, *Euphorbia maculata:* so named because its seed-capsules are a favorite food of the ground-dove. Also called *spotted eyebright.* [West Indies.]

dove-whistle (duv′hwis″l), *n.* A light whistle, single or compound, attached to pigeons and sounded by their flight against the wind. It is used in China and other countries of eastern Asia. Also *pigeon-whistle.*

dow6 (dou), *n.* [Hind. *dāo,* Burmese *dāh.*] A hewing-knife which serves on occasion as a sword. [Anglo-Indian.]

dow. An abbreviation of *dowager.*

dowdyism (dou′di-izm), *n.* The quality of being dowdy in dress or appearance; lack of smartness or 'style' in dress.

dowel-mill (dou′el-mil), *n.* A hollow cutter, which cuts on the inner face, used for making dowels.

dowel-plate (dou′el-plāt), *n.* An iron plate punctured with round holes, used for making dowels by driving the wood through the holes.

dowel-strip (dou′el-strip), *n.* 1. A piece of stock from which round dowels are made. — 2. A strip intended to receive dowel-pins and form a joint.

Dower by custom, in *common law,* the dower to which a widow became entitled by reason of some local or particular custom. — **Dower de la plus belle,** in *common law,* the process by which a widow was required to re-indow herself out of the lands held by her as guardian in socage, in order to release from dower the lands of her husband held in chivalry. This could be required by the guardian in chivalry when sued by the widow for dower. It was abolished with military tenures, of which it was an incident. — **Dower ex assensu patris,** in *common law,* the same as *dower ad ostium ecclesiæ* (which see, under *dower*2, 2), except that the property endowed belonged to the husband's father and was given by his consent.

dowlas, *n.* 2. In modern use, a coarse cotton fabric made to imitate the linen cloth of the same name.

down2, *adv.* — **One down,** in *golf,* one hole down, or one hole by which the player is behind his opponent.

down2. I. *a.* 4. In *stud poker,* said of the first card, which is dealt face down.

II. *n.* 2. In *dominoes,* the first stone laid on the table. — 3. A scrimmage in foot-ball. When a player is held so that he can no longer advance the ball, he cries 'down,' and the ball is then placed on that spot for a scrimmage. — 4. A grudge or prejudice (against); a hostile attitude: usually with *on* or *upon:* as, to have a private *down* on one; the diggers had a *down* on made dishes. [Australia.]

down3, *n.* — **Vegetable down.** Same as ★*bombax cotton.*

down-bow (doun′bō), *n.* In *violin-playing,* a stroke of the bow downward, beginning with the nut: opposed to ★*up-bow.* — **Down-bow mark,** in violin music, a sign to use a down-bow, usually ⌐ or ⌐.

downcast, *n.* 3. In *ship-building,* a duct or trunk with a cowl or hood at its upper end, arranged to drive air down into the interior of a vessel.

downcomer (doun′kum″ėr), *n.* 1. Any tube or passage for leading solids or fluids downward. — 2. A downtake. — 3. The descending element of a sectional boiler, through which the cooler or heavier water descends in the process of circulation. — 4. In a blast-furnace for smelting iron from the ore, a large pipe which takes combustible gas from the top of the furnace-shaft and brings it down to boilers, stoves, engines, etc., in which it is burned as a source of heat.

down-draft, *n.* II. *a.* Pertaining to a current of air or gas which flows downward: used in connection with furnaces. In down-draft furnaces the current of air is admitted on top of the grate and passes down through it.

down-faulted (doun′fâl″ted), *a.* Depressed by faulting to a relatively lower level.

It was shown that the coals occur in a *down-faulted* block of coal measure beds surrounded by Pocous strata.
Science, March 15, 1901, p. 426.

down-grade (doun′grād), *n.* and *a.* I. *n.* A downward sloping portion of a road or railway; hence, figuratively, a downward moral course.

II. *a.* Sloping downward; hence, relating to a downward moral course.

downmost (doun′mōst), *adv.* and *a.* Farthest down: opposed to *upmost* or *uppermost.*

They affected to champion the cause of the "*downmost* man." *New York Independent,* June 14, 1900, p. 1440.

downright, *a.* II. *n.* One of the lower qualities or sorts of a fleece of wool. *Hannan,* Textile Fibres of Commerce, p. 191.

downtake, *n.* 2. A passage or tube leading downward through which a material, as coal, ore, etc., is poured into hoppers or carts.

down-thrust (doun′thrust), *a.* Pertaining to or resulting from a downward movement, as in faults. — **Down-thrust fault,** a normal or gravity fault; one in which the chief movement is a downthrow of one side of the fault in the direction of the hade.

dowress (dou′res), *n.* A woman possessed of or entitled to the possession of a dowry.

dozen (duz′n), *v. t.* To make up into bundles of twelve, as certain kinds of dressed hides.

The next day wipe off grain with flannel, and stock is finished, and may be sorted and *dozened* to ship away.
C. T. Davis, Manuf. of Leather, p. 376.

D. P. An abbreviation of *Doctor of Pharmacy.*

d. p. In *elect.,* an abbreviation for *double pole.*

D. P. H. An abbreviation of *Diploma in Public Health.*

D. P. O. An abbreviation of *distributing post-office.*

D. P. S. An abbreviation of *Doctor of Physical Science.*

dpt. An abbreviation (*b*) of *department.*

drab2, *n.* 3. An English collectors' name for a number of noctuid moths of a drab color: as, the clouded *drab, Tæniocampa instabilis;* the northern *drab, T. opima;* the lead-colored *drab, T. populeti.*

drac (drak), *n.* [Pr.; cf. *drake*2, *dragon.*] In southern France, formerly, an elf of popular fancy.

drach. A contraction of *drachma,* a drachm.

Draconism (drā′kō-nizm), *n.* [Gr. Δράκων, L. *Draco*(*n*-), Draco, + *-ism.*] Draconic severity; harshness: as, the *Draconism* of the slave laws.

dracuncular (drā-kun′kū-lär), *a.* Relating to or caused by the guinea-worm, *Dracunculus medinensis.*

draf, *n.* A simplified spelling of *draff.*

draft1, *n.* 12. *Draft aft* is that measured at the stern; *draft forward,* that measured at the bow; *mean draft,* the average between that at the bow and the stern, or that measured at the middle of the length; *draft extreme,* that measured to the lowest projecting portion of the vessel, as the rudder or the propellers when they are below the lowest point of the keel; *light draft,* that at light displacement; *load draft,* that at load displacement. See ★*displacement.*

34. In *textile-manuf.,* the amount of attenuation of a lap, sliver, or roving effected by

drawing it between rollers running at different speeds.—**35.** A body or bunch of cattle which have been separated from the rest of the herd. See *draft*[1], 10. [Australia.]—**Direct draft,** an arrangement of the flues for the products of combustion such that these products move always in the same direction toward the chimney.—**Fan draft,** a system of supplying the air for the combustion of coal in boiler-furnaces by means of mechanically driven fans or blowers.

Fan draught is also of great value under unfavourable conditions, such as hot weather, calms, or following winds, giving a command of steam not possible with funnel draught and ordinary ventilators.

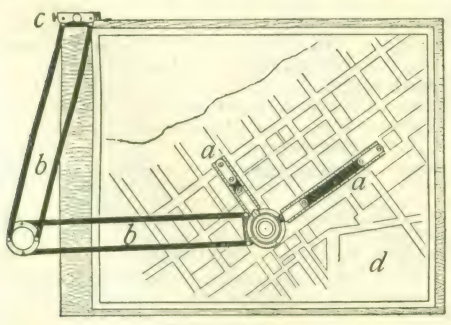
White, Manual of Naval Architecture, p. 563.

Forced draft, an accelerated draft produced by supplying air to the furnace at a greater pressure than that of the atmosphere.—**Induced draft,** an accelerated draft caused by drawing the gases away from the furnace by a centrifugal fan or other device, so that the pressure within the furnace and flues is less than that of the atmosphere.—**Mechanical draft,** draft for a furnace which is produced by some mechanical contrivance such as a blower, steam-jet, etc., as distinguished from a *natural draft* produced by a chimney.—**Skip-shaft draft,** a plan for a plain weave (as for calicoes), with four or more shafts or harnesses in a loom, by skipping from the first shaft to the third in drawing in the warp-threads through the heddles, then from the second to the fourth, and so on.—**Straight-over draft,** the process of drawing in warp-threads for a loom through the harnesses in their regular order.

draft[1], *v. t.* **6.** In *cotton manuf.*, to attenuate (a lap, sliver, or roving) by drawing it between rollers which run at different speeds.—**7.** To separate (and sort) from the herd: as, to *draft* cattle. See def. 3. [Australia.]

draft-cord (drȧft′kôrd), *n.* A cord or small rope attached to the draft-scroll on a spinning-mule.

draft-engine (drȧft′en″jin), *n.* **1.** An engine used to cause a current or draft of air or other gas through flues.—**2.** An engine for hauling. This is an improper use: such an engine is a traction-engine if mobile and a windlass or derrick if stationary.



drafter (drȧf′tėr), *n.* **1.** One who drafts; one who drafts a document: as, the *drafters* of the Constitution of the United States.—**2.** One employed in a drafting-yard to sort out sheep. [Australia.]—**3.** A draft-horse.

draft-furnace (drȧft′fėr″nās), *n.* A furnace used in a primitive method of ventilating mines or shafts. It was placed at the base of the shaft, so that a column of air heated by it should rise and carry out with it the air or gases to be removed. In modern plants this ventilating is effected by fans.

draft-gage (drȧft′gāj), *n.* A gage for measuring the force of a draft by ascertaining the difference in pressure between a point in the course of the draft and the pressure of the atmosphere.

draft-gear (drȧft′gēr), *n.* In *car-building,* the entire system of couplers, draw-bars, springs, etc., used to connect one car with another or to the locomotive.—**Continuous draft-gear,** a draft-gear extending by means of rods, called *draft-rods,* from one draw-bar of a car to the other, and designed to distribute the pulling strains when the car is being hauled.—**Friction draft-gear,** a form of draw-head for railway-cars in which the action of the usual spring attachment is retarded by introducing friction surfaces which must move upon each other when shocks of traction or retardation occur.

drafting-machine (drȧf′ting-ma-shēn″), *n.* An appliance for the rapid and accurate drawing

Drafting-machine.

a, a, square; *b, b,* pivoted arms; *c,* fixed point of support on board; *d,* map.

of plans, diagrams, and mechanical drawings. It consists of a graduated square having extension arms which in a normal position are at a right angle and can be adjusted to other angles when desired. It is provided with two parallel arms hinged at the outer end to two more arms, which are, in turn, hinged to a fixed point on the edge of the drawing-board. The combined arms permit of a free movement of the square over the board, and yet keep it at all times at the same relative angle.

drafting-room (drȧf′ting-röm), *n.* Same as *drawing-room*[1].

drafting-yard (drȧf′ting-yärd), *n.* A stock-yard which has many small yards or pens arranged for sorting sheep. [Australia.]

draft-scroll (drȧft′skrōl), *n.* A scroll on a spinning-mule for regulating the draft of the roving. *C. Vickerman,* Woollen Spinning, p. 233.

draft-tube (drȧft′tūb), *n.* An air-tight tube which descends from the bottom of a turbine-casing into the tail-race, with its lower end below the surface of the water in the latter. The atmospheric pressure is balanced in part by the height of the water column, so that the motor can be placed above the level of the tail-race and yet suffer no loss of effective working head. This lessens the weight of the transmission shaft, and the turbine need not be placed so low as to be inaccessible. Applicable principally to downward-flow wheels.

draft-wheel (drȧft′hwēl), *n.* On a machine for textile-fibers, a gear for regulating the speed of the draft-rollers for attenuating the sliver, roving, lap, etc.

drag, *n.*—**Collapsible drag** (*naut.*), a drag which folds up into a comparatively small compass, such as the cornucopia and umbrella drags.—**Cornucopia drag** (*naut.*), a heavy iron ring, varying in size according to the tonnage of a vessel, to which is laced a funnel-shaped canvas bound on the seams with rope. At the pointed end of the canvas a small iron eye is secured into which the tripping-line is bent; and a four-part bridle is formed at the mouth end of the bag by continuing the rope a couple of fathoms and ending it in an iron ring to which the hawser is secured with two half-hitches and a stopped end. The weight of the iron ring is generally sufficient to keep the mouth of the bag down in the water. After the hawser has been led through the hawse-pipe or over the bow-chock, it is bent on to the bridle-eye and the drag is tossed over the bow. A long scope of hawser is given to the drag, and the tripping-line, which is employed for reversing the drag and getting it on board, is kept well slack.—**Folding drag** (*naut.*), a hinged or swiveled set of wooden or iron frames to which is laced a shape of canvas.—**Kite drag** (*naut.*), a form of drag popular among English seamen, consisting of several spars lashed together at or pinned through the center. When spread out they resemble the sticks of a kite. Around the outer ends of the spars, and encircling them, a chain is passed, and to this chain is laced a baggy canvas shaped to the frame. A bridle leads from the four spars to which the towing hawser is made fast, and a tripping-line is bent to the end of one of the spars to capsize the kite and haul it on board horizontally.—**Portable drag** (*naut.*), a drag, easy of transportation, such as the cornucopia drag.—**Propeller drag** (*naut.*), the drag which the propeller exercises in a heavy sea if the engines are stopped and the vessel is allowed to take up its own position.—**Spar drag** (*naut.*), a single spar with a bridle leading from its extremities, into the slings of which a hawser is made fast. To the center of this spar a kedge-anchor is secured to hold the spar down in the water and to give it additional resisting power, and to one of its ends a tripping-line is made fast.—**Umbrella drag** (*naut.*), a patented folding drag, built like an umbrella, to a ring in the handle of which the hawser is bent, while the tripping-line is secured to a ring in the ferrule.

drag-bench (drag′bench), *n.* Same as *draw-bench.*

drag-buck (drag′buk), *n.* See ★*buck*[6], (*c*).

drag-cart (drag′kärt), *n.* Same as ★*bummer,* 3.

drag-lines (drag′līnz), *n. pl.* In *geol.,* a set of cross-striæ which are produced on the lee sides of older striæ. *T. C. Chamberlin,* in U. S. Geol. Surv., 1885-86.

dragma (drag′mä), *n.*; pl. *dragmata* (-ma-tä). [NL., < Gr. *δράγμα,* a handful, a sheaf.] In sponge-spicules, one of the microscleres, of which there are several in a cell or sclero-blast, lying in sheaves.

drag-mill (drag′mil), *n.* A mill for grinding ore by dragging massive rollers over the mass to be pulverized; an arrastre.

drag-nut (drag′nut), *n.* A nut on a bar, bolt, or rod for drawing two parts of a mechanism toward each other, or the reverse.

dragomanate (drag′ō-man-āt), *n.* [*dragoman* + *-ate*[3].] The office of a dragoman; the interpreter's department: as, the consular *dragomanate.*

dragomanic (drag′ō-man-ik), *a.* [*dragoman* + *-ic.*] Of or pertaining to a dragoman: as, *dragomanic* expenses.

dragon, *n.* **10.** The larva of a European notodontid moth, *Hybocampa millhauseri,* having remarkably angular outlines and conspicuous corners and humps, so that it resembles an oak-leaf curled and eaten by a tortricid larva. —**11.** The hellgrammite fly, *Corydalus cornutus.* [Local, eastern U. S.]—**Blue dragon.** Same as *Broseley* ★*dragon.*—**Broseley dragon,** a

Broseley Dragon.

design used extensively by Thomas Turner of Caughley, near Broseley, England, in the decoration of tableware, in the latter part of the eighteenth century. This pattern was almost as celebrated as his willow pattern. Also called *blue dragon.*—**Dragon green.** Same as *malachite-green.*—**Flying dragon,** a meteor with a luminous train.—**Order of the Double Dragon.** See ★*order.*—**Water-dragon.** See *water-dragon.*

dragonade, dragonnade (drag-ọ-nād′), *v. t.*; pret. and pp. *dragonaded* or *dragonnaded,* ppr. *dragonading* or *dragonnading.* [*dragonade, n.*] To persecute by methods similar to those of the dragonades.

dragonet, *n.*—**Sword-dragonet,** a common name of the fish *Callionymus lyra.*

dragon's-blood, *n.* **2.** In *ceram.,* a red color resembling arterial blood, with iridescence, in places, due to the presence of copper; a variety of sang-de-bœuf.

dragon's-claw (drag′ọnz-klâ), *n.* The coral-root, *Corallorhiza odontorhiza* or *C. multiflora:* so called from the claw-like form of the root.

dragon's-mouth (drag′ọnz-mouth), *n.* **1.** The snapdragon.—**2.** A terrestrial orchid, *Arethusa bulbosa,* of eastern North America, with gaping flowers.

dragon's-skin (drag′ọnz-skin), *n.* A name given by coal-miners to decorticated trunks and slabs of *Sigillaria* and *Lepidodendron,* from the resemblance of the scars to the scales of reptiles.

dragon's-tongue (drag′ọnz-tung), *n.* An occasional name of the spotted wintergreen, *Chimaphila maculata.*

drag-road (drag′rōd), *n.* Same as ★*dray-road.*

drag-sled (drag′sled), *n.* Same as ★*dray*[1], 3.

dragsman, *n.* **3.** One engaged in dragging a river, lake, pond, harbor, or the like, in search of something.

drain, *n.* **2.** (*d*) In *ship-building,* a large pipe which runs through or above the double bottom of a war-ship and is connected with the principal pumps to remove water from the various compartments. The *main drain* is from 12 to 15 inches in diameter, has openings into the large compartments controlled by valves, and is intended to pump out the water in case of damage by grounding, collision, etc. The *secondary* or *auxiliary drain* is also connected with all the large compartments and is used for all ordinary pumping.—**Block drain.** Same as *plug* ★*drain.*—**Bush, brush-wood,** or **wood drain,** an old style of drain consisting of poles or fagots placed at the bottom of a trench and covered with soil. The water passes among the material while it lasts, then through the cavity left by its decay. Of the same type are *spray drains* and *straw drains,* in which branches and straw are used.—**Cobble** or **cobble-stone drain.** Same as *rubble drain* (which see, under *drain*). *W. I. Chamberlain,* Tile Drainage, p. 29.—**Mole** or **mole-plow drain,** a drain made by a mole-plow, consisting of a cylindrical channel communicating with the surface by a slit which is closed by a furrow-slice.—**Plug drain,** a drain formed by placing in the bottom of a trench a row of connected poles or fagots and puddling clay over these, then drawing the poles along and repeating the process. Also called *block drain.* [Great Britain.]—**Sheep-drain,** one of the small ditches often made in upland pastures in Great Britain.—**Shoulder drain.** See *wedge-and-shoulder* ★*drain.*—**Stone drain,** either a rubble drain (which see, under *drain*) or one made with flat stones at the bottom of a trench so placed as to secure a passage, the trench above being filled with soil.—**Turf** or **wedge drain,** a drain formed by cutting a trench with or without ledges at the bottom and inserting turf, grass side down, to be supported either by the ledges or merely by its wedging, the space above being filled with soil. [Great Britain.]—**Wedge-and-shoulder drain** or **shoulder drain,** a turf drain which has ledges or shoulders.

drainage, *n.*—**Adjusted drainage,** a drainage-system in which the streams and valleys have come, by spontaneous changes, to follow chiefly the belts of weak rock, while the ridges and divides follow the belts of resistant rock. Rivers and divides also are similarly adjusted.—**Antecedent drainage.** See ★*antecedent.*—**Arterial drainage,** that part of drainage which is effected through large open channels which are either artificial watercourses or natural ones improved: opposed to *minor* ★*drainage.*—**Autogenetic drainage.** See ★*autogenetic.*—**Deep drainage.** Same as *thorough* ★*drainage* (*a*).—**Drainage cycle,** the initiation, development, and maturity of drainage of any given region to the time of interruption introduced by new conditions.

"The old drainage of this basin presents some interesting peculiarities, and the interpretation of these will enable us to determine some of the deformations of the basin during the development of this old *drainage cycle.*"

W. G. Tight, U. S. Geol. Surv., Professional Paper 13, [p. 76.

Dumb-well drainage. Same as *sink-hole* ★*drainage.*—**Epigenetic drainage.** Same as *inherited* ★*drainage.*—**Essex system of drainage,** an earlier British method of drainage in which drains of the bush and straw type (which see, under ★*drain*) were placed under each, or each second or third, water-furrow: hence, also called *furrow drainage.*—**Inherited drainage,** streams the courses of which have been determined by the slope of a once overlying series of strata now removed by erosion so as to disclose rock structures of another arrangement with respect to which the streams manifest no sympathy. Also called *superposed* or *epigenetic drainage.*—**Minor drainage,** deep or thorough drainage as opposed to arterial ★drainage (which see).—**Mole drainage,** drainage with mole ★drains (which see).—**Parallel drainage.** Same as

thorough ★*drainage* (*a*).—**Sink-hole drainage,** the draining of land which is underlain by an impervious clay, by sinking a shaft through the latter into a bed of gravel beneath. This is Elkington's system of drainage. Also called *dumb-well* and *swallow-hole drainage.* [Great Britain.] —**Superposed drainage.** Same as *inherited* ★*drainage.*—**Surface drainage,** draining by open furrows and ditches and natural watercourses.—**Swallow-hole drainage.** Same as *sink-hole* ★*drainage.*—**Thorough drainage.** (*a*) In *agri.*, drainage by means of thoroughs (see *thorough, n.*, 1 (*b*)); specifically, underground drainage by any of the modern systems, including the Essex (see above). The latter was followed by a system of parallel drains, somewhat shallow and rather closely placed, devised by Smith of Deanstone; this was displaced (but only temporarily) by Parkes's system of deeper and more distant drains. Also called *deep* and *parallel drainage.* [Mainly Great Britain.] (*b*) In *surg.*, drainage of a cavity by a tube which opens at the surface at two opposite points, allowing irrigation and drainage of the cavity without disturbance of the dressings.—**Tile drainage.** See *drain-tiles,* under *tile*[1].—**Underground drainage,** drainage by any system of closed drains; underdrainage. Underground drainage secures the benefits of drainage in the highest degree and escapes the disadvantages of surface drainage.

drainage-area (drā′nāj-ā″rē-ą̄), *n.* The entire basin drained by a river and all its tributaries.

drainage-level (drā′nāj-lev″el), *n.* A nearly horizontal tunnel in a mine or other underground working to receive and gather the water from upper levels, so that it can be pumped out.

drainage-way (drā′nāj-wā), *n.* A drain or drain-way; a drainage-channel.

drainer, *n.* **3.** A vessel or bag in which moist substances are put to drain.

draining (drān-ing), *n.* The drawing or running off of water, especially the artificial removal of water from land by surface or underground channels; drainage. Different methods are known, as *bush draining, furrow draining, mole draining, plug draining, thorough draining, tile draining,* etc. See ★*drain* and ★*drainage.*

drain-tube (drān′tūb), *n.* A drip-pipe; a pipe for draining the water from the cylinder of an engine or a pump.

drake[2], *n.* **4.** (*b*) Any one of several pseudoneuropterous insects used as bait by fishermen, especially certain May-flies. *Ephemera danica* and *E. vulgata* are known to English fishermen as the *green drake* and the *gray drake.*—**5.** A man-of-war of the Vikings. *Marryat. N. E. D.*

dram[2] (dram), *v. t.*; pret. and pp. *drammed,* ppr. *dramming.* [*dram, n.*] To ascertain the fineness or size of by dram weight, as of a silk thread or yarn.

dram. An abbreviation of *dramatic* and *dramatist.*

dramaticism (dra-mat′i-sizm), *n.* [*dramatic* + *-ism.*] Dramatic character or quality.

dramaturgic, *a.* **2.** In *anthrop.*, bringing about effects by means of a dramatic performance, as in cases where a myth is dramatized with a view of bringing about the events the origin of which is accounted for in the myth. *F. H. Cushing,* in 13th Rep. Bur. Ethnol., p. 375.

drammage (dram′āj), *n.* [*dram* + *-age.*] The weight in drams of 1,000 yards of a raw-silk thread.

dranu (drä′nö), *n.* [Fijian name.] In the Fiji Islands, the giant taro, *Alocasia Indica,* the starchy root-stock of which is eaten by the natives in times of scarcity, though it is very acrid and often causes sickness. See ★*piga.*

drap d'été (drä′dā-tā′). [F., 'summer cloth.'] A fine woolen fabric for summer dresses.

Draper's actinometer, law. See ★*actinometer,* ★*law*[1].

drapery (drā′pėr-i), *v. t.*; pret and pp. *draperied,* ppr. *draperying.* [*drapery, n.*] To drape; cover with draperies.

> And then her dress—what beautiful simplicity
> *Draperied* her form with curious felicity.
> *Byron,* Don Juan, xvi. 102.

dratchel (drach′el), *n.* [Also *dratchell, drotchel, drotchell;* < *dratch, dretch,* linger, dawdle: see *dretch*[2].] A slovenly, untidy woman; a slattern. [Prov. Eng.] *Johnson,* Dict. of the Eng. Lang., 1755.

> She 'll be a poor *dratchell* by then she's thirty, a-marr'in' a' that'n, a fore her teeth's all come.
> *George Eliot,* Adam Bede I. ii. 20.

drave (drāv), *n.* [Northern Eng. form of *drove.*] **1.** A fishing trip in which the members of the crew go as sharesmen, each supplying a net and receiving a share of the profits.—**2.** A haul. *N. E. D.*

Dravidian architecture. See *Indian architecture,* under *Indian.*

dravite (drav′it), *n.* [F., *Drave,* G. *Drau,* a river of Tyrol, Carinthia, etc., one of the tributaries of the Danube, + *-ite*[2].] A brown to black magnesian variety of tourmalin, found in the Drave district in Carinthia.

draw, *v.* **I.** *trans.* **31.** In *golf,* to 'pull' (a ball); to cause (it) to curve to the left.—**32.** To pull by means of a hook or similar device (threads of warp) through the heddle eyes of a loom.—**33.** In *organ-playing,* to pull out (a stop-knob) so as to cause a certain set of pipes to sound.—**34.** In *cotton-spinning,* to lengthen and attenuate (the sliver or roving) by drawing it between sets of rollers running at different speeds.—**35.** To make (wire, piping, or tubing) by drawing a piece of metal through successively diminishing holes in perforated plates.—**To draw stumps,** in *cricket,* to close a match finally, or for the day, by pulling the wickets from the ground. *R. H. Lyttelton,* Cricket and Golf, p. 114.—**To draw to the ear,** in *archery,* to draw a bow so fully that the drawing hand is as far back as the archer's ear: a fault which makes against accurate shooting.

II. *intrans.* **13.** In *poker,* to discard part of the original hand and draw an equal number of cards so as to improve the value of the combination held.—**14.** In *agri.,* to effect drainage; to draw off water.

> A drain, in the language of farmers, is said to *draw,* which means that it renders the land dry on either side to a certain distance. *Low,* Pract. Agr., p. 268.

15. In *salt-boiling,* to take out from the pans the salt as it crystallizes and set it aside to drain.—**16.** In *cricket,* to turn the ball past the leg-wicket, by allowing it to glance off the bat and pass between the wicket and the body. —**To draw away,** in *cricket,* to shrink away from a ball bowled at the legs: said of the batsman.—**To draw level,** in *cricket,* to equalize a score.—**To draw up.** (*e*) To assume an erect or stiff attitude: used reflexively: as, she *drew* (herself) *up* disdainfully. (*f*) To come up with; gain on an opponent, as in racing.

draw, *n.* **11.** In *poker,* the second part of the deal; the filling of the hands after discarding. —**12.** A depression in the land through which surface-water flows after rains; a basin-like valley convertible into an irrigation-reservoir by damming its outlet.

> One of the characteristic inhabitants of *draws* and low meadows . . . is *Vernonia gigantea.*
> *F. E. Clements,* Phytogeog. Neb., p. 307.

13. In *hort.*, the sprouts or shoots that spring from the tuber of the sweet-potato when it is placed in a seed-bed and by means of which the plant is propagated.—**14.** In *organ-building,* same as *draw-stop.* [Colloq.]—**Continuous draw,** in *archery,* a style of shooting in which the string is loosed and the arrow discharged immediately upon the completion of the draw, without the usual pause.—**Sand draw,** a channel filled with sand overlying a subterranean stream; also, the stream itself.

> A *sand draw* is a subterranean stream. On the surface is seen only a broader or narrower band of pure sand, marking the channel.
> *P. A. Rydberg,* Contrib. U. S. Nat. Herb., III. 470.

Spread draw, in *billiards,* a stroke by which the cue-ball rebounds from the object-ball at an angle more obtuse than that of the direct draw. It is not always possible to say where the spread ends and the draw begins.

draw-bowl (drâ′bōl), *n.* One of two wooden rollers, of cylindrical form, running in contact with each other for the purpose of drawing cloth from a bleaching-keir.

draw-box (drâ′boks), *n.* In *cotton-manuf.*, a set of three or more pairs of rollers attached to combing- and certain other machines for attenuating, or drawing out, the sliver.

draw-cock (drâ′kok), *n.* A drain-cock; a pet-cock; a valve for draining water out of an engine- or pump-cylinder.

drawer, *n.* **6.** One who draws warp-threads through heddles, preparatory to putting them into the loom.

draw-game (drâ′gām), *n.* A game of dominoes in which the player may draw from the boneyard when he cannot play.

draw-hole (drâ′hōl), *n.* A hole through which the spent ore is removed from a furnace.

draw-hook (drâ′hůk), *n.* **1.** The hook-end of a draw-bar in the construction used in automatic car-couplers. The hook is so made that when two cars are run together the hooks of the two draw-bars pass each other and are locked together by powerful springs. The hooking, in the best systems, takes place in a horizontal plane, although many efforts have been made to have the hooks operate in a vertical plane.
2. Same as ★*gooseneck,* 4 (*b*).

drawing-hand (drâ′ing-hand), *n.* In *archery,* the hand used to pull the string and hold the arrow against it in drawing a bow; ordinarily, the right hand: opposed to *bow-hand,* 1.

drawing-pliers (drâ′ing-plī″ėrs), *n. pl.* A pair of gripping-pincers used, in the process of drawing wire, to seize the stock and pull it through the hole in the draw-plate.

drawing-ring (drâ′ing-ring), *n.* In *archery,* a ring worn on the thumb of the drawing-hand by tribes which use a thumb-loose to catch and pull back the bowstring.

draw-iron (drâ′ī″ėrn), *n.* A swaged iron rod, fitted with a forged shackle near the branched end, used for attaching shafts to sleighs.

draw-kiln (drâ′kil), *n.* A lime-kiln so constructed that the burned lime is drawn at the bottom. *N. E. D.*

drawn, *p. a.* **7.** Abnormally tall and slender because of too much crowding and too little sunlight and air: said of a plant, particularly a seedling. Badly drawn plants are of little value.—**Drawn game,** in *chess,* a position in which the game is even or the advantage on one side too slight to secure victory. A draw may also be arrived at by perpetual check, by stalemate, or by failure to mate after having received notice to mate within fifty moves. Of late a draw counts half a point in a tournament.—**Drawn glass,** glass which has been pulled and stretched when heated.

draw-pit (drâ′pit), *n.* A pit in a furnace for the reception of the exhausted ore.

draw-plate, *n.* **3.** A transverse plate connecting the side-frames in a locomotive and forming part of the framing to which the draw-bar is attached.—**Diamond draw-plates,** tiny flat plates made of diamonds which are drilled with minute holes, sometimes as small as the thousandth of an inch, for the purpose of drawing platinum, gold, iron, or copper wire.

draw-rod, *n.* **2.** A straight rod with a thread and nut at one end and an eye and thread and nut at the other, used to secure the draw-bar of a sleigh.

draw-shave (drâ′shāv), *n.* A surgical instrument resembling a drawing-knife, with a single long handle, used to remove thin slices of tissue or pathological growths from the interior of a cavity.

draw-sheet (drâ′shēt), *n.* In hospitals, a wide sheet so disposed on the bed that it can easily be drawn from under a patient who is lying upon it.

draw-shot (drâ′shot), *n.* In *billiards,* a shot in which the cue-ball is struck underneath its center, so that after hitting the object-ball it comes back toward the player; a draw. Draw-shots are *live* or *dead* according as the cue-ball, for the sake of position for the next shot, is returned fast or slow.

draw-skid (drâ′skid), *n.* Same as ★*brow-skid.*

draw-stroke (drâ′strōk), *n.* In *cricket,* the stroke of the bat by which a draw is performed. *Hutchinson,* Cricket, p. 318.

draw-table (drâ′tā″bl), *n.* A draw-bench; a machine for drawing metal rods or tubes through a die to reduce them to a particular form and size.

draw-tube (drâ′tūb), *n.* One of the overlapping movable tubes of a field-glass or telescope.

drax (draks), *n.*; pl. *draces* (drā′sēz). [Gr. *δράξ,* a handful: akin to *δραχμή,* a drachm: see *drachm, dram, drachma.*] In the nomenclature of sponges, a tuft of monaxial filaments.

dray[1], *n.* **3.** In *forestry,* a single sled used in dragging logs. One end of the log rests upon the sled.

dray[1], *v. t.*—**To dray in,** to drag logs from the place where they are cut directly to the skidway or landing.

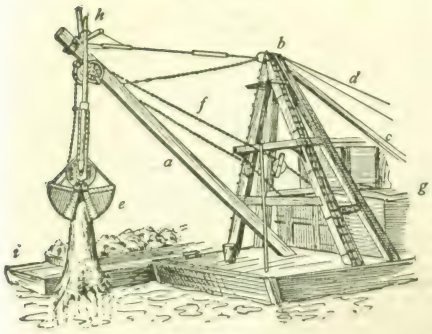
Dr. Bot. An abbreviation of *Doctor of Botany.*

Dr. Chem. An abbreviation of *Doctor of Chemistry,* a European degree. Also *Ch. D.*

dreadnought, *n.* **4.** The name of a British battle-ship used as a general name for the all-large-gun type. See *Dreadnought,* in the Cyc. of Names (Supplement).

dream[1], *n.*—**Waking dream,** in *psychol.*, a dreamlike or visionary state, occurring in the waking life. It may be of all degrees, from the vivid visual imagery of normal reverie ('day-dreaming') to the hallucinatory state of the ecstatic.

dreamer, *n.* **5.** *pl.* See the quotation.

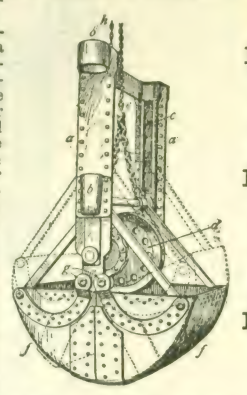


> A member of the band of chief Joseph, the leader of the non-treaty Nez Percés, was killed by whites, and the Indians are said to have made depredations on the crops of the latter; while a native religious sect, known as *Dreamers,* under the leadership of Smohalla, tended to widen the breach. *Encyc. Brit.,* XXIX. 463.

dred[2], **dredful.** Simplified spellings of *dread, dreadful.*

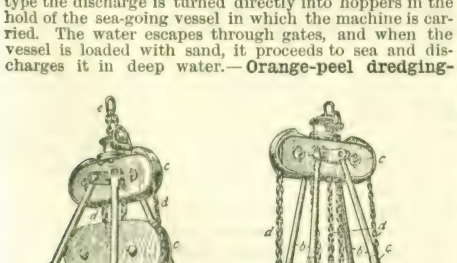
dredge-boat (drej′bōt), *n.* A large, flat-bottomed vessel equipped with a dredging-machine for removing mud, sand, etc., from the bottom of a harbor or in a channel.

dredge-machine (drej′ma-shēn″), *n.* The digging and hoisting mechanism on a dredge-boat.



dredging-machine, *n.*—**Clam-shell dredging-machine,** a dredging-machine which employs a bucket

Clam-shell Dredging-machine.



a, pivoted boom; *b*, "A" shape frame; *c*, stiff leg supporting frame; *d*, guy-rod; *e*, clam-shell bucket, lifting tree-stump; *f*, chains lifting bucket and controlling its operation; *g*, power-house; *h*, guide-poles; *i*, spoil-boat.

resembling the bivalve shell of a clam. The open bucket is lowered into the water till it sinks into the silt. The leaves are then drawn together, inclosing a mass of silt, and it is raised to the surface and discharged by opening the two leaves.—**Dipper dredging-machine**, a machine consisting essentially of a strong flat-bottomed boat upon which are boilers and engines for handling a derrick erected at the bow of the boat. The derrick has a massive boom which supports a shovel or dipper resembling the scoop of a steam-shovel. The dipper is lowered to the bottom of the water, and, by means of chains, is dragged through the mud or silt until it is filled; it is then raised from the water, and the boom is swung to the right or left, over the bank or over a scow, and its contents are discharged. Since the boom swings in a half-circle in front of the boat, the machine can dredge out a channel equal in width to the diameter.—**Hydraulic dredging-machine**, a dredging-machine which employs a rotary pump and hinged suction-pipe. The end of the suction-pipe is let down into the water until it rests upon the sand. A jet of water through a hose, or some other mechanical device is employed to loosen the sand, and the mingled sand and water are drawn up through the suction-pipe and forced into a discharge-pipe. The latter may be a long flexible pipe supported on boats or floats and extending over the water for a mile or more to the shore. The mingled sand and water are discharged on the shore, the water running back and the sand remaining on the shore. The sand forms about 20 per cent. of the discharge, but so large is the pipe and so rapid the flow that the machine has great capacity, excavating and delivering great quantities of sand in an hour. In the larger machines of this type the discharge is turned directly into hoppers in the hold of the sea-going vessel in which the machine is carried. The water escapes through gates, and when the vessel is loaded with sand, it proceeds to sea and discharges it in deep water.—**Orange-peel dredging-machine**, a dredging-machine having a bucket which is divided into four parts which resemble the skin of an orange divided into quarters.—**Vacuum dredging-machine**, a dredging-machine which employs a vacuum, made by condensing steam in a suitable reservoir, in place of a pump to raise the mingled sand and water. Not in general use.

Bucket of Clam-shell Dredging-machine.

a, frame supporting shells; *b*, socket for guide-poles; *c*, guide-way for arms supporting shells; *d*, mechanism for operating shells; *e*, chain controlling *d*; *f*, bivalve shells, in closed (loaded) position; open position shown by dotted lines; *g*, pivots supporting shells; *h*, lifting-chain.

Bucket of Orange-peel Dredging-machine.

a, leaves of bucket; *b*, arms supporting leaves, pivoted at top and bottom; *c*, mechanism controlling operation of leaves; *d*, chains controlling leaves; *e*, lifting-chains. Compare movements of parts as shown in open and closed position in two cuts.

dredging-pump (drej'ing-pump), *n.* A form of pump for use in the removal of water containing sand, mud, or other solid material such as occurs in dredging operations. See *hydraulic* ★*dredging-machine*.

dredging-tube (drej'ing-tūb), *n.* In a hydraulic dredging-machine, the tube which carries up the mud, sand, or other solid materials from the bottom, or which delivers it at a distance. See *hydraulic* ★*dredging-machine*.

dreibund (drī'bůnt), *n.* [G., < *drei*, three, + *bund*, alliance: see ★*bund*[2].] A triple alliance. See, specifically, *Triple Alliance*, 3, in Century Cyclopedia of Names.

dreikanter (drī'kän-tėr), *n. pl.* [G., 'three-cornered things.'] Angular and prismoidal pebbles whose flat faces have been cut by wind-blown sand. They sometimes closely resemble artifacts, for which they have been mistaken. *Nature*, Dec. 10, 1903, p. 143.

drenching (drench'ing), *n.* 1. The act of soaking or covering with water; a thorough wetting.—2. In *vet. med.*, a dose of liquid medicine; a drench.

drenching-bit (drench'ing-bit), *n.* An appliance with a mouthpiece like that of a bridle-bit, used for administering medicine to horses. The mouthpiece is hollow and has an opening midway between the ends; connected with it is a funnel.

Drepanaspis (drep-a-nas'pis), *n.* [NL., < Gr. *δρέπανον*, a sickle, + *ἀσπίς*, a shield.] A genus of ostracoderm fishes having the armor of the head more or less completely fused into large plates, the caudal region short, with small plates and heterocercal tail.

Drepanididæ (dre-pa-nid'i-dē), *n. pl.* [NL., < *Drepanis* (*-id-*) + *-idæ*.] The Sandwich Island honey-suckers of the genus *Drepanis* and related genera, considered as forming a distinct family of birds. They have curved, slender bills and extensible tubular, brushy tongues. See cut under *Drepanis*.

Drepanidiidia (dre″pa-nid″i-id'i-ä), *n. pl.* [NL.] A suborder of *Hæmosporidia* which infest the blood-corpuscles of amphibia, reptiles, and birds: contrasted with *Acystosporidia*. They are small uninucleated, gregarine-like organisms found in the red, rarely in the colorless, corpuscles. Destroying these, they are then liberated freely into the plasma. Later they pass through other changes, involving encystation in the red corpuscles, then fission, and migration into new cell-hosts.

dress, *v. t.* 11. In *veg. pathol.*, to treat (grain and other seed) with hot water, formaldehyde solution, or a similar fungicide, for the purpose of destroying the spores of smut and other plant-diseases.—12. In *milling*, to clean and refine (flour); free (flour) from bran by passing it through bolters. See *milling*.

dress, *n.* 7. In *printing*, a set of types with their appurtenances; also, their arrangement and their general appearance in print.

In consequence of this, a large number of small printing shops sprang up in obscure places, being generally known as "holes." These shops often used secondhand and worn-out *dresses* of type, and, operating secretly, produced pamphlets and small books of a very poor grade.
Census Bulletin 216, June 28, 1902, p. 52.

Fancy dress, an unusual dress or costume that is imagined or intended to represent that of some historical or fictitious type or person. Sometimes used attributively: as, a *fancy-dress* ball.

dresser[1], *n.* 6. A mandrel having a round top face, used by blacksmiths in forging the forked ends of connecting-rods.—**Emery-wheel dresser**, a hand-tool for truing and dressing worn, eccentric, or ill-balanced emery-wheels.

dresser[2], *n.* 3. A dressing- or toilet-table.

dressership (dres'ėr-ship), *n.* [*dresser* + *-ship*.] In a hospital, the office of a dresser, a medical student or young physician whose duty is to dress wounds, ulcers, etc.

He [Sir James Paget] had been too poor to afford a house-surgeoncy, or even a *dressership*.
Encyc. Brit., XXXI. 406.

dress-form (dres'fôrm), *n.* A frame, sometimes of wire, in the form of a woman, used in making dresses. Such forms are sometimes capable of being expanded and contracted, according to the proportions of the woman for whom the dress is fitted.

dress-guard (dres'gärd), *n.* 1. A removable cover designed to be placed over the rim of a carriage-wheel to prevent the garments of persons who are entering or leaving the carriage from coming in contact with the wheel.—2. A similar guard placed on the wheels of a bicycle.

dress-improver (dres'im-prö″vėr), *n.* A bustle, usually in the shape of a pad or cushion, intended to give the desired curve to a woman's hips and back.

dressiness (dres'i-nes), *n.* Fondness for dress or fashionable dress; modishness; stylishness. [Colloq.]

dressing, *n.*—**Dry dressing**, the application to a wound of dry gauze, absorbent cotton, or the like, impregnated (or not) with corrosive sublimate or other antiseptic.—**Occlusive dressing**, one which covers the wound and adjacent parts, shutting out the air and obviating all possibility of infection from without.—**Ore dressing**, in *metal.*, the breaking up of lumps of ore mixed with veinstone so as to detach the former from the latter; the first stage of the mechanical purification of the ore before submitting it to chemical treatment.

dressing-forceps (drės'ing-fôr″seps), *n.* A forceps with pivoted blades and scissor-like handles used for grasping lint, drainage-tubes, etc., in dressing a wound.

dressing-machine, *n.*—**Box-dressing machine**, a planing-machine which employs reciprocating planes moving between vertical guides, used to finish the corners of packing-boxes after they have been put together by a box-nailing machine (which see, under ★*nailing-machine*).

dressmakery (dres'mā″kėr-i), *n.* A dressmaking establishment; a dressmaker's business.

She also gave her an insight into details . . . concerning the conduct of a *dressmakery*.
W. Besant, All Sorts and Conditions of Men, viii.

dressmaking (dres'māk″ing), *n.* The occupation of a dressmaker.

dress-preserver (dres'prē̤-zėr″vėr), *n.* A leather-covered iron frame extending from the step of a carriage upward over the rim of the wheel, designed to prevent mud or water from being thrown into the carriage.

dress-suit (dres'süt), *n.* A gentleman's evening clothes. [Colloq.]—**Dress-suit case**, a flat, thin traveling-bag, intended originally to carry a gentleman's dinner or evening dress.

drias (drī'as), *n.* [Origin obscure.] The deadly carrot, *Thapsia Garganica*. See cut under *Thapsia*.

dribbler, *n.* 2. In *foot-ball*, one who 'dribbles,' or kicks the ball lightly along the ground. See *dribble*[1], *v. t.*, 3.

driblet-cone (drib'let-kōn), *n.* A cone produced by the ejection of drops of molten lava or fragments of but partly solidified lava to no great height, so that they fall back still viscous and adhere to the surface wherever they fall.

A *driblet-cone* has no crater, but simply a hole for the projection of lava in small liquid masses, drops, driblets, or worm-like streamlets. *Dana*, Manual of Geol., p. 271.

driery (drī'ėr-i), *n.* A drying establishment: as, a peach or an apple *driery*. Also spelled *dryery*.

drift, *n.*, 7. (*b*) The flow of a current. (*c*) The amount by which a ship is drifted by the action of a current, wind, or sea. (*d*) The place in the sheer where the rails are cut off.—11. (*b*) A conical steel pin used by riveters or fitters to drift or force two holes not quite in line with each other, so that the openings will coincide and let the rivet or bolt pass through.—17. (*a*) A set of fishing-nets. (*b*) A drift-net. (*c*) The catch of fish taken in a drift-net.—18. In *turpentining*, a subdivision of the crop, usually 2,100 boxes or cups.—19. In *oceanography*, a broad and shallow current which advances at a rate of ten or fifteen miles a day, like that which crosses the middle North Atlantic. *W. M. Davis*, Elem. Phys. Geog.—20. In *aëronautics*, the tendency of an object supported in the air (as a kite or a bird) to move in the direction of the air; opposed to *lift* or the ascensional force. *H. S. Maxim*, in The Aeronautical Annual, 1896, p. 50.—**Dead-reckoning drift** (*naut.*), the determination of drift by dead-reckoning. When a ship is hove to under sail she will come up and fall off, and the middle point between is considered the compass course, to which must be applied the leeway, variation, and deviation, in order to obtain the true course, or the true drift of the vessel. The speed of the ship on this drift is determined by the patent-log.—**Drift of a projectile**, deviation of a projectile from the plane of fire, caused by the rifling of the gun.—**Drift of zero.** See ★*zero*.—**Eskar drift**, coarse gravel and shingle in banks. *R. M. Johnston.*—**Extra-morainic drift**, glacial debris occurring outside of the area actually occupied by the ice. *R. D. Salisbury*, Geol. Surv. of New Jersey, 1892, p. 61.—**Lower terrace drift**, gravels and shingle in terraces occurring in Tasmania and Australia. *R. M. Johnston.*—**Overwash drift**, the material which is washed out from the front of a glacier. *R. D. Salisbury*, Geol. Surv. of New Jersey, 1893, p. 150.—**Preglacial drift**, loose sand or gravel lying beneath the till, in Ireland. *G. H. Kinahan.*—**Quartz drift**, a drift containing quartz fragments as a prominent constituent of the loose rock-mantle. *Science*, March 15, 1901, p. 407.—**Ripple drift**, the process by which a moving current of water produces ripples upon the sand of its bed and thus leaves a record of its direction. *Geikie*, Text-book of Geol., p. 255.—**River drift**, the gravel deposits accumulated by a river in its torrential stages.—**Rubble drift**, a coarse agglomeration of angular debris and large blocks set in an earthy matrix. The fragments are of local type and the deposit of glacial or fluvioglacial origin.

drift, *v. t.* **5.** To drive; specifically, to drive by striking a set, pin, or block placed against the object to be driven.—**6.** To enlarge or shape a hole by the use of a drift-pin.

drift-angle (drift'ang″gl), *n.* **1.** In *naval arch.*, the angle between a tangent to the circular path of the center of gravity of a vessel, when turning under the influence of the rudder, and the central longitudinal line of the vessel.—**2.** The angle by which the direction axis of the bore of a gun deviates from the true direction in order to compensate for the drift of the projectile.

drift-bed (drift'bed), *n.* In *geol.*, a layer of drift of sufficient uniformity to be distinguished from associated ones of similar origin; a drift-stratum.

drift-boat (drift'bōt), *n.* A boat used for putting out and taking in a drift-net.

drift-bottle (drift'bot″l), *n.* A bottle used for the same purpose as a ★drift-cask (which see).

drift-cask (drift'kåsk), *n.* An empty cask closely sealed, usually furnished with a pole and flag, numbered, lettered, labeled, and tagged, set adrift in some part of the ocean, to be observed from time to time by passing vessels, as an aid in the study of ocean-currents. If it is found cast upon the shore, the inclosed tags, or labels, or cards are sent to the nearest hydrographic office. See ★*drifter*.

drift-deposit (drift'dē-poz″it), *n.* Any accumulation of glacial origin; glacial or fluvioglacial deposit. *J. Geikie,* The Great Ice Age, p. 724.

drifter (drift'ėr), *n.* One who or that which drifts; specifically, a cask, buoy, float, or other light object, properly labeled and tagged, and allowed to drift freely in the ocean to determine ocean-currents. When the surface of the drifter above the water is intentionally made large, relatively to the immersed portion, the drift is due principally to the influence of the surface-winds. When the drifter is not exposed to the wind it shows the influence of the ocean-currents either at the surface or at a considerable depth, depending upon the depth of the layer in which it floats. This may be regulated to some extent by an arrangement similar to that of the Cartesian and Florentine divers. Drifters are set afloat in all parts of the ocean, and their paths are shown on the monthly pilot-charts, together with the paths of derelicts.

Excellent use has here been made of "*drifters,*" or floats, supplementing the temperature and salinity observations. On the voyage from Iceland to Jan Mayen in 1896 twenty drifters were thrown overboard.
Geog. Jour. (R. G. S.), XV. 275.

drift-filled (drift'fild), *a.* Filled with drift: the condition of preglacial depressions, which were crossed by the great ice-sheet and filled with its morainal deposits.

A paper on the "*Drift-filled* and Post-glacial Glens of Ayrshire." *Geog. Jour.* (R. G. S.), XVIII. 83.

drift-fish (drift'fish), *n. pl.* Fish taken with a drift-net. *N. E. D.*

drift-fisher (drift'fish″ėr), *n.* One who uses a drift-net; one who is engaged in a drift-fishery.

drift-fishery (drift'fish″ėr-i), *n.* A fishery in which drift-nets are used.

drift-keel (drift'kēl), *n.* Same as *bilge-keel.*

drift-map (drift'map), *n.* A map showing the distribution of various glacial and glaciofluvial deposits, generally called *drift.*

drift-peat (drift'pēt), *n.* A peat deposit associated with or imbedded in glacial drift.

The ancient alluvia with their arctic flora must be older than the *drift-peat* and timber that underlie the carse deposits of the 45 to 50 foot level.
J. Geikie, The Great Ice Age, p. 308.

drift-piece (drift'pēs), *n.* See *drifts in the sheer draft,* under *draft.*—**Ordnance drift-piece,** an attachment to the rear sight of a gun, by means of which compensation for the drift of the projectile, caused by the rifling of the bore, is made.

drift-pin (drift'pin), *n.* A steel pin having a slight taper, preferably largest in diameter at about the middle of its length and tapering toward the ends: used in ship-building and structural work to force the punched holes in the material into line, so that a rivet or bolt can be inserted.

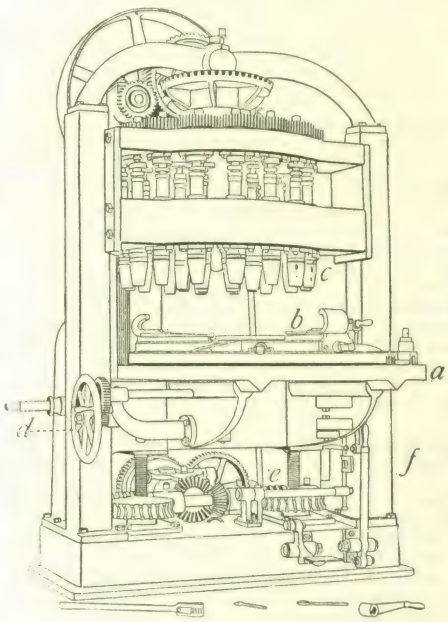
drift-way (drift'wā), *n.* In *stock-raising,* a right of way across neighboring land.

dril, drild. Simplified spellings of *drill, drilled.*

drill[1], *n.*—**Calyx drill,** a core-drill having a revolving cylindrical serrated cutting-tool. In soft rock, the cutter is used alone; in hard rock, chilled-steel shot are used as abradants. A stream of water is delivered to the cutter through the hollow drill-rod and, as it is under pressure, it sweeps the chips and stone-dust upward in the annular space between the outer casing of the drill-rod and the sides of the bore-hole. The rising stream of water and chips soon reaches the top of the short casing and here the current, having more room, slackens and the stone chips fall into the open top of the casing or calyx. The calyx, with its contents, is lifted out of the hole with the tools, and the core is broken off and raised as with any form of core-drill.—**Half-round drill,** a form of boring- or perforating-tool for metals in which the cutting edge is made at the end of a bar of semi-cylindrical section or half-round rod. The flat part makes a channel up through which the borings may pass.—**Oil-tube drill,** a twist-drill in which is cut a slender channel, following the twist from the shank to the point, which is used to convey a fine stream of oil to the cutting-point and to cool and lubricate the tool: used in boring deep holes in steel. It can be used in any form of boring-machine.—**Paddy-drill,** a well-boring drill with expanding cutters.—**Percussion-drill,** the ordinary drill for hand-work on rocks, which is struck by a sledge, or, where it is massive, is lifted up and allowed to fall into the drill-hole.—**Pillar-drill.** Same as *pillar drilling-machine.*—**Pneumatic rotary drill,** a form of boring-machine for steel or other metals, usually portable, and driven by compressed air. The motor in the body of the tool has a rapid rotary motion, geared down to the slower speed desirable for the cutting edges of the drill proper.—**Pump-drill,** a rock-drill in which the bar or shank is raised and lowered by a lever-action like a pump-handle. The descent of the bar causes the cutting blow of the bit at its lower end. The bar is turned continually as it rises and falls.—**Sensitive drill.** See ★*drilling-machine.*—**Setting-up drill,** the methodical performance of certain calisthenic exercises designed to give an erect carriage.—**Slotting-drill,** a drill for metal which cuts at its sides rather than at its end: hence, if the work is fed crosswise to the axis of the drill, a long slit or slot will be cut.—**String-drill,** a form of drill for light work in which the holder or shank is caused to revolve by a round turn of a piece of cord or catgut, to which a to-and-fro motion is given by hand or by foot-treadle. For jewelers' use, the ends of the cord may be attached to the ends of a bow, making what is called a *bow-drill.*—**Wimble-drill.** (*a*) A drill which bores by means of the cutting edges on its end. (*b*) An apparatus used with a boring-tool which cuts on its end and is fed into the hole by a gimlet point, or with a tool such as is ordinarily turned by hand.

drill-bone (dril'bōn), *n.* A bone which sometimes develops in the deltoid muscle in soldiers: supposed to result from irritation caused by the pressure of the musket.

drill-clamp (dril'klamp), *n.* A portable frame for holding a drill, having, usually, a screw for feeding the drill; a portable drill; a frame for a ratchet-drill. This frame is often called in American shops an *old man.*

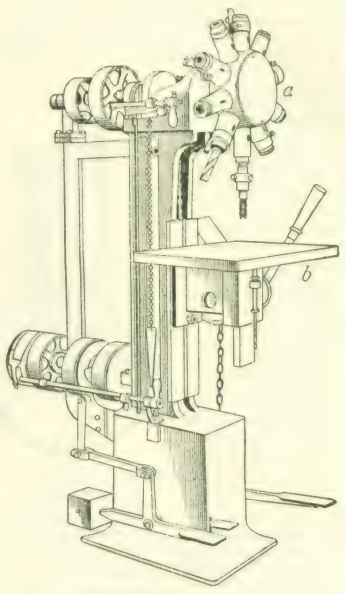


drill-core (dril'kōr), *n.* Same as *core*[1], 2 (*i*).

drill-extractor (dril'eks-trak″tor), *n.* A device, used in drilling tube-wells, by which the drill-rod or -bit can be drawn up out of the tube in case of breakage; a drill-tongs.

drill-grinder (dril'grīn″dėr), *n.* A grinding-machine for forming different kinds of twist-drills and other drills.

drilling-clip (dril'ing-klip), *n.* A frame or holder to force a drill against the service-pipe for gas or water when the latter is to be drilled and tapped to connect a new service-outlet.



drilling-machine, *n.* Specifically, a power-machine of the first class, employed in drilling small holes in metals. Small machines and all hand-power machines used for this purpose are often called *drills,* as the *radial*

Multiple-spindle Drilling-machine.

a, traversing and partly rotating table; *b,* self-centering chuck; *c,* spindles (24), drilling tools not shown; *d,* wheel controlling traverse of table; *e,* feed mechanism; *f,* control. About 16 feet high.

drill (which is properly a radial drilling-machine). When the diameter of the boring-tool (drill) exceeds two inches the machine is properly a boring-machine. All machines for boring holes in wood are called *boring-machines.* See ★*boring-machine* and *boring-mill.* The essential features of the machine are a rotary spindle carrying the cutting-tool, a table for holding the work, and a suitable frame uniting these features into a complete machine. Drilling-machines are often named after the things on which the work is to be done, as *rail-drilling machine,* etc. Drilling-machines, when of superior construction, with great refinement of adjustment in the moving parts, are said to be sensitive; hence, the term *sensitive drill,* that is, one highly responsive to delicate and rapid adjustment. The drilling-machine is sometimes used also for other work, by employing tapping- and milling-cutters on additional spindles, as in the drilling-, tapping-, and milling-machine.—**Boring-and-drilling machine.** See ★*boring-machine.*—**Gang drilling-machine,** a drilling-machine having from two to ten spindles placed in a row above the work-table, each supported by a fixed column or frame. The spindles may all carry the same style of drill or different ones, according to the requirements of the work, and may be used in turn, or all at once.—**Multiple-spindle drilling-machine,** a drilling-machine having four or more spindles. Two principal types are in use. In one, the drill-heads which carry the spindles are supported on a cross-rail and are adjustable to any position, or at any angle on the cross-rail; in the other, the spindles are arranged in groups about a center, with adjustment along the radius of the circular group.—**Turret drilling-machine,** an upright drilling-machine, with a disk sup-

Turret Drilling-machine.

a, revolving turret with ten spindles, two shown with tools; *b,* table with vertical traverse and feed.

porting four or more radial spindles and having a rotary motion, under the control of the operator, whereby each spindle, with its special drilling-, reaming-, or other boring-tool, can be brought in turn to the work, thus making it possible to perform a series of operations upon the same piece without removing it from the table.—**Upright drilling-machine,** the most common and generally useful of the single-spindle drilling-machines. The spindle has a feed-motion, an automatic stop to control the depth of the hole, and a quick return in withdrawing the tool. The table is adjustable to the work and there is often a lower or floor table, the upper table swinging out of the way when this is used.

drilling-twill (dril'ing-twil), *n.* Same as *drilling*[2].

drill-pin (dril'pin), *n.* In a lock, the projecting pin that serves as a guide for a hollow key.

drill-ship (dril'ship), *n.* A practice-ship; a ship for the instruction of cadets; a vessel employed for teaching the rudiments of seamanship, navigation, gunnery, and marine engineering.

drill-templet (dril'tem″plet), *n.* A templet or jig in which the holes to be drilled in the work are carefully laid out as to location and relative distance and hardened steel bushings are inserted at these points. If the drill is inserted through these bushings and the templet firmly clamped to the work the drill will bore all the holes exactly in the same relations to each other, in every piece.

drill-tongs (dril'tôngz), *n.* **1.** A tool for gripping and extracting the drill-rod when the latter has been broken in the bore of a well and has fallen to the bottom.—**2.** A drilling- or boring-tool with one jaw which can go behind or below the object to be perforated, while the bit is on the face or end of the other jaw, so that closure of the jaws causes the bit to advance and make the hole.

drill-yard (dril'yärd), *n.* In *railroading,* a special yard for receiving, classifying, and forwarding freight-cars; a division or junction yard, as opposed to a freight, storage, way-station, or terminal yard. It is divided into three parts: the *receiving-yard,* where the arriving trains are received; the *classification-yard* or *car-sorting yard;* and the *forwarding-yard,* where departing trains are made up. The classification-yard is many times larger than the receiving- or the forwarding-yard and is always placed

between them, in a continuous line, so that all movements of cars shall be progressive or in the direction of their destination. The receiving-yard is a group of parallel tracks all connected by switches with the main-line tracks, and it always includes tracks leading to the roundhouse, coal-yard, etc., storage-tracks for cabooses, and cripple-tracks. On the arrival of the train at the receiving-yard the engine and crew are dismissed and the train is delivered to the yard crews. Drill-engines then proceed to rearrange the cars of the train. The caboose is sent to its storage-track and the cars are inspected and moved forward to the classification-yard. This yard consists of a large number of parallel tracks joined together by diagonal tracks, called *ladder-tracks*. The drill-engines push the train along the ladder, turning out each car (or group bound to one station) into its special track, thus sorting them into way- or through trains for the next division, or into the proper trains for other roads that have junction-points in the neighborhood. In this classification process, all injured, damaged, or unsafe cars, called *cripples*, are sorted out and sent to the cripple-tracks. Four methods of drilling a train in a classification-yard are employed. One is to place the drill-engine in the rear of the train and to push it, as a whole, along the ladder, sending one car at a time, the first, second, etc., into its proper track. This implies 'kicking,' or sending a car off into its track by moving the whole train forward and casting off the end car to run into its place by its own momentum, the remaining cars being stopped or pulled backward ready for the next push forward. Another method is to send the train into the ladder-track and then to employ a second drill-engine, moving on a track parallel with the ladder, to pole one car at a time into its proper track. This is done by placing a wooden pole at one corner of the engine and fitting the other end into an iron pocket on one corner of the car. The forward movement of the engine poles or pushes the car along until it has sufficient momentum to enter its appropriate track. In this method only the engine moves backward and each car moves continuously forward. These two methods are used where the entire yard is upon one level. The third method is used when the entire yard is upon a down grade, or where the ladder-track alone is upon a down grade. The drill-engine pushes the train upon the down-grade ladder (this may be on an artificial grade) and the work of drilling is greatly hastened by using gravity to assist the engine in handling the train, or by using gravity to send each car down grade into its proper track, the train and engine moving only slightly or just enough to start the free car down the grade. The fourth method employs a hump-ladder, or a ladder-track laid upon a slight artificial hill or 'hump.' The engine pushes the train up the hill, and as each car reaches the summit or hump it is released and runs down the grade to its proper track. By this method no single car ever moves backward and its progress through the yard is hastened with a great saving of time and labor. At the farther end of the classification-yard is the smaller advance-yard, connected with it by ladder-tracks. In this yard the fresh engine and crew receive the train with the cars properly arranged according to destination. The train is made up by drill-engines that pull out the proper cars from each track of the classification-yard, and make up the new train in the advance-yard. Drill-yards are always double, one complete yard being assigned to trains moving one way, and the other to those moving in the opposite direction. Some drill-yards are a mile or more long and have trackage for a thousand cars. Such yards are usually outside of cities, and in the neighborhood of coal-storage yards and car-shops. In a well-planned yard trains are usually received, classified, and sent forward within an hour or two and at an expense of only a few cents per car.

drimin (drī′min), *n.* [*Drim(ys)* + *-in*[2].] A crystalline pulverulent compound, $C_{13}H_{14}O_4$, found in the bark of *Drimys Winteri*. It darkens and melts at about 256° C.

drimol (drī′mōl), *n.* [*Drim(ys)* + *-ol.*] A colorless compound, $C_{28}H_{58}O_2$, found in the leaves of *Drimys Winteri*. It crystallizes in needles, melts at 73–74° C., and boils without decomposition.

drinking-song (dring′king-sông), *n.* A song suited to convivial gatherings, or where toasts are drunk.

drip, *n.* **6.** In *meteor.*, the drops of water which fall from leaves and other objects which are enveloped by clouds or fog, or covered with dew. In some locations, such as the summit of Green Mountain, in the Island of Ascension, the cloud-drip is the only source of water for plants and animals. The fog-drip on the California coast is also important.

7. An inclined wooden platform, used in the manufacture of salt, for draining the salt before it is conveyed to the storehouse.—**8.** A deposit formed from dripping water, as stalactites in caves.—**9.** In *hort.*, the water that drips from the sash-bars and other roof-structure of a glass-house. The true drip is due to the water of condensation, although the term is also applied to the water of leakage.

dripcock (drip′kok), *n.* A waste-valve or releasing-valve used in hydrants. See ★*hydrant-cock*.

drip-cup (drip′kup), *n.* A shallow tray of tin or iron placed under a bearing or machine to catch the dropping oil, so that it will not soil anything underneath, and to preserve the oil which is usually strained and used again.

drip-grooves (drip′grövz), *n. pl.* Channels, in bearings for machinery, in which lubricant may be caught, as it is fed in drops or collects from a splash or spray surface, and fed to the entire surface of contact between shaft and bearing.

drip-pan (drip′pan), *n.* Same as ★*drip-cup*.

dripping-point (drip′ing-point), *n.* See ★*drip-tip*.

drip-point (drip′point), *n.* **1.** The end of a metal rod or wire from which oil drips when it is to be used as a lubricant or when it is to be burned in some forms of internal-combustion engines.—**2.** See ★*drip-tip*.

drip-sheet (drip′shēt), *n.* In *med.*, a wet sheet from which the water (cold, cool, or warm, as the case may be) is wrung out and which is then wrapped around the naked body of a patient standing in a tub of water.

dripstone, *n.* **3.** Same as *stalagmite*.

drip-tip (drip′tip), *n.* In *bot.*, a long acuminate point of a leaf, common in regions where the rainfall is heavy, which serves to drain off the water rapidly. It occurs only on leaves with a wettable surface. Also *dripping-point*, and *drip-point*.

drip-valve (drip′valv), *n.* A valve for removing liquid which is superfluous, or undesired; specifically, a valve through which condensed steam, in the form of water, is removed from a cylinder of an engine, or any pipe carrying steam. Such water is not only inconvenient, but may become dangerous if accumulating in excess. Similar drip-valves are required to remove tar and other liquids from gas-mains.

drisk (drisk), *n.* [Appar. a mixture of *dri(zzle)* and *(du)sk.*] A drizzle or drizzly mist. [New Eng.]

drivable (drīv′a-bl), *a.* **1.** Capable of being driven: as, a *drivable* nail.—**2.** Suitable for driving: as, a *drivable* distance.—**3.** Suitable for the transportation of logs: as, a *drivable* stream, that is, one down which logs from a lumber-camp may be floated and directed in their course. [North America.]

drive, *v. t.*, **1.** (*e*) In *cricket*, to strike (a ball) forcibly, so as to send it somewhere in front of the wicket. (*f*) In *lumbering*, to float (logs or timbers) from the forest to the mill or shipping-point. (*g*) In *entom.*, to induce (a colony of honey-bees) to leave one hive and enter another: usually effected by pounding on the hive.

drive, *n.*, **1.** (*f*) In *croquet*, a roquet stroke that sends the object-ball to some particular spot. (*g*) In *golf*, the shot off the tee: usually made with a wooden club (driver). (*h*) In *cricket*, a stroke by which a ball, usually a half-volley, is hit somewhere in front of the wicket.

8. A driving mechanism, as of a motor-cycle or motor-carriage: used with some qualifying term, as a flexible *drive*, a gear-*drive*, etc.—**9.** In *lumbering:* (*a*) A body of logs or timbers in process of being floated from the forest to the mill or shipping-point. (*b*) That part of logging which consists in floating logs or timbers.—**Bevel-gear drive.** See ★*bevel-gear.*—**Drive bridge, euchre, whist,** etc. Same as *progressive bridge, euchre,* ★*whist*, etc. See *progressive* ★*games.*—**Flying drive,** in *lumbering*, a drive of logs of which the main portion is put through with the utmost despatch, without stopping to pick up the rear.—**Union drive,** a drive of logs belonging to several owners who share the expense pro rata.

drive-off (drīv′ôf), *n.* In *golf*, the initial stroke played; a drive from the tee.

drive-pipe (drīv′pīp), *n.* **1.** The feed- or supply-pipe of a hydraulic ram.—**2.** A pipe to be driven into the ground for a driven well. A pointed strainer is put on the end of the pipe to make it drive easily and also to serve as a foot-valve.

driver, *n.*, **1.** (*i*) A horse which is fitted to be used for driving, in distinction from one used for riding or as a draft-horse. Drivers are classed as *roadsters* and *standard-bred* or *trotters*, the last being used for racing purposes. (*j*) In sporting phrase, a pigeon or other bird that when liberated from the trap, or flushed, flies rapidly and directly away. Contrasted with *twister*. (*k*) A wooden golf-club with which the ball is driven from the tee. Also *play-club*. See cut under *golf-club*.

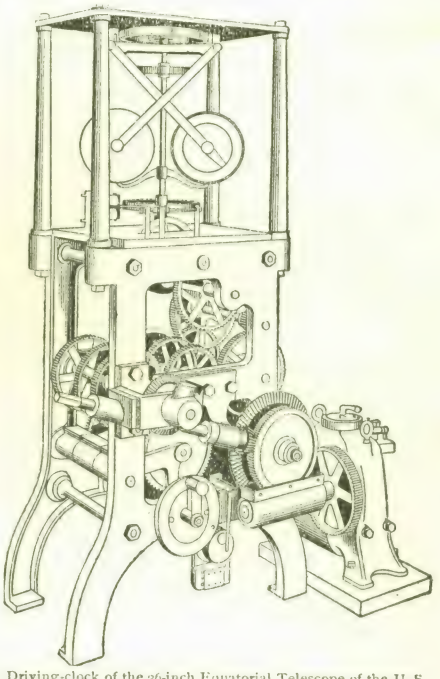
driver-brake (drī′vėr-brāk), *n.* A brake applied to the rim of a driving-wheel on a locomotive. Also called *driving-wheel brake*.

driver-chuck (drī′vėr-chuk), *n.* A chuck fastened on the head-stock mandrel which drives work that is being turned between centers.

driver-mast (drī′vėr-mȧst), *n.* On a six-masted vessel, the after-mast. See ★*after-mast*.

driving-belt (drī′ving-belt), *n.* The belt by which an engine or other source of power drives the machinery of a factory, or any primary belt that conveys motion.

driving-bit (drī′ving-bit), *n.* A light bit of varying pattern and construction designed especially for trotting-horses.



driving-chain (drī′ving-chān), *n.* Any form of chain used in transmitting power from a motor to a tool, machine, or conveyor, or from one part of a machine to another. It is usually made with detachable links, designed to run over sprockets, and is used in bicycles, motors, etc.

driving-cheek (drī′ving-chēk), *n.* A wing projecting from the face of a disk, by which another element may be made to move or to revolve; a crank which drives by pushing a follower by a flat surface.

driving-chuck (drī′ving-chuk), *n.* A lathe-chuck fitted with a driver for rotating the work. The chuck is usually a circular face-plate, having one or more pins projecting from its face. The name is sometimes applied to the cup-chuck, because the wood to be turned is driven into it by blows from a hammer.

driving-cleik (drī′ving-klēk), *n.* In *golf*, an iron club with a comparatively straight face: it is slightly deeper than the regular cleik.

driving-clock (drī′ving-klok), *n.* A form of clock which drives a mechanism or apparatus,

Driving-clock of the 26-inch Equatorial Telescope of the U. S. Naval Observatory at Washington.

as a telescope, heliostat, or chronograph, at a uniform rate which is directly related to the passage of time. Such clockwork is attached to an equatorial telescope, so that the tube shall move exactly in opposition to the motion of the earth on its axis, and the optical axis of the lenses be directed continuously upon a star. In stellar photography, calling for long exposures, the driving-clock of the telescope-tube must be of the greatest refinement and accuracy as a machine and as a timekeeper.

driving-cushion (drī′ving-kůsh″ọn), *n.* A wedge-shaped cushion for the driver of a carriage. It is placed on the carriage-seat, with the thin edge in front, so that the driver is held in a half-sitting position.

driving-flange (drī′ving-flanj), *n.* A flange or rim on a wheel or shaft which, by friction or by engagement, drives another part of the machine.

driving-iron (drī′ving-ī″ėrn), *n.* In *golf*, an iron club with less loft than the regular iron and a slightly deeper face.

driving-mashie (drī′ving-mash″i), *n.* In *golf*, an iron club with a small, deep face, with less loft than an ordinary mashie, and usually with a longer shaft.

driving-pinion (drī′ving-pin″yọn), *n.* Any small toothed wheel which drives another, or from which another receives its motion. *Nasmith*, Cotton Spinning, p. 213.

driving-putter (drī′ving-put″ėr), *n.* In *golf*, a wooden putter with a straight face, used in playing against the wind.

driving-rein (drī′ving-rān), *n.* A rein fitted with a billet and buckle at one end for the attachment of the bit: the other end is stitched to the hand part.

driving-rod (drī′ving-rod), *n.* In locomotives, the connecting-rod; the main-rod: distinguished from the side-rod.

driving-wing (drī′ving-wing), *n.* One of the arms of a double crank, or of a crank formed in the shaft to be driven, at such a distance from either end that there is a bearing for the shaft on each side of the crank. If one of the arms is lighter in weight than the other, by reason of the smaller resistance to be overcome on one side of the crank-pin, the driving-wing will be the more massive arm.

Drobisch's spiral. See ★*spiral.*

drog (drōg), *v. t.* To transport or carry in a droger: as, he was engaged in *drogging* sugar from the West Indies. *N. E. D.*

drogue, *n.* 2. Same as *drag,* 1, (*j*).

Dromatheriidæ (drō″ma-thē′rī-i-dē), *n. pl.* [*Dromatherium,* the type genus, + *idæ,* family ending.] A family of small mammals, comprising extinct species from the Trias and Jurassic. The type genus *Dromatherium* has 3 premolars and 7 molars, the dentition somewhat resembling that of the living *Myrmecobius.* The family is commonly considered as belonging with the polyprotodont marsupials, but it has been suggested that some of the species assigned to the group may really be anomodont reptiles. *Gill,* 1872.

drome (drōm), *n.* An abbreviation of ★*aërodrome.*

Dromiacea (drō-mi-ā′sē-ä), *n. pl.* [NL., < *Dromia* + *-acea.*] A group of Mesozoic crabs in which the fifth pair of feet, which are sometimes chelate, are carried dorsally.

dromograph (drō′mō-graf), *n.* [Gr. δρόμος, running, + γράφειν, write.] 1. A device for recording the rapidity of the blood-current.—2. An instrument for recording the apparent path of anything in the atmosphere. It has a vertical cylinder on which directions in azimuth and altitude may be inscribed by pencils which slide vertically. A telescope pointing toward a balloon, a bird, a kite, or a cloud carries the pencils with it, and the record made by the latter gives the altitude and azimuth of the object at any moment. Two dromographs, with observers at stations a short distance apart, can obtain a continuous record of the movement of an object that is mutually visible. Having clocks that agree perfectly, they make time-marks every five minutes on the respective records.

dromometer (drō-mom′e-tėr), *n.* An instrument for the measurement of velocity; a speed-indicator.

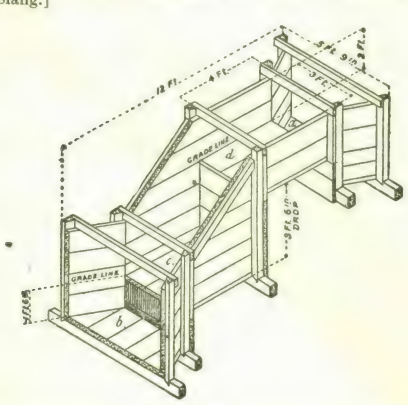
dromometry (drō-mom′e-tri), *n.* The measurement of speed; the use of the dromometer.

Dromornithidæ (drōm-ôr-nith′i-dē), *n. pl.* [NL., < *Dromornis,* (*Dromornith-*) + *-idæ.*] A family of large, extinct birds which contains species related to the emu.

dromos, *n.* 3. In *Gr. antiq.,* the shortest foot-race which was just the length of the stadium, or about 600 feet. See *stadium.*—4. The entrance to the Mycenæan beehive tomb. See ★*beehive tomb.*

dromoscope (drō′mō-skōp), *n.* An instrument for exhibiting the circulation of winds around a storm-center, or for locating a storm-center when the direction of the wind is known.

dromotropism (drō-mot′rō-pizm), *n.* Interference with the conductivity of muscle.



The centrifugal cardiac nerves influence the frequency, the force of contraction, and the conductivity of the excitatory wave (chrono-, ino-, and *dromo-tropism* of Engelmann). *Encyc. Brit.,* XXXI. 733.

drone[1], *n.* 3. The tone emitted by the drone of a bagpipe.

drong (drong), *n.* A lane or narrow passage. [Prov. Eng.] *N. E. D.*

Drooping disease, *n.* See ★*disease.*

drop, *v.* **I.** *intrans.* 10. In *archery,* to fall short of the mark aimed at: said of an arrow.—11. To show a tendency to lower the shoulders, due to weakness of the muscles: said of a horse.—**To drop asleep,** to sink quietly into slumber; figuratively, to die peacefully, without struggle, and as if unobserved.—**To drop off.** (1) To become detached and fall: as, the petals *dropped off,* one by one; (2) to drop asleep; (3) die peacefully, and as if unobserved; (4) become less regular; fail gradually: as, he began to *drop off* in his visits.—**To drop to,** to 'tumble to'; 'catch on'; become aware of; begin to understand; perceive: as, the crowd did not *drop* to his game for some time. [Slang.]

Drop.

a, flaring approach and submerged platform; *b,* flaring wings and submerged platform of outlet to ditch below drop; *c,* floor on the grade of the ditch below the drop forming a water-cushion; *d,* short flume on grade of ditch above drop.

II. *trans.* 10. To lose or part with: as, to *drop* a thousand dollars at poker. [Slang.]

drop, *n.,* 9. (*h*) A device of timber, metal, or masonry for permitting the waters of irrigating and other canals and ditches to descend to a lower level without causing erosion. The drops are usually provided with a water-cushion to break the force of the fall.

15. In *elect.,* a fall of potential.—16. A steep slope.—17. A disease of lettuce, caused by the fungus, *Sclerotinia Libertiana.*—18. A fall or sudden vertical descent, as from a height or from a general level, either in space, or from some known position or condition, as in prices, values, temperature, etc.: as, an unexpected *drop* in the rate of discount; a *drop* in the price of steel.—19. The distance through which, or the extent to which, anything drops: as, a *drop* of twenty feet; a *drop* of ten points in copper; a *drop* of twenty degrees in temperature in as many hours.—20. In tabular work, a drop-line.—21. In *baseball,* a ball so delivered by the pitcher that it shoots downward.—22. In *tennis,* a ball so struck by the racket as to shoot sharply downward after crossing the net.—23. A patent-leather ornament, pear-shaped or of other ornamental form, used on the face-straps and hip-straps of a harness.—24. The newly born young of animals: most commonly used in speaking of sheep.—**Black drop,** vinegar of opium.—**Drop culture.** See ★*culture.*—**Green drops,** a solution of mercuric chlorid or corrosive sublimate, colored green to attract attention to its poisonous character.—**Hoffmann's drops,** the pharmaceutical name for a mixture of three parts of alcohol and one part of ether: used as an anodyne, and called after Hoffmann, of Halle, who died in 1742. Also called *Hoffmann's anodyne.*—**Knock-out drops,** a powerful narcotic, such as a saturated solution of chloral hydrate in water, or a preparation of the fruit of *Cocculus Cocculus* (fishberries): employed by evil-doers to stupefy their intended victims.—**To have the drop on one.** Same as *to get the drop.*

drop-arch (drop′ärch), *n.* An arch lower in proportion than is usual: as, a blunt-pointed arch, a segmental arch, or a three-centered arch.

drop-berry (drop′ber″i), *n.* The Solomon's-seal, *Polygonatum,* applied to *P. multiflorum* and *P. commutatum.* See *Solomon's-seal.*

drop-bolt (drop′bōlt), *n.* 1. A bolt so constructed as to drop into a socket.—2. The bolt which keeps the drop of a gallows in place until the signal for its withdrawal is given.

drop-cake (drop′kāk), *n.* A small cake made by dropping thick batter from a spoon into hot, deep fat, or on a well-buttered pan to be baked in the oven.

drop-door (drop′dōr), *n.* In *car-building,* the gate or flap of a hopper or drop-bottom car. See *drop-bottom.*

drop-dry (drop′drī), *a.* Water-tight; proof against leaks: as, a *drop-dry* roof. *N. E. D.*

drop-ear (drop′ēr), *n.* An ear that turns downward, as in certain dogs. See ★*drop-eared.*

drop-eared (drop′ērd), *a.* Having ears that turn downward, but are not so long and pendulous as those of a hound: said of dogs.

drop-flower (drop′flou″ėr), *n.* Any plant of the genus *Nabalus,* so called from its nodding heads. It is better known as *rattlesnake-root* (which see).

drop-forge (drop′fōrj), *v. t.* To shape by the impact of a falling mass or weight. Usually the shaping is done by one blow received upon the stock while the latter is held between hardened steel dies carefully adjusted to each other, so as to hold each one half of the required shape. When the two halves come together by the fall of the weight, the stock takes both form and impress from the dies, and a finished product results, needing only trimming and polishing. Most manufactured forgings for the parts of sewing-machines, guns, bicycles, automobiles, and the like, are made by this process, and fine patterns in forks, spoons, and metal ware can be similarly produced, with great economy of labor and exact duplication of size and form. See *drop-press.*

drop-frame (drop′frām), *n.* In *candy-making,* a hand- or power-machine for making the many forms of fruit or other drops; a fruit-drop frame. It consists of a pair of rolls engraved with forms of fruits, fishes, toys, etc., between which the sheets of candy are passed and by which they are impressed and cut into drops. The finished drops are delivered to a traveling-apron and conveyed through cooling-boxes to be chilled and hardened.

drop-gate (drop′gāt), *n.* A gate in an irrigation-canal operated in such a way that it can be opened by dropping a shutter.

drop-handle, *n.* 2. A carriage-door handle which is attached to the spindle in such a manner that it hangs down when not held in the hand.

drop-hook (drop′hůk), *n.* A harness check-hook secured to its base by a collar which allows the hook to drop to the sides.

drop-jaw (drop′jâ), *n.* Paralytic rabies in the dog: so called from the half-open mouth, due to paresis of the jaw muscles, which is characteristic of this form of the disease.

The dumb form of rabies is very common, and many persons know it as "*drop jaw*" who have no idea of its true nature. *Yearbook U. S. Dept. Agr.,* 1900, p. 233.

drop-key (drop′kē), *n.* In *lock-making,* a key having a hinged shank to allow the end or bow to hang down parallel to the door.

drop-leg (drop′leg), *n.* A vertical pipe which carries gas, steam, or water downward from a horizontal pipe.

drop-lever (drop′lev″ėr), *n.* 1. A lever having a drop or an offset to pass an obstacle or to bring the end to any desired point.—2. A lever that drops or swings on a pivot, used to disengage the feed or stop any part of a machine.

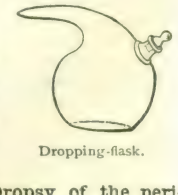
drop-light, *n.* 2. An electric lamp, analogous to a gas drop-light, for table use.—3. A coach-window that can be dropped in grooves in the framework of the coach, so as to be out of sight.

drop-line (drop′līn), *n.* 1. A hand-line; a fishing-line worked by hand without a rod. See *hand-line.*—2. A horizontal line, as in a genealogical table, which is carried lower down when the space for continuing it horizontally is insufficient.

drop-lubrication (drop′lū-bri-kā″shọn), *n.* Lubrication by some device which drops the oil upon a bearing constantly, instead of applying it in a flood intermittently.

drop-meter (drop′mē″tėr), *n.* An instrument for measuring liquids by drops.

drop-motion (drop′mō″shọn), *n.* An arrangement on a yarn-reel by means of which two of the arms of the reel can be shortened so as to release the hank and facilitate its removal.



dropping, *n.* 5. *pl.* The waste material which drops under a machine, as in the process of scutching cotton.

The primary impurities from each of the two processes of opening and scutching are known as the *droppings.* *Hannan,* Textile Fibres of Commerce, p. 115.

6. A disease of cattle commonly known as milk fever, somewhat analogous to puerperal fever in women: so called because the cow drops to the ground when sick.—**Iceberg droppings,** debris deposited from an iceberg.

The results obtained by geologists, who have been studying the peripheral areas of the drift-covered regions of our continent, are such as to satisfy us that the drifts of those regions are not *iceberg-droppings.* *Smithsonian Rep.* 1890, p. 221.

dropping-flask (drop′ing-flâsk), *n.* A light glass vessel for delivering liquids by drops: also used for weighing out liquids.

Dropping-flask.

dropsy, *n.* — **Abdominal dropsy,** ascites. — **Amniotic dropsy,** hydramnios. — **Articular dropsy,** hydrarthrosis. **Cardiac dropsy,** dropsy consequent upon weak circulation due to heart-disease.—**Dropsy of the brain,** hydrocephalus.—**Dropsy of the chest,** hydrothorax.—**Dropsy of the pericardium,** hydropericardium.—**Dropsy of the peritoneum,** ascites.—**Dropsy of the pleura,** hydrothorax.—**Dropsy of the spine,** hydrorachis.—**Dropsy of the testicle,** hydrocele.—**Dropsy of the uterus,** hydrometra.—**False dropsy.** Same as *retention cyst* (which see, under *retention*).—**Hepatic dropsy,** dropsy (ascites) due to obstruction of the flow of blood in the veins of the liver.

dropsy-plant (drop′si-plant), *n.* The common garden- or lemon-balm, *Melissa officinalis,* reputed to cure dropsy.

dropt, *pp.* A simplified spelling of *dropped.*

drop-table, *n.* 2. A table, without legs, which is hinged to a wall. When not in use it may hang down against the wall; when in use it is propped up by one or two hinged braces or by a revolving bracket: used in boat-cabins and in small pantries.

drop-terret (drop′ter″et), *n.* A harness-terret attached to its base by a collar which allows it to drop to the sides.

dropwort, *n.*—**Western dropwort,** *Porteranthus trifoliatus.* See cut under *Gillenia.*

droseraceous (dros-ę-rā′shius), *a.* Belonging to the plant-family *Droseraceæ;* pertaining or related to the sundews.

droshky, *n.* 2. A very low four-wheeled carriage of the cabriolet type.

Drosophilidæ (dros-ǫ-fil′i-dē), *n. pl.* [NL., < *Drosophila* + *-idæ.*] A family of acalyptrate

muscoid Diptera of which *Drosophila* is the type: commonly known as the *little fruit-flies*.

drosophore (dros'ō-fōr), *n.* [Gr. δρόσος, dew, + -φορος, < φέρειν, bear.] A device for spraying water into air to increase its humidity; a kind of atomizer.

dross, *v. t.* 2. To convert (lead) into dross or protoxid by melting in an oxidizing atmosphere. The operation is usually accomplished in a reverberatory furnace.

drove[2] (drōv), *v. t.* and *i.*; pret. and pp. *droved*, ppr. *droving*. To follow the occupation of a drover.

drove-road (drōv'rōd), *n.* An ancient road or track along which cattle may be driven, but which is not kept in repair: same as *drove*[2], *n.*, 2.

drown, *v. t.* 4. In *phys. geog.*, to submerge beneath the waters of a lake or ocean: said of a valley that is thus converted into a bay by a relative change of land- and water-level. See ★*drowned stream.*— 5. In *tobacco culture*, to injure by long-continued rain followed by warm sunshine. The tobacco soon wilts under these conditions. Also called *scald*.

This tobacco was cut after being *drowned* or scalded.
Yearbook U. S. Dept. Agr., 1897, p. 33.

drownd, *pp.* A simplified spelling of *drowned*.

drowned (dround), *p. a.* That has been drenched or submerged, as *drowned* lands; also, that has perished by drowning.—**Drowned boiler.** (*a*) A type of sectional boiler in which the evaporating units deliver the steam formed in them into a drum or chamber below the level of the water in the latter: distinguished from a 'foaming' boiler, in which each unit disengages from the area of its own cross-section only, or above the water-level of the steam-and-water drum.

The Belleville boiler belongs to what is called the "foaming" class. This epithet is not applied as a mark of disparagement in any way, but simply to distinguish it from the "*drowned*" class. The difference between the two is that, whereas in the "foaming" class the tubes deliver the steam above the water level in the large steam drum, in the "*drowned*" type the steam is delivered in the drum below the water line.
Sci. Amer. Sup., Dec. 27, 1902, p. 22566.

(*b*) A fire-tube upright boiler in which the tubes forming the heating-surface are surrounded for their whole length by the water to be evaporated, instead of projecting for part of their length above the normal water-level. This construction diminishes the tendency to leakage at the upper tube-sheet, because the tubes are not subject to such wide ranges of temperature change, and to such changes of length relatively to the outer shell, as the fire varies in intensity or the water-level is carelessly lowered. —**Drowned level,** a horizontal passage or level, as in a mine, at each end of which an upward shaft, either inclined or vertical, rises above the level of the roof. Such passage and shafts form an inverted siphon, and water gathering there fills it up, and can only be removed by pumping, as no drainage is possible.—**Drowned stream,** a stream whose valley has subsided until the sea, encroaching upon it, has formed a bay or estuary of its lower course. The St. Lawrence, Hudson, Chesapeake, and Delaware rivers are examples of drowned streams entering the sea. The St. Louis river flowing into Lake Superior illustrates similar inland relationships. See ★*drown*, 4.

drowner, *n.* 2. In *irrigation*, one who works the sluices of reservoirs and side-channels, in the upper part of a valley, which flood or drown meadows below, so as to afford an equable distribution of water for irrigation. Locally called *drownder*.

Dr. Phil. An abbreviation of *Doctor of Philosophy*.

Dr. Phys. Sc. An abbreviation of *Doctor of Physical Science*. Also *D. P. S.*

drug-beetle (drug'bē″tl), *n.* Same as ★*biscuit-beetle* (which see, with cut).

drug-disease (drug'di-zēz), *n.* 1. A morbid state caused by the long-continued or habitual use of a drug.—2. In homeopathic medicine, the complex of symptoms noted after the administration of any drug for purposes of proving.

The manifestations of drug action thus produced are carefully recorded, and this record of "*drug-diseases*," after being verified by repetition on many "provers," constitutes the distinguishing feature of the homœopathic materia medica. *Encyc. Brit.*, XXIX. 312.

druggy (drug'i), *a.* [*drug* + -*y*[1].] 1. Of or relating to drugs.—2. Being under the influence of a drug.

drug-mill (drug'mil), *n.* A special grinding-mill used in the manufacture of drugs.

drum[1], *n.*, 1. (*b*) The head or membrane of a banjo or similar instrument.

3. (*k*) A circular box, revolved by machinery, in which skins are tanned or colored. See also ★*coloring-wheel*. *C. T. Davis*, Manuf. of Leather, p. 337.

8. (*b*) A drummer in a military command.

12. An inflatable sac on the side of the neck of such a bird as the prairie-chicken: supposed to give resonance to the sound produced by the wings when drumming. See *tympanum*, 2. (*c*) (2).—13. An Australian bushman's bundle; a swag.—14. The revolving cylinder of the kymograph, chronograph, or other instrument, upon the surface of which curves are drawn, time records made, etc.

The clockwork of the kymograph is wound up, and the *drum* swung round to its proper starting-point.
E. B. Titchener, Exper. Psychol., I. i. 104.

Black drum, the salt-water drum, *Pogonias chromis*. See cut under *drum*.—**Conical drum,** in *mining*, a form of rope-drum used on hoisting-engines to equalize the variation in load due to the varying length of the hoisting-rope as the load ascends or descends in the shaft. Such drums are usually double and serve two hoisting-compartments, one load ascending as the other descends.—**Drum-and-cone signal.** See ★*signal*.—**Drum membrane.** Same as *tympanic membrane*.—**Wash drum,** a drum for washing skins. *Modern Amer. Tanning*, p. 81.

drum[1], *v. t.* 5. To treat in a drum, as skins. See ★*drum*[1], *n.*, 3 (*k*). *Modern Amer. Tanning*, p. 90.—6. In *forestry*, to haul (logs) by drum and cable out of a hollow or cove.

drum-barrage (drum'bär″āj), *n.* See ★*barrage*.

drum-beat (drum'bēt), *n.* The sound of a drum.

drumbledore (drum'bl-dōr), *n.* An imitative variant of *dumbledore* (a bumblebee). Compare *drumble-drone*. Sometimes applied figuratively to a person. [Prov. Eng.]

drum-dial (drum'dī″al), *n.* A revolving cylindrical surface on which a record is kept in a time-register. *Engin. Mag.*, July, 1904, p. 618.

Drumhead motion, the vibratory motion or wave-motion of the head of a drum, boiler, or tank.

drum-language (drum'lang'gwāj), *n.* A system of communication in which certain ideas are expressed by rhythmical combinations of drum-beats. This method of signaling is found among the negroes of the west coast of Africa. *Ratzel* (trans.), Hist. of Mankind, II. 406.

drumlinoid (drum'lin-oid), *a.* and *n.* [*drumlin* + -*oid*.] I. *a.* Resembling a drumlin.

Some of the principal ridges present *drumlinoid* profiles, while their lateral slopes were greatly over-steepened.
Sci. Amer. Sup., Jan. 16, 1904, p. 23447.

II. *n.* A hill resembling a drumlin in shape.

drumlinoidal (drum-lin-oi'dal), *a.* Same as ★*drumlinoid*.

drumloid (drum'loid), *a.* and *n.* [*drumlin*(*oid*) + -*oid*.] Same as ★*drumlinoid*.—**Drumloid hill,** a hill having a lenticular outline similar to that of a drumlin.

While the drumlin type is fairly distinct, drumlins grade into hills which are not drumlins. When they become somewhat irregular in form they are sometimes designated drumloids, *drumloid hills* or immature drumlins. It is not certain that some of them may not be over-mature drumlins—that is, drumlins made irregular by unequal surface deposits upon regular drumlin forms.
R. D. Salisbury, Geol. Surv. of New Jersey, 1891, p. 74.

drummer, *n.* 4. A horse that beats the air by throwing its fore legs out irregularly as it goes. *Grose*. [Jockey cant.]—5. Same as *drum*[1], 11. —6. A local English name for a rabbit: so called on account of its habit of beating or drumming upon the earth with the hind feet.

drumstick, *n.* 4. The tetanus bacillus, which has a round spore at one extremity.

drum-tannage (drum'tan″āj), *n.* Tannage by means of a drum. See ★*drum*[1], *n.*, 3 (*k*). *C. T. Davis*, Manuf. of Leather, p. 399.

drum-wheel, *n.* 2. In *tanning*, same as ★*drum*[1], *n.*, 3 (*k*).

drunk, *p. a.* 3. Bent; crooked: used to describe a bent screw which imparts a sidewise as well as an endwise motion to a nut.

drunkard, *n.* 2. [*pl.*] The marsh-marigold. —3. [*pl.*] The wintergreen or checkerberry, *Gaultheria procumbens*.

drunken, *p. a.* 5. Producing intoxication, or used in manufacturing intoxicants, as certain plants—for example, the betel-nut, called *drunken date*, the darnel, called *drunken rye-grass*.

drunken-fish (drung'kn-fish), *n.* One of the trunk-fishes, *Lactophrys triqueter*. [West Indies.]

drunkenness, *n.* 3. In *mech.*, unsteadiness, crookedness, or inequality of pitch in a screw, such that the nut either wabbles or does not advance at a constant speed.—**Sleep drunkenness,** a confused mental state and muscular incoördination sometimes seen in one aroused from a deep sleep.

drunkery (drung'ke-ri), *n.*; pl. *drunkeries* (-riz.) [*drunk* + -*ery*.] A place in which to get drunk; a grog-shop or saloon. [Colloq.] *N. E. D.*

drupal (drö'pal), *a.* [*drupe* + -*al*.] Same as *drupaceous*.

drupiferous (drö-pif'e-rus), *a.* [NL. *drupa*, drupe, + L. *ferre*, bear.] Bearing drupes.

drusiness (drö'zi-nes), *n.* The state of being drusy; exhibiting a surface of minute crystals.

Drusiness is sometimes produced by a regular deposit upon the faces of one mineral of minute sub-individual belonging to a different species.
H. A. Miers, Mineralogy, p. 86.

Drusy vein. See ★*vein*.

dry. I. *a.* 14. In *pathol.*, not attended with suppuration, a fluid discharge or exudation, or hemorrhage.—**Dry arch, element,** etc. See ★*arch*[1], etc.—**Dry method,** in *chem.*, same as *dry way*.—**Dry streak.** Same as *dry* ★*face*.

II. *n.* 4. Dry land: as, to execute a piece of engineering work in the *dry* (that is, not under water).

Owing to the annual rise and fall of the Nile, it was seldom that such work [the digging of a canal] could be executed in the *dry*.
Sci. Amer. Sup., Jan. 10, 1903, p. 22590.

dryback (drī'bak), *a.* Having no water-space at the back end: used in reference to boilers which have no water-space at the back of the combustion-chamber.

dry-blowing (drī'blō″ing), *n.* A method adopted in Western Australia, of freeing pounded gold ore from the powdered matter when water is not available. It consists in slowly pouring the crushed material from one dish into another and blowing away the powder with the mouth as it falls, when there is not wind enough to do the work.

Drydenian (drī-dē'ni-an), *a.* Of, pertaining to, or characteristic of John Dryden, the English poet (1631–1700).

He [Crabbe] reverted to the *Drydenian* triplet and Alexandrine on which Pope had frowned.
G. Saintsbury, Hist. Nineteenth Cent. Lit., p. 8.

Drydenic (drī-den'ik), *a.* Same as ★*Drydenian*.

Drydenism (drī'den-izm), *n.* A phrase, turn of expression, or the like, characteristic of John Dryden, the English poet.

dry-fly (drī'flī), *n.* In *angling*, an artificial fly intended to float on the surface of the water like the natural insect. Also called *floating fly*.

Dry-fly fishing, although more or less has been heard about it, is still little practiced in this country, and many anglers will be interested to see the work done at the tournament with *dry flies*.
Forest and Stream, Feb. 21, 1903, p. 151.

Dry-fly casting, in *angling*, a mode of fly-casting in which the fly is not allowed to sink below the surface of the water.—**Dry-fly fishing,** in *angling*, fishing with the dry-fly.

To define *dry-fly fishing*, I should describe it as presenting to the rising fish the best possible imitation of the insect on which he is feeding, in its natural position.
F. M. Halford, Floating Flies, p. 117.

dry-hole (drī'hōl), *n.* A hole in a mine or quarry in which no water can be used in the drilling process. Such is any hole the mouth of which is at a lower level than the bottom as the drilling proceeds.

drying-bath (drī'ing-bath), *n.* In *chem.*, a vessel, often made of sheet-copper or sheet-iron, cubical or nearly so in form, in which substances are heated to a determinate temperature in order to drive off water, or sometimes alcohol or other liquids. The walls are often made double, and hot water or steam occupies the intervening space. An electric current is sometimes passed through resistance-coils so as to produce an easily regulated temperature. Also called *drying-oven*.

drying-cylinder (drī'ing-sil″in-dèr), *n.* A hollow metal cylinder, heated by steam, for drying textile fabrics brought into contact with it.

drying-room (drī'ing-röm), *n.* A room, as in a factory, where drying operations are carried on.

drying-stove (drī'ing-stōv), *n.* 1. A core-oven. See *drying-oven*, under *oven*.—2. A laundry dry-room.

drying-train (drī'ing-trān″), *n.* A number of receptacles containing desiccating materials, so joined together that any gas passing through them is thoroughly dried.

dry-kiln (drī'kil), *n.* In *lumbering*, a kiln for drying and seasoning cut lumber, boards, etc.; a lumber drier. Such kilns are often made of great size, contain tracks for cars loaded with lumber, and are fitted with steam-heating pipes and power-fans for delivering warmed air.

dry-mixer (drī'mik″sèr), *n.* See ★*sand-mixer*.

Drynaria (drī-nā'ri-ā), *n.* [NL. (J. Smith, 1841, adopted from Bory de Saint-Vincent, 1825, as subgenus), < Gr. δρῦς, oak.] A peculiar genus of mainly epiphytic polypodiaceous ferns mostly with fronds of two sorts, the sterile ones sessile, concave, cordate-oblong and sinuate or laciniate, having little chlorophyl and conspicuous, raised venation; the fer-

tile ones larger, pinnatifid or pinnate, the sori roundish, naked, sometimes confluent, borne at the junction of the compoundly anastomosing veinlets. There are about a dozen species, widely distributed in the eastern hemisphere, of which *D. quercifolia* is the best known.

Dryopterideæ (drī-op-te-rid′ē-ē), *n. pl.* [NL., ⟨ *Dryopteris* (*Dryopterid-*) + *-eæ.*] A large tribe of polypodiaceous ferns of various habit and venation, typified by the genus *Dryopteris.* They have the stipes continuous with the rhizome, the sori terminal or dorsal, the indusia superior and either free upon all sides or extrorse, or often lacking. The genera occurring within the United States and Canada are: *Dryopteris, Phegopteris, Goniopteris, Phanerophlebia, Polystichum, Sayenia,* and *Tectaria.*

Dryopteris (drī-op′te-ris), *n.* [NL. (Adanson, 1763), ⟨ Gr. *δρῦς*, oak, + *πτερίς*, a fern. The name alludes to frequent association of ferns with oaks and groves generally.] A large genus of polypodiaceous ferns, type of the tribe *Dryopterideæ* with fronds pinnate to tripinnate or dissected, the venation usually free, and the sori roundish with superior cordato-reniform indusia fixed at the sinus. The type of the genus is *D. Filix-mas,* the well-known male-fern or vermifuge, of wide distribution. Nineteen species occur within the United States and Canada, many of them the commonest woodland species. See *male-fern* and *Nephrodium.*

dryopteroid (drī-op′te-roid), *a.* Resembling or related to the genus *Dryopteris,* or the tribe *Dryopterideæ.*

dry-pipe (drī′pīp), *n.* A pipe, running along near the top of the steam-space, which takes steam from the boiler. It is perforated with a number of small holes, the end being closed to prevent any large body of water from entering. The aggregate area of the holes is a little less than the area of a cross-section of the steam-pipe, so that the steam will be slightly expanded and superheated so as to become thoroughly dry.

dry-room (drī′röm), *n.* In *laundry-work,* an inclosed chamber heated by steam-pipes, used in drying shirts, collars, and other laundered articles. It is made of wood lined on the inside with sheet-metal and asbestos, or is made entirely of metal and fitted with wood or metal racks on which the articles are hung while being dried. Dry-rooms are also fitted with suction-fans for removing the heated air when it is saturated with moisture.

dry-rot, *n.,* **1.** *Trametes Pini, Thelephora pedicellata* and other *Hymenomycetes* cause a timber disease. See ★*conk*[2], 3, and *Thelephora. Fusarium Solani* and several species of *Phoma* cause a fungus disease of potatoes, turnips, and other root-crops.

dry-rot (drī′rot), *v. t.* To affect with dry-rot. *Lowell.*

dry-salt, *v. t.* **2.** In *dairying,* to add the salt to the butter while it is being worked. [Eng.]

dryster (drī′stėr), *n.* A drier; one employed in a drying establishment; one who is engaged in carrying on some drying operation.

Dr. Z., Dr. Zoöl. Abbreviations of *Doctor of Zoölogy.*

D. S. An abbreviation (*b*) of *Doctor of Science.*

D. Sc. D. An abbreviation of *Doctor of Science and Didactics.*

D. S. O. An abbreviation of *Distinguished Service Order.*

d. s. q. An abbreviation of *discharged to sick quarters.*

D. T., D. Th. Abbreviations of *Doctor of Theology.*

d. t. An abbreviation (*a*) of *delirium tremens.* [Slang.] (*b*) In *elect.,* of *double-throw:* as, a *d. t.* switch.

D-trap (dē′trap), *n.* In *plumbing,* a term sometimes applied to simple forms of traps resembling the letter **D.**

Du. An abbreviation of *Dutch.*

dual. I. *a.* **3.** In *geom.,* given by a principle of duality, as by interchanging point and straight in a plane.—**Dual consciousness.** See ★*consciousness.*

II. *n.* **2.** In *geom.,* a figure or theorem obtained by a principle of duality, as by interchanging side and angle in a plane.—**3.** In *chess,* a problem which has two solutions, that is, one in which the mate can be given either by one or by two pieces, or by one piece on two or more different squares.

dualism, *n.*—**Ethical dualism,** a moral system which demands one kind of conduct toward fellow-members of one's own social group, and the opposite kind of conduct toward all other men; especially, in primitive society, the recognition of one set of duties toward fellow-clansmen and of opposite duties toward strangers not of the blood-bond.—**Psychophysical dualism,** the metaphysical opinion that mind and matter are two different kinds of existents which are capable of acting upon each other.

dualistic, *a.* **3.** In *chem.,* pertaining to the dualistic system.—**Dualistic notation,** a notation based upon a principle of duality.—**Dualistic system,** the system, developed chiefly by Berzelius, of representing chemical compounds as constituted of two parts, a positive and a negative, chemically and electrically complementary, that is, mutually opposed. Thus sodium sulphate was represented as composed, not of sodium sulphur and oxygen, but of sulphuric acid (SO_3) and sodium oxid, which themselves were separated into positive and negative constituents. In some respects the theory is similar to the modern one of electrolytic dissociation.

duality, *n.*—**The principle of duality,** in *geom.:* (*b*) The principle that in theorems of configuration and determination any element or component may be interchanged with an element or component of like determining power in the universe under consideration, as straight for point or angle for sect in the plane.

dualize (dū′a-līz), *v. t.*; pret. and pp. *dualized,* ppr. *dualizing.* To make or regard as two. *N. E. D.*

dub[1], *v. t.* **4.** (*f*) To make a fair show outside or on the surface, as by placing the good wares in the upper part of a basket and the inferior beneath. [Prov., Eng.]

dub-end (dub′end), *n.* The carved end of a cross- or spring-bar of a carriage.

dubitant (dū′bi-tant), *a.* and *n.* [L. *dubitans* (*-ant-*), ppr. of *dubitare,* doubt; see *doubt.*] **I.** *a.* Doubting; inclined to doubt: as, a shy, *dubitant* creature. *Bulwer.*

II. *n.* One who doubts; a doubter.

dubl, *a., n., v.,* and *adv.* A simplified spelling of *double.*

dubld, *pp.* A simplified spelling of *doubled.*

dublet, *n.* A simplified spelling of *doublet.*

Dubois's abscesses or **disease.** See ★*abscess.*

ducat, *n.*—**Barbary ducat,** an Arab gold coin current in the West Indies in the first half of the eighteenth century.

ducatello (dö-kä-tel′ō), *n.* [It., dim. of *ducato,* ducat.] A silver coin of Venice.

duchesse (dü-shes′), *n.* [F.: see *duchess.*] A type of sofa borrowed by the English designer Hepplewhite from the French. It is composed of two arm-chairs placed face to face with a stool connecting them, all three being framed together.

duck[1], *v.* **I.** *intrans.* **4.** In *bridge,* to lead a suit from the dealer or the dummy hand, and make no attempt to win the trick third hand, even when able to do so. See *underplay.*

II. *trans.*—**To duck up** (*naut.*), to lift (the clue of the foresail or mainsail on a square-rigger), so that the view ahead of the vessel may not be shut out from the steering-wheel. On cutters carrying a loose-footed mainsail the tack (junction of the foot and luff) of the sail is lifted by a small permanent purchase called a *tack-tackle* when the lower part of the sail near the mast obstructs the helmsman's view ahead.

duck[2], *n.* **5.** In *cricket,* no score; zero: short for *duck's-egg* (which see). [Slang.]—**Aylesbury duck,** a breed of ducks named from Aylesbury, England. They are large ducks, white with orange shanks, having a long, slender head and a pink beak.—**Call duck,** a duck of diminutive breed, raised for display rather than for the market: used originally for decoys, whence the name.—**Field-lane duck,** a local English name for a baked sheep's head.

duck-acorn (duk′ā″kôrn), *n.* The water-chinkapin, *Nelumbo lutea.*

duck-barnacle (duk′bär″na-kl), *n.* Same as ★*goose-barnacle.*

duckbill, *n.* **4.** *Polyodon spathula,* one of the ganoid fishes of the order *Salachostomi.* Two species are known, inhabiting fresh waters of the United States and China.

duck-boat (duk′bōt), *n.* A light, shallow-draft boat propelled by oars or a sail, and employed in duck-shooting.

Duck-egg porcelain. See ★*porcelain.*

ducker[2] (duk′ėr), *n.* **1.** One who rears ducks. —**2.** A ducking-gun (which see).

duck-grass (duk′gràs), *n.* See ★*grass.*

duck-ladder (duk′lad″ėr), *n.* A short ladder. [Local, Eng.]

duck-mud (duk′mud), *n.* Same as *crow-silk* (which see).

ducks (duks), *n. pl.* In *bot.,* a name indiscriminately applied to any of the American species of *Cypripedium* except *C. arietinum.*

duck-shover (duk′shuv″ėr), *n.* A cabman who breaks rank in order to pick up a stray passenger instead of waiting his turn. [Australia.]

duckweed, *n.*—**Greater duckweed,** *Spirodela polyrhiza,* formerly included in the genus *Lemna.* Also called *water-flaxseed.*—**Tropical duckweed,** the water-lettuce, *Pistia Stratiotes.*

duckwheat (duk′hwēt), *n.* A local name for *Fagopyrum Tataricum,* the Tartarian buckwheat or India wheat. This species differs from the common buckwheat in having a grain with notched or wavy edges, a more slender habit of plant, smaller and hastate leaves, and greenish or yellowish flowers in smaller clusters.

duck-wing (duk′wing), *n.* Same as *duck-wing* ★*game.*

duct, *n.*—**Aberrant duct of the liver.** See ★*aberrant.*—**Botal's duct.** Same as *ductus Botalli.*—**Closed duct,** in *bot.,* an elongated cell which is not continuous but has the intervening septa remaining.—**Dotted duct,** in *bot.,* a duct or vessel marked with dots or pits.—**Hermaphrodite duct,** in certain mollusks, as *Helix,* a duct leading from the hermaphrodite gland to the exterior or communicating therewith through other passages.—**Intercellular duct,** a duct or passage formed between the cells.—**Nephric duct,** the duct of the kidney: a general term applied to the pronephric, mesonephric, and metanephric ducts.—**Reticulated duct,** a duct in which the markings seem to form a network.—**Santorini's duct.** Same as *Santorini's* or *Bernard's canal* (which see, under *canal*[1]).—**Scalariform duct,** a duct with ladder-like markings, characteristic of ferns. See *scalariform,* 1, (*b*), and *scalariform vessels* under *scalariform.*—**Skene's ducts,** minute tubules which open into the female urethra near the meatus.—**Thyroglossal duct,** the temporary connection between the thyroid gland in the embryo and the floor of the mouth.—**Umbilical duct,** in *embryol.,* the tubular connection between the primitive intestine, or archenteron, and the umbilical vesicle.

duct (dukt), *v. i.* and *t.* [L. *ducere,* pp. *ductus,* lead, draw: see *duct, n.,* and cf. *abduct, adduct,* etc.] To draw: said of muscles which abduct, adduct, or circumduct a part, such as the leg or the eye.

> The eyes can never be pronounced innocent in any case until the *ducting* and verting power of each separate muscle has been determined.
>
> *Med. Record,* Feb. 7, 1903, p. 210.

ductil, *a.* A simplified spelling of *ductile.*

Ductus dorsopancreaticus. Same as *Santorini's* ★*duct* or *canal.*—**Ductus hepatopancreaticus.** Same as the *duct of Wirsung.*—**Ductus omphalo-entericus.** Same as *ductus vitellinus.*

ducu (dö′kö), *n.* [S. Amer.] A shrub or small tree, *Clusia Ducu,* of the gamboge family, found in the Andes of Ecuador and Colombia. It yields a fragrant gum-resin which is used by the natives like incense.

dudder-grass (dud′ėr-gràs), *n.* The fern Venus's hair, *Adiantum Capillus-Veneris.* See *Venus's hair.*

dudish (dū′dish), *a.* Like a dude; characteristic of a dude.

dudler (dud′lėr), *n.* Same as ★*dudley.*

dudley (dud′li), *n.* [From the surname *Dudley.*] An engine for hauling logs which propels itself and drags its load by revolving a large spool around which are several turns of a cable, fixed at each end of the track.

dudleyite (dud′li-īt), *n.* [*Dudley(ville),* in Alabama, + *-ite*[2].] A hydrous silicate allied to the vermiculites and derived from the alteration of margarite.

due-cento (dö″ā-chen′tō), *n.* [It., contraction for *mille due cento,* 1200.] The thirteenth century. In the history of Italian art the due-cento is characterized by a blending of romanesque and gothic influences, and by the proto-renaissance of Frederick II. (1215–1250), who showed peculiar appreciation of classic art. The chief master of the period is Niccola Pisano, the sculptor and architect (about 1207–1278).

dueling-pistol (dū′el-ing-pis″tol), *n.* A long-barreled pistol of fine workmanship, made especially for dueling.

duellant (dū-el′ant), *n.* [L. *duellum,* duel, + *-ant.*] A duelist.

> The successful *duellant* had simply kept his guard and struck in the nick of time.
>
> *J. M. Hart,* German Universities, p. 77.

duettist (dū-et′ist), *n.* [*duet* + *-ist.*] One who takes part in a duet.

duetto, *n.* **2.** A base coin of Lucca, equal to two quattrini.

duff[2] (duf), *v. i.* In *golf,* to miss a stroke by hitting the ground behind the ball.

duffadar (duf-a-där′), *n.* [Hind. Pers. *daf'adār,* an officer in command of a small body of men, ⟨ *daf'a,* a section, + *-dār,* suffix of agent.] A petty officer, such as a sergeant or corporal of irregular cavalry, a police officer, or the man in charge of a gang of laborers. [Anglo-Indian.]

> We now composed a small party; besides our *Duffadar,* there remained Lassoo and Esau, twelve animals, and Ruby. *Geog. Jour.* (R. G. S.), XII. 268.

dufoil, *n.* **2.** In *bot.,* the twayblade, *Ophrys ovata.*

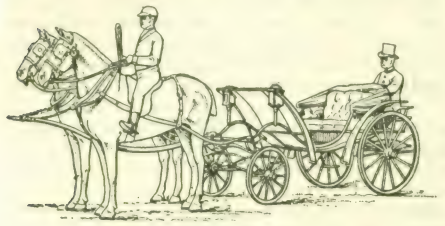
Dufton shales. See ★*shale*[2].

dugdug (dög′dög), *n.* [Chamorro name, in Guam.] The name in Guam of the fertile form of *Artocarpus communis,* the chestnut-like seeds of which, called *nangka,* are roasted and eaten by the natives. The latex is used as bird-lime, as a sizing for whitewash, and as a medium for mixing paints. The soft yellow wood is used for cupboards and interior woodwork of houses, but will not stand exposure to the weather. See *Artocarpus, breadfruit,* ★*bread-nut,* 2, and ★*antipolo.*

Dugongidæ (dū-gong′gi-dē), *n. pl.* [*Dugong* + *-idæ.*] A family of sirenian mammals, including the existing species of dugong and the extinct genus *Prohalicore.* *J. E. Gray,* 1821.

duguan (dö-gö-än′), *n.* [Tagalog *duguan*, < Tagalog and Bisaya *dugó*, blood.] In the Philippines, the name of several species of nutmeg, especially *Myristica Philippiensis*, a tree yielding a red resin. Its fruit is fragrant and was formerly used by the natives for making sweetmeats, but the inclosed nutmeg and its surrounding mace have little if any aroma. Also called *talangtalang*. See *Myristica*.

duiker (dī′kėr), *n.* [Cape D.] Short for ★*duiker-bok*.



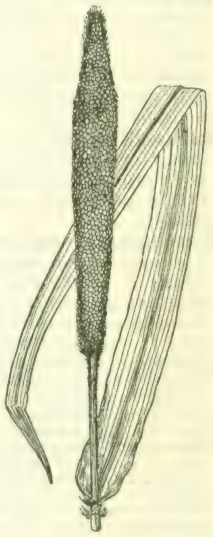
Mr. Oldfield Thomas exhibited and made remarks upon the skin of a female yellow-backed *duiker* (Cephalophus sylvicultrix) which had been obtained in the Awemba district of North-Eastern Rhodesia.
Athenæum, Jan. 25, 1902, p. 120.

duiker-bok (dī′kėr-bok), *n.* [Cape D., < *duiker*, diver, + *bok*, buck.] A small South African antelope, *Cephalophus grimmi*. It is about 26 inches high and typically of a yellowish-brown color. The males have small, straight pointed horns; the females are hornless. The name is extended to other antelopes of the same genus.

dukan (dö-kän′), *n.* [Aram., stage, platform.] The stage in the Jewish temple upon which the priests officiated, and the Levites stood when singing the daily psalms.

duk-duk (dök′dök), *n.* [New Britain.] The rituals of a secret society of the natives of New Britain. In these rites large masks are used which are said to represent the cassowary. *Ratzel* (trans.), Hist. of Mankind, I. 133.

duke[1], *n.* **6.** A vehicle having a victoria body suspended at the front on scroll-irons. At the rear is a rumble for a footman. It is sometimes driven by a postilion. Now called a *ladies' driving-phaëton*.—**Grand-duke.** See *duke*[1], 4f.



A Duke, appointed Demi-daumont.

Duke bit. See ★*bit*[1].

duke-phaëton (dūk′fā″e-ton), *n.* A form of the duke which is provided with a detachable driver's seat at the front. See ★*duke*[1], 6.

dukhan (dů′kạn), *n.* [Also *dukn*, *duchn*; < Ar. *dukhn*.] The pearl or negro millet, *Pennisetum spicatum*, a grass widely cultivated in warm countries for the sake of its seed and sometimes for fodder for cattle. The seeds are an important food-staple in many countries, but are not of such great economic importance as those of durra (*Andropogon Sorghum*). They are ground into meal, which in Africa is eaten in the form of mush, and in India, where it is the principal food-staple of the natives in many parts, in the form of bread or cakes, which are eaten together with buttermilk. In India called *cumboo-millet*.

Dukhan (*Pennisetum spicatum*), about one half natural size. (Drawn from Engler and Prantl's "Pflanzenfamilien.")

Dukhobors (dö′kō-bôrz), *n. pl.* See *Dukhobortsi*.

dulcamaretin (dul-ka-mar′ē-tin), *n.* [*dulcamara* + *-et* + *-in*[2].] A resinous compound, $C_{16}H_{26}O_6$, formed by the action of dilute acids on dulcamarin.

dulcan (dul′kạn), *n.* See ★*dolcan*, 2.

dulcin, *n.* **2.** Same as ★*sucrol*.

dulcinan (dul′si-nan), *n.* Same as *dulcitan*.

dulcinea (dul-sin′ē-ạ), *n.* [Sp., from the name of *Dulcinea* del Toboso, the lady beloved by Don Quixote, the hero of Cervantes's romance of that name; < L. *dulcis*, sweet.] A sweetheart; a mistress.

dulcitanide (dul-sit′ạ-nid), *n.* [*dulcitan* + *-ide*[1].] The general name employed in chemistry for compounds of acids and dulcitan: as, *benzodulcitanide*.

Dulidæ (dū′li-dē), *n. pl.* [NL., < *Dulus* + *-idæ*.] A family of passerine birds related to the shrikes, found in tropical America.

dull-witted (dul′wit″ed), *a.* Stupid; having a dull wit.

I do not believe that the average boy of the modern congregation is *duller-witted* or more restless now than I was then. *W. Gladden*, Parish Problems, p. 404.

dulotic (dū-lot′ik), *a.* [Gr. *δουλωτικός, < δούλωσις, enslavement, < δουλοῦν, enslave, < δοῦλος, a slave: see *dulia*.] In *entom.*, slave-holding: applied to those genera of ants which enslave colonies or individuals of colonies of other ants.

Dahl is mistaken in supposing that L. bismarckensis is a *dulotic* ant, as a perusal of the above quoted passages from Wroughton's work will suffice to show.
Biol. Bulletin, May, 1904, p. 257.

dum, *a.* and *v.* A simplified spelling of *dumb*.

duma (dö′mạ), *n.* [Also *douma* (< F. *douma*); < Russ. *duma*, a council, a court, a chapter (of an order), also thought, idea, elegy, = OBulg. Bulg. *duma*, council, = Bohem. *duma*, thought, reflection, = Pol. *duma*, thought, idea, reflection, opinion, elegy (see ★*dumka*) = Little Russ. *duma*, thought, = White Russ. *duma*, pride, arrogance, = Lith. *duma*, opinion, = Lett. *pa-dōms*, council; of Teutonic origin, < Goth. *dōms* = OHG. *tuom* = AS. *dōm*, E. *doom*, judgment: see *doom*[1], *n.*] In Russia, a council; an official assembly; specifically, an elective legislative assembly or council in Russia, established by ukase of Nicholas II. in 1905.

The *Doumas* of nearly all the principal cities have addressed the throne praying that the representatives of the people be summoned at once.
N. Y. Times, June 9, 1905.

In this [plans for a National Assembly] he [the Czar] has been influenced by the men who instituted the recent Congress at Moscow, of delegates from the zemstvos and *dumas*, or district and municipal councils.
Outlook, Aug. 12, 1905, p. 892.

dumaist (dö′mạ-ist), *n.* [*duma* + *-ist*.] A member of a duma.

The Czar, on March 3, issued a rescript addressed to the Minister of the Interior directing him to prepare plans for the assembling of representatives of the people. . . . [The plan] was received with derision by the zemstvoists and *dumaists* at their Congress in July.
Outlook, Aug. 12, 1905, p. 892.

dumaree, *n.* See ★*dumree*.

dumasin (dū′mạ-sin), *n.* [*Dumas*, a French chemist, + *-in*[2].] An oily ketonic compound, $C_6H_{10}O$, prepared by passing the vapors of acetic acid or acetone through a red-hot tube. It has a spicy odor and boils at 120–125° C.

Dumas's method. See ★*method*.

Dumb jockey, peal, tooling. See ★*jockey*, ★*peal*[1], *blind tooling* (under *tooling*).

dumb-barge (dum′bärj), *n.* See ★*barge*[1].

dumb-bell, *n.* **2.** In *bacteriol.*, a diplococcus: so called from its shape.—**Dumb-bell crystals.** See ★*crystal*.

dumb-card (dum′kärd), *n.* See ★*card*[1].

dumbcow (dum′kou), *v. t.* To browbeat into silence or submissiveness; cow. *R. Kipling.* [Anglo-Indian.]

dumb-drift (dum′drift), *n.* An airway for conveying foul air and dangerous gases to the upcast shaft of a mine, past, but not through, the ventilating-furnace, to avoid explosions.

dumb-furnace (dum′fėr″nās), *n.* Same as ★*dumb-drift*.

dumb-iron (dum′ī″ėrn), *n.* In carriages, an iron shaped like the half of an elliptic spring attached to a half-elliptic and with it presenting the appearance of a full elliptic. It is sometimes covered with wood and richly carved.

dumb-pintle (dum′pin″tl), *n.* A rudder-pintle whose lower end rests on a disk in a socket-brace designed to take the weight of the rudder.

dumb-sound (dum′sound), *v. t.* To deaden the sound of or proceeding from: as, to *dumb-sound* an iron bridge. *N. E. D.*

dumb-telescope (dum′tel″e-skōp), *n.* See ★*telescope*.

dumb-watches (dum′woch″ez), *n.* The pitcher-plant, *Sarracenia purpurea*, also the trumpet-leaf, *S. flava*, in allusion to the convex circular expansion at the summit of the style, resembling a watch.

dumby, *n.* See ★*dummy*, 5 (*d*).

Dumdum bullet, fever. See ★*bullet*, ★*fever*[1].

dumka (dömk̇ä), *n.* [Pol. *dumka*, dim. of *duma*, thought, elegy: see ★*duma*.] A Polish lament or threnody, or a piece of music in a melancholy style.

dummele (dům′e-lē), *n.* [Cingalese?] A tar prepared from the wood of the bastard sandal-

wood, *Erythroxylum monogynum*, a shrub or small tree of southern India and Ceylon. It is used as a preservative of native boats. See *Erythroxylum*.

dumminess, *n.* **2.** Specifically, an abnormal mental condition of the horse, following acute inflammation of the brain, in which the various senses are dulled and the animal takes no notice of its surroundings. There is also a peculiar alteration in the method of taking in the food. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 11.

dummy, *n.* **3.** (*e*) Proofs of pages of composed type pasted down upon a larger leaf in proper order, to show the general arrangement of an intended book or pamphlet.—**5.** (*c*) The dealer's partner at bridge. (*d*) In the game of rounce, an extra hand of 6 cards in the center of the table. *Amer. Hoyle*, p. 322.—**6.** A person who is put forward (by interested parties in the background) in some capacity in connection with a matter in which he has no real concern or as to which he is the mere tool of his movers: for example, (*a*) as an incorporator or a director of a bank, a railway, or other company, in order to satisfy some statutory requirement as to number, place of residence, or the like, or as (*b*) in Australia, when the public lands were thrown open, one who made application for an allotment in his own name, but really on behalf of another who had already made his own 'selection.'—**7.** A horse affected with dumminess, which follows an acute inflammation of the brain. See ★*dumminess*, 2.

The duration of the disease varies from a few hours to a week, the average being perhaps 72 hours. Horses which recover are said to become "*dummies*"—animals with a permanent cerebral lesion and defective intelligence. *Jour. Exper. Med.*, VI. 66.

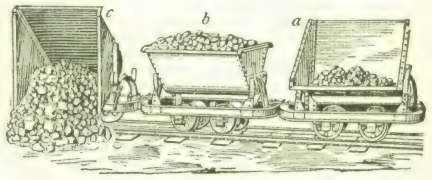
dummy (dum′i), *v. i.* To act as a dummy. See ★*dummy*, 6.

dummyism (dum′i-izm), *n.* The practice of using or of acting as a dummy in any matter, as taking up land by perjury and false pretenses on the part of the dummy. See ★*dummy*, 6.

dummy-weed (dum′i-wēd), *n.* The coltsfoot, *Tussilago Farfara*.

dump[2], *v. t.* **5.** To press closely; subject to severe pressure, as bales of wool. [Australia.]

dump-car, *n.*—**Air dump-car**, a gondola-car of which the body can be tilted up to discharge the load. It is operated by compressed air. See ★*gravel-car*.



dumper, *n.* **2.** In *railroading*, any form of tilting-, dumping-, or unloading-car, whether operated by hand or by power.

dump-grate (dump′grāt), *n.* A furnace- or boiler-grate which can be tilted or tipped up so as to drop or dump its load of ash and cinder; a dumping-grate or tip-grate.

dump-hook (dump′hůk), *n.* A levered chain grab-hook attached to the evener, to which a team is hitched in loading logs. A movement of the lever releases the hook from the logging-chain without stopping the team.

dumping-boat (dum′ping-bōt), *n.* A boat or scow used in the removal of rubbish and in dumping it into the ocean. *Buck*, Med. Handbook, VI. 880.

dumping-car, *n.* Any railroad-car which is used to carry loose material in bulk and which, through its construction or fittings, can be made to discharge its load. The most simple form has a balance square, cup-, or V-shaped body, so supported that it can be tilted up to discharge the load at the side of the track. In another type the body is hinged to a turntable on the truck and can be swung around and tilted in any direction. Another simple form has a tilting-floor and fixed ends, or a fixed sloping floor and hinged sides, or two floors joined together and sloping outward, with hinged sides. In this type the car-body is fixed and the load is dumped by releasing the hinged sides. In this sense the hopper-car, having sloping floors for the automatic discharge of the load through the hopper, is a dump-car. The largest and most complicated type consists of an under-frame supporting two hinged and inclined floors which meet in the middle and, when closed, sustain the

Dumping-car for Industrial Railroad.

a, car tilted up for convenience in loading; *b*, car loaded and locked for transport; *c*, car released and upset, discharging coal.

load in a V-shaped trough. When the load is to be discharged, one section of one floor may be opened and the load dumped between the rails, or, by means of deflecting plates and a fixed apron on the side of the car, it may be dumped at the side of the track. Two sections may be opened and the load discharged on both sides or on one side. The dumping apparatus may be operated by hand or by compressed air (obtained from the air-brake system), either when the train is at rest or when it is in motion, and in any direction, one car at a time or all the cars of the train at the same instant.

dumpling, *n.* 3. Any one of two or three species of dwarf, stemless, succulent evergreen plants belonging to the genus *Mesembryanthemum*, especially *M. minimum*, called the *small dumpling*, a plant only half an inch high, and *M. obcordellum*, called the *greater dumpling*, which is about an inch higher.—**Blue dumplings,** a favorite dish among the Creek Indians, consisting of two cups of corn meal, half a teaspoonful of baking-powder, and a little butter, made into small balls which are dropped into boiling water and cooked for five minutes. *Sci. Amer. Sup.*, May 7, 1904, p. 23703.

dump-moraine (dump′mō-rān″), *n.* A moraine formed of material dropped from a glacier.

dumpoke (dum′pōk), *n.* [A back-formation from *dumpoked.*] A stuffed duck; in general, any baked dish. [Anglo-Indian.]

dumpoked (dum′pōkt), *a.* [Hind. *dampukht*, cooking in steam, simmering, < *dam*, air, breath, steam, + *pukht*, cooked.] Boiled, as a fowl, with butter and spices; now, baked, as a fowl. [Anglo-Indian.]

dump-skip (dump′skip), *n.* A bucket for hoisting coal or ore, so constructed as to overturn or open when its contents are to be dumped.

dumree (dum′rē), *n.* [Also *dumrie, dumaree;* < Hind. *damrī.*] A copper coin formerly in use in Central India, of very slight value. *Yule and Burnell.*

dumus (dū′mus), *n.*; pl. *dumi* (-mī). [L., a bush. OL. *dusmus*, prob. connected with *densus*, thick: see *dense.*] A bush or low-branching shrub.

dun[1]. **I.** *a.*—**Dun hackle, land, limestone, skipper.** See ★*hackle*[3], ★*land*[1], *Redesdale* ★*limestone,* ★*skipper*[1].

II. *n.* 2. A dun-colored natural or artificial fly used in angling: as, the pale-olive *dun*, made with a body of hair from the polar bear; goose-*dun*, with a body of gray goose-pinion; blue *dun*, with a body of pale mole-fur.

dunal (dū′nal), *a.* [*dune* + *-al*[1].] Of or pertaining to dunes.

At Lake of the Woods there is no evidence that the Isle aux Sables is tenanted by both *dunal* and predunal types of plants.
C. MacMillan, Minn. Bot. Studies, Bulletin IX. p. 993.

dun-bar (dun′bär), *n.* A British collector's name for a dun-colored moth (*Cosmia trapezina*) having two bars or transverse lines on the fore wings. *N. E. D.*

Duncanella (dung-ka-nel′ä), *n.* [NL., < *Duncan*, proper name, + *-ella.*] A genus of extinct tetracorals of the family *Cyathaxoniidæ*, including very simple conical cups with regular septa and no tabulæ or dissepiments. It is of Silurian age.

dunch[1] (dunch), *n.* [*dunch*[1], *v.*] A jog with the elbow; a nudge; a 'dig in the ribs.' [Scotch and prov. Eng.]

dunch[2], *a.* 2. Dull; stupid; slow of understanding.—3. Heavy, as bread; stodgy. [Prov. Eng. in both senses.]

II. *n.* 1. A stodgy pudding, made of flour, currants, and water. [Prov. Eng.]—2. Improperly baked bread. [Newfoundland.]

dune[1], *n.*—**Active dune,** a sand-dune in the wandering or shifting state.—**Barrier dune,** an artificial ridge created for the protection of inland areas by obstructing the shifting of the sand, as with living grasses, brush fences, etc.—**Gray dune,** a dune belonging to the innermost and highest of three lines found on some coasts: so called because the sand is tinged by an intermixture of humus; a land dune. The gray dunes and white dunes are inside of a low outer row.—**Land dune.** See *gray* ★*dune.*—**Sea dune.** See *white* ★*dune.*—**Wandering dune,** one which, being unprotected by vegetation, is continually changing its shape and place under the action of the wind. The movement of dunes is commonly inland from the shore.—**White dune,** a dune belonging to the middle of three lines as found on some coasts, and also medium in height: so named because the sand is uncolored by humus. Also called *sea dune.* See *gray* ★*dune.*

Dunelm. An ecclesiastical abbreviation of the Latin *Dunelmensis*, 'of Durham.'

dun-fly, *n.* See ★*dun, n.*, 2.

Dung substitute. Same as ★*dunging-salt.*

dunga-runga (dung″gä-rung′gä), *n.* [Aboriginal name in New South Wales.] A small tree of crooked growth, *Notelæa ovata*, yielding close-grained, hard wood, used for tool-handles. See *Notelæa.*

dung-beetle, *n.*—**Indian dung-beetle,** an East Indian scarabæid beetle, called by Kirby and Spence *Copris midas.*

dunging-salt (dung′ing-sâlt), *n.* A trade-name for sodium phosphate or arseniate when used in calico-printing as a more cleanly substitute for cow-dung in the bath in which, to remove superfluous mordant, the cloth is immersed after printing and before dyeing. Also called *dung substitute.*

dungon (dung-ōn′), *n.* See ★*dongon.*

dungstead (dung′sted), *n.* A dung-heap; a place where manure is piled; a midden.

The general conclusion arrived at, and clearly expressed by Pfeiffer, is that excessive loss in manure can be best avoided by storing it in a deep mass in a water-tight *dungstead* placed in a well-shaded situation, in which the material is firmly compressed.
Nature, Sept. 15, 1904, p. 491.

dung-worm (dung′wėrm), *n.* A worm or larva found in cow-dung, used as bait.

Dunkard series. See ★*series.*

Dunker[1], *n.*—**Seventh-day Dunkers,** a division of the Dunkers organized in Pennsylvania in 1728 by Conrad Beissel. The society, now almost extinct, was monastic in character, advocated celibacy for its members, and observed the Sabbath on the seventh day: whence its name.

dunkirk (dun′kėrk), *n.* A privateer vessel from Dunkirk in the seventeenth century.

dunkirker (dun′kėrk-ėr), *n.* 1. Same as ★*dunkirk.*—2. One of the crew of a dunkirk.

dunk-tree (dungk′trē), *n.* The jujube, *Zizyphus Jujuba.* See *Zizyphus.* [West Indian.]

dunner[2] (dun′ėr), *v. i.* [Var. of **dinner*, collateral form of *dinnle, dindle;* imitative.] To vibrate with a reverberating sound; make a thundering, reverberating noise. [Scotch.]

dunner[2] (dun′ėr), *n.* [*dunner*[2], *v.*] A hollow reverberating sound, as if made by heavy blows from the closed fist on a door; a thundering sound. [Scotch.]

dunnite (dun′īt), *n.* [*Dunn*, a proper name, + *-ite*[2].] Same as ★*explosive D.*

dunstone (dun′stōn), *n.* [*dun*[1] + *stone.*] In *petrog.*, stone of a dun or dull brown color, sometimes sedimentary, as dolomite or sandstone; occasionally, an altered dolerite. [Local, Eng.]

dunting (dun′ting), *n.* Knocking; hitting; dinting; in *ceram.*, the cracking of ware entirely through, while it is being fired in the kiln.

duny (dū′ni), *a.* [*dune* + *-y*[1].] Having numerous sand-dunes.

duodecagon (dū-ō-dek′a-gon), *n.* [Gr. *δυώδεκα*, twelve, + *γωνία*, angle.] Same as *dodecagon.*

duodecane (dū-ō-dek′ān), *n.* [Gr. *δυώδεκα*, twelve, + *-ane.*] Same as ★*dodecane.*

duodenary, *a.* 2. In *music*, pertaining to a duodene, or consisting of duodenes.

II. *n.* A musical instrument for acoustical research, played from a keyboard laid out in duodenes.

duodenate (dū′ō-dē-nāt), *v. i.*; pret. and pp. *duodenated*, ppr. *duodenating.* [*duodene* + *-ate*[2].] In *music*, to modulate by duodenes.

duodenation (dū-ō-dē-nā′shon), *n.* [*duodenate* + *-ion.*] In *music*, the act, process, or result of modulating by duodenes.

duodenocholecystostomy (dū-ō-dē″nō-kol″ē-sis-tos′tō-mi), *n.* [NL. *duodenum* + Gr. *χολή*, bile, + *κίστις*, bag, bladder, + *στόμα*, mouth.] In *surg.*, an operation for making an artificial opening between the gall-bladder and the duodenum.

duodenohepatic (dū-ō-dē″nō-hē-pat′ik), *a.* [*duodenum* + *hepatic.*] Relating to both the duodenum and the liver. *Buck*, Med. Handbook, I. 654.

duodenotomy (dū-ō-dē-not′ō-mi), *n.* [*duodenum* + Gr. *-τομία*, < *ταμεῖν*, cut.] In *surg.*, an operation for making an opening into the duodenum.

duogravure (dū″ō-grā-vūr′), *n.* [F. **duogravure*, irreg. < L. *duo*, two, + *gravure*, engraving.] A method of photo-engraving which requires two plates for the production of a print in one color. *N. Y. Times*, Jan. 1, 1904.

duole (dū′ōl), *n.* [L. *duo*, two, + dim. *-ole*, L. *-olus.*] In *music*, a group of two notes to be performed in the time normally occupied by three.

duoparental (dū″ō-pā-ren′tal), *a.* [L. *duo*, two, + *parens*, parent.] Of or from two parents or sexual elements; bisexual; amphigonic.

The conclusion that chromatin was the true hereditary-substance could only be deduced with convincing clearness after *duo-parental* . . . reproduction had been studied. *Nat. Sci.*, Nov., 1896, p. 312.

duotal (dū′ō-tal), *n.* The trade name of guaiacol carbonate, a white odorless and tasteless crystalline compound, $(C_6H_4O.CH_3O)_2CO$, obtained by the action of phosgen on guaiacol-sodium. It is decomposed in the intestines into guaiacol and carbonic acid, and is used as an intestinal antiseptic and in tuberculosis. It is official in the U. S. Pharmacopœia under the name *guaiacolis carbonas.*

dup[2] (dup), *n.* [D. *dop*, a shell, husk.] A trough used in South Africa for sheep-washing.

Dupin's cyclide. Same as *cyclide.*

duplex, *a.*—**Cox duplex press.** See ★*press*[1].—**Duplex lock, paper, pump.** See ★*lock*[1], ★*paper,* ★*pump*[1].—**Duplex rail.** Same as *compound rail* (which see, under *rail*[1]).

duplexity (dū-plek′si-ti), *n.* Same as *duplicity*, 1.

duplicand (dū-pli-kand′), *n.* [L. *duplicandus*, fut. pass. part. of *duplicare*, double.] In *Scots law*, a double feu-duty due to a superior upon entry into possession by an heir, or at certain specified times.

duplicate, *v. i.* 2. In *whist* and *bridge*, to play the same cards over again, as nearly as possible under the same conditions, each side getting the hands originally held by its opponents.

duplicate. I. *a.* 4. In *bot.*, folded.—**Duplicate whist board.** See ★*board.*

II. *n.*—**Memory duplicate,** in *whist*, a game in which the hands are preserved and played over again by the same players at the same table.

duplicator (dū′pli-kā-tor), *n.* 1. One who duplicates anything; one who makes duplicates.—2. A machine or other contrivance for making duplicates, as of a writing or drawing or the like.

duplicident (dū″plis′i-dent), *a.* [L. *duplex* (*duplic-*), double, + *dens* (*dent-*), tooth.] Same as *duplicidentate.*

duplicipennate (dū″pli-si-pen′āt), *a.* [L. *duplex* (*duplic-*), double, + *penna*, wing: see *pennate.*] In *entom.*, having the wings folded longitudinally in repose, as the moths. [Rare.]

duplicispinate (dū″pli-si-spī′nāt), *a.* [L. *duplex* (*duplic-*), double, + *spina*, spine: see *spinate.*] Bearing double or duplex spines.

duplicity, *n.* 4. In *biol.*, the division of a part of the body of an organism, such as a limb or a digit, into two equivalent parts which may be regarded as equivalent to normal single members. *W. Bateson*, Study of Variation, p. 406.—**Axial duplicity,** the presence in a bilateral animal of a pair of organs or parts in place of one which is normally single and median, as the presence of two tails in some breeds of goldfishes, or of two heads in monsters.

durative (dūr′a-tiv), *a.* [NL. **durativus*, < L. *durare*, continue: see *dure, v.*] In *philol.*, that expresses or serves to express continued or continuing action: as, to 'sit' and to 'strike' are *durative* verbs, while to 'strike down' and to 'sit down' are perfective verbs and express completed action.

durbachite (dėr′baċh-īt), *n.* [*Durbach*, in Baden, Germany, + *-ite*[2].] In *petrog.*, a variety of syenite rich in mica which occurs as a basic facies of granite, and also as independent bodies.

Durchmusterung (dörċh-mös′te-röng), *n.* [G., < *durchmustern*, inspect closely, review, scrutinize, < *durch*, through, + *mustern*, inspect, muster: see *muster, v.*] A German name given to certain extensive catalogues of stars which give their magnitudes and their approximate positions sufficiently for identification. The oldest and best-known is Argelander's Durchmusterung of the Northern Heavens, containing about 324,000 stars. It was made at Bonn, and is usually referred to by the initials B. D. M. His successor, Schönfeld, extended the work to stars south of the equator, in the Southern Durchmusterung (S. D. M.). A third is the Cordova Durchmusterung (Cord. D.), extending Schönfeld's work to the south pole. The three contain all the stars easily observable with a telescope of three inches aperture down to the ninth magnitude, and many between magnitudes 9 and 9½. There is also the Cape (of Good Hope) Photographic Durchmusterung (C. P. D. M.), covering nearly the whole of the southern hemisphere.

durdenite (dėr′den-īt), *n.* [Named for H. S. *Durden* of San Francisco.] A hydrous ferric tellurite occurring in greenish-yellow small mammillary forms: found with native tellurium in Honduras.

durene (dū′rēn), *n.* [? L. *durare*, last, + *-ene.*] A colorless compound found in coal-tar oil and prepared by the action of methyl chlorid on toluene in the presence of aluminium chlorid; 1, 2, 4, 5-tetramethyl benzene. It has an odor resembling that of camphor, crystallizes in leaves, melts at 79–80° C., and boils at 193–195° C.

durenol (dū′rē-nōl), *n.* [*durene* + *-ol.*] A colorless compound prepared by fusing durene-sulphonic acid with potassium hydroxid; 1, 2, 4, 5-tetramethyl phenol. It crystallizes in large flat prisms, melts at 117° C., boils at 249–250° C., and is volatile with steam.

durezza (dö-ret'zä), *n.* [It., < L. *duritia*, hardness, < *durus*, hard.] In *music*, harshness of tone or expression.

durgah (dur-gä'), *n.* [Also *durgaw;* < Hind. *dargāh*, < Pers. *dargāh*, threshold, door, place, court, mosque, shrine; < *dar*, door, + *gāh*, place.] In India, the shrine of a Mohammedan saint.

duridine (dū'ri-din), *n.* [L. *durare*, last, + *-id* + *-ine*[2].] A colorless compound prepared by heating xylidene with methyl alcohol. It melts at 14° C. and boils at 252–253° C.

durote (dö-rō'tā), *n.* [Sp. *duro*, hard.] In Venezuela, a large, leguminous tree of Guiana and Venezuela, *Bocoa Provacensis*, which yields the boco-wood. See *boco-wood.*

durrin (dur'in), *n.* [*durra* + *-in*[2].] A glucoside, $HOC_6H_4CH(CN)OC_6H_{11}O_5$, present in Egyptian durra. It crystallizes in brilliant leaflets.

durylic (dū-ril'ik), *a.* [*dur(ene)* + *-yl* + *-ic.*] Derived from durene.—**Durylic acid.** Same as *cumylic acid.*

duscle (dus'kl), *n.* [Appar. an artificial formation from *dusk.*] The black nightshade, *Solanum nigrum.*

dusky-wing (dus'ki-wing), *n.* Any butterfly of the genus *Thanaos:* so called on account of its dark color.—**Dreamy dusky-wing,** an American hesperiid butterfly, *Thanaos icelus*, occurring in nearly all parts of the United States. Its larvæ feed on the aspen.—**Juvenal's dusky-wing,** an American hesperiid butterfly, *Thanaos juvenalis*, occurring throughout the eastern United States. Its larvæ feed on the oak.—**Lucilius's dusky-wing,** an American hesperiid butterfly, *Thanaos lucilius*, occurring in the Atlantic United States. Its larvæ feed on wild columbine and on pigweed.—**Martial's dusky-wing,** an American hesperiid butterfly, *Thanaos martialis*, occurring throughout the Atlantic United States and westward to Colorado.—**Persius's dusky-wing,** an American hesperiid butterfly, *Thanaos persius*, of wide distribution in the United States. Its larvæ feed on the willow and poplar.—**Sleepy dusky-wing,** an American hesperiid butterfly, *Thanaos brizo*, occurring throughout most of the United States except the far Northwest.

duss (dus), *n.* [E. Indian.] A shrubby labiate plant, *Sussodia oppositifolia*, indigenous to the Himalaya Mountains. It has opposite or ternate leaves, and spikes of minute white flowers with feathery calyx-teeth. The leaves are covered with downy wool, which is used to remove insect larvæ from old sores; they are also applied to wounds and bruises. The wood is moderately hard and close-grained and is used for making gunpowder charcoal.

dust[1], *n.* **11.** In *bot.*, pollen. *Blair.* **12.** Flour. [Slang, Australia.]—**Dust-particles of Müller.** See ★*homoconium.*—**Dust process,** in *ceram.*, a method of making buttons, tiles, etc., by pressing dampened clay-dust in molds.

dust-bar (dust'bär), *n.* In *cotton manuf.*, one of the parallel bars in a grid for the escape of dust and extraneous matter in cotton, in the scutching- and other preparatory machines.

dust-cage (dust'kāj), *n.* In a cotton-scutching machine, a drum or cylinder with a perforated surface, against which the cotton is blown and from which it is taken in the form of a fleece or sheet. By means of a draft-fan and conduits attached to the ends of the cylinder the dust is removed from the cotton through the perforations.

dust-collector (dust'kọ-lek″tọr), *n.* In *milling*, a machine for removing and collecting the dust from purifiers and other milling-machines. It consists of a large number of cloth cylinders, placed radially, through which the dust-laden air is blown, the air escaping through the cloth and leaving the dust in the cylinders to be removed as fast as it collects.

dust-counter (dust'koun″tėr), *n.* An instrument for counting the number of particles of dust in a unit volume of air. It is made in several forms, but in each a small volume of air is suddenly expanded so that it cools to the dew-point, and the moisture condensing on the dust-nuclei brings them down to rest on the surface of a glass mirror, where they may be counted. The air along the French and Italian Riviera, for example, contains sometimes many thousands of dust-particles per cubic centimeter, the purest observed having 750. On the Rigi Kulm the lowest number observed is 210. In the western Highlands of Scotland the lowest number is 16.

dustee (dus-tē'), *n.* [Varied from *fustee*?] The offspring of a fustee and a white. [West Indies.]

duster, *n.* **6.** An apparatus or device, usually employing a current of air, for removing dust or fine particles from any material, such as grain, ore, rags, and the like.—**7.** A light wool or linen blanket, embroidered or plain, used as a cover for the lap, in driving, to protect the clothing from dust.—**8.** A test-well which fails to reach water; a dry hole. [U. S.]

Great assistance would have been given in the location of this line of complete saturation had the unsuccessful test wells of the past been divided into two classes, as salt-water wells and *dusters*, instead of calling them all dry holes, as has generally been done.
Contrib. to Econ. Geol., U. S. Geol. Surv., 1902, p. 338.

dust-fall (dust'fâl), *n.* The settling of dust from the atmosphere.

dust-feather (dust'feŦH″ėr), *n.* See *feather.*

dust-figure (dust'fig″ūr), *n.* A regular figure formed on the surface of a body by the deposition of dust. The dust adheres to certain parts of the surface, sometimes by osmosis, sometimes by electric attraction, sometimes by a special physical or chemical affinity between special kinds of dust and special parts of the solid surface.

dust-flow (dust'flō), *n.* A stream or land-slide of water-saturated volcanic ashes.

Few days, however, pass without clouds of steam rising from the crater, accompanied from time to time by *dust-flows* down the gorge to the Rivière Blanche to the southwest or across the basin of the Lac des Palmistes to the east. *E. O. Hovey*, in Science, July 1, 1904, p. 24.

dust-fog (dust'fog), *n.* **1.** A whitish fog formed of vapor-dust or the finest kind of mist, differing from the dust-haze which frequently follows volcanic eruptions and is formed of fine dust-particles or nuclei upon which vapor has begun to condense.

Cold winds from the north-east, accompanied by *dust-fogs*, began only in December, and then the cold reached 11° Fahr., and even 5° Fahr. at night.
Geog. Jour. (R. G. S.), IX. 549.

dust-haze (dust'hāz), *n.* See *haze*[1].

dusting (dus'ting), *n.* **1.** The act of casting dust or powder upon anything; specifically, in *ceram.*, sprinkling over the damp, unburned clay, through a canvas bag, powdered lead or galena, which in the kiln will fuse into a glaze. This method of lead-glazing was employed in England for common red pottery. See *lead-glaze* and ★*plumbiferous*, 2.—**2.** The act of brushing the dust from a surface, as of a table, chair, floor, etc.

dust-plate (dust'plāt), *n.* A plate placed in front of the cinder-outlet of an iron blast-furnace, which usually serves also to support the slag-runner, so that the workmen may be protected from dust and solid particles which may be blown through the cinder-opening by the blast.

dust-pressed (dust'prest), *p. a.* See *Prosser's* ★*process.*

dust-proof (dust'pröf), *a.* Proof against dust; capable of excluding dust.

dust-shower (dust'shou″ėr), *n.* A cloud of dust which, having been caught up into the upper atmosphere by a violent wind in one place, is blown, it may be, long distances, and precipitated with or without rain or snow. See also ★*sea-dust.*

dust-trunk (dust'trungk), *n.* A conduit through which cotton is blown (in the early processes of manufacture) and the dust knocked out by the cotton striking against projecting fins or plates.

dust-vapor (dust'vā-pọr), *n.* See ★*vapor-dust.*

dust-wind (dust'wind), *n.* A wind that brings dust-storms, such as the northwesterly gales on the eastern coast of Australia. *Geog. Jour.* (R. G. S.), XVIII. 91.

dust-wisp (dust'wisp), *n.* A delicate spray or stria of dust or ice-spiculæ floating in the sky among the sunrise and sunset colors; usually of a steely-white tint and hence high up in the atmosphere.

This was of an unmistakably volcanic character, different from anything that has appeared here since the Krakatoa sunsets, though not equal to those in splendour. Since that maximum, the colouring has been gradually lessening. Yesterday and to-day it was remarkably weak, the chief feature being the *dust-wisps*, which were more conspicuous than I have previously seen them during this apparition. *Nature*, Dec. 25, 1902, p. 174.

dusty, *a.* **4.** In *bot.*, covered with granulations simulating dust. Also *farinose.*

dusty-husband (dus'ti-huz″band), *n.* The alpine rock-cress, *Arabis alpina.*

dusty-miller, *n.* **3.** Same as *miller*, 3.

dusty-wing (dus'ti-wing), *n.* Any member of the neuropterous family *Coniopterygidæ:* so named from the fact that the wings are covered with a white powder.

Dutch. I. *a.*—**Dutch consolation, door, kiln, roof, sauce.** See ★*consolation*, etc.—**Dutch treat, yellow.** See *treat*, ★*yellow.*

II. *n.*—**Double Dutch.** (*a*) Unintelligible gibberish. (*b*) A form of the child's game of jumping the rope in which two ropes are used.

dutch, *v. t.*—**To dutch it,** in *euchre*, to name a different color when the trump is turned down.

Dutchman, *n.* **3.** [*l. c.*] A layer of suet fastened with skewers into a roast of lean beef or mutton.—**4.** [*l. c.*] In *lumbering*, a short stick placed transversely between the outer logs of a load to divert the load toward the middle and so keep the logs from falling off.

Dutchman's-breeches, *n.* **2.** The streaks of blue sky seen between the alto-stratus clouds after a storm begins to abate.

duty, *n.*—**Duty of water,** in *irrigation*, the relation which the quantity of water applied bears to the area irrigated. For example, one cubic foot of water per second flowing throughout the irrigating season should irrigate 100 acres. Under a high duty of water 160 or more acres may be irrigated; under a low duty 60 acres or less may be watered. Or, in other units, two and a half acre-feet of water held in a reservoir should be ample to furnish water for one acre; or under a high duty one acre-foot of water may irrigate half an acre or more.—**Export duty,** a sum of money levied by a government upon the exportation of goods. Such duties are unconstitutional in the United States.—**Probate duty.** See *probate-duty.*

duv, *n.* A simplified spelling of *dove.*

duzen, *n.* A simplified spelling of *dozen.*

D. V. M. An abbreviation of *Doctor of Veterinary Medicine.*

D. V. M. S. An abbreviation of *Doctor of Veterinary Medicine and Surgery.*

D. V. S. An abbreviation (*a*) of *Doctor of Veterinary Science;* (*b*) of *Doctor of Veterinary Surgery.*

Dwarf male. See ★*male*[1].

dwarf-ear (dwârf'ēr), *n.* An ear-snail; a gastropod belonging to the family *Otinidæ*, having an auriform shell.

dwarfism (dwârf'izm), *n.* [*dwarf* + *-ism.*] The state of being a dwarf or dwarfed; dwarfishness.

Some predisposition to deformity is noted in funnel-breast, hallux valgus and *dwarfism.*
Phil. Med. Jour., Jan. 31, 1903, p. 215.

dway-berry (dwā'ber″i), *n.* [A reduction of ★*dwale-berry.*] Same as *dwale*, 3.

dwel, *v.* and *n.* A simplified spelling of *dwell.*

dwell, *n.* **2.** An automatic pause in the action of one part of a machine to enable another part to complete its work; specifically, in a sheet-metal drawing-press, a pause in the motion of one die to enable another to continue its work, or a pause in the motion of the two dies to enhance the effect of their combined pressure. It is also utilized to enable one die to serve as a binding-clamp, holding the blank firmly, while another die draws it into the required shape. A dwell can be produced by the use of a cam or by the omission of some of the teeth of a gear.

dyad. I. *n.* **5.** A group or association of two chromosomes in certain cells, such as the germ-cells in certain stages.—**6.** In *pros.*, a group of two lines having different rhythms.

Dyads and triads there are in Pindar, but they do not disturb the rhythmical working of the odes.
B. L. Gildersleeve, Pindar, p. liii. *N. E. D.*

II. *a.* **2.** Noting an axis of twofold symmetry. See ★*symmetry.*

dyadics (dī-ad'iks), *n.* That branch of pure mathematics which supposes no other regular relation between the principal objects of its study than those which are concerned with the assumption that there are two alternative ways in one or other, but not both, of which each of those objects is determined. For example, if the algebra of necessary reasoning, which is wholly concerned with the dyadic distinction between what is true and what is false, taking no account of greater or less probabilities, be considered in its pure mathematical relations, regardless of its application to logic, the simple mathematical theory that will so result belongs to dyadics.

dyakis-dodecahedral (dī″a-kis-dō″dek-a-hē'drạl), *a.* Of or pertaining to a dyakis-dodecahedron or diploid; diploidal.

dyakis-dodecahedron, *n.* **2.** A solid of twenty-four faces, somewhat resembling the deltoidal icositetrahedron.

dyakis-hexacontahedron (dī″a-kis-hek″sa-kon-ta-hē'dron), *n.* [Gr. *δυάκις*, twice, + E. *hexacontahedron.*] A solid of 120 faces, reciprocal to the great rhombicosidodecahedron.

Dyaus (dyä'ûs), *n.* [Skt. *dyāús* (stem *dyo*), gen. *divás* (*dyos*): see *Zeus* and *Jupiter.*] In *Hindu myth.*, the god of the sky, answering to the Greek Zeus and the Roman Jupiter in their simpler aspects.

dye[1], *n.*—**Basic dye.** (*a*) Same as ★*basic stain.* (*b*) See *basic* ★*color.*—**Neutral dye,** a dye which results through the interaction between a basic and an acid dye, whereby the acid and basic affinities of the two become mutually saturated: as, for example, the eosinate of methylene-blue.—**Oxyazo dyes,** a class of artificial coal-tar colors which includes Soudan brown, crocein orange, and others.—**Paste dye,** a coloring material prepared for dyers' use in the condition of a semi-liquid pasty mass. Artificial alizarin and indigo are among the dyestuffs supplied in this form.—**Triphenylmethane dyes,** an important class of artificial dyestuffs, of which magenta or fuchsin and Hofmann's violet are prominent examples; made from materials originally derived from coal-tar, and very extensively used in dyeing, especially on wool and silk.

dye-beck, *n.*—**Spiral dye-beck,** a kind of dye-vat with a winch, for dyeing piece-goods which are made to pass spirally along the winch, by means of guide-pins, from one end to the other.

dye-box (dī'boks), *n.* In *leather-manuf.*, a box or tray in which the dye is placed and in which the skins are dipped.

dye-leaves (dī'lēvz), *n. pl.* **1.** The inkberry or gallberry, *Ilex glabra.*—**2.** The sweetleaf, *Symplocos tinctoria.*

dyer's-weed, *n.* **2.** The woad, *Isatis tinctoria.* —**3.** Either of the two American goldenrods, *Solidago nemoralis* and *S. rugosa*, somewhat used in dyeing. See *Solidago.*

dyestuff, *n.*—**Albumen dyestuff.** Same as *albumen* ★*color.*

dygogram (dī'gō-gram), *n.* [Gr. *δύ(ναμις)*, power, + *γω(νία)*, angle, + *γράμμα*, a writing.] A diagram that shows both the horizontal directive magnetic force of the compass-needle on board ship under local influences and its deviation from the meridian for any latitude and sailing-course; specifically, the dygogram of Captain Colongue (1870) and of A. Smith, from which Paugger obtained the idea of his mechanical dromoscope of 1872.

dyn., dynam. Abbreviations of *dynamics.*

dyname, *n.* See *dynam*, 2.

dynamic, *a.* **5.** Sthenic; functional, not organic: as, a *dynamic* disease.—**6.** In *bot.*, capable of strongly swelling on one side: applied to tissue.—**Dynamic action.** See ★*action.* —**Dynamic agent,** in society, whatever produces change, especially progressive change. *L. F. Ward*, Outlines of Sociol., p. 167.—**Dynamic cooling,** in *meteor.*, the cooling of a portion of the atmosphere when it expands against a slightly inferior pressure whereby its own internal heat is partly consumed in doing external work.—**Dynamic density.** See ★*density.*—**Dynamic heating,** in *meteor.*, the warming of the air, when it is compressed, by virtue of a slightly superior external pressure whereby work is done upon it and an equivalent amount of heat is thereby generated.—**Dynamic knowledge, meteorology,** etc. See ★*knowledge*, ★*meteorology*, etc.

Dynamical capacity, in *physics*, same as *density.* [Rare.]

dynamicity (dī-na-mis'i-ti), *n.* [*dynamic* + *-ity.*] In *chem.*, same as *atomicity* or *valence.* The term has not come into general use.

dynamics, *n.*—**Chemical dynamics,** in *phys. chem.*, chemical mechanics as applied to a chemical system which is not in equilibrium but is undergoing changes in the active masses of the reacting substances; the study of the velocity of chemical reactions.—**Vital dynamics,** the theory of the vital forces in motion, as distinguished from mechanical or chemical forces acting upon the living organism.

dynamist, *n.* **2.** A student of dynamics.

dynamite, *n.* Nitroglycerin soaked up by silicious earth as an inert absorbent or 'dope' is now distinguished as *dynamite No. 1*, and the meaning of the word is extended so as to include also numerous mixtures of nitroglycerin with absorbents which increase the force of the explosion. See *dope*, 3.—**Gelatin dynamite,** a high explosive used for blasting, made by mixing a cheap absorbent with explosive gelatin.—**Lignin dynamite,** a trade-name for various mixtures of wood-pulp or sawdust with a nitrate, generally sodium nitrate, and more or less nitroglycerin: used as explosives in blasting.

dynamite-shell (dī'na-mīt-shel″), *n.* A projectile with thin walls and containing a large bursting-charge of dynamite; especially the shell fired from dynamite-guns.

dynamitic (dī-na-mit'ik), *a.* [*dynamite* + *-ic.*] Of or pertaining to dynamite or dynamiters.

dynamitist (dī'na-mī-tist), *n.* [*dynamite* + *-ist.*] One who favors dynamitism.

dynamo, *n.*—**Compound dynamo,** a dynamo in which the field-magnets are excited by both series and shunt windings.—**Fly-wheel dynamo,** a dynamo in which the revolving part, either the armature or field, serves as a fly-wheel for the engine.—**Load of a dynamo.** See ★*load*2.

dynamocosmical (dī″na-mō-koz'mi-kal), *a.* In *meteor.*, relating to the terms in the analytical expression for the variations of any meteorological element that are supposed to depend upon the influence of forces external to the earth and therefore solar or cosmical.

dynamogen (dī-nam'ō-jen), *n.* [Gr. *δύναμις*, power, + *-γενής*, -producing.] A trade-name of an explosive consisting of yellow prussiate of potash, potash, chlorate of potash, starch, and charcoal, made into a paste with boiling water and spread with a brush over porous paper, which is then to be dried, cut up, and rolled into cartridges.

dynamogenesis, *n.*—**Law of mental dynamogeny** or **dynamogenesis,** in *psychol.*, the doctrine that every consciousness tends to express or realize itself in corresponding muscular movements; or, more accurately, that every consciousness tends to kinæsthesis as its natural term. The law is a translation, so to speak, from the law of neural dynamogeny, which asserts that incoming energy of stimulation tends always to be transformed into outgoing energy of bodily movement. Its verification has usually been attempted by means of the dynamometer or some equivalent instrument; a normal pull or squeeze is recorded, and then the pull or squeeze as reinforced by the dynamogenic effect of some sensory stimulus.

> If simultaneously with the contraction the subject received a sensorial impression, the contraction was sometimes weakened, but more often increased. This reinforcing effect has received the name of *dynamogeny.*
> *W. James*, Prin. of Psychol., II. 379.

dynamogenetic (dī″na-mō-jē-net'ik), *a.* Same as *dynamogenic.*

dynamogenic, *a.* **2.** Producing force: as, the *dynamogenic* value of food. *Smithsonian Rep.*, 1898, p. 543.

dynamogenous (dī-na-moj'e-nus), *a.* Same as *dynamogenic.*

dynamogenously (dī-na-moj'e-nus-li), *adv.* In accordance with the principle of dynamogeny.

dynamographic (dī″na-mō-graf'ik), *a.* [Gr. *δύναμις*, power, + *γράφειν*, write, + *-ic.*] Of or pertaining to the graphic recording of force.

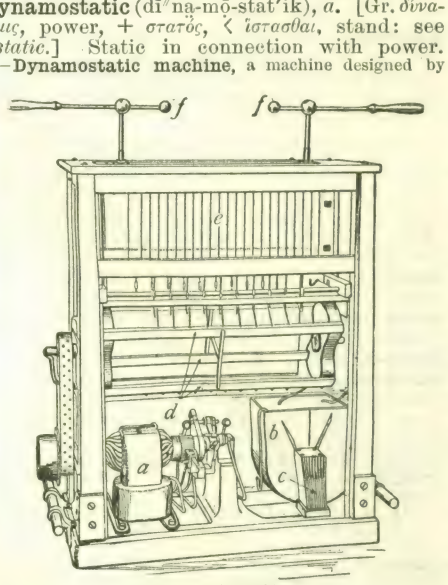
dynamology (dī-na-mol'ō-ji), *n.* [Gr. *δύναμις*, power, + *-λογία*, ‹ *λέγειν*, speak.] The science of forces; dynamics.

> In the sciences of organized bodies we find them subdivided by abstraction into categorical sciences, which we call chemology or chemistry, morphology, *dynamology* or dynamics, ontology or evolution, and psychology.
> *J. W. Powell*, in Amer. Anthropologist, Oct.–Dec., 1901, [p. 603.

dynamometamorphic (dī″na-mō-met-a-môr'fik), *a.* Pertaining to or characteristic of dynamometamorphism, or changes effected in rocks by movement and pressure. *Nature*, Aug. 4, 1904, p. 317.

dynamometamorphism (dī″na-mō-met-a-môr'fizm), *n.* [Gr. *δύναμις*, power, + *metamorphism.*] In *petrog.*, metamorphic changes produced by mechanical rather than chemical processes. See *metamorphism.*

dynamometamorphosed (dī″na-mō-met-a-môr'fōzd), *p. a.* Metamorphosed by processes among which earth-movements are the controlling factors.



dynamometer, *n.* **2.** An instrument for determining the magnifying power of a telescope by measuring the diameter of the little image of the object-glass which is formed just outside of the eyepiece: usually, and better, called *dynameter*, to distinguish it from the instrument for measuring stress.

dynamophone (dī-nam'ō-fōn), *n.* [Gr. *δύναμις*, power, + *φωνή*, sound.] A form of transmission dynamometer in which the twist of a running-shaft is determined by the aid of specially mounted telephones whose relative angular positions, when giving the same tone vibrations, can be accurately measured and compared with those when the shaft is at rest. *Science*, Aug. 29, 1902, p. 339.

dynamoscope (dī-nam'ō-skōp), *n.* [Gr. *δύναμις*, power, + *σκοπεῖν*, view.] An appliance for auscultating a muscle during its contraction.

dynamoscopy (dī-na-mos'kō-pi), *n.* [*dynamoscope* + *-y*3.] The use of the dynamoscope in listening to the murmur produced by contracting muscular fibrils.

dynamostatic (dī″na-mō-stat'ik), *a.* [Gr. *δύναμις*, power, + *στατός*, ‹ *ἱστασθαι*, stand: see *static.*] Static in connection with power. —**Dynamostatic machine,** a machine designed by

Dynamostatic Machine.

a, dynamo or converter; *b*, step-up transformer; *c*, laminations; *d*, revolving-frame; *e*, glass condensers; *f*, spark-terminals.

Professor E. Thomson, which gives very high direct-current voltage of considerable power. It consists of an alternating-current generator or inverted converter (see ★*converter*), a step-up transformer (see ★*transformer*), a series of glass-plate condensers, and a frame revolved synchronously with the converter, which charges the condensers in parallel and connects them in series for discharge.

dynamotor (dī'na-mō-tor), *n.* [Gr. *δύνα(μις)*, power, + E. *motor.*] A combined electrical motor and generator by means of which direct current can be drawn from the source of supply at one voltage and delivered for use at another voltage. The dynamotor is used for electroplating, and has various functions in laboratories which employ electric power. *Scripture*, Exper. Phonetics, p. 209.

dyne-centimeter (dīn-sen'ti-mē-tėr), *n.* **1.** The c. g. s. unit of work; the work done by a dyne of force acting through one centimeter; an erg.—**2.** The c. g. s. unit for moment of force; a unit of torque; the moment of a force of one dyne acting at the end of an arm one centimeter in length.

dyophone (dī'ō-fōn), *n.* [Gr. *δίο*, two, + *φωνή*, sound.] In *acoustics*, an instrument for the simultaneous production of two tones differing in composition or timbre but of equal pitch.

dyophysite (dī-of'i-zīt), *n.* [Gr. *δίο*, two, + *φύσις*, nature, + *-ite*2.] Same as *diphysite.*

dyophysitism (dī-of'i-zī-tizm), *n.* [*dyophysite* + *-ism.*] Same as *diphysitism.*

dyotheletian (dī-oth-e-lē'shian), *a.* [Gr. *δίο*, two, + *θελητής*, one who wills, + *-ian.*] Of or pertaining to the doctrine that there are two wills in Christ.

> The monotheletian patriarchs and the *dyotheletian* popes mutually anathematized each other.
> *A. F. Heard*, Russ. Church and Russ. Dissent, p. 2.

dyotheletism (dī-oth'e-lē-tizm), *n.* Same as *dyotheletism.*

dyphone (dī'fōn), *n.* [Irreg. spelling for *diphone*, as if meaning 'having a doubled, that is, increased sound.'] A powerful double lute with fifty strings, invented by Thomas Mace of London in 1672.

dysacousis (dis-a-kō'sis), *n.* [Also *disacusis;* NL., ‹ Gr. *δυσ-*, ill, + *ἀκουσις*, hearing.] Incomplete deafness; hardness of hearing. Also *dysacusis.*

dysalbumose (dis-al'bū-mōs), *n.* [*dys-* + *albumose.*] A variety of hetero-albumose which results from the latter on standing. It is insoluble in a dilute saline solution.

dysaphe (dis'a-fē), *n.* [NL., ‹ Gr. *δυσ-*, ill, + *ἁφή*, touch, ‹ *ἅπτειν*, touch.] Impaired sense of touch.

dysaphia (dis-ā'fi-ą), *n.* [NL.] Same as ★*dysaphe.*

dysarthrosis (dis-är-thrō'sis), *n.* [NL., ‹ Gr. *δυσ-*, ill, + *ἀρθρωσις*, jointing: see *arthrosis.*] **1.** Same as *dysarthria.*—**2.** Congenital defect causing limited movement of a joint.—**3.** Dislocation of a joint.—**4.** A false joint.

dysboulia (dis-bō'li-ą), *n.* [NL., ‹ Gr. *δυσβουλία*, ill counsel (taken as 'difficult willing'), ‹ *δυσ-*, hard, ill, + *βουλή*, will, wish, counsel.] Impairment of the power of the will. Also written *dysbulia.* *Baldwin*, Dict. of Philos. and Psychol., II. 817.

dyschromia (dis-krō'mi-ą), *n.* [NL., ‹ *δυσ-*, hard, ill, + *χρῶμα*, color.] Same as *dyschroia.*

dyschronous (dis'krō-nus), *a.* [Gr. *δυσ-*, ill, + *χρόνος*, time.] Ill agreeing, or disagreeing, in time: opposed to *synchronous.*

> It [consciousness] has a selective power, manifest both in choosing and in combining sensations received at different times. It can make synchronous impressions *dyschronous* in their effects, and *dyschronous* impressions synchronous. *Science*, July 4, 1902, p. 5.

dyscinesia, *n.* Same as *dyskinesia.*

dyscoria (dis-kō'ri-ą), *n.* [NL., ‹ Gr. *δυσ-*, ill, + *κόρη*, pupil of the eye.] Irregularity in the contour of the pupil of the eye.

dyscrasial (dis-krā'si-al), *a.* [*dyscrasia* + *-al*1.] Same as *dyscrasic.*

dysderid (dis'dē-rid), *n.* and *a.* **I.** *n.* A member of the family *Dysderidæ.*

II. *a.* Having the characteristics of or belonging to the family *Dysderidæ.*

dysenteriform (dis-en-ter'i-fôrm), *a.* [L. *dysenteria*, dysentery, + *forma*, form.] Resembling dysentery.

dysentery, *n.* Recent researches have shown that there are at least two diseases, and possibly more, having the same general symptoms and still grouped under the common designation of *dysentery.* One form, distinguished as *bacillary dysentery,* is characterized by the presence of a specific bacillus, *Bacillus dysenteriæ* or Shiga's bacillus (so named after the Japanese physician who discovered it). Another form, *amebic dysentery,* is associated with the presence in the intestine of a unicellular animal micro-organism, *Amœba dysenteriæ.* This form is less acute in its onset than bacillary dysentery,

but may continue for months or even years, causing great emaciation and anemia, and not infrequently leading to abscess of the liver.

dysentery-root (dis'en-ter-i-rōt), *n.* The stickseed or beggar's-lice, *Lappula Virginiana*, from the supposed medicinal properties of the root. Also called *dysentery-weed*.

dysentery-weed (dis'en-ter-i-wēd), *n.* **1.** Same as ★*dysentery-root*.—**2.** The low cudweed or wartwort, *Gnaphalium uliginosum*.

dysgalactia (dis-ga-lak'ti-ạ), *n.* [NL., < Gr. *δυσ-*, ill, hard, + *γάλα* (*γαλακτ-*), milk.] Diminished secretion of milk, or secretion of milk of an unhealthy character.

dysgenesia (dis-je-nē'si-ạ), *n.* [NL.] Same as *dysgenesis*.

dysgeogenous (dis-jē-oj'e-nus), *a.* [Gr. *δυσ-*, ill, + *γῆ*, earth, + *-γενης*, -producing.] Disintegrating slightly or not at all into detritus (said of rocks); resisting decomposition; hence, coarse and little retentive of water (said of soils): opposed to ★*eugeogenous*.

dyslexic (dis-lek'sik), *a.* [*dyslexia* + *-ic*.] Relating to or affected with dyslexia.

dyslochia (dis-lō'ki-ạ), *n.* [Gr. *δυσ-*, ill, + *λόχια*, lochia.] Cessation in whole or in part of the lochial discharge.

dyslogia (dis-lō'ji-ạ), *n.* [NL., < Gr. *δυσ-*, ill, + *λόγος*, reason.] Impairment of the reasoning faculties. *Baldwin*, Dict. of Philos. and Psychol., II. 571.

dyslogical (dis-loj'i-kal), *a.* Characterized by dyslogia or the disturbance of thought shown by a jumbled order of words in speech or in writing.

dyslysin (dis'li-sin), *n.* [Gr. *δυσ-*, ill, + *λύσις*, dissolution, + *-in*[2].] A decomposition-product of cholalic acid. $C_{24}H_{36}O_3$, formed during the process of intestinal putrefaction.

dysmenia (dis-mē'ni-ạ), *n.* [NL., < Gr. *δυσ-*, ill, + *μήν*, month.] Same as *dysmenorrhea*.

dysmenorrheic (dis-men-ọ-rē'ik), *a.* Same as *dysmenorrheal*.

dysmnesia (dis-mnē'si-ạ), *n.* [NL., < Gr. *δυσ-*, hard, ill, + *μνῆσις*, memory.] Forgetfulness; impaired memory.

dysodontiasis (dis″ọ-don-tī-ā'sis), *n.* [NL., < Gr. *δυσ-*, ill, + *ὀδούς* (*ὀδοντ-*), tooth, + *-iasis*.] Delayed or defective dentition.

dysosmia (dis-os'mi-ạ), *n.* [NL., < Gr. *δυσοσμία*, ill smell (taken in NL. as 'difficulty of smelling'), < *δύσοσμος*, ill-smelling, < *δυσ-*, ill, + *ὀσμή*, *ὀδμή*, smell.] Loss in whole or in part of the sense of smell.

dysostosis (dis-os-tō'sis), *n.* [NL., irreg. for ★*dysosteosis*, < Gr. *δυσ-*, ill, + *ὀστέον*, bone, + *-osis*.] Imperfect formation of bone.

dyspepsia, *n.*—**Acid dyspepsia,** impaired digestion due to extreme acidity of the gastric juice.—**Reflex dyspepsia,** impairment of the digestive powers as a result of reflex nervous influence, due, for example, to eye-strain.—**Salivary dyspepsia,** impaired digestion due to deficiency or altered character of the saliva.

dyspepsiodynia (dis-pep″si-ọ-din'i-ạ), *n.* [NL., < Gr. *δυσπεψία*, dyspepsia, + *ὀδύνη*, pain.] Heartburn.

dyspeptodynia (dis-pep″tọ-din'i-ạ), *n.* [NL.] Same as ★*dyspepsiodynia*.

dyspeptone (dis-pep'tōn), *n.* [*dys-* + *peptone*.] An insoluble modification of hetero-albumose which results from the latter on prolonged exposure to water or on drying. Also termed *dysalbumose*.

dysphasia (dis-fā'zi-ạ), *n.* [NL., < Gr. *δυσ-*, hard, + *φάσις*, a speaking.] Difficulty of speech which does not amount to actual aphasia.

dysphasic (dis-fā'zik), *a.* Relating to or suffering from dysphasia.

dysphonic (dis-fō'nik), *a.* Relating to or suffering from dysphonia.

dysphotic (dis-fō'tik), *a.* [Gr. *δυσ-*, ill, + *φῶς* (*φωτ-*), light, + *-ic*.] In *phytogeog*: (*a*) Poorly lighted: designating the dim tract between the photic and aphotic levels in a body of water.

> The flora of the *dysphotic* region [in fresh-water lakes] is composed almost exclusively of microphytes, Diatomaceæ in particular; but exceptionally a few macrophytes have been observed in it.
>
> *A. F. W. Schimper* (trans.), Plant Geog., p. 811.

(*b*) Adapted to live in such a tract: as, a *dysphotic* plant, a *dysphotic* flora.

dyspnœa, *n.*—**Cardiac dyspnœa,** difficult respiration due to sluggish pulmonary circulation, and consequent deficient aëration of the blood, from heart-disease.—**Expiratory dyspnœa,** a form of dyspnœa in which the chief difficulty is in expelling the air from the lungs.—**Inspiratory dyspnœa,** a form of dyspnœa in which the chief difficulty is in inspiration.—**Renal dyspnœa,** difficulty in respiration accompanying disease of the kidneys.—**Traube's dyspnœa,** a form occasionally observed in diabetes, in which the desire for air is urgent yet the respirations are slow.

dysprosia (dis-prō'si-ạ), *n.* [NL.] Oxid of dysprosium.

dysprosium (dis-prō'si-um), *n.* [NL.] In *chem.*, one of the supposedly distinct elements of the yttrium group contained in samarskite and gadolinite, closely related to holmium, but distinguished from it by a special absorption-spectrum. Symbol, Dy; atomic weight, 162.5.

dysrhythmia (dis-rith'mi-ạ), *n.* [NL., < *δυσ-*, ill, + *ῥυθμός*, rhythm.] In *pathol.*, an occasional disturbance of rhythm.

dyssynchronous (di-sing'krọ-nus), *a.* [Gr. *δυσ-*, bad, ill. + *σύν*, with, + *χρόνος*, time.] Not coincident as to time; not synchronous.

dystaxia (dis-tak'si-ạ), *n.* [NL., < Gr. *δυσ-*, ill, + *τάξις*, disposition, order.] Tremor similar to that which occurs in paralysis agitans.

dysteleological, *a.* **2.** Of the nature of or pertaining to dysteleology.

> Arguments [from design] . . . cut both ways, as the formidable array of facts capable of an equally cogent *dysteleological* application sufficiently shows.
>
> *J. Ward*, Naturalism and Agnosticism, I. 6.

dysteleologist, *n.* **2.** Any agent which evades the functional end, as a bee which secures honey from a flower by means not conducive to cross-fertilization.

dysteleology, *n.* **2.** Any evasion of the functional aim or end, as where an insect punctures a nectary from below without coming into contact with the anthers, thus frustrating the end of cross-fertilization.

dysthanasia (dis-thạ-nā'si-ạ), *n.* [NL., < Gr. *δυσθάνατος*, bringing a hard death, < *δυσ-*, hard, + *θάνατος*, death.] A painful death.

dysthymia (dis-thī'mi-ạ), *n.* [NL., < Gr. *δυσθυμία*, despondency, < *δύσθυμος*, despondent, melancholy, low in mind, < *δυσ-*, ill, + *θυμός*, mind.] Mental depression.

dysthyroidism (dis-thī'roid-izm), *n.* [*dys-* + *thyroid* + *-ism*.] A morbid state marked by impaired function of the thyroid gland.

dystopia (dis-tō'pi-ạ), *n.* [NL., < Gr. *δυσ-*, hard, + *τόπος*, place.] Malposition; dislocation.

dystraumia (dis-trâ'mi-ạ), *n.* [NL., < Gr. *δυσ-*, hard, + *τραῦμα*, wound. The formation really means 'a condition of being hard to wound.'] A condition in which the healing processes are sluggish.

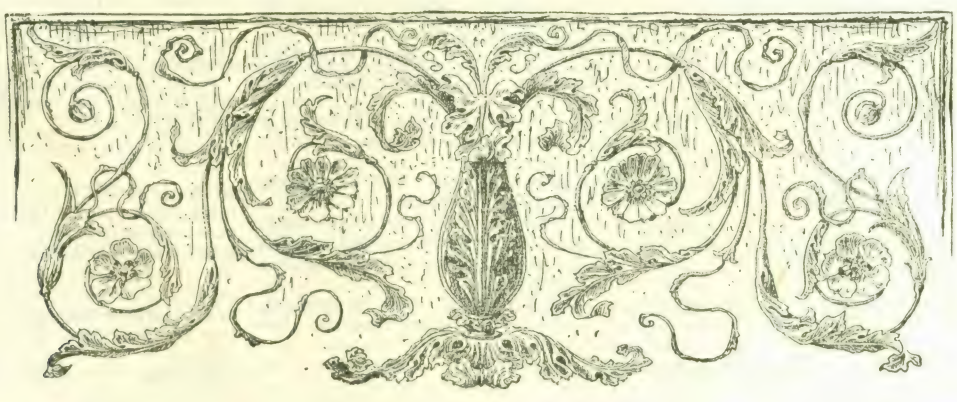
dystrophy, *n.*—**Progressive muscular dystrophy.** Same as *progressive muscular atrophy* (which see, under *progressive*).—**Pseudohypertrophic dystrophy.** Same as *pseudohypertrophic paralysis* (which see, under *paralysis*).

dysuresia (dis-ū-rē'si-ạ), *n.* [NL., < Gr. *δυσ-*, hard, + *οὖρησις*, urination.] Same as *dysuria*.

dysuresis (dis-ū-rē'sis), *n.* [NL., < Gr. *δυσ-*, hard, + *οὖρησις*, urination.] Same as ★*dysuresia*.

dysyntribite (di-sin'tri-bīt), *n.* [Appar. an error for ★*dyssyntribite*, irreg. < Gr. *δυσ-*, ill, + *συντρίβειν*, shatter (*σύν*, together, + *τρίβειν*, rub, scrape), + *-ite*[2].] An impure massive mineral or rock, resembling serpentine in appearance, but near pinite in composition: it occurs in Jefferson county and elsewhere in northern New York and is doubtless pseudomorphous in origin.

Dyvour's habit. See ★*habit*.



dzo (dzō), *n.*; pl. *dzos* (collective *dzo*). [Tibetan *dzo* (Jaeschke, 1866, p. 33).] A hybrid, the

Dzo.

result of a cross between the male of the water buffalo and the female of the domesticated yak. The dzo are kept for beasts of burden and for the milk yielded by the cows.

> They also breed herds of *dzo*, a very valuable hybrid between the cow [buffalo] and yak, and capable of carrying eighty pounds more than either the horse or mule. The male *dzo* is used for ploughing, and the female gives more milk than any other of the bovine race. . . . From the hair of the *dzo* and yak the Mantzu prepare a heavy felt used for boots and for circular cloaks, worn in cold or wet weather.
>
> *Geog. Jour.* (R. G. S.), X. 36.

E **3.** (*c*) (3) [*cap.*] The sign of residuation (which see). (*d*) [*cap.*] In *chem.*, sometimes used as the symbol for erbium: more commonly *Er*. (*e*) The common symbol for the modulus of elasticity, or the force, in pounds, required to stretch a bar of any material one square inch in cross-section until its length is increased by one hundred per cent. (*f*) In *elect.*, a symbol for *electromotive force.* — **5.** An abbreviation (*c*) of *Earl*; (*d*) of *Eastern*; (*e*) of *English*; (*f*) in *exper. psychol.*, of *experimenter*.

E. A. An abbreviation of *entered apprentice*, in freemasonry.

eacid (ē′as″id), *n.* [Prop. *e-acid* or *E-acid*, appar. for *E*(*mmens's*) *acid*.] The name given by Dr. Emmens of New York, in 1888, to a substance which he assumed to be a new organic acid, but which in fact was merely picric acid or trinitrophenol crystallized from solution in strong nitric acid and perhaps retaining a little of the latter. Also *Emmens's acid*.

eagle, *n.*, **1.** The eagle is the emblem of St. John the Evangelist and for this reason is placed on lecterns from which the gospels are read. It is also the emblem of regal and imperial power and as such was adopted by the Roman and Holy Roman Empires.

9. A base foreign coin which circulated in England in the reign of Edward I.—**Bearded eagle.** Same as *bearded vulture*.

eagle-fern (ē′gl-fėrn), *n.* See ★*fern*[1].

eagle-hawking (ē′gl-hâk″ing), *n.* The plucking of wool from dead sheep. [Bushman's Eng., Australia.]

ear[1], *n.*, **8.** (*g*) In *archery*, the stiff portion of a reflex bow at the end of each limb and including the nock. The ear works stiffly in order that the curve of the bow may be more readily reversed in stringing it.—**Blainville ears,** congenital inequality in size and configuration of the two ears.—**Cagot ear,** absence of the lobule of the ear.—**Cauliflower ear,** a shrunken ear following the absorption of effused blood after an injury.—**Darwinian ear,** an ear in which the upper portion of the helix is defective.—**Diabetic ear,** mastoiditis occurring as a complication of diabetes.—**Ear vesicle,** a cystic structure constituting the organ of hearing in mollusks and worms. See cut under *Synaptidæ*.—**Insane ear,** hematoma auris.—**Morel ear,** a large flabby ear in which the curves of the concha are not pronounced.—**Stahl ear,** an abnormally broad external ear.—**To be on one's ear,** to be very angry or much exasperated. [U. S. slang.]—**Vestibule of the ear.** See *membranous vestibule*, under *vestibule*.—**Wildermuth ear,** abnormal prominence of the antihelix.

earbow (ēr′bō), *n.* The forehead-piece of a bridle when it is made to pass before one ear and behind the other.

ear-covert (ēr′kuv″ėrt), *n.* In *ornith.*, one of the tufts of feathers covering the external opening of the ear.

ear-crystal (ēr′kris″tal), *n.* Same as *otolith*.

ear-cushion (ēr′kůsh″ŏn), *n.* A small cushion designed to be hung in the back of a coach as a head-rest.

ear-finger (ēr′fing″gėr), *n.* The fifth or little finger: also called the *auricular finger*.

ear-fly (ēr′flī), *n.*—**Black-striped ear-fly,** *Chrysops vittatus*, an American gadfly of the dipterous family *Tabanidæ*, which particularly attacks the ears of horses and cattle. *C. univittatus* is a very common species, also annoying to live stock.

Ear-fly (*Chrysops univittatus*). Much enlarged. (U. S. D. A.)

ear-forceps (ēr′fôr″seps), *n.* A very delicate forceps for removing foreign bodies from the external auditory canal.

ear-learning (ēr′lėr″ning), *n.* Learning that is acquired through the sense of hearing. *Scripture*, Exper. Phonetics, p. 114.

ear-minded (ēr′mīn″ded), *a.* In *psychol.*, having a marked tendency to carry on mental operations (remembering, thinking, imagining, dreaming, etc.) in terms of auditory images; of an auditory, as opposed to a visual or motor type of mental constitution. A person is called *ear-minded*, in a narrower sense, when his memory is chiefly or exclusively auditory; and, in a still narrower sense, when his verbal memory is thus auditory in type.

Notwithstanding the fact that he was decidedly visual, he had a strong tendency to be *ear-minded*.
W. B. Secor, in Amer. Jour. Psychol., XI. 228.

ear-mindedness (ēr′mīn″ded-nes), *n.* In *psychol.*, a type of mental constitution, characterized by the predominance of auditory processes as vehicles of the complex mental functions (thought, memory, etc.). *Baldwin*, Dict. Philos. and Psychol., II. 571.

ear-muff (ēr′muf), *n.* One of a pair of coverings for the ears, made of cloth or fur, worn as a protection against wind and cold.

ear-plug (ēr′plug), *n.* **1.** An ornament in the form of a plug, worn in the lobe of the ear.

Numerous copper ornaments were found, such as pendants and *ear-plugs*, some of the latter being decorated with symbolic designs. *Nature*, June 9, 1904, p. 138.

2. A stopper (made of cotton-wool and wax, of a vaselined cork, etc.) for closing the aperture of the one ear, while a stimulus is applied to the other.

ear-sand (ēr′sand), *n.* Same as *ear-dust*.

ear-splitting (ēr′split″ing), *a.* Deafeningly or overpoweringly noisy.

ear-tab (ēr′tab), *n.* One of a pair of tabs or tags fastened to a cap and tied down over the ears and under the throat as a protection from the cold.

earth[1], *n.*—**Barbados earth,** a friable earthy marl of Miocene age, occurring in the Barbados Islands and accumulated in deposits which rise to a height of over one thousand feet. It is largely composed of the minute siliceous skeletons of radiolarians with an intermixture of the calcareous tests of the *Foraminifera*. According to Haeckel the number of species of *Radiolaria* in the Barbados earth is not less than 400 and probably more than 500. This authority regards it as a deep-sea deposit and states that very many of the Barbados radiolarians "are to-day extant and unchanged in the radiolarian ooze of the deep Pacific Ocean."—**Black earth.** (*b*) Same as *chernozem*.—**Blue earth,** a local name for the stratum which yields amber on the shores of the Baltic Sea.—**Cassel earth.** Same as *Vandyke brown*.—**Earth quadrant.** See ★*quadrant*.—**Golden earth,** in early chemistry, one of the names for orpiment or arsenic trisulphid.—**Japonic earth,** terra Japonica; catechu; cutch.—**Rare earth.** in *chem.*, one of those earths of which the compounds are found in nature only in small quantity and sparingly distributed. The principal rare earths are beryllia, scandia, ceria, lanthana, neodymia, praseodymia, yttria, erbia, terbia, ytterbia, samaria, zirconia, and thoria; but there is doubt as to the individuality of some of these, and several others have received partial recognition.—**Rare-earth metals,** the metals the oxids of which are known as the *rare earths*. See ★*earth*.—**Red earth,** red residual soil which results from the decomposition of ferruginous rocks; terra rossa.—**Residuary earth,** soil formed by the decomposition and disintegration of rock, without undergoing transportation. *R. D. Salisbury*, Geol. Surv. of New Jersey, 1892, p. 45.—**Santorin earth,** a mineral material of volcanic origin, resembling the Italian pozzuolana, found in the Greek island of Santorin, used in making hydraulic cement.

earth-almond (ėrth′ä″mǫnd), *n.* The yellow nut-grass or earthnut, *Cyperus esculentus*. More frequently in the plural.

earth-apple (ėrth′ap″l), *n.* The Jerusalem artichoke, *Helianthus tuberosus*.

earth-bar (ėrth′bär), *n.* In *elect.*, a metallic bar forming part of a switchboard and used as a conductor for grounding such circuits as may be connected with it.

earth-club (ėrth′klub), *n.* The squawroot, *Conopholis Americana*, so called from the club shape of the plant.

earth-drop (ėrth′drop), *n.* In *elect.*, the voltage or difference of potential at any point between the return conductor of an electric system and the ground.

earth-fork (ėrth′fôrk), *n.* A fork with flat tines, used, like a spade, for turning up the earth.

earth-glacier (ėrth′glā″shiėr), *n.* A mass of land-waste and snow which slides down hill as the snow melts in the spring. *J. Geikie*, The Great Ice Age, p. 600.

earthing (ėrth′ing), *n.* In *elect.*, the act of connecting to earth; grounding.

earth-lamp (ėrth′lamp), *n.* In *elect.*, an incandescent lamp one terminal of which is grounded while the other is connected through a switch to a circuit. It thus serves as an indicator of the insulation of the circuit from earth.

earth-lard (ėrth′lärd), *n.* The subterranean larvæ of the common European cockchafer, *Melolontha vulgaris*. [Great Britain.]

earth-light (ėrth′līt), *n.* Light reflected by the earth: same as *earth-shine*.

earth-louse (ėrth′lous), *n.* **1.** Any root-feeding aphidid, as the corn root-louse, *Aphis maidi-radicis*, or the lettuce root-louse, *Rhizobius lactucæ*.—**2.** Any one of many soil-inhabiting thysanurous insects, especially those of the family *Poduridæ*.

earth-metal (ėrth′met″al), *n.* A metal the oxid of which is classed among the earths, as aluminium, the oxid of which is alumina.

earth-pillar (ėrth′pil″ăr), *n.* A column of loose, unconsolidated material produced by erosion. The best known examples are found in the Tyrol.

A paper by Dr. Christian Kittler on *earth-pillars* and similar structures. *Geog. Jour.* (R. G. S.), XI. 441.

earth-pitch (ėrth′pich), *n.* Same as *mineral pitch* (which see, under *mineral*).

earthquake, *n.*—**Submarine earthquake,** one whose origin or focus is beneath the sea, and which affects the overlying sea-bottom.

earth-return (ėrth′rē-tėrn″), *n.* In *elect.*, a return-circuit which, instead of being insulated, is grounded throughout, or of which the ground itself forms a principal part: opposed to *metallic* ★*return*.

earth-sculpture (ėrth′skulp″tůr), *n.* The modifying of surface features of the earth by surface agencies; the carving of relief by erosion.

earth-shaker (ėrth′shā″kėr), *n.* A poetic epithet (Gr. σεισίχθων), applied to Poseidon and Zeus.

He [Poseidon] is clearly the impersonation of water rather than either the *earth-shaker* or the brother of Zeus.
P. Gardner, Types of Greek Coins, p. 203.

earth-shock (erth′shok), *n.* An earthquake; specifically, the most violent oscillations during the continuance of an earthquake; also, the sudden movement of the ground consequent upon the intentional explosion of a mine or the accidental explosion of a magazine of explosives.

earth-shrinkage (ėrth′shring″kāj), *n.* In *geol.*, the shortening of the earth's diameter and the lessening of its volume, which are inferred from the deformation of its outer portion, and which are explained by loss of heat, by loss of centrifugal energy, and by loss of porosity.

Under the new hypothesis the *earth-shrinkage* is due to original porosity and gravitational compression, and is in active operation today. The amount of such spacial reduction has not been estimated, but it must be several times any possible reduction due to cooling.
Amer. Geol., Feb., 1904, p. 112.

earth-slope (ėrth′slōp), *n.* The slope which loose rock-waste will assume under the influence of gravity.

earth-wave (ėrth′wāv), *n.* An oscillation of the ground, either vertically or horizontally, on a small scale, as by the explosion of a mine, or on a large scale, as by earthquakes; a vibration of the crust of the earth as an elastic solid.

earth-wax (ėrth′waks), *n.* Same as *ozocerite* or *mineral wax*.

earthy, *a.* **6.** In *chem.*, having the general character of the substances known as earths, and of their compounds: as, an *earthy* salt.—**Earthy degeneration.** Same as *calcareous degeneration* (which see, under *degeneration*).

ear-tone (ēr′tōn), *n.* In *psychol.*, a tone due to the constitution of the ear itself, and not to the presence of a wave-motion in the surrounding medium.

The first difference-tone . . . is an *ear-tone* and not an air-tone. *E. B. Titchener*, Exper. Psychol., I. i. 40.

ear-tuft (ēr′tuft), *n.* **1.** A tuft of feathers suggesting an ear, as those of the great horned owl.—**2.** A tuft of feathers arising near the ear-opening, as in the Inca tern.—**3.** A tuft or pencil of hair on the tip of the ear, as in the lynx.

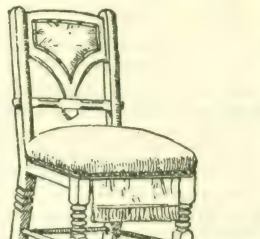
east, *n.*—**East-by-north,** the seventh point of the compass, counting from north, equal in angular value to 78° 45′.—**East-by-south,** the seventh point of the compass, counting from south, equal in angular value to 78° 45′.—**East Coast fever.** Same as *African Coast* ★*fever.*—**East-northeast,** the sixth point of the compass, counting from north, equal in angular value to 67° 30′.—**East-southeast,** the sixth point of the compass, counting from south, equal in angular value to 67° 30′.

east-ender (ēst′en″dėr), *n.* An inhabitant of the eastern part of a city or town, specifically [cap.] of the East End of London.

easter (ēs′tėr), *v. i.* [*easter(ly).*] To change toward the east, as the wind; move toward the east, as the head of a vessel.

Easter card, lily. See ★*card*[1], *Bermuda* ★*lily.*

Easter-bell (ēs′tėr-bel), *n.* The greater stitchwort, *Alsine Holostea.*



Easter-ledges (ēs′tėr-lej″ez), *n.* The bistort, *Polygonum Bistorta.* See *Polygonum.*

East-Indian (ēst-in′di-an), *a.* and *n.* **I.** *a.* Of or pertaining to the East Indies: used in a comprehensive sense.

II. *n.* A native or resident of the East Indies.

easting, *n.* **2.** Reaching the point in its diurnal motion where it crosses the prime vertical and is exactly east of the observer: said of a heavenly body.

Eastlake (ēst′lāk)′ *a.* Noting a style of design in furniture, current in England and the United States in the latter half of the nineteenth century. It was based on a book entitled "Hints on Household Taste" written by Sir Charles L. Eastlake and published in London in 1869. Eastlake's designs are, for the most part taken from the medieval work of England.

Eastlake Chair.

eastmost (ēst′mōst), *a.* Farthest east (of a series or row): as, the *eastmost* house on a street that runs east and west: easternmost.

Eastralia (ēs-trā′li-ą), *n.* [*East* (*Aust*)*ralia.*] A modern colloquial designation for the eastern Colonies of Australia. [Australia.]

Eatonia (ē-tō′ni-ą), *n.* [NL., named for Amos *Eaton.*] A genus of telotrematous *Brachiopoda* characterized by large flabellate, deeply excavate muscular scars in the ventral valve and a large bifurcate cardinal process. It is of early Devonian age.

Eau céleste [F., 'sky water,' alluding to its deep-blue color], a fungicide applied to fruit-trees and other plants as a spray, originally made with copper sulphate and ammonia largely diluted with water, forming a solution of a deep-blue color. The modified eau céleste is now made with 4 pounds of crystallized copper sulphate, 5 pounds of sodium carbonate, 3 pounds of water of ammonia, and 45 gallons of water.—**Eau-de-vie de piquette,** an inferior brandy, made by distilling the weak wine or piquette obtained by adding water to the marc, or residue of grape-skins, seeds, etc., left in the first expression of grape-juice, re-pressing and fermenting the liquid. *Jour. Soc. Chem. Industry,* XI. 256.—**Eau forte** [F., 'strong water']. See *aqua fortis.*

eau-fortist (ō-fôr′tist), *n.* [F., ‹ *eau forte* + *-iste,* E. *-ist.*] One who uses *eau forte* or *aqua fortis* especially in etching; an etcher.

eaves-martin (ēvz′mär″tin), *n.* The European house-martin or swallow, *Hirundo urbica:* so called because it nests beneath the eaves of houses.

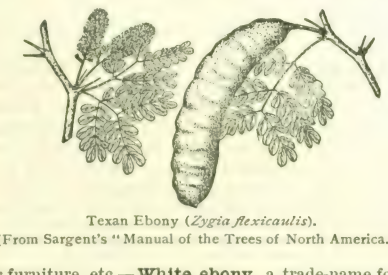
eb, *n.*, *a.*, and *v.* A simplified spelling of *ebb.*

Eb. In *chem.*, a symbol sometimes used (instead of the more common *Er.*) for erbium.

ebb, *n.*—**Ebb-and-flow structure,** in *geol.*, an alternation, in a sandstone, of a cross-bedded layer with a horizontal one indicating a period of deposition in a considerable current succeeded by one of comparative quiet.

Ebenezer (eb-en-ē′zėr), *n.* [Heb., 'stone of help.'] **1.** A stone erected by Samuel (1 Sam. vii. 12) as a memorial of divine aid in defeating the Philistines. Hence—**2.** Any memorial of divine assistance: often adopted as a name for a chapel or church.

Here I raise my *Ebenezer,*
Hither by thy help I'm come;
And I hope, by thy good pleasure,
Safely to arrive at home.
R. Robinson, Come, Thou Fount of Every Blessing (old [version), st. 3.



3. A contemptuous name for a 'dissenting' chapel or church. [Eng.]

Eberth's bacillus. See ★*bacillus.*

Ebionize (ē′bi-ọn-īz), *v. i.* pret. and pp. *Ebionized,* ppr. *Ebionizing.* [*Ebion*(*ite*) + *ize.*] To become an Ebionite, or to affect or imitate the doctrines and practices of the Ebionites.

ebonine (eb′ọ-nīn), *a.* [*ebon* + *-ine*[1].] Black; dark; somber: as, "the *ebonine* gate of doom," *F. T. Palgrave.*

ebony, *n.*—**Black ebony,** a trade-name for the wood of *Diospyros Dendo.* See *Niger* ★*ebony.*—**Calabar, Gaboon, Lagos ebony.** Same as *Niger* ★*ebony.*—**Ceylon ebony,** the wood of several species of *Diospyros,* especially *D. Ebenaster, D. Ebenum, D. montana,* and *D. sylvatica.*—**False ebony, ebony of the Alps.** See *laburnum.*—**Green ebony** of India, the hard, greenish-yellow wood of *Diospyros chloroxylon.*—**Madagascar ebony,** the highly prized wood of two species of *Diospyros, D. haplostylis* and *D. microrhombus.*—**Manila ebony,** the wood of either of two trees, *Diospyros Ebenaster* and the mabolo, *D. discolor.* See ★*mabolo* and ★*kamagon.*—**Mauritius ebony,** the wood of *Diospyros tesselaria:* often called *black Mauritius ebony* to distinguish it from the white ebony.—**Mountain ebony** of Australia. Same as *Queensland* ★*ebony.*—**Niger ebony,** the black wood of the dendo, *Diospyros Dendo.* Also called *Calabar, Lagos, Gaboon,* and *black ebony.* See ★*dendo.*—**Orange River ebony,** the hard, black wood of *Euclea Pseudebenus,* a shrub or small tree of the family *Diospyraceæ.* See ★*Euclea,* 2.—**Queensland ebony,** the wood of either of two leguminous trees, *Bauhinia Carronii* and *B. Hookeri.* Also called *mountain ebony.*—**Red ebony** of Mauritius, the wood of *Diospyros rubra.*—**St. Helena ebony,** the hard, black wood of *Trochetia Melanoxylon,* a small tree of the family *Sterculiaceæ* indigenous to the island and now nearly exterminated.—**Sénégal ebony,** the jet- or brownish-black wood of *Dalbergia melanoxylon,* called by the natives *dialambam.*—**Siam ebony,** a commercial term for the wood of several species of the genus *Diospyros,* especially *D. Ebenum, D. montana, D. ramiflora, D. Ebenaster,* and *D. peregrina.* See *gaub.*—**Texan ebony,** a handsome leguminous tree, *Zygia flexicaulis,* of western Texas, Arizona, and northern Mexico, especially of the Gulf coast and lower Rio Grande, with light-yellow fragrant flowers in dense spikes, large curved, woody pods, and very hard and heavy close-grained wood, often beautifully colored, and hence much prized

Texan Ebony (*Zygia flexicaulis*).
(From Sargent's "Manual of the Trees of North America.")

for furniture, etc.—**White ebony,** a trade-name for the grayish or white-streaked woods of *Diospyros melanida* and *D. chrysophyllos* of the Mascarene Islands. *D. Malacapai,* of the Philippine Islands, also furnishes some of the wood sold under this name.—**Zanzibar ebony,** the wood of *Diospyros mespiliformis,* a tree distributed over the whole of tropical Africa.

Ebor. An abbreviation of the Latin *Eboracum,* York, or of the Latin *Eboracensis,* of York.

ebriose (ē′bri-ōs), *a.* [L. *ebriosus,* ‹ *ebrius,* drunk: see *ebrious.*] Drunk: same as *ebrious.*

ebriously (ē′bri-us-li), *adv.* Drunkenly.

Not *ebriously* swilled but moderately tasted.
T. Newton, Fowre Severall Treatises.

ebulliently (ę-bul′yent-li), *adv.* In an ebullient manner; overflowingly; 'gushingly': as, *ebulliently* sentimental.

ebullioscopic (ę-bul″yō-skop′ik), *a.* **1.** Of or pertaining to those methods of determining molecular weight, dissociation, osmotic pressure, etc., which depend upon measurements of the boiling-point. In the ebullioscopic method for the determination of the molecular weight of a substance the boiling-point of a liquid is observed as affected by the presence of a given proportion of the substance in question dissolved in such liquid. *Amer. Chem. Jour.,* April, 1903, p. 342. [Rare.]

ebullitionary (eb-u-lish′ọ-nā-ri), *a.* [*ebullition* + *-ary*[1].] Of the nature of an ebullition; characterized by a bubbling or boiling commotion; bubbling: as, an *ebullitionary* agitation.

eburated (eb′ū-rā-ted), *a.* [L. *eburatus,* ‹ *ebur,* ivory.] Covered with, or as with, ivory; having the appearance of ivory. *Proc. Zool. Soc. London,* 1898, p. 318.

eburnean, *a.* **2.** [*cap.*] In the classification of late geological deposits bearing human relics, a subdivision of the Paleolithic section in France. It includes the oldest deposits containing well-finished implements associated with carved bone and ivory. It was the period of the mammoth, went back into glacial time, and was followed by the Tarandean or reindeer epoch.

eburneoid (ę-bėr′nę-oid), *a.* [L. *eburneus,* of ivory, + *-oid.*] Ivory-like as regards color; eburneous.

eburnitis (eb-ėr-nī′tis), *n.* [NL., ‹ L. *eburnus,* of ivory, + *-itis.*] A condition of increased density and hardness of the dentine of teeth.

E. C. An abbreviation (*a*) of *Eastern Central,* a London postal district; (*b*) of *Established Church.*

ecardine (ē-kär′din), *n.* [NL. *Ecardines.*] A mollusk having a shell without a hinge; a brachiopod.

écartelé (ā-kär″tę-lā′), *a.* [F., pp. of *écarteler,* divide into quarters.] In *her.*, divided into quarters: said of a shield.

ecboline (ek′bō-lin), *n.* [Gr. *ἐκβολή,* a throwing out, + *-ine*[2].] A brownish amorphous, slightly bitter alkaloid contained in ergot.

eccaleobion (e-kal″ē-ō-bī′on), *n.* [Irreg. ‹ Gr. *ἐκκαλέω,* I call forth, + *βίον,* acc. of *βίος,* life.] An apparatus for hatching eggs by artificial heat; an incubator.

eccentric. **I.** *a.* **7.** In *astron.*, noting orbital motion which is not in a circle around the center of attraction; as applied to curves generally, deviating from circularity, as the ellipse and hyperbola.—**Eccentric projection.** See ★*projection.*—**Eccentric wheel.** (*b*) In carriages, a fifth wheel so centered that when backing to either side the body of the carriage is thrown to one side of the center, to facilitate turning in a short radius.

II. *n.*—**Adjustable eccentric,** an eccentric which is so constructed that the distance between the center of figure and the center of motion can be varied in order to vary the throw of the rod. This result is secured either by slotting the disk of the eccentric, or by mounting one eccentric upon another so that the effective eccentricity may be the sum or the difference of the eccentricity of each disk, or may have intermediate values.—**Backward eccentric,** that eccentric which is used when a locomotive or a ship goes backward and the valve-gear is adjusted accordingly. See *reversing-gear.*—**Movable eccentric.** Same as *adjustable* ★*eccentric.*

eccentrolinead (ek-sen-trō-lin′ē-ad), *n.* [*eccentr*(*ic*) + L. *linea,* line, + *-ad*[3].] A ruler for drawing eccentric radial lines. It is used in designing gears and making drawings of gear-teeth, etc.

ecchondrotic (ek-ọn-drot′ik), *a.* Same as ★*epichondrotic.*

ecchondrotome (e-kon′drō-tōm), *n.* [Gr. *ἐκ,* out, + *χόνδρος,* cartilage, + *-τομος,* ‹ *ταμεῖν,* cut.] An instrument for cutting cartilage.

Eccl. An abbreviation (*c*) [*l. c.*] of *ecclesiastic;* (*d*) [*l. c.*] of *ecclesiology.*

ecclesiarchy (e-klē′zi-är-ki), *n.* [Gr. *ἐκκλησία,* church, + *ἀρχή,* rule.] The rule of a church; government by ecclesiastics.

ecclesiast, *n.* **3.** A member of the ancient Greek ecclesia; a free Greek citizen having the right to vote in the ecclesia or assembly.

Ecclesiastical emerald. Same as *Brazilian* ★*emerald.*

ecclesiasticize (e-klē-zi-as′ti-sīz), *v. t.*; pret. and pp. *ecclesiasticized,* ppr. *ecclesiasticizing.* To render ecclesiastical; bring under the influence of, or into conformity with, the church.

ecclesiol. An abbreviation of *ecclesiology.*

ecclesiolater (e-klē-zi-ol′ą-tėr), *n.* [Gr. *ἐκκλησία,* church, + *-λατρης,* worshiper.] One who shows excessive reverence for church authority, form, and traditions.

ecclesiolatry (e-klē-zi-ol′ą-tri), *n.* [Gr. *ἐκκλησία,* church, + *λατρεία,* worship.] Worship of the church as such; extreme, undue respect for the formal observances and authority of the church.

eccrisiologia (ek-ris-i-ō-lō′ji-ą), *n.* [NL., ‹ Gr. *ἐκκρισις,* secretion, + *-λογια,* ‹ *λέγειν,* speak.] That branch of physiology which treats of secretion: same as *eccrinology.*

eccritic, *n.* **II.** *a.* Relating to excretion or to any of the excretory organs: said of a disease which affects these functions or organs, or of a remedy which promotes excretion.

eccyclema (ek-si-klē′mą), *n.*; pl. *eccyclemata* (-klem′ą-tą). [Gr. *ἐκκύκλημα,* ‹ *ἐκκυκλεῖν,* wheel out, ‹ *ἐκ,* out, + *κυκλεῖν,* wheel, ‹ *κύκλος,* a wheel.] A machine in the Greek theater which in some way disclosed an interior to the spectators, as in the murder scene of the "Agamemnon" of Æschylus.

ecdemic (ek-dem′ik), *a.* [Gr. ἐκδημος, from home, in foreign lands, abroad, < ἐκ, out, + δῆμος, people.] Originating from without; not endemic: said of diseases.

ecdemiomania (ek-dem″i-ō-mā′ni-ą), *n.* [NL., < Gr. ἐκδημία, a going or being abroad (< ἔκδημος, abroad), + μανία, madness.] A morbid impulse to travel unceasingly.

ecdemite (ek′de-mīt), *n.* [Gr. ἔκδημος, abroad, + *-ite*².] An arsenite of lead containing 8 per cent. of chlorin. It occurs in crystals and in massive forms, ranging in color from yellow to green: found in Sweden. Also called *heliophyllite*.

ecesis (ē-sē′sis). *n.* [NL. **œcesis*, < Gr. οἴκησις, habitation, < οἰκεῖν, inhabit.] The fixation of a migrating plant in a new habitat.

In a word, *Ecesis* is the adjustment of a plant to a new habitat. It comprises the whole process covered more or less incompletely by acclimatisation, naturalisation, accommodation, etc.
F. E. Clements, Bot. Surv. Neb., VII. 50.

ecethmoid (ek-eth′moid), *a.* [*ec-* + *ethmoid*.] In *ichth.*, same as ★*ecto-ethmoid*. *Science*, March 8, 1901, p. 379.

echelon, *n.* 2. *Milit.*, one of the subdivisions of a command marching in echelon.—3. In *optics*, a set of glass plates placed one upon another, with the edge of each projecting slightly, stepwise, beyond the edge of the preceding one. The device, which is due to A. A. Michelson, is used for the production of diffraction spectra of high dispersion and resolving power.—**Echelon diffraction grating.** See ★*grating*².—**Echelon spectroscope.** See ★*spectroscope*.

echidnase (e-kid′nās), *n.* [Gr. ἔχιδνα, viper, + *-ase*.] A supposed temperature-raising substance analogous to diastases, found in viper venom.

echidnotoxin (e-kid-nō-tok′sin), *n.* [Gr. ἔχιδνα, viper, + *toxin*.] A general poison found in viper venom.

echidnovaccine (e-kid-nō-vak′sin), *n.* [Gr. ἔχιδνα, viper, + E. *vaccine*.] Viper venom that has been heated for a few minutes to 75–85° C., and has thus lost its poisonous properties. The remaining solution has the properties of a venom vaccine.

echin. An abbreviation of ★*echinology*.

echinal (e-kī′nąl), *a.* [Gr. ἐχῖνος, hedgehog, sea-urchin (see *echinus*), + *-al*¹.] Pertaining or belonging to a sea-urchin.

echinastrin (ek-i-nas′trin), *n.* [*Echinaster* + *-in*².] A red pigment found in certain invertebrates, as in starfishes.

echinate (ek′i-nāt), *v.*; pret. and pp. *echinated*, ppr. *echinating*. [Gr. ἐχῖνος, hedgehog, + *-ate*².] **I.** *trans.* To project at an acute angle to the axis of (a fiber), giving it a feathery or plumed appearance: said of the spicules in the axinellid type of sponge skeleton.

The spicules so placed are said to "*echinate*" the fibre.
E. R. Lankester, Treatise on Zool., II. 140.

II. *intrans.* To project at an acute angle to the axis of a fiber: said of the spicules in a sponge skeleton.

Echinocaridæ (e-kī″nō-kar′i-dē), *n. pl.* [NL., < *Echinocaris* + *-idæ*.] A family of phyllocarid crustaceans of the suborder *Ceratiocarina*. Its genera possess an elongate bivalved carapace with nodes in the cephalic region and one or more lateral carinæ. They are mostly of Devonian age.

Echinocaris (ek-i-nok′a-ris), *n.* [NL., < Gr. ἐχῖνος, a sea-urchin, + καρίς, (prob.) a shrimp.] The typical genus of the family *Echinocaridæ*.

Echinocereus (e-kī-nō-sē′rē-us), *n.* [NL. (Engelmann, 1848), < *Echino* (*cactus*) + *Cereus*. The name refers to its intermediate position between these two genera.] A large genus of globular or columnar cacti, very closely allied to *Cereus*, with which some authors unite it. It is distinguished by the spines, bristles, or wool arising from the bracteate ovary, short funnel-shaped flowers, and spiny globose or elliptical fruit. The species are native from Texas south and west. Some of them are usually found in the collections of cactus cultivators.

Echinochloa (ek-i-nok′lō-ą), *n.* [NL. (Palisot de Beauvois, 1812), in allusion to the bristly spikelets; < Gr. ἐχῖνος, hedgehog, + χλόη, grass.] A genus of grasses, including about 12 species, widely distributed in warm and tropical regions. Four species occur in the United States, ranging from New York to Texas. They are usually tall annual grasses with broad leaves and a terminal inflorescence composed of several one-sided spike-like racemes. The European *E. Crus-galli*, the cockspur or barn-yard grass, is widely distributed as a weed in all cultivated regions except the extreme north.

echinochrome (e-kī′nō-krōm), *n.* [Gr. ἐχῖνος, sea-urchin (see *echinoderm*), + χρῶμα, color. Same as ★*echinochromogen*.

echinochromogen (e-kī-nō-krō′mō-jen), *n.* [Gr. ἐχῖνος, sea-urchin, + χρῶμα, color, + *-γενής*, -producing.] A yellowish pigment found in echinoderms; also called *echinochrome*.

echinococcosis (e-kī″nō-ko-kō′sis), *n.* [NL., < *Echinococcus* + *-osis*.] Infection with *Echinococcus*, the larval stage of a tapeworm which lives in the dog; hydatid disease.

Echinocorys (ek-i-nok′ō-ris), *n.* [Gr. ἐχῖνος, sea-urchin, + κόρυς, a helmet.] A genus of spatangoid *Echinoidea* or sea-urchins. It has a large oval actinally high test, biporose ambulacra, oval peristome, and inframarginal posterior periproct. It is very common in the Upper Cretaceous formation. Same as *Ananchytes*.

Echinocotyle (ē-kī-nō-kot′i-lē), *n.* [NL., < Gr. ἐχῖνος, hedgehog, + κοτύλη, a socket.] The typical genus of the family *Echinocotylidæ*. The metacestode stage of *E. rosseteri*, which is parasitic in the duck, occurs in the ostracode crustacean, *Cypris cinereus*. *Blanchard*, 1891.

Echinocotylidæ (ē-kī″nō-kō-til′i-dē), *n. pl.* [NL., < *Echinocotyle* + *-idæ*.] A family of tetracotylean *Cestoidea* having the acetabula armed and the rostellum furnished with one or two circlets of hooklets. They are parasitic in birds. The typical genus is *Echinocotyle*.

Echinocystis, *n.* 2. A genus of Lower Silurian cystideans of the family *Cryptocrinidæ*.—3. A genus of Silurian *Palæechinoidea*, of the family *Cystocidaroida*.

echinoidean (ek-i-noi′di-ąn), *a.* and *n.* Same as *echinoid*.

echinologist (ek-i-nol′ō-jist), *n.* [*echinolog(y)* + *-ist*.] One who is versed in echinology or the study of echinoderms.

echinology (ek-i-nol′ō-ji), *n.* [Gr. ἐχῖνος, sea-urchin, + *-λογια*, < λέγειν, speak.] That branch of zoölogy which treats of echinoderms.

echinophthalmia (e-ki-noph-thal′mi-ą), *n.* [NL., < Gr. ἐχῖνος, hedgehog, + ὀφθαλμός, eye.] A form of inflammation of the eyelids characterized by stiffness and projection of the lashes.

echinoplute (e-kī′nō-plōt). *n.* [NL. *echinopluteus*.] Same as ★*echinopluteus*.

echinopluteus (e-kī-nō-plō′tē-us), *n.* [NL., < Gr. ἐχῖνος, sea-urchin, + NL. *pluteus*.] The pluteus, or free-swimming larva, of a sea-urchin.

Echinopsis (ek-i-nop′sis), *n.* [NL. (Zuccarini, 1836), in allusion to the spiny character of the plant; < Gr. ἐχῖνος, hedgehog, + ὄψις, view.] A South American genus of *Cactaceæ*, marked by spherical or very short sharp-ribbed stems and very long tubed cereus-like flowers with the ovary and tube narrow-bracted. It is closely related to *Cereus* and has been combined with that genus by some authors. It consists of about 20 species. A number of them are in cultivation, for example, *E. multiplex*, *E. Eyriesii*, *E. gemmata*, and *E. tubiflora*.

echinosphærite (e-kī-nō-sfē′rīt), *n.* [NL. *Echinosphærites*.] A cystid of the genus *Echinosphærites*, notably *E. aurantium*, a form characteristic of the echinosphærite limestone. See ★*limestone*.

Echinosphærites (e-kī″nō-sfē-rī′tēz), *n.* [NL., < Gr ἐχῖνος, sea-urchin, + σφαῖρα, a ball, + *-ites*, E. *-ite*².] A genus of cystideans of the family *Echinosphæritidæ*. It is characterized by globose non-pedunculate calyx, central mouth, short ambulacral grooves, and anal pyramid, and is very abundant in the Lower Silurian of Russia and Scandinavia.

Echinosphæritidæ (e-kī″nō-sfē-rit′i-dē), *n. pl.* [NL., < *Echinosphærites* + *-idæ*.] A Silurian family of the *Cystoidea*, typified by the genus *Echinosphærites*.

echinothuriid (e-kī-nō-thū′ri-id), *a.* and *n.* **I.** *a.* Of or pertaining to the family *Echinothuriidæ*.

II. *n.* A member of the *Echinothuriidæ*.

echinothurioid (e-kī-nō-thū′ri-oid), *a.* Having characters similar to those of the *Echinothuriidæ*.

echinulation (e-kin-ū-lā′shọn), *n.* [NL. **echinulus*, dim. of L. *echinus*, sea-urchin, + *-ation*.] A small spiny or prickly outgrowth.

echinus, *n.* 5. [*cap.*] A genus of dicotyledonous plants belonging to the family *Euphorbiaceæ*. See *Mallotus*.

Echiostoma (ek-i-os′tō-mą), *n.* [NL., < Gr. ἔχις, serpent, + στόμα, mouth.] A genus of deep-sea fishes of the family *Stomiatidæ*. *E. barbatum* is the common species.

echiretin (e-ki-rē′tin), *n.* [*Echi(tes)* + Gr. ῥητίνη, resin.] An amorphous dextrorotatory compound, $C_{35}H_{56}O_2$, contained in dita-bark, *Pala scholaris* (*Echites scholaris* of Linnæus). It melts at 52° C.

echitamine (e-ki-tam′in), *n.* [*Echit(es)* + *amine*.] Same as ★*ditaine*.

echitein (e-kit′ē-in), *n.* [*Echit(es)* + *-e-in*.] A colorless dextrorotatory compound, $C_{42}H_{70}O_2$, contained in dita-bark, *Pala scholaris* (*Echites scholaris* of Linnæus). It crystallizes in needles or prisms melting at 195° C.

echitenine (e-kit′e-nin), *n.* [*Echit(es)* + *-ene* + *-ine*².] A brown amorphous alkaloid, $C_{20}H_{27}O_4N$, contained in dita-bark, *Pala scholaris* (*Echites scholaris* of Linnæus). It melts above 120° C.

Echites (e-kī′tēz), *n.* [NL. (Patrick Browne, 1756), < L. *echites*, < Gr. ἐχίτης (otherwise read as L. *echitē*, < Gr. **ἐχίτη*), the name in Pliny (not recorded in Greek authors) for some climbing plant, prob. clematis, prob. < Gr. ἔχις, adder.] A large genus of twining plants belonging to the family *Apocynaceæ*. The genus differs from *Dipladenia* in having a five-lobed disk in the flowers and in bearing a five-scaled or glandular calyx. They are tropical American plants, extending as far north as southern Florida. In choice horticultural collections a few of the 40 species may be found, as *E. umbellata*, *E. Andrewsii*, and *E. paludosa*.

Echites umbellata.
One fifth natural size.

echitin (ek′i-tin), *n.* [*Echit(es)* + *-in*².] A colorless dextrorotatory compound, $C_{32}H_{52}O_2$, contained in dita-bark, *Pala scholaris* (*Echites scholaris* of Linnæus). It crystallizes in leaflets melting at 170° C.

echiurid (ek-i-ū′rid), *n.* Any member of the family *Echiuridæ*.

echo, *n.* 7. In *whist*, a response to a partner's signal for trumps.—8. In *bridge*, a method of showing the leader how many cards his partner holds in the suit led, or of indicating that the third hand can trump the third round. The first is called the *plain-suit echo*, the second the *down-and-out echo*.—**Echo sign**, a frequent indication of epilepsy, being the repetition of words or phrases in speech or writing.—**Plain-suit echo**, in *whist* and *bridge*, a method of playing the pone's cards so as to show the leader how the former's suit is distributed. See ★*echo*, *n.*, 7.

echo, *v. i.* 4. In *bridge*, to show the leader how many cards the third hand holds in the suit led.

echolalia, *n.* 2. An agreeable but meaningless arrangement of words in poetry.

The "Eve of Crecy" contains two magnificent examples of that mode of poetic expression dubbed "*echolalia*" by Max Nordau, and as such condemned by him.
A. Vallance, William Morris, p. 19.

echo-organ (ek′ō-ôr-gąn), *n.* In *organ-building*, a section of the instrument, containing very delicate stops, inclosed in a thick swell-box, which is often placed at a distance from the rest of the organ, so as to be capable of echo or distant effects. Sometimes the echo-organ has a keyboard of its own in the console, but often it is played from either the swell or the choir keyboard through a special mechanism.

echopathy (e-kop′a-thi), *n.* [Gr. ἠχώ, echo, + *-παθεια*, < πάθος, disease.] A neurosis characterized by the meaningless repetition of words or movements.

echophrasia (ek″ō-frā′si-ą), *n.* [NL., < Gr. ἠχώ, echo, + φράσις, speaking.] Same as *echolalia*.

echurin (ek′ū-rin), *n.* [Prob. for **echyrin*, < Gr. ἐχυρός, strong, secure (< ἔχειν, hold), + *-in*².] A dyestuff made by treating a mixture of 3 parts of flavin and 5 parts of picric acid with 12 parts of nitric acid. It dyes wool a reddish yellow in an acid bath.

ecitophile (e-sit′ō-fil), *n.* [*Eciton* + Gr. φιλεῖν, love.] Any inquiline in the nests of ants of the genus *Eciton*.

ecl., eclect. Abbreviations of *eclectic*.

eclabium (ek-lā′bi-um), *n.* [NL., < Gr. *ἐκ*, out, + L. *labium*, lip.] Eversion of the lip.

Eclampsia infantum, convulsions occurring in infancy, epileptic in nature or of reflex origin.

Eclectic school. See ★*school.*

eclecticize (ek-lek′ti-sīz), *v. t.*; pret. and pp. *eclecticized*, ppr. *eclecticizing*. [*eclectic* + *-ize.*] To make selections from: as, to *eclecticize* and harmonize all mythologies. *Maurice.*

eclectist (ek-lek′tist), *n.* [*eclect-ic* + *-ist.*] One who favors or who practises eclecticism. *N. E. D.*

eclipsareon (ē-klip-sā′rē-on), *n.*; pl. *eclipsarea* (-ä). [Irreg. < *eclipse* + *-areon* (for *-arion*, *-arium*).] An apparatus for illustrating eclipses.

eclipse, *n.*—**Cycle of eclipses.** See ★*cycle*[1].—**Eclipse cyclone.** See ★*cyclone.*—**Eclipse variable.** Same as ★*Algol variable.*

eclipser (ē-klip′sėr), *n.* A mechanical device for automatically interrupting the beam of light from a lighthouse.

A double or divided *eclipser* is used which occults the light during every alternate revolution.
Encyc. Brit., XXX. 256.

eclipsis (e-klip′sis), *n.* [L. *eclipsis*, < Gr. *ἔκλειψις*, a failing, cessation, non-appearance, eclipse: see *eclipse.*] 1. An eclipse.—2. Omission of a sound or letter; specifically, in *Celtic gram.*, the suppression of the sound of a radical consonant when preceded by another of the same organ. *J. O'Donovan*, Irish Gram. p. 58.—3. A momentary loss of consciousness.

ecliptical (ē-klip′ti-kal), *a.* Relating or pertaining to the ecliptic.

ecloge (ek′lō-jē), *n.* [NL. *eclogē*, < Gr. *ἐκλογή*, selection: see *eclogue.*] Selection; specifically, in *rhet.*, a judicious selection of the most striking circumstances in describing anything. *J. de Mille*, Rhet., § 157.

ecmnesia (ek-mnē′si-ä), *n.* [NL., < Gr. *ἐκ*, out, + *μνῆσις*, memory.] Loss of memory of events occurring during a limited period of time, recollection of what has happened before or after that time being retained.

ecoid, *n.* See *œcoid.*

ecologic, ecological, ecology. The simpler and now the preferred spellings of *œcologic*, *œcological*, *œcology.*

econ. An abbreviation of *economics.*

econometer (ē-kō-nom′e-tėr), *n.* An apparatus for determining the economy of a steam-boiler by measuring the amount of carbon dioxid (CO_2) which passes up the chimney.

economic, *a.* 6. Relating to value as viewed from the standpoint of material welfare in contrast with values of other orders. Thus higher education may represent an *economic* loss to the community, although the social and moral advantages derived from it far outweigh that loss.—**Economic botany, cure, freedom,** etc. See ★*botany*, etc.

economics, *n.*—**Dynamic economics,** a proposed division of political economy dealing with changes in the production, distribution, and consumption of wealth, and the effects of such changes upon social organization.—**National economics,** a type of political economy which exaggerates the economic significance of national boundaries, bases its deductions upon the idea of a self-sufficing state, and regards international economic relations as merely accidental. Most frequently, however, the term is used synonymously with *political economy*, in imitation of the German usage.—**Pure economics,** theoretical political economy, conceived of as an independent, abstract science: contrasted with economics viewed as an integral part of social science, and with the art of political economy, that is, a body of precepts for the guidance of political and social action.—**Social economics,** the science which deals with economic laws in their relation to social welfare. The term is frequently used as a synonym for *political economy* or *economics.*

economizer, *n.* 2. Specifically—(*b*) In fog-signaling on British railways, a device by which the detonation of one track-torpedo on the rail by the passage of the engine-wheels removes the second one in series before the wheels reach it.

economy, *n.* 5. In *theol.*: (*a*) The practical measures employed in giving effect to a divine dispensation. (*b*) The cautious presentation of doctrine, accommodating it to the feelings and prejudices of the hearers: used by J. H. Newman to describe the accommodated method (*κατ'οἰκονομίαν*) of the early fathers; in a bad sense, the system of withholding a large portion of gospel doctrine in teaching the mass of Christians.—**Motor economy,** in *linguistics*, the principle of ease of utterance. *Scripture*, Exper. Phonetics, p. 123.—**Perceptive economy,** in *linguistics*, the principle of the neglect, by language, of certain differences and the exaggeration of others, in order to bring the essential part of the sentence into prominence.

Perceptive economy requires not only the suppression of needless distinctions but also the emphasis of needful ones. *Scripture*, Exper. Phonetics, p. 123.

ecotone (ē′kō-tōn), *n.* [Gr. *οἶκος*, habitat, + *τόνος*, tension, stress.] In *phytogeog.*, the line along which two types of vegetation compete for the same ground. See ★*tension-line.* *F. E. Clements.*

ecphrasis (ek′fra-sis), *n.* [NL., < Gr. *ἔκφρασις*, description, < *ἐκφράζειν*, tell, recount, < *ἐκ*, out, + *φράζειν*, speak.] A description or interpretation; a plain declaration or utterance.

ecphyaditis (ek″fi-ä-dī′tis), *n.* [NL., < Gr. *ἐκφυάς* (*-φυαδ-*), an appendage, outgrowth (< *ἐκφύεσθαι*, grow out), + *-itis.*] Same as *appendicitis.*

ecphyma, *n.* 2. Same as *measles.*

ecphysis (ek′fi-sis), *n.* [NL., < Gr. *ἐκφυσις*, a growing out, an outgrowth, < *ἐκφύεσθαι*, grow out, *ἐκφύειν*, produce, bear, < *ἐκ*, out, + *φύεσθαι*, grow, *φύειν*, produce.] In crustaceans, a branch of any joint of an appendage, as a basecphysis. *Trans. Linnean Soc. London*, Zoöl., Feb., 1903, p. 448.

ecpyrosis (ek-pi-rō′sis), *n.* [NL., < Gr. *ἐκπύρωσις*, < *ἐκπυροῦν*, burn up, < *ἐκ*, out, + *πυροῦν*, burn, < *πῦρ*, fire: see *pyre.*] Destruction by fire.

The sect of Stoics adopted most fully the system of catastrophes destined at certain intervals to destroy the world . . . the Cataclysm, or destruction by water, which sweeps away the whole human race, and annihilates all the animal and vegetable productions of nature; and the *Ecpyrosis*, or destruction by fire, which dissolves the globe itself. *Sir C. Lyell*, Princip. Geol., I. 13.

ecrasite (ek′ra-sīt), *n.* [F. **écrasite*, < *écraser*, crush, destroy (see *acraze*), + *-ite* (*-ite*[2]).] The ammonium salt of trinitrocresol, experimented with in Austria as an explosive for charging shells. The same name is said to have been given to an explosive consisting of the so-called blasting-gelatin with picrate and either sulphate or hydrochlorate of ammonium.

écroulement (ā-krȯl-moṅ′), *n.* [F., < *écrouler*, fall to pieces, < *é-* (L. *ex-*) + *crouler*, shake, fall to pieces.] A falling down or to pieces, as a building, great masses of rock, or the like; a land-slide.

ecstrophy, *n.* See *exstrophy.*

Ectal origin, valve. See *superficial origin* (under *origin*, 5 (*b*)), ★*valve.*

ectally (ek′tal-i), *adv.* Externally; on the exterior; superficially.

ectatic, *a.* 2. Distensible.

ectenic (ek-ten′ik), *a.* [Gr. *ἐκτενής*, strained, zealous, eager, < *ἐκτείνειν*, stretch: see *ectasis.*] Subjected to tension, literally or figuratively; strained.—**Ectenic phenomena.** See ★*phenomenon.*

ectepicondylar (ek-tep-i-kon′di-lär), *a.* [Gr. *ἐκτός*, without, + *ἐπί*, upon, + *κόνδυλος*, condyle.] Situated just above the outer condyle of the humerus.—**Ectepicondylar foramen,** a perforation in the outer, distal portion of the humerus, found in some reptiles and characteristic of the anomodont reptiles.—**Ectepicondylar process,** a process just above the outer condyle of the humerus of such birds as gulls and sandpipers.

ectepicondyloid (ek-tep-i-kon′di-loid), *a.* Same as ★*ectocondylar* and ★*ectocondyloid.*

ectethmoid (ek-teth′moid), *a.* and *n.* [Gr. *ἐκτός*, outside, + E. *ethmoid.*] **I.** *a.* External to the ethmoid bone.

II. *n.* A portion of the aliethmoid forming a plate on either side of the mesethmoid and usually constituting part of the anterior wall of the orbit. It appears as a transverse, vertical plate in the skull of birds and is frequently termed the *antorbital* or *pars plana.*

ectethmoidal (ek′teth-moi-dal), *a.* [*ectethmoid* + *-al*[1].] Relating to the ectethmoid or antorbital plate. Also *ecto-ethmoidal.*

ecthronym (ek′thrō-nim), *n.* [Gr. *ἐχθρός*, hostile, + *ὄνομα*, *ὄννμα*, name.] The name by which a people is called by its neighbors: opposed to *autonym*, the name by which the people call themselves.

ecthymatoid (ek-thim′a-toid), *a.* [*ecthyma(t-)* + *-oid.*] Resembling ecthyma.

ecthymatous (ek-thim′a-tus), *a.* [*ecthyma(t-)* + *-ous.*] Relating to or affected with ecthyma.

ecthyrosis (ek-thi-rō′sis), *n.* [NL., < Gr. *ἐκ*, out, + *θύρα*, door (see *thyroid*), + *-osis.*] A myxœdematoid condition following excision of the thyroid gland.

ectiris (ek-tī′ris), *n.* [NL., < Gr. *ἐκτός*, without, + *ἶρις*, iris.] The external layer of the iris.

Ectobiides (ek-tō-bī′i-dēz), *n. pl.* [Erroneous form for NL. **Ectobiidæ*, < *Ectobia* + *-idæ.*] A tribe of cockroaches of which *Ectobia* is the type. It contains species with spiny thighs, the last ventral plate of the female large and valveless, the supra-anal lamina of both sexes transverse and narrow, and the egg-capsules with a longitudinal suture. This tribe corresponds to the subfamily *Anaplectinæ* of Saussure.

Ectobranchiata (ek″tō-brang-ki-ā′tä), *n. pl.* [NL.: see ★*ectobranchiate.*] A group of regular *Echinoidea* having the mouth and anus at opposite poles and an apical system of plates. They are endocyclic and have external gills present. It includes the order *Diademoida.* Compare ★*Endobranchiata.*

ectobranchiate (ek-tō-brang′ki-āt), *a.* [NL. *ectobranchiatus*, < Gr. *ἐκτός*, without, + *βράγχια*, gills: see *branchiate.*] Having an exsertile branchia, as the gastropod *Valvata.*

ectobronchium (ek-tō-brong′ki-um), *n.*; pl. *ectobronchia* (-ä). [NL., < Gr. *ἐκτός*, without, + *βρόγχος*, windpipe.] In *ornith.*, one of several branches given off laterally and dorsally from the mesobronchium or prolongation of the bronchus.

ectocalcaneal (ek″tō-kal-kā′nē-al), *a.* [Gr. *ἐκτός*, without, + NL. *calcaneum* + *-al*[1].] On the outer side of the calcaneum or bone of the heel: specifically applied by Owen to the outermost of the ridges on the posterior side of the proximal end of the tarsometatarsus of a bird.

ectocarpaceous (ek″tō-kär-pā′shius), *a.* Belonging to the family of algæ *Ectocarpaceæ.*

ectochoroidea (ek″tō-kō-roi′dē-ä), *n.* [NL., < Gr. *ἐκτός*, without, + NL. *choroidea*, choroid.] The external layer of the choroid.

ectocnemial (ek-tok-nē′mi-al), *a.* [Gr. *ἐκτός*, without, + *κνήμη*, tibia, + *-al*[1].] On the outer side of the tibia: as, the *ectocnemial* ridge, the outer of the two prominent ridges on the tibia of a bird, the other being the *procnemial* ridge.

ectocondylar (ek-tō-kon′di-lär), *a.* [Gr. *ἐκτός*, without, + *κόνδυλος*, condyle, + *-ar*[3].] Relating to the ectocondyle or outer articular face of such a bone as a femur: contrasted with ★*entocondylar.*—**Ectocondylar depression** or **cavity,** the hollow receiving the ectocondyle.

ectocondyloid (ek-tō-kon′di-loid), *a.* [Gr. *ἐκτός*, without, + *κόνδυλος*, condyle.] Same as ★*ectocondylar.*

ectocornea (ek-tō-kôr′nē-ä), *n.* [NL., < Gr. *ἐκτός*, without, + NL. *cornea*, cornea.] The outer layer of the cornea.

ectodactylism (ek-tō-dak′ti-lizm), *n.* An abnormal absence of digits. *Bateson*, Study of Variation.

ecto-ethmoid (ek-to-eth′moid), *n.* [Gr. *ἐκτός*, without, + E. *ethmoid.*] In *ichth.*, same as *prefrontal.*

ectogenesis (ek-tō-jen′e-sis), *n.* [Gr. *ἐκτός*, outside, + *γένεσις*, origin, production.] The production of or the giving rise to structures from without: opposed to ★*endogenesis.*

ectolateral (ek-tō-lat′e-ral), *a.* [Gr. *ἐκτός*, without, + L. *latus* (*later-*), side, + *-al*[1].] Situated on the outer side.

ectoloph (ek′tō-lof), *n.* [Gr. *ἐκτός*, without, + *λόφος*, crest.] The external ridge or crest on such an upper molar as that of a horse or rhinoceros. From it arise the parastyle, mesostyle, and metastyle. See cut under ★*tooth.*

ectomesoblast (ek-tō-mes′ō-blast), *n.* [Gr. *ἐκτός*, without, + E. *mesoblast.*] In *embryol.*, the cell-layer or cells which have not yet differentiated into ectoblast and mesoblast proper.

ectonephridium (ek″tō-ne-frid′i-um), *n.*; pl. *ectonephridia* (-ä). [Gr. *ἐκτός*, without, + NL. *nephridium.*] A nephridium of ectodermal origin, as in the annelids.

ectonuclear (ek-tō-nū′klē-är), *a.* [Gr. *ἐκτός*, outside, + L. *nucleus*, kernal, nucleus.] Situated or occurring outside the nucleus of the cell: opposed to ★*endonuclear.*

ectopagus (ek-top′a-gus), *n.*; pl. *ectopagi* (-jī). [NL., < Gr. *ἐκτός*, outside, + *πηγνύναι* (√*παγ-*), fix, fasten.] A double monster with lateral union of the trunk from the umbilicus upward.

ectoparenchyma (ek″tō-pa-reng′ki-mä), *n.* [NL., < Gr. *ἐκτός*, outside, + NL. *parenchyma.*] In trematodes, the outer portion of the parenchyma. *Jour. Roy. Micros. Soc.*, Aug. 1903, p. 500.

ectoperitoneal (ek″tō-per″i-tō-nē′al), *a.* [Gr. *ἐκτός*, outside, + *περιτόναιον*, peritoneum.] Relating to the surface of the peritoneum which is in contact with the viscera or the abdominal wall.

ectophyte (ek′tō-fīt), *n.* [Gr. *ἐκτός*, outside, + *φυτόν*, plant.] An external vegetable parasite.

ectophytic (ek-tō-fit′ik), *a.* [*ectophyte* + *-ic.*] Of the nature of an ectophyte.

More or fewer of their rootlets have their extremities invested by a weft of hyphal mycelium as an *ectophytic* mycorhiza. *Encyc. Brit.*, XXV. 439.

Ectopic gestation. Same as *extra-uterine pregnancy* (which see, under *pregnancy*).

ectoplast (ek′tō-plăst), *n.* [Gr. ἐκτός, without, + πλαστός, formed.] The outermost layer or membrane bounding and inclosing the cytoplasm of the plant cell.

ectopocystic (ek″tō-pō-sis′tik), *a.* [Gr. ἔκτοπος, out of the place, + κύστις, bladder, + *-ic.*] Relating to or caused by malposition of the bladder.

ectoretina (ek-tō-ret′i-nä), *n.* [NL., < Gr. ἐκτός, outside, + NL. *retina*, retina.] The outer layer of the retina.

ectorganism (ekt-ôr′gan-izm), *n.* [Gr. ἐκτός, outside, + E. *organism.*] Same as *ectoparasite.*

ectorhinal (ek-tō-rī′năl), *a.* [Gr. ἐκτός, without, + ῥίς (ῥιν), nose, + *-al.*] Situated on the outer side of the nose.—**Ectorhinal fissure.** See ★*fissure.*

ectosac (ek′tō-sak), *n.* [Gr. ἐκτός, outside, + σάκκος, sack, bag.] The membrane inclosing the ovum, or egg.

ectosaccal (ek-tō-sak′ăl), *a.* Of or pertaining to the ectosac.

ectosipho (ek-tō-sī′fō), *n.* [NL., < Gr. ἐκτός, without, + σίφων, L. *sipho*, a pipe: see *siphon.*] The outer siphuncular tube in the nautiloid cephalopods of the extinct family *Endoceratidæ.*

ectoskeletal (ek″tō-skel′e-tăl), *a.* [Gr. ἐκτός, without, + σκελετόν, skeleton, + *-al*[1].] Same as *exoskeletal.*

ectoskeleton (ek-tō-skel′e-tŏn), *n.* [NL., < Gr. ἐκτός, outside, + σκελετόν, skeleton.] Same as *exoskeleton.*

ectosolenian (ek-tō-sō-lē′ni-an), *a.* [Gr. ἐκτός, outside, + σωλήν, channel, pipe, + *-ian.*] Having an extended neck-like orifice, as the foraminifer *Lagena sulcata.* Compare ★*entosolenian.*

ectosome, *n.* **2.** In *cytol.*, one of the deeply staining granules eliminated from the chromatin of the nuclei of the germ-track during their karyokinetic divisions. *Haeckel*, 1902.

ectosphenotic (ek″tō-sfē-not′ik), *a.* and *n.* **I,** *a.* [Gr. ἐκτός, without, + E. *sphenotic.*] Relating to the external portion of the sphenotic bone.—**Ectosphenotic process,** a name given by Mivart to a small, slightly hooked process which arises on the sphenotic process of the skull in birds, just in advance of the articulation of the quadrate.

II, *n.* The ectosphenotic process.

ectosphere (ek′tō-sfēr), *n.* [Gr. ἐκτός, outside, + σφαῖρα, ball.] In *cytol.*, the outer or cortical zone of the centrosphere.

Ectospora (ek-tō-spō′rä), *n. pl.* [NL., < Gr. ἐκτός, outside, + σπορά, seed (spore).] A group of *Sporozoa* in which sporulation takes place at the close of the trophic period and the spore mother-cells or sporoblasts are formed at the periphery of the sporonts. It includes the *Gregarinida, Coccidiidea,* and the *Hæmosporidia.* Compare ★*Endospora. Mesnil.*

ectostracal (ek-tos′trą-kal), *a.* Of or pertaining to the ectostracum.

ectostracum (ek-tos′trą-kum), *n.*; pl. *ectostraca* (-kä). [NL., < Gr. ἐκτός, outside, + ὄστρακον, shell.] The second layer of the integument of mites, lying between the epiostracum and the hypostracum. It consists, in the *Hydrachnidæ,* of a single layer of subcubical cells forming a dense tissue flat on both sides.

ectosylvian (ek-tō-sil′vi-an), *a.* [Gr. ἐκτός, outside, + *Sylvian.*] Situated at the outer side of the Sylvian sulcus.—**Ectosylvian sulcus.** See ★*sulcus.*

ectotheca (ek-tō-thē′kä), *n.* [NL., < Gr. ἐκτός, outside, + θήκη, receptacle.] In certain hydroids, the external layer of the chitinous covering; an exotheca.

ectothrix (ek′tō-thriks), *n.* [From the specific name of the fungus, *Megalosporon ectothrix*: < Gr. ἐκτός, outside, + θρίξ, hair (see def.).] The form of the parasitic fungus causing *tinea* or ringworm which produces its spores on the outside of the hairs.

ectotrachea (ek″tō-trā-kē′ä), *n.* [NL., < Gr. ἐκτός, outside, + τραχεία, windpipe.] The outer epithelial layer of the tracheæ of insects.

It is the so-called peritoneal membrane or invaginated epiblast: a true pavement epithelium.
A. S. Packard, Text-book of Entom., p. 432.

ectotrochlea (ek-tō-trok′lē-ä), *n.* [NL., < Gr. ἐκτός, outside, + NL. *trochlea.*] In *ornith.*, a name sometimes applied to the articular facet or trochlea on the outer distal end of the tarso-metatarsus, with which the outer toe articulates.

In both groups [Grebes and Divers] the tarso-metatarsus is much compressed laterally, and the *ectotrochlea* is much reduced. *Proc. Zool. Soc. London*, 1899, p. 1041.

Ectotrophi (ek-tot′rō-fī), *n. pl.* [NL., < Gr. ἐκτός, outside, + *-τροφος*, < τρέφειν, nourish.] A group of thysanurous insects having external mouth-parts, and comprising the *Machilidæ* and *Lepismatidæ.*

ectotrophic (ek-tō-trof′ik), *a.* [Gr. ἐκτός, outside, + *-τροφος*, < τρέφειν, nourish.] Getting nourishment outside: in *bot.*, said of fungi which envelop the roots of a plant without penetrating them.

ectotrophous (ek-tot′rō-fus), *a.* Of or belonging to the *Ectotrophi.*

ectrimma (ek-trim′ä), *n.*; pl. *ectrimmata* (-ma-tä). [NL., < Gr. ἐκτριμμα, < ἐκτρίβειν, rub constantly, < ἐκ, out, + τρίβειν, rub.] An ulcer resulting from long-continued pressure or friction; a bed-sore.

ectrosis (ek-trō′sis), *n.* [Gr. ἔκτρωσις, miscarriage.] Abortion; abortive treatment of disease.

ectylosis (ek-ti-lō′sis), *n.* [NL., < Gr. ἐκ, out, + τύλωσις, a becoming callous, < τύλος, a knob, callus.] The removal of corns or other callosities.

ectylotic (ek-ti-lot′ik), *a.* Pertaining to or effecting ectylosis.

Ecua. An abbreviation of *Ecuador.*

écuelle (ā-kü-el′), *n.* [F.: see *sculler*[2].] A low porringer, with handles, used for soup or broth, common in the middle ages: usually of wood, but sometimes of pewter or even silver.

écuelle (ā-kü-el′), *v. t.* [F. *écuelle*, a porringer or bowl: see ★*écuelle.*] To grate or rub gently in a pan lined with rounded knobs, made for the purpose.

From the rind of the fruit, by a process known as *ecuelling*, which consists of gently rubbing the fruit on rounded projections arranged inside a brass basin, a very fine essence of limes is obtained.
Bulletin Roy. Gardens (Kew), May–June, 1891.

ecumene (ek′ū-mēn), *n.* [Gr. οἰκουμένη: see *ecumenic.*] The habitable part of the world; the part of the world inhabited by man.

Ecumenical patriarch. See ★*patriarch.*

écurie (ā-kü-rē′), *n.* [F.: see *equery, equerry.*] A stable; stabling.

ecurvature (ē-kėr′vą-tūr), *n.* [L. *e-*, out, + E. *curvature.*] An outward curve.

ecurved (ē-kėrvd′), *a.* [L. *e-*, out, + E. *curved.*] Curved outward.

eczema, *n.*—**Eczema epizoöticum.** Same as *foot-and-mouth disease* (which see, under *foot*).—**Eczema marginatum,** an eczematous eruption occurring on the inner side of the thighs.

eczematoid (ek-zem′ą-toid), *a.* [*eczema*(*t-*) + *-oid.*] Resembling eczema.

eczematosis (ek″ze-mą-tō′sis), *n.* [NL., < *eczema*(*t-*) + *-osis.*] One of several skin-diseases characterized by an abnormal secretion from the surface.

Edam cheese. Same as *Dutch cheese* (*a*) (which see, under *cheese*[1]).

edaphic (ē daf′ik), *a.* [Gr. ἔδαφος, base, ground, + *-ic.*] Influenced or produced by the soil or its contents; arising from the soil: as, *edaphic* formations (see ★*formation*); *edaphic* influences. The edaphic factors in climatology are the temperature, moisture, and sunlight favorable or unfavorable to the growth of the plant; the edaphic factors of soil-structure are those that more intimately relate to the growth of vegetation, such as its moisture, capillary structure, and soluble chemical contents.

The water-supply is an important *edaphic* factor. A series of springs emerging from some rock-stratum rarely fails to alter the vegetation.
Geog. Jour. (R. G. S.), Aug., 1903, pp. 149, 151.

eddering (ed′ėr-ing), *n.* [*edder*[1] + *-ing*[1].] **1.** The act of binding or strengthening a hedge at the top by an interlacing of flexible rods or osiers or other material.—**2.** The rods, osiers, etc., used for this purpose. [Prov. Eng. in both uses.]

eddoes, *n.*—**Blue or nut eddoes.** In the British West Indies, *Xanthosoma violaceum*, a large-leaved aroid plant with violet-blue petioles, widely cultivated for the sake of its edible starchy root-stock.

eddy, *n.*—**Tidal eddy,** a whirl or gentle local circulation in some corner of the ocean formed by the deflection of one or more tidal streams.

eddy-chamber (ed′i-chām″bėr), *n.* A chamber in which, by jets or otherwise, a current of fluid is compelled to whirl in eddies, as in a spray-nozle. *Yearbook U. S. Dept. Agr.*, 1899, p. 153.

eddy-current (ed′i-kur″ent), *n.* In *elect.*, currents induced by alternating, rotating, or moving magnetic fields in places where they are not desired and are objectionable because they consume energy and produce heat. To avoid or reduce eddy-currents, the iron of changing magnetic circuits is subdivided by lamination in the direction at right angles to the path of induced electromotive force (so as to give no closed circuits for the production of eddy-currents), and large copper conductors exposed to changing magnetic fields are *stranded*, that is, composed of a number of smaller conductors more or less insulated from one another. Reduction of eddy-currents is the cause of the lamination of the iron in transformers, induction-motors, and armatures of electric machines in general. Also called *parasitic current* and *Foucault current.*

Eddying suspension. See ★*suspension.*

eddy-rock (ed′i-rok), *n.* A rock, generally a sandstone, which shows marked cross-bedding or flow-and-plunge structure.

edelweiss, *n.*—**New Zealand edelweiss,** either of two species of *Gnaphalium, G. Colensoi* and *G. grandiceps*: so called from the resemblance of their woolly, silvery-white flowers to the edelweiss, to which they are closely related botanically.

edema, *n.*—**Angioneurotic edema.** See ★*angioneurotic.*—**Collateral edema,** serous infiltration into the tissues outside of an area of inflammation.—**Flying edema, œdema fugax,** evanescent swellings, due to effusion of fluid, occurring in various portions of the body: differing from urticaria in not being accompanied by itching or other signs of irritation.—**Malignant edema,** an edematous swelling extending rapidly and accompanied by gangrene and the subcutaneous formation of gas.—**Mucous edema, solid edema.** Same as *myxedema.*

edentate, *a.* **3.** In *bot.*, having no teeth, as an entire leaf.

edestin (ē-des′tin), *n.* [Gr. ἐδεστός, eatable (< ἔδειν, eat), + *-in*[2].] A crystallizable vegetable globulin found in wheat, rye, oats, etc.

Edestus (ē-des′tus), *n.* [NL., < Gr. ἐδεστής, an eater, < ἔδειν, eat: see *eat.*] A genus of extinct cestracionti selachians: known only by the large-arched symphysial dentitions (finspines according to some authors) which occur in the Carboniferous of North America, Russia, and Australia.

edge, *n.* **7.** In *poker*, same as (and a substitution for) *age*, 13.—**To the edge,** to the highest degree; in all completeness. [Colloq.]

edge-laid (ej′lād), *a.* Made of narrow strips laid together face to face, and with the edges up and exposed, as floors and table-tops: said also of built-up leather belting when to secure thickness and strength the elements of the belt run on their edges.

edge-molding (ej′mōl″ding), *n.* In *arch.*, any molding which has as its chief or an important part a projecting sharp arris.

edge-plate (ej′plāt), *n.* A heavy iron plate placed against the inside of the rockers, or sills, of a heavy carriage-body to insure stability and strength.

edge-roll, *v. t.* **3.** To roll (a flat strip, as of steel) in a coil or helix around a cylindrical rod with the flat face of the strip perpendicular to the axis.

edge-runner (ej′run″ėr), *n.* A form of grinding-apparatus or -mill for ores or similar material, in which a heavy disk or wheel runs in a circular path upon its edge in a pan or mortar. By its weight and the sliding motion of its edge as it revolves, it comminutes the material.

edge-stitching (ej′stich″ing), *n.* In *sewing-machine work*, the process of sewing two parallel rows of stitches along the edge of the fabric to form a double edge-stitch. See *multiple-needle* ★*sewing-machine.*

edge-weed (ej′wēd), *n.* The fine-leafed water-hemlock or water-fennel, *Œnanthe Phellandrium.*

edge-zone (ej′zōn), *n.* In corals, a fold of tissue extending over the theca and usually containing a cavity continuous over the lip of the calycle with the cœlenteron. In colonial forms the buds arise from this part. *Annals and Mag. Nat. Hist.*, Jan. 1904, p. 22.

edging, *n.* **5.** In *photog.*, a coat of albumen, gelatin, or india-rubber along the edges of a collodion-covered dry-plate; a protection to the film during development. Generally the whole surface of the plate is given a substratum for the collodion.

edging-machine, *n.* **3.** In *sheet-metal work*, a machine for turning and forming an edge in tinware and sheet-metal. By changing the forming-rolls it becomes a turner or turning-machine; by the use of still other rolls it becomes a burring-machine. See ★*beading-machine.*

edgy, *a.* **3.** Having contours which are too sharply defined: said of a picture.

edh (eᵺ), *n.* [*e*, auxiliary vowel (as in *em*, *ess*, etc.), + *dh* = *th* in *this*, *that*, etc., AS. *d.*] A name of the Anglo-Saxon letter ð or Ð representing the sound of *th* in *that*, *this*, *smooth*, etc.

edictally (ē′dik-tal-i), *adv.* By edict or public proclamation: as, to be *edictally* notified or enjoined.

edility, ædility (ē-dil′i-ti), *n.* [L. *ædilitas*, < *ædilis*, edile.] The office of edile or the duties pertaining to it.

edinol (ed′i-nōl), *n.* The trade-name of a photographic developer, said to be m-amino-o-hydroxybenzylalcohol hydrochlorid,

$$\overset{3}{N}H_2C_6H_3(\overset{2}{O}H)\overset{1}{C}H_2OH.HCl.$$

Edison effect. See ★*effect*.

edition, *n.*—**Acting edition.** See ★*acting*.

editor, *n.* 2. An exhibitor: in the phrase *editor of the games* (translating the Latin *editor ludorum*), an officer who superintended the Roman public games. *L. Wallace*, Ben-Hur, p. 347.

edobole (ē′dō-bōl), *n.* [Gr. *οἶδος*, a swelling, + *βόλος*, a throwing.] In *phytogeog.*, a bolochore in which propulsion is effected by means of turgescence. *F. E. Clements.*

Edomite (ē′dom-it), *n.* [*Edom* + *-ite*².] A descendant of Esau or Edom; one of the race which dwelt in southern Palestine (called *Edom*, or *Idumæa*), and which was bitterly hostile to the Israelites, a kindred nation.

Edomitish (ē′dom-ī-tish), *a.* [*Edomite* + *-ish.*] Pertaining to or characteristic of the Edomites, the descendants of Esau and the hereditary enemies of the Israelites.

Edrioaster (ed″ri-ō-as′tėr), *n.* Same as *Edriaster*.

edriophthalmate (ed″ri-of-thal′māt), *a.* Same as *edriophthalmous*. *Annals and Mag. Nat. Hist.*, Feb. 1904, p. 154.

edriophthalmian (ed″ri-of-thal′mi-an), *a.* and *n.* **I.** *a.* Same as *edriophthalmous*.

II. *n.* Any individual of the order *Edriophthalma*; a sessile-eyed crustacean.

E. D. S. An abbreviation of *English Dialect Society*.

educand (ed′ū-kand), *n.* [L. *educandus*, that is to be educated, < *educare*, educate.] One who is to be educated; a pupil or student.

> We wish therefore that the *educands* be taught to observe. *Petty.*

educatory (ed′ū-kā-tō-ri), *a.* [*educate* + *-ory.*] Educative; that has an educating effect or influence; as, an *educatory* regimen.

educement (ē-dūs′ment), *n.* [*educe* + *-ment.*] The act of drawing out or developing.

Edwardian (ed-wär′di-an), *a.* [*Edward* + *-ian.*] Of, pertaining to, or characteristic of any one of the sovereigns of England named Edward or his reign: as, the *Edwardian* period; *Edwardian* architecture.

Edwardsian (ed-wärd′zi-an), *a.* and *n.* [*Edwards* + *-ian.*] **I.** *a.* Pertaining to Jonathan Edwards or his opinions (★Edwardsianism, which see).

II. *n.* One of the school of American theologians which has followed the lines laid down by Jonathan Edwards (1703–58). The members of the school differ widely from the founder and among themselves. For their general view, see ★*Edwardsianism*.

Edwardsianism (ed-wärd′zi-an-izm), *n.* The system of modified Calvinism which is the outgrowth of the teachings of Jonathan Edwards (1703–58). The majority of its defenders recognize the following tenets: all moral character lies in the will; man's ability to choose does not lessen his dependence on the interposition of the Holy Spirit; without such interposition man, by nature depraved, infallibly chooses evil; God's decrees are consistent with human liberty; the governmental theory of the atonement. Also called *New England Theology* and *New-light Divinity*.

E. E. An abbreviation (*b*) of *Early English*; (*c*) of *Electrical Engineer*.

E. E. and M. P. An abbreviation of *Envoy Extraordinary and Minister Plenipotentiary*.

eel, *n.*—**Black eel,** *Anguilla australis*, of Australia and New Zealand.—**Commom eel.** Same as *black* ★*eel*.—**Fresh-water eel,** a name applied to eels of the genus *Anguilla*, which live chiefly or wholly in fresh water.—**Green eel,** *Muræna afra*, an eel of the family *Murænidæ*, found in Australian waters.—**Long-necked eel,** an eel of the family *Derichthyidæ*.—**Mother of eels.** See *mother*¹.—**Silver eel.** (*a*) *Murænesox cinereus*, of New South Wales. Also called *sea-eel*. (*b*) *Leptocephalus wilsoni* of Australia. (*c*) *Congromuræna habenata* of New Zealand.—**Symbranchoid eel,** an eel-like fish of the family *Symbranchidæ*. Also known as *rice-eel*.

eel-cake (ēl′kāk), *n.* Small eels fried together and turned out of the pan like a flat cake. *Wallin.*

eel-cat (ēl′kat), *n.* One of the channel catfish, *Ictalurus anguilla*.

eelery (ē′lę-ri), *n.* [*eel* + *-ery.*] A place where eels are caught; an eel-fishery.

eel-grass, *n.*—**Green eel-grass,** the white water-crowfoot, *Batrachium trichophyllum*, ranging from Nova Scotia to North Carolina, and also found in California, Europe, and Asia.

eel-pick (ēl′pik), *n.* An eel-spear.

eel-picker (ēl′pik″ėr), *n.* One who fishes with an eel-pick.

> In its [the Broad's] deep mud eels abound; and the *eel-picker* in his little punt, . . . is a common object on the flats. *G. C. Davies*, Norfolk Broads, xxvi.

eel-pump (ēl′pump), *n.* A portable pump for forcing eels and fish out of water-pipes. [Rare.]

eelskin, *n.* 2. In *ceram.*, a peculiar glaze of a brownish-yellow tint, seen on old Chinese porcelain.

eel-trap (ēl′trap), *n.* In *mech.*, a screen or net used in water-pipes to prevent the entrance of fish which might otherwise pass into machines and clog their valves.

eel-trunk (ēl′trungk), *n.* A box with holes in it in which eels are kept alive until they are wanted. [Prov. Eng.]

eel-worm (ēl′wėrm), *n.* Any one of the free-living nematoid worms of the family *Anguillulidæ* (which see). *Yearbook U. S. Dept. Agr.*, 1897, p. 568.

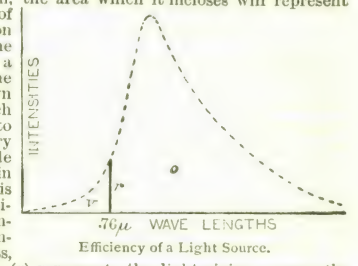
E. E. T. S. An abbreviation of *Early English Text Society*.

efemeral, *a.* and *n.* A simplified spelling of *ephemeral*.

effect, *n.* 9. In *art*, an accidental or unusual combination of colors, lights, or forms which especially excite the interest of a painter and form a suitable motive or key in painting or etching.

> It is evident that such perfectly favorable *effects* are likely to be rare, but they do occur, and the business of the imaginative artist is either to seize upon them when they do occur, or imagine them in their absence.
> *P. G. Hamerton*, in Portfolio, 1886, p. 152.

Budde effect, the effect, not due to heating, of the chemically active rays of the sun in causing expansion of dry chlorin gas: observed and described by Budde.—**Coefficient of Peltier effect,** a numerical constant denoting the size of the Peltier effect; the heat developed in a circuit consisting of more than one metal, other than that due to the overcoming of the resistance of the circuit, divided by the product of the current and the absolute temperature.—**Doppler's effect,** the effect, upon the apparent frequency of a train of waves, of a movement of the source of the wave-motion toward or away from the observer; Doppler's principle (see *principle*). Thus there is a displacement of lines in the spectrum of a star toward the violet when the earth and star are approaching each other, and vice versa.—**Edison effect,** a phenomenon of the vacuum of incandescent lamps, consisting of an electric glow near the ends of the filament, caused by a current flowing through the gases between the terminals or from a third terminal and the negative leg of the filament.—**Faraday effect,** the rotatory effect of a magnetic field upon the plane of polarization of light.—**Ferranti effect,** in *elect.*, the rise of voltage occurring in underground cables under certain conditions due to the effect of distributed capacity and self-induction.—**Fly-wheel effect,** a property common to all revolving wheels, or balanced masses, of storing up energy when accelerated by a force greater than the average and of giving up this energy when retarded.—**Illuminating effect,** the illuminating power of a source of light or of a group of such sources. It is measured by comparing the brightness of a surface at the position in question with the brightness of the same surface when illuminated by a unit light-source, such as the Hefner lamp, placed at a distance of one meter.—**Joule effect,** the heating effect produced by the passage of an electric current through a conductor, arising from its resistance only.—**Joulean** or **Joule-Kelvin effect.** Same as *Joule-Thomson* ★*effect*.—**Joule-Thomson effect,** the effect upon the temperature of a gas of forcing it to pass through a porous plug or small aperture. It was found by Joule and Thomson (Lord Kelvin) that hydrogen rose in temperature by this process, but that other gases were cooled. It has since been shown that at very low temperatures hydrogen is likewise cooled by passage under pressure through an orifice.—**Kerr effect,** a phenomenon occurring when light is reflected from the surface of a magnet. It consists in a rotation of the plane of polarization of the reflected ray when the light falling upon the magnetized mirror is polarized at right angles to or parallel with the plane of incidence.—**Lenard effect,** the ionization of gases by ultra-violet light.—**Mechanical effect,** the result obtained from a mechanical device or the useful work done by a machine; the available power developed by an engine.—**Multiplication of effects,** the law, formulated by Spencer, that in society, as throughout the cosmos, every cause produces more than one effect.—**Purkinje effect.** See *Purkinje* ★*phenomenon*.—**Pyrometric effect.** Same as ★*calorific intensity*.—**Rowland effect,** in *elect.*, the magnetic effect of electric convection or of a moving electrostatic charge.—**Skin effect,** in *elect.*, the tendency of an alternating current to concentrate itself most upon the surface of the conductor through which it flows at high frequency, due to the magnetic field of the current inside of the conductor.—**Vacuum effect,** the effect produced by a vacuum, or the amount of pressure less than that of the atmosphere which exists in an evaporating apparatus, as in sugar-boiling.—**Young effect.** See *recurrent* ★*vision*.—**Zeeman effect,** the effect of a strong magnetic field upon the lines in the spectrum of a beam of light passing through it. The lines of the spectrum are widened and subdivided, the light of the components due to the division being polarized.



effect-carbon (e-fekt′kär″bon), *n.* See *electric* ★*arc*.

Effective head, pressure, resistance, section, utility, value. See ★*head*, etc.—**Mean effective pressure.** See ★*pressure*.

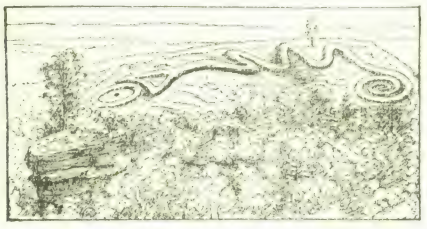
efferential (ef-e-ren′shal), *a.* [*efferent* + *-i-al.*] That carries outward or away; that serves to carry off; of the nature of an efferent: as, an *efferential* blood-vessel.

efficacity (ef-i-kas′i-ti), *n.* [L. *efficacitas*, < *efficax*, efficacious: see *efficacious*.] The quality of being efficacious; efficaciousness; efficacy; effectiveness. *Browning.*

efficiency, *n.*—**Apparent efficiency,** in *elect.*, the ratio of the power-output divided by the apparent power-input. (See *apparent* ★*power*.) If the apparent power is greater than the true power, the apparent efficiency is less than the true efficiency and equals the product of power-factor and true efficiency.—**Efficiency of a source of light,** the ratio of the luminous energy of a source of light to its total energy. *Radiant efficiency* or *luminous efficiency* is the ratio of the light-giving radiation of a source to the total radiation. The method formerly employed in the determination of this important constant consisted in measuring the total radiation received upon the face of a thermopile or bolometer placed at a given distance from the source of light and comparing the same with the radiation reaching the heat-measuring instrument when a glass cell containing water or a solution of alum was interposed in the path of the rays. If such a cell were capable of transmitting all the light-giving radiation and that alone, the ratio of the effects thus obtained would be the radiant efficiency. It was known at an early day that this assumption was not warranted, and a correction, thought to be approximately accurate, was applied. It has recently been shown that even with this correction the values obtained for the radiant efficiency are much too large, and more rigorous methods have been devised, as follows: (1) *Langley's method.* The first of these methods consists in dispersing the light from the source by means of a prism of rock-salt or fluorite, which is transparent to all wave-lengths, and in determining the distribution of intensities throughout the spectrum thus obtained. If a curve be then drawn having as abscissæ wave-lengths and as ordinates the intensity of each wave-length of the spectrum, the area which it incloses will represent the energy of total radiation from the source. If a vertical line (*r*) be drawn at 76μ, which corresponds to the boundary of the visible spectrum in the red, this line will divide the inclosed area into two parts,

Efficiency of a Light Source.

one of which (*v*) represents the light-giving energy, the other (*o*) that portion of the energy which is non-luminous. The ratio of the light-giving area to the total area of the curve will then be the radiant efficiency of the source of light. The first experimenter to obtain such curves was S. P. Langley. (2) *Ångström's method.* Another method of measuring the radiant efficiency of a source of light is due to Knut Ångström. An opaque screen is mounted in such a position as to cut off all rays lying beyond the red end of the visible spectrum, and the remaining radiation is assembled upon the face of a bolometer by means of a cylindrical lens. The ratio of this quantity to the total radiation, measured by the same instrument, gives the radiant efficiency of the source of light. The radiant efficiency of such sources of light as have been measured by the two methods thus described is given in the following table. The values obtained by the integration of the energy-curves and by Ångström's method are marked respectively L and A.



Source.	Efficiency.	Method.	Observer.
Hefner lamp	.0096	A	Ångström
Acetylene flame	.056	A	Ångström
Acetylene flame	.033–.040	L	Nichols & Coblentz
Nernst lamp	.036–.047	A	Ingersoll
Mercury arc	.20	L	Nichols
Geissler tube	.20	L	Drew

While other sources of light have not as yet been measured by these methods, their relative efficiencies are approximately known, and by comparison with the above data we know that the radiant efficiency of ordinary oil- and gas-flames is about .01, that of the glow-lamp from .01 to .03, and that of the electric arc from .04 to .08. *Gross efficiency.* The term *efficiency* is likewise used to express the ratio of the energy in light-giving form developed in unit time by a source to the energy of combustion of the fuel which it is necessary to consume in order to maintain the source during that time. The efficiency thus defined takes into account the total heat-losses in the production of light. In the case of the flames of candles and of oil-lamps the heat lost by convection and conduction is very large compared with the total radiation from the flame. In the case of gas-flames the heat of combustion of the coal necessary to produce the gas to maintain the flame, as com-

pared with the luminous energy emitted by the flame, gives the gross efficiency. In computing the gross efficiency of electric lights the heat of combustion of the fuel used to generate the current supplied to the lamps or the equivalent amount of energy, whatever be its source, is to be taken. In the case of a steam-plant for electric lighting the losses by dissipation of heat in the boiler, engine, dynamo, and lead-wires, together with the loss by convection and conduction in the electric lamp itself, all enter into the computation of the gross efficiency. Whatever process for the production of light may be employed, the amount of energy dissipated for the purpose of obtaining luminous radiation is very great, and the gross efficiency of luminous flames used in lighting ranges from .001 to .002, while the gross efficiency of electric lamps under the best existing conditions for the production of power is little if any above these figures. *Electric efficiency.* It is convenient in the case of the electric light to express the efficiency in watts per candle — a method not comparable with the energy-ratio defined above, but useful for the comparison of the various types of lamp used in electric lighting. The electric efficiency of the ordinary lamp ranges between four watts per candle and three watts per candle, according to the temperature of the filament, that of the arc-light from two watts per candle to one watt per candle (mean spherical candle-power), while the efficiency of the Nernst lamp is intermediate between that of the arc and the glow-lamp.— **Luminous efficiency.** See ★*efficiency of a source of light.*— **Projected efficiency,** the hypothesis that, in the process of evolution, existing individuals and their present interests are by natural selection subordinated to the interests of a much larger number of future individuals. *Kidd*, Western Civilization, p. 65.— **Radiant efficiency.** See ★*efficiency of a source of light.*— **Thermal efficiency,** the ratio of the heat converted into work by a thermal engine to the total amount of heat supplied to it.— **Transmission efficiency,** the ratio of the power delivered by a transmission-mechanism to the power received by it; the efficiency with which anything can be transmitted.

Efficient zone. See ★*zone.*

effigy-mound (ef'i-ji-mound), *n.* A mound or earthwork representing some object, especially

Serpent Effigy-mound, Adams County, Ohio.

some animal. Mounds of this form are particularly frequent in the northwestern United States.

efflagration (ef-la-grā'shon), *n.* [L. *ef-* for *ex,* out, + *flagrare,* burn: see *flagrant.*] In *geol.,* a burst of flame or incandescent material from a volcano.

effluviography (e-flö-vi-og'ra-fi), *n.* [L. *effluvium,* outflow, + Gr. *-γραφια,* ‹ *γράφειν,* write.] In *photog.,* the action of the silent electric discharge upon a sensitized gelatinobromide plate. An image is obtained in complete darkness and may be developed in the usual manner. *Woodbury,* Encyc. Dict. of Photog., p. 179.

effort, *n.*— **Tractive effort,** the force required or exerted to draw a given load along a road or track at a given speed; in locomotives, the draw-bar pull.

effraction (e-frak'shon), *n.* [NL. **effractio(n-),* ‹ L. *effringere* (pp. *effractus*), break open: see *effracture.*] A breaking-open or breaking-in; house-breaking; burglary.

effractor (e-frak'tor), *n.* [ML. *effractor,* ‹ L. *effringere,* break open: see *effracture.*] One who breaks in by force; a house-breaker; a burglar. *Bouvier,* Law Dict.

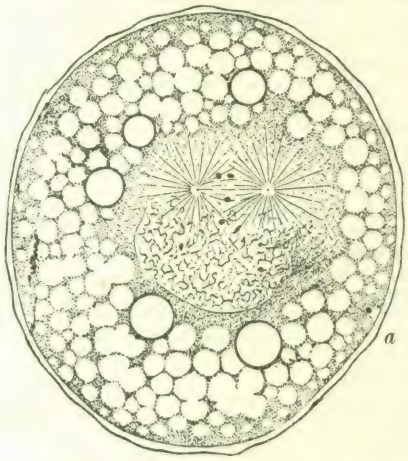
effranchisement (e-fran'chiz-ment), *n.* [*effranchise* + *-ment.*] The act of effranchising, or the state of being effranchised or invested with privileges.

effuse, *v.* **II.** *intrans.* To flow, as a fluid, through an aperture or through a porous partition the openings in which are large compared with the diameter of a molecule.

Effusion of gases. (*b*) In *physics,* the passage of gases through a perforated diaphragm the openings in which are very large as compared with the diameter of a molecule. The phenomena of effusion differ from those of diffusion (which is the passage of a gas through a membrane the pores of which are of molecular dimensions) in some important respects. In effusion, the rate of flow of a gas or mixture is inversely as the square root of the density and the composition of a mixture remains unchanged: in diffusion, each component of a mixture is transmitted at a rate inversely proportional to the square root of its molecular weight and the composition of the mixture is therefore changed.— **Thermal effusion of gases,** the effusion of gases through a porous diaphragm when the pressures on the two sides are the same but the temperatures vary. The gases move from the cold to the hot side of the partition.

effusion-plug (e-fū'zhon-plug), *n.* A small section of glass tubing, closed at one end by a platinum plate in which there is a minute hole, which serves as a stopper to a vessel from which a gas is allowed to escape in determining its density by the rate of effusion. *M. W. Travers,* Exper. Study of Gases, p. 281.

effusive. **I.** *a.*— **The effusive period,** in the solidification of an igneous rock, that period in which it cools after having been poured out on the surface of the earth: at this time the finer-grained portion or ground-mass of the rock is usually crystallized.



II. *n.* In *petrog.,* a volcanic rock poured out on the surface of the earth: contrasted with *intrusive rocks.* Also *extrusive. Amer. Jour. Sci.,* Aug., 1903, p. 121.

eg, *n.* and *v.* A simplified spelling of *egg.*

egeriid (e-jē'ri-id), *n.* and *a.* **I.** *n.* A member of the family *Egeriidæ.*

II. *a.* Of or belonging to the lepidopterous family *Egeriidæ* or *Ægeriidæ.*

egg[1], *n.* 3. In *cricket,* no score; zero; a duck's egg. [Slang.]— **Egg apparatus,** the three nucleated cells at the micropylar end of the embryo-sac of plants, two of which form the synergidæ and the third the oösphere. See *oösphere* and *synergida.*— **Egg centrosome,** a centrosome belonging to the egg, as distinguished

Egg Centrosome.

Fertilization of the egg of *Nereis,* from a section. Magnified 400 times.

Appearance presented soon after the entrance of the spermatozoön, showing the minute sperm-nucleus at *a,* the germinal vesicle disappearing, and the first polar mitotic figure forming. The empty spaces represent deutoplasm-spheres (slightly swollen by the reagents), the firm circles oil-drops. (From Wilson's "The Cell.")

from the sperm centrosome.— **Immediate egg,** in rotifers, a parthenogenetic summer egg.— **Philosopher's egg.** See *philosopher.*— **Resting egg.** Same as *winter* ★*egg.*— **Summer egg,** one of the parthenogenetic eggs produced by rotifers in summer, the large form giving rise to females and the small to males. In some entomostracans, as *Daphnia,* one of the parthenogenetic eggs which are produced in summer and develop rapidly in the brood-pouch. Compare *winter* ★*egg.*— **Warty egg,** the shell of *Amphiperas ventricosum,* which is egg-shaped and has a wart-like tubercle at each end.— **Winter egg,** in rotifers, a thick-shelled egg, produced in autumn and probably impregnated by the male: it remains inert all winter and develops in the spring; in some entomostracans, one of the fertilized eggs, produced in autumn, which remain inactive all winter in the detached ephippium and develop in the spring. Compare *summer* ★*egg.*

egg-assorter (eg'a-sôr″tèr), *n.* A simple form of egg-tester. [Eng.]

egg-bath (eg'bàth), *n.* In *tanning,* a bath of egg-yolks.

egg-boiler (eg'boi″lèr), *n.* An arrangement for boiling water so that eggs may be easily cooked in it, particularly on the table.

egg-bound (eg'bound), *p. a.* A condition in birds in which they are unable to expel the fully developed egg, either on account of its excessive size or because of the presence of some disease.

egg-breaker (eg'brā″kèr), *n.* Same as *egg-tooth.*

egg-candler (eg'kan″dlèr), *n.* One who candles or tests the freshness of eggs by holding them between the eye and a lighted candle.

egg-candling (eg'kan″dling), *n.* The practice of testing eggs by holding them between the eye and a lighted candle. The translucency of the egg shows its freshness.

egg-cement (eg'sē-ment″), *n.* A sticky fluid by which the eggs of some animals, such as certain frogs, are united with one another.

egg-coal (eg'kōl), *n.* A size of broken coal suitable for use in a hot-air furnace or the like, as distinguished from a smaller size called 'chestnut' used in a kitchen range or stove, and a still smaller size called 'pea-coal.'

egg-covering (eg'kuv″èr-ing), *n.* The covering

of the egg-masses of many insects. It varies greatly in character and, in general, is secreted by the accessory glands of the oviduct. Also called *egg-case, egg-pod, egg-sac.*

Eggertz test. See ★*test*[1].

eggette (eg-et'), *n.* [Irreg. *egg* + *-ette* as in *briquette.*] A lump of artificial fuel of the shape and size of a hen's egg. [Trade-name, U. S.]

egg-fruit (eg'fröt), *n.* In the Bahamas, the fruit of *Achras serpentaria* (*Lucuma serpentaria* of Humboldt, Bonpland, and Kunth). It is of the size of a small egg, has a thick skin, and is edible.

egg-guide (eg'gīd), *n.* A ventral movable triangular flap at the external opening of an oviduct, which serves to guide the eggs as they are laid. *A. S. Packard,* Text-book of Entom., p. 183.

egg-mite (eg'mīt), *n.* Any predatory mite which feeds on the eggs of insects.

egg-oil (eg'oil), *n.* The oleaginous material obtained from the yolks of hens' eggs. It contains olein and palmitin, with lecithin, cerebrin, neurine, etc., and is used in dressing alum-tanned leather.

egg-parasite (eg'par″a-sīt), *n.* Any insect of the family *Chalcididæ* or the family *Proctotrypidæ* which lays its eggs in the eggs of other insects. The chalcidid subfamilies *Trichogramminæ* and *Mymarinæ* seem to be exclusively composed of egg-parasites, and the same may be said of the proctotrypid subfamily *Scelioninæ.* The genus *Hadronotus* is a parasite of the eggs of *Heteroptera. H. rugosus* is described by Howard from eggs supposed to be those of the cotton-stainer, *Dysdercus suturellus.* See cut under ★*cotton-worm egg-parasite.*

Egg-parasite (*Hadronotus rugosus*). (Howard, U. S. D. A.)

Egg-plant blight, flea-beetle. See ★*blight,* ★*flea-beetle.*

egg-powder (eg'pou″dèr), *n.* The trade-name of a prepared form of casein obtained from skim-milk, offered for use as an article of food. *Yearbook U. S. Dept. Agr.,* 1900, p. 623.

egg-roller (eg'rō-lèr), *n.* A form of machine for making oval briquettes of the shape and size of a hen's egg from refuse from collieries or dumps. The small particles are cemented together by a tar or pitch and molded and compacted under pressure.

egg-sac (eg'sak), *n.* 1. The silken cocoon in which the eggs of most spiders are deposited and in which they hibernate. *Comstock,* Manual of Insects, p. 41.— **2.** In earthworms, one of the reniform sacs which open into the funnel-shaped ends of the oviducts; a *receptaculum ovorum.*— **3.** In crustaceans, as some copepods, one of the pair of egg-containing receptacles at the hinder end of the body.

egg-sleeker (eg'slē″kèr), *n.* A molder's tool having a face in the shape of a segment of an annular ring, used for giving a smooth or sleek surface in facing or finishing the hollow faces of curved molds.

egg-Sunday (eg-sun'dā), *n.* The Sunday before Shrove-Tuesday.

egg-timer, *n.* 2. An apparatus for the automatic cooking of eggs. It consists of a vessel containing boiling water and a series of three or more wire baskets suspended over the water. On placing an egg in a basket the basket sinks into the water and keeps the egg there for a fixed time. When the time has elapsed the basket automatically rises out of the water and stops the process of cooking. Each basket is adjusted to lift the eggs it may contain out of the water at the end of one, two, or three minutes as desired.

egg-whip (eg'hwip″), *n.* A hand-tool or machine for beating or whipping eggs, sponge, or batter; an egg-beater. The tool is a slender balloon-shaped form of wire fitted with a handle; the machine is a cylinder of wires, or two sets of wire paddles, held in the hand and made to revolve at a high speed by means of gearing.

eglantine, *n.* 3. A stone of the hardness and grain of marble. *Goldsmith,* Nat. Hist., I. vi. *N. E. D.*— **Eglantine gall.** Same as *bedegar.*

eglestonite (eg'l-ston-īt), *n.* [Named after Professor Thomas *Egleston* (1832-1900) of Columbia University.] An oxychlorid of mercury (said to be $Hg_6Cl_3O_2$) occurring in yellow to brown isometric crystals: found at Terlingua, Texas.

ego-altruism (ē″gō-al′trö-izm), *n.* Altruism conjoined with self-respect; the subjective aspect of morality.

Subjectively, morality is self-respect, and that desire for the good opinion of others, and that endeavour to deserve it, which Mr. [Herbert] Spencer has called *ego-altruism.* *Giddings,* Inductive Sociol., p. 257.

egocentric (ē-gō-sen′trik), *a.* [L. *ego,* I, + *centrum,* center, + *-ic.*] Having or regarding self as the center of all things; centering in self; egoistic.

The heliocentric system was expanded out of an antecedent geocentric system, itself the offspring of a democentric system, which sprang from an earlier ethnocentric system born of the primeval *egocentric* cosmos of inchoate thinking.

19th An. Rep. Bur. Amer. Ethnol., 1897–98, p. 831.

egocentricity (ē-gō-sen-tris′i-ti), *n.* [*egocentric* + *-ity.*] The character of being egocentric; specifically, an extreme and abnormal state of self-concentration or egoism.

Ziehen limits the hysterical constitution to emotional instability, *egocentricity,* craving for attention, peculiar predilections, disorders of imagination and attention (fantastic instability).

Amer. Jour. Psychol., July–Oct., 1903, p. 100.

ego-idea (ē″gō-ī-dē′ạ), *n.* In *psychol.,* the empirical or psychological idea of the self.

Besides the idea of one's present corporeal and mental ego, there is still a third member participating in the usual *ego-idea.* This is the very essential total idea that has been deposited in memory by the succession of one's most important mental and physical experiences in the past. *T. Ziehen* (trans.), Introd. to Physiol. Psychol., xi.

egols (eg′ōlz), *n. pl.* A name of the potassium-mercury salts of o-nitro-phenol-, o-nitro-cresol- and o-nitro-thymol-p-sulphonic acids. The former, called phenegol, is best known. The others are *cresegol* and *thymegol.* They are bactericides.

egomania (ē″gō-mā′ni-ạ), *n.* [L. *ego,* I, + Gr. *μανία,* madness.] An exaggerated egotism, amounting to an actual mental disorder.

egomaniac (ē-gō-mā′ni-ak), *n.* One who exhibits egomania.

egotic (ē″gō̤t-ik), *a.* [Irreg. *ego* + *-t-* + *ic.*] Self-regarding; egoistic.

Under sociability are lumped together desires so diverse as the craving for companionship, and the eagerness for appreciation, the one effective, the other *egotic.*

E. A. Ross. in Amer. Jour. of Sociol., IX. 539.

egressive (ē-gres′iv), *a.* [L. *egressus,* pp. of *egredi,* go out (see *egress*), + *-ive.*] That proceeds forth or downward from an ultimate source or cause, as in tracing some process of development or evolution.

We may follow two methods [in working out a problem] ... the regressive and the *egressive.* The regressive ... starts from the completed process and proceeds backward . . . in search of the factors and the forces which have produced the completion; and . . . cannot terminate till the sufficient reason or the ultimate cause be reached. If we follow the *egressive* method we simply reverse the procedure and reason downward.

A. M. Fairbairn, Philos. Christ. Relig., p. 40.

egret, *n.*—**Cattle egret,** a small heron, *Bubulcus ibis,* formerly abundant in Egypt and frequently confused with the sacred ibis.

egurgitate (ē-gėr′ji-tāt), *v. t.*; pret. and pp. *egurgitated,* ppr. *egurgitating.* [L. *egurgitare,* < *ē,* out, + (LL.) *gurgitare,* < *gurges* (gurgit-), gulf.] To throw up or out.

Egyptian bath-sponge. Same as *sponge-gourd.*—**Egyptian bondage,** a state of servitude or bondage as oppressive and degrading as that of the Israelites in Egypt.—**Egyptian brown, clover, cotton,** etc. See ★*brown, n.,* etc.—**Egyptian cross,** the ankh (which see).—**Egyptian ophthalmia.** Same as *trachoma.*—**Egyptian thorn.** See *thorn.*—**Egyptian type, letters,** or **figures.** See *antique, n.,* 3.—**White Egyptian corn.** Same as ★*chicken-corn.*

Egyptianism (ē-jip′shiạn-izm), *n.* [*Egyptian* + *-ism.*] The characteristics of the Egyptians; also the inclination to adopt Egyptian customs.

Egyptianize (ē-jip′shiạn-īz), *v. t.*; pret. and pp. *Egyptianized,* ppr. *Egyptianizing.* [*Egyptian* + *-ize.*] 1. To make similar to an Egyptian in appearance and customs.—2. To treat (clay) by a patented process involving the use of tannic acid, in order to give it increased adhesiveness and tenacity. See ★*Egyptianized clay.*—**Egyptianized clay,** clay treated by a special process discovered by E. G. Acheson, of Niagara Falls, by which it is rendered more soluble and plastic and its tensile strength is increased 50 per cent. in the burned form and 350 per cent. in the sun-dried form, by the addition of a small proportion of tannin; an effect assumed to be similar to that produced by the use of straw in the manufacture of bricks by the ancient Egyptians. *Sci. Amer.,* April 25, 1903, p. 311.

Egypticity (ē-jip-tis′i-ti), *n.* [*Egyptic* + *-ity.*] The quality of belonging to Egypt.

Egyptologic (ē-jip-tō-loj′ik), *a.* [*Egyptolog-y* + *-ic.*] Of or pertaining to Egyptology.

Egyptologue (ē-jip′tō-log), *n.* [Gr. *Αἴγυπτος,* Egypt, + *-λογος,* < *λέγειν,* speak.] An Egyptologist.

E. H. P. An abbreviation of *electrical horse power.*

Ehrlich's side-chain hypothesis. See ★*immunity,* 5., with cut.

ehuawa (ā-hö-ä′wä), *n.* [Hawaiian; also *ahuawa.*] In the Hawaiian Islands, *Cyperus lævigatus,* a sedge, very widely spread in the tropics, from which the natives of the island of Niihau make fine, very flexible, highly-prized mats.

E. I. An abbreviation (*a*) of *East India;* (*b*) of *East Indian.*

E. I. C. An abbreviation of *East India Company.*

Eichhornia (īk-hôr′ni-ạ), *n.* [NL. (Kunth, 1843), named in honor of J. A. F. *Eichhorn* (born in 1779), patron of science and adviser to the king of Prussia.] An untenable name for *Piaropus,* a genus of plants of the family *Pontederiaceæ.* See ★*Piaropus.*

Eichwaldia (īch-väl′di-ạ), *n.* [NL., < *Eichwald,* a Russian geologist.] A genus of protrematous *Brachiopoda,* of the family *Eichwaldiidæ,* characterized by the fine epidermal network covering the surface of both valves. It occurs in Silurian rocks.

eicosane, *n.* See ★*icosane.*

eicosylene (ī-kos′i-lēn), *n.* [Also *eikosylene;* Gr. *εἴκοσι,* twenty (= L. *viginti,* twenty: see *twenty*), + *-yl* + *-ene.*] A colorless liquid hydrocarbon, $C_{20}H_{38}$, obtained from paraffin. It boils at 314–315° C. and is also called *icosinene.*

E. I. C. S. An abbreviation of *East India Company's Service.*

Eider-down cloth, a heavily napped wool or cotton knitted fabric of thick texture, in plain and fancy colors and effects, used for blankets, cloakings, women's sacks, robes, etc.

eidolic (ī-dol′ik), *a.* [Gr. *εἰδωλικός,* mythologic, < *εἴδωλον,* an image, idol, myth.] Of the nature of an eidolon; eidolon-like.

eidoloclast (ī-dol′ọ̄-klast), *n.* Same as *idoloclast.*

To be an *eidoloclast* is not a pleasant office, because an invidious one . . . It is prudent to devolve the odium of such an office upon the idol himself. Let the object of the false worship always, if possible, be made his own *eidoloclast.*

De Quincey, Goethe as Reflected in "Wilhelm Meister."

eidolon, *n.* 3. One of the small floating winged figures frequently found in Greek art, especially on Greek vases. They are sometimes quite human, with wings; sometimes half human, half bird, like harpies, and of both sexes. They are supposed to represent the human soul, being similar to the Egyptian conception.

eidoloscope (ī-dol′ọ̄-skōp), *n.* A form of kinetoscope or moving-picture machine.

eidophone (ī′dọ̄-fōn), *n.* [Gr. *εἶδος,* form, + *φωνή,* sound.] A cylindrical box, with a lateral tube and mouthpiece, over the open end of which sheet-rubber is fastened. Sand or lycopodium powder dusted on the rubber assumes various geometrical designs called *voice-figures* when one sings into the instrument. *Athenæum,* Feb. 4, 1893.

eidophusikon (ī-dọ̄-fö′si-kon), *n.* [Gr. *εἶδος,* form, + *φυσικόν,* neut. of *φυσικός,* natural: see *physic.*] A kind of magic lantern or stereopticon constructed by an Alsatian painter, Philip de Loutherbourg, in London about 1780. A set of colored slides was made for it by the painter Gainsborough. The machine and slides were exhibited at the Grosvenor gallery in London in 1885.

The *eidophusikon,* as the Anglo-Alsatian called it, seems to have emotionné his fellow Academician much in the same way as a fine violin.

W. Armstrong, in Portfolio, N. S., IX. 54.

eidoptometry (ī-dop-tom′e-tri), *n.* [Gr. *εἶδος,* form, + *ὀπτ(ικός),* of seeing, + *-μετρία,* < *μέτρον,* measure.] Determination of the degree of acuteness of vision.

eidotrope (ī′dọ̄-trōp), *n.* [Gr. *εἶδος,* form, + *τρόπος,* a turning.] A device for exhibiting, by means of revolving disks, certain phenomena which arise from persistence of vision. The form of the instrument is similar to that of the ordinary chromatrope, but the revolving disks carry perforated patterns in gauze, lace, etc.

eidotropic (ī-dọ̄-trop′ik), *a.* Pertaining to or exhibited by means of the eidotrope.

Eifelian (ī-fē′li-an), *a.* and *n.* [*Eifel* in Germany.] I. *a.* In *geol.,* designating a subdivision of the Middle Devonian in the Eifel region in Germany and Belgium regarded by German geologists as equivalent to the Calceola group of the Rhineland. It is underlain by the Coblenzian and overlain by the Givetian.

II. *n.* The Eifelian subdivision.

Eigenmannia (ī-gen-man′i-ạ), *n.* [NL., named after C. H. *Eigenmann,* a German-American ichthyologist.] A genus of fishes of the family *Gymnotidæ,* found in Central and Southern America. *E. humboldti* is the common species.

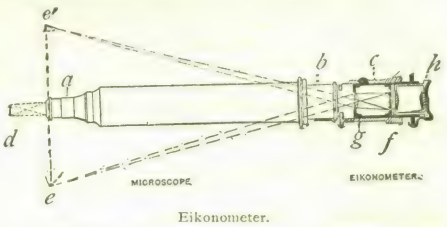
eight[1]. I. *a.*—**Eight-hour movement,** a movement which aims to establish, either through the combined action of trade-unions or by compulsion of law, a working-day of no more than eight hours in all industries.

II. *n.*—**In eights.** (*a*) In *bibliography,* having eight leaves to the sheet: applied to early printed books. (*b*) In *meter,* in lines of eight syllables. (*c*) In companies or 'teams' of eight. (*d*) In *printing,* containing eight pages only: said of a type-form or a printed and folded sheet.

eight-coupled (āt′kup″ld), *a.* Having eight driving-wheels coupled by side-rods. The driving-wheels of heavy freight or consolidation engines are often coupled in this manner, there being four wheels on each side coupled together.

eighteen, *n.*—**In eighteens,** containing eighteen pages: said of a type-form or a printed and folded sheet; in *bibliography,* an octodecimo.

eight-square (āt′skwār), *a.* and *n.* I. *a.* Having eight corners; octagonal.



II. *n.* An octagon or an octagonal solid.

eight-square (āt′skwār), *v. t.* [*eight-square, a.*] To make octagonal.

eikonogen (ī-kou′ọ̄-jen), *n.* [Gr. *εἰκών,* an image (see *icon*), + *-γενής,* -producing.] The trade-name of the sodium salt of amido-β-naphthol-monosulphonic acid, used in photography as a developer.

eikonolatry, *n.* Same as *iconolatry.*

eikonometer (ī-kọ̄-nom′e-tėr), *n.* [Gr. *εἰκών,* image, + *μέτρον,* measure.] A device for measuring the size of an object under the microscope, or for obtaining the magnifying power of a microscope.

Eikonometer.

a, object-glass, and *b,* eyepiece of the microscope; *c,* eikonometer; *d,* object examined; *e, e′,* apparent size and position of object seen through microscope; *f,* image of the image at *e, e′,* reduced to one tenth the size; at *f,* is a micrometer scale read by means of a lens in the eyepiece, *h,* by which the image at *e, e′* can be measured; *g,* lens.

Eimeria (ī-mē′ri-ạ), *n.* [NL. (Schneider, 1875), from the German surname *Eimer.*] A spurious genus of *Coccidiidea,* of the family *Asporocystidæ,* characterized by the absence of sporocysts. With scarcely an exception, the species are nothing but the schizogenic generations of *Coccidia* belonging to other genera and species.

Eimerian cycle. Same as *schizogenic* ★*cycle.*

E. Ind. An abbreviation (*a*) of *East Indies;* (*b*) of *East Indian.*

eirenarchical, *a.* Same as ★*irenarchical.*

eirenarchy, *n.* Same as ★*irenarchy.*

eisegesis (īs-ē-jē′sis), *n.* [Gr. *εἰσήγησις,* < *εἰσηγεῖσθαι,* lead into, < *εἰς,* into, + *ἡγεῖσθαι,* lead.] A subjective method of interpretation by introducing one's own opinions into the original: opposed to *exegesis.*

eisegetical (īs-ē-jet′i-kạl), *a.* Relating to or of the nature of eisegesis.

eisne, *a.* See *eigne.*

eisodic, *a.* Same as *esodic.*

ejaculative (ē-jak′ū-lā-tiv), *a.* [*ejaculate* + *-ive.*] Of the nature of an ejaculation; ejaculatory: as, an *ejaculative* expression.

eject, *n.* 2. In *projective geom.,* the figure composed of straights and planes made in projecting the original.—**Axial eject,** a figure composed of planes obtained by projecting from a fixed straight (the projection-axis) an original composed of points.

ejection, *n.* 3. In *philos.,* the mental act of forming an eject.

ejectivism (ē-jek′tiv-izm), *n.* [*ejective* + *-ism.*] In *philos.,* the doctrine that the formation of ejects is an indispensable factor in the formation of the consciousness of personality. *Baldwin.*

ejectivity (ē-jek-tiv′i-ti), *n.* [*ejective* + *-ity.*] The fact of being an eject or inferred existence. *G. J. Romanes.*

ejector, *n.* (*d*) In sheet-metal work, an attachment to a press for throwing out the finished stamped or drawn object while the die is rising and before the operator or the feed-motion places the next blank in position. The push-out plate used with presses employing double dies is a form of ejector. (See *double dies,* under ★*die.*) The stripper, on the other hand, is not an ejector, since it releases the work from the die only, without removing it from the press. See *stripper.*

ejector-blade (ē-jek′tor-blād), *n.* In the Mergenthaler linotype, a device which ejects the slug from a mold into a stick or galley; on a Dow machine, one which ejects types, after they are assembled, into a stick or galley.

ejector-washer (ē-jek′tor-wosh″ėr), *n.* A tank or receptacle in which sand for filter-beds is washed or scoured by streams of water from an ejector.

eka-aluminium (ek″ą-al-ū-min′i-um), *n.* See *eka-*.

eka-boron (ek″a-bō′ron), *n.* In *chem.*, the name given by Mendeléjeff to an element, the existence of which he predicted, occupying the same position in his fourth series that boron does in the second. When this element was subsequently discovered it was named *scandium*.

ekaha (ā-kä′hä), *n.* [Native name.] In the Hawaiian Islands, the bird's-nest fern, *Neottopteris Nidus*, a fern with large simple fronds usually growing as an epiphyte on forest trees. See *bird's-nest*, 1 (*c*).

eka-iodoform (ek″ą-ī′ō-dō-fôrm), *n.* Iodoform with which 5 per cent. of formaldehyde has been mixed.

eka-silicon (ek″a-sil′i-kon), *n.* In *chem.*, the name given by Mendeléjeff to an element, the existence of which he predicted, occupying the same position in his fifth series that silicon does in the third. When this element was subsequently discovered it was named *germanium*.

eka-tellurium (ek″ą-te-lū′ri-um), *n.* In *chem.*, a supposed new element, announced by Grünwald, occupying the same position in Mendeléjeff's eleventh series that tellurium does in the seventh, and presumably identical therefore with the austriacum of Brauner. As yet there is no confirmation of the existence of either of these hypothetical substances.

eke, *n.* (*c*) An added structure. (*d*) In *agri.*, an oblong stack.

> Ricks are built either as long *ekes* or round stacks.
> *J. Wrightson*, Farm Crops, p. 127.

ekkyklema, *n.* See ★*eccyclema*.

Elachistidæ (el-a-kis′ti-dē), *n. pl.* [NL., ⟨ *Elachista* + *-idæ*.] A family of tineoid moths containing many large and prominent genera, some of its forms having considerable economic importance.

elæagnaceous (el″ē-ag-nā′shius), *a.* Belonging to the plant family *Elæagnaceæ*.

Elæocarpaceæ (e-lē-ō-kär-pā′sē-ē), *n. pl.* [NL. (Lindley, 1836), ⟨ *Elæocarpus* + *-aceæ*.] A family of dicotyledonous choripetalous plants of the order *Malvales*, typified by the genus *Elæocarpus*. They were formerly included in the *Tiliaceæ*, but differ from that family chiefly in the fact that the 2-celled anthers open by terminal pores, and in the absence of mucilage-cells in the bark and pith. There are 8 genera and about 120 species, half of which belong to *Elæocarpus* and 44 to *Sloanea*. They are chiefly natives of the tropics or of temperate regions of the southern hemisphere, a few growing in China and Japan. They are trees or shrubs with undivided leaves and flowers in racemes, cymes, or clusters. The wood is often valuable. See *breakax*, 1, *maqui*, and *hedgehog-fruit*.

elæocarpaceous (e-lē-ō-kär-pā′shius), *a.* Belonging to the plant family *Elæocarpaceæ*.

Elæococca (e-lē-ō-kok′kä), *n.* [NL., ⟨ Gr. *ἔλαιον*, oil (or *ἐλαία*, the olive-tree), + *κόκκος*, berry.] In *bot.*, a genus of trees. *E. vernicia* is the tung-tree, the varnish-tree of China and Japan. — **Elæococca oil**, a drying oil obtained in China and Japan from the kernels of *Elæococca vernicia* (*Aleurites cordata*). It contains the radical of a special acid, elæomargaric acid, $C_{17}H_{30}O_2$. Same as *tung-oil* (which see).

Elæocrinidæ (e-lē-ō-krin′i-dē), *n. pl.* [NL., ⟨ *Elæocrinus* + *-idæ*.] A Devonian family of blastoid *Echinodermata* or blastoids, characterized by having the posterior deltoid divided into two parts by an anal plate and the anus distinct from the posterior spiracles.

elæoleic (e-lē-ō-lē′ik), *a.* Pertaining to elæoleic acid. — **Elæoleic acid**, a liquid acid, $C_{17}H_{30}O_2$, which is found as a glyceride together with elæomargaric acid in the oil from the seeds of *Elæococca vernicia*. It is also formed when the isomeric elæomargaric or elæostearic acid is heated to 175°–180° C. in a tube filled with hydrogen.

elæomargaric (e-lē″ō-mär-gar′ik), *a.* [Gr. *ἔλαιον*, oil, + *μαργαρ(ίτης)*, a pearl, + *-ic*. Cf. *margaric*.] Noting an acid, a colorless compound, $C_{17}H_{30}O_2$, prepared by the saponification of elæococca oil with alcoholic potassium hydroxid. It melts at 41° C. and is readily converted into elæoleic acid, with which and with elæostearic acid it is isomeric.

elæoplast[1], **eleoplast** (e-lē′ō-plāst), *n.* [Gr. *ἔλαιον*, oil, + *πλαστός*, formed.] 1. In *cytol.*, a highly refractive globular body consisting of granular protoplasm and containing drops of oil. — 2. A minute body of unknown function arising within the endochrome of certain diatoms. It may be genetically connected with the pyrenoid. *Mereschkowsky*.

elæosaccharum (e-lē″ō-sak′a-rum), *n.* [Gr. *ἔλαιον*, oil, + *σάκχαρον*, sugar.] A mixture of an essential oil and sugar; oil-sugar.

elæostearic (e-lē″ō-stē-ar′ik), *a.* [Gr. *ἔλαιον*, oil, + *στέαρ*, suet, + *-ic*.] Noting an acid, a colorless compound, $C_{17}H_{30}O_2$, prepared by the saponification of elæococca oil which has been exposed to sunlight. It melts at 71° C., is isomeric with elæomargaric and elæoleic acids, and is converted into the latter by heating.

elæothesium (e-lē-ō-thē′si-um), *n.*; pl. *elæothesia* (-si-ą). [L. (Vitruvius), ⟨ Gr. *ἐλαιοθέσιον*, ⟨ *ἔλαιον*, oil, + *θέσις*, putting.] In an ancient Roman or Greek bathing establishment, the room where the bathers were anointed after bathing.

Elagatis (el-ą-gā′tis), *n.* [NL., ⟨ Gr. *ἠλακάτη*, distaff.] A genus of carangoid fishes related to *Seriola*, distinguished by the presence of the finlet behind the dorsal and anal fins.

Elaidic ethers. Same as ★*elaidic esters*. — **Elaidic esters**, the esters of elaidic acid.

Elaidin test, a test applied for the identification of particular fixed oils, depending upon their reaction with nitric acid, which converts olein into elaidin.

elaidinic (el″ą-i-din′ik), *a.* [*elaidin* + *-ic*.] Having reference to elaidin. — **Elaidinic acid**, a substance isomeric with oleic acid.

eland, *n.* — **Giant eland**, a subspecies or geographic race of Derby's eland, known as *Taurotragus derbianus gigas*, found in the province of Bahr-el-Ghazal, Africa. It is characterized by its great size, dark neck, white V mark on the forehead, and a small number of white stripes on the side. — **Patterson's eland**, *Taurotragus oryx pattersonianus*, a northern race of the common eland, but somewhat larger, and darker on the neck.

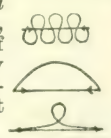
Elaphebolia (el″a-fē-bō′li-ą), *n. pl.* [Gr. *Ἐλαφηβόλια*, ⟨ *ἐλαφηβόλος*, an epithet of Artemis: see ★*Elaphebolos*.] A feast of Artemis Elaphebolos in Phocis. It is mentioned by Plutarch in connection with the city of Hyampolis.

Elaphebolion (el″a-fē-bō′li-on), *n.* [Gr. *Ἐλαφηβολιών*, ⟨ *Ἐλαφηβόλια*: see ★*Elaphebolia*.] The ninth month of the Greek calendar, from the middle of March to the middle of April, approximately. In this month the Elaphebolia were held.

Elaphebolos (el-a-feb′ō-los), *n.* [Gr. *ἐλαφηβόλος*, shooting deer, ⟨ *ἔλαφος*, deer, + *βάλλειν*, throw.] The deer-slayer: an epithet of Artemis.

Elaphoglossum (el″ą-fō-glos′um), *n.* [NL. (Schott, 1834), ⟨ Gr. *ἔλαφος*, a deer, + *γλῶσσα*, the tongue. The fertile fronds are fancifully compared to a deer's tongue.] A well-defined genus of tropical polypodiaceous ferns.

Elaphomycetaceæ (el″ą-fō-mī-sē-tā′sē-ē), *n. pl.* [NL., ⟨ *Elaphomyces* (*Elaphomycet-*) + *-aceæ*.] A family of subterranean ascomycetous fungi, named from the single genus *Elaphomyces*, having the ascocarps inclosed in a distinct peridium. The spores form a powdery mass at maturity.



elapine[2] (el′ą-pin), *a.* [*Elaps* + *-ine*[1].] Relating to the snakes of the genus *Elaps* and their relatives, usually considered as forming the family *Elapidæ*.

elapine[2] (el′ą-pin), *n.* [*Elaps* + *-ine*[2].] A poisonous constituent of snake-poison.

elasmometer (ē-las-mom′e-tėr), *n.* [*elas(tic)* + Gr. *μέτρον*, measure.] A form of interferometer for the measurement of the elasticity of flexure.

Elastic fatigue. See ★*after-strain*. — **Elastic force of vapor, hysteresis.** See ★*vapor*, ★*hysteresis*. — **Elastic limit.** See *limit of elasticity*. — **Elastic nut.** See ★*nut*. — **Elastic-piston pump.** See ★*pump*[1]. — **Elastic resistance, spindle.** See ★*resistance*, ★*spindle*.

elastica (ē-las′ti-kä), *n.* [NL.] 1. The elastic (middle) layer of the walls of the arteries: an abbreviation of ★*tunica elastica* (which see, with cut). — 2. In *physics*, a curve such that the reciprocal of the radius of curvature at any point is proportional to the distance of the point from a straight line. Also called *elastic curve*.

Elastica Curves.

elasticin (ē-las′ti-sin), *n.* [*elastic* + *in*[2].] Same as *elastin*.

Elasticity of elongation, the resistance to stretching or compression of a body subjected to longitudinal stress. Its value is denoted by Young's modulus. See *modulus of elasticity*, under *modulus*. — **Elasticity of flexure**, the resistance to bending manifested by a body subjected to transverse stress. — **Elasticity of liquids**, the resistance to change of volume under compression, shown by liquids. Liquids at rest offer no resistance to change of form but their elasticity of volume is in general very high and the return to their original volume when relieved from stress is complete. — **Elasticity of volume.** Same as *elasticity of bulk*. — **Equation of elasticity**, the characteristic equation of a perfect gas; an equation of condition expressing the relation between elastic pressure, volume, density, and temperature prevailing in the ideal gas: the combined laws of Boyle, Mariotte, Gay-Lussac, and Charles; the equation of Van-der-Waals. — **Rotational elasticity**, the power of a medium to resist rotational stress and when released to return to its original conformation: specifically applied to certain conceptions of the luminiferous ether.

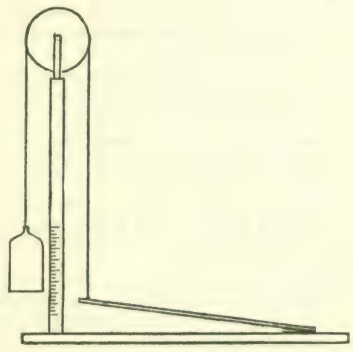
elastoidin (ē-las-toi′din), *n.* [*elast(ic)* + *-oid* + *-in*[2].] An albuminoid belonging to the skeletins, found in certain cartilaginous structures of a shark (*Mustelus lævis*).

elastose (ē-las′tōs), *n.* [*elast(in)* + *-ose*.] An albumose derived from elastin.

elater[2], *n.* — **Eyed elater**, an American elaterid beetle, *Alaus oculatus*, so called on account of two large eye-like spots on its thorax. Its larvæ live in decaying wood.

Eyed elater (*Alaus oculatus*). Somewhat enlarged.

elaterics (el-ą-ter′iks), *n. pl.* [NL. **elatericus*, Gr. *ἐλατήρ*, a driver, ⟨ *ἐλαύνειν*, drive, set in motion: see *elastic*.] The science of the elasticity of solids. *C. S. Peirce*.



elaterist† (e-lat′e-rist), *n* One who holds a particular theory of elasticity: used by Boyle with reference to his law. See quotation under *elastic*, *a.*, 2.

elatinaceous (ē-lat-i-nā′shius), *a.* Belongingto the plant family *Elatinaceæ*.

elbow, *n.* 7. In carriages, the rail that forms the upper part of the frame of the quarter. — **False elbow**, a piece of timber shaped to fit the elbow of a carriage-body. It is used as a form for the roll or elbow-cushion. — **Miners' elbow**, enlargement of a bursa at the point of the elbow, due to pressure, occurring in miners who work in low tunnels resting the weight of the body on the elbow.

elbow-bit (el′bō-bit), *n.* A coach-bit with long cheek-pieces which have a double-elbow bend below the mouth piece.

elbow-board, *n.* 2. In *psychol.*, an apparatus for determining the just noticeable (passive) motion of the forearm, that is, the just noticeable change of articular sensation at the elbow. Also called *arm-board*. The forearm and hand (palm down) are laid upon the hinged board, which is thus brought to the horizontal: the elbow-joint rests directly above the hinge. The experimenter then gently draws down the weight, and thus raises the forward end of the board. The observer reports the first indication of articular sensation at the elbow.

Elbow-board.

elbow-spring (el′bō-spring), *n.* A carriage-spring slightly curved. The spring-plates are graduated toward one end, and the other end is bolted to the body, it being used as a spring body-loop.

elder[2], *n.* — **American elder**, *Sambucus Canadensis*. See cut under *Sambucus*. — **Blood-elder**, the dwarf elder, *Sambucus Ebulus*. — **California elder.** Same as *pale* ★*elder*. — **Common elder.** Same as *American* ★*elder*. — **Dwarf elder.** (*a*) See *elder*[2]. (*b*) Same as *wild elder* (*b*) (under *elder*[2]). — **German elder**, the Old World elder, *Sambucus nigra*. See *elder*[2], *bour-tree*, *hautboy*, 2, and *Judas-tree*, 3. — **Ground-elder**, the dwarf elder, *Sambucus Ebulus*. — **Horse-elder.** Same as *horseheal*. — **Marsh-elder.** See *marsh-elder*. The name is applied to all the species of *Iva*. — **Mexican elder**, a tree 25–30 feet high, *Sambucus Mexicana*, of the Southwestern United States, Mexico, and Central America, with creamy-white flowers, small, blackish, shining, juicy berries, and light, soft, fine-grained wood. It makes a fairly good shade-tree in the dry regions of Mexico and Lower California, and the berries are eaten by the Mexicans and Indians. — **Mountain-elder.** (*a*) The red-berried elder. (*b*) Same as *pale* ★*elder*. — **Pale elder**, a tree 30–50 feet high, *Sam-*

Pale Elder (*Sambucus glauca*).
(From Sargent's "Manual of the Trees of North America.")

bucus glauca, common on the Pacific slope from British Columbia to southern California, and extending inland to the Sierras and the Wasatch Mountains. The flowers are yellowish white; the berries blue-black, whitened with a mealy bloom, rather sweet and juicy; the wood light, soft, weak, and coarse-grained. It is sometimes planted for ornament.—**Parsley-elder, parsley-leaved elder,** the Old World elder, *Sambucus nigra*, especially a form with narrowly lobed or cut leaflets.—**Prickly-elder,** the Hercules'-club or angelica-tree, *Aralia spinosa*.—**Red-berried elder,** *Sambucus pubens*, a North American shrub of wide distribution across the continent, differing from other species by its conical inflorescence and red or scarlet drupes.—**Sweet elder.** Same as *American* ★*elder*.—**Water-elder.** See *water-elder*.

elder-blow (el'dėr-blō), *n.* The common American elder, *Sambucus Canadensis*.

elder-rob (el'dėr-rob), *n.* The juice of the fruit of the Old World elder, *Sambucus nigra*. Also called *elder-roob*.

elect. An abbreviation (*b*) of *electrical;* (*c*) of the Latin *electuarium*, electuary.

election, *n.*—**Judge of election,** one of a body of voters appointed to receive, count, and record the ballots cast at an election and to report the same to the proper authorities.—**Supervisors of election,** in *United States law*, the persons appointed by the United States Circuit Court judge to supervise the registration of voters and the holding of elections for members of the House of Representatives. The law providing for such supervisors was repealed in 1894.

electionary (ē-lek'shọn-ā-ri), *a.* [*election* + *-ary*[1].] Relating or pertaining to the exercise of one's right to vote at a popular election, or the casting of one's vote at such an election.

election-committee (ē-lek'shọn-kọ-mit″ē), *n.* In parliamentary or municipal elections in the United Kingdom, a committee of voters voluntarily formed to promote the election of a particular candidate.

electric. **I.** *a.*—**Electric arc, bath, blue, calamin, capstan, car,** etc. See ★*arc*, etc.—**Electric chorea.** Same as ★*chorea electrica*.—**Electric efficiency.** See ★*efficiency of a source of light*.—**Electric inertia.** See *inertia*.—**Electric motor.** (*a*) See *electric*. (*b*) See ★*motor*.—**Electric osmose.** See *electrical endosmosis*, under *endosmosis*.—**Electric steel process.** See ★*process*.—**Electric sunstroke.** Same as *electric* ★*prostration*.

II. *n.* 2. A railway or car operated by electricity: usually in the plural.

Electrical fire, kiss, syntony. See ★*fire*, etc.

electricity, *n.*—**Atmospheric electricity,** the free electricity present in the atmosphere of the earth and supposed to be equivalent to the sum of the small charges of electricity accompanying the particles of dust and atmospheric vapor, and especially of those on the electrified ions or electrons of Elster and Geitel and the free corpuscles of J. J. Thomson. Both positive and negative electrons exist in the atmosphere, and the charges are equal, so that the general character of any electric reaction depends on the preponderance of positive or negative electrons. The upper layers of air are usually electrified positively relative to the lower layers; the ground is ordinarily negative. The descending air of the foehn contains more positive than negative electrons. At a lower cloud-level of about two thousand meters Ebert finds the electronic charge greater than at the earth's surface. At the earth's surface, under normal conditions, there are from one to three electrostatic units of charge per cubic meter of air, and somewhat more free positive than free negative units. This latter difference diminishes with altitude, and at three kilometers the charge is four electrostatic units per cubic meter for each kind of electricity.—**Atom of electricity, natural unit of electricity,** in *phys. chem.*, terms sometimes used to denote the quantity of electricity which is carried by a single ion of a univalent element, such as an atom of hydrogen.—**Cleavage electricity,** electrification produced by the cleavage of crystalline substances.—**Contact electricity,** electricity supposed to be produced by the mere contact of two substances. Since the production of electricity requires energy, this energy must be supplied when producing electricity by contact, by chemical action, as corrosion of one of the contact plates, by heat, etc.—**Terrestrial electricity,** the electrified condition of the earth as distinguished from that of the atmosphere. It is usually negative and more intense in equatorial than in polar regions. It was formerly supposed to have originated in the earth either by chemical, thermal, or piezo-electric processes; but the theory of electrons or corpuscles and the discovery of the ionization of the air and the emanation of radio-active gases from the earth have modified these views.

electricize (ē-lek'tri-sīz), *v. t.*; pret. and pp. *electricized*, ppr. *electricizing*. To charge, as a Leyden jar; to electrify.

Then *electricise* the bottle and place it on wax.
Franklin, Experiments and Observations on Elect., p. 16.

electrics (ē-lek'triks), *n.* The science of electricity.

electricute (ē-lek'tri-kūt), *v. t.* [Also *electrocute;* absurdly formed from *electri(city)* + *(exe)cute*.] To execute or put to death by electricity. [Recent and colloq.]

electrication (ē-lek-tri-kū'shọn), *n.* The act of electricuting. Also *electrocution*. [Recent and colloq.]

electrification, *n.* 2. The substitution, upon a railway system, of electric for steam or other motive power; the conversion of a steam-, cable-, or horse-railway into an electric railway.

electrion (ē-lek'tri-ọn), *n.* [Gr. ἤλεκτρον, amber (repr. electricity), + ἰών, going (see *ion*).] In *phys. chem.*, a name given by Lord Kelvin to an atomic quantity of negative electricity.

According to it each atom of matter has positive electricity distributed uniformly through its mass, and, concentrated at one or more points, in general within it, atomic quantities of negative electricity, to which Lord Kelvin gives the name "*electrions*."
Nature, Oct. 22, 1903, p. 611.

electro-anæsthesia (ē-lek″trō-an-es-thē'si-ạ), *n.* Insensibility to electrical stimulation.

electro-analysis (ē-lek″trō-ạ-nal'i-sis), *n.* In *chem.*, the method of determining the amounts of metals in solutions by causing the metal to be deposited, by electrolysis, in a form convenient for weighing.

The differences observed in the *electro-analysis* of mercury from a potassium cyanide solution are due to an attack of the platinum disc serving as cathode and to the solubility of platinum in potassium cyanide.
Elect. World and Engin., March 28, 1903, p. 530.

electro-analytical (ē-lek″trō-an-ạ-lit'i-kal), *a.* In *chem.*, utilizing, or related to, methods of analysis by electrolysis, and especially by the electrolytic deposition of metals.

Electro-analytical methods, on account of their simplicity and quickness, are becoming more and more used in practice.
Elect. World and Engin., Nov. 21, 1903, p. 853.

electrocardiogram (ē-lek-trō-kär'di-ọ-gram), *n.* A record showing the variations in the electric currents in the body which occur with the pulsations of the heart. *Sci. Amer.*, March 5, 1904, p. 197.

electrochemical energy, equivalent of an element, filtration. See ★*energy*, etc.

electro-copper (ē-lek-trō-kop'er), *n.* Copper which has been deposited from solution by means of electrolysis.

electrocute, electrocution. See ★*electricute*, ★*electrication*.

electrocyanide (ē-lek″trō-sī'ạ-nid), *a.* Employing cyanides and electrolysis.—**Electrocyanide process,** a cyanide process in which the solution of the gold is aided by electrolysis.

electrode, *n.*—**Brush electrode,** a wire brush connected with one of the poles of an electric battery, used in the therapeutic application of electricity to the body.—**Calomel electrode,** in *phys. chem.*, a non-polarizable or reversible electrode consisting of metallic mercury covered with the insoluble mercurous chlorid (calomel) and with the chlorid of the other metal indicated by the conditions. Suppose the other metal to be zinc; then, if a current passes from the electrode to the electrolyte, chlorin ions from the mercurous chlorid go into solution, leaving their equivalent of metallic mercury; if the current passes from electrolyte to electrode, chlorin ions from the zinc chlorid combine with mercury to reproduce mercurous chlorid. All succeeding currents in either direction meet precisely the same conditions, and the electromotive force is constant.—**Indifferent electrode,** in *electrotherap.*, the electrode which serves to complete the circuit. The one employed to make the therapeutic application is called the *therapeutic electrode*.—**Reversible** or **non-polarizable electrode,** in *phys. chem.*, a metallic plate standing in a solution of a salt of the metal. When a current passes from the plate into the solution, part of the metal is dissolved; when the current passes from the solution to the plate, part of the metal of the solution is deposited on the plate: the chemical process in one case is precisely the reverse of that in the other. Moreover, the two currents in the two opposite directions have precisely the same electromotive force, assisting or opposing the current; that is, the electrode is non-polarizable.

electrodeless (ē-lek'trōd-les), *a.* Without electrodes: said specifically of a vacuum-tube through the glass of which no metal terminals are inserted, or of the electrical discharge within such a tube when the latter is placed in a suitable oscillatory field.

electrodiagnosis (ē-lek″trō-dī-ag-nō'sis), *n.* The locating and determination of disease by testing the reaction of nerves and muscles to a current of electricity.

electro-ethereal (ē-lek″trō-ē-thē'ri-ạl), *a.* Of or pertaining to the ether, considered as the medium to the disturbance of which electrical phenomena are ascribed.—**Electro-ethereal theory of light,** a theory of light, propounded by Kelvin (1903), according to which the electrons in a source of light are vibrators that derive energy by collisions with surrounding atoms and radiate it in the form of ether-waves.

electrogoniometer (ē-lek″trō-gō-ni-om'e-tėr), *n.* An instrument devised by Rontin for measuring the difference of phase between the electromotive force and current in a three-phase system.

electrogram (ē-lek'trō-gram), *n.* A diagram exhibiting continuously the electric condition of the atmosphere at any station.

electrograph, *n.* 3. In *photog.*, a photograph of an electric spark. See the extract.

Perhaps it is not exactly correct to describe this as a photograph, since light plays no part in its production. It may more properly be called an "*electrograph*." The manner in which such representations of electric discharges are produced is as follows: An ordinary photographic plate, inclosed in two light-proof paper bags (as used in X-ray work), is placed film upward on a metal plate, which is insulated. The pointed dischargers of an induction coil, in this case one giving a 10-inch spark, are placed a few inches apart, touching the paper envelope. The circuit is then closed, and a single discharge brought about by holding the hammer of the coil and letting it go suddenly. The spark in its passage through the sensative film decomposes it. The negative is then developed in the ordinary way.
Sci. Amer. Sup., March 11, 1905, p. 24405.

Electrograph.

4. An instrument for the continuous recording of atmospheric electricity.

electrography, *n.* 3. In *photog.*, a process by which a dry sensitized paper is made to reproduce a design through the agency of electric sparks. It consists in placing a bromo-iodide of silver paper on a spotted metallic plate, pressing the same down by means of a glass, and passing sparks from a powerful Leyden jar along the metallic plate. Each break in continuity of the metallic surface causes a spark which discolors the paper at this point.

electrohorticulture (ē-lek-trō-hôr'ti-kul-tūr), *n.* The growing of plants by means of the electric light, the electric light either (and usually) supplementing the sunlight or affording the only illumination for the plants: the latter condition is commercially impossible.

electro-industrial (ē-lek″trō-in-dus'tri-ạl), *a.* Relating to electricity as applied to industrial operations.

electro-irrigation (ē-lek″trō-ir-i-gā'shọn), *n.* Irrigating by means of water pumped by electric power.

electroluminescence (ē-lek″trō-lū-mi-nes'ẹns), *n.* Luminescence electrically excited, as by the discharge in a vacuum tube. See ★*luminescence*.

electroluminescent (ē-lek″trō-lū-mi-nes'ẹnt), *a.* Rendered luminescent by the electric discharge.

electrolysis, *n.* 2. In *surg.*, the destruction of tumors, cicatricial bands, calculi, and other pathological formations by means of the electric current.—**Arrhenius's theory of electrolysis,** in *phys. chem.*, the hypothesis that an electric current is carried through an electrolyte only by dissociated ions, coupled with a proposed method of determining the relative amounts of the dissociated and the undissociated molecules.—**Laws of electrolysis.** The principal laws relating to electrolysis are as follows: (*a*) The amount of chemical action in a given time is equal in all parts of the circuit. (*b*) The number of ions set free in a given time is proportional to the strength of the current. The current is carried through the electrolyte by the motion of ions possessing electric charges, and the ions of each element carry an unalterable charge of electricity; increase of current therefore involves an increase in the number of ions liberated. (*c*) If the same current be passed simultaneously through several cells in series, containing different electrolytes, the weight of the ions liberated in each cell is equal to the total quantity of electricity conveyed, multiplied by the electrochemical equivalent of the ions of that cell.

Electrolytic detector. See ★*detector*.—**Electrolytic dissociation.** See ★*dissociation*.—**Electrolytic gas,** in *chem.*, the mixture of gases set free in the electrolysis of dilute oxacids or of alkaline solutions, as well as of other substances. In the cases specified, the gas is an explosive mixture of one volume of oxygen with two volumes of hydrogen. The volume produced in a given time is sometimes used to measure the strength of the current of electricity by means of one of the forms of voltameter.—**Electrolytic hysteresis, interrupter.** See ★*hysteresis*, ★*interrupter*.—**Electrolytic meter,** in *phys.*, a meter for measuring an electric current by the weight of metal which is dissolved or deposited by the passage of the cur-

rent (or of a convenient fraction of it) through an electrolytic cell.—**Electrolytic refining,** a mode of purification now applied on a very large scale and with great advantage to several of the metals, especially to copper, which is thus obtained for electrical conductors of a far higher degree of purity than would otherwise be possible, while notable quantities of gold and silver present in minute proportion are at the same time saved. The principle of the process is the decomposition of a salt of the metal to be refined, dissolved in water, by passing an electric current through it, the metal in question being deposited in a pure state on the negative electrode, while the acid constituent of the salt attacks and dissolves a slab or plate of the impure metal which forms the positive electrode, reproducing the salt. By suitable regulation of the current some impurities are not dissolved, while others, which pass into solution, are not deposited.—**Electrolytic slime,** the finely divided deposit of material left undissolved at the anode in electrolytic refining, as of copper. From it the precious metals are recoverable with profit, even when they have formed but a very minute proportion of the original copper.

Electromagnetic coupling, inertia, waves. See ★*coupling*, etc.

electrometallurgical (ē-lek″trō-met-a-lėr′ji-kal), *a.* Relating to or connected with electrometallurgy.

electrometallurgist (ē-lek-trō-met′al-ėr-jist), *n.* One who is versed in the art of electrometallurgy (which see).

electrometallurgy, *n.* 2. The process of extracting metals from their ores, or the manufacture of metals by the use of heat from an electric arc.

electrometer, *n.*—**Dolazalek electrometer,** a quadrant electrometer of great sensitiveness used in the study of radioactivity. It has a very light needle of silvered paper suspended by a quartz fiber. It can be made to indicate a potential difference of 0.05 millivolt.—**Ebert electrometer,** an apparatus for observing the charge of electrons contained in the air at a given time and place. It consists of a clockwork aspirator which draws a definite quantity of air through the space between two metal cylinders fitting one into the other. If the capacity of the system and the quantity of air drawn through it at a given time are known, the quantity of electricity that has been contained in a cubic meter as a charge of electrons can be determined. It is especially adapted for use in balloon ascensions.

electromobile (ē-lek-trō-mō′bil), *n.* An electric automobile; a motor-car driven by electric motors whose current is derived from electric storage-batteries or accumulators.

electromotive, *a.*—**Contact electromotive force,** in *elect.*, the electromotive force due to the contact between two different metals. The existence of a true contact electromotive force which does not depend on chemical action is denied by many physicists.—**Energy electromotive force,** in *elect.*, an alternating electromotive force or component of electromotive force in phase with the current.

electromotivity (ē-lek″trō-mō-tiv′i-ti), *n.* [*electromotive* + *-ity.*] The power of exciting electrical action.

The original positive current of a freshly excised eyeball has two factors: *electromotivity* of the cut end of the optic nerve and *electromotivity* of the disturbed retina.
Philos. Trans. Roy. Soc. (London), 1900, ser. B, p. 128.

electron, *n.* 2. In *phys. chem.*, the definite charge of electricity which is associated with a univalent ion. Sometimes called an *atom of electricity.* See ★*electricity.*—3. According to a recent hypothesis, a minute particle detached from an atom of a gas by certain agencies, as when the gas is carrying an electric current. The electron has a mass of something like one thousandth of the mass of an atom of hydrogen, and possesses (or consists of) a negative electric charge equal to that of the negative univalent ion of electrolytic conduction. In a gas at very low pressures, the electron constitutes the negative ion of gaseous conduction, while the atom from which the electron has been detached constitutes the positive ion. In gases at greater pressures, electrically neutral molecules become attached to the electron and to the atom from which the electron has been detached, and these complex systems constitute the ions of gaseous conduction at atmospheric pressure. In liquid electrolytes, according to this theory, an atom or radical from which one, two, or three electrons have been detached is a positive univalent, bivalent, or trivalent ion. An atom or radical to which one or more electrons have been attached constitutes a negative ion of the corresponding valence. In metallic conductors the electrons pass from an atom to an adjacent atom without producing electrolysis or chemical decomposition. The experimental basis of the hypothesis has been chiefly discovered by J. J. Thomson, with the aid of some of his pupils.

These negative ions perhaps realize the conception of *electrons* due to Lorentz and Larmor. . . . An atom plus an *electron* is a monovalent anion, an atom minus an electron, a monovalent cation. In metallic conductors the *electrons* can pass from one atom to the next, and thus allow a current to flow without chemical decomposition. *J. J. Thomson,* Encyc. Brit., XXVIII. 16.

It may be convenient here to emphasize the dimensions of an *electron* as above specified, for the arguments in favor of that size are very strong, though not absolutely conclusive; we are sure that their mass is of the order one thousandth of the atomic mass of hydrogen, and we are sure that if they are purely and solely electrical their size must be one hundred-thousandth of the linear dimensions of an atom; a size with which their penetrating power and other behavior is quite consistent. Assuming this estimate to be true, it is noteworthy how very small these electrical particles are, compared with the atom of matter to which they are attached. If an *electron* is represented by a sphere an inch in diameter, the diameter of an atom of matter on the same scale is a mile and a half. Or if an atom of matter is represented by the size of this theater, an *electron* is represented on the same scale by a printer's full stop.
Sir Oliver Lodge, in Pop. Sci. Mo., Aug., 1903, p. 291.

Electron theory in *phys. chem.*, the hypothesis, not yet fully developed, that the atom of any element consists of a definite (large) number of electrons, describing orbital and vibratory motions under the influence of the forces acting between them. Optical considerations led Larmor and Lorentz to adopt the hypothesis as a basis for mathematical studies, before J. J. Thomson isolated electrons (called corpuscles by him) and found that the electrons produced in a vacuum-tube are identical in mass, whatever the gas and whatever the metal of the electrodes. That atoms of all elements are made up of different numbers of identical electrons is an attractive and valuable working hypothesis.

The *electron theory* fits and luminously explains Ampère's idea that magnetism is due to a rotating current of electricity round each atom of iron; and following these definite views of the existence of free electrons, has arisen the *electronic theory* of matter.
Sir W. Crookes, quoted in Science, June 26, 1903, p. 1001.

electronic (ē-lek-tron′ik), *a.* Pertaining to or of the nature of electrons. See ★*electron,* 2 and 3.—**Electronic charge,** the number of electrons contained in a unit volume, as one cubic meter of gas or air. This increases rapidly with altitude above sea-level. The upper strata of air have high electric conductivity, as is shown by the auroral displays and heat-lightning. According to some authorities, the electric charge of the upper air is the effect of the violet rays of sunlight; according to others, it is due to corpuscles emanating directly from the sun's atmosphere. The condensation and precipitation of aqueous vapor takes place on the negative nuclei more easily than on the positive; the former are therefore washed from the lower air down to the earth, thus leaving the positive charge to preponderate in the atmosphere. Victor Conrad computes the amount of electricity attached to one gram of water in a cumulus cloud as 0.028×10^{-8} of a coulomb.—**Electronic theory.** See ★*electron theory.*

electron-trap (ē-lek′tron-trap), *n.* An arrangement by which plus and minus electrons may be separated from each other by taking advantage of the different velocities with which they move.

electro-osmose (ē-lek-trō-os′mōs), *n.* See *electrical endosmosis,* under *endosmosis.*

electro-osmotic (ē-lek″trō-os-mot′ik), *a.* In *phys. chem.*, producing, produced by, or connected with electric osmose.

electropath (ē-lek′trō-path), *n.* [A back formation from *electropathy.*] One who is skilled in the art of electrotherapy.

electrophore (ē-lek′trō-fōr), *n.* [See *electrophorus.*] Same as *electrode.*

electrophototherapy (ē-lek″trō-fō-tō-ther′a-pi), *n.* The treatment of disease by means of the electric light. *Lancet,* July 11, 1903, p. 104.

electrophysics (ē-lek-trō-fiz′iks), *n.* Same as *electrology.*

electropneumatic (ē-lek″trō-nū-mat′ik), *a.* Moved by electric and (then) pneumatic power.—**Electropneumatic action,** in *organ-building,* an action in which the original impulse from the console is conveyed by electricity, but the force exerted within the instrument (in opening valves, etc.) is derived from compressed air.—**Electropneumatic organ,** an organ with an electropneumatic action.—**Electropneumatic thermostat.** See ★*thermostat.*

electroprocess (ē-lek′trō-pros″es), *n.* The arts or manipulations needed to produce an electrotyped duplicate.

electroprognosis (ē-lek″trō-prog-nō′sis), *n.* A prognosis based upon the reactions obtained upon a trial application of electricity to diseased nerves or muscles.

electrorefine (ē-lek″trō-rē-fīn′), *v. t.*; pret. and pp. *electrorefined,* ppr. *electrorefining.* To refine by means of electrolysis. A plate of the crude metal is made the anode in an electrolyte consisting of a salt of the same metal; when the current passes, the crude metal dissolves from the anode, and the pure metal, if suitable conditions are maintained, is deposited on the cathode.

electrorefining (ē-lek′trō-rē-fī″ning), *n.* The refining of a metal by means of electrolysis.

electroreplica (ē-lek″trō-rep′li-kä), *n.* A metallic duplicate of an orginal produced by electrodeposition.

An *electro replica* of Tycho Brahe's quadrant, from the original in the British Museum, is deposited in the Smithsonian Institution. *Smithsonian Rep.,* 1890, p. 728.

electroscope, *n.*—**Lantern electroscope,** an electroscope so constructed that it may be placed in the field of a projecting lantern and an enlarged image of the moving parts thus be thrown upon a screen for observation at a distance.—**Radium electroscope,** an electroscope, devised by Strutt, in which the charge is permanently maintained by the action of a small mass of radium, or in which the leaves of the instrument, thus charged, are discharged by contact, collapse, and are recharged by the radium at a regular rate indefinitely.

electrostenolysis (ē-lek″trō-stē-nol′i-sis), *n.* [*electro-* + Gr. στενός, narrow, + λύσις, dissolution.] Electrodeposition within the interstices of a permeable substance traversed by the current within an electrolytic cell.

electrostenolytical (ē-lek″trō-sten-ō-lit′i-kal), *a.* Of, pertaining to, or by means of electrostenolysis.

electrostenolytically (ē-lek″trō-sten-ō-lit′i-kal-i), *adv.* In an electrostenolytic manner or by an electrostenolytic process.

electrostriction (ē-lek-trō-strik′shon), *n.* [*electro-* + LL. *strictio*(*n-*), compression.] Change in the dimensions of, or deformation of, a dielectric produced by the action of an electrostatic field.

electrosurgical (ē-lek-trō-sėr′ji-kal), *a.* Relating or pertaining to the use of electricity in surgery: as, *electrosurgical* devices.

electrosynthesis (ē-lek-trō-sin′the-sis), *n.* Chemical synthesis effected by the aid of electrolysis.

electrotactic (ē-lek-trō-tak′tik), *a.* [*electrotaxis* (*-tact-*) + *-ic.*] Of or pertaining to the locomotion of organisms in relation to electric currents; exhibiting electrotaxis.

electrotaxis (ē-lek-trō-tak′sis), *n.* [NL., < *electro-* + Gr. τάξις, disposition]. The orientation or the locomotion of organisms or of cells in relation to electric currents: a phenomenon first observed in vertebrates in the frog's tadpole, in 1885.

electrotelethermometer (ē-lek″trō-tel″ē-thėr-mom′e-tėr), *n.* An apparatus consisting of a mercurial thermometer with platinum wires sealed into the glass at the bulb and at different points on the stem. These wires are connected with a switch, an alarm-bell, and a battery in such a manner that, when the mercury expands to a particular point corresponding to the position of the switch, the circuit is closed and the alarm rings. *Sci. Amer.,* Sept. 12, 1903, p. 184.

electrothanasia (ē-lek″trō-tha-nā′zi-ä), *n.* [*electro-* + Gr. θάνατος, death.] Death caused by electricity.

electrotherapist (ē-lek-trō-ther′a-pist), *n.* Same as *electrotherapeutist.*

electrothermal (ē-lek-trō-thėr′mal), *a.* Relating to heat produced by electricity.—**Electrothermal detector.** See ★*detector.*

electrothermic (ē-lek-trō-thėr′mik), *a.* Same as ★*electrothermal. Engineering Mag.,* June, 1899.

electrothermometer (ē-lek″trō-thėr-mom′e-tėr), *n.* An instrument for the measurement of temperature by electrical means; an electrical thermometer.

electrothermy (ē-lek-trō-thėr′mi), *n.* [*electro-* + Gr. θέρμη, heat, + *-y*[3].] The science of the electricity developed by heat. *N. E. D.*

electrotonus, *n.*—**Physical electrotonus,** an electrical change, analogous to physiological electrotonus, which takes place in a wire during the passage of an electric current.—**Physiological electrotonus,** an altered excitability of a nerve brought about as the result of the passage of a constant current, such that at the positive pole the excitability is diminished (region of anelectrotonus), while it is increased at the negative pole (region of catelectrotonus).

electrotropic (ē-lek-trō-trop′ik), *a.* [*electro-* + Gr. τροπικός, of turning: see *tropic.*] Of or pertaining to the growth or bending of an organism under the influence of electricity; exhibiting electrotropism.

electrotropism (ē-lek-trot′rō-pizm), *n.* [Also by error or ellipsis *electropism*; < *electrotrop*(*ic*) + *-ism.*] The growth or bending of an organism under the influence of electricity.

electrotype, *n.*—**Electrotype shell,** the thin sheet of metal, usually of copper, deposited by electrolysis in the previously prepared mold of wax, that has been pressed upon a surface of type or of engraving in relief. The shell so obtained, of the thickness of an ordinary sheet of paper, is made usable for printing by the addition of a type-metal backing.

electrotypograph (ē-lek-trō-tī′pō-graf), *n.* A type-making and type-setting apparatus, invented by Meray-Rozar of Nuremberg, in which some operations are controlled by electricity. Its types are cast singly.

The "*Electrotypograph*" . . . justifies automatically . . . and offers the greatest facility for corrections. . . . There are two distinct machines combined in one. One of these is a writing and the other a casting and composing machine.
La Nature, as quoted in Sci. Amer. Sup., Aug. 30, 1902. [p. 22288.

electrotypoplate (ē-lek-trō-tī′pō-plāt), *n.* An electrotype plate produced from types made and composed by the electrotypograph.

electrovitalism (ē-lek-trō-vī′tal-izm), *n.* The doctrine of the electrical nature of nervous action.

electrozone (ē-lek′trō-zōn), *n.* [*electr(ic)* + *ozone*.] A trade-name for a weak solution of common salt, as, for instance, sea-water, in which by means of an electric current sodium hypochlorite has been formed. It is antiseptic, and has been proposed as a material to be added in small proportion to a public water-supply in order to destroy bacteria or other micro-organisms.

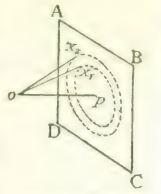
electrum, *n.* 2. Native argentiferous gold in which the silver amounts to one third or more.

electuary-pot (ē-lek′tū-ā-ri-pot), *n.* A vessel designed to hold an elixir or cordial, such as the majolica drug-pots of Faenza. See *albarello*.

elegante (el-e-gant′), *n.* [F. *élégante*, fem. of *élégant*, elegant.] A lady of fashion.

> If my Waverley had been entitled "A Tale of the Times," wouldst thou not . . . have demanded from me a dashing sketch of the fashionable world, . . . with a set of subordinate characters from the *elegantes* of Queen Anne Street East? *Scott*, Waverley, I.

elem. An abbreviation of *elementary*.



eleme (el′ē-mi), *n.* [Also *elemi*; < Turk. *eleme*, *elemeh*, something sifted or selected.] A kind of Turkish fig: generally used attributively: as, *eleme* figs, selected figs (that is of superior quality) from Turkey.

element, *n.*, **1.** (*d*) In *math.*: (2) any one of the different products of which a determinant is the sum. See *determinant*, 3. (*j*) In *anat.*, one of the indivisible constituents of a tissue, as a cell or ultimate fiber. (*k*) In *pathol.*, an individual lesion among several the aggregation of which constitutes the anatomical disease, as a single pustule in the smallpox eruption. *Lancet*, April 4, 1903, p. 949. (*l*) In any complex mechanical structure, one of the simpler or irreducible parts: as, the *elements* of a machine, the *elements* of a sectional boiler.

3. The common division of the chemical elements, as at present known, into metals and non-metals is not based upon any chemical distinction of scientific value, but rather upon a more or less general consideration of physical properties of the elements in an uncombined state; hence the line between the two classes is arbitrarily drawn and is without entire uniformity of usage, certain elements, as arsenic, antimony, bismuth, and tellurium, being by some writers counted as metals, by others as non-metals. The following table furnishes a list of the elements as at present generally recognized by chemists, omitting those of imperfectly established character. The number is 83. The atomic weights given are those of the last table published by the International Committee on Atomic Weights.

Elements.	Symbols.	Atomic Weights. O = 16.
Aluminium	Al	27.1
Antimony	Sb	120.2
Argon	A	39.88
Arsenic	As	74.96
Barium	Ba	137.37
Beryllium (or glucinum)	Be	9.1
Bismuth	Bi	208.0
Boron	B	11.0
Bromine	Br	79.92
Cadmium	Cd	112.40
Cæsium	Cs	132.81
Calcium	Ca	40.07
Carbon	C	12.00
Cerium	Ce	140.25
Chlorin	Cl	35.46
Chromium	Cr	52.0
Cobalt	Co	58.97
Columbium (or niobium)	Cb	93.5
Copper	Cu	63.57
Dysprosium	Dy	162.5
Erbium	Er	167.7
Europium	Eu	152.0
Fluorin	F	19.0
Gadolinium	Gd	157.3
Gallium	Ga	69.9
Germanium	Ge	72.5
Glucinum (or beryllium)	Gl	9.1
Gold	Au	197.2
Helium	He	3.99
Holmium	Ho	163.5
Hydrogen	H	1.008
Indium	In	114.8
Iodine	I	126.92
Iridium	Ir	193.1
Iron	Fe	55.84
Krypton	Kr	82.92
Lanthanum	La	139.0
Lead	Pb	207.10
Lithium	Li	6.94
Lutecium	Lu	174.0
Magnesium	Mg	24.32
Manganese	Mn	54.93
Mercury	Hg	200.6
Molybdenum	Mo	96.0
Neodymium	Nd	144.3
Neon	Ne	20.2
Nickel	Ni	58.68
Niobium (or columbium)	Nb	93.5
Niton (radium emanation)	Nt	222.4
Nitrogen	N	14.01
Osmium	Os	190.9
Oxygen	O	16.00
Palladium	Pd	106.7
Phosphorus	P	31.04
Platinum	Pt	195.2
Potassium	K	39.10
Praseodymium	Pr	140.6
Radium	Ra	226.4
Rhodium	Rh	102.9
Rubidium	Rb	85.45
Ruthenium	Ru	101.7
Samarium	Sm	150.4
Scandium	Sc	44.1
Selenium	Se	79.2
Silicon	Si	28.3
Silver	Ag	107.88
Sodium	Na	23.00
Strontium	Sr	87.63
Sulphur	S	32.07
Tantalum	Ta	181.5
Tellurium	Te	127.5
Terbium	Tb	159.2
Thallium	Tl	204.0
Thorium	Th	232.4
Thulium	Tm	168.5
Tin	Sn	119.0
Titanium	Ti	48.1
Tungsten	W	184.0
Uranium	U	238.5
Vanadium	V	51.0
Xenon	Xe	130.2
Ytterbium (neoytterbium)	Yb	172.0
Yttrium	Y	89.0
Zinc	Zn	65.37
Zirconium	Zr	90.6

Dry element, in *elect.*, a battery element having the exciting fluid absorbed in a porous or spongy mass, as sawdust.—**Element of an analytic function.** An analytic function is defined by an aggregate of series composed of a primary series and its continuations; the separate series are called *elements* of the analytic function, and the primary series is called the primary element.—**Euclid's elements of geometry.** See *Euclidean*, 1.—**Half-period element,** in *optics*, an annular or zonal element of area upon a wave-front such that the difference of the distances from its outer and inner boundaries to a point, external to the wave, with respect to which the element is taken, is half a wave-length. Also called *Huygens' zone*. Let ABCD be a portion of the wave-front and *op* the line from *o* to the pole of the wave. If $ox_2 - ox_1$ is everywhere equal to $\frac{1}{2}\lambda$, where λ is the wave-length, the zone included between the closed curves x_1 and x_2 is a *half-period* element with respect to *o*.—**Leading element,** in a determinant, the leading term; the product of the diagonal constituents or elements from the top left-hand corner.—**Natural system of the elements,** the arrangement of the chemical elements according to the periodic law, by Mendelejeff and Lothar Meyer. See *periodic law*, under *periodic*.—**Noble elements,** the differentiated cells which constitute the functionating parts of organs, as distinguished from the connective-tissue cells which constitute the framework of the organs.—**Null element,** one whose addition to any other element α of the manifold yields the same element α.—**Phonetic element,** any distinguishable spoken sound.—**Plastic element,** in *physiol.*, an alimentary element which is destined for the formation of new tissue.—**Radial elements,** in *ichth.*, the interspinal bones, actinosts and baseosts; the fin-supporting elements.—*T. W. Bridge*, in Jour. Linn. Soc. Zool., XXV. 533.—**Surface elements,** in *math.*, infinitesimal strips perpendicular to an axis.

Half-period Element.

elementaloid (el-ē-men′ta-loid), *a.* [*elemental* + *-oid*.] Resembling an element in character.

elementarize (el-ē-men′ta-rīz), *v. t.*; pret. and pp. *elementarized*, ppr. *elementarizing*. [*elementar(y)* + *-ize*.] To confine or restrict (one's teaching) to elementary principles.

> The very word passion is becoming obsolete in psychological literature, which on this subject *elementarizes*, repeats, is pedantic, or affectedly didactic.
> *G. S. Hall*, Adolescence, II. 59.

elementary, *a.* **4.** Of the nature of an infinitesimal element or part.—**Elementary integral** See ★*integral*.

elementist (el-ē-men′tist), *n.* One who discovers or expounds the elements of a subject; specifically [*cap.*], Euclid, the geometer.

> The man and the book are, of course, Euclid and his Elements, but the book so overshadowed the man that not long after his day Euclid was regularly called the *Elementist*. *W. B. Frankland*, Story of Euclid, p. 16.

elemi, *n.*—**Luban elemi.** Same as *Oriental* or *African elemi*. See *elemi*.—**Mexican elemi,** the oleoresin derived from *Terebinthus Mexicana* and *T. Jorullensis*. Also called *copal blanco* and *copal de santo*. See ★*copal*.

elemic (e-lem′ik), *a.* [*elemi* + *-ic*.] Pertaining to or derived from elemi.—**Elemic acid,** a crystalline acid, $C_{35}H_{46}O_4$, present in small quantities in elemi.

elenchus, *n.*—**Socratic elenchus,** the method of question and answer employed by Socrates in eliciting truth.

eleolite, *n.* See *elæolite*.

eleonorite (el″e-ō-nō′rīt), *n.* [*Eleonore* (see def.) + *-ite*2.] A variety of beraunite, first described from the Eleonore mine near Giessen, Germany.

Elephant boiler, cent. See ★*boiler*, ★*cent*.

elephanteer (el″ē-fan-tēr′), *n.* A mahout or elephant-driver.

elephantiac, *a.* **II.** *n.* A person suffering from elephantiasis.

elephantiasic (el-ē-fan-ti-ā′sik), *n.* Same as ★*elephantiac*.

elephantoid, *a.* **2.** Pertaining to or having the character of elephantiasis.—**Elephantoid fever,** elevation of temperature and other symptoms marking the onset of elephantiasis.

Elephantomyia (el″ē-fan-tō-mī′yä), *n.* [NL. (Osten Sacken, 1859), < Gr. *ἐλέφας* (*ἐλεφαντ-*), elephant, + *μυια*, fly.] An extraordinary genus of tipulid flies, occurring in North America and characterized by an extremely long proboscis.

elephantry (el′ē-fan-tri), *n.* [*elephant* + *-ry*.] Troops mounted on elephants. *F. Hall*.

elephant's-ear, *n.* **2.** In India, *Siphonanthus hastata*, a Himalayan shrub belonging to the verbena family. The name translates the native name *hattee-kana*, and refers to the shape of the leaves.—**3.** In the United States, a common name for the large-leaved *Caladium Colocasia*, planted for ornament.

elephant-shark (el′ē-fant-shärk), *n.* Same as *basking-shark*.

elephant's-tooth (el′ē-fants-töth), *n.* A tooth-shell, *Dentalium*.

elephant's-trunk (el′ē-fants-trungk), *n.* **1.** The unicorn-plant, *Martynia Louisiana*.—**2.** The bastard bryony or china-root, *Cissus sicyoides*.

eleutherarch (e-lū′ther-ärk), *n.* [Gr. *ἐλεύθερος*, free, + *ἀρχός*, a chief.] The chief of an imaginary secret society called the 'Eleutheri.' *N. E. D.*

> Do not persevere in writing after you grow weary of your toil; . . . the swans and the *Eleutherarchs* are proofs that you were a little sleepy.
> *Shelley*, in Contemporary Rev., Sept., 1884, p. 387.

eleutherism (e-lū′the-rizm), *n.* [Gr. *ἐλεύθερος*, free, + *-ism*.] The cause of freedom or zeal in promoting it.

Eleutherognathi (e-lū-the-rog′na-thī), *n. pl.* [NL., < Gr. *ἐλεύθερος*, free, + *γνάθος*, jaw.] Same as *Acanthopteri* or *Acanthopterygii*, a large suborder of fishes, commonly called the *spiny-rayed fishes*.

eleutherorhabdic (e-lū″the-rō-rab′dik), *a.* [Gr. *ἐλεύθερος*, free, + *ῥάβδος*, rod.] Relatively free from union with one another, as the gill-filaments provided with ciliated disks in certain lamellibranchs. See ★*synaptorhabdic*. *Lankester*, Philos. Trans. Roy. Soc. (London), ser. B, p. 154.

Eleutherozoa (e-lū″the-rō-zō′ä), *n. pl.* [NL., < Gr. *ἐλεύθερος*, free, + *ζῷον*, animal.] A grade of echinoderms in which the theca, which may be only slightly or not at all calcified, is not attached by any portion of its surface, but is usually placed with the oral surface downward or in the direction of forward locomotion. It includes the *Holothuroidea*, *Stelleroidea*, and *Echinoidea*.

eleutherozoic (e-lū″the-rō-zō′ik), *a.* Of or pertaining to the *Eleutherozoa*.

elevated (el′ē-vā-ted), *p. a.* **1.** Lifted or raised to, or placed or situated in, a position above the ground or general level; situated higher than the plane with which the comparison is made. See *elevate*. In *astrol.*, a planet is said to be elevated above another when it is nearer to the meridian. **2.** In *math.*, containing high powers of the unknown or variable: said of an equation.

elevate-reticulate (el″ē-vāt-rē-tik′ū-lāt), *a.* Reticulate with elevated lines or carinæ, as the sculpturing of the integument of certain coleopterous and hymenopterous insects. *Proc. Zool. Soc. London*, 1901, p. 155.

elevating-block (el′ē-vā-ting-blok″), *n.* The sheave or block, in a cable or overhead tramway system, over which the hoisting-rope passes, and by means of which the load is elevated sufficiently for it then to be conveyed on the cable by the carrier of which the block or sheave is a part.

elevation, *n.* **9.** In *old music*, a grace or embellishment consisting of a short upward run connecting two notes separated by a skip.—**Axis of elevation.** See ★*axis*1.

elevator, *n.* **3.** In *surg.*: (*b*) An instrument for extracting the stump of a tooth. (*c*) Same as *repositor*.—**4.** (*c*) Any form of hoisting-machinery employing an endless belt (composed of link-belt chains, or of leather, rubber, or fabric) which carries buckets, brackets, or trays. Where buckets are used, the material (grain, sand, coal, phosphate, nails, small fish, etc.) is handled in bulk, each bucket being filled at the foot of the elevator and discharging its load at the top. Where brackets, arms, or trays are used, general freight (in packages, rolls, boxes, barrels, etc.) is handled by placing it on the brackets or trays by hand or by some form of feeder, and unloading it by hand or by automatic dumping- or discharging-machines. While all are essentially alike, such

machines differ materially in form and application, and are given many different names, according to their construction or the uses to which they are put. They are often combined with conveyers.—**Derrick-elevator,** an apparatus for lifting grain stored in bulk in a vessel's hold and transferring it to lighters or into the bins of storage-elevators. The elevator proper is borne upon a frame on a flat-bottomed vessel, as in the case of the marine derrick used

Derrick- or Grasshopper-Elevator.

a, *a*, hull of scow or lighter; *b*, propelling-engine and steam-boiler for *c*, the elevator operating and adjusting engine; *d*, the bucket-elevator and its casing; *e*, chute into which the buckets discharge; *f*, conveyer delivering to the spouts; *g*, discharge or loading spouts or chutes fed from *h*, conveyer receiving from *f*, and delivering to *g*.

for placing machinery in vessels. The truss carrying the elevator has jointed members, so that the elevator can drop down through hatchways in the decks of the vessels to be unloaded. Hence another common name, *grasshopper-elevator*. *Sci. Amer.*, Jan. 31, 1903, p. 75.—**Elevator disease.** See ★*disease*.—**Uterine elevator.** Same as *repositor*.

elevator-cage (el′ē-vā-tor-kāj″), *n.* The cage or inclosed car by which passengers and freight are carried in an elevator. In mines, the sides are grated or protected with bars only.

elevator-cup (el′ē-vā-tor-kup″), *n.* The metal receptacle attached to the chain or belt of a bucket elevator: usually called *bucket*.

elevator-scales (el′ē-vā-tor-skālz″), *n.* Platform-scales for weighing grain as it comes from an elevator. Such scales are usually automatic, receiving about 100 bushels as a load, recording the weight, and then emptying the grain into a storage-bin. Two hoppers work alternately, filling and emptying.

elevator-shaft (el′ē-vā-tor-shaft″), *n.* In modern buildings, the inclosed space, of uniform height from top to bottom, in which an elevator-car moves up and down.

Eleven rule, in *bridge*, a mathematical rule invented by R. F. Foster to enable the pone to determine how many cards in the leader's suit are out against him higher than the one led, when this is the fourth best. It is the following: Deduct from eleven the number of spots on the card led, and the remainder is the number of cards in the suit higher than the one led, which the leader does not hold. From the remainder thus found the pone deducts the number he holds himself, and sees in the dummy, higher than the one led, and this second remainder, if any, is the number the dealer holds. For instance, the 7 is led, dummy lays down Q, 10, 5, and the pone holds A, 8, 6. Deducting the 7, led, from 11, 4 higher than the 7 are left, all of which are in sight, so that the dealer has no card higher than the 7, and the leader must hold K, J, 9, 7. Therefore, if dummy does not cover the 7, the pone will pass it, and it will win the trick. The dealer, if he knows the eleven rule, will of course avail himself of it and cover the 7 led with the 10 in dummy's hand, so as to force the pone to play higher and lead up to dummy's guarded queen, if he continues the suit.

elf-cup (elf′kup), *n.* A small stone perforated by the action of water at a waterfall.

elf-god (elf′god), *n.* The elfish god, that is, Cupid. *Tennyson*.

elfic (el′fik), *a.* [*elf* + *-ic*.] Of or pertaining to an elf; proper to an elf.

elfin, *n.* 3. An American lycænid butterfly of the genus *Incisalia*.—**Banded elfin,** a lycænid butterfly *Incisalia niphon*, occurring throughout the United States and found commonly in open spaces in pine woods. It is brown in color, with the under sides of the wings checkered with brown and white. Its larvæ live on pine-leaves.—**Brown elfin,** an American lycænid butterfly, *Incisalia augustus*, of dark-brown color, inhabiting the northern United States. Its food-plant is unknown.—**Hoary elfin,** *Incisalia irus*, a species occurring east of the Mississippi, feeding in the larval state on the fruit of the wild plum.

elfin-tree (el′fin-trē). [Tr. of G. *zwergbaum* (Schimper).] In *phytogeog.*, an alpine type of tree with short, gnarled, often oblique or horizontal stem, and long serpentine branches bent in all directions, occuring mainly in the tropics. *A. F. W. Schimper* (trans.), Plant-Geog., pp. 704, 705.

elfin-wood (el′fin-wůd), *n.* A wood composed of elfin-trees. See ★*elfin-tree*. *A. F. W. Schimper* (trans.), Plant-Geog., p. 704.

elf-owl (elf′oul), *n.* A diminutive species of owl, *Micropallas whitneyi*, found in the southwestern United States.

Elgin sandstone. See ★*sandstone*.

Elian (ē′li-an), *a.* Of or pertaining to "Elia," that is, Charles Lamb, who wrote essays under this pseudonym.

Many of the new letters are of no literary account; perhaps a score have the true *Elian* cachet, and one or two supply a link hitherto missing in the writer's life. *Athenæum*, June 3, 1905, p. 681.

eliasite (ē-lī′a-sīt), *n.* [*Elias*, name of the mine of origin, + *-ite*2.] An alteration-product of the pitch-blende of Joachimsthal, Bohemia; a kind of gummite.

Elijah's cup. See ★*cup*.

eliminant, *n.* 2. In *med.*, an agent which stimulates excretion.

Eliminative selection. See ★*selection*.

eliminator, *n.* 2. A combination of a separator for taking the water out of steam and a trap for automatically discharging the water from the collector.

elittoral (ē-lit′ō-ral), *a.* [L. *e*, out, + *litus*, *littus* (*littor-*), shore, + *-al*.] Out from shore; that is, occurring in the sea near shore, at least below high water mark.

She finds that the plant *Callymenia phyllophora* is *elittoral*, and occurs in crevices in the rocky caverns where the tidal surge is strong. Only young plants were uncovered by low tides; mature plants were well beyond low tide line. *Jour. Roy. Micros. Soc.*, April, 1905, p. 215.

elixir, *n.*—**Brown-Séquard's elixir,** a sterilized testicular fluid used in the treatment of mental and nervous diseases.—**McMunn's elixir,** a watery solution of opium of the same strength as laudanum.

Eliz. An abbreviation of *Elizabethan*.

Eliza, *n.* See ★*Long Eliza*.

Elizabethan, *a.* **II.** *n.* One who lived during the Elizabethan period; especially a poet, or dramatist of that period.

Elizabethanize (ē-liz-a-beth′an-īz), *v. t.*; pret. and pp *Elizabethanized*, ppr. *Elizabethanizing*. To give an Elizabethan character to; pattern after the style of the Elizabethan period.

elk1, *n.* 5. [*cap.*] A member of a benevolent and fraternal society known as the *Benevolent and Protective Order of Elks*, organized in New York in 1868. Its membership is restricted to citizens of the United States.

Elk-horn fern. See ★*fern*1.

elk-game (elk′gām), *n.* A ceremonial game of the Dakota Indians of North America, played with a ring and darts: similar to the hoop-and-pole game.

Elk River series. See ★*series*.

elk-yard (elk′yärd), *n.* A space cleared in the deep snow by the trampling of a small band of elk, within which they live and feed. Called, in America, *moose-yard*. See *elk*1.

ellagitannic (e-laj-i-tan′ik), *a.* [*ellagi*(*c*) + *tannic*.] Pertaining to gallnuts and tannin.—**Ellagitannic acid** an acid substance resembling ellagic and tannic acid, but derived from the tannin of divi-divi and myrobalans rather than from gallnuts or sumac. Its empirical formula is $C_{14}H_{10}O_{10}$.

Elliott eye. See ★*eye*1.

Elliott's apparatus. See ★*apparatus*.

ellipse, *n.*—**Aberrational ellipse,** the little ellipse which a star appears to describe annually on account of the aberration of light. Its major axis is always 41 seconds long and parallel to the ecliptic. Its minor axis varies with the star's latitude, that is, its distance from the ecliptic.—**Ellipse of stress,** a geometrical construction, devised by Rankine, for finding the stresses at a point within a solid in a state of strain. It is an ellipse whose center is at the given point, whose principal axes are the normals to the planes of principal stress, and whose principal semi-axes are proportional to the intensities of the principal stresses.

ellipsoid, *n.* 2. In *anthrop.*, a cranium the norma verticalis of which has an ellipsoidal form. *G. Sergi*, Var. of the Human Species, p. 27.—**Fresnel's ellipsoid,** an ellipsoid whose semi-axes are taken proportional respectively to the maximum, minimum, and mean values of the light-velocity for a given biaxial crystal. See *axes of light-elasticity*, under *axis*1.—**Irrotational ellipsoid,** an ellipsoid that is not a solid of revolution.—**Planetary ellipsoid,** an oblate ellipsoid.

Ellipsoidal harmonic, structure. See *Lamé's function*, under *function*, and ★*structure*.

ellipsone (e-lip′sōn), *n.* [*ellipse* + (*cycl*)*one*.] A whirlwind in which the winds describe ellipses instead of circles. *Fitz Roy*. [Rare.]

ellipsonic (e-lip-son′ik), *a.* Having the shape, motion, or property of an ellipse.

Elliptic spheroid, substitution. See ★*ellipsoid of revolution*, ★*substitution*.

Elliptical vibration. See ★*vibration*.

ellipticity, *n.*—**Coefficient of ellipticity.** See ★*coefficient*.

ellwife (el′wīf), *n.* A dialectal variant of *alewife*.

elm, *n.* Of other varieties of elm (comprising some trees more or less closely related to the elm and a few belonging to different families but somewhat resembling elms: those given below are among the most important.—**American elm.** Same as *white* ★*elm*.—**Basket-elm.** Same as ★*cedar-elm*.—**Bastard elm,** the hackberry, *Celtis occidentalis*. See *hackberry*, 2 (with cut).—**Broad-leaved elm.** Same as *witch-elm*.—**Cedar-elm.** See ★*cedar-elm*.—**Cork-elm.** See ★*cork-elm*.—**Corky white elm,** an occasional name of the cork-elm.—**Dutch elm,** a form of the English elm with corky ridges on the branches: distinguished by some authors as a species, *Ulmus suberosa*.—**Dwarf elm** of Siberia. See *Ulmus*.—**Elm bark-beetle, elm flea-beetle, elm leaf-beetle, elm span-worm.** See ★*bark-beetle*, ★*flea-beetle*, ★*leaf-beetle*, ★*span-worm*.—**English elm,** *Ulmus campestris*. See *elm* (with cut). This tree was extensively planted in some American cities, especially Washington, by the English and Scotch gardeners, who apparently were not aware of the superior claims of indigenous species.—**False elm.** Same as *bastard* ★*elm*.—**Himalayan elm.** See *Ulmus*.—**Indian elm,** the slippery-elm (which see).—**Mountain-elm.** (*a*) The Scotch elm. (*b*) The wing-elm or winged elm. See *wahoo*,3.—**Red elm.** (*a*) The slippery-elm, from the red wood, by which it is distinguished from the white elm, and well known among lumbermen. (*b*) The winged elm, *Ulmus alata*, so called in Florida and Arkansas. (*c*) *Ulmus serotina*, a tree of limited distribution on limestone hills and river-banks in southern Kentucky and northern Alabama and Georgia, only recently distinguished from *U. fulva*, from which it differs in its much smaller fruit, in the absence of mucilage in the inner bark, and in other respects. The wood is reddish in color.—**Sweet elm,** the slippery-elm, from the sweet aromatic taste and smell of the inner bark.—**White elm,** *Ulmus Americana*, the most important of American elms. It sometimes reaches

White Elm (*Ulmus Americana*).

a height of 120 feet and a diameter near the base of 10 feet, with 60 feet or more clear of limbs. The trunk then normally divides up into a large number of more or less equal branches or subsidiary trunks, which diverge in graceful curves in all directions, forming an inversely pyramidal or umbrella-shaped top of wide expanse and great beauty, the dense foliage furnishing a perfect shade. The wood is tough and difficult to split, but very durable and of great value in the arts. The tree ranges from Newfoundland to Florida and westward to the base of the Rocky Mountains.

elm-beetle (elm′bē″tl), *n.* 1. The elm bark beetle. See ★*bark-beetle*.—2. A native American beetle, *Monocesta coryli*, of the family *Chrysomelidæ*, which feeds on elm-leaves in the more northern of the Southern States.

Elm-borer (*Dularius brevilineus*). (Packard, U. S. D. A.)

elm-borer (elm′bōr″ėr), *n.* Any one of several coleopterous insects whose larvæ bore into elm-trees. Among them are the cerambycids *Saperda tridentata*, *S. lateralis*, *S. vestita*, *Dryobius sex-maculatus*, *Dularius brevilineus*, *Neoclytus erythrocephalus*, and *N. capræa*; the curculionid *Magdalis armicollis*; the buprestid *Anthaxia viridicornis*; and the scolytid *Hylesinus opaculus*.

elm-butterfly (elm′but″ėr-flī), *n.* Any one of

Elm-butterfly (*Polygonia progne*), Natural size (Packard, U. S. D. A.)

several nymphalid butterflies whose larvæ feed on elm-leaves, as *Euvanessa antiopa*, *Polygonia interrogationis*, *P. faunus*, and *P. progne*.

elm-gall (elm′gâl), *n.* A gall upon the leaves of the elm.—**Cockscomb elm-gall**, a gall resembling in shape a miniature cockscomb, made on the leaves of elm by an aphidid, *Colopha ulmicola*.

elm-grass (elm′grȧs), *n.* See ★*grass*.

elm-moth (elm′môth), *n.* Any one of several species of moths whose larvæ feed on elm-leaves, notably *Paleacrita vernata*, known in the larval state as the *spring canker-worm*.

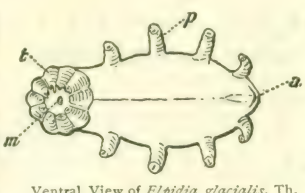
elm-scale (elm′skāl), *n.* An American diaspine scale-insect, *Chionaspis americana*.

Elohimic (el-ō-him′ik), *a.* [*Elohim* + *-ic*.] Characterized by the use of the Hebrew word *Elohim*, 'God,' instead of 'Jahveh,' or 'Jahwè,' the proper name of God; Elohistic: applied to certain passages in the Hebrew scriptures: as, the *Elohimic* psalms; the *Elohimic* portions of Genesis; *Elohimic* documents.

eloiner (ē-loi′nėr), *n.* One who eloins; one who causes an eloinment; for example, one who removes chattels so that they cannot be replevied.

E. lon. An abbreviation of *east longitude*.

elongation, *n.*—**Elasticity of elongation.** See ★*elasticity*.—**Elongation strain.** See ★*strain*1.—**Percentage of elongation.** See *elongation* ★*strain*.



elongato-conical (ē-long-gā′tō-kon′i-kal), *a.* Shaped like an elongated cone.

elongato-ovate (ē-long-gā′tō-ō′vāt), *a.* Shaped like an elongated egg.

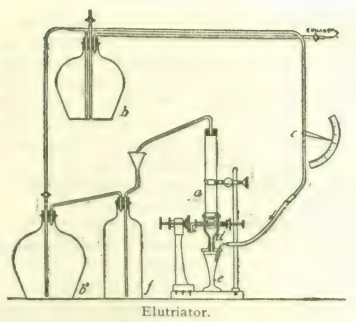
elotillo (ā-lō-til′yō), *n.* [Mex. Sp. *elotillo*, dim. of Mex. (Nahuatl) *elotl*, an ear of green maize.] In Mexico, a name of the fleshy, leafless parasitic plant, *Conopholis Americana*, which somewhat resembles a small ear of corn. See cut under *squawroot*.

elpasolite (el-pä′sō-līt), *n.* [*El Paso*, a county in Colorado, + *-lite* for Gr. λίθος, stone.] A fluoride of aluminium, potassium, and sodium, perhaps analogous to cryolite in composition: found in El Paso county, Colorado.

Elpidia (el-pid′i-ȧ), *n.* [NL. (Théel, 1876).] The typical genus of the family *Elpidiidæ*.

Ventral View of *Elpidia glacialis*, Th. *a*, anus; *m*, mouth; *p*, tube-foot; *t*, tentacle. (From Lankester's "Zoology.")

Elpidiidæ (el-pi-dī′i-dē), *n. pl.* [NL., < *Elpidia* + *-idæ*.] A family of deep-sea holothurians of the order *Actinopoda*. They have the body generally flattened ventrally, mouth more or less ventral, tentacles from 10 to 20, stone-canal single, respiratory trees absent or rudimentary, calcareous ring of 5 or 10 pieces, and the spicules of various shapes. The family contains about 20 genera, of which *Elpidia* is the typical one.



elpidite (el′pi-dīt), *n.* [Gr. ἐλπίς (ἐλπιδ-), hope, + *-ite*2.] A silicate of zirconium and sodium occurring in from white to brick-red masses, rarely in orthorhombic crystals: found in southern Greenland.

eltrot (el′trot), *n.* [Also *altrot*, *heltrot*, *hiltrot*, *hilltrot*, *eldertrot*, *eldroot*, *eldrop*, etc.; a not understood compound of E. dial. *elt*, *yelt*, var. of *gilt*, AS. *gilte*, a young sow, + *root*1.] **1.** The cow-parsnip.—**2.** The water-parsley.—**3.** The wild or cow parsley.—**4.** The wild carrot.—**5.** A stalk of certain plants, especially the wild parsley. [Prov. Eng. in all uses.]

elutor (ē-lū′tọr), *n.* [NL. *elutor*, < L. *eluere*, wash out, < *e*, out, + *-luere*, *lavare*, wash: see *lava*.] A vessel in which tribasic calcium sucrate, produced by the addition of lime to beet-root molasses, is washed with dilute alcohol in order to free it from impurities before it is decomposed by carbon dioxid and crystallizable sugar thereby recovered from it.

elutriator (ē-lū′tri-ā-tọr), *n.* [NL. *elutriator*, < L. *elutriare*, wash out, rack off, < *eluere*, wash out: see ★*elutor*.] An apparatus for the analysis of finely divided solids, such as soils, by means of which the particles of different size and weight are separated from each other by falling through water or a current of water. See cut in middle column.

eluvial (ē-lū′vi-al), *a.* [*eluvium* + *-al*1.] Of the nature of eluvium; formed by wind-drift or atmospheric weathering: as, *eluvial* accumulations. *Nature*, XXIII. 225.

Elutriator.

a, container for sample; *b* and *b*′, reservoirs for water; *c*, stop-cock to control flow of water; *d*, agitator; *e*, receptacle for coarse particles; *f*, settling-vessel for fine particles.

eluvium (ē-lū′vi-um), *n.* [NL. **eluvium*, parallel to L. *eluvio(n-)*, a washing away, < *eluere*, wash out: see ★*elutor*. Cf. *alluvium*.] In *geol.*, an accumulation of dust and soil produced by decomposition of rocks in situ, or drifted by winds.

For atmospheric accumulations of this nature [loess] Trautschold has proposed the name *eluvium*. They originate in situ, or at least only by wind-drift, whereas alluvium requires the operation of water, and consists of materials brought from a greater or less distance.
Geikie, Text-book of Geol., p. 322.

elvanitic (el-vạ-nit′ik), *a.* [*elvanite* + *-ic*.] Containing, resembling, or characterized by elvanite.

elydoric (el-i-dor′ik), *a.* [F. *eludorique*, erroneously formed from Gr. ἕλ(αιον), oil, + ὑδωρ (ὑδρο-), water, + F. *-ique*, E. *-ic*.] Noting a complicated method of painting, invented by Armand-Vincent de Montpetit in the eighteenth century, supposed to combine the effects of oil- and water-color.

elytriferous (el-i-trif′ẹ-rus), *a.* [NL. *elytrum* + L. *ferre*, bear.] Bearing an elytrum: as, an *elytriferous* segment of certain polychætes.

elytrodema (el″i-trō-dē′mȧ), *n.*; pl. *elytrodemata* (-mạ-tȧ). [NL.] Edema of the submucous tissues of the vagina.

elytroncus (el-i-tron′kus), *n.*; pl. *elytronci* (-sī). [NL., < Gr. ἔλυτρον, a sheath (vagina), + ὄγκος, a mass.] A tumor of the vagina.

elytrophore (el′i-trō-fōr), *n.* [Gr. ἔλυτρον, a sheath, + *-φορος*, < φέρειν, bear.] A special part of the parapodial ridge bearing an elytrum, as in some polychætes.

elytrous (el′i-trus), *a.* Resembling or suggesting the elytra of a beetle.

Elz. An abbreviation of *Elzevir*.

Elzeviran, *n.* **II.** *a.* Noting a style of bookmaking practised by the Elzevir family. See *Elzevir editions*, under *Elzevir*.

E. M. An abbreviation (*a*) of *Engineer of Mines*; (*b*) of the Latin *equitum magister*, master of the horse.

ema-fiber (ā′mä-fī″bėr), *n.* The fiber of the kendir, *Apocynum venetum*. See ★*kendir*.

emailloid (e-māl′oid), *n.* [F. **émailloïde*, < *émail*, enamel, + *-oïde*, E. *-oid*.] A tumor which arises from the enamel of a tooth.

emajagua (ā-mä-hä′gwȧ), *n.* [Porto Rico.] Same as ★*majagua*, 2.

emanation, *n.* **5.** Specifically, in radioactivity, an unstable gaseous disintegration-product spontaneously produced from a radioactive substance. The radioactive elements thus far known to give off an emanation are thorium, radium, and actinium. The emanations are inert gases resembling in their chemical relations the gases of the argon group, but differing from these and from all other known chemical compounds in the fact that they are produced as disintegration-products continuously at a rate which is independent of the temperature and the chemical and physical state of the compounds from which they are formed and which are converted spontaneously into other and non-volatile disintegration-products at a constant rate. The existence of an emanation, which is produced only in very small quantities, is detected by means of its radioactive effects. The rate at which it is produced and at which it disappears by disintegration is determined from the change in the intensity of these effects, and it is by such observations that the emanations of radium, thorium, and actinium are distinguished from one another. The radium emanation differs from the others in that it is the first disintegration-product of that element, whereas with thorium and actinium the emanation in the case of the former is the fifth, and in the case of the latter the third, disintegration-product to be produced. These three emanations differ greatly in the degree of instability which they exhibit. The rate of decay (which measures the rate at which the radium emanation is converted into the next following and non-volatile disintegration-product) is comparatively slow, about 3.7 days being required to reduce its activity to one half; whereas the thorium emanation suffers the corresponding reduction in about one minute, and the actinium emanation in 3.9 seconds. The properties of the emanations, which are in the main similar, have been most completely studied in the case of radium emanation. Its chemical inertness is shown by the fact that it will pass through tubes containing reagents which absorb all gases except those of the argon family, that it is unaffected by the electric spark in an atmosphere of oxygen, and that it may be kept in contact with incandescent magnesium or calcium for hours without loss. Both radium emanation and thorium emanation are capable of condensation at low temperatures, the point of liquefaction of the thorium emanation being —120° C. and that of the radium emanation —150° C. All three emanations are radioactive, giving off *α*-rays, and they possess the property of imparting temporary radioactivity to all substances with which they come in contact. This imparted radioactivity disappears much more slowly than the emanation itself, having its own law of decay, and the imparted radioactivity is of the same character, whatever the nature of the substance affected. The imparted radioactivity, or excited radioactivity, is ascribed to the formation, on the surface of the body made active, of a solid disintegration-product; and it has been found possible to remove this product by rubbing the surface with sandpaper, and to transfer the activity to the latter. The radioactive matter can also be dissolved by certain acids. However, it is not destroyed, but reappears on the surface of the dish after the acid has been evaporated. Thus it appears that a film of radioactive matter is deposited upon surfaces with which the emanation comes in contact, and that this active deposit consists of a series of successive disintegration-products of the emanation. A series of changes of this sort has been traced, and the successive disintegration-products, which differ as regards their stability and radioactive character, have been studied. They are known respectively as *radium A*, *radium B*, *radium C*, *radium D*, *radium E*, *radium F*, *radium G*; *thorium A*, *thorium B*, *thorium C*; and *actinium A*, *actinium B*, and *actinium C*. These disintegration-products behave as solids, being in general volatilized at a white heat. They are soluble in strong acids, and separable from one another by electrolysis. Each disintegration-product is spoken of as the *parent* of the one which it produces, and the first of the series is known as the *parent substance*. In most of these changes in radioactive bodies rays are emitted; but certain changes (known as *rayless changes*) unaccompanied by radiation have been recognized. The emission of *β*-rays and *γ*-rays appears to be characteristic of the last of the succession of changes to which the radioactive elements are subject, and to result in the appearance of a product more stable than those which have gone before.

emanational (em-ạ-nā′shọn-al), *a.* [*emanation* + *-al*1.] Relating or pertaining to the theory of emanation: as, *emanational* ideas.

emanatism (em-ạ-nā′tizm), *n.* The cosmological theory of emanation.

His idea on the Word bore the impress of *emanatism*.
Cockran, Pressensé's Rep. to Renan, p. 21. *N. E. D.*

emancipative (ē-man′si-pā-tiv), *a.* [*emancipate* + *-ive*.] Having the property of emancipating; serving to emancipate: as, *emancipative* knowledge. *Fitzedward Hall*, Hindu Philos. Syst.

emanium (e-mā′ni-um), *n.* [NL., irreg. < L. *emanare*, emanate.] A radioactive substance separated from pitchblende by Giesel. It was at first believed to be a distinct element, but was afterward shown to be identical with the *actinium* of Debierne (see ★*actinium*, 2).

emarginate, *v. t.* **2.** [An erroneous use of the word, as if 'to bring out the margin' (into view). The proper word would be **demarginate*, parallel to *delimitate*, etc.] To render visible or conspicuous the boundary or margin of (something); specifically, to bring out clearly the outlines of (objects under the microscope) by adjustment of the focus and lighting.

emasculate, *v. t.* **4.** In *plant-breeding*, to remove the anthers from a hermaphrodite flower in order to prevent self-fertilization. In case of monœcious plants, as Indian corn, the whole male inflorescence is removed. See ★*detasseling*.

emasculative (ē-mas′kū-lā-tiv), *a.* Tending or serving to emasculate (in any sense).

émaux ombrants (ā-mō′ zōñ broñ′). [F., 'shading enamels.'] In *pottery* and *tile-making*, enamels in which the design is modeled in intaglio and tinted glaze is poured in to a level with the surface. The different thicknesses of glaze produce the lights and shades of a picture, on the principle of lithophanes.

embarcadero (em-bär-kä-dā′rō), *n.* [Sp., < *embarcar*, embark.] A wharf; a quay. [Spanish America and Philippine Is.]

Embayed mountain. See ★*mountain*.

embedment (em-bed′ment), *n.* [*embed* + *-ment*.] **1.** The act of embedding or the state of being embedded or firmly fixed in some surrounding mass.—**2.** The mason work, clay, cement, or the like, in which something is or is to be embedded.

embelic (em-bel′ik), *a.* [*Embelia* + *-ic*.] Noting an acid, an orange-colored crystalline principle, $C_9H_{14}O_2$ or $C_{18}H_{28}O_4$, obtained from the dark-red fruit of *Embelia Ribes*: said to be anthelmintic.

embira (em-bē′rä), *n.* [Tupi *embira*, bark, bast.] A name in Brazil of a number of trees which yield bast-fiber, especially of *Xylopia frutescens* and *X. sericea*. The name *embira branca* (white bast) is applied to *X. grandiflora* and *Daphnopsis Brasiliensis* and *embira guassú* to *Bombax pubescens*, the fiber of which is strong and resembles jute in color.

emblematology (em-blem-ạ-tol′ō-ji), *n.* [Gr. *ἐμβλημα(τ-)*, emblem, + *-λογια*, ‹ *λέγειν*, speak.] The science of emblems; the study of the origin and significance of emblems.

emblemist (em′blem-ist), *n.* [*emblem* + *-ist.*] A writer or inventor of emblems: as, "Quarles the *Emblemist*," *Southey*, Doctor, I. xlviii.

embody, *v. t.* **3.** To paint with body or solidity. See *impasto*.

emboîtement, *n.* **2.** In *anat.*, the fitting of one bone, or assemblage of bones, into another, as a box fits within its cover. *N. E. D.* [Rare.]

embole (em′bō-lē), *n.* [NL., ‹ Gr. *ἐμβολή*, insertion.] Same as *emboly*.

embolism, *n.*—**Air embolism**, obstruction to the passage of blood by the froth which results from the entrance of air into the circulation.—**Bacillary embolism**, obstruction in a small blood-vessel caused by an aggregation of micro-organisms.—**Fat embolism**, obstruction in a blood-vessel caused by fat-globules, a condition sometimes observed in cases of fracture of a long bone.

embolo (em-bō′lō), *n.* [Aboriginal name, southwest Africa.] The bluish, fleshy, edible fruit of *Euclea Pseudebenus*, a shrub or small tree of southwest Africa yielding the Orange River ebony. See ★*Euclea*, 2.

embolus, *n.* **4.** The terminal portion of the digital joint of the palpus of a male spider, containing an orifice near the tip through which the seminal fluid is collected and later ejected.

Palpus. . . . The *embolus* of the bulb has a stout erect spur springing from the cavity below the apex of the lamina of the bulb, while the *embolus* itself is short, strongly curved, and conspicuously flanged on each side.
Proc. Zool. Soc. London, 1903, I. 161.

Embossed printing. See ★*printing*.

embossing-machine, *n.* **4.** A machine which stamps a figure or design on leather, such as alligator or seal, as it passes under or through the steel plates or rollers on which the figure or design has been cut.

embossing-press, *n.* **2.** A press which has dies for embossing coins, jewelry, and silverware. The upper die is fixed to the top of the frame, and the lower die, carrying the blank, is moved upward against it under heavy pressure.

embouchement (oṅ-bösh-moṅ′), *n.* [F., ‹ *emboucher*, open into another body: see *embouchure*.] The opening of one vessel into another: as, the *embouchement* of the cloaca.

embouchure, *n.* **3.** In *vocalization:* (*a*) The position of the vocal organs in forming a tone. (*b*) The particular character of the tone itself, especially at its beginning. Occasionally the term is further defined as *palatal*, *dental*, etc., according to the apparent position of the center of resonance.

embouchure-tube (oṅ-bö-shür′tūb), *n.* The cavities of the pharynx and mouth collectively, when used in vocalization.

embowerment (em-bou′ėr-ment), *n.* [*embower* + *-ment.*] The act of embowering or of placing within a bower: as, the *embowerment* of Mrs. Pipchin. *Dickens*, Dombey and Son.

embrasure (em-brā′zūr), *v. t.*; pret. and pp. *embrasured*, ppr. *embrasuring*. [*embrasure*, *n.*] To furnish with embrasures, as a wall or fort: used chiefly in the past participle.

embreastment (em-brest′ment), *n.* [*em-* + *breast* + *-ment.*] A breast-like swelling on the surface of the ground. *Coleridge. N. E. D.*

embrittle (em-brit′l), *v. t.*, pret. and pp. *embrittled*, ppr. *embrittling*. [*em-* + *brittle.*] To make brittle, or liable to break under sudden load or shock. This result will follow any cause which raises the elastic limit relatively to the ultimate resistance of the material, or which lowers its ductility. Hardening of steel in the tempering process does this.

Sudden cooling hardens and *embrittles* steel and cast iron. *Encyc. Brit.*, XXIX. 574.

embrocado, *n.* **2.** A brocaded fabric of gold, silver, and silk.

embryectomy (em-bri-ek′tō-mi), *n.* [Gr. *ἐμβρυον*, embryo, + *ἐκτομή*, excision.] Removal of the embryo by an operation, in cases of extra-uterine pregnancy.

embryo, *n.*—**Hexacanth embryo**, a tapeworm embryo having six chitinoid hooks by which it bores its way through the wall of the alimentary canal of its host to enter the body cavity or to become encysted in the voluntary muscles.

embryoctonic (em″bri-ok-ton′ik), *a.* Relating to embryoctony; destructive to the fetus in the uterus.

embryoferous (em-bri-of′ẹ-rus), *a.* [Gr. *ἐμβρυον*, embryo, + L. *-fer*, bearing, ‹ *ferre*, bear.] Inclosing or producing an embryo.

embryogenesis (em″bri-ō-jen′e-sis), *n.* [NL., ‹ Gr. *ἐμβρυον*, embryo, + *γένεσις*, generation.] The generation of embryos, or development from embryos; embryogeny; the subject-matter of the science of embryology.

embryogenetic (em″bri-ō-jẹ-net′ik), *a.* Of or pertaining to embryogenesis.

embryographer (em-bri-og′rạ-fėr), *n.* One who is versed in the science of embryography or embryology; an embryologist.

embryol. An abbreviation of *embryology*.

embryology, *n.*—**Experimental embryology**, the study of the development of eggs and embryos under artificial conditions. Among the many remarkable discoveries made by experimental methods in embryology are the following: that some unfertilized eggs may be made to develop in a normal or nearly normal way by treatment with certain inorganic substances; that perfect but diminutive embryos may be produced from the separated cells of an organism during its early stages of development; that a small nucleate fragment of an unfertilized egg may be fertilized and give rise to a diminutive embryo; and that the constituent cells of certain embryos may be shifted around with reference to one another without affecting the future history of development.

embryoma (em-bri-ō′mä), *n.*; pl. *embryomata* (-ma-tä). [NL., ‹ Gr. *ἐμβρυον*, embryo, + *-oma.*] A tumor composed wholly or in part of fetal tissues or structures.

Embryonic shield, variation. See ★*shield*, ★*variation*.

embryonoid (em′bri-ọn-oid), *a.* [*embryon* + *-oid.*] Resembling an embryo in form or structure.

embryopathology (em″bri-ō-pā-thol′ō-ji), *n.* [Gr. *ἐμβρυον*, embryo, + E. *pathology.*] The study of abnormal embryos or of pathological conditions traceable to defective development.

embryophore (em′bri-ō-fōr), *n.* [Gr. *ἐμβρυον*, embryo, + *-φορος*, ‹ *φέρειν*, bear.] A cellular envelop inclosing the six-hooked oncosphere, or tapeworm embryo.

Embryophyta (em-bri-of′i-tạ), *n. pl.* [NL. (Engler, 1892): see ★*embryophyte*.] A great division of the vegetable kingdom, including all plants which possess an embryo proper, these being also the only ones which have vascular tissues. It is therefore the equivalent of the vascular plants of other authors. The *Embryophyta* are subdivided by Engler into the *Embryophyta asiphonogama* and the *Embryophyta siphonogama*, the former of which is the same as the ★*Archegoniatæ*, recognized by him as synonymous, while the latter is the same as the *Phanerogamia* or *Spermatophyta*.

embryophyte (em′bri-ō-fīt), *n.* [NL. *embryophytum*, ‹ Gr. *ἔμβρυον*, embryo, + *φυτόν*, a plant.] A plant generated by means of an embryo; a plant belonging to the group *Embryophyta*.

embryothlasis (em-bri-oth′la-sis), *n.* [Gr. *ἐμβρυον*, embryo, + *θλάσις*, break, ‹ *θλᾶν*, break.] In *surg.*, the operation of breaking the bones of the fetus, in cases of difficult labor, to facilitate its removal.

embryothlast (em′bri-ō-thlȧst), *n.* Same as *embryothlasta*.

embryotome (em′bri-ō-tōm), *n.* [Gr. *ἐμβρυον*, embryo, + *-τομος*, ‹ *ταμεῖν*, cut.] An instrument for dismembering the fetus in embryotomy.

embryotroph (em′bri-ō-trof), *n.* [Gr. *ἐμβρυον*, embryo, + *-τροφος*, ‹ *τρέφειν*, nourish.] In *embryol.*, that which nourishes the embryo; the food-yolk or deutoplasm.

embryotrophy (em-bri-ot′rō-fi), *n.* [Gr. *ἔμβρυον*, embryo, fetus, + *-τροφια*, ‹ *τρέφειν*, nourish.] The nutrition or nourishment of the embryo.

embryulcia (em-bri-ul′si-ạ), *n.* [NL., ‹ Gr. *ἐμβρυουλκία*, ‹ *ἐμβρυουλκός*, an obstetric forceps; see ★*embryulcus*.] In *surg.*, instrumental extraction of the fetus.

embryulcus (em-bri-ul′kus), *n.*; pl. *embryulci* (-si). [NL., ‹ Gr. *ἐμβρυουλκός*, an obstetric forceps, ‹ *ἐμβρυον*, embryo, + *ἕλκειν*, draw.] A hook-shaped instrument used in the forcible extraction of the fetus.

Embryx (em′briks), *n.* [NL., ‹ Gr. *ἐν*, in, + *βρύξ*, the depth of the sea.] A genus of deep-sea fishes of the North Pacific, belonging to the family *Zoarcidæ*.

emendate (ē-men′dāt), *v. t.*; pret. and pp. *emendated*, ppr. *emendating*. [L. *emendare* (pp. *-atus*), emend: see *emend.*] To remove errors and corrupt readings from (a text).

First, then, he compared, *emendated*, and transcribed the text of Scripture.
J. H. Newman, Hist. Sketches, III. v. 5.

emerald, *n.*—**Brazilian emerald**, a jewelers' name for the rich green variety of tourmalin found in Brazil. See *tourmalin.*—**Ecclesiastical emerald.** Same as *Brazilian* ★*emerald*.

emergence, *n.*—**Grazing emergence**, in *optics*, emergence of a ray of light from within a refractive medium in a direction such that the angle of refraction is nearly 90° and the ray, after leaving the denser medium, travels nearly parallel to the interface.—**Path of emergence**, in *geol.*, the path followed by the undulations of an earthquake from the focus to the point of emergence.

Emergency brake. See ★*brake*[3].

emerse (ē-mėrs′), *v. t.*; pret. and pp. *emersed*, ppr. *emersing*. [L. *emersus*, pp. of *emergere*, emerge: see *emerge.*] To rise, or cause to rise, from a liquid: opposed to *immerse*.

The following rules express, with a considerable amount of accuracy, the number of tons required to immerse or *emerse* the ship one inch when floating at her load-draught. *White*, Manual of Naval Arch., p. 7.

emersion, *n.*—**Wedge of emersion.** See ★*wedge*[1].

emery (em′ẹ-ri), *v. t.*; pret. and pp. *emeried*, ppr. *emerying*. [*emery*, *n.*] **1.** To coat or cover with emery, as in making emery-cloth, emery-paper, or the like.—**2.** To rub or polish with emery or with emery-paper, emery-cloth, etc.

emerylite (em′ẹ-ri-līt), *n.* [*emery* + Gr. *λίθος*, stone.] In *mineral.*, a silicate of calcium and aluminium better known as *margarite* (which see).

emery-surfacer (em′ẹ-ri-sėr″fā-sėr), *n.* A surface-grinder; a machine in which a broad, solid emery-wheel is employed to finish a flat surface. The work to be surfaced is fastened to a sliding table guided to move on a true plane surface, and passed underneath the revolving wheel.

emetatrophia (em″ẹ-ta-trō′fi-ạ), *n.* [NL., ‹ Gr. *ἔμετος*, vomiting, + *-τροφια*, ‹ *τρέφειν*, nourish.] Wasting of the body resulting from the persistent vomiting of food.

emetic-root (ē-met′ik-röt), *n.* The flowering spurge, *Euphorbia corollata*. See *spurge*[2].

emetocatharsis (em″e-tō-ka-thär′sis), *n.* [NL., ‹ Gr. *ἔμετος*, vomiting, + *κάθαρσις*, purging.] Combined vomiting and purging.

emetomorphine (em″e-tō-mōr′fin), *n.* [Gr. *ἔμετος*, vomiting, + E. *morphine.*] Same as *apomorphine*.

E. M. F.—**Contact E. M. F.** See *contact* ★*electromotive force*.

emfasis, emfasize, emfatic. Simplified spellings of *emphasis*, etc.

emigrant, *n.* **2.** In *biol.*, one of a generation of parthenogenetic insects which migrate from the plant upon which they were born to a plant of another kind upon which they multiply.

A winged parthenogenetic generation frequently appears, and then may migrate to a different plant there to reproduce itself, and in a later generation return to the original host. . . . These generations have been distinguished . . . as *emigrants*, *alienocolæ*, and *remigrants*.
Proc. Amer. Philos. Soc., 1903, p. 297.

emigrationist (em-i-grā′shọn-ist), *n.* [*emigration* + *-ist.*] One who favors or advocates emigration—for example, as a remedy for dull times, overcrowding, or the like.

emigratory (em′i-grạ-tọ-ri), *a.* Migratory. [Rare.]

Emilia (ē-mil′i-ạ), *n.* [NL. (Cassini, 1817), appar. from a personal name.] A genus of plants of the family *Asteraceæ*, allied to *Senecio*, but with simple involucre, no ray-florets, and achenia with 5 acute ciliate angles. They are natives of Africa, tropical Asia, and Oceanica. They are of general interest only from the tassel-flower or lady's paint-brush, an old-fashioned garden annual known under a number of botanical names, being referred to both *Senecio* and *Cacalia*, but now distinguished as *Emilia sagittata*. It is an attractive plant of easy culture, bearing small scarlet or sometimes golden-yellow heads.

Emilian, *a.* **II.** *n.* An inhabitant of the province of Emilia, Italy.

Emin red. See ★*red*[1].

eminent, *a.* **5.** In *mineral.*, highly perfect: said of cleavage.

emission, *n.*—**Coefficient of emission.** See ★*coefficient.*—**Emission spectrum.** See ★*spectrum.*—**Selective emission**, emission of light confined to certain regions of the spectrum; selective radiation.

emission-band (ē-mish′ọn-band), *n.* In *optics*, a band of light, or of infra-red or ultra-violet radiation, occupying a limited region of the spectrum. Emission-bands are distinguished from bright lines in the spectrum by the fact that they are not monochromatic.

emission-line (ē-mish′ọn-līn), *n.* One of the bright lines in the spectrum of an element: opposed to *absorption-line*.

emissivity, *n.* Specifically—**2.** A physical constant by means of which the power of radiation of a body is quantitatively expressed. It

is the quantity of heat emitted per second by a square centimeter of the surface of the body when the difference of temperature between the body and its surroundings is one degree centigrade. *Emissivity* is frequently used as the equivalent of *emissive power* or *coefficient of emission*, which is the radiating power of the body as compared with that of an ideal black body at the same temperature. See *radiation*.

emmensite (em'en-zīt), *n.* [*Emmens* (see def.) + *-ite*2.] A name given by Dr. Emmens of New York to a class of explosives proposed by him. The chief varieties were No. 35, for blasting, consisting of picric acid with sodium and ammonium nitrates; No. 259, for military and naval use, consisting of the same ingredients and dinitrobenzene; and No. 5, proposed as a substitute for gunpowder, consisting of picric acid, sodium nitrate, and charcoal or flour.

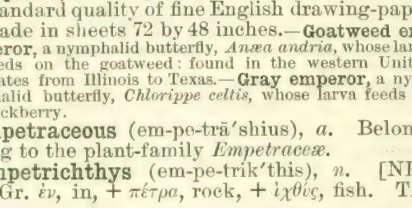
emmer (em'ėr), *n.* [G. *emmer*, a dial. form of *amer*: see *amei-corn*.] A species of wheat, *Triticum dicoccum*; amel-corn. Though commonly known as *Russian spelt*, it differs markedly from true spelt, having the heads much flattened and very compact, the spikelets in two rows, almost always bearded, and usually two-seeded, and being much more hardy. It is produced in some quantity in Russia and several European countries, but the grain is used rather for grits, porridge, etc., than for bread. Varieties have recently been experimentally introduced into the United States. See *amel-corn* and *gommer*.

emoloa (ā-mō-lō'ä), *n.* [Hawaiian **emoloa*.] A grass, *Eragrostis variabilis*, indigenous to the Hawaiian Islands. It grows in tufts from one to three feet high, and is distinguished from all other Hawaiian grasses by the roughness of its rachis and branches of the panicle. Also called *kalamalo*.

emolumentary (ē-mol-ū-men'tā-ri), *a.* [*emolument* + *-ary*1.] Productive of emolument or profit; financially advantageous.

emotion, *n.*—**Asthenic emotion,** in *psychol.*, weakening, depressing, paralyzing emotion: thus, fear and anxiety are *asthenic emotions*. The distinction between sthenic and asthenic emotions is due to Kant.—**Sthenic emotion,** in *psychol.*, emotion which is accompanied by heightened muscular innervation and the corresponding feelings of power or activity, such as joy or anger: opposed to *asthenic* emotion.

Emotional memory. Same as ★*affective memory*.



emotionalize (ē-mō'shọn-ạl-īz), *v. t.*; pret. and pp. *emotionalized*, ppr. *emotionalizing*. To render emotional; infect with emotional excitement; regard as a mere matter of emotion.

> A pious family, where religion was not *emotionalized*.
> *Froude*, Carlyle, I. v.

emperor, *n.* 4. [*cap.*] The trade-name of a standard quality of fine English drawing-paper made in sheets 72 by 48 inches.—**Goatweed emperor,** a nymphalid butterfly, *Anæa andria*, whose larva feeds on the goatweed: found in the western United States from Illinois to Texas.—**Gray emperor,** a nymphalid butterfly, *Chlorippe celtis*, whose larva feeds on hackberry.

empetraceous (em-pe-trā'shius), *a.* Belonging to the plant-family *Empetraceæ*.

Empetrichthys (em-pe-trik'this), *n.* [NL., < Gr. *ἐν*, in, + *πέτρα*, rock, + *ἰχθύς*, fish. The

Death Valley Fish (*Empetrichthys merriami*, Gilbert).

name alludes to the large pharyngeal bones.] A genus of pœcilioid fishes remarkable for the great size of the pharyngeal bones and teeth. *E. merriami* is found in the desert springs of Death Valley, California.

emphraxis (em-frak'sis), *n.* [NL., < Gr. *ἐμφραξις*, obstruction, < *ἐμφράσσειν*, shut up, < *ἐν*, in, + *φράσσειν*, fence in, shut up.] Obstruction of a canal or duct by some morbid product.

emphysema, *n.*—**Subcutaneous** or **surgical emphysema.** Same as *interstitial emphysema*.

empided (em'pi-did), *n.* and *a.* **I.** *n.* A member of the family *Empididæ*.

II. *a.* Of or belonging to the dipterous family *Empididæ*.

Empire style, a name applied, in the history of French decorative art, to the types developed during the supremacy of Napoleon I., especially by the imperial architects Percier and Fontaine. Interesting examples of the empire style are illustrated in Percier and Fontaine's "Recueil des Décorations Intérieures" (Paris, 1801). The empire style is contemporaneous with the classical school of Jacques Louis David. See *French schools of* ★*painting*.—**The New Empire,** the great historical period inaugurated in ancient Egypt on the expulsion of the Hyksos or Shepherd Kings by Aahmes (Amasis), the founder of the eighteenth dynasty about 1700 B. C.

Empiric function. See ★*function*.

empiricistic (em-pir-i-sis'tik), *a.* [*empiricist* + *-ic*.] Same as *empiristic*.

> An *empiricistic* psychology [of *Bernardino Telesio*], the singular completeness and consistency of which accounts for its wide influence on Italian philosophy.
> *Jour. Philos., Psychol. and Sci. Methods*, May 26, 1904, [p. 307.

empirico-psychological (em-pir″i-kō-sī-kō-loj'i-kạl), *a.* Pertaining to or characteristic of empirical, as distinguished from speculative or philosophical, psychology.

> The principle of psycholphysical parallelism has an *empirico-psychological* significance, and is thus totally different from certain metaphysical principles that have sometimes been designated by the same name.
> *W. Wundt* (trans.), Outlines of Psychol., p. 318.

empiriocritical (em-pir″i-ō-krit'i-kạl), *a.* Of or pertaining to empiriocriticism.

empiriocriticism (em-pir″i-ō-krit'i-sizm), *n.* [Gr. *ἐμπειρία*, experience, + NL. *criticismus*, criticism.] The system of philosophy of Richard Avenarius (1843–96), founded on pure experience, that is, natural experience conceptually amplified, clarified, and completed. The only assumption of the system not given in experience is supposed to be that the motions of our fellow-men have the same interpretation as our own. This is one of the most important philosophical developments of the latter half of the nineteenth century, but is understood by few, owing to the difficulty of its author's principal treatise and his employment of a novel terminology, which is insufficiently explained.

> *Empirio-criticism* . . . is the hypothesis of the inseparability of subject and object, or . . . of ego and environment, in purely empirical, or à posteriori form.
> *Encyc. Brit.*, XXX. 668.

emplastrum (em-plas'trum), *n.*; pl. *emplastra* (-trä). [L., < Gr. *ἔμπλαστρον*, plaster.] Same as *plaster*, 1.

empleomania (em-plā″ō-mā-nē'ä), *n.* [Sp., < *empleo*, employ, + *manía*, mania.] A mania for public employment; a thirst for public office and its opportunities for personal enrichment.

> The *empleomania*, which is the dry-rot of Spain, as it threatens to become of the United States, supplies every leader with a momentarily devoted band of adherents.
> *Lowell*, in The Century, Nov., 1898, p. 144.

empress, *n.*—**Red empress,** an old English collectors' name for *Vanessa polychloros*, more commonly known as the large tortoise-shell.

emprosthotonic (em-pros-thō-ton'ik), *a.* [*emprosthotonos* + *-ic*.] Characterized by the tonic muscular spasm known as emprosthotonos.

emptor (emp'tọr), *n.*; pl. *emptores* (-tō'rēz). [L., < *emere*, buy.] In *law*, a buyer. Its most frequent use is in the maxim *caveat emptor*, 'let the buyer take heed'—that is, a purchaser of property without warranty takes it at his own risk.

empyema, *n.*—**Mastoid empyema,** suppurative inflammation of the mucous membrane which lines the cavities in the mastoid process.

Empyreal air. See ★*air*1.

Emscherian (em-shē'ri-ạn), *n.* [G. *Emscher*, or *Emsche*, a small river in west Prussia.] In *geol.*, a division of the Senonian in western Europe, comprising the two Cretaceous substages, Coniacian and Santonian. It is preceded by the Turonian (Angoumian substage) and followed by the Campanian. In the Anglo-Parisian Basin it is characterized by *Micraster cor-testudinarium* (Coniacian) and *M. cor-anguinum* (Santonian), and in southern France by *Hippurites*.

emu1, *n.*, 2. (*d*) A name erroneously applied to the rhea, or South American ostrich.

emu-apple (ē'mū-ap″l), *n.* A name of two Australian trees and their fruits: (*a*) *Rancooria acidula* (*Owenia acidula* of F. von Mueller), belonging to the mahogany family, with fruits the size of a small peach, which are eaten by the colonists and aboriginals. (*b*) Same as ★*bitter-bark*, 1.

emu-bush (ē'mū-bůsh), *n.* A name of two Australian shrubs or small trees, *Stenochilus longifolius*, of the family *Myoporaceæ*, and *Heterodendrum oleæfolium*, of the soapberry family, whose leaves are greedily eaten by sheep, affording food when grass and other herbage are killed by drought and heat. Called also *emu-tree*.

emulsifier (ē-mul'si-fī-ėr), *n.* An agent, such as gum arabic, employed to effect the emulsification of a fixed oil.

emulsion, *n.*—**Bromide emulsion,** in *photog.*, finely divided silver bromide suspended in gelatin. It is made by adding silver nitrate and a soluble bromide to warm gelatin, cooling the mass, and thoroughly washing the jelly. The mass is next worked into a state of fine division. All operations are conducted in a dark room.—**Chlorid emulsion,** in *photog.*, an emulsion consisting of silver chlorid suspended in gelatin: largely used in the preparation of lantern-slides. It is not so rapid in action as the bromide emulsion.—**Chloriodobromide emulsion,** in *photog.*, finely divided silver chlorid, bromide, and iodide suspended in gelatin.—**Chlorobromide emulsion,** in *photog.*, finely divided silver chlorid and bromide suspended in gelatin.—**Collodiobromide emulsion,** in *photog.*, finely divided silver bromide held in suspension in collodion. Used in the preparation of sensitive surfaces on glass or paper.—**Collodiobromochlorid emulsion,** in *photog.*, finely divided silver bromide and silver chlorid held in suspension in collodion: used in the preparation of sensitive surfaces on glass or paper.—**Collodiochlorid emulsion,** in *photog.*, an emulsion consisting of silver chlorid in a finely divided state held in suspension in collodion. Two varieties are made: one needing development when used, the other serving for 'printing-out.'—**Collodion-albumin emulsion,** in *photog.*, an emulsion consisting of collodion to which a small quantity of albumin has been added, together with zinc bromide and silver nitrate, to render it sensitive to light.—**Collodion emulsion,** in *photog.*: (*a*) *Washed*, a collodion sensitized by the use of zinc bromide, silver nitrate, and nitric acid, and allowed to evaporate. The pellicle is washed with water, then with alcohol, and is afterward emulsified with ether and alcohol. (*b*) *Unwashed*, a collodion containing finely divided silver bromide held in suspension.—**Gelatin emulsion,** finely divided sensitive silver compounds suspended in gelatin.—**Gelatinobromide emulsion,** finely divided silver bromide held in suspension in gelatin.—**Gelatinochlorid emulsion,** in *photog.*, finely divided silver chlorid suspended in gelatin. The image produced is latent and requires development. When a certain percentage of free silver nitrate is added the image is printed out by the action of light.—**Kerosene emulsion.** See *kerosene-soap* ★*emulsion*.—**Kerosene-soap emulsion,** an emulsion of kerosene and soap, used as a standard insecticide. The best formula is kerosene 2 gallons, whale-oil soap ½ pound, water 1 gallon. The soap, finely divided, is dissolved in boiling water and immediately added to the kerosene. The mixture is then violently agitated while hot until it has increased somewhat in bulk and has assumed the consistency of cream. It will keep indefinitely and should be diluted only when used. *Yearbook U. S. Dept. Agr.*, 1899, p. 150.—**Silver emulsion,** in *photog.*, an emulsion containing silver in the form of bromide, chlorid, or iodide, or a mixture of these held in suspension in a viscous material, as collodion, gelatin, etc.

emulsor (ē-mul'sọr), *n.* [NL. **emulsor*, < L. *emulgere*, milk out: see *emulsion*.] An apparatus for lifting water by an air-lift, that is, by forcing air down a tube and allowing it to escape at the mouth of a vertical discharge-pipe. As the air rises it carries water along with it.

emu-tree (ē'mū-trē), *n.* Same as ★*emu-bush*.

emydosaurian (em″i-dō-sâ'ri-ạn), *a.* and *n.* **I.** *a.* Relating to or having the characters of the *Emydosauria*.

II. *n.* A member of the order *Emydosauria*; a crocodilian.

en., enc. Abbreviations of *encyclopedia*.

enable, *v. t.*—**Enabling act,** an act or a statute which removes a restriction or disability and empowers a person or a corporation to do what he or it could not do.

enaction (e-nak'shọn), *n.* [*enact* + *-ion*.] The act of enacting or the state of having been enacted or made law; enactment.

enactory (e-nakt'ō-ri), *a.* [*enact* + *-ory*.] Of the nature of an enactment or of enactments: relating to enactments: as, bills *enactory* and declaratory.

enaena (ā-nä-ā'nä), *n.* [Hawaiian **enaena*.] A composite plant, *Gnaphalium luteo-album*, widely distributed over the warmer parts of the earth, with heads of brownish flowers. See *Jersey livelong*, under *livelong*2. [Hawaii.]

enalid (en'ạ-lid), *n.* [NL. *Enalus*, also *Enhalus* (L. C. Richard) (see def.) (< Gr. *ἐν*, in, + *ἅλς*, sea), + *-id*2.] A plant with the œcological character of the genus *Enhalus*, family *Vallisneriaceæ*. See *sea-grass*.

enamel, *n.* 8. The firm white substance which covers the bony scales of some ganoid fishes.—**Bilston enamel,** painted enamel on copper produced at Bilston, Staffordshire, England, in the latter half of the eighteenth century: usually consisting of small objects such as snuff-boxes, patch-boxes, and trinkets. Compare *Battersea enamel*, under *enamel*.—**Cluny enamel,** pottery decorated with colored enamels by the method practised at Cluny and Longwy, France, and at other places. Outlines of the designs are first applied to the surface of the ware in black or dark color containing iron, which repels the enamels. The spaces between are then filled in with relief enamel colors, which, after firing, resemble cloisonné enameling, appearing as convex drops, raised in the center and thin at the edges. Also called *Longwy enamel*.—**Longwy enamel.** Same as *Cluny* ★*enamel*.—**Stanniferous enamel,** in *ceram.*, a thick, opaque glaze, of milky whiteness, containing oxid of tin; tin enamel. It resembles white-lead paint. This enamel is used on majolica and delf.—**Tin enamel.** Same as *stanniferous* ★*enamel*.

enamel-cell (e-nam'el-sel), *n.* One of the cells which are concerned in producing the enamel in the embryonic tooth; an adamantoblast or ameloblast.

enameling-furnace (e-nam'el-ing-fėr″nās), *n.* A furnace used for vitrifying the enamel coating on metal, glass, or biscuit. The work is placed in a muffle, which consists of an arched chamber in the midst of a small furnace.

enameling-lamp (e-nam'el-ing-lamp), *n.* A glass-blower's lamp with a blowpipe for performing some of the more delicate surface ornamentation on glass.

enamel-prism (e-nam'el-prizm), *n.* One of the microscopic rods, set side by side in close con-

tact, of which the enamel of the teeth is formed. In section they are five- or six-sided, hence the term.

enamel-pulp (e-nam'el-pulp), *n.* The central portion of the enamel-organ lying between the cubical cells and the enamel-membrane which incloses the superior part of the dental papilla.

enanthem (en'an-them), *n.* Same as *enanthema*.

enanthematous (en-an-them'ạ-tus), *a.* Relating to or affected with an enanthema.

enanthylic, *a.* Same as *œnanthylic*.

enantiobiosis (e-nan″ti-ō-bī-ō'sis), *n.* [NL., < Gr. *ἐναντίος*, opposite, + *βίωσις*, living.] The living together of organisms which mutually impede each other's development.

Enantioliparis (ē-nan″ti-ō-lip'ạ-ris), *n.* [NL., < Gr. *ἐναντίος*, opposite, + NL. *Liparis*.] A genus of snail-fishes of the family *Liparidæ*, found in the Antarctic Ocean.

enantiomorph (e-nan'ti-ō-môrf″), *n.* [Gr. *ἐναντίος*, opposite, + *μορφή*, form.] Noting the stereomeric isomer of a compound containing one or more asymmetric carbon atoms: thus, levorotatory lactic acid is the enantiomorph of the dextrorotatory acid, and vice versa. The word is also used of crystals.

enantiomorphism (e-nan″ti-ō-môr'fizm), *n.* **1.** The property or condition of being enantiomorphous. Specifically—**2.** In *crystal.*, the relation of similarity of form between crystals which are not superposable, so that one of two crystals differs from the other as it differs from its own image in a mirror. See *enantiomorphous*.

enantiomorphously (e-nan″ti-ō-môr'fus-li), *adv.* In an enantiomorphous manner: as, *enantiomorphously* related crystals.

enantiotropic (e-nan″ti-ō-trop'ik), *a.* [Gr. *ἐναντίος*, opposite, + *-τροπος*, < *τρέπειν*, turn.] In *phys. chem.*, capable of transformation in opposite directions.

Sulphur is *enantiotropic:* if rhombic sulphur, which is stable below 96° C., is kept at a temperature above 96° C. but below its melting point, it is transformed into monoclinic sulphur; and if monoclinic sulphur, which is stable at temperatures between 96° C. and its melting point, is kept below 96° C., it is transformed into rhombic sulphur.
H. C. Jones, Prin. Inorganic Chem., p. 172.

enantiotropy (e-nan-ti-ot'rō-pi), *n.* The state or condition of being enantiotropic. *A. Findlay*, The Phase Rule, p. 42.

Enargea (en-är-jē'ạ), *n.* [NL. (Banks, 1788), < Gr. *ἐνάργεια*, clearness, distinctness, < *ἐναργής*, clear, distinct.] A genus of plants of the family *Liliaceæ*. See *Luzuriaga*.

enarkyochrome (en-är'ki-ō-krōm), *n.* [Gr. *ἐν*, in, + *ἄρκυς*, a net, + *χρῶμα*, color.] In *neurol.*, a nerve-cell in which fine threads of chromatic substance connect the nodal points in the nuclear network or reticulum.

enate (ē'nāt), *n.* [L. *enatus*, pp. of *enasci*, be born, < *e*, out, + *nasci*, be born. Cf. *agnate, cognate*.] A relative on the mother's side.

enatic (ē-nat'ik), *a.* [*enate* + *-ic*.] Pertaining to or characteristic of a clan in which descent is reckoned from mother to children: opposed to *agnatic*, which designates clans in which descent is reckoned from father to children. *Giddings*, Prin. of Sociol., p. 167.

en axe (oṅ äks), [F.] In or upon the axis: used in architecture. Thus, an entrance-door or a fireplace may be on the principal axis of the room, and is then said to be *en axe*.

en barbette (oṅ bär-bet'). [F.] In barbette; so as to fire over the parapet. See *barbette*.

encarditis (en-kär-dī'tis), *n.* Same as *endocarditis*.

encash (en-kash'), *v. t.* [*en-*[1] + *cash*[1], after F. *encaisser*.] **1.** To turn (a note, draft, or check) into cash; cash.—**2.** To convert into cash; obtain in the form of cash; realize in cash.

encelialgia, encœlialgia (en-sē-li-al'ji-ạ), *n.* [NL. *encœlialgia*, < Gr. *ἐγκοίλια*, the intestines, + *ἄλγος*, pain.] Pain located in any of the abdominal viscera.

encelitis, encœlitis (en-sē-lī'tis), *n.* [NL. *encœlitis*, < Gr. *ἐγκοίλια*, the intestines, + *-itis*.] Inflammation of one or more of the abdominal viscera.

encephalin (en-sef'ạ-lin), *n.* [Gr. *ἐγκέφαλος*, brain, + *-in*[2].] A derivative of cerebrin.

encephalodialysis (en-sef″ạ-lō-dī-al'i-sis), *n.* [NL., < Gr. *ἐγκέφαλος*, brain, + *διάλυσις*, dissolution.] Softening of the brain.

encephalolith (en-sef'ạ-lō-lith), *n.* [Gr. *ἐγκέφαλος*, brain, + *λίθος*, stone.] A concretion within the brain-substance.

encephalomalacosis (en-sef″ạ-lō-mal-ạ-kō'sis), *n.* [NL., < Gr. *ἐγκέφαλος*, brain, + *μαλακός*, soft, + *-osis*.] Same as *encephalomalacia*.

encephalomalaxis (en-sef″ạ-lō-ma-lak'sis), *n.* [NL., < Gr. *ἐγκέφαλος*, brain, + *μάλαξις*, softening, < *μαλάσσειν*, soften, < *μαλακός*, soft.] Same as *encephalomalacia*.

encephalomeningocele (en-sef″ạ-lō-mē-ning'gō-sēl), *n.* [Gr. *ἐγκέφαλος*, brain, + *μῆνιγξ*, membrane, + *κήλη*, tumor.] Protrusion, through a fissure of the skull, of brain-substance with a portion of the attached membranes.

encephalomeric (en-sef″ạ-lō-mer'ik), *a.* Of or relating to an encephalomere or brain-segment.

encephalometric (en-sef″ạ-lō-met'rik), *a.* [Gr. *ἐγκέφαλος*, brain, + *μέτρον*, measure, + *-ic*.] In *anat.*, relating to measurements of the brain.

encephalomyelitis (en-sef″ạ-lō-mī-e-lī'tis), *n.* [NL., < Gr. *ἐγκέφαλος*, brain, + *μυελός*, marrow, + *-itis*.] Inflammation of both the brain and the spinal cord.

encephalopathic (en-sef-ạ-lop'ạ-thik), *a.* Of, pertaining to, or of the nature of encephalopathia, or disease of the brain.

encephalorachidian (en-sef″ạ-lō-rā-kid'i-ạn), *a.* [Gr. *ἐγκέφαλος*, brain, + *ῥάχις*, spine, + *-id* + *-ian*.] Same as *cerebrospinal*.

encephalorhachidian, *a.* See ★*encephalorachidian*.

encephaloscope (en-sef'ạ-lō-skōp), *n.* [Gr. *ἐγκέφαλος*, brain, + *σκοπεῖν*, view.] A tubular device resembling a speculum, with a reflecting mirror or electric light attachment: used for inspecting the brain in operations on the cranium.

encephaloscopy (en-sef″ạ-los'kō-pi), *n.* [*encephaloscope* + *-y*[3].] Examination (not necessarily visual) of the brain.

enchannel (en-chan'el), *v. t.*; pret. and pp. *enchanneled* or *enchannelled*, ppr. *enchanneling* or *enchannelling*. [*en-*[1] + *channel*.] To confine within its proper channel.

Enchanter's plant, the common vervain, *Verbena officinalis*.

Enchodontidæ (eng-kō-don'ti-dē), *n. pl.* [NL., < *Enchodus* (*-odont-*) + *-idæ*.] A family of extinct teleost fishes whose rapacious habit is indicated by their powerful jaws and teeth. The species were without scales, but bore a series of dorsal and lateral bony scutes. They are found only in Cretaceous rocks.

Enchodus (eng'kō-dus), *n.* [NL., < Gr. *ἔγχος*, a spear, + *ὀδούς* (*ὀδοντ-*), a tooth.] The typical genus of the *Enchodontidæ*.

enchondrosis (en-kon-drō'sis), *n.*; pl. *enchondroses* (-sēz). [NL., < Gr. *ἐν*, in, + *χόνδρος*, cartilage, + *-osis*.] An outgrowth from cartilage; also, a tumor composed of cartilage, or *chondroma*.

enchyma (eng'ki-mạ), *n.* [NL., < Gr. *ἔγχυμα*, an infusion: see *enchymatous*.] A liquid elaborated from chyme and used in the formation of the living cells and tissues.

Enchytræidæ (eng-ki-trē'i-dē), *n. pl.* [NL., < *Enchytræus* + *-idæ*.] A family of limicolous *Oligochæta*, consisting of small worms having straight or curved setæ, sometimes a single pair of calciferous glands, a dorsal vessel in the anterior region, and usually a single pore on the præstomium. It contains *Enchytræus, Pachydrilus*, and several other genera found in fresh and salt water and in damp earth.

Enchytræus (eng-ki-trē'us), *n.* [NL., < Gr. *ἐν*, in, + *χύτρα*, an earthen pot: see *chytra*.] The typical genus of the family *Enchytræidæ*. *Henle*, 1837.

encinillo (en-thē-nēl'yō), *n.* [Sp., dim. of *encina*, oak. It resembles certain European species of oak.] In Porto Rico, an indigenous shrub of the spurge family, *Drypetes ilicifolia*.

encliticism (en-klit'i-sizm), *n.* [*enclitic* + *-ism*.] In *gram.*, the tendency of a symbolic word to lose its accent in a stronger adjacent (like an enclitic) word. *J. Earle*, Philol. Eng. Tongue, ¶ 254.

encœlialgia, encœlitis, *n.* See ★*encelialgia*, ★*encelitis*.

encoffinment (en-kof'in-ment), *n.* [*en-* + *coffin* + *-ment*.] The act of placing a corpse in a coffin; coffining.

encoil (en-koil'), *v. t.* [*en-*[1] + *coil*[1].] To wrap or hold captive in, or as in, a coil. *P. J. Bailey*, Festus.

encolumn (en-kol'um), *v. t.* [*en-*[1] + *column*.] To ornament with columns: as, *encolumned* walls.

encomienda (en-kō-mi-en'dä), *n.* [Sp., a commission, charge, grant, < ML. *in commendam*: see *commendam*.] In a special use, an estate in Spanish America, comprising land and Indian inhabitants, granted to one of the early military adventurers.

encorbelment (en-kôr'bl-ment), *n.* Corbeling (in the general sense of the projection of one mass or surface beyond the substructure) and the construction of it in masonry.

encounter, *n.*—**Molecular encounter,** in *phys.*, a collision between two or more molecules of a gas, taking place during the translatory motion of each molecule, postulated by the kinetic theory of gases. See *gas*, 1.

encranial (en-krā'ni-ạl), *a.* [Gr. *ἐν*, in, + *κρανίον*, skull, + *-al*[1].] Same as *intracranial*.

Encrinal limestone. See ★*limestone*.

Encrinasteriæ (eng″kri-nas-tē'ri-ē), *n. pl.* [NL., < *Encrinus*, + Gr. *ἀστήρ*, a star.] A subclass of the *Asteroidea* or starfishes. They are of paleozoic age and characterized by the alternate meeting in the middle of the ambulacral groove of the slightly inclined ossicles and by the position of the madreporite on the oral side of the disk.

Encrinite limestone. See ★*limestone*.

encrinoid (eng'kri-noid), *a.* Pertaining to or having the characters of the pelmatozoan order *Encrinoidea*.

encurage, *v. t.* A simplified spelling of *encourage*.

encyclopedize, encyclopædize (en-sī'klō-pē-dīz″), *v. t.*; pret. and pp. *encyclopedized, -pædized*, ppr. *encyclopedizing, -pædizing*. [*encyclopedia* + *-ize*.] To treat, describe, or arrange as in an encyclopedia, or with encyclopedic fullness, accuracy, and system: as, to *encyclopedize* knowledge.

end, *n.* **10.** One length of a piece of woven woolen or cotton goods. In dyeing, 'goods given four *ends*' means that the piece is passed through the coloring-liquor four times.

11. In *mining*, that one of two vertical sets of joints in coal which shows the rougher surface. [Eng.] *Geikie*, Text-book of Geol., p. 660.—**Both ends against the middle,** a system of dealing at faro with prepared cards, so that if the end of the layout wins the middle shall lose, or vice versa.—**Change of end,** in *cricket*, the shifting of a bowler from one wicket to the other.—**End-on tube.** See ★*tube*.—**Law of heterogony of ends,** in Wundt's psychology and ethics, the principle that "manifestations of will, over the whole range of man's free voluntary actions, are always of such a character that the effects of the actions extend more or less widely beyond the original motives of volition, so that new motives are originated for future actions, and again, in their turn, produce new effects." *W. Wundt* (trans.), Ethics, I. 330.—**Open-end straight.** See ★*straight*.

endangiitis (en-dan-ji-ī'tis), *n.* [NL., < *endangium* + *-itis*.] Inflammation of the lining membrane of a lymphatic or blood-vessel.

endangium (en-dan-jī'um), *n.*; pl. *endangia* (-ạ). [NL., < Gr. *ἔνδον*, within, + *ἀγγεῖον*, vessel.] Same as *intima*.

endaortic (en-dā-ôr'tik), *a.* [NL. **endaorta* (Gr. *ἔνδον*, within, + *ἀορτή*, aorta) + *-ic*.] Referring to the interior or the lining membrane of the aorta.

endaortitis (end-ā-ôr-tī'tis), *n.* [NL., < **endaorta* + *-itis*.] Inflammation of the lining membrane of the aorta.

endarterial (end-är-tē'ri-ạl), *a.* [Gr. *ἔνδον*, within, + *ἀρτηρία*, artery, + *-al*.] Relating to the interior of an artery.

endarteritic (end″är-tē-rit'ik), *a.* Relating to or affected with endarteritis.

Endarteritis deformans of Virchow. Same as ★*arteritis deformans*.—**Endarteritis obliterans,** endarteritis of the smaller vessels, causing occlusion.—**Endarteritis proliferans,** a chronic degenerative process marked by an overgrowth of fibrous tissue in the inner layers of the arteries.

end-brush (end'brush), *n.* The terminal ramification of a motor nerve-fiber in the granular sole of a Doyère's elevation on the side of a muscle-fiber.

end-bud (end'bud), *n.* An organ consisting of a number of sensory cells, each bearing sensory hairs, compacted into a bud-like mass. Such organs are scattered over the surface of the body of fishes, but in mammals are confined to the mouth cavity and serve as organs of taste.

Allied to the sense organs of the lateral line are structures known as *end buds*.
J. S. Kingsley, Vert. Zool., p. 68.

end-chase (end'chās), *n.* End play; end motion; motion axially along a shaft.

end-correction (end'kō-rek″shon), *n.* In *phys.*, the correction to be applied in the determination of the thermal, electrical, or magnetic conductivity of a rod or of the magnetic flux within a coil or of the capacity of a cylindrical condenser, on account of the

effect of the ends of the rod or cylinder upon the quantity to be computed.

endecanaphthene (en-dek-a-naf′thēn), *n.* [Prop. *hendeca-*; < Gr. *ἑνδεκα*, eleven, + *naphthene.*] A colorless, liquid hydrocarbon, $C_{11}H_{22}$, found in Baku petroleum. It boils at 179–181° C.

endeiolite (en-dī′ō-līt), *n.* [Gr. *ἔνδεια*, want, lack, + *λίθος*, stone. Analysis showed a large loss, assumed to be silica.] A rare mineral from southern Greenland, of uncertain composition but containing niobium, zirconium, cerium, iron, calcium, sodium, and probably silicon: it is allied to pyrochlore and occurs in chocolate-brown octahedrons.

endemia (en-dē′mi-a), *n.* An endemic disease.

endemic, *a.*, 2. (*b*) In *phytogeog.*, properly, confined to a particular region, whether indigenous or not: sometimes confused with *indigenous.* Originally used (A. P. De Candolle, 1820) of genera whose species are all grouped in one region; later, also of species whose distribution is similarly limited. Compare ★*polydemic*, ★*pandemic*, and *sporadic.*

endemio-epidemic (en-dē″mi-ō-ep-i-dem′ik), *a.* Noting an endemic disease when it suddenly assumes increased virulence and attacks a large proportion of the population.

endemiological (en-dē″mi-ō-loj′i-kal), *a.* Pertaining or relating to endemiology.

endermically (en-dėr′mi-kal-i), *adv.* In *med.*, by the endermic method of administering certain medicines, that is, by direct application to the skin.

end-game (end′gām), *n.* In *chess*, the third or last stage of a game, arising after the forces on both sides have been sufficiently diminished to make the pawns the paramount issue. The other stages are the opening and the middle games.

endite (en′dīt), *n.* [Gr. *ἔνδον*, within, + *-ite*2.] One of the processes on the inner or mesial border of the leaf-like abdominal appendages of the branchiopod *Crustacea.*

endive, *n.*—**Sea-endive,** any seaweed of the genus *Haliseris*, translating the genus name.

end-measure (end′mezh-ūr), *n.* A measure of length which is defined by the distance between certain points in the surfaces of the ends of a bar, and not by the distance between lines engraved on the bar. *Nature*, Aug. 7, 1902, p. 350.

end-moraine (end′mō-rān″), *n.* A terminal moraine.

end-motion (end′mō″shon), *n.* Axial motion; the motion of a part of a machine along the line of its shaft, as distinguished from its motion of rotation.

endoabdominal (en″dō-ab-dom′i-nal), *a.* [Gr. *ἔνδον*, within, + L. *abdomen*, abdomen, + *-al*1.] Situated or occurring in the abdomen.

endobiotic (en″dō-bī-ot′ik), *a.* [Gr. *ἔνδον*, within, + *βίωσις*, way of living: see *biotic.*] Living as a parasite within the tissue of the host, as *Chrysophlyctis endobiotica* in potato tubers.

Endobranchiata (en-dō-brang-ki-ā′tä), *n. pl.* [NL., < Gr. *ἔνδον*, within, + *βράγχια*, gills: see *branchiate.*] A group of regular *Echinoidea*, having the mouth and anus at opposite poles, the anus surrounded by the apical system of plates when they are present, and no external gills. It includes the orders *Bothriocidaroida*, *Cystocidaroida*, *Cidaroida*, *Melonitoida*, and *Plesiocidaroida.* Compare ★*Ectobranchiata.*

endocannibalism (en-dō-kan′i-bal-izm), *n.* [Gr. *ἔνδον*, within, + E. *cannibalism.*] Cannibalism within the family; the custom of eating parents and relatives. *Keane*, Man Past and Present, p. 79.

Endocardial murmur. See ★*murmur.*

endocarditis, *n.*—**Infectious** or **ulcerative endocarditis,** a septic form, marked by ulceration of the valves, leading to loss of substance and permanent impairment of function.—**Plastic endocarditis,** a form of endocarditis marked by a fibrinous exudate which causes adhesions of the valves to the neighboring parts.

endocellular (en-dō-sel′ū-lär), *a.* [Gr. *ἔνδον*, within, + L. *cellula*, cell, + *-ar*3.] Within a cell; intracellular.

Endoceras (en-dos′e-ras), *n.* [NL., < Gr. *ἔνδον*, within, + *κέρας*, horn.] A genus of Silurian nautiloid cephalopods of the family *Endoceratidæ*, characterized by the development of the endocones inclosing a central canal, the endosiphuncle, and by the projection of the funnels from one septum apically toward the next.

Endoceratida (en″dō-se-rat′i-dä), *n. pl.* [NL., < *Endoceras* (*-cerat-*) + *-ida.*] A subdivision of the order *Nautiloidea* of the tetrabranchiate *Cephalopoda*, characterized by large tubular siphuncles and a complete isolation, by the funnels, of the interior of the siphuncle from the interior of the cameræ.

endoceratite (en-dō-ser′a-tīt), *n.* [As *Endoceras* (*-at-*) + *-ite*2.] A member of the genus *Endoceras.*

endoceratitic (en-dō-ser-a-tit′ik), *a.* [*endoceratite* + *-ic.*] Having an endosiphon, as cephalopods.

endochylous (en-dō-kī′lus), *a.* [Gr. *ἔνδον*, within, + *χυλός*, juice, moisture, + *-ous.*] In *bot.*, placed inside the chlorenchyma: said of aqueous tissue which serves as a defense against physiological dryness, as in *Cactaceæ* and most other stem succulents. *A. F. W. Schimper.*

endoclinal, *a.* 2. In *geol.*, pertaining to or of the nature of an endocline.

Finally he proved that the complicated tectonics of the Silurian tableland, its endless overfolds, its *endoclinal* and exoclinal structures, can be unravelled by means of the graptolite zones.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 625.

endocline (en′dō-klīn), *n.* In *geol.*, a fan-fold of anticlinal type.

endocœle (en′dō-sēl), *n.* [Gr. *ἔνδον*, within, + *κοῖλος*, hollow.] The cavity in the endoderm; the archenteron.

endocolitis (en″dō-kō-lī′tis), *n.* [NL., < Gr. *ἔνδον*, within, + *κόλον*, colon, + *-itis.*] Inflammation of the lining membrane of the colon.

endocomplement (en-dō-kom′plē-ment), *n.* [Gr. *ἔνδον*, within, + E. *complement.*] A complement which occurs in the body of a cell, in contradistinction to complements which occur free in the serum.

endoconal (en-dō-kōn′al), *a.* [*endocone* + *-al*1.] Relating to an endocone.

endocorpuscular (en″dō-kôr-pus′kū-lär), *a.* [Gr. *ἔνδον*, within, + NL. *corpusculum*, corpuscle, + *-ar*3.] Within a corpuscle, especially a blood corpuscle.

endocrane (en′dō-krān), *n.* Same as *endocranium.*

endocranium, *n.* 2. The lining membrane of the skull; the dura mater.

endocrystallic (en″dō-kris-tal′ik), *a.* [Gr. *ἔνδον*, within, + *κρύσταλλος*, crystal, + *-ic.*] In *petrog.*, a term used by J. D. Dana (1894) to describe that form of metamorphism which may be referred to the effects of pressure in modifying the structure of crystals, as in the production of secondary twinning, or in fracturing them.

endocystitis (en″dō-sis-tī′tis), *n.* [NL., < Gr. *ἔνδον*, within, + *κύστις*, bladder, + *-itis.*] Inflammation of the mucous membrane of the urinary bladder or gall-bladder.

endoderm, *n.*—**Secondary endoderm,** in *embryol.*, a name for the endoderm cells which form the wall of the mesenteron or mid-gut in certain animals such as the insects, which have a primary endoderm in the form of vitellophags, or cells which are early set free into the yolk and aid in its assimilation by the growing embryo.

endodontitis (en″dō-don-tī′tis), *n.* [NL., < Gr. *ἔνδον*, within, + *ὀδούς* (*ὀδοντ-*), tooth, + *-itis.*] Inflammation of the membrane which incloses the pulp-cavity of a tooth.

endoectothrix (en-dō-ek′tō-thriks), *n.* [Gr. *ἔνδον*, within, + *ἐκτός*, without, + *θρίξ*, hair.] That form of the fungus causing tinea or ringworm which produces its mycelium and spores both on the exterior and on the interior of the affected hairs.

The spores in this variety are arranged in chains with short jointed mycelium here and there; these elements being in more or less profusion either in or outside the shaft or they may occupy both localities—*endo-ectothrix.*
Buck, Med. Handbook, VII. 781.

endoenzyme (en-dō-en′zīm), *n.* [Gr. *ἔνδον*, within, + *enzyme.*] An intracellular ferment; a ferment which exercises its peculiar function within the cell.

endogamic (en-dō-gam′ik), *a.* Same as *endogamous.*—**Endogamic mating.** See ★*mating.*

endogamy, *n.* 2. In *bot.*, the fusion or coalescence of two or more female gametes.

endogastric (en-dō-gas′trik), *a.* [Gr. *ἔνδον*, within, + *γαστήρ*, stomach, + *-ic.*] Situated within the abdomen; coiled posteriorly, as the shell of *Spirula.* Compare ★*exogastric.* *Encyc. Brit.*, XXX. 795.

endogenesis (en-dō-jen′e-sis), *n.* [NL., < Gr. *ἔνδον*, within, + *γένεσις*, origin, production.] The production of or the giving rise to structures from within: opposed to ★*ectogenesis.*

endogenetic, *a.* 2. Formed directly from solutions, as a rock, whether from silicate solutions (igneous magmas), aqueous solutions, or gaseous solutions (sublimation), including those formed through organic agencies. *Grabau*, 1904.

Endogenetic rocks may also be called nonclastic, since they are never composed of fragments of older rocks, as are the clastic rocks, though they include regenerated rocks, or those in which the material of the older rocks has gone back to the original state of fusion or solution, from which it is then redeposited in a chemical way.
Amer. Geol., April, 1904, p. 229.

endogenous, *a.* 3. In *geol.*, formed within a mass of rock or even within the earth itself: especially employed to describe the effects, in contact-metamorphism, produced in the intrusive rock itself, as distinguished from those in the walls. The common endogenous results are a dense or even felsitic or glassy texture due to the relatively quick chill.

endogeny (en-doj′e-ni), *n.* [Gr. *ἔνδον*, within, + *-γενεια*, < *-γενης*, -produced.] 1. Same as ★*endogenesis.*—2. In sporozoans, sporulation taking place while the cyst is within the host. Compare ★*exogeny.*—3. Same as *endogamy.*

endoglobular (en″dō-glob′ū-lär), *a.* [Gr. *ἔνδον*, within, + L. *globulus*, globule, + *-ar*3.] Situated or occurring within a blood-globule, especially an erythrocyte. *Jour. Exper. Med.*, March 25, 1901, p. 473.

endognath (en′dog-nath), *n.* [Gr. *ἔνδον*, within, + *γνάθος*, jaw.] The inner branch of a gnathite or mouth-appendage in crustaceans. *Proc. Zool. Soc. London*, 1899, p. 705.

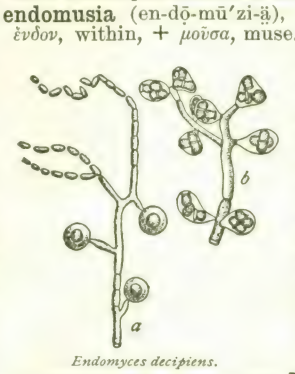
endognathal (en-dog′na-thal), *a.* [Gr. *ἔνδον*, within, + *γνάθος*, jaw, + *-al.*] Within the jaw.

endognathion (en-dog-nā′thi-on), *n.*; pl. *endognathia* (-ä). [NL., < Gr. *ἔνδον*, within, + *γνάθος*, jaw.] Same as *intermaxilla.*

endolabium (en-dō-lā′bi-um), *n.*; pl. *endolabia* (-ä). [NL., < Gr. *ἔνδον*, within, + L. *labium*, lip.] The tongue, lingua, or hypopharynx of an insect. It is placed inside the mouth and is attached to the labium.

endolemma (en-dō-lem′ä), *n.*; pl. *endolemmata* (-a-tä). [NL., < Gr. *ἔνδον*, within, + *λέμμα*, scale.] In *histol.*, a structureless membrane lying beneath the exolemma and inclosing the axis-cylinder in the tail of certain spermatozoa.

endomesoderm (en-dō-mes′ō-dėrm), *n.* [Gr. *ἔνδον*, within, + *μέσος*, middle, + *δέρμα*, skin.] In *embryol.*, that portion of an embryo not yet differentiated into endoderm and mesoderm proper. Same as ★*mesentoderm.*



endometritis, *n.*—**Exfoliative endometritis,** inflammation of the mucous lining of the uterus with the casting off of the superficial portion of this membrane.—**Membranous endometritis,** a form of inflammation in which there is a fibrinous exudate which forms a false membrane.

endometry (en-dom′e-tri), *n.* [Gr. *ἔνδον*, within, + *-μετρια*, < *μέτρον*, measure.] The determination of the capacity of a cavity, especially that of the cranium.

endomorphic, *a.* Specifically—2. In *petrog.*, having the character of those phases of contact-metamorphism which are developed within the intrusive rock. See ★*endomorphism.*

endomorphism (en-dō-môr′fizm), *n.* [Gr. *ἔνδον*, within, + *μορφή*, form, + *-ism.*] In *petrog.*, changes brought about within the mass of an intrusive igneous rock by contact with the intruded rock. The commonest modifications are in the crystallization of the intrusive rock, which is usually more finely grained, sometimes glassy, and often more porphyritic near the contact. Less often there are changes in the composition of the intrusive rock, resulting in some cases from differentiation within the igneous magma. In rare instances there has been a diffusion of material from the surrounding rock into the intruded rock. Also called *endomorphic contact-metamorphism.*

endomusia (en-dō-mū′zi-ä), *n.* [NL., < Gr. *ἔνδον*, within, + *μοῦσα*, muse.] In *psychol.*, a term suggested by Baldwin and Stout, on the analogy of *endophasia*, for 'internal song,' that is, for the mental processes which constitute melodic imagery and which may prompt to melodic expression. *Baldwin*, Dict. of Philos. and Psychol., I. 564.

Endomyces decipiens.
a, mycelium bearing chains of conidia and chlamydospores, magnified 120 times; *b*, portion of mycelium bearing asci, magnified 160 times.
(Drawn from Engler and Prantl's "Pflanzenfamilien.")

Endomyces (en-dom′i-sēz), *n.* [NL. (Reess, 1870), < Gr.

ἔνδον, within, + *μύκης*, fungus.] A genus of *Ascomycetes*, the type of the family *Endomycetaceæ*, having a loose mycelium bearing naked 4-spored asci at the ends of short, simple branches. So called from the fact that some of the species grow within the tissues of their host. *E. decipiens* is a parasite of *Armillaria mellea*. According to Ludwig, certain species are concerned in producing the slime-flux of trees.

Endomycetaceæ (en-dō-mī-sē-tā'sē-ē), *n. pl.* [NL., ⟨ *Endomyces* (*Endomycet-*), + *-aceæ*.] A family of ascomycetous fungi named from the genus *Endomyces*. The asci are naked, that is, are not inclosed in an ascocarp, but are produced at the sides or end of the hyphæ.

endomyocarditis (en″dō-mī-ō-kär-dī'tis), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *μῦς*, muscle, + *καρδία*, heart.] Inflammation which involves both the lining membrane and the muscular substance of the heart.

endonomic (en-dō-nom'ik), *a.* [Gr. *ἔνδον*, within, + *νόμος*, custom, law.] Concerning or pertaining to the sort of selection which is due to the aptitude of a race for dealing with its environment.

This form of selection, determined by the aptitudes and habitudes of the species in dealing with the environment, I call *endonomic* selection.
T. Gulick, in Amer. Nat., Aug., 1904, p. 495.

endonuclear (en-dō-nū'klē-ăr), *a.* [Gr. *ἔνδον*, within, + L. *nucleus*, a nucleus, + *-ar*[3].] Situated or occurring within the nucleus of the cell: opposed to ★*ectonuclear*.

endopelvic (en-dō-pel'vik), *a.* [Gr. *ἔνδον*, within, + L. *pelvis*, basin (pelvis), + *-ic*.] Situated or occurring within the pelvis.

endopericardial (en″dō-per-i-kär'di-ăl), *a.* [Gr. *ἔνδον*, within, + *περικάρδιον*, pericardium, + *-al*.] Relating to both the endocardium and the pericardium.

endophasia (en-dō-fā'si-ă), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *φάσις*, speech.] In *psychol.*, internal speech: a term proposed by Morselli for the auditory or motor processes which constitute imagery of spoken words and which may prompt to verbal expression. *Baldwin*, Dict. of Philos. and Psychol., I. 564.

endophasic (en-dō-fā'sik), *a.* [*endophasia* + *-ic*.] Pertaining to endophasia or internal speech.

A person may be gifted with an excellent visual imagination of objects or words, and may yet use in his processes of ideation only the auditive images of words. He makes use in this case of a cerebral mechanism that connects the working of the intellectual centers with the sympathetic action of the *endophasic* center.
Amer. Inventor, May 1, 1904, p. 206.

endophragma (en-dō-frag'mă), *n.* [NL.] Same as *endophragm*.—**Endophragmal system**, in some crustaceans, a kind of internal skeleton consisting of a segmental series of calcified plates, projections of the ventral and lateral regions of the thoracic exoskeleton into the interior of the body, so arranged as to form a row of lateral chambers in which the muscles of the limbs lie, and a sternal canal which contains the thoracic portion of the nervous system.

Endophyllaceæ (en-dō-fi-lā'sē-ē), *n. pl.* [NL., ⟨ *Endophyllum* + *-aceæ*.] A small family of rust-fungi, of the order *Uredinales*, named from the genus *Endophyllum*: characterized by having the teleutospores produced in a chain-like series.

Endophyllum (en-dō-fil'um), *n.* [NL. (Léveillé, 1825), ⟨ Gr. *ἔνδον*, within, + *φύλλον*, leaf.] A genus of rust-fungi of the order *Uredinales*. They produce only teleutospores which form in chains and are surrounded by an æcidium-like peridium, more or less buried in the tissue of the host, whence the name. *E. Sempervivi* is parasitic on the leaves of *Sempervivum*.

endoplastron (en-dō-plas'tron), *n.* [NL.] Same as *entoplastron*.

endoplutonism (en-dō-plö'tō-nizm), *n.* [*endopluton-ic* + *-ism*.] In *petrol.*, the theory which assumes the cooling of a molten earth.

endoplutonist (en-dō-plö'tō-nist), *n.* [*endopluton-ic* + *-ist*.] One who advocates the theory of an originally molten earth.

endopod (en'dō-pod), *n.* Same as *endopodite*.

endoproct (en'dō-prokt), *n.* One of the *Endoprocta*.

Endopterygota (en″dop-ter-i-gō'tă), *n. pl.* [NL., ⟨ Gr. *ἔνδον*, within, + *πτερυγωτός*, winged.] A superorder of insects whose wings, in the early stages, are developed within the body. It includes the *Coleoptera*, *Diptera*, *Lepidoptera*, etc.

endopterygote (en-dop-ter'i-gōt), *a.* and *n.* **I.** *a.* Of or belonging to the superorder *Endopterygota*.

II. *n.* An insect of the superorder *Endopterygota*.

endopterygotic (en″dop-ter-i-gō'tik), *a.* Pertaining to, or characteristic of, the *Endopterygota*.

endopterygotism (en″dop-ter-i-gō'tizm), *n.* The development of wings in the early stages within the body, as with the *Endopterygota*.

We have no evidence that any Endopterygota existed amongst Palæozoic insects, so that the phenomena of *endopterygotism* are comparatively recent.
Encyc. Brit., XXIX. 502.

endopterygotous (en″dop-ter-i-gō'tus), *a.* Pertaining to or having the characteristics of the *Endopterygota*.

endorachis (en-dor'a-kis), *n.* [Also *endorhachis*; ⟨ Gr. *ἔνδον*, within, + *ῥάχις*, spine.] The delicate membrane which lines the spinal canal.

end-organ (end'ôr″gan), *n.* In *physiol.*, any specialized structure which forms the terminus of a path of nervous conduction: usually applied to the terminal organs at the periphery of the body.

The sensation which we isolate in the present experiment is the sensation whose peripheral *end-organ* is striped muscle, and whose stimulus is muscular contraction.
E. B. Titchener, Exper. Psychol., I. ii. 144.

endosarcode (en-dō-sär'kōd), *n.* [Gr. *ἔνδον*, within, + *σαρκώδης*, *σαρκοειδής*, fleshy: see *sarcode*.] Same as *endoplasm* or *endosarc*.

endoscopy (en-dos'kō-pi), *n.* [Gr. *ἔνδον*, within, + *-σκοπια*, ⟨ *σκοπεῖν*, view.] Inspection of the interior of any cavity or canal of the body. *Therapeutic Gazette*, Jan., 1903, p. 59.

Endosepsis (en-dō-sep'sis), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *σῆψις*, putrefaction.] Sepsis excited by a poison formed within the organism; autotoxemia.

endosipho (en-dō-sī'fō), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *σίφων*, L. *sipho*, a pipe: see *siphon*.] In the extinct nautiloid cephalopods of the family *Endoceratidæ*, the contents of the ectosipho of the siphuncle as a whole.

endosipho-blade (en-dō-sī'fō-blād), *n.* [*endosipho* + *blade*.] In some of the extinct nautiloid cephalopods, as the *Endoceratida*, a membrane supporting the endosiphuncle and extending to the ectosipho.

endosiphocoleon (en″dō-sī-fō-kol'ē-on), *n.*; pl. *endosiphocolea* (-ă). [NL., ⟨ Gr. *ἔνδον*, within, + *σίφων*, pipe, + *κόλεός*, sheath.] In some of the Silurian nautiloid cephalopods, as *Endoceras*, a flat, broad, conchiolinous tube extending from the posterior end of the visceral sac (inclosed in the endosiphocone) toward the apex.

endosiphocone (en-dō-sī'fō-kōn), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *σίφων*, pipe, + *κῶνος*, cone.] In *paleon.*, the posterior conical continuation of the endosiphocylinder of the siphuncle of certain Paleozoic *Nautiloidea* (*Endoceratidæ*).

endosiphocylinder (en″dō-sī-fō-sil'in-dėr), *n.* [Gr. *ἔνδον*, within, + *σίφων*, a siphon, + *κύλινδρος*, a cylinder.] In some of the extinct nautiloid cephalopods (*Endoceratida*), a calcareous cylinder lining the anterior and wider part of the siphuncular tube.

endosiphofunicle (en″dō-sī-fō-fū'ni-kl), *n.* [NL., *endosipho* + L. *funiculus*, a little rope.] In certain extinct nautiloid cephalopods (*Piloceras*), one of the supporting cords which extend from the endosiphuncular structures to the ectosipho.

endosipho-sheath (en-dō-sī'fō-shēth), *n.* [NL. *endosipho* + E. *sheath*.] In some of the Silurian cephalopods (*Endoceratida*), the membranous wall of the endosiphocone which becomes hardened by deposition of lime carbonate.

endosiphotube (en-dō-sī'fō-tūb), *n.* [Gr. *ἔνδον*, within, + *σίφων*, pipe, + L. *tubus*, tube.] See ★*endosiphuncle*.

endosiphuncle (en-dō-sī'fung-kl), *n.* [Gr. *ἔνδον*, within, + NL. *siphunculus*, dim. of L. *sipho*, pipe.] An axial tube in the fossil nautiloid *Cephalopoda*, passing through the center of the siphuncle in forms with endosiphuncular organic deposits. Same as *prosiphon*, *endosiphon*, and ★*endosiphotube*.

endosiphuncular (en″dō-sī-fung'kū-lăr), *a.* Situated within the siphuncle.

endosmosic (en-dos-mō'sik), *a.* An erroneous form for *endosmotic*.

endosmotic equivalent. See *osmotic* ★*equivalent*.

Endosphæraceæ (en″dō-sfē-rā'sē-ē), *n. pl.* [NL., ⟨ Gr. *ἔνδον*, within, + *Sphæraceæ*.] A subfamily of the *Protococcaceæ*, (which see).

Endospora (en-dos'pō-rā), *n. pl.* [Gr. *ἔνδον*, within, + *σπορά*, seed (spore).] A group of *Sporozoa* in which the spore-formation goes on during the growth of the trophozoite, and the spore mother-cells or pansporoblasts are cut off in the interior of the body. It includes the *Myxosporidia*, *Sarcosporidia*, and the *Haplosporidia*. Compare ★*Ectospora*. *Mesnil*.

endosternitic (en″dō-stėr-nit'ik), *a.* Of or pertaining to an endosternite.

endosternum (en-dō-stėr'num), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *στέρνον*, breast-bone: see *sternum*.] Same as *entosternum*.

endostitis (en-dos-tī'tis), *n.* [NL., ⟨ *endosteum* + *-itis*.] Inflammation of the endosteum.

endotheliolysin (en-dō-thē-li-ol'i-sin), *n.* [*endothelium* + *lysin*.] A lysin, belonging to the class of cytotoxins, which causes the destruction of vascular endothelial cells, leading to the extravasation of blood. Also termed *hemorrhagin*.

endotheliolytic (en-dō-thē″li-ō-lit'ik), *a.* Of or pertaining to an endotheliolysin; noting the action of an endotheliolysin.

The agglutinative hemolytic and *endotheliolytic* action of the blood serum. *Jour. Med. Research*, Oct., 1904, p. 359.

endotheliotoxin (en-dō-thē″li-ō-tok'sin), *n.* [*endothelium* + *toxin*.] The antibody which results on immunization with endothelial cells. Also *endotheliolysin*.

endotherm (en'dō-thėrm), *n.* [Gr. *ἔνδον*, within, + *θέρμη*, heat.] In *chem.*, a compound substance in the formation of which from its constituents energy is absorbed, and in its decomposition energy (usually heat) is evolved.

Endothiodon (en-dō-thī'ō-don), *n.* [Gr. *ἐνδοθι*, within, + *ὀδούς* (*ὀδοντ-*) tooth.] A genus of anomodont reptiles, comprising large animals from the Karoo formation of South Africa, characterized by their palatal teeth, elongated muzzle, and terminal nares overhung by great nasalia.

endothiodont (en-dō-thī'ō-dont), *a.* Related to or having the characters of *Endothiodon*.

endothrix (en'dō-thriks), *n.* [Gr. *ἔνδον*, within, + *θρίξ*, hair.] That form of the fungus causing tinea or ringworm which produces its mycelium and spores within the shaft of the affected hairs.

endotoxin (en-dō-tok'sin), *n.* [Gr. *ἔνδον*, within, + E. *toxin*.] A toxic substance set free during the process of bacteriolysis by means of immune sera against which the animal body does not appear to be capable of producing an antitoxin. These specific toxins are only liberated after or during the destruction of the microorganism.

endotrachea (en-dō-trā-kē'ă), *n.*; pl. *endotracheæ* (-ē). [NL., ⟨ Gr. *ἔνδον*, within, + *τραχεῖα*, trachea.] The inner layer of the tracheæ of insects. It consists of a membrane, part of which is thickened in such a way as to form chitinous transverse bands or a spiral strengthening which serves to hold the tube open. *A. S. Packard*, Text-book of Entom., pp. 432, 448.

endotrypsin (en-dō-trip'sin), *n.* [Gr. *ἔνδον*, within, + E. *trypsin*.] An intracellular proteolytic ferment having the general character of trypsin.

endotryptase (en-dō-trip'tās), *n.* [Gr. *ἔνδον*, within, + E. *tryptase*.] An intracellular proteolytic ferment which has been found in yeast and which is capable of digesting and destroying zymase. *Nature*, Aug. 27, 1903, p. 385.

endovasculitis (en-dō-vas-kū-lī'tis), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + L. *vasculum*, vessel, + *-itis*.] Same as ★*endangiitis*.

Endozoa (en-dō-zō'ă), *n.* [NL., ⟨ Gr. *ἔνδον*, within, + *ζῷον*, animal.] Same as *Entozoa*.

endozoic (en-dō-zō'ik), *a.* Same as *entozoic*.

end-point (end-point'), *n.* **1.** In *analyt. chem.*, the point at which a chemical reaction is completed without excess of either reagent. The end-point is commonly determined by means of an indicator: for instance, when the amount of an alkali is to be determined by measuring the amount of acid required to neutralize it, litmus may be the indicator, and the end-point is known by the change of color of the litmus.

2. In function-theory, of an interval or path from x_0 to x, either of the points x_0, x. Also called *end-value*, of the path.

end-port (end'pōrt), *n.* In *mach.*: (*a*) The opening at either end of the face of the valve-seat of a steam-engine, or the traverse of the valve thereon, through which steam is admitted alternately to the crank-end and to the head-end of the cylinder. (*b*) In gas-engines, an opening through the wall of the cylinder which is uncovered by the travel of the piston just as it reaches the end of its stroke. Such

end-ports release the exhaust gases at the end of the stroke, particularly in the two-phase cycle type of engine.

end-product (end′prod-ukt), *n.* The substance finally produced as a result of a series of chemical reactions.

end-reaction (end-rē-ak′shọn), *n.* In *chem.*, a reaction easily recognized by the senses, as by a change of color, and which takes place only when some other reaction has been completed, thus serving to indicate that this latter is at an end.

Thus, if a little yellow potassium chromate is added to a solution of sodium chlorid, and then a solution of silver nitrate is gradually dropped in, as soon as the precipitation of the chlorin as silver chlorid is complete a permanent red color makes its appearance, due to the formation of silver chromate.

end-rib (end′rib). In *organ-building*, the board forming one end of a wind-chest.

end-stopped, end-stopt (end′stopt), *a.* Having a break or pause at the end of the line: applied to poetry.

At first Shakspere has his breaks and pauses at the end of the line—the verse is '*end-stopt*'; gradually he more and more found pleasure in carrying on the sense from one line to another without a pause at the end of the line—the verse is 'run on,' and the breaks and pauses occur with great frequency in some part of the line other than the end. *Dowden*, Shakspere Primer, p. 39.

end-thrust (end′thrust), *n.* The push exerted through the axis of a shaft in transmitting power, or in resisting the action of weights.

In marine engines the propeller tends to force the shaft inboard by a force equal to that by which the boat is propelled; in driving through bevel gears the pressure is oblique to the teeth and causes end-thrust on both shafts; in vertical shafts, the weight of machinery (and perhaps the load) forces the shaft downward. The end-thrust is resisted by some form of thrust-bearing or by a ball bearing.

end-value (end′val″ū), *n.* 1. In the calculus, an upper or a lower limit. Thus in $\int_a^b f(x)dx$, the numbers a and b are the end-values of x. —2. In function-theory. Same as ★*end-point*, 2.

end-wool (end′wůl), *n.* Parts of a fleece of wool which are of little or no value.

energesis (en-ėr-jē′sis), *n.* [NL., < Gr, *ἐνεργεῖν*, be in action, show energy: see *energy*.] In *veg. physiol.*, a term proposed by Professor Charles R. Barnes "to designate the disruptive processes by which energy is released." It has heretofore been included in respiration. See *respiration*, 4.

It will at least do no harm to propose that the terms aerobic and anaerobic *energesis* be considered, to which fermentative *energesis* may be added if necessary. *C. R. Barnes*, in Science, Feb. 17, 1905, p. 252.

energetic, *a.* 2. In *phys.*, of or pertaining to energy or to the science of energetics.

It is used to find equations of motion from *energetic* data. *Nature*, Jan. 29, 1903, p. 297.

energid (en′ėr-jid), *n.* [Gr. *ἐνεργός*, at work (see *energy*), + *-id*[2].] In *biol.*, the cell-nucleus together with the cytoplasm which it influences or dominates: almost synonymous with *cell*, except that it does not include such structures as the wall of the plant-cell. *Sachs*, 1892.

energism (en′ėr-jizm), *n.* [G. and NL. *energismus*; as *energ-y* + *-ism*.] Any theory of ethics which makes the summum bonum to consist, not in the excitement of particular feelings, but in a particular state of mind considered as an activity.

The term originated with F. Paulsen, and is employed by Thilly and other of Paulsen's disciples. The distinction upon which the definition turns is not between an external fact and an internal fact, nor between the state of mind of society and that of the moral agent himself, but is rather partly between a state which modifies all others and a possibly transient state, and partly between a state of mind regarded as a fact in itself and a state of mind regarded as a seeming, that is, as a sort of sign, possibly deceptive, of another state of mind. Perfectionism seems to be nearly coextensive with the principal kind of energism.

Energopoda (en-ėr-gop′ō-dä), *n. pl.* [NL., < Gr. *ἐνεργός*, active, + *πούς* (*ποδ-*), foot.] A superfamily of dipterous insects, in the classification of Brauer, containing the families *Asilidæ*, *Dolichopodidæ*, *Empidæ*, *Lonchopteridæ*, and (doubtfully) *Phocidæ*.

energy, *n.*—**Angular energy,** the kinetic energy of rotation; the product of the moment of inertia of a rotating body into one half of its angular velocity.—**Apparent energy,** in *elect.* Same as *apparent* ★*power*.—**Available energy,** in *thermodynam.*, that part of the energy of a system which can be employed for mechanical purposes. *J. W. Gibbs*.—**Bound energy,** in *thermodynam.*, the change of total energy, in an isothermal process, minus the change of free energy occurring in that process.—**Condensational energy,** energy stored in a medium as the result of work done in condensing or compressing it.—**Curve of energy.** See ★*curve*.—**Degradation of energy.** See ★*degradation*.—**Doctrine of the dissipation of energy,** the doctrine that in the processes of nature there is a tendency for energy to be converted into unavailable forms, so that while the total energy of the universe remains constant in amount the proportion of it that is available for the production of work is continually diminishing. See *correlation of energies*.—**Electrochemical energy,** in *phys. chem.*, either electrical energy when it performs chemical work, or chemical energy when it is manifested as electrical energy.—**Energy electromotive force.** See ★*electromotive*.—**Energy spectrum.** See ★*spectrum*.—**Energy surface,** that one of the thermodynamic surfaces which has for its equation $U=f(v\eta)$ where U is the energy of the system, v its volume, and η its entropy.—**Equation of energy.** See ★*equation*.—**Factors of energy,** in *phys.*, two factors such that one defines the direction in which energy shall be transferred in the case of a given body, while their product defines the whole quantity of energy possessed by the body. The first factor is called the *intensity-factor*, the second the *capacity-factor*. If a small vessel of water is suspended in a larger, our knowledge of the whole energy of heat contained in the two masses of water does not inform us as to the direction in which energy shall be transferred. If, however, we know the temperature of the two masses of water, we know the direction in which the transfer will take place. In this case the intensity-factor depends on temperature, and the capacity-factor on the mass of the water. For volume-energy, as of steam or compressed air, the intensity-factor depends on the pressure and the capacity-factor on the volume of the steam or air.—**Free energy,** in *thermodynam.*, a name given by Helmholtz to that part of the intrinsic energy of a thermodynamic system whose diminution determines the maximum work which the system can perform upon bodies external to it. The remaining part of the total energy of the system, which cannot be transformed into external work, Helmholtz called *bound energy*.

From a theoretical point of view, it would be preferable if we would not base our calculation on the thermochemical value of the heat of reaction, but on Helmholtz's "*free energy*" of the reaction. *Electrochem. Industry*, June, 1904, p. 213.

Intrinsic energy, the internal energy of a body or system, due to its configuration, position and motion, or to the motion of its parts, as measured by the work it is capable of doing without the introduction of energy from other bodies.—**Law, principle,** or **theory of specific nervous energy,** in *neurol.*, the doctrine that every sensory nerve is specific in function, so that, however stimulated or connected, it can, or could, mediate only such sensations as it gives rise to under normal conditions.

In opposition to the principle of indifference of function, it is generally held, at the present time, that the *law of specific energy*, as it is termed, is an especially valuable asset of modern nerve and sense physiology. Nevertheless, the history of the law shows a gradual regression. *W. Wundt* (trans.), Physiol. Psychol., I. 330.

Law of equipartition of energy, the Boltzmann-Maxwell law for the partition of energy in a gas; the law that in a gas the distribution of energy will be such that every mode of vibration of its particles is equally favored.—**Radial energy.** Same as *radiant energy*. [Rare.]—**Strain-energy method.** See ★*strain*[1].—**Thermal energy,** that form of energy which manifests itself as heat; the lower form of energy into which the higher forms (kinetic energy, potential energy, etc.) tend to degenerate, and which is only in part recoverable into more available forms.—**Traction energy.** Same as *tractive* ★*effort*.—**Translatory energy,** kinetic energy due to the motion of translation of a body or particle.

energy-meter (en′ėr-ji-mē″tėr), *n.* An apparatus for measuring and usually also for recording the passage of power or energy through it.

It records both the quantity of force and the time through which this force has been exerted: used in the sale of electric current to consumers and to determine expenditure of mechanical energy.

enface (en-fās′), *v. t.*; pret. and pp. *enfaced*, ppr. *enfacing*. [*en-*[1] + *face* (after *endorse*).] To write, print, or stamp some mark or form of words on or across the face of (a note, bond, certificate, map, or the like).—**Enfaced paper,** the name given to the bonds or certificates of certain India loans: so called because they are marked on the top, bottom, and left margins by a broad band impressed upon them from an enchased copper-plate. *Bithell*, Counting-house Dict.

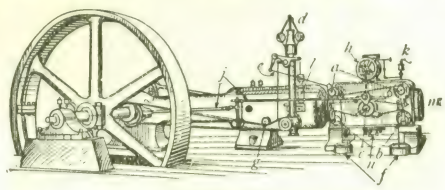
enfacement (en-fās′ment), *n.* [*enface* + *-ment*.] The mark or form of words written, printed, or stamped on or across the face of a bond or note, etc.: such as "interest payable in London," or the like.

enfilade, *n. Milit.*, (*b*) An infantry or artillery fire which sweeps a line of works or men from flank to flank.

enfranchise, *v. t.* 5. The *feudal law*, to free from the obligations of feudal tenure, as to convert a copyhold estate into a freehold.

engage, *v. t.* 9. In *construction*, to fasten or let into a wall for support, as to secure a column to a wall. See *engaged column*, under *column*.

engagement ring. See ★*ring*[1].



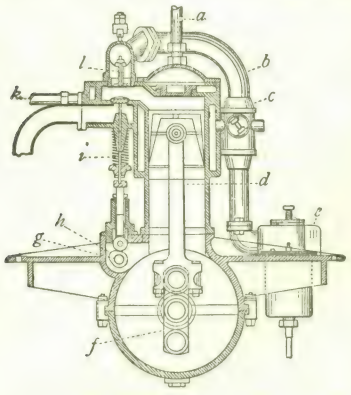
engarb (en-gärb′), *v. t.* [*en-*[1] + *garb*.] To dress; attire; garb.

engastration (en-gas-trā′shọn), *n.* [Gr. *ἐν*, in, + *γαστήρ* (*γαστρ-*), belly, + *-ation*.] The placing of a fowl, as a stuffing, inside another fowl. *N. E. D.*

engenderment (en-jen′dėr-ment), *n.* [*engender* + *-ment*.] The act of engendering, procreating, or reproducing.

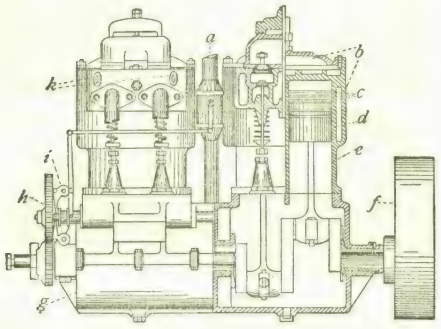
engin, *n.* and *v. t.* A simplified spelling of *engine*.

engine, *n.*—**Aëro-steam engine,** an engine in which the motor energy is derived both from hot air and from steam, admitted together to the cylinder. Its theory is that the hot steam will impart heat and therefore greater tension to the air, or that the hot air will raise the steam-tension, and that the mixture will be less liable to loss from condensation in the cylinder than steam alone. It has not proved to be of practical advantage. The name is also applied, less correctly, to engines in which the crank-shaft is driven by two cylinders, of which one is supplied with steam from a boiler and the other with hot air from a heating-chamber.—**Balanced engine,** an engine so constructed as to be free from unbalanced forces which would make it shake or rock.—**Balance-valve engine,** a steam-engine provided with a balance-valve (which see).—**Camel-back engine.** Same as ★*camel-back*, 2.—**Closed heat engine,** a closed-cycle engine; an engine in which the same charge is used repeatedly, being alternately heated, allowed to expand doing work, cooled and compressed, heated, etc.; an engine operating on the Carnot, Joule, or Ericsson cycle.—**Coal-dust engine,** an internal-combustion engine which uses coal-dust as a fuel. The coal-dust is blown on to a hot plate and vaporized by heat in a chamber filled with compressed air.—**Condensing engine,** a steam-engine in which the steam, after working in the cylinder, is exhausted into a chamber in which a pressure less than that of the atmosphere prevails. This condition can continue only by continually condensing the steam to water, either by a jet of water directly or by contact with a water-cooled metal surface. The vacuum is maintained by pumping out the water and air or by placing the condensing chamber over 32 feet in the air with its discharge-pipe sealed by water at its foot so as to cause and maintain a vacuum above the water-column. A condensing-engine will be smaller than a non-condensing engine of the same power as respects its cylinder-volume. It is theoretically more efficient thermally, since it rejects its fluid at a lower temperature: and the discharge of condensed steam and warmed injection-water gives the boiler a supply of pre-heated feed-water.—**Corliss engine,** a four-valve engine having cylindrical rock-



Corliss Engine.

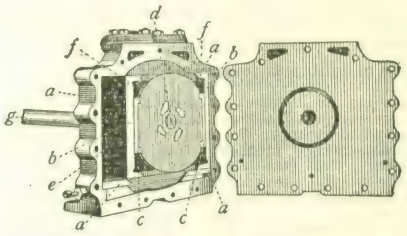
a, steam inlet-valves; *b*, exhaust outlet-valves; *c*, wrist-plate actuating the four valves; *d*, governor controlling point of release or trip of valves *a*; *e*, rod from governor to tripping-latches or -levers; *f*, dash-pots acting as air-springs to close *a* quickly and by compression of air prevent shock in closure; *g*, roller resting on governor driving-belt and by its weight forcing the arms and balls up in the governor-belt breaks or runs-off; *h*, hand-control throttle-valve in the pipe from boiler; *j*, rods from eccentric causing wrist-plate *c* to oscillate; *k*, oil-pump to force lubricant at intervals into cylinder and valve casings; *l*, dash-pot to diminish oscillation of the governor-balls, or the "hunting" of the governor up and down its spindle; *m*, cover or head of the steam-cylinder; *n*, outlet for exhaust-pipe.



ing-valves to open and close the ports alternately. The inlet- and exhaust-valve being separate, the latter are opened to their full extent at each stroke, while the former are opened only so much as the governor permits. All the valves are actuated from a disk or wrist-plate which receives motion from the eccentric, though the inlet-valves are disconnected from this plate by a trip and closed by a dash-pot. The advantages of the Corliss engine are the small clearance spaces, the large port areas, and the sharp cut-off; the latter easily variable by the governor through a wide range as the load varies, while the point of release of exhaust and the point of closure which causes compression are constant. The engine was promoted by George H. Corliss of Providence, Rhode Island.—**Coupled engine.** (*a*) A duplex or twin engine, two cylinders acting through their mechanism on one crank-pin or on one revolving shaft. (*b*) A locomotive which has two or more pairs of driving-wheels coupled together by side or parallel rods.—**Diagonal engine,** an engine so set that the direction of the piston's travel is neither horizontal nor vertical; an inclined engine.—**Explosion engine,** internal-combustion engine: so named because early forms of the internal-combustion motor used mixtures of gas and air which were explosive and detonated when set on fire. The modern engine, with compression, does not detonate, but a true ignition takes place at constant volume, and little or no noise is audible aside from that due to the power. When the ignition takes place outside the cylinder, and without doing work against the piston, the free expansion of the same mixture is noisy, because the air receives the impact of the expanding gases.—**Fan engine,** an engine which drives a fan or rotary blower, usually directly connected on the common revolving shaft.—**Hot-water engine.** Same as *fireless locomotive*. See *locomotive*.—**Hydro-oil engine,** an internal-combustion engine in which water in equal quantities to that of the oil which constitutes the fuel is drawn into the cylinder on the aspiration stroke. The water is atomized by the air which enters to furnish oxygen for combustion, and a complete mechanical mixture of water and oil-vapor is made. On ignition the water-vapor becomes steam, tending to keep down the temperature and pressure of the mixture and to absorb heat during expansion. The presence of the water-vapor diminishes the volume of fuel-vapor in a given cylinder, and diminishes the danger of pre-ignition on compression. The principle is specially adapted to the use of crude petroleum as fuel, since the retarded combustion and lower temperatures mitigate mechanical difficulties from the varying volatility of the elements in unrefined oil.—**Inside-connected engine,** a locomotive in which the driving mechanism is so constructed that the cranks are formed in the driving axles of the front pair of wheels and therefore come within the frames. The cylinders are also between the frames, under the smoke-box. This type was much used in Europe and was followed in early American practice, but the greater convenience and accessibility for

adjustment and repair of the outside-connected type soon made this latter form standard in the United States.—**Internal-combustion engine,** any engine in which the pressure for driving the piston is obtained by burning

Internal-combustion Engine (sectional view).

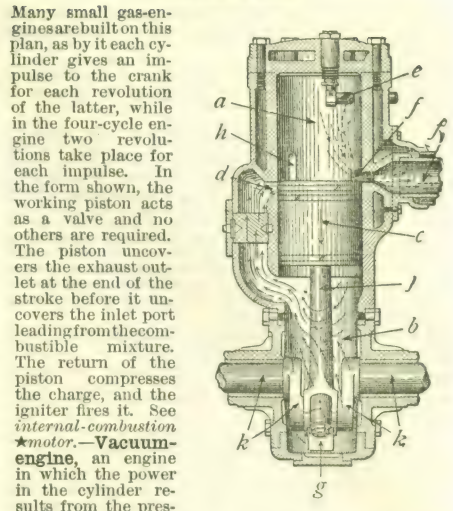


a, water-outlet; *b*, vapor-pipe; *c*, throttle-valve; *d*, connecting-rod; *e*, carbureter; *f*, crank-shaft; *g*, cam-shaft; *h*, cam; *i*, exhaust-valve; *k*, water-inlet; *l*, induction-valve.

Internal-combustion Engine (side view).

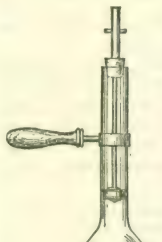
a, inlet-pipe for fuel mixture; *b*, water-jacket; *c*, piston-rings; *d*, piston; *e*, cylinder; *f*, fly-wheel; *g*, base-chamber; *h*, half-speed wheel; *i*, governor-gear; *k*, holes for sparking-plugs.

or exploding a mixture of oxygen and fuel in the cylinder of the engine, as in a gas-, gasolene-, or oil-engine. See ★*motor* and ★*cycle*.—**Inverted-cylinder engine,** a vertical engine having an inverted cylinder. From its use, also called the steam-hammer pattern. Most marine screw-engines are now built in this way.—**Liquid-fuel engine,** an internal-combustion engine which uses a liquid, such as gasolene, for fuel, as distinguished from an engine which uses gas or a solid for fuel.—**Multicylinder engine,** an engine having more than two steam-cylinders.—**Nigger engine,** an engine intended for rough and heavy work out of doors or in exposed places where little care can be taken of it. It is usually cheaply made, and without finish or polished surfaces except where unavoidable.—**Outside-connected engine,** the usual American form of simple locomotive engine, in which the cylinders are outside of the frames, and their pistons are connected by rods, also outside the frames, to pins outside of the driving-wheels.—**Quadrant engine,** a form of steam-engine mechanism in which the piston was rectangular in shape and was pivoted on one edge which coincided with the axis of a geometric cylinder. The opposite edge was free to move through an arc of such cylinder, which was usually a quadrant or 90°. The other two edges fitted the two heads steam-tight, and the piston oscillated through 90° as the steam was admitted alternately on its opposite faces. The motion was transmitted through connecting-rods from the axis by means of vibrating arms which worked like half-beams of a beam-engine.—**Quarter-crank engine,** an engine in which the angle between the cranks, which work in pairs, is 90°, or a quarter of the complete circle Locomotives are made with their cranks quartered, so as to have one cylinder always at its most advantageous crank-angle when the other is at or near its dead-center. Blowing or compressing engines are often similarly designed, with one cylinder vertical and the other horizontal and with the two connecting-rods on one crank-pin. Then the maximum resistance of the compressing cylinder comes when the effort of the driving steam-cylinder is most powerful.—**Quintuple expansion engine,** an engine in which the expansion of the steam takes place in five steps or stages, either in five successive cylinders, or in more. In the latter case, the steam will expand from one of smaller capacity into two others of larger, but as respects each other of equal, capacity somewhere in the series: if eight cylinders are used this will occur three times.—**Reaction engine,** an engine in which the moving or propelled part or element, which corresponds to the piston, is impelled by reaction or unbalanced pressure instead of by the direct pressure of the motor fluid, as is usually the case. Turbines are often driven by reaction.—**Reversing rolling-mill engine,** a type of engine designed to drive the massive rolls for rolling plate or iron or steel beams or rails, when the roll-train is 'two-high,' or consists of one roll above another, with the 'pass' for rolling between them. When only two rolls are used, the hot metal must be passed back over the top of the upper roll to be inserted a second time between them if the engine and rolls turn in one direction only. If the rolls and engine reverse their motion, the piece undergoing rolling may be passed back on the same level. Practice in the United States has favored the 'three-high' roll-train, with continuous motion of engine and rolls, the piece receiving its compression in a pass when being passed back over the top of the middle roll. For heavy and massive sections, such as an ingot or bloom, the lifting of the piece requires a mechanical lifting table, but to install this diminishes the labor cost while increasing only the first cost and repair-account. The reversing engine will be more approved when the rolls are of large diameter. In England such reversing engines were often geared to the rolls, perhaps three to one, and were reversed by a Stephenson or Joy link-motion operated by a steam or hydraulic cylinder or by hand. To diminish the weight of the fly-wheel and its living force, which would retard quick-reversal, the engine was often of two-cylinder design, simple or compound, with cranks quartering, or at 90 degrees apart.—**Rotative engine,** a term commonly used in specifications to distinguish the ordinary engine with connecting-rod and crank from an engine in which the reciprocating movement is not converted into circular motion, as in pumps of the direct-acting type.—**Saddle-tank engine.** Same as *saddle-tank locomotive*.—**Series-expansion engine,** a compound or multiple-expansion engine in which the steam expands in steps or stages in a series of cylinders.—**Side-beam engine,** a form of beam- or lever-engine in which the working-beam is placed at the side of the vertical cylinder instead of above it, as is more common. For symmetry of the stresses there are usually two of these side-beams, one on each side of the cylinder. This form of engine was once used widely for side-wheel war-vessels, but it is now out of use.—**Simple engine,** a form of engine in which the process of expanding the working fluid is completed in one cylinder, instead of in two or more as occurs in the compound engine.—**Single-acting engine.** See *single-acting*.—**Solar engine.** See *solar*.—**Spherical engine,** any engine which has a spherical form, as Hero's engine; specifically, the Tower spherical engine, which consists of a pair of quarter-spheres hinged to a disk along diameters at right angles with each other, and inclosed in a hollow sphere which the disk and also the quarter-spheres just fit. The hollow sphere is steam-tight and forms the cylinder. The two spaces between the sections and disk will, in the course of a revolution, open and close in pairs, thus giving the effect of the action of steam admitted to a hollow sphere. In principle this spherical engine is similar to a Hooke's universal joint, the sections corresponding to the bows and the disk to the cross-piece which connects the bows.—**Spiral-vane engine,** a form of rotary engine in which the revolving pistons were portions of helices instead of being planes.—**Square engine.** (*a*) A reciprocating engine in which the stroke or traverse



Square Engine.

a, exterior casing of the steam-cylinder; *b*, *b*, first piston, sliding horizontally in casing *a*; *c*, *c*, second piston, sliding vertically in piston *b*; *d*, crank-pin, receiving motion from the combined effort of *b* and *c*; *e*, space receiving steam to impel *b*; *f*, space receiving steam to impel *c*; *g*, shaft to take off the power.



of the piston is equal to the diameter of the cylinder. (*b*) A form of engine in which the crank is driven by the pressure on two rectangular pistons, the second of which traverses in a suitable recess in the first. This double motion enables the pistons to follow the angular displacement of the crank without the use of connecting-rods, and gives a square section to the case inclosing the two pistons.—**Sulphur-dioxid engine,** an engine in which the vapor of sulphur-dioxid (SO_2) is used in place of the vapor of water. This is done for the purpose of utilizing the low boiling-temperature of SO_2 and perhaps its smaller cylinder-condensation at the temperatures at which it is operated. But the material has to be purchased or manufactured, and its odor is objectionable, while no economy in its use has been demonstrated.—**Surgical engine,** an apparatus similar to the dental engine, used by surgeons in certain operations on bone.—**Tangye engine,** an engine having a bed-plate of the design first proposed by C. T. Porter, of the United States, and adopted in England by Tangye Brothers. The cylinder is overhung at the back end of the bed to allow of free expansion by heat, and the front part curves downward in front of the cylinder to carry the guides and give free play to the sway of the connecting-rod. The bed-plate thus consists of two parts only, and the metal is disposed so as to give rigidity and mass and present a pleasing effect to the eye by its lines.—**Thermodynamic engine,** an engine which derives its motive power from rise in temperature or increase and diminution of intrinsic or heat energy in the medium which it employs: applied to hot-air and gas-engines, often to distinguish them from steam-engines, although by strict definition the last belong also in the same class.—**Three-cylinder engine,** an engine with three cylinders, each taking hold upon a crank which is set at an angle of 120° from the other two. Such an engine has no dead-center and gives a very uniform turning effort: much used with capstans and winches and steam steering-gear.—**Twin-screw engine,** an engine designed to propel twin screws, one on each side of the keel of a vessel. Such an engine is usually, in effect, two engines, so that each screw and shaft may be driven independently.—**Two-cycle engine,** an internal-combustion engine having only two phases or strokes in a complete cycle. The explosion, expansion, and exhaust take place in one (the out or working) stroke, and admission and compression of the charge take place in the other (or return) stroke. The mixture has to be under slight compression either from a second cylinder, or from the front face of the working-piston.

Many small gas-engines are built on this plan, as by it each cylinder gives an impulse to the crank for each revolution of the latter, while in the four-cycle engine two revolutions take place for each impulse. In the form shown, the working piston acts as a valve and no others are required. The piston uncovers the exhaust outlet at the end of the stroke before it uncovers the inlet port leading from the combustible mixture. The return of the piston compresses the charge, and the igniter fires it. See *internal-combustion* ★*motor*.—**Vacuum-engine,** an engine in which the power in the cylinder results from the presence, on the negative side of the cylinder, of a tension of vapor less than that of the atmosphere, while on the positive or pressure side a low pressure above the atmosphere, or that of the atmosphere alone, is exerted. Hence the power comes from the vacuum or absence of pressure opposed to the motion of the piston. Very low pressure condensing steam-engines would be of this class, but modern engines have always the positive pressure much above the atmosphere. The Newcomen atmospheric engine was of this type.—**Vibrating-piston engine,** an engine whose rectangular piston is free to move around a fixed hinge-joint on one of its sides, so that the piston moves in its casing as a door swings upon its hinges. It is no longer used. See *quadrant* ★*engine*.—**Waste-heat engine,** an engine which utilizes as a source of heat the discharge of a primary motor. In such engines steam may be made by conducting the hot exhaust discharge of gas-engines under a boiler; or the waste heat of the boiler-furnace gases may be used to superheat and mix with the steam from the boiler; or the exhaust from a large engine at high pressure may be used to operate a second smaller engine with a lower pressure-range.—**Wollaston's engine,** an experimental apparatus designed to illustrate the expansive force of steam.

Two-cycle Engine.

a, working-end of cylinder; *b*, inclosed crank-case filled with slightly compressed aspirated and combustible mixture of air and gasified fuel; *c*, working-piston; *d*, inlet-port for mixture from crank-case; *e*, igniter, or spark-plug; *f*, *f*, exhaust-port and -pipe; *g*, inlet for air and fuel; *h*, deflector to prevent inlet mixture from crossing over to exhaust-port before the piston has closed the latter on its return stroke; *j*, connecting-rod; *k*, crank and crank-shaft.

Wollaston's Engine.

engine-cycle (en′jin-sī″kl), *n.* The various phases attending one complete revolution of the crank of an engine, including admission, expansion, exhaust, and compression. In some engines, particularly gas-engines, two revolutions are sometimes needed for a complete cycle. See ★*cycle*.

engineer, *n.*—**Cadet engineer,** formerly the title of a student at the United States Naval Academy who entered the corps of engineer officers of the navy: now abolished.—**Chemical Engineer,** a degree given to graduates of a technical or engineering school for special knowledge of the scientific laws and the rules of practice concerned with the manufacture of chemical products. Abbreviated *Ch. E.*—**Civil engineer.** (*a*) See *engineer*, 1. (*b*) The title of an officer of the corps of civil engineers of the United States Navy. See ★*corps*[2].—**Forest Engineer,** a degree given for a course in the study of forestry. Abbreviated *F. E.*—**Hydrographic engineer.** (*a*) An engineer skilled in hydrography; a hydrographer. (*b*) An official grade of governmental engineering officers in some countries, as in France.—**Sanitary engineer,** an engineer skilled in the relation (and application) of the principles of public sanitation to engineering works and public improvements; one who is competent to design, construct, and operate public works as aids to public sanitation.—**Topographic engineer,** an engineer skilled in topographic surveying and mapping; a topographer.—**Traveling engineer,** an expert locomotive engineer sent out by railroad companies to inspect the locomotives and to instruct engine-drivers and firemen in their duties.

engineering, *n.*—**Agricultural engineering.** See *rural* ★*engineering*.—**Chemical engineering,** a department of manufacturing in which the productive processes are chemical reactions, or depend upon the laws of chemistry.—**Dynamic engineering.** See *engineering*.—**Rural or agricultural engineering,** the science and the art of producing and maintaining a farming plant, including the laying out of the farm, fencing, drainage, irrigation, the construction of buildings, and the provision of machinery, also the construction and care of roads.—**Sanitary engineering,** that division of civil engineering which deals with the relation (and application) of the principles of public sanitation to engineering works and public improvements.—**Steam engineering,** that department of engineering which deals with the generation and distribution of energy by means of steam-power.—**Topographical engineering.** Same as *topographical surveying* (which see, under *surveying*).

engine-frame (en′jin-frām), *n.* The structure

which connects, or ties together, the various parts of an engine. It is usually a heavy iron casting connecting the cylinder to the shaft-journals and supporting the weight of practically all the parts of the engine.

engine-pit (en′jin-pit), *n.* A cleaning-pit; a pit made between the rails of a railroad-track to allow room for getting underneath a locomotive to clean or repair it. The pits are usually as wide as the distance between the tracks permits, and about 3 feet deep.

engine-stop (en′jin-stop), *n.* A device for closing, either automatically or by hand, the steam-valve of an engine in case of accident. One form consists of a falling weight with an electrical release which may be operated automatically, if the engine runs too fast, from the breakage or loss of the governor-belt, or may be operated from any one of a number of stations in case of an accident in a remote part of the works.

engine-telegraph (en′jin-tel″ē-grȧf), *n.* An apparatus used in large steam-vessels to send signals from the bridge or other station of the executive officers to the engine-room. One dial is placed at the transmitting and another at the receiving end. A pointer on each dial is actuated by an operating handle at the other instrument. The connection between them is made by chains and wires, or is electric or pneumatic. The right-hand half of the dial is for orders ahead, and the left hand for orders astern. The usual arrangement is to place the order 'Stop' in the center, and others are 'Stand by,' 'Quarter-speed,' 'Half-speed,' 'Full-speed' (ahead or astern as the case may be). The telegraph is also connected with a bell-sounding device.

englacial (en-glā′shi̤al), *a.* [*en-* + *glacial.*] Being within a glacier: used, in *geol.*, with reference to detritus carried within the ice of a glacier or ice-sheet: as, *englacial* drift.

The water which descended into the ice from its surface through crevasses, or through smaller cracks or pores, had a various course. It is possible that it was sometimes concentrated into streams which had longer or shorter courses within the ice itself. On one of the Alaskan glaciers at the present time, an *englacial* stream appears at the surface of the ice, issuing from an ice tunnel, pursues a superglacial course for a short distance, and plunges again beneath an ice arch and pursues for an undetermined distance an *englacial* course.

R. D. Salisbury, Geol. Surv. of New Jersey, 1891, p. 87.

Englander, *n.*— **Little Englander,** in recent English politics, an opponent of colonial extension or of territorial aggrandizement.

Englerophœnix (eng″lėr-ō-fē′niks), *n.* [NL. (Kuntze, 1891), ⟨ G. *Engler* (Adolph Engler, director of the Berlin Botanical Garden) + Gr. *φοινιξ*, palm.] A genus of palms. See *Maximiliana.*

English. **I.** *a.*— **English cholera.** See ★*cholera.*— **English schools of painting.** See ★*painting.*— **English yellow.** See ★*yellow.*

II. *n.*— **Reverse English,** in *billiards,* a stroke which twists the cue-ball on the side opposite to the direction in which it should go after taking the first cushion.

englobe (en-glōb′), *v. t.*; pret. and pp. *englobed,* ppr. *englobing.* [*en-* + *globe.*] **1.** To inclose as in a globe: as, "youthful energy *englobed* within the bosom of the young." See *inglobe.* —**2.** Specifically, to absorb or take within the substance of a white blood-globule, amœba, or other single-celled body.

Red blood corpuscles are often *englobed* by this amœba [in amœbic dysentery], as are also micrococci and bacilli. *Encyc. Brit.*, XXXI. 536.

englobement (en-glōb′mẹnt), *n.* [*englobe* + *-ment.*] The process of englobing.

It is difficult to explain this difference except on the ground that the *englobement* of parasites in the liver is more active at certain periods of the cycle, or occurs intermittently, and that the destruction of englobed parasites may be completed very rapidly, i. e. within a few hours. *Jour. Exper. Med.*, Feb. 5, 1902, p. 155.

englyn (en′glin), *n.* [Also *englin,* ⟨ W. *englyn.* pl. *englynion.*] In Welsh poetry, a stanza (now always a quatrain) of a certain metrical structure. *N. E. D.*

engouement, engoûment (äṅ-gō-moṅ′), *n.* [F., ⟨ *engouer,* be choked in gorging.] Infatuation; an unreasoning fondness.

The young lady . . . had never received kindness except from this old spinster and her brother and father: and she repaid Miss Crawley's *engoûment* by artless sweetness and friendship.

Thackeray, Vanity Fair, xxxiv.

engr. An abbreviation of *engraving.*

engraver, *n.* 2. A tool used in engraving; a triangular rod of steel, of different widths, with a plow-shaped point, pushed forward to make a furrow on the surface of wood or metal that is being engraved.

engraver-beetle (en-grā′vėr-bē″tl), *n.* Any beetle of the family *Scolytidæ.* Also called *bark-beetle.*

engraving, *n.* The taking of impressions from raised or incised seals has always been practised by civilized people. The goldsmiths of the Middle Ages and Renaissance in Europe used engraving in the decoration of their work, and were accustomed to take impressions from their designs. Such impressions have been traced to the twelfth century. Among the earliest examples of engraving, properly so called, on metal are about three hundred prints in the dotted style (*manière criblée*) in which black spots are relieved against white and white spots against black, which date from about 1450 A.D. The practice of engraving was encouraged by the use of niello in the decoration of metals. (See *niello.*) Undoubtedly frequent impressions were taken from niello designs. For making plates to print upon paper, copper and later steel were substituted for other metals. Engraving on copper was extensively practised by the great artists of the Renaissance, as Pollajuolo, Mantegna, Botticelli, and Marcantonio Raimondi in Italy, and Martin Schongauer and Albert Dürer in Germany. In France engraving on copper found its first development in the illustration of books, as in the architectural series of Jacques I. Androuet Du Cerceau. In the seventeenth century the largest development of engraving on metal occurred about the powerful personalities of Rembrandt and Rubens. The influence of Rubens, especially, brought about the culmination of the art. After this period, engraving on copper and steel became universal throughout modern civilization. The special contribution of England to the art of engraving on metal was the development of mezzotint, which was, however, invented in Holland in the middle of the seventeenth century. Wood-engraving was brought to perfection by the large school of German artists of the Renaissance grouped about the court of the Emperor Maximilian I. The chief of them was Albert Dürer who may still be considered the greatest master of the art. From Germany the art of wood-engraving was carried into Italy, and practised with a peculiar charm by the painters of the quattrocento and cinquecento. The father of the modern art of wood-engraving is Thomas Bewick of Newcastle, England (1753–1828). Previous to his time the practice was chiefly in black line, that is, a drawing in black lines was made upon the block and the portions of the surface not touched by the draftsman were cut away by the engraver. Bewick established the ascendancy of the white line, that is, the incision made by the engravers' tools. This change in point of view vastly increased the effectiveness and artistic interest of the engraved block. The principles of Bewick have been accepted by all modern engravers whose interest is artistic rather than commercial. As in the case of engraving on copper and steel, the development of wood-engraving in modern times has been great, but little has been added to the fundamental principles established by the older masters. — **Photochemical engraving.** (*a*) The art of preparing engraved printing-plates by photographic and chemical methods. (*b*) An engraved printing-plate produced by this process. See *photo-engraving* and *photogravure.*

engreen (en-grēn′), *v. t.* [*en-*[1] + *green.*] To cover or clothe with green: as, to *engreen* the hills. *J. S. Blackie.*

engroove (en-grōv), *v. t.*; pret. and pp. *engrooved,* ppr. *engrooving.* [*en-*[1] + *groove.*] **1.** To fit into a groove. *Tennyson.* —**2.** To Channel: as, "a narrow glen, *engrooved* with sliding water." *R. D. Blackmore.*

Enhanced line. See ★*line*[2].

enhancive (en-han′siv), *a.* [*enhance* + *-ive.*] That tends or serves to enhance, heighten, or intensify; that imparts added force: as, an *enhancive* sentence, or expression. Also *enhansive.*

enhemospore (en-hem′ō-spōr), *n.* [Gr. *ἐν,* in, + *αἱμα,* blood, + *σπορά,* seed (spore).] In the division of the malarial parasite within a red blood-corpuscle, one of the nucleated segments into which the protoplasmic body of the parasite separates. On the breaking up of the corpuscle the segments are set free and then invade fresh corpuscles.

enhydritic (en-hī-drit′ik), *a.* [*enhydrite* + *-ic.*] Of or pertaining to an enhydrite.

enjewel (en-jö′el), *v. t.*; pret. and pp. *enjeweled, enjewelled,* ppr. *enjeweling, enjewelling.* [*en-*[1] + *jewel.*] To bejewel.

To lone lake that smiles,
In its dream of deep rest,
At the many star-isles
That *enjewel* its breast.

Poe, Al Aaraaf, ii.

en l'air (oṅ lãr). [F.] In the air; unsupported: said of the flank of a line of battle which does not rest on an impassable obstacle.

enlarge, *v. t.* **8.** To cause (a horse) to spread his legs wider apart, so as to prevent him from interfering.

To *enlarge* your horse you should prick him with both heels, or aid him with the calves of your legs, and bear your hand outwards. *T. Wallis,* Farrier's Dict.

To enlarge an estate, to give to the tenant of a particular estate another estate in the same property superior to that already held.— **To enlarge the pocket.** See ★*pocket.*

enlife (en-līf′), *v. t.*; pret. and pp. *enlifed,* ppr. *enlifing.* [*en-*[1] + *life.*] To impart life to; enliven.

. . . As if they knew
What music slept enchanted in each stem,
Till Pan should choose some happy one of them,
And with wise lips *enlife* it through and through.

Lowell, Invita Minerva, st. 5.

enneacontahedral (en″ē-a-kon-ta-hē′dral), *a.* [*enneacontahedron* + *-al.*] Having 90 faces.

enneacontahedron (en″ē-a-kon-ta-hē′drọn), *n.* [Gr. **ἐννεάκοντα,* assumed form for the actual *ἐνενήκοντα,* ninety, + *ἕδρα,* seat, base.] A polyhedron of 90 faces.

enneaeteric (en″ē-a-e-ter′ik), *a.* [Gr. *ἐνναέτηρος,* nine years old, ⟨ *ἐννέα,* nine, + *ἔτος,* a year.] Containing or consisting of nine years: as, an *enneaeteric* period. *Grote.*

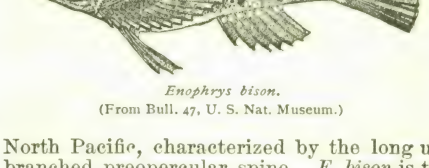
Enneagynia (en″ē-a-jin′i-ȧ), *n. pl.* [NL., ⟨ Gr. *ἐννέα,* nine, + *γυνή,* female (style).] In the Linnæan artificial system of botanical classification, an order in any of the first thirteen classes characterized by having flowers with nine styles.

enneaphyllous (en-ē-af′i-lus), *a.* [Gr. *ἐννέα,* nine, + *φύλλον,* leaf, + *-ous.*] Having nine leaflets: said of a compound leaf.

Enneapla (en″e-ap′lȧ), *n.* [Gr. *ἐννέα,* nine, + *-πλοος* (neut. pl. *-πλα*), -fold. Cf. *Hexapla.*] An edition of the Old Testament ascribed to Origen, containing nine versions of the Scriptures in parallel columns. Only a single reference is found to the work and there is doubt as to its existence.

ennearctic (en-ē-ärk′tik), *a.* [Gr. *ἐν,* in, + E. *Nearctic.*] Confined to the Nearctic region.

ennomoclon (e-nom′ō-klōn), *n.*; pl. *eunomoclones* (-klō′nēz). [Gr. *ἔννομος,* lawful, regular, + *κλών,* a twig.] In the terminology of the spicular elements of the sponges, a four-rayed spicule, in which one arm is shortened and inflated.



Enochic (ē-nok′ik), *a.* [*Enoch* + *-ic.*] Of or pertaining to the patriarch Enoch, the seventh from Adam, whose alleged prophecies (as recorded in the apocryphal Book of Enoch) are supposedly quoted in the Epistle of Jude, verse 14.— **Enochic literature,** the literature that has grown up around the apocryphal Book of Enoch, mentioned by the early Christian fathers and later writers, but first made definitely known in Europe through three copies of an Ethiopic version of it brought from Abyssinia by Bruce, the African traveler (1730–94), and translated into English in 1821.

enol (en′ōl), *n.* [Appar. for **henol,* ⟨ Gr. *εἰς* (*ἑν-*), one, + *-ol.*] One of several compounds containing the unsaturated alcoholic group –CH:COH–. These compounds pass more or less readily into the isomeric or tautomeric group $-CH_2.CO-$, which is called the ketone form.

enolic (e-nol′ik), *a.* Of or pertaining to an enol.

enophite (en′ō-fīt), *n.* [Gr. *ἐν,* in, + E. *ophite* (serpentine).] An uncertain alteration-product from the chrysolite rocks of Krems, Bohemia. It is intermediate in composition between the chlorites and serpentine.

Enophrys (e-nof′ris), *n.* [NL., ⟨ Gr. *ἐν,* in, + *ὀφρύς,* brow.] A genus of sculpins of the

Enophrys bison.
(From Bull. 47, U. S. Nat. Museum.)

North Pacific, characterized by the long unbranched preopercular spine. *E. bison* is the buffalo-sculpin of the Puget Sound region.

enophthalmia (en-of-thal′mi-ȧ). *n.* [NL.] A more correct form for *enophthalmus.*

enoplan (en-op′lạn), *a.* and *n.* **I.** *a.* Relating or pertaining to the *Enopla.*

II. *n.* One of the *Enopla.*

enorganic (en-ôr-gan′ik), *a.* [Gr. *ἐν,* in, + *ὀργανον,* organ.] Existing as a permanent attribute of the organism.

en plein (oṅ plaṅ). [F.] In *roulette* and other banking games, flat upon any number.

en prise (oṅ prēz). [F.] In *chess,* in a position to be taken: as, a piece or pawn may be put or left *en prise.*

enroll, *v. t.* **4.** In *law,* to engross; to prepare in proper legal form; also, specifically, to make a legislative bill ready for the consideration of the Executive.— **Enrolled bill.** See ★*bill*[3].

ens. An abbreviation of *ensign.*

Ens legis (L., a being of the law), in *law,* a thing created by law, as a corporation.

ensanguin, *v. t.* A simplified spelling of *ensanguine.*

ensellure (aṅ-se-lür′), *n.* [F., ⟨ *enseller,* saddle, ⟨ *en,* in, + *selle,* saddle: see *sell*[2].] In *anthrop.,* a strongly marked curve of the dorso-lumbo-sacral region. *Deniker,* Races of Man, p. 93.

ensemble, *n.*— **Grand ensemble,** in statistical mechanics, an ensemble of systems, in which the various systems are composed of particles of various kinds and in which the systems differ both in phase and in the number of particles which they contain.

A *grand ensemble* is therefore composed of a multitude of petit ensembles. *J. W. Gibbs,* Statistical Mech., p. 190.

Microcanonical ensemble, an ensemble of systems, in statistical equilibrium, such that all the systems have the same energy.

In a *microcanonical ensemble* of systems the energy (E) is constant, but the kinetic energy (E_p) and the potential energy (E_g) vary in the different systems.
J. W. Gibbs, Statistical Mech., p. 116.

Petit ensemble, an ensemble of systems in which the systems differ only in phase. *J. W. Gibbs.*— **Time ensemble,** the "ensemble of phases through which a single system passes in the course of time." *J. W. Gibbs,* Statistical Mech., p. 169.

II. *a.* In *music,* same as *concerted:* as, an *ensemble* passage or work.

ensepulcher, ensepulchre (en-sep'ul-kėr), *v. t.*; pret. and pp. *ensepulchered, ensepulchred,* ppr. *ensepulchering, ensepulchring.* [*en-* + *sepulcher.*] To entomb; bury. *Pollok.*

ensient (en-si-ent'), *a.* In *law,* same as *enceinte* (which see).

Ensign halyards. See ★*halyard.*

ensign-fly (en'sīn-flī″), *n.* Any parasitic hymenopterous insect of the family *Evaniidæ. Comstock,* Manual of Insects, p. 626.

ensilage, *v. t.* **2.** To make into silage; to ensile.—**3.** To affect by feeding silage, as *ensilaged* milk.

The crops *ensilaged* should contain no more water than can be retained in the cells of the plant, etc.
M. Miles, Silos, Ensilage, and Silage, p. 80.

ensilage-cutter (en'si-lāj-kut″ėr), *n.* A large power-machine having revolving cutters fed by hand, or by a self-acting feed-table that moves the corn-stalks, etc., to the cutters. Since silos are now lofty cylindrical bins placed above ground, ensilage-cutters are fitted with conveyers for delivering the cut ensilage at the top of the bins. These may be belt-and-bucket elevators of the ordinary type, or pneumatic conveyers, consisting of sheet-metal pipes through which the cut ensilage may be blown by a blast from a fan placed at the side or end of the cutter. These conveyers may be fixed in one position or pivoted at the bottom. Ensilage-cutters are sometimes fitted with splitting and shredding appliances for splitting corn-stalks and reducing the material more completely than is possible by cutting alone.

ensilate (en'si-lāt), *v. t.*: pret. and pp. *ensilated,* ppr. *ensilating.* [*ensile* + *-ate*[2].] To ensile. [Rare.] *N. E. D.*

ensilation (en-si-lā'shon), *n.* [*ensile* + *-ation.*] The making into and preserving as silage. [Rare.]

The life of the plant under the restricting conditions of *ensilation.* *Nature,* Oct. 22, 1885, p. 606.

ensilist (en-sī'list), *n.* [*ensile* + *-ist.*] One who constructs or uses silos for the storing of fodder.

En-Soph (en-sōf), *n.* [Heb., the infinite, lit. 'no end.'] In cabalistic doctrine, the Deity, prior to the creation of the universe, from which the ten attributes forming the Adam Kadmon emanated. See ★*Sephiroth,* ★*Adam Kadmon.*

enspell (en-spel'), *v. t.* [*en-*[1] + *spell*[1].] To cast a spell upon; charm; fascinate; enchant.

enstatitic (en-stā-tit'ik), *a.* [*enstatite* + *-ic.*] Pertaining to, resembling, or containing enstatite.

ent., entom. Abbreviations of *entomology.*

entacmæous (en-tak-mē'us), *a.* [Gr. *ἐντός,* within, + *ἀκμαῖος,* adj., ‹ *ἀκμή,* point: see *acme.*] In actinians, having the tentacles of the inner longer than those of the outer cycles. *Trans. Linnean Soc. London,* Zool., Oct., 1902, p. 299.

entacoustic (en-ta-kös'tik), *a.* [Gr. *ἐντός,* within, + *ἀκουστικός,* of hearing.] Relating to or originating within the organ of hearing.

entailable (en-tā'la-bl), *a.* [*entail* + *-able.*] Capable of being left in fee-tail; also, often used with reference to any property that is capable of being left by will.

Ental valve. See ★*valve.*

entapophysial (en-ta-po-fiz'i-al), *a.* Of or pertaining to an entapophysis. See ★*entapophysis.*

entapophysis (en-ta-pof'i-sis), *n.* [Gr. *ἐντός,* within, + *ἀπόφυσις,* apophysis.] An internal apophysis; an apophysis that projects internally, as with many arthropods.

The wall of the œsophageal portion of the foregut [in spiders] . . . is supplied with a well-developed post-cerebral sucking-apparatus lying on the upperside of the entosternite and worked by powerful lateral muscles which attach it to this plate, and by a dorsal muscle which passes from its chitinous dorsal wall through the aortic space of the "stomach" to the median *entapophysis* of the carapace. *Proc. Zool. Soc. London,* 1902, p. 185.

entarthrotic (en-tär-throt'ik), *a.* [Gr. *ἐντός,* within, + *ἄρθρον,* joint, + *-ot-ic.*] Same as *interarticular.*

entepicondylar (en-tep-i-kon'di-lär), *a.* [Gr. *ἐντός,* within, + *ἐπί,* upon, + *κόνδυλος,* condyle, + *-ar*[3].] **1.** On the inner side of the humerus and above the condyle: as, the *entepicondylar* foramen, a foramen so situated, found in the humeri of many mammals and very characteristic of the cats.—**2.** Relating to the internal epicondyle or entepicondyle.

entepicondyle (en-tep-i-kon'dil), *n.* [Gr. *ἐντός,* within, + *ἐπί,* upon, + *κόνδυλος,* condyle.] The process or projection just above the inner condyle of the humerus; the internal epicondyle or epitrochlea. See cut under *epicondyle.*

enteraden (en-ter'a-den), *n.* [Gr. *ἔντερον,* intestine, + *ἀδήν,* a gland.] An intestinal gland.

enteradenitis (en-te-rad-e-nī'tis), *n.* [NL., ‹ *enteraden* + *-itis.*] Inflammation of the intestinal glands.

enterectasis (en-te-rek'ta-sis), *n.* [Gr. *ἔντερον,* intestine, + *ἔκτασις,* extension.] Distention of the intestines with gas.

enterelcosis (en″te-rel-kō'sis), *n.* [Gr. *ἔντερον,* intestine, + *ἕλκωσις,* ulceration.] Ulceration of the mucous membrane of the intestines.

entero-anastomosis (en″te-rō-a-nas″tō-mō'sis), *n.* [Gr. *ἔντερον,* intestine, + *ἀναστόμωσις,* anastomosis.] Intestinal anastomosis.

enterocentesis (en″te-rō-sen-tē'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *κέντησις,* puncture.] In *surg.,* operative puncture of the bowel.

enterocholecystostomy (en″te-rō-kol″ē-sis-tos'tō-mi), *n.* Same as *enterocholecystotomy.*

enterocleisis (en″te-rō-klī'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *κλεῖσις, κλῄσις,* a closing, ‹ *κλείειν,* close.] Obstruction of the bowel.

enteroclysis (en″te-rok'li-sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *κλύσις,* drenching, ‹ *κλύζειν,* drench: see *clyster.*] Rectal injection of large quantities of water, usually for the purpose of washing out the large intestine. *Med. Record,* July 18, 1903, p. 107.

enteroclysm (en'te-rō-klizm), *n.* [Gr. *ἔντερον,* intestine, + *κλυσμός,* a drench, ‹ *κλύζειν,* drench.] Same as ★*enteroclysis.*

enterocœle, *n.* **2.** A body-cavity or cœlom which arises as a diverticulum from the digestive cavity of the embryo. *Parker and Haswell,* Zoology, I. 359.

Enterocœlic pouch. See ★*pouch.*

enterocolostomy (en″te-rō-kō-los'tō-mi), *n.* [Gr. *ἔντερον,* intestine, + *κόλον,* colon, + *στόμα,* mouth.] In *surg.,* the establishment of an artificial communication between the colon and some portion of the small intestine.

enterocyst (en'te-rō-sist), *n.* [Gr. *ἔντερον,* intestine, + *κύστις,* bladder (cyst).] Cystic tumor of the intestine.

entero-enterostomy (en″te-rō-en-te-ros'tō-mi), *n.* [Gr. *ἔντερον,* intestine, + *ἔντερον,* intestine, + *στόμα,* mouth.] The operative formation of a permanent communication between two originally non-continuous portions of the intestine. *Med. Record,* Feb. 28, 1903, p. 352.

enterograph (en'te-rō-gràf), *n.* [Gr. *ἔντερον,* intestine, + *γράφειν,* write.] A medical instrument for recording the peristaltic movements of the intestines.

enterohematin (en″te-rō-hem'a-tin), *n.* [Gr. *ἔντερον,* intestine, + *αἷμα(τ-),* blood, + *-in*[2].] A red pigment found in the so-called livers of certain invertebrates.

enteroid (en'te-roid), *a.* [Gr. *ἔντερον,* intestine, + *εἶδος,* form.] Shaped like a bowel or intestine.

enterokinase (en″te-rō-kin'ās), *n.* [Gr. *ἔντερον,* intestine, + E. *kinase.*] A kinase found in the intestinal mucous membrane, which renders the pancreatic trypsin physiologically active. Similar bodies probably occur elsewhere in the mammalian organism, and have also been noted in bacteria and in snake-venom.

enteromere (en'te-rō-mēr), *n.* [Gr. *ἔντερον,* intestine, + *μέρος,* part.] A segment of the intestinal tract in the embryo.

enteromyiasis (en″te-rō-mī-i-ā'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *μυῖα,* fly.] Presence of larvæ in the intestine, and the morbid state resulting therefrom.

enteropexy (en″te-rō-pek'si), *n.* [Gr. *ἔντερον,* intestine, + *πῆξις,* attachment.] In *surg.,* an operation for the attachment of a portion of the intestine to the anterior abdominal wall.

enterophthisis (en″te-rof'thi-sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *φθίσις,* consumption: see *phthisis.*] Intestinal tuberculosis.

entercplegia (en″te-rō-plē'ji-ą), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *πληγή,* stroke.] Paralysis of the muscular coat of the intestine.

enteropneust (en'te-rop-nūst), *n.* In *zoöl.,* a worm-like animal belonging to the group *Enteropneusta.*

enteroptosis (en-te-rop-tō'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *πτῶσις,* falling.] Prolapse or sinking down of the intestines, and usually of some or all of the other abdominal viscera, due to want of tone in the abdominal wall. Also called *Glénard's disease.*

enterorrhexis (en″te-rō-rek'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *ῥῆξις,* rupture.] Rupture of the intestine.

enterosepsis (en″te-rō-sep'sis), *n.* [NL., ‹ Gr. *ἔντερον,* intestine, + *σῆψις,* putrefaction.] Blood-poisoning by absorption of toxic materials formed within the intestine.

enterospasm (en'te-rō-spazm), *n.* [Gr. *ἔντερον,* intestine, + *σπασμός,* spasm.] Spasmodic colic.

enterostomy (en-te-ros'tō-mi), *n.* [Gr. *ἔντερον,* intestine, + *στόμα,* mouth.] Formation, by a surgical operation, of a permanent opening into the intestine. Same as *enterotomy,* 2.

enterotome (en-ter'ō-tōm), *n.* [Gr. *ἔντερον,* intestine, + *-τομος,* ‹ *ταμεῖν,* cut.] A portion of the embryo of vertebrates containing those structures which later develop into the digestive tract. [Rare.]

enterozoic (en″te-rō-zō'ik), *a.* Of or pertaining to the *Enterozoa.*

Enthelminthes (en-thel-min'thēz), *n. pl.* [NL.] Same as *Enthelmintha.*

entheomania (en″thē-ō-mā'ni-ą), *n.* [NL., ‹ Gr. *ἐνθεος,* inspired, frenzied, + *μανία,* madness.] Religious frenzy.

enthlasis (en'thla-sis), *n.* [Gr. *ἐνθλασις,* a dent caused by pressure, ‹ *ἐνθλᾶν,* dent by pressure, ‹ *ἐν,* in, + *θλᾶν,* crush.] A comminuted depressed fracture of the skull.

enthymematic (en-thi-mē-mat'ik), *a.* In *logic,* of the nature of or containing an enthymeme; incompletely stated: as, an *enthymematic* syllogism.

entiris (en-tī'ris), *n.* [NL., ‹ Gr. *ἐντός,* within, + *ἶρις,* iris.] The posterior pigmented layer of the iris.

entity, *n.* **3.** An individual fact or conception, having in itself all that is needed to constitute a characteristic whole.

Palpable enlargement of the pylorus, in infants a few weeks old, has now come to be recognized as a definite clinical and pathological *entity.*
Therapeutic Gazette, Feb. 15, 1903, p. 141.

entoblast, *n.* **2.** In *embryol.,* one of the blastomeres or segments of the egg which takes part in forming the wall of the intestine, or enteron.

entobronchium (en-tō-brong'ki-um), *n.*; pl. *entobronchia* (-ą). [NL., ‹ Gr. *ἐντός,* within, + *βρόγχος,* windpipe.] In *ornith.,* one of several tubes branching off from the vestibule or dilatation of the bronchus.

entocalcaneal (en-tō-kal-kā'nē-al), *a.* [Gr. *ἐντός,* within, + NL. *calcaneum* + *-al.*] Situated on the inner side of the calcaneum or heel-bone: specifically applied by Owen to the innermost of the ridges or projections on the posterior face of the proximal end of the tarsometatarsus of a bird.

entochoroidea (en-tō-kō-roi'dē-ą), *n.* [NL., ‹ Gr. *ἐντός,* within, + NL. *choroidea.*] The posterior layer of the choroid.

entocnemial (en-tok-nē'mi-al), *a.* [Gr. *ἐντός,* within, + *κνημη,* tibia, + *-al.*] Situated on the inner side of the tibia.

entocœle (en'tō-sēl), *n.* [Gr. *ἐντός,* within, + *κοῖλος,* hollow.] The portion of the cœlenteron or gut-cavity of a hexactinian polyp inclosed within each pair of mesenteries; the intramesenterial space: opposed to ★*exocœle. Trans. Linnean Soc. London,* Zool., Oct., 1902, p. 304.

entocœlic (en-tō-sē'lik), *a.* Same as *entocœlic.*

entocondylar (en-tō-kon'di-lär), *a.* [Gr. *ἐντός,* within, + *κόνδυλος,* condyle, + *-ar*[3].] Relating to the entocondyle, or inner articular face of such a bone as a femur: contrasted with ★*ectocondylar.*— **Entocondylar cavity,** the cavity or depression receiving the entocondyle, as in the tarsometatarsus of a bird.

entocondyloid (en-tō-kon'di-loid), *a.* [*entocondyl-ar* + *-oid.*] Relating to the inner side

or portion of a condyle, or such an articulation as that of the distal end of the humerus.

entoconid (en-tō-kon'id), *n.* [Gr. *ἐντός*, within, + *κῶνος*, cone, + *-id*[2].] The postero-internal cusp of a lower molar. See cut under ★*tooth*.

entocornea (en-tō-kôr'nē-ạ), *n.* [NL., < Gr. *ἐντός*, within, + NL. *cornea*, cornea.] Same as *membrane of Demours* or *Descemet* (which see, under *membrane*).

entocranial (en-tō-krā'ni-ạl), *a.* [Gr. *ἐντός*, within, + *κρανίον*, cranium, + *-al*.] Same as *endocranial*.

entocyst (en'tō-sist), *n.* Same as *endocyst*.

entoglossum (en-tō-glos'um), *n.*; pl. *entoglossa* (-ạ). [NL., < Gr. *ἐντός*, within, + *γλῶσσα*, tongue.] The foremost bone of the hyoid apparatus of a bird, lying in the substance of the tongue: really composed of a pair of bones properly known as *ceratohyals*.

Entognathi (en-tog'nạ-thī), *n. pl.* [NL., < Gr. *ἐντός*, within, + *γνάθος*, jaw.] A proposed group of thysanurous insects including the *Campodeidæ*, the *Japygidæ*, and the various families of *Collembola*.

entohyal (en-tō-hī'ạl), *n.* [Gr. *ἐντός*, within, + *hyal*(*oid*).] One of a chain of median bones in the lower part of the gill-arches in fishes: same as *basibranchial*. *Starks*, Synonymy of the Fish Skeleton, p. 518.

Entoloma (en-tō-lō'mạ), *n.* [NL. (Quélet, 1882), < Gr. *ἐντός*, within, + *λῶμα*, fringe.] A genus of agarics having reddish or pinkish angular spores, a somewhat fleshy stem and pileus, and no volva or annulus. The species are widely distributed, occurring in fields and woodlands.

Entomacrodus (en-tō-mak'rō-dus), *n.* [NL., < Gr. *ἔντομος*, cut in, + *ἄκρος*, at the extremity, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of small blennies of the tropics, differing from *Salarias* in the presence of the long canines.

entomeric (en-tō-mer'ik), *a.* Pertaining to or of the nature of an entomere.

entomesoblast (en-tō-mes'ō-blȧst), *n.* [Gr. *ἐντός*, within, + *μέσος*, middle, + *βλαστός*, germ.] A layer or cluster of embryonic cells which have not yet been differentiated into entoblast and mesoblast proper.

entometatarse (en-tō-met'ạ-tärs), *n.* [Gr. *ἐντός*, within, + E. *metatarsus*.] The internal face of the tarsometatarsus of a bird. *Owen*. [Rare.]

Entomidæ (en-tom'i-dē), *n. pl.* [NL., < *Entomis* + *-idæ*.] A Paleozoic family of ostracode crustaceans, characterized by short, strongly convex, subequal bivalve tests with a depression near the middle of the dorsal region.

entomion (en-tō'mi-on), *n.*; pl. *entomia* (-ạ). [NL., < Gr. *ἐντός*, within, + *ὦμος*, shoulder.] In *craniom.*, the anterior point of the mastoid angle of the parietal bone. *Von Török*.

Entomis (en'tō-mis), *n.* [NL., < Gr. *ἐντομίς*, a gash, < *ἔντομος*, cut in.] The typical genus of the family *Entomidæ*.

Entomoconchidæ (en″tō-mō-kong'ki-dē), *n. pl.* [NL., < *Entomoconchus* + *-idæ*.] A family of Carboniferous ostracode crustaceans, characterized by subglobose, somewhat inequivalve shells, with a truncate front edge and a slit on the central portion of the margin.

Entomoconchus (en″tō-mō-kong'kus), *n.* [NL., < Gr. *ἔντομος*, cut in, + *κόγχη*, a shell.] The typical genus of the family *Entomoconchidæ*.

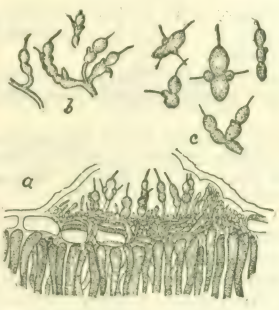
Entomophila (en-tō-mof'i-lạ), *n. pl.* [NL., < Gr. *ἔντομον*, insect, + *φίλος*, loving.] A group of hymenopterous insects (according to Ashmead's classification) having the hypopygium entire, the pronotum not extending back to the tegulæ, and the tarsi slender. It includes the families *Crabronidæ*, *Pemphredonidæ*, *Bembecidæ*, *Larridæ*, *Trypoxylonidæ*, *Philanthidæ*, *Nyssonidæ*, *Sphecidæ*, and *Ampulicidæ*.

entomophilous, *a.* 2. In *phytogeog.*, parasitic on insects: said of a class of fungi. *Pound and Clements*.

Entomophthoraceæ (en″tō-mof-thō-rā'sē-ē), *n. pl.* [NL., < *Entomophthora* + *-aceæ*.] A family of phycomycetous fungi named from the genus *Entomophthora*. See *Entomophthoreæ*.

entomophthoraceous (en″tō-mof-thō-rā'shius), *a.* Belonging or pertaining to the *Entomophthoraceæ*.

Entomophthorales (en″tō-mof-thō-rā'lēz), *n. pl.* [NL., < *Entomophthora* + *-ales*.] An order of entomogenous fungi containing the single family *Entomophthoraceæ*. See *Entomophthoreæ*.



Entomophthorineæ (en″tō-mof-thō-rin'ē-ē), *n. pl.* [NL.] Same as ★*Entomophthorales*.

entomophthorous (en-tō-mof'thō-rus), *a.* Pertaining to or caused by a fungus of the genus *Entomophthora*.

A view of grasshoppers dead or dying from *entomophthorous* disease.

L. O. Howard, in Yearbook, U. S. Dept. Agr., 1901, p. 460.

Entomosporium (en″tō-mos-pō'ri-um), *n.* [NL. (Léveillé, 1858), < Gr. *ἔντομον*, insect, + *σπορά*, seed (spore).] A genus of parasitic fungi of the order *Sphæropsidales*, having black flattened pycnidia without ostiola. The spores usually become four-celled and furnished with slender appendages. *E. maculatum* causes the leaf-blight of the pear and quince. See *leaf-*★*blight*.

Entomosporium maculatum.

a, section of leaf, through a disease-spot, showing a fruit pustule of the fungus containing spores in different stages of development; *b*, young spores, showing method of development and attachment to the mycelium; *c*, mature spores, all highly magnified. (Drawn from Report of U. S. D. A.)

entomosteg-ous (en-tō-mos'tē-gus), *a.* Belonging to the *Entomostega*, a division of *Foraminifera*; characterized by having the cells subdivided by transverse partitions.

entomostomatous (en″tō-mos-tō'mạ-tus), *a.* Belonging to the *Entomostomata*, siphonobranchiate gastropods which have the lip of the shell notched.

entophthalmia (en-tof-thal'mi-ạ), *n.* [NL., < Gr. *ἐντός*, within, + *ὀφθαλμία*, ophthalmia.] Inflammation of the inner structures of the eyeball.

entopic (en-top'ik), *a.* [Gr. *ἔντοπος*, in or of a place, < *ἐν*, in, + *τόπος*, place.] Being or occurring in the proper place: as, *entopic* gestation.

entoplasm (en'tō-plazm), *n.* [Gr. *ἐντός*, within, + *πλάσμα*, anything formed.] Same as *endoplasm*.

entoplastral (en-tō-plas'tral), *a.* [*entoplastr-on* + *-al*[1].] Relating to the entoplastron, the bone in the plastron of a turtle that corresponds to the interclavicle of other reptiles.

entoptoscope (en-top'tō-skōp), *n.* [Gr. *ἐντός*, within, + *ὀπτ*(*ικός*), of seeing (see *optic*), + *σκοπεῖν*, view.] An instrument employed in testing the transparency of the media of the eye. A beam of light enters the eye through a minute hole in an opaque diaphragm, and any opacities in the lens or humors of the eye are projected as distinct shadows on the retina.

entoretina (en-tō-ret'i-nạ), *n.*; pl. *entoretinæ* (-nē). [NL., < Gr. *ἐντός*, within, + NL. *retina*.] The inner layer of the retina.

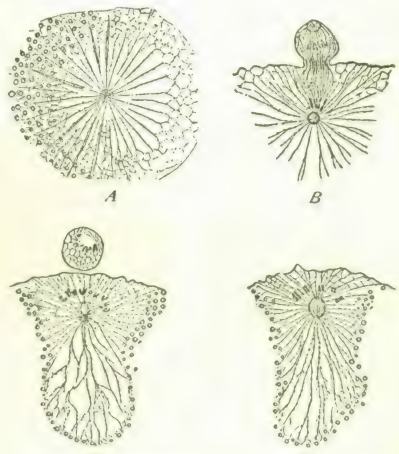
entorganism (ent-ôr'gan-izm), *n.* [Gr. *ἐντός*, within, + E. *organism*.] An internal parasite.

entosclerite (en-tō-sklē'rīt), *n.* [Gr. *ἐντός*, within, + *σκλῆρός*, hard, + *-ite*[2].] A sclerite that is entirely internal, having no external portion, as the prophragma or mesophragma of an insect. *Proc. Zool. Soc. London*, 1902, p. 174.

entoseptum (en-tō-sep'tum), *n.*; pl. *entosepta* (-tạ). [NL., < Gr. *ἐντός*, within, + L. *septum*, *sæptum*, a partition.] In corals, a septum developed within an entocœle. Compare ★*exoseptum*. *Annals and Mag. Nat. Hist.*, Feb., 1903, p. 147.

entosolenian (en″tō-sō-lē'ni-ạn), *a.* [Gr. *ἐντός*, within, + *σωλήν*, a channel, pipe.] Having an internal neck or tube, as the foraminifer *Lagena globosa*. Compare ★*ectosolenian*. *Smithsonian Rep.* (*Nat. Mus.*), 1897, p. 306.

entosphenal (en-tō-sfē'nạl), *n.* [Gr. *ἐντός*, within, + *σφήν*, a wedge, + *-al*[1].] A bone in fishes anterior to the bones above the myodome: same as *basisphenoid*. *Starks*, Synonymy of the Fish Skeleton, p. 512.



Entosphenus (en-tō-sfē'nus), *n.* [NL., < Gr. *ἐντός*, within, + *σφήν*, wedge.] A genus of lampreys running in the rivers from California northward on the Pacific slope. *E. tridentatus* is the common large lamprey of the Pacific coast.

Entosphenus tridentatus.

(From Bull. 47, U. S. Nat. Museum.)

entosphere (en'tō-sfēr), *n.* [Gr. *ἐντός*, within, + *σφαῖρα*, a ball.] In *cytol.*, the inner or medullary zone of the centrosphere of the cell. *Ziegler*, 1899.

Centrosome and aster in the polar mitoses of *Unio*. (Lillie). *A*, aster of the first polar figure, central granule (centrosome) surrounded by medullary (*entosphere*) and cortical (ectosphere) zones; *B*, late anaphase of second polar mitosis, radial *entosphere* bounded by continuous membrane; *C*, *D*, prophases of second mitosis, formation of central spindle within and from the substance of the old entosphere. (From Wilson's "The Cell.")

entostosis (en-tos-tō'sis), *n.* [NL., < Gr. *ἐντός*, within, + *ὀστ*(*έον*), bone, + *-osis*.] Same as *enostosis* or *endostosis*.

entotentacle (en-tō-ten'tạ-kl), *n.* [Gr. *ἐντός*, within, + NL. *tentaculum*, tentacle.] One of the radially arranged tentacles which arise later than the exotentacles and from the entocœles of a coral polyp.

entothorax (en-tō-thō'raks), *n.* [Gr. *ἐντός*, within, + *θώραξ*, thorax.] A chitinous process, probably an elaborate inward fold of the integument, which projects upward in a forked manner from the sternum. Also called *apophysis*.

Entotrophi (en-tot'rō-fī), *n. pl.* [NL., < Gr. *ἐντός*, within, + *τροφός*, feeder, nurse: see *trophi*.] Same as ★*Entognathi*.

entotrophous (en-tot'rō-fus), *a.* Pertaining to or having the characteristics of the *Entotrophi* or *Entognathi*.

entotympanic (en″tō-tim-pan'ik), *a.* [Gr. *ἐντός*, within, + *τύμπανον*, drum: see *tympanum*.] Situated or occurring within the drum of the ear.

entozoal (en-tō-zō'ạl), *a.* [*entozo-on* + *-al*[1].] Caused by the presence of *Entozoa:* as, an *entozoal* disease.

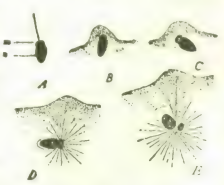
entozoölogically (en″tō-zō-ō-loj'i-kạl-i), *adv.* From the point of view of an entozoölogist, or regarding entozoölogy.

entrain[1], *v. t.* 2. To carry along mechanically by the flow of another fluid at high velocity. Thus water may be carried through a pipe with steam at such a rate that it cannot be precipitated and attach itself to the walls of the pipe, but must move with the steam into the engine-cylinder or other vessel into which the pipe delivers. *Sci. Amer. Sup.*, Dec. 27, 1902, p. 22558.

entrain[2] (en-trān'), *v.* [*en-*[1] + *train*[1].] **I.** *trans.* To put aboard a train.

I doubt very much whether, in Russia, a whole army corps was ever *entrained* or embarked, secretly and noiselessly, in the latter half of a single night; but in Japan this has been done again and again.

George Kennan, in Outlook, June 18, 1904, p. 402.



II. *intrans.* To go aboard a train.

entrainer (en-trān'ėr), *n.* A device for saturating a current of gas or steam with liquid: usually a hollow or pocket for collecting a liquid in such a way that it will be picked up by a passing current of gas or steam.

entrainment (en-trān'ment), *n.* The act of entraining; specifically, the catching up and conveying away by live steam of minute drops of water from a boiler or of particles of sugar from an evaporating-pan or other vessel from which steam is exhausted.

entrance[1], *n.* 7. In *phonetics*, the initial movement in producing a sound; the 'attack' or on-glide. *Scripture*, Exper. Phonetics, p. 429.—8. In music of a concerted sort, the point at which or the effect with which any one of the parts begins, especially when not at the beginning of a piece or passage.—**Pupil of entrance**, same as ★*entrance-pupil* and *interfusion* ★*disk* (which see). *Jour. Roy. Micros. Soc.*, June, 1904, p. 283.

entrance-cone (en'trans-kōn), *n.* In *embryol.*, the conical protrusion of the surface protoplasm of the egg at the point of entrance of the spermatozoön.

Entfance-cone in Sea-urchin's Egg. (Magnified.)

A, sperm-head before entrance; *n*, nucleus; *m*, middle-piece and part of the flagellum; *B*, *C*, sperm-head immediately after entrance, showing entrance-cone; *D*, rotation of the sperm-head, formation of the sperm-aster about the middle-piece; *E*, casting off of middle-piece, centrosome at focus of the rays. The changes figured occupy about eight minutes. (From Wilson's "The Cell.")

entrance-pupil (en'trans-pū″pil), *n.* In a lens system, the circular space corresponding in size and position to the image which is formed of the stop by that portion of the system which lies between the stop and the object. See *interfusion* ★*disk*.

entrancing (en-trans'ing), *p. a.* That entrances or transports with delight or wonder: as, *entrancing* music; an *entrancing* tale.

entrechat (oṅ-tr-shä'), *n.* [F., < It. *intrecciata* (sc. *capriola*), a complicated caper, pp. of *intrecciare*, complicate, < *in*, in, + *treccia*, plait, tress.] A leap in ballet-dancing, during which the performer strikes his heels together several times.

"Mr. Edgeworth excelled me so much" [said the stranger], "that I sat down upon the ground, and burst out a crying; he could actually complete an *entrechat* of ten distinct beats, which I could not accomplish."
Edgeworth, Memoirs, II. vi.

entrée, *n.* 5. An old dance resembling the polonaise, or the music for it.

Entropy leakage, a lowering of the value of the entropy factor in the expansion of a heat-medium, and a consequent lowering of the intrinsic energy of the medium, without a corresponding useful expenditure of mechanical energy to overcome a resistance. The heat-energy of the medium is dissipated without doing work, as the water is wasted which leaks from a mill-dam.—**Principle of the increase of entropy**, the principle (due to Clausius) that, owing to the inequalities of temperature between different points, the *entropy* of the universe continually tends to increase.—**Unit of entropy**, the ★claus (which see).

entry, *n.*—**Catchword entry.** See ★*catchword*.—**Entry sign**, in *music*: (*a*) In a canon that is but partly written out, a mark indicating the point at which the imitating part is to begin. (*b*) A sign from a conductor to a singer or player to begin.—**Table of double entry**, a table having two arguments, as, for example, a multiplication table. It may or may not be arranged so that one argument is entered at the top and the other at the side. As long as the quantities in the table vary with two independent quantities, or appellations, to be entered, it remains a table of double entry, however arranged. Tables of triple, quadruple, etc., entry would be possible; but they are little used, since any table of N + 1 arguments can be replaced by N tables of double entry, though a larger number will often be convenient. A table of double entry cannot be reduced to a table of single entry.—**Writ of entry**, in *common law*, a writ which lies in favor of one having a right of entry to recover possession of lands wrongfully withheld.

entry-clerk (en'tri-klėrk), *n.* A clerk whose business is to make entries in the proper book or books; in common usage, a clerk in a mercantile establishment who keeps a book of original entry in which all purchases and sales are recorded in the order of their occurrence.

entry-word (en'tri-wėrd), *n.* The word under which a book is listed or entered in a catalogue.

Entyloma (en-ti-lō'mä), *n.* [NL. (De Bary, 1874), < Gr. *ἐντυλοῦσθαι*, to grow hard, < *ἐν*, in, + *τύλος*, a callus.] A genus of parasitic fungi of the order *Ustilaginales*. The mycelium is intercellular and not gelatinous as in most smut-fungi. The spores are intercalary or terminal, usually forming groups in the tissue of the host, but not separating from it. Some of the species produce gall-like swellings, and many bear simple conidia. About 70 species have been described. *E. Physalidis* is common on species of *Physalis*.

enucleate, *v. t.* 3. In *cytol.*, to deprive (the cell) of its nucleus; to denucleate.

enuf, *a.*, *n.*, *adv.*, and *interj.* A simplified spelling of *enough*.

Env. Ext. An abbreviation of *Envoy Extraordinary*.

enzoöty (en-zō'ō-ti), *n.* [Gr. *ἐν*, in, + (*epi*)*zoöty*.] A contagious disease of animals, such as infectious abortion of cattle, confined to small localized regions.

enzymatic (en-zi-mat'ik), *a.* [Irreg. < *enzym* + *-atic*. The proper form is *enzymic*.] Relating to an enzym or ferment; enzymic.

enzymation (en-zi-mā'shon), *n.* [*enzym* + *-ation*.] The process of affecting with an enzym.—**Oxidizing enzymation**, the so-called tobacco ★fermentation (which see). Also *oxidizing enzymosis*.

enzymic (en-zim'ik), *a.* Relating to or of the nature of an enzym.

enzymol (en'zi-mōl), *n.* [*enzym* + *-ol*.] A proteid ferment used in place of hydrogen peroxid as a wash for the ulcerated surface of the pharynx.

enzymology (en-zi-mol'ō-ji), *n.* [MGr. *ἐνζυμος*, leavened (see *enzym*), + *-λογια*, < *λέγειν*, speak.] The study of enzyms.

enzymosis (en-zi-mō'sis), *n.* [*enzym* + *-osis*.] Fermentation by non-organized ferments. *Roberts*.

E. O. A game of chance, in which the appropriation of the stakes is determined by the falling of a ball into one of several niches marked E or O respectively. *N. E. D.*

eo- (ē'ō). [Gr. *ἠώς*, dawn: see *eocene*, etc.] In *petrog.*, specifically, a prefix used before the names of rocks, chiefly volcanic, to indicate that they were erupted in geologically ancient time as distinguished from Tertiary or recent time. Its use was suggested by O. Nordenskjöld in 1893. The resulting terms are *eobasalt*, *eodacite*, *eorhyolite*, etc.

Eocardidæ (ē-ō-kär'di-dē), *n. pl.* [NL. *Eocardia*, the type genus, + *-idæ*.] A family of small fossil rodent mammals, containing species of the genera *Helomys*, *Phanomys*, *Palæocarida*, etc., from the Santa Cruz formation (Miocene) of Patagonia. *Ameghino*, 1891.

Eocicada (ē″ō-si-kā'dä), *n.* [NL., < Gr. *ἠώς*, the dawn, + L. *cicada*, cicada.] A genus of the *Cicadidæ* or harvest-flies occurring in the Jurassic lithographic slates of Bavaria.

eodemotic (ē″ō-dē-mot'ik), *a.* [Gr. *ἠώς*, dawn, + *demotic*,] Pertaining to the dawn of demotic (civil as contrastedwith tribal) organization of society.

On comparing the method classes with the periods and culture-grades, it is found that archaic trephining was chiefly prehistoric and exclusively *eodemotic*, but that neoteric trephining persists, at least vestigially, among backward representatives of civilized peoples.
Rep. Bur. Amer. Ethnol., 1894–95, p. 18.

eohistoric (ē″ō-his-tor'ik), *a.* Pertaining to the dawn of history: as, *eohistoric* times; *eohistoric* man.

eolation (ē-ō-lā'shon), *n.* [L. *Æolus*, the wind-god, + *-ation*.] In *geol.*, the process of earth-sculpture by wind; the scouring of exposed formations by wind-driven dust and sand, the chiseling of cliffs and modeling of beaches by wind-driven waves, and the modification of existing features by transportation and deposition of rock material by wind.

eolith (ē'ō-lith) *n.* [Gr. *ἠώς*, dawn, + *λίθος*, a *stone*.] A rudely chipped flint implement (or what appears to be such) regarded, from its workmanship, as older than the paleoliths. Eoliths are found in the oldest Quaternary deposits of Europe. *Keane*, Ethnology, p. 74.

eolithic (ē-ō-lith'ik), *a.* Pertaining to or characterized by the presence of eoliths.

eolotropic (ē″ō-lō-trop'ik). *a.* [*eolotrop-y* + *-ic*.] Characterized by eolotropy; having a different structure in different directions: opposed to *isotropic*. An eolotropic medium shows different elastic properties according to the direction of the stress, and, when transparent, exhibits double refraction.

eolotropy (ē-ō-lot'rō-pi), *n.* [Gr. *αἰόλος*, changeable, shifting, + *-τροπος*, < *τρέπειν*, turn.] Difference of structure in different directions. Doubly refracting crystals are eolotropic, and isotropic bodies, when twisted or subjected to longitudinal or shearing stress, show a temporary eolotropy.

Bodies . . . whose electro-magnetic properties merge into those of isotropic non-conductors as the *eolotropy* disappears. *H. Hertz* (trans.), Electric Waves, p. 203.

eon, *n.* 3. The largest division of geologic time: used by J. D. Dana especially in dividing the archæan into astral and archæozoic eons.

eonial, æonial (ē-ō'ni-al), *a.* Same as *eonian*.

eophone (ē'ō-fōn), *n.* [Gr. *ἠώς*, dawn, the east, the orient, + *φωνή*, sound. The intended meaning seems to be 'that which orients, or fixes the direction of, the sound.'] An apparatus for ascertaining at sea the direction or bearing of a source of sound-waves. It consists of a pair of trumpet-shaped receivers pointing in the same direction and mounted on opposite sides of a separating screen. From these condensing-receivers tubes lead downward and are attached to the two ears of the observer. The screen and trumpets are mounted on a short vertical mast free to be turned so that the edge of the screen can point in any direction. When the observer receives by trial the most intense vibration of the air, then both mouthpieces and the screen between them are pointed to the source of sound. Used in thick weather or at night.

Eoplacophora (ē″ō-pla-kof'ō-rä), *n. pl.* [Gr. *ἠώς*, dawn, + *πλάξ* (*πλακ-*), plate, + *-φορος*, < *φερειν*, bear.] A suborder of the polyplacophorous chitons. It is characterized by having the tegumentum coextensive with the articulamentum, or the latter projecting in smooth insertion-plates, and by having posterior gills. One of its two families is Paleozoic, the other Tertiary and recent.

Eopsetta (ē-op-set'ä), *n.* [NL., < Gr. *ἠώς*, dawn, + *ψῆττα*, a flatfish.] A genus of flounders closely allied to *Hippoglossoides*, found on the coast of California. *E. jordani*, the single known species, is frequently sold as English sole.

eorhyolite (ē-ō-rī'ō-līt), *n.* [*eo-* + *rhyolite*.] In *petrog.*, a geologically ancient rhyolite. See ★*eo-*.

Eosaurus (ē-ō-sâ'rus), *n.* [NL., < Gr. *ἠώς*, dawn, + *σαῦρος*, a lizard.] A genus of stegocephalous *Amphibia* represented only by detached amphicœlous vertebræ from the Coal-measures of Nova Scotia.

Eoscorpius (ē-ō-skôr'pi-us), *n.* [NL., < Gr. *ἠώς*, dawn, + *σκορπίος*, a scorpion.] A genus of fossil scorpions from the Carboniferous rocks of Illinois.

Eosebastes (ē″ō-sē-bas'tēz), *n.* [NL., < Gr. *ἠώς*, dawn, + *Sebastes*.] A subgenus of the genus *Sebastodes*, including the red rockfishes of the coast of California.

Eophone.

a, collecting-cone for sound-vibrations; *b*, screen to separate the sound-waves coming to each cone from different directions and to reflect those coming obliquely; *c*, *c*, ear-tubes connecting each cone separately to one of the operator's ears; *d*, suspending-spring to carry weight of *e*, clamp to press the tube-outlets against the ears; *f*, revolving mast carrying collecting-cones and screen; *g*, hand-wheel to point the screen and cones to the point of greatest intensity of sound; *h*, dumb compass in a fixed relation to the axis of the ship; *i*, pointer indicating the bearing of the screen and cones.

Eosin B, BN, or **BW**, a coal-tar color of the xanthene type, the sodium salt of dibrom-dinitro-fluorescein. It is applied like eosin, but gives bluer pinks. Also called *eosin scarlet*.—**Eosin J.** Same as ★*erythrosin*.—**Eosin S** or **BB**, a coal-tar color of the xanthene type, the potassium salt of the ethyl ether of tetrabrom-fluorescein. It is insoluble in cold water, but readily soluble in alcohol, and for this reason it is often called spirit-soluble eosin. Its application is the same as that of eosin.—**Eosin scarlet.** Same as ★*eosin B, BN*, or *BW*.—**Eosin 10B.** Same as *phloxin*.—**Methyl eosin.** Same as *erythrin*, 1.

eosinophil, a. II. *n.* A leucocyte which stains only with the acid dyes, such as eosin. Also called *acidophil* and *oxyphil*.

eosinophilia (ē″ō-sin-ō-fil'i-ä), *n.* [*eosin* + Gr. *-φιλια*, < *φιλειν*, love.] The presence in the blood of eosinophil leucocytes in markedly increased numbers. *R. C. Cabot*, Clinical Exam. of the Blood, p. 116.

eosinophilic (ē″ō-sin-ō-fil'ik), *a.* Same as *eosinophil*.

eosinophilous (ē″ō-si-nof″i-lus), *a.* [*eosinophil* + *-ous*.] Staining readily and intensely in eosin; of or pertaining to an eosinophil.

eosium (ē-ō'si-um), *n.* [NL., irreg. < Gr. *ἠώς*, dawn (aurora), + *-ium*.] A name suggested by Berthelot for the recently discovered atmospheric gas *krypton*.

eosolate (ē-ō'sō-lāt), *n.* [*eos*(*in*) + *-ol* + *-ate*[1].] A salt of sulpho-acids of the aliphatic creosote esters. *Calcium eosolate* is a gray, gritty powder, with slightly pungent ethereal odor and somewhat acrid leathery taste: used in diabetic affections. *Silver eosolate* is used in gonorrhea, and *quinine eosolate* in malaria.

Eotrochus (ē-ot'rō-kus), *n.* [NL., < Gr. *ἠώς*, dawn, + NL. *Trochus*, a genus of gastropods.] A genus of platypodous *Mollusca*, characterized by turbinate, widely umbilicate shells which have flat whorls and concave base, and which sometimes carry agglutinated foreign particles. The genus was described from Silurian rocks.

epacme (ep-ak'mē), *n.* [Gr. *ἐπί*, upon, + *ἀκμή*, acme.] A stage in the ancestral or phylogenetic history of a group of organisms, such as a family or a genus or a species, before the perfection of development, or acme, is reached. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 616. [Rare.]

epagomenic (ep″a-gō-men'ik), *a.* Same as *epagomenal*.

epanorin (ep-a-nō'rin), *n.* [NL. *epanora* (see def.) + *-in*[2].] A yellow compound contained

in the lichen *Lecanora epanora*. It crystallizes in needles, melting at 131–132° C.

Epanorthidæ (ep-a-nôr'thi-dē), *n. pl.* [NL. (*Ameghino*, 1889), < *Epanorthis*, the type genus, + *-idæ*.] A family of mammals, comprising small species, known from fragmentary remains in the Santa Cruz formation (Miocene) of Patagonia, and placed with the diprotodont marsupials.

epanorthotic (ep″an-ôr-thot'ik), *a.* Of the nature of or characterized by epanorthosis; given to epanorthosis.

eparchæan (ep-ärk-kē'an), *a.* [Gr. *ἐπί*, upon, + E. *archæan*.] Situated above the recognized archæan: applied to a group of rocks which contain no fossils and are not yet accepted as Paleozoic, but which apparently are later in age than the true archæan. *Dana*, Manual of Geol., p. 446.—**Eparchæan interval**, the time-interval between the formation of an archæan rock and the next overlying one. As first used by A. C. Lawson it was restricted to Precambrian time, but it has had a wider significance in the writings of others. *Science*, N. S., Feb. 20, 1903, p. 290.

eparchate (ep'ärk-āt), *n.* [*eparch* + *-ate*[3].] Same as *eparchy*. *Schaff.*

eparchial (ep-ärk'i-al), *a.* Of or pertaining to an eparchy. *Schaff.*

eparcuale (ep-är-kū-ā'lē), *n.*; pl. *eparcualia* (-li-ą). [Gr. *ἐπί*, upon, + L. *arcus*, arch.] The independent ossification from which the neural spine is developed; the supradorsal of Gadow.

eparitoi (e-par'i-toi), *n. pl.* [Gr. *ἐπάριτοι* or *ἐπαρίται*.] A picked body of hoplites created in Arcadia, in ancient Greece, after the foundation of Megalopolis in 370 B. C. They probably formed a considerable troop.

Here too the *Eparitoi* must have had their quarters; and it was their duty, in case of an hostile assault, to defend the southern circuit of the walls.
J. B. Bury, in Jour. Hellenic Studies, XVIII. 18.

Epaxial actinophores. See ★*actinophore*.

epeirogenetic, epeirogenic. Same as ★*epirogenic*.

epembryonic (ep-em-bri-on'ik), *a.* [Gr. *ἐπί*, upon, + *embryonic*.] Of or pertaining to stages in the life of an organism later than the embryonic stages. *Hyatt*, Biol. Lect., 1899, p. 132. [Rare.]

éperlan (ā-pār-loṅ'), *n.* [F., OF. *esperlanc*, *esperlan*, *esperlen*, etc., < MLG. *sperlink* = E. *sparling*[1].] The European smelt, *Osmerus eperlanus*, found along the shores of northern Europe, and esteemed as a food-fish.

eph-. See *epi-*.

Eph., Ephes. Abbreviations of *Ephesians*.

Ephebaceæ (ef-ē-bā'sē-ē), *n. pl.* [NL., < *Ephebe* + *-aceæ*.] A family of gymnocarpous lichens named from the genus *Ephebe*.

ephebarch (ef'ē-bärk), *n.* [Gr. *ἐφήβαρχος*, < *ἔφηβος*, a boy, + *ἀρχός*, leader.] In *Gr. antiq.*, an overseer of youth: a kind of magistrate whose precise duties are not now known.

ephebastic (ef-ē-bas'tik), *a.* Of or pertaining to ephebasty: having characters which belong to the mature growth-stage of a colony.

ephebasty (ef'ē-bas-ti), *n.* [Gr. *ἔφηβος*, mature, + *ἀστυ*, city.] In *paleon.*, the condition of having attained mature growth, as a colony of corals; the stage of mature growth.

Ephebe[2] (e-fē'bē), *n.* [NL. (Fries, 1825), < Gr. *ἐπί*, upon, + *ἥβη*, youth, > pubescence, in allusion to the pubescent thallus.] A genus of lichens having the thallus small and branched and composed chiefly of the algal element. The apothecia are small and round. The species are few and occur on wet rocks and earth.

Ephebeitic (e-fē-bē-it'ik), *a.* [*ephebeitis* + *-ic*.] Of or pertaining to ephebeitis. [Rare.]

Many of the phenomena are those of over-accentuation of processes normal at puberty, which I have for years called *ephebeitic*. *G. S. Hall*, Adolescence, I. 308.

ephebeitis (e-fē-bē-ī'tis), *n.* [NL., < Gr. *ἐφηβεία*, man's estate, + *-itis* (implying inflammation).] The fever of maturing youth. [Rare.]

When the youth takes the helm of his own being, he navigates a choppy sea. . . . He must strive, fight, and storm his way up, if he would break into the kingdom of man. . . . Many an impulse seeks expression, . . . which will never be heard of later. Its function is to stimulate the next higher power. . . . Never is it so true that nothing human is alien from each individual, as in this fever of *ephebeitis*. *G. S. Hall*, Adolescence, II. 89.

ephebiate (e-fē'bi-āt), *n.* [Gr. *ἐφηβεία*, man's estate, + *-ate*[3].] In *Gr. antiq.*, the period of adolescence in boys or the period of ephebic education.

ephebic, *a.* **2.** Of or pertaining to the adult stage of individual development or ontogeny, as contrasted with the adolescent and the senile stages.

[The] *ephebic* stages give the differentials elaborated in the ontogeny at the acme of the evolution of the stock.
Hyatt, Biol. Lect., 1899, 132.

The *ephebic* stages begin with the assumption of characters of lowest taxonomic rank (varietal).
Amer. Jour. Sci., Jan., 1903, p. 12.

ephebolic (ef-ē-bol'ik), *a.* [Gr. *ἔφηβος*, youth, + *βολή*, a throw, cast (cf. *metabolic*, etc.).] Same as ★*ephebic*, 2.

ephebus (e-fē'bus), *n.* Same as *ephebe*.

epheby (ef'ē-bi), *n.* [Gr. *ἐφηβία* (or *ἐφηβεία*, man's estate, < *ἐφηβεύειν*, arrive at man's estate), < *ἔφηβος*, adult: see *ephebic*.] The adult condition; adulthood; the ephebic stage: used in the classification of the stages of ontogeny.

ephectic (e-fek'tik), *a.* and *n.* [Gr. *ἐφεκτικός*, able to hold back, < *ἐπέχειν*, hold back, < *ἐπί*, to, unto, + *ἔχειν*, hold.] **I.** *a.* Holding the judgment in check.

II. *n.* One who suspends judgment.

All these men were called Pyrrhoneans from their master; and also doubters, and sceptics, and *ephectics*, or suspenders of their judgment, and investigators, from their principles. And their philosophy was called investigatory from their investigating or seeking the truth on all sides; and sceptical from their being always doubting (*σκέπτομαι*), and never finding; and *ephectic*, from the disposition which they encouraged after investigation, I mean the suspending of their judgment, epoche; and doubting, because they asserted that the dogmatic philosophers only doubted, and that they did the same.
Diogenes Laertius (trans.), Lives of the Philosophers, [p. 405.

ephedrine (ef'ē-drin), *n.* [*Ephedra* + *-ine*[2].] A crystalline alkaloid, $C_{10}H_{15}ON$, contained in the leaves of *Ephedra distachya* and other species of *Ephedra*. It is mydriatic.

ephedrismos (ef-ē-dris'mos), *n.* [Gr. *ἐφεδρισμός*, lit. 'sitting or riding upon (another's back),' < *ἐφεδρίζειν*, sit or ride upon another's back, < *ἐφεδρος*, sitting upon, < *ἐπί*, upon, + *ἕδρα*, a seat.] A Greek game in which a stone was set up at a given distance and balls were thrown at it. The player who failed to hit the stone was blindfolded and made to carry the victor to the stone.

This is also the case with the group illustrating the oft-repeated theme of the *Ephedrismos* or Encotyle.
M. B. Huish, Greek Terra-cotta Statuettes, p. 123.

ephelkustic (ef-el-kös'tik), *a.* [Gr. *ἐφελκυστικός*, attracted, drawn after, < *ἐφέλκυσις*, power of attraction, < *ἐφέλκειν*, draw after, attract, < *ἐπί*, upon, + *ἕλκειν*, draw.] In *Gr. gram.*, attracted or appended: applied to the letter *ν* (*n*) when, for the sake of euphonious utterance, it is appended to a word ending in a vowel and followed by another beginning with a vowel.

ephemeranthy (e-fem'ę-ran-thi), *n.* [Gr. *ἐφήμερος*, of the day, fleeting, + *ἄνθος*, flower.] In *bot.*, the phenomenon of lasting only one day or less: referring to flowers or, chiefly, their corollas. *F. E. Clements.*

Ephemerida (ef-ę-mer'i-dą), *n. pl.* [NL.] The *Ephemeridæ* considered as of ordinal rank.

ephemeromorphic (e-fem″ę-rō-môr'fik), *a.* [Gr. *ἐφήμερος*, of the day, + *μορφή*, form.] Of or pertaining to the ephemeromorphs; of or pertaining to a form of organic life that is transitory and unstable—in particular, a form of life which, being definitely neither plant nor animal, has no permanent place in nature; ephemeromorphous. [Rare.]

Ephemeroptera (e-fem-ę-rop'tę-rą), *n. pl.* [NL., < Gr. *ἐφήμερος*, of the day, + *πτερόν*, wing.] In *entom.*, the *Ephemeridæ* considered as an order.

ephete (ef'ēt), *n.* [Gr. *ἐφέτης*, a commander, a magistrate, < *ἐφιέναι*, send to, command, < *ἐπί*, to, + *ἰέναι*, send.] In *Gr. antiq.*, a criminal magistrate in Athens, especially one who tried cases of murder.

ephetic (e-fet'ik), *a.* [*ephete* + *-ic*.] Of or pertaining to the office of ephete.

ephippial, *a.* **2.** Having or carrying a brood-pouch: as, the *ephippial* females of certain crustaceans.

ephippic (e-fip'ik), *a.* [Gr. *ἐφίππιον*, a saddle-cloth (taken for 'saddle'), + *-ic*.] Saddle-shaped; specifically, having the ends of the vertebral centra concave in one plane and convex in the other, as are the cervical vertebræ of birds; heterocœlous. *Wieland*, 1899.

ephor, *n.* **2.** In modern Greece, an overseer or superintendent of public works.

ephoric (e-for'ik), *a.* [*ephor* + *-ic*.] Same as *ephoral*.

Ephraimite (ē'fra-im-īt), *n.* **1.** In *Old Test. hist.*, a member of the tribe of Ephraim, one of the 12 tribes of Israel.—**2.** A nickname for pieces of 8 groschen struck at Berlin by Frederick the Great about 1759: so called from one of the directors of the mint.

ephydriad (e-fid'ri-ad), *n.* [Gr. *ἐφυδριάς* (*-αδ-*), of the water (sc. *νύμφη*, nymph), < *ἐπί*, upon, + *ὑδωρ*, water.] A water-nymph. *L. Hunt.* [Rare.]

ephydrid (ef'i-drid), *a.* Of or belonging to the dipterous family *Ephydridæ*.

ephydrogamic (ef″i-drō-gam'ik), *a.* [Gr. *ἐπί*, upon, + *ὑδωρ*, water, + *γάμος*, marriage, + *-ic*.] Hydrophilous, with the pollination occurring on the surface of the water.

ephyrula (ef-ir'ū-lą), *n.*; pl. *ephyrulæ* (-lē). [NL.] A young acraspedote medusa newly set free from the scyphistoma.

epial (ep'i-al), *n.* [F. *épial* (Geoffroy), < Gr. *ἐπί*, upon, + *-al*.] In *ichth.*, the neural spine; the spine in which the neural arch ends. *Starks*, Synonymy of the Fish Skeleton, p. 524.

epialid, hepialid (ē-, hē-pī'a-lid), *n.* and *a.* **I.** *n.* A member of the family *Epialidæ* (*Hepialidæ*).

II. *a.* Of or belonging to the lepidopterous family *Epialidæ* (*Hepialidæ*).

epiandrium (ep-i-an'dri-um), *n.*; pl. *epiandria* (-ą). [NL., < Gr. *ἐπί*, to, + *ἀνήρ* (*ἀνδρ-*), male.] In the *Arachnida*, the opening of the male genital organs.

Epibaterium (ep″i-bā-tē'ri-um), *n.* [NL. (Forster, 1776), in allusion to the climbing habit, < Gr. *ἐπιβατήριος*, of or for climbing, < *ἐπιβαίνειν*, go upon: see *epibatus*.] A genus of plants of the family *Menispermaceæ*. They are usually twining shrubs with axillary panicles of small flowers, but the leaves not peltate as in some related genera. There are about 30 species, widely distributed, chiefly in the tropical and subtropical regions of the Old World. One species, *E. Carolinum* (*Cocculus Carolinus* of Linnæus), occurs in the southern United States, and another, *E. diversifolium* (*Cocculus diversifolius* of de Candolle), extends from Texas to Arizona and Mexico.

epibenthic (ep-i-ben'thik), *a.* [*epibenthos* + *-ic*.] Living upon or in the bottom of the continental shelf or littoral zone of the ocean; of or pertaining to epibenthos. See ★*epibenthos*, ★*benthos*, ★*benthonic*.

Everywhere, however, the *epibenthic* fauna is exposed to certain definite environmental conditions, as compared with a deeper fauna. *Encyc. Brit.*, XXXIII. 933.

epibenthos (ep-i-ben'thos), *n.* [NL., < Gr. *ἐπί*, upon, + *βένθος*, depth (see ★*benthos*).] The animals and plants that exist next to the benthos, or deep-sea fauna and flora—namely, those that live in the sea-bottom of the continental shelf or littoral zone, and those that are attached to its surface, and those that creep or run over its surface, considered collectively. See ★*benthos*.

The fauna of this zone [continental shelf or littoral zone], generally very well characterized, may be distinguished as the *epibenthos*. *Encyc. Brit.*, XXXIII. 933.

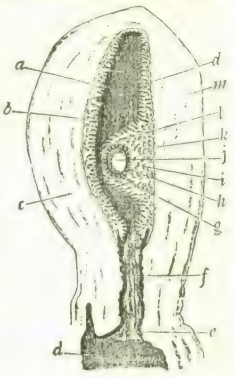
epiboulangerite (ep″i-bō-lan'jėr-īt), *n.* [*epi-* + *boulangerite*.] A lead sulphantimonate, $Pb_3Sb_2S_8$, occurring in dark bluish-gray to black masses. It is perhaps derived by alteration from boulangerite.

epibranchial, *n.* **2.** In *ichth.*, one of the upper bones of the gill-arches. They lie just above the angle of each arch, between the superior pharyngeals (which they support) and the ceratobranchials below.

epibranchiale (ep″i-brang-ki-ā'le), *n.*; pl. *epibranchialia* (-li-ą). [NL., neut. of **epibranchialis*, < Gr. *ἐπί*, upon, + *βράγχια*, gills: see *branchial*.] In *ichth.*, the uppermost of the three pieces of the gill-branches (*branchialia*) in the gill-apparatus.

Epibulia (ep-i-bū'li-ą), *n.* [NL.] The typical genus of the family *Epibulidæ*. *Eschscholtz*, 1829.

Epibulidæ (ep-i-bū'li-dē), *n. pl.* [NL., < *Epibulia* + *-idæ*.] A family of calyconectous *Siphonophora*. It consists of polygastric forms with a short, inflated, spirally convoluted stem, cormidia ordinate in a spiral ring protected by a corona of palpons, pneumatophore without pericystic radial pouches but with hypocystic villi. It includes the genera *Epibulia* and *Angela*.



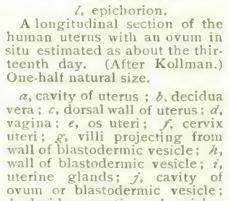
epicheilous, *a.* See ★*epichilous*.

epichilous (ep-i-kī'lus), *a.* [Gr. *ἐπιχειλής*, on or at the lips, < *ἐπί*, upon, + *χείλος*, lip.] Of or pertaining to the lip or buccal segment: specifically applied to earthworms having the prostomium separated from the buccal segment by a complete groove. Also *epicheilous*. *Proc. Zool. Soc. London*, 1901, p. 199.

Epichloë (e-pik'lō-ē), *n.* [NL. (Tulasne, 1865), < Gr. *ἐπί*, upon, + *χλόη*, grass, verdure.] A genus of parasitic fungi of the order *Hypocreales*, having the perithecia embedded in a smooth, bright-colored, fleshy stroma which is at first covered with a conidial layer. The asci are cylindrical and contain 8 hyaline filiform spores. The species are mostly parasitic on grasses, as the name indicates. *E. typhina* frequently attacks the cultivated grasses, *Poa pratensis*, blue-grass, and *Phleum pratense*, timothy.

epichondrosis (ep″i-kon-drō'sis), *n.* [NL., < Gr. *ἐπί*, upon, + *χόνδρος*, cartilage, + *-osis.*] A growth of cartilage upon the periosteum, such as that producing the antlers of a deer.

epichondrotic (ep″i-kon-drot'ik), *a.* [*epichondrosis* (*-ot-*) + *-ic.*] Relating to a growth of cartilage upon the periosteum or perichondrium. The antlers of deer are epichondrotic growths.



Epichondrotic growths preponderate, with multiple and broadened bases.
Proc. Zool. Soc. London, [1902, I. 218.

epichordal, *a.* **2.** Noting a type of vertebræ, found in some *Batrachia*, in which the cartilaginous elements from which the centra of the vertebræ are developed are suppressed on the ventral side of the notochord, as in *Pipa*, *Bombinator*, and *Alytes*.

The *epichordal* feature is not necessarily indicative of relationship.
H. Gadow, Amphibia and [Reptiles, p. 20.

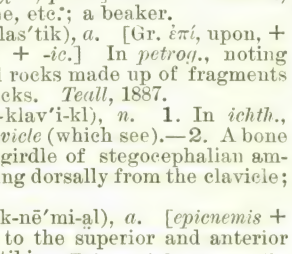
epichorion (ep-i-kō'ri-on), *n.*; pl. *epichoria* (-ä). [Gr. *ἐπί*, upon, + *χόριον*, the membrane that incloses the fetus.] In *embryol.*, that portion of the uterine mucosa which folds over and incloses the egg in mammals.

l, epichorion.
A longitudinal section of the human uterus with an ovum in situ estimated as about the thirteenth day. (After Kollman.) One-half natural size.

a, cavity of uterus; *b*, decidua vera; *c*, dorsal wall of uterus; *d*, vagina; *e*, os uteri; *f*, cervix uteri; *g*, villi projecting from wall of blastodermic vesicle; *h*, wall of blastodermic vesicle; *i*, uterine glands; *j*, cavity of ovum or blastodermic vesicle; *k*, decidua serotina; *l*, epichorion; *m*, ventral wall of uterus. (From Marshall's "Vertebrate Embryology.")

epichrosis (ep-i-krō'sis), *n.* [NL., < Gr. *ἐπίχρωσις*, a surface stain, < *ἐπιχρωννύναι*, color on the surface, < *ἐπί*, upon, + *χρωννύναι*, color.] Cutaneous discoloration, as in chloasma, freckles, etc.

epichysis (ep-i-kī'sis), *n.* [NL., < Gr. *ἐπίχυσις*, a pouring in, also a pitcher, < *ἐπιχεῖν*, pour in, < *ἐπί*, on, in, + *χεῖν*, pour.] In *Gr. archæol.*, a pitcher for wine, etc.; a beaker.



epiclastic (ep-i-klas'tik), *a.* [Gr. *ἐπί*, upon, + *κλαστός*, broken, + *-ic.*] In *petrog.*, noting detrital, surficial rocks made up of fragments of preëxisting rocks. *Teall*, 1887.

epiclavicle (ep-i-klav'i-kl), *n.* **1.** In *ichth.*, same as *supraclavicle* (which see).—**2.** A bone of the shoulder-girdle of stegocephalian amphibians extending dorsally from the clavicle; the clithrum.

epicnemial (ep-ik-nē'mi-al), *a.* [*epicnemis* + *-al*[1].] Relating to the superior and anterior portion of the tibia.—**Epicnemial process,** the long, upwardly directed process on the superior part of the tibia, particularly pronounced in grebes and loons.

epicnemis (ep-ik-nē'mis), *n.* [NL., < *ἐπί*, upon, + *κνήμη*, tibia.] A small sclerite sometimes found at the base of the tibia in some *Arachnida*, which does not appear to have separate motion.

epicœloma (ep-i-sē-lō'mä), *n.* [Gr. *ἐπί*, upon, + *κοίλωμα* (*τ-*), a hollow, cavity: see *cœloma.*] The portion of the cœloma, or true body-cavity, nearest the notochord in the vertebrate embryo. Also *epicœlom.*

m, epicœloma.
Transverse section across the middle of the length of a frog embryo. Magnified.

a, dorsal root of spinal nerve; *b*, mesoblastic somite; *c*, subnotochordal rod; *d*, archinephric duct; *e*, intestinal region of mesenteron; *f*, splanchnocœle; *g*, epiblast; *h*, yolk-cells; *i*, mesoblast; *j*, splanchnopleuric layer of mesoblast; *k*, somatopleuric layer of mesoblast; *l*, archinephric duct; *m*, myocœle or epicœloma; *n*, notochord; *o*, spinal cord. (From Marshall's "Vertebrate Embryology.")

epicontinental (ep″i-kon-ti-nen'tal), *a.* [*epi-* + *continental.*] In *geol.*, resting upon a continent: said of shallow seas formed by the submergence of continental areas in certain geological periods. *Chamberlin and Salisbury*, Geol., I. 11.

epicostal (ep-i-kos'tal), *a.* [Gr. *ἐπί*, upon, + L. *costa*, rib, + *-al*[1].] Lying upon a rib.

epicotyleal (ep″i-kot-i-lē'al), *n.* [Gr. *ἐπί*, upon, + *κοτυλη*, cup, + *-al*[1].] In *ichth.*, the metapterygoid, one of the lateral bones of the head of fishes. *Starks*, Synonymy of the Fish Skeleton, p. 514.

epicrisis, *n.* **3.** A secondary crisis in an infectious disease.

epicrystalline (ep-i-kris'ta-lin), *a.* [*epi-* + *crystalline.*] In *geol.*, noting a crystalline structure or character which is superimposed (as often in regional metamorphism) upon an older sedimentary one. *Geikie*, Text-book of Geol., p. 802.

epicurrent (ep'i-kur-ent), *n.* [Gr. *ἐπί*, upon, + L. *currens*, current.] A stream or current at the surface of the sea, such as the Gulf Stream. *Haeckel* (trans.), Planktonic Studies, p. 625.

epicycle, *n.* **2.** (*b*) In *mod. astron.*, sometimes used for the geocentric path of a planet, or its path relative to the earth regarded as fixed.

epicyclic, *a.* **II.** *n.* A curve which is the path of a point P describing uniformly a circular orbit relatively to a point Q which itself has a uniform circular motion about O. If the angular velocities have the same sign, the epicyclic is *direct*; if opposite, *retrograde.*

epidemicity (ep-i-dē-mis'i-ti), *n.* [*epidemic* + *-ity.*] The condition of being epidemic. *Encyc. Brit.*, XXVII. 468.

epidemiographist (ep-i-dē-mi-og'ra-fist), *n.* A writer on the subject of epidemics. *N. E. D.*

epidendral (ep-i-den'dral), *a.* [Gr. *ἐπί*, upon, + *δένδρον*, tree, + *-al*[1].] Growing on trees: applied chiefly to epiphytes: as, an *epidendral* orchid.

epidendric (ep-i-den'drik), *a.* Same as ★*epidendral.*

epiderma (ep-i-dėr'mä), *n.*; pl. *epidermata* (-ma-tä). [NL., < Gr. *ἐπί*, upon, + *δέρμα*, skin.] A cutaneous excrescence, such as a wart.

epidermatic (ep″i-dėr-mat'ik), *a.* Same as *epidermic.*

epidermatous (ep-i-dėr'ma-tus), *a.* Pertaining to or affecting the epidermis.

Epidermic globes. Same as *epithelial pearls* (which see, under *pearl*).—**Epidermic medication.** See *epidermic method*, under *epidermic.*

epidermin (ep-i-dėr'min), *n.* [*epidermis* + *-in*[2].] An emollient consisting of equal parts of white wax, acacia, glycerin, and water, employed as a vehicle for exhibiting skin-medication.

epidermoid, *a.* **II.** *n.* A tumor composed of cells resembling those of, or derived from, the epidermis.

epidermoidal (ep″i-dėr-moi'dal), *a.* Resembling the epidermis.

epidermolysis (ep″i-dėr-mol'i-sis), *n.* [Gr. *ἐπιδερμ(ίς)*, epidermis, + *λύσις*, loosening.] A loosening of the epidermis from the next underlying layer of the skin.

epidermoma (ep″i-dėr-mō'mä), *n.*; pl. *epidermomata* (-ma-tä). [Gr. *ἐπιδερμ(ίς)*, epidermis, + *-oma.*] A cutaneous excrescence or outgrowth, such as a wart.

epidermosis (ep″i-dėr-mō'sis), *n.*; pl. *epidermoses* (-sēs). [Gr. *ἐπιδερμ(ίς)*, epidermis, + *-osis.*] A disease of the skin which affects chiefly the superficial layer, or epidermis.

epidiabase (ep-i-dī'a-bās), *n.* [*epi-* + *diabase.*] In *petrog.*, a diabase the augite in which has been changed to amphibole, uralite, or hornblende: applied to rocks previously called *epidiorite.* *Issel*, 1892.

epidiascope (ep-i-dī'a-skōp), *n.* [Gr. *ἐπί*, upon, + *διά*, through, + *σκοπεῖν*, view.] An instrument for the optical projection of the images of opaque bodies on a screen by means of reflected or transmitted light. It consists of a lantern-box containing a powerful arc-light, a water-tank for removing heat-rays, and a series of mirrors beneath and above the objective. *Nature*, Feb. 19, 1903, p. 376. See cut at *projecting-*★*lantern.*

epididymectomy (ep-i-did-i-mek'tō-mi), *n.* [NL. *epididymis* + Gr. *ἐκτομή*, excision.] Excision of the epididymis. *Jour. Trop. Med.*, Jan. 15, 1903, p. 25.

epididymite (ep-i-did'i-mīt), *n.* [Gr. *ἐπί*, upon, + E. (*eu*)*didymite.*] A silicate of beryllium and sodium, $HNaBeSi_3O_8$, occurring in colorless twinned orthorhombic crystals of tabular habit: found in southern Greenland. It has the same composition as eudidymite, but differs from it in crystallization.

epidotiferous (ep″i-dō-tif'e-rus), *a.* [*epidote* + L. *ferre*, bear.] Containing epidote; epidotic.

epidotization (ep″i-dō-tī-zā'shon), *n.* [*epidote* + *-ize* + *-ation.*] In *petrog.*, that form of metamorphism which is accompanied by the formation of epidote, usually at the expense of the ferromagnesian minerals, but also from the feldspars in some instances.

epidural (ep-i-dū'ral), *a.* [*epi-* + *dura* (*mater*) + *-al*[1].] Situated upon the dura mater: as, the *epidural* space, an interval between the periosteum which lines the spinal canal and the dura mater of the spinal cord.

epifocal (ep-i-fō'kal), *a.* [*epi-* + *focal.*] Lying about the focus; arranged with reference to the focus; near the focus; specifically, above the seismic center or focus of an earthquake.

When this material is volcanic it is almost invariably magnetic, and we perceive in its sudden rearrangement causes which should produce magnetic effects within an *epifocal* district. *Encyc. Brit.*, XXVII. 608.

epifolliculitis (ep″i-fo-lik-ū-lī'tis), *n.* [NL., < Gr. *ἐπί*, upon, + NL. *folliculus*, follicle, + *-itis.*] Inflammation of the hair-follicles of the scalp.

epigamic (ep-i-gam'ik), *a.* [Gr. *ἐπί*, upon, + *γάμος*, marriage.] Relating to the mating of animals: as, *epigamic* colors, those worn by males during the mating period and supposed to attract the females. *E. B. Poulton*, Colors of Animals, p. 338.—**Epigamic character,** any characteristic of color, markings, structure, or conduct which serves to attract or excite the other sex during the courtship of animals, such as the song of birds, the drumming of the grouse, the plumage of the peacock, etc.—**Epigamic coloring.** See ★*coloring.*

Epigastric angle, fold, fossa, zone. See ★*angle*[3], ★*fold*[1], ★*fossa*, and *abdominal regions*, under *abdominal.*

epigenetic (ep″i-jē-net'ik), *a.* [*epigenesis*, after *genetic.*] **1.** Of, pertaining to, or produced by epigenesis.

He criticises the ideas of progress and of the unity of history, and contends for an *epigenetic* as distinguished from an evolutionary view of the origins of civilisation. *Mind*, XII. 629.

2. In *phys. geog.*, a term applied to those rivers whose courses have been determined by the slope of a once overlying series of strata, now removed by erosion so as to disclose rock-structures of another arrangement; superposed; inherited.

epigenist (e-pij'e-nist), *n.* [*epigen(y)* + *-ist.*] One who accepts the doctrine of epigenesis as opposed to evolution in the sense of preformation: same as *epigenesist.*

epigenite (e-pij'e-nīt), *n.* [Gr. *ἐπιγενής*, growing after, + *-ite*[2].] A sulpharsenate of copper and iron occurring in steel-gray prismatic crystals: found near Wittichen, Baden.

epiglottitis (ep″i-glo-tī'tis), *n.* [NL., < *epiglottis* + *-itis.*] Inflammation of the epiglottis.

epignath (ep'ig-nath), *n.* [Gr. *ἐπί*, upon, + *γνάθος*, jaw.] In *Isopoda*, an epipodite usually consisting of one article affixed to the external margin of the protopodite or basal part of a maxilliped.

epigonal (e-pig'ō-nal), *a.* Characteristic of or pertaining to an epigone. See *epigone*[1].

epigraf, *n.* and *v. t.* A simplified spelling of *epigraph.*

epigramme (ep-i-gram'), *n.* [F. *épigramme*: see *epigram.*] A small fillet of game, poultry, lamb, or other delicate meat prepared and served as an entrée.

epiguanine (ep-i-gwä'nin), *n.* One of the xanthin bases, $C_6H_7N_5O$.

epigyne (ep'i-jīn), *n.* [Gr. *ἐπί*, to, + *γυνή*, female.] The female aperture or vulva in arachnids. *Proc. Zool. Soc. London*, 1900, p. 387.

epigynum (e-pij'i-num), *n.*; pl. *epigyna* (-nä). [NL., < Gr. *ἐπί*, to, + *γυνή*, female.] In the *Arachnida*, the opening of the female genital organs; the epigyne. *Trans. Linnean Soc. London*, 2d ser., Zool., 1892, p. 297.

epigyny (e-pij'i-ni), *n.* [*epigyn-ous* + *-y*[3].] In *bot.*, the character of being epigynous; the growth of corolla and stamens on the top of the ovary.

Apart from this, botanists are generally agreed that the concrescence of parts of the flower-whorls . . . is an indication of advance, as is also the concrescence that gives the condition of *epigyny.* *Encyc. Brit.*, XXV. 440.

epihypocycloidal (ep″i-hī-pō-sī-kloi′dal), *a.* [*epi-* + *hypocycloidal.*] In *math.*, having a generating rolling curve of such a form that the portion of the profile without the primitive circle is epicycloidal, while that within it is hypocycloidal.

epilaryngeal (ep″i-lă-rin′jē-al), *a.* [Gr. *ἐπί*, upon, + *λάρυγξ*, larynx, + *-e-al.*] Above the larynx; falsetto.

epilate, *v. t.*—**Epilating forceps.** See ★*forceps.*

epilatory (ē-pil′a-tō-ri), *n.* [L. *e*, out, + *pilus*, hair, after *depilatory.*] Same as *depilatory.*

epilemma (ep-i-lem′ă), *n.*; pl. *epilemmata* (-ma-tă). [Gr. *ἐπί*, upon, + *λέμμα*, scale.] The fine, transparent sheath of a terminal nerve-fibril.

epilemmal (ep-i-lem′al), *a.* Of or pertaining to the epilemma. *Jour. Exper. Med.*, March 25, 1901, p. 506.

epilepsy, *n.*—**Cursive epilepsy,** epilepsy in which the prodromes take the form of an impulse to run. —**Diurnal epilepsy,** a form of epilepsy in which the attacks occur only or chiefly during the daytime.—**Focal epilepsy.** Same as *cortical epilepsy.*—**Laryngeal epilepsy.** Same as *laryngeal* ★*vertigo.*—**Nocturnal epilepsy,** a form of epilepsy in which the paroxysms occur only at night, and usually during sleep.—**Psychic epilepsy,** a form of epilepsy attended with mental derangement.

Epileptic cry. See ★*cry.*—**Epileptic status,** a morbid condition marked by almost continuous epileptic seizures, the intervals between which are passed in a state of coma and fever.

epileptoid, *a.* **II.** *n.* A person who is prone to have epileptic seizures.

epilobe, *n.* **2.** In *bot.*, a plant of the genus *Epilobium.* Also applied to *Chamænerion angustifolium*, the great willow-herb, long included in *Epilobium.*

epilog, *n.*, and *v. i.* A simplified spelling of *epilogue.*

epilogism†, *n.* **2.** Something added; an epilogue.

epilogist (e-pil′ō-jist), *n.* [*epilogue* + *-ist.*] The writer or the speaker of an epilogue.

The *epilogist* says that missing sections of the tale will be lost unless he finds time to treat them; this is a confession that the pretended book of the Grail (assumed according to the usual mediæval fiction) has no existence outside of his inner consciousness.
Jour. Amer. Folk-lore, Jan.–March, 1902, p. 55.

epimagmatic (ep-i-mag-mat′ik), *a.* [*epi-* + *magmatic.*] In *petrog.*, noting those minerals in igneous rocks which have been formed since the solidification of the magma: not pyrogenetic. Such minerals are often called *secondary* minerals. See *secondary*, 4.

epimere (ep′i-mēr), *n.* [Gr. *ἐπί*, upon, + *μέρος*, part, portion.] **1.** In *embryol.*, a portion of the mesodermal wall of the epicœloma in the vertebrate embryo. See cut under ★*epicœloma.*—**2.** In *zoöl.*, same as *epimeron.*

epimorphosis (ep″i-môr-fō′sis), *n.* [Gr. *ἐπί*, upon, + *μόρφωσις*, forming, < *μορφοῦν*, *v.*, form, < *μορφή*, form.] The regeneration of a piece or fragment of an organism by cell-proliferation at the cut or injured surfaces: a more common form of regeneration, distinguished from ★*morphallaxis.*

epimysium (ep-i-mī′si-um), *n.* [NL., erroneously formed from Gr. *ἐπί*, upon, + *μῦς* (*μυ-*), muscle.] The connective-tissue sheath of a muscle.

epimyth (ep′i-mith), *n.* [NL. *epimythium*, < Gr. *ἐπιμύθιον*, < *ἐπί*, upon, + *μῦθος*, fable. Compare *affabulation.*] The moral appended to a fable or story.

epimythium (ep-i-mith′i-um), *n.*; pl. *epimythia* (-ă). [NL.] Same as ★*epimyth.*

Such are the repetition in cursive of a fable . . . and of an *epimythium.*
D. C. Hesseling, in Jour. Hellenic Studies, XIII. 296.

epinephridial (ep″i-nef-rid′i-al), *a.* [Gr. *ἐπί*, upon, + NL. *nephridium* + *-al*[1].] Of or pertaining to the spaces above the renal organ or nephridium. See the quotation under ★*perigonadial.*

epinephrin (ep-i-nef′rin), *n.* [Gr. *ἐπί*, upon, + *νεφρός*, kidney, + *-in*[2].] **1.** A term introduced by J. J. Abel to designate the active blood-pressure raising principle of the adrenal glands. See also ★*adrenalin.*—**2.** The proprietary name of a preparation made from the suprarenal capsule, which possesses marked hemostatic properties.

epineural, *a.* **2.** Lying upon or over a nerve. —**Epineural canal,** in some echinoderms, one of the canals which run between the nervous system and the adjacent body epithelium.

Epinnula (e-pin′ū-lă), *n.* [NL., < L. *ē-*, out, + *pinnula*, dim. of *pinna*, fin.] A genus of scombroid fishes of the family *Gempylidæ:* found in the West Indies.

epinotum (ep-i-nō′tum), *n.*; pl. *epinota* (-tă). [NL., < Gr. *ἐπί*, upon, + *νῶτος*, back.] Same as *metanotum. Biol. Bulletin*, May, 1904, p. 258.

epionychium (ep″i-ō-nik′i-um), *n.*; pl. *epionychia* (-ă). [NL., < Gr. *ἐπί*, upon, + *ὄνυξ* (*ὀνυχ-*), nail.] The membrane which covers the nails of the fetus.

epiopticon (ep-i-op′ti-kon), *n.*; pl. *epioptica* (-kă). [NL., < Gr. *ἐπί*, upon, + *ὀπτικός*, optic.] The second of the three ganglionic swellings in each of the optic ganglia of an insect. *A. S. Packard*, Text-book of Entom., pp. 253, 254.

epiostracum (ep-i-os′tra-kum), *n.* [NL., < Gr. *ἐπί*, upon, + *ὄστρακον*, shell.] The outer layer in the integument of *Acarina.* It consists of a single layer of cells, rounded or conical on the outer side and flat on the inner side. These cells form the papillæ with which the soft parts of the body are often coated.

epiotic, *n.* **2.** One of the outer or lateral pair of the supratemporal bones in the cranial roof of the stegocephalian *Amphibia*, regarded as bones of dermal origin.—**3.** In *ichth.*, a lateral, posterior paired bone of the cranium, usually forming a blunt projection. It lies at the side of the supraoccipital behind the parietal, and articulates below with the exoccipital. The upper limb of the post-temporal is attached to it.

epiparasite (ep-i-par′a-sīt), *n.* [Gr. *ἐπί*, upon, + *παράσιτος*, parasite.] Same as *ectoparasite.*

epipastic (ep-i-pas′tik), *a.* and *n.* [F. *épipastique*, < Gr. *ἐπίπαστος*, sprinkled over, < *ἐπιπάσσειν*, sprinkle over, < *ἐπί*, upon, + *πάσσειν*, sprinkle.] **I.** *a.* Sprinkled over, as silk or paper with cantharides or other blistering agents, or with a powder.

II. *n.* A substance which causes a blister when applied to the skin; blister-plaster; a vesicatory.

Epiph. An abbreviation of *Epiphany.*

epiphallus (ep-i-fal′us), *n.*; pl. *epiphalli* (-ī). [NL., < Gr. *ἐπί*, upon, + *φαλλός*, phallus.] In some pulmonate gastropods, an enlargement of the vas deferens, which does not enter the penis directly, but is continued beyond the apex of that organ and frequently bears a long blind duct, the flagellum. *Proc. Zool. Soc. London*, 1897, p. 447.

epiphenomenal (ep″i-fē-nom′e-nal), *a.* [*epiphenomenon* + *-al*[1].] Pertaining to or of the nature of an epiphenomenon.

The spiritual becomes the "*epiphenomenal*," a merely incidental phosphorescence, so to say, that regularly accompanies physical processes of a certain type and complexity. *Encyc. Brit.*, XXXI. 88.

From the standpoint of naturalism a world described in such terms is *epiphenomenal.*
J. Ward, Naturalism and Agnosticism, ii.

epiphenomenalism (ep″i-fē-nom′e-nal-izm), *n.* [*epiphenomenal* + *-ism.*] The doctrine that consciousness, or mind, is an added or secondary phenomenon (epiphenomenon); the doctrine that consciousness is the incidental result of the phenomena of neural structure and of neural activity according to the laws of mechanics. According to this view, freedom and responsibility are illusions or a routine, having no more real relation to conduct than has the sound of the bell to its tolling or the whistle of the engine to its movements. The aim of science is held to be the objective study of a material universe, into which our minds must not be thrust as part of the problem, which is complete and intelligible only when considered objectively and as separated from our minds by a chasm that is intellectually impassable. Sensible knowledge is held to consist of phenomena or appearances which are produced in our minds by a natural world that in itself is, and always must be, utterly unknown and unknowable; and as the human brain is part of the phenomenal world of appearances in our minds, critical epiphenomenalism resolves itself into the assertion that our minds are the by-products of appearances in our minds, produced by we know not what.

How does *epiphenomenalism* arise? By immediate inference from the fundamental thesis of parallelism, the denial of causal relations between mental and physical. If the volition is not the cause of its movement, then consciousness is inefficient. If the physical world is a closed circle, then the mind is a mere epiphenomenon on the roof of things but looking helplessly down. Everything goes on exactly as if it were not present. It is therefore, so to speak, a potential absentee. If it were an actual absentee, the world would be no different.
C. A. Strong, Why the Mind has a Body, p. 80.

epiphenomenalist (ep″i-fē-nom′e-nal-ist), *n.* [*epiphenomenal* + *-ist.*] One who holds consciousness to be an epiphenomenon. See ★*epiphenomenalism.* *C. A. Strong*, Why the Mind has a Body, p. 83.

epiphenomenalistic (ep″i-fē-nom″e-nal-is′tik), *a.* Partaking of the character of epiphenomenalism. *C. A. Strong*, Why the Mind has a Body, p. 350.

epiphenomenon, *n.* **2.** A phenomenon which is secondary to another or others; a phenomenon which is a sort of by-product in no wise affecting other phenomena. The term is used especially to describe consciousness as conceived by Dr. Shadworth Hodgson, who thinks that not only is consciousness without effect upon the brain, but that one idea is without effect upon other ideas.

The human soul Herbart conceived to be such a real, its various presentations and mental processes being but passing *epiphenomena* of its simple underlying existence. These *epiphenomena* he attributed to the interaction of the reals. *H. Nichols*, Cosmology, § 121.

To say that consciousness is an aura or *epiphenomenon* of the organism, which itself is but a mechanical automaton, is to shirk the difficulty, not to face it.
J. Ward, Naturalism and Agnosticism, II. 37.

Specifically—**3.** In *psychol. theory*, a collateral product of a given set of conditions; a phenomenon which accompanies the effect of a given cause, but which itself has no place in the chain of cause and effect.

They [psychical changes] are called collateral products or "*epiphenomena*" to obviate the charge of materialism, and to conform to the interpretation of the conservation of energy that we have just discussed.
Encyc. Brit., XXXII. 68.

4. In *neurol.*, a supererogatory phenomenon; something added after the plan of the work is complete.

The cortex cerebri [is] the most important portion of the brain from a psychical point of view, though from the physiological standpoint it may seem rather an *epiphenomenon* or afterthought. *Buck*, Med. Handbook, II. 273.

Epiphenomenon hypothesis. See ★*epiphenomenalism.*

epiphonematical (ep″i-fō-nē-mat′i-kal), *a.* [*epiphonema*(*t-*) + *-ic* + *-al*[1].] Of the nature of an epiphonema.

epiphylly (ep′i-fil-i), *n.* [Gr. *ἐπί*, upon, + *φύλλον*, a leaf, + *-y*[3].] The occurrence of epiphytes upon leaves. *Kearney*, Contrib. National Herb., V. 436.

epiphyma (ep-i-fī′ma), *n.*; pl. *epiphymata* (-ma-tă). [NL., < Gr. *ἐπί*, upon, + *φῦμα*, a growth.] Any disease of the skin.

epiphyseolysis (ep-i-fi-sē-ol′i-sis), *n.* [NL., < Gr. *ἐπίφυσις*, epiphysis, + *λίσις*, dissolution.] Separation of an epiphysis.

epiphysitis (ep″i-fi-sī′tis), *n.* [NL., < *epiphysis* + *-itis.*] Inflammation of an epiphysis.

epiphyte, *n.*, **1.** Schimper classifies epiphytes as follows: (*a*) *proto-epiphytes*, comprising the little-homogeneous species which are compelled to obtain nourishment from the surface of their support and directly from atmospheric sources; (*b*) *hemi-epiphytes*, which germinate and pass through their earliest stage on trees, but which later become connected with the ground by their roots; (*c*) *nest-epiphytes*, consisting of species which by appropriate devices collect large quantities of humus and water; (*d*) *tank-epiphytes*, in which the root system is developed only as an anchoring apparatus or is entirely suppressed, so that the whole process of nutrition is carried on by the activity of the leaves.

epiphytism (ep′i-fi-tizm), *n.* [*epiphyte* + *-ism.*] The character or habit of being epiphytic.

epiphytotic (ep″i-fi-tot′ik), *a.* [Gr. *ἐπί*, upon, + *φυτόν*, plant, + *-otic* (as in *epizootic*).] In *bot.*, noting an epidemic of a plant-disease.

epiphytous (ep″i-fī′tus), *a.* Same as *epiphytic.*

epiplankton (ep-i-plangk′ton), *n.* [NL., < Gr. *ἐπί*, upon, + NL. *plankton.*] The animals and plants which float or swim at the surface or above the hundred-fathom line, considered collectively and in contrast with the dwellers in deeper water; the pelagic plankton (which see, under ★*plankton*).

The *epiplankton* of the open sea is described as *oceanic*; it consists almost entirely of holoplanktonic forms and their larvæ. *Encyc. Brit.*, XXXIII. 936.

Limnitic epiplankton, the animals and plants which float or swim at or near the surface of fresh water.—**Neritic epiplankton,** the floating or swimming animals and plants of the waters near the coast.—**Oceanic epiplankton,** the floating and swimming organisms of the high sea.

epiplanktonic (ep″i-plangk-ton′ik), *a.* [*epiplankton* + *-ic.*] Of or pertaining to epiplankton; floating or swimming in the water at the surface or above the hundred-fathom line; pelagic. See ★*planktonic.*

epiplasmic (ep-i-plaz′mik), *a.* [*epiplasm* + *-ic.*] Of or pertaining to the epiplasm.

epiplastral (ep-i-plas′tral), *a.* and *n.* [*epiplastron* + *-al*[1].] **I.** *a.* Of or pertaining to the epiplastron.

II. *n.* One of the pair of bones which lie behind the entoplastron bone of the plastron of the *Chelonia*, or turtles. Together these bones form the epiplastron. See the cuts under *Chelonia* and *plastron.*

epipleur (ep′i-plör), *n.* [Gr. *ἐπί*, upon, + *πλευρά*, the side.] A cavity in *Amphioxus*, surrounding the pharynx at the sides and below, into which the respiratory stream of

water passes through the gill-openings and from which it escapes through the atrial pore.

epipleural, *n.* 2. Same as *epipleura*, 1.

epiploenterocele (e-pip″lō-en′tę-rō-sēl), *n.* [Gr. *ἐπίπλοον*, omentum, + *ἔντερον*, intestine, + *κήλη*, a tumor.] Hernia of a loop of intestine and portions of the omentum.

epiplopexy (e-pip′lō-pek-si), *n.* [Gr. *ἐπίπλοον*, omentum, + *πῆξις*, fastening.] Attachment, by a surgical operation, of the omentum to the anterior abdominal wall in order to cause anastomosis between the blood-vessels of the two parts.

epipod (ep′i-pod), *n.* Same as *epipodite*.

epipodal (e-pip′ō-dal), *a.* Same as *epipodial*.

epipodium, *n.* 2. In some *Echinoidea*, a raised ring surrounding each pair of pores on each primary ambulacral plate.

epipolize (e-pip′ō-līz), *v. t.*; pret. and pp. *epipolized*, ppr. *epipolizing*. [Gr. *ἐπιπολή*, a surface, + *-ize*.] To render fluorescent. See *epipolized*.

epipterygoid (ep-ip-ter′i-goid), *a.* and *n.* **I.** *a.* Situated upon or above the pterygoid bone. —**Epipterygoid bone,** a rod-shaped bone articulating with the pterygoid bone.

II. *n.* 1. In *herpet.*, a cartilage-bone, developed in some reptiles, which abuts on the superior face of the pterygoid.—2. In *ornith.*, a hook-like process developed on the inner edge of the pterygoid near its articulation with the quadrate.

epipygium (ep-i-pij′i-um), *n.*; pl. *epipygia* (-ä). [Gr. *ἐπί*, upon, + *πυγή*, the buttocks.] The last dorsal segment of an insect's abdomen: applied especially to the aculeate *Hymenoptera*. *Proc. Zool. Soc. London*, 1901, p. 236.

epirhizous (ep-i-rī′zus), *a.* [Gr. *ἐπί*, upon, + *ῥίζα*, root.] Growing on roots.

epirogenic (e-pī-rō-jen′ik), *a.* [Gr. *ἤπειρος*, a continent, + *-γενης*, -producing.] Continent-making; in *geol.*, pertaining to movements by which wide changes of level have occurred without special orogenic results; noting continent-making movements or the up-and-down movements or oscillations of continental areas. *G. K. Gilbert*, 1890.—**Epirogenic physiography,** land-features controlled and limited largely by epirogenic disturbances which give rise to cycles of change: a term proposed by W. H. Hobbs, together with the contrasted term *orogenic physiography*, which emphasizes the importance of earlier structural features and orogenic disturbances in controlling surface-contour. *Science*, Oct. 23, 1903, pp. 538, 539.

epirogeny (ē-pī-roj′e-ni), *n.* [Also *epeirogeny*; < Gr. *ἤπειρος*, the mainland, a continent, + *-γενεια*, < *-γενης*, produced.] The production of a continent; the appearance of a continent due to continental oscillation of level. See ★*diastrophism*. *Geikie*, Text-book of Geol., pp. 392, 1374.

epirotulian (ep″i-rō-tū′li-an), *a.* [Gr. *ἐπί*, upon, + NL. *rotula*, patella, + *-ian*.] Situated or directed upon the patella or knee-cap: as, an *epirotulian* blow. *Buck*, Med. Handbook, III. 846.

epirrhysa (ep-i-rī′sä), *n. pl.* [NL., irreg. pl. based on Gr. *ἐπίρρυσις*, a flowing in, < *ἐπιρρεῖν*, flow in or upon, < *ἐπί*, upon, + *ῥεῖν*, flow.] In the sponges, the canals which carry water from the exterior of the body inward to the flagellate chambers; the inhalant canals: contrasted with *aporrhysa*, or exhalant canals, which are the conduits carrying water from the flagellate chambers inward to the paragastral cavity.

Epis., Episc. Abbreviations of *Episcopal*.

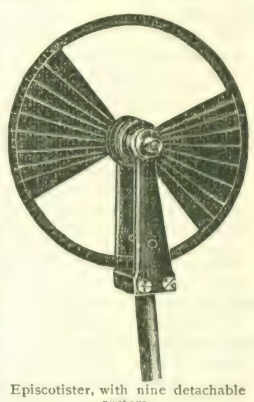
episarcine (ep-i-sär′sin), *n.* [Gr. *ἐπί*, upon, + *σάρξ* (*σαρκ-*), flesh, + *-ine*².] A basic substance, $C_4H_6ON_3$(?), possibly belonging to the pyrimidin group.

epischesis (e-pis′kē-sis), *n.* [NL., < Gr. *ἐπίσχεσις*, stopping, holding back, < *ἐπέχειν*, hold back, < *ἐπί*, upon, to, + *ἔχειν*, hold.] Suppression of any of the normal excretions.

episclera (ep-i-sklē′rä), *n.* [NL., < Gr. *ἐπί*, upon, + *σκληρός*, hard: see *sclere*.] The superficial layer of the sclerotic.

episclerotitis (ep-is-klē-rō-tī′tis), *n.* [NL., < Gr. *ἐπι*, upon, + *sclerot-ic* + *-itis*.] Same as *episcleritis*.

episcopality (ē-pis-kō-pal′i-ti), *n.* [*episcopal* + *-ity*.] 1. The essence of the episcopacy.—2. The office of bishop.—3. The dignity or bearing of a bishop. *N. E. D.*



episcopation (ē-pis-kō-pā′shon), *n.* [NL. **episcopatio(n-)*, < LL. *episcopari*, be a bishop, < *episcopus*, bishop.] The act of consecrating to the episcopal office; the being made a bishop.

episcope (ep′i-skōp), *n.* A form of projection-lantern, for opaque objects, in which reflected light is used: a simplified form of ★*epidiascope*. See ★*lantern*.

episcopolatry (ē-pis-kō-pol′a-tri), *n.* [Gr. *ἐπίσκοπος*, bishop, + *λατρεία*, worship.] Worship of bishops; blind devotion to the episcopal system in church organization. *N. E. D.*

Those Englishmen who, in the violence of their recoil from Presbyterianism and Congregationalism, have cherished proclivities in the direction of *Episcopolatry*."
Ch. Times, Dec. 22, 1882, p. 915.

episcotister (ep″is-kō-tis′tėr), *n.* [Gr. *ἐπισκοτίζειν*, darken, < *ἐπί*, upon, + *σκοτίζειν*, make dark, < *σκότος*, darkness.] In *psychophys.*, an instrument devised by H. Aubert for the accurate graduation of intensity of light. In its original form the episcotister consists of two similar disks of blackened brass from each of which four octants have been cut out. The disks are pierced at the center for mounting upon a color-mixer. The nearer or outer disk is furnished with a retaining-rim, and is graduated, over 45 degrees of its periphery, in units of one degree. When the episcotister is rotated before a source of light, the light is darkened to a degree which can be measured in terms of the angular value of the black sectors. The construction of the episcotister may be widely varied, to suit different conditions.

Episcotister, with nine detachable sectors.

A small motor was attached to the stimulus-lantern, and an *episcotister* was mounted upon it.
J. W Baird, Carnegie Inst. Pub., xxix. 60.

episematic (ep″i-sē-mat′ik), *a.* [Gr. *ἐπί*, upon, to, + *σῆμα*, mark: see *sematic*.] Serving as a special means of recognition: applied to characteristics of animals which, when displayed, serve as recognition-marks for the guidance of other individuals of the species.—**Episematic coloring.** See ★*coloring*.

episiolasty (ep-i-sī′ō-plas-ti), *n.* [Gr. *ἐπίσειον*, the region of the pubes, + *πλαστός*, < *πλάσσειν*, form.] Operative restoration of a defect in the vulva.

episiotomy (ep″i-sī-ot′ō-mi), *n.* [Gr. *ἐπίσειον*, the region of the pubes, + *-τομια*, < *ταμεῖν*, cut.] In *surg.*, incisions into the labia during childbirth, made to relieve dangerous stretching of the perineum.

epispadiac (ep-i-spā′di-ak), *a.* and *n.* **I.** *a.* Relating to or affected with epispadias.

II. *n.* One who has an epispadias.

epispadias (ep-i-spā′di-as), *n.* [NL., < Gr. *ἐπί*, upon, + *σπαδών*, a rent.] Abnormal opening of the urethra upon the dorsum of the penis.

epispinal (ep-i-spī′nal), *a.* [*epi-* + *spinal*.] Situated on or above the spinal cord.—**Epispinal spaces,** intervals between the spinal cord substance and the pia mater.

episplenitis (ep″i-splē-nī′tis), *n.* [NL., < Gr. *ἐπί*, upon, + *σπλήν*, spleen, + *-itis*.] Inflammation of the peritoneal covering of the spleen.

epistapedial (ep″i-stā-pē′di-al), *a.* [Gr. *ἐπί*, upon, + NL. *stapedius* (see *stapes*) + *-al*¹.] Lying upon or relating to the stapes: as, the *epistapedial* cartilage, a branch of cartilage running from the columella to the tympanum.

epistasis, *n.* 2. An arrested or stationary condition in the ancestral history of a group of organisms.

Epistasis is a modified form of the process emphasized by Bons under the name of neotenia, a reversion of a phylum to a modified embryonic condition.
Science, March 6, 1903, p. 381.

Epistemological parallelism. See ★*parallelism*.

episternal, *a.* **II.** *n.* In *ichth.*, the lower median bone in the hyoid arch. Also called *urohyal*.

episternum, *n.* 6. In spatangoid sea-urchins, the third pair of plates on the ventral face of the posterior interradius.

epistolite (e-pis′tō-līt), *n.* [So called in allusion to its flat rectangular form and white color; < Gr. *ἐπιστολή*, letter, + *-ite*¹.] A rare mineral, consisting essentially of the silicate, niobate, and titanate of sodium with water, occurring in silver-white tabular crystals with pearly luster: found in southern Greenland.

epistoma, *n.* (*d*) The anterior part of the cephalic doublure of the *Trilobita*, sometimes isolated by the sutures.

epistomian (ep-i-stō′mi-an), *a.* Of or pertaining to an epistoma.

epistroma (ep-i-strō′mä), *n.* [LGr. *ἐπίστρωμα*, trappings, < Gr. *ἐπιστορεννύναι*, spread over, < *ἐπί*, over, + *στορεννύναι*, spread.] A varied form of ornamentation of the echinoid test, which arises early during postlarval development, and which is due to the deposit of calcareous substance on the plates.

epit. An abbreviation (*a*) of *epitaph*; (*b*) of *epitome*.

epitactic (ep-i-tak′tik), *a.* [Gr. *ἐπιτακτικός*, < *ἐπίταξις*, command, injunction, < *ἐπιτάσσειν*, put upon as a duty, < *ἐπί*, upon, + *τάσσειν*, order, arrange.] Of the nature of an injunction or command.

The categorical form involves an *epitactic* meaning.
Whewell, Elem. of Morality, Preface, p. 16.

epitaf, *n.* and *v.* A simplified spelling of *epitaph*.

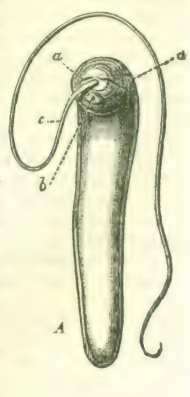
epithecal, *a.* 2. Situated on the outside of the body, as the radial water-vessels of a starfish. Compare ★*hypothecal*.

Epithelial cancer. See ★*cancer*.—**Epithelial pearl** or **nest.** Same as *onion* ★*body*.

epithelioglandular (ep-i-thē″li-ō-glan′dū-lär), *a.* Relating to the epithelial cells of a gland or of its duct. *Nature*, April 24, 1902, p. 604.

Epithelioid cell, in *histol.*, a cell resembling an epithelial cell in shape.

epitheliolysin (ep-i-thē-li-ol′i-sin), *n.* [*epithelium* + *lysin*.] A lysin which is the product of immunization with epithelial cells and is antagonistic toward them.

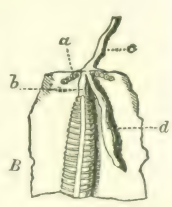


epitheliomuscular (ep-i-thē″li-ō-mus′kū-lär), *a.* Concerning or pertaining to epithelial cells with muscular processes.

epitheliotoxin (ep-i-thē″li-ō-tok′sin), *n.* [*epithelium* + *toxin*.] A cytotoxin produced by immunization with epithelial cells and toxic for the homologous cells.

epithelium, *n.*—**Auditory epithelium.** See ★*auditory*.—**Cubical epithelium,** epithelium composed of cells having a more or less cubical shape. This variety grades into columnar epithelium.—**Glandular epithelium,** any epithelium consisting of glandular or secreting cells.—**Sensory epithelium,** an epithelium which gives rise to sensory cells, such as that which forms the essential layer of the organs of the special senses.

epithelization (ep-i-thē-li-zā′shon), *n.* [*epithelium* + *-ize* + *-ation*.] Conversion into epithelium.



Epithetosomatidæ (ep-i-thet″ō-sō-mat′i-dē), *n. pl.* A family of gephyreans, peculiar in having a hollow proboscis whose lumen opens into the body-cavity, and a series of pore-like openings which lead from the exterior to the same cavity. The typical and only genus is *Epithetosoma*.

epithyme (ep′i-thīm), *n.* [NL. *epithymum*.] The lesser or thyme-dodder, *Cuscuta Epithymum*. See *dodder*¹ (with cut).

epitokal (e-pit′ō-kal), *a.* Of or pertaining to an epitoke; sexual: as, the *epitokal* region of the palolo. *Nature*, April 21, 1904, p. 582.

epitoke (ep′i-tōk), *n.* [Gr. *ἐπί*, upon, + *τόκος*, birth, production.] The sexual portion of polychætous worms, as the palolo. See ★*atoke*.

A, *Epithetosoma norvegicum*. *a*, *a*, right and left slits leading to the pores; *b*, mouth; *c*, proboscis. *B*, The same animal opened dorsally. *a*, pores; *b*, esophagus; *c*, proboscis; *d*, brown tube. (From "Cambridge Natural History.")

epitomatory (ē-pit′ō-ma-tō-ri), *a.* [*epitomate* + *-ory*.] Of the nature of an epitome; epitomized. *G. Meredith*.

epitonic (ep-i-ton′ik), *a.* [Gr. *ἐπίτονος*, stretched, < *ἐπιτείνειν*, stretch, < *ἐπί*, upon, + *τείνειν*, stretch.] Stretched; overstrained.

epitoxoid (ep-i-tok′soid), *n.* [*epi-* + *toxoid*.] A toxoid which has a less marked affinity for the corresponding antitoxin than has the toxin proper.

epitoxonoid (ep-i-tok′sō-noid), *n.* [*epi-* + *toxonoid*.] A toxonoid which has the least affinity for the corresponding antitoxin.

epitrachelion (ep″i-tra-kē′li-ǫn), *n.*; pl. *epitrachelia* (-ă). [NGr. *ἐπιτραχήλιον*, neut. of MGr. *ἐπιτραχήλιος*, upon the neck, < Gr. *ἐπί*, upon, + *τράχηλος*, the neck.] In the *Gr. Ch.*, a priest's stole, as distinguished from the *orarion*, or deacon's stole.

Epitrapezios (ep″i-tra-pē′zi-os), *a.* [Gr. *ἐπιτραπέζιος*, at table, < *ἐπί*, at, + *τράπεζα*, table.] An epithet of Hercules; specifically, noting a table-statue of Hercules seated, in bronze, which was made by the Greek sculptor Lysippus and presented by him to Alexander the Great. It was afterward owned by Hannibal and by Sulla. In the time of Domitian it had passed to the collection of a Roman amateur poet named Vindex. It is described by Martial and Statius. A plaster cast in the École des Beaux Arts, Paris, taken from an original now lost, is supposed to represent the statue.

epitrichial (ep-i-trik′i-ạl), *a.* [*epitrichium* + *-al*[1].] 1. Of or pertaining to the epitrichium. —2. Situated upon a hair or hairs.—**Epitrichial layer**, a layer of larger cells representing the most superficial layer of the epidermis in the human embryo of the third month.

epitympanic, *a.* 2. Situated upon or above the tympanum.—**Epitympanic bone.** See *tympanic*, *n.*, 2.—**Epitympanic space.** Same as ★*attic*[2], 3.

epitympanum (ep-i-tim′pạ-num), *n.* [NL., < Gr. *ἐπί*, upon, + *τύμπανον*, a drum: see *tympanum*.] The attic of the tympanum.

epityphlitis (ep″i-ti-flī′tis), *n.* [NL., < **epityphlum* (< Gr. *ἐπί*, upon, + *τυφλός*, blind: see *cæcum*) + *-itis*.] Same as *appendicitis*.

epivertebral (ep-i-vėr′tē-brạl), *a.* and *n.* [*epi-* + *vertebral*.] I. *a.* Situated upon or above a vertebra.

II. *n.* Same as *neural spine* (which see, under *neural*). *Starks*, Synonymy of the Fish Skeleton, p. 524.

epizoicide (ep-i-zō′i-sīd), *n.* [*epizoa* + L. *-cida*, < *cædere*, kill.] An agent which destroys external animal parasites.

epizygal (e-piz′i-gạl), *a.* and *n.* [Gr. *ἐπί*, upon, + *ζυγόν*, a yoke, + *-al*[1].] I. *a.* Having reference to the upper pinnule-bearing of two arm-segments in the *Crinoidea*, which meet transversely in a rigid suture and form a syzygy, constituting physiologically but one segment.

II. *n.* An epizygal segment.

E-plan (ē-plan), *n.* In *arch.*, a plan according to which three main structures of approximately equal importance are connected, with usually a smaller one projecting into the court of honor between the main wings, the shape of the whole being like that of the letter E. Compare ★*L-plan*.

epoch, *n.* 5. In the mechanics of vibration, a term introduced into the equation for a simple harmonic motion in cases where time is not reckoned from the instant when the vibrating particle has reached its greatest positive elongation. The equation then becomes $x = a\cos(t\omega + e)$, in which e is the epoch. The epoch is the angle traversed by the point of reference in the interval between the era of reckoning and the instant of greatest elongation.—**Chellean epoch.** See ★*Chellean*.—**Diluvian, forestian epoch.** See ★*diluvian*, ★*forestian*.—**Helvetian epoch**, in *geol.*, a name given by some glaciologists to the second interglacial epoch of Europe, represented by the lignites of Switzerland and Great Britain. It intervened between the Saxonian or second glacial epoch and the Polandian or third glacial epoch.—**Interglacial epoch**, in *geol.*, one of the intervals of mild temperature in the glacial period, when the ice retired. These intervals are recognized by intercalations in the boulder-clay of stratified beds of sand, gravel, and clay, often containing plant-remains or marine or fresh-water shells.—**Mecklenburgian epoch** [*Mecklenburg* in north Germany], in *geol.*, a subdivision of the Pleistocene or glacial period, of northern Europe. It is equivalent to the fourth glacial epoch, and is evinced in the ground-moraines and terminal moraines of the last great Baltic glacier, which reach their southern limit in Mecklenburg.—**Neudeckian epoch** [*Neudeck* in Prussia], in *geol.*, a subdivision of the Pleistocene or glacial period of northern Europe. It is equivalent to the third interglacial epoch, and is represented by marine and fresh-water deposits between the boulder-clays of the southern Baltic coast-lands. It is preceded by the Polandian or third glacial epoch and followed by the Mecklenburgian or fourth glacial epoch.—**Norfolkian epoch** [*Norfolk* in England], in *geol.*, a subdivision of the Pleistocene or glacial period of northern Europe. It is equivalent to the first interglacial epoch, and is typically represented by the forest-bed period of Norfolk. It is preceded by the Scanian or first glacial epoch and followed by the Saxonian or second glacial epoch.—**Polandian epoch** [*Poland* in Europe], in *geol.*, a subdivision of the Pleistocene or glacial period of northern Europe. It is equivalent to the third glacial epoch, and is represented by the glacial and fluvioglacial accumulations of the minor Scandinavian ice-sheet and the upper boulder-clay of northern and western Europe. It is preceded by the Helvetian or second interglacial epoch and followed by the Neudeckian or third interglacial epoch.—**Saxonian epoch**, in *geol.*, a subdivision of the Pleistocene or glacial period of northern Europe. It is equivalent to the second glacial epoch, and includes the accumulations of the time of maximum glaciation, when the northern ice-sheet extended to the low grounds of Saxony. It is preceded by the Norfolkian or first interglacial epoch and followed by the Helvetian or second interglacial epoch.—**Scanian epoch** [L. *Scania*, Scandinavia, Sweden], in *geol.*, a subdivision of the Pleistocene or glacial period of northern Europe. It is equivalent to the first glacial epoch, and is represented only in the south of Sweden (Scania), which was overridden by a great Baltic glacier.—**Terrace epoch**, in *geol.*, a subdivision of the Pleistocene or glacial period of North America. It is regarded by American geologists as equivalent to a part of the Champlain period, and is characterized by a great abundance of terraces of fluviatile, lacustrine, and marine origin.

eponym, *n.* 4. The *archon eponymus* at Athens (see *archon*); also, one of certain Assyrian functionaries who gave their names to the years during which they held office.

Eponymic disease, a disease which bears the name of a person, usually of the one who discovered or first accurately described it, as *Bright's* disease.

epsilon, *n.* 2. In *math.*, a quantity which approaches zero when the independent variable approaches a certain limit fixed for it by the conditions of the particular problem or discussion.

epsomite (ep′sǫ-mīt), *n.* [*Epsom* + *-ite*[2].] See *stylolite*.

eq. An abbreviation of *equity*.

equal, *a.*—**Identically equal**, congruent; the same in everything but place or name.

equalizer, *n.* 3. In a wide sense, any form of balanced bar designed to equalize irregular strains, as in the buffers of a car-platform or the springs used to keep a car-vestibule closed under the swaying of the cars when in motion. —4. A box or tank, loosely filled with sand, coke, sawdust, or other cleansing material, through which the gas from a producer is passed to make its quality uniform.

equalizing-gear (ē′kwạl-ī-zing-gēr″), *n.* Any device for making each of the driving parts do its proportionate share of the work; in motor-vehicles, the differential gear.

equalizing-lever (ē′kwạl-ī-zing-lev″ėr), *n.* A lever to which the two adjacent ends of the springs of a locomotive are attached. It insures the equal distribution of the weight of the engine between the springs, no matter how the track-surface may depart from a true plane; this mitigates shocks and maintains equal tractive effect on the driving-wheels so as to lessen the tendency to slip on defective alinements.

equalizing-machine (ē′kwạl-ī-zing-mạ-shēn″), *n.* In *wood-working*, a machine for sawing off the ends of blanks of hubs, spokes, handles, etc., to make them of equal length preparatory to turning them in a lathe or treating them in some other machine. The simplest machine is a sliding saw-table provided with a length-gage, on which the blank is cut one end at a time. The better and more common types have two circular saws adjustable to positions for blanks of different lengths, and fitted with some form of feed-table for bringing the blanks to the saws. Sometimes called *equalizing-saw*.

equalizing-pipe (ē′kwạl-ī-zing-pīp″), *n.* A pipe which connects two or more pipes in such a manner as to permit a free flow from one to the other, thus maintaining an equal pressure in all of them.

equate, *v.* I. *trans.* 4. To join by the sign of equality.—**Equating motion.** Same as ★*jack-in-a-box motion*.

II. *intrans.*—**To equate for curves.** (*a*) In railroad construction, to diminish the slope of grade of a railroad while passing around a curve, in order to compensate for the increased tractive resistance due to the curve, so that the total tractive resistance on the curve shall be the same as on a straight portion of track having the original grade. (*b*) In the preparation of the running schedules for trains, to make an allowance of an imaginary increase in length of line, on account of and as an equivalent of the retardation due to curves.—**To equate for grades**, in the preparation of the running schedules for railroad-trains, to make an allowance of an imaginary increase in length of line, on account of and as an equivalent of the retardation due to grades.

equation, *n.* 4. It is to be noted that a chemical equation, used to represent the results of a chemical change under certain conditions, does not of itself imply that such results necessarily occur; this can be established only by actual experiment, and the equation merely furnishes a brief form of statement of what the experiment has shown to be true.—**Annual equation**, a periodic variation of the motion of the moon owing to the variation of the sun's distance, in consequence of which as the earth moves from perihelion to aphelion the length of the month becomes shorter, the moon's angular motion being accelerated, while the reverse effect takes place as the earth returns from aphelion to perihelion. The effect, equal to a little more than 11 minutes, was discovered by Tycho Brahe about 1590.—**Beltrami's equation**, an equation analogous to Laplace's equation for a plane. It is of the form

$$\frac{\partial}{du}\left(\frac{G\frac{\partial\phi}{\partial u} - F\frac{\partial\phi}{\partial v}}{H}\right) + \frac{\partial}{\partial v}\left(\frac{E\frac{\partial\phi}{\partial v} - F\frac{\partial\phi}{\partial u}}{H}\right) = 0;$$

where $H = \sqrt{EG - F^2}$, and u, v are variables determining the position of a point on a surface such that the square of its linear element $ds^2 = E\,du^2 + 2F\,du\,dv + G\,dv^2$. *Beltrami*, Opere Matematiche, I. 325.—**Brightness**

equation, in *psychol.-optics*, the subjective match of two impressions in regard to brightness or luminosity. A typical brightness equation would be given with the matching of two grays. The term is, however, generally reserved for the matching (in respect of brightness) of a color with a color, or of a color with a gray.—**Consistent equations**, simultaneous equations.—**Cyclotomic equation**, an equation related to the partition of the perigon, such as $(x^n - 1)/(x - 1) = 0$, where n is prime.—**Dimensional equation**, in *phys.*, a formula or equation indicating the manner in which the fundamental units of any system of physical measurements enter into a derived unit or quantity.—**Equation of acceleration.** See ★*acceleration*.—**Equation of elasticity.** See ★*elasticity*.—**Equation of energy.** Denoting kinetic energy by E(K), and potential energy by E(P), we may write the energy equation

$$-[E(P) - E_0(P)] = E(K) - E_0(K).$$

In words: The total energy of the system, or the sum of the kinetic energy and the potential energy, is a constant quantity.—**Equation of equilibrium**, an equation expressing the conditions under which the parts of a dynamical system will remain at rest. The complete specification of the conditions of equilibrium usually demands a set of such equations.—**Equation of force**, an equation expressing the dimensions of the derived entity force (P) in terms of the fundamental entities, mass, length, and time: $[P] = [M]\,[L]\,[T]^{-2}$.—**Equation of state**, the law $f(p, v, \theta) = a$, connecting the pressure (p), volume (v), and temperature (θ) defining the change of state of a homogeneous liquid or gaseous substance.—**Equation of the equinoxes**, the difference between the mean and apparent places of the equinoxes, arising from the variation in the force which produces their precession. This force is a maximum when the sun passes the solstices, and disappears at the time of the equinoxes.—**Equations of the transformation**, the equations which express x' and y' in terms of x and y, or inversely, when a point transformation replaces $P(x, y)$ by $P'(x', y')$.—**Equation time-piece**, a timepiece which shows the difference between mean and apparent solar time. [Now obsolete.]—**Equivalent equations**, equations such that every root of either is also a root of the other.—**Exact differential equation**, an equation in which an exact differential is equated to zero.—**Formulaic equation**, an equation which has to do only with the very nature of the operations involved, and not at all with the particular numbers operated with. Thus the equation $(a + b) + c = a + (b + c)$ expresses the fact that addition is an associative operation.—**Fractional equation**, one containing an expression in which an unknown or variable is contained in a denominator; for example, $\frac{2}{x} + 1 = 0$.—**Galoisian equation**, for a domain R, an irreducible equation of prime degree whose roots are all rational functions of two of the roots.—**Gas equation**, the equation $pv = R\theta$, where p is pressure, v volume, θ temperature, and R a constant.—**Gauss's equation**,

$$x(1-x)\frac{d^2y}{dx^2} + \left\{c - (a+b+1)x\right\}\frac{dy}{dx} - aby = 0,$$

where a, b, c are constants, and x is the independent variable.—**Graph of an equation.** See ★*graph*.—**Green's equation**,

$$\iiint \nabla u \,.\, \nabla v\,dv = \iint \mu \nabla v \,.\, d\sigma - \iiint v\nabla^2 v\,dv,$$

an equation useful for problems in gravitation, hydrodynamics, and electrostatics.—**Hypergeometric equation.** Same as *Gauss's* ★*equation*.—**Incompatible equations**, equations having no solution whatever in common; for example, $x + y = 4$ and $2x + 2y = 9$.—**Inconsistent equations**, incompatible equations.—**Integral equation.** (*a*) In *alg.*, an equation whose terms are integral expressions so far as concerns the unknown or variable. (*b*) In the *calculus*, an equation which contains no differentials.—**Irrational equation**, an equation which contains an indicated root of an unknown or variable.—**Laplace's spherical harmonic equation.** Same as *Laplace's principal equation*. See *Laplace's equation*.—**Metacyclic equation**, of degree p, an equation whose group for a domain R is the metacyclic group of degree p.—**Octic equation**, an equation of the eighth degree.—**Poisson's equation**,

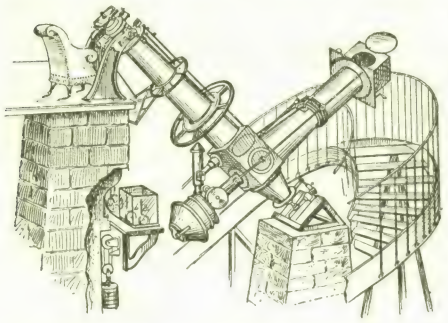
$$\frac{\partial^2 V}{\partial x^2} + \frac{\partial^2 V}{\partial y^2} + \frac{\partial^2 V}{\partial z^2} = \frac{1}{\kappa}\frac{\partial V}{\partial t} = 4\pi\rho,$$

where κ is a constant; x, y, z are the coördinates of a point in space; t denotes the time; ρ is a function of x, y, z; and V may denote temperature, potential, etc. —**Primitive of a differential equation**, an integral equation which satisfies a differential equation.—**Radical equation**, an irrational equation.—**Reflection equations**, in *optics*, equations from which the phase and intensity of the reflected ray may be computed from the angle of incidence and the index of refraction of the mirror. The two best-known forms of such equations are those of Fresnel and of Neumann.—**Symmetric equation**, an equation which is unchanged by interchange of the unknowns or variables.—**Tidal equations**, equations which are involved in the theory of the tides.—**To reduce an equation.** See ★*reduce*.—**Van der Waal's equation**, an equation which represents the relation between volume and pressure of a gas with much better approximation than the law of Boyle and Gay-Lussac. The law of Boyle may be written $pv = RT$; where p is the pressure exerted by a gram-molecule of the gas when its volume is v, T is the absolute temperature, and R is a constant. To the pressure, p, Van der Waal adds the attraction of the molecules of the gas on one another, represented by $\frac{a}{v^2}$, and he subtracts from the volume, v, that part of this volume which is so occupied by the molecules that it is not left free for their motion. The equation becomes $\left(p + \frac{a}{v^2}\right)\left(v - \beta\right) = RT$, where a and β are constants depending on the properties of the gas in question.—**Vertical equation**, the equation of a conic referred to a vertex as origin.—**Zonal equation.** See ★*zonal*.

equational, *a.* 2. Operating with equations: as, *equational* logic.

equationally (ē-kwā′shọn-ạl-i), *adv.* As an equation or as equations: in the form of equations; by use of equations.

equationism (ē-kwā′shọn-izm), *n.* [*equation* + *-ism.*] The principle of solving problems equationally.



equator, *n.*— **Hydrometeoric equator,** the line which divides regions in which the rainfall varies with the slight movement of the equatorial belt of calms and attending winds; the pluviometric equator. This line varies not only with the variation of the winds, but also with the orography, and is often determined by the presence of an elevated ridge trending nearly east and west. Supan's hydrometeoric equator bends south of the astronomical equator on the east of the continents, and north on the west.

Dr. Supan draws a line, the *hydrometeoric equator*, dividing regions experiencing the rainfall conditions of the northern winter half-year from regions which have those of the southern summer half-year and vice versâ. This bends south of the astronomical equator in the east, and north in the west, of the continents, which may be interpreted, in the present writer's opinion, as a monsoonal phenomenon. *Geog. Jour.* (R. G. S.), XIII. 64.

Meteorological equator, the region on the globe near the geographic equator, which corresponds to the belt of calms, midway between equal opposing winds, and with reference to which the general circulation of the atmosphere is approximately symmetrical.

equatorial. **I.** *a.* **2.** In *crystallog.*, of or pertaining to the horizontal or lateral plane. —**Equatorial acceleration of the sun.** See ★*acceleration.*—**Equatorial belt of low pressure.** See ★*pressure.*—**Equatorial crystal,** a crystal in which the principal axis of symmetry is perpendicular to the equatorial plane of symmetry.—**Equatorial horizontal parallax.** See ★*parallax.*—**Equatorial mounting,** the mechanical part of an equatorial telescope, consisting of the stand, axes, circles, driving-clock, etc., with their appendages.—**Equatorial symmetry.** See ★*symmetry.*

II. *n.*—**Elbow equatorial,** or (F.) **équatorial coudé,** an equatorial so arranged that by the use of two

Équatorial Coudé of the Paris Observatory.

plane mirrors the observer is able to view an object in any part of the heavens by looking down the polar axis from a fixed position. It has great advantages and some drawbacks.—**Twin equatorial,** two telescopes, which may be of different sizes and forms, attached to the same equatorial mounting. In some cases the two tubes are firmly connected; in others they are independent as to their motion in declination.—**Universal equatorial,** an equatorial so constructed that its mounting and driving-clock can easily be adjusted to suit any latitude.

equatorward (ē-kwā′tọr-ẉard), *adv.* [*equator* + *-ward.*] In the direction of the equator; with motion toward the equator.

equianchorate (ē-kwi-ang′kọr-āt), *a.* and *n.* [L. *æquus*, equal, + *anchora*, prop. *ancora*, anchor, + *-ate*[1].] **I.** *a.* Having similar anchorate processes at each end. See *anchorate.*

II. *n.* An equianchorate sponge-spicule.

equiangular, *a.*—**Mutually equiangular,** having the angles of the one equal respectively to the angles of the other, taken in the same order.

equiangularity (ē″kwi-ang-gū-lar′i-ti), *n.* The condition or quality of being equiangular.

Equianharmonic quadrangle. See ★*quadrangle.*

equiarcal (ē-kwi-är′kạl), *n.* [For **equiarcual*, < L. *æquus*, equal, + *arcus*, bow (arc), + *-al*[1].] A line which cuts off, on a system of curves, equal arcs measured from the origin.

equiarticulate (ē″kwi-är-tik′ū-lāt), *a.* [L. *æquus*, equal, + *articulus*, joint, + *-ate*[1].] **1.** Alike in the number and arrangement of articulations.—**2.** Having joints of equal length, as the legs of some crustaceans.

equiaxial (ē-kwi-ak′si-ạl), *a.* [L. *æquus*, equal, + *axis*, axis, + *-al*[1].] Having axes of equal length. *Buck.*, Med. Handbook, II. 320.

equicellular (ē-kwi-sel′ū-lạr), *a.* [L. *æquus*, equal, + *cellula*, cell, + *-ar*[3].] Composed of an aggregation of similar cells, as some colonial protozoans.

equicross (ē′kwi-krôs), *a.* [L. *æquus*, equal, + E. *cross*[1], *a.*] Having equal cross-ratios.

equidiagonal (ē″kwi-dī-ag′ọ̄-nạl), *a.* [L. *æquus*, equal, + E. *diagonal.*] With equal diagonals.

equidimensional (ē″kwi-di-men′shọn-ạl), *a.* [L. *æquus*, equal, + *dimensio*(*n*-), dimension, + *-al*[1].] Having equal dimensions: used especially in description of the grain of rocks.

equidistant, *a.*—**Equidistant projection.** See ★*projection.*

II. *n.* Same as ★*equidistantial.*

equidistantial (ē″kwi-dis-tan′shạl), *n.* [NL. **æquidistantia*, equidistance, + *-al*[1].] A curve, in Bolyai's non-Euclidean geometry, coplanar with a straight line, perpendiculars to which from all points of the curve are equal.

In the Euclidean geometry all points equidistant from a straight line are on a straight line. In this non-Euclidean geometry all points equidistant from a straight line are on a curve called the *equidistantial.* *Science*, March 11, 1904, p. 404.

Equidistantial surface, in Bolyai's geometry, the locus of points on one side of a plane from which perpendiculars to that plane are equal.

equielliptic (ē″kwi-e-lip′tik), *a.* [L. *æquus*, equal, + NL. *ellipticus*, elliptic.] Of equal elliptic eccentricity.

equiglacial (ē-kwi-glā′shạl), *a.* [L. *æquus*, equal, + *glacies*, ice, + *-al*[1].] Being in the same condition as regards ice.—**Equiglacial lines,** lines drawn by Hildebrandsson connecting those points on the earth s surface at which the condition of the ice-formation is the same as to thickness or amount on any given day in the year.

equigraphic (ē-kwi-graf′ik), *a.* [L. *æquus*, equal, + Gr. *-γραφια*, < *γράφειν*, write.] Homolographic; noting a method of map-projection in which equal areas of the earth's surface are reduced to equal areas on the map.

equilarcenous (ek-wi-lär′sẹ-nus), *a.* [L. *equus*, a horse, + E. *larcenous.*] Given to horse-stealing. [Humorous.]

equilateral, *a.*—**Mutually equilateral,** having the sides of one equal respectively to the sides of the other taken in the same order.

equilibration, *n.*—**Artificial equilibration,** in *sociol.*, adjustment to environment by artificial means or intelligent choice, as opposed to the equilibration brought about by natural selection. *L. F. Ward*, Dynamic Sociol., II. 484.—**Law of equilibration,** the law, formulated by Spencer, that in society, as throughout the cosmos, a group or aggregate highly charged with energy transforms a neighboring group or aggregate less highly charged.

equilibrator (ē-kwi-lī′brā-tọr), *n.* [< *equilibrate.*] A mechanical device for securing equilibrium, specifically in the change in the lifting power of a balloon due to expansion or contraction of the gas.

equilibrium, *n.*, **1.** In *phys. chem.*, the equilibrium of a thermodynamic system is said to be *indifferent* if it is not disturbed by changing the mass of some or all its phases. If a system consists of a liquid and of its vapor, at a certain temperature, and at the pressure of the vapor saturated at that temperature, we may, without changing temperature or pressure, condense a certain mass of vapor or evaporate a certain mass of liquid, and the system will be in equilibrium indifferently in every one of the states through which it is made to pass. The same is true of a system consisting of a hydrated salt and of a solution of the hydrated salt, at the temperature at which the solid salt and the solution have the same composition: a certain amount of the solid may be dissolved or precipitated, but the system is indifferently in equilibrum in every one of the states through which it is made to pass.—**Absorptiometric equilibrium.** See ★*absorptiometric.*—**Atmospheric equilibrium,** the tendency of the force of gravity to produce motion in any portion of the atmosphere, either horizontally or vertically, relatively to the earth's surface. In static equilibrium there is no tendency to move in any direction. In thermal equilibrium there is no tendency to move so far as the temperature influence is concerned. The equilibrium of mixed gases is disturbed by the fact that dry air is denser than moist air, the former sinking under the influence of gravity and being driven equatorward under the influence of centrifugal force more energetically than the latter. These conditions give rise to problems in thermal-gravitational and thermal-centrifugal equilibrium, or in general thermodynamic or convective equilibrium. In thermal-gravitational equilibrium three stages are recognized: (1) *Stable equilibrium*, when the decrease of temperature with altitude in the surrounding still air is less than the adiabatic rate in moving air, or one degree Fahrenheit for each 183 feet. In this case a mass of air at any height in the atmosphere has a tendency to return to its original level when it has once been displaced. (2) *Indifferent* or *neutral equilibrium*, when the vertical gradient of temperature in still air is exactly equal to the adiabatic rate in moving air, and a disturbed mass stays in its new location. (3) *Unstable equilibrium*, when the vertical gradient of temperature in still air is greater than the adiabatic rate in moving air. In this case the mass of air when once started in vertical motion continues to rise or fall as the case may be, because the thermodynamic change in its own temperature is less than the change actually existing in the surrounding atmosphere. A thunder-storm, with its ascending currents and formation of tall cumuli, illustrates unstable equilibrium.—**Chemical equilibrium,** the state of a chemical system in which the concentrations of the acting substances remain unchanged. If the transformation is irreversible, equilibrium comes when one or more acting substances are consumed; if the transformation is reversible, equilibrium is attained when a given substance is decomposed

and reproduced at the same rate.—**Convective equilibrium,** the tendency or liability of a mass of air to ascend or descend in the atmosphere because of buoyancy. In *stable convective equilibrium* the ascending and descending masses return to their initial levels because the rate of cooling due to expansion, or warming due to compression, exceeds the gradient in the quiet air. In *unstable convective equilibrium* ascending masses continue to ascend and descending masses continue to descend because their changes of temperature and density are less than those in the quiet air about them. In *indifferent convective equilibrium* the ascending and descending masses remain always in equilibrium with the strata into which they come, because their changes of temperature coincide with those of the quiet air through which they pass.—**Criterion of equilibrium,** a simple law or rule, based upon a study of the conditions of equilibrium of a system, by means of which the question whether equilibrium exists in any given case may be decided. Gibbs has shown that in an isolated system the energy of which is constant, thermodynamic equilibrium exists when the entropy is constant or decreasing; and that in such a system, the entropy of which is constant, equilibrium exists when the energy is constant or increasing.—**Equation of equilibrium.** See ★*equation.*—**False equilibrium,** in *phys. chem.*, a state of equilibrium not capable of prediction by thermodynamics in its present development. All the equilibriums predicted by thermodynamics can be verified by experiment, but many cases of equilibrium occur which cannot now be predicted by thermodynamics, or which are contradicted by thermodynamics. If the discrepancy is due to some unwarranted simplification introduced into the theory, Duhem calls the equilibrium an *apparent false equilibrium*; otherwise, a *genuine false equilibrium.* If water is cooled ten degrees below the freezing-point, according to thermodynamics the water should not remain in equilibrium as liquid water, but should become ice; yet sometimes the solidification does not take place, and the water remains unchanged as liquid water. This is an *apparent false equilibrium*, for we know what unwarranted omission of considerations has led to the erroneous prediction of disturbance of equilibrium which does not take place.—**Labile equilibrium.** (*a*) A type of equilibrium existing in the case of fluids, in which there is a continuous slipping of the molecules. (*b*) In *chem.*: (1) An assumed condition of a mass consisting of the same or of different kinds of matter, in which apparently no chemical change is going on, but in which it is imagined that individual atoms are exchanging places with others of exactly similar character, so that in a given (perhaps extremely short) time many molecules may be decomposed and precisely as many molecules, of absolutely similar character, formed. (2) The equilibrium of a liquid cooled, out of contact with its solid phase, below the temperature of equilibrium between the liquid and the solid; or of a liquid heated, out of contact with its vapor, above the temperature of equilibrium between the liquid and the vapor having a pressure equal to the actual pressure on the liquid. Water, free from ice, may be cooled many degrees below its usual freezing-point; when brought into contact with a fragment of ice, sometimes when disturbed mechanically, part of the water instantly freezes, and the temperature rises, from that of the labile equilibrium of water alone, to that of the stable equilibrium between water and ice.—**Point of equilibrium,** in a field of force, any point at which the forces are balanced.—**Statistical equilibrium,** in statistical mechanics, an equilibrium, as regards phase, between the systems of an ensemble, such that the distribution of the ensemble in phase remains unchanged.

equilibrium-ring (ē-kwi-lib′ri-um-ring), *n.* A balancing-ring; a metal ring placed on the back of a slide-valve, or in the casing of a steam-chest, to keep the steam-pressure from acting over an area on the back of the valve equal to the area of the exhaust-port. This so relieves the valve of pressure that it is practically balanced. The ring is usually placed in a recess and kept tight by placing springs behind it.

equilibrize (ē-kwil′i-brīz), *v. t.*; pret. and pp. *equilibrized*, pp. *equilibrizing.* [*equilibr*(*ium*) + *-ize.*] To bring into a state of equilibrium or equipoise; balance or cause to balance.

equilobate (ē-kwi-lō′bāt), *a.* [L. *æquus*, equal, + *lobus*, lobe, + *-ate*[1].] Having lobes of equal size, as the tails of some fishes.

equimolecular (ē″kwi-mọ̄-lek′ū-lạr), *a.* [L. *æquus*, equal, + NL. *molecula*, molecule, + *-ar*[3].] Having or containing an equal number of molecules.—**Equimolecular solutions,** in *phys. chem.*, solutions in which equal volumes contain the same number of molecules of the two dissolved substances, that is, solutions which contain quantities of the two dissolved substances which are in the ratio of their molecular weights.

equinate (ek′wi-nāt), *v. t.*; prep. and pp. *equinated*, ppr. *equinating.* [*equine* + *-ate*[1].] To inoculate with glanders.

equinocavus (ek-wi-nok′ạ-vus), *n.* [NL., < L. *equinus*, of a horse, + *cavus*, hollow.] Same as ★*talipes equinocavus.*

Equinoctial year. See ★*year.*

equinovarus (ek″wi-nọ̄-vā′rus), *n.* [NL., < L. *equinus*, of a horse, + *varus*, bent.] Same as *talipes equinovarus.*

equinox, *n.*—**Equation of the equinoxes.** See ★*equation.*—**Mean equinox,** the point on the equator which is determined by correcting the true equinox of the date for the equation of the equinox and the nutation.

equinus (ē-kwī′nus), *n.* [NL., < L. *equinus*, of a horse: see *equine.*] Same as *talipes equinus.*

equipartile (ē-kwi-pär′til), *n.* [L. *æquus*, equal, + *pars* (*part-*), part, + *-ile.*] One of the divisions between which stand equipostiles. *Biometrika*, Aug., 1902, p. 386.

equipartition (ē″kwi-pär-ti′shon), *n.* [L. *æquus*, equal, + *partitio*(*n-*), partition, distribution.] In *phys.*, the distribution of energy throughout a medium, consisting of molecules in motion, in accordance with the law of the partition of energy. See ★*energy.*

Equipartition of energy is supposed to establish itself within a small fraction of a second.
Lord Rayleigh, in Nature, LXXII. 54.

equiped (ē′kwi-ped), *a.* and *n.* [Also *equipede*; L. *æquus*, equal, + *pes* (*ped-*), foot.] **I.** *a.* Having legs of equal length: said of some crustaceans: as, the *equiped* chilopods.

II. *n.* One of the chilopods whose legs, save the last pair, are of approximately equal length; a member of the *Æquipedes* of Kirby.

equipment, *n.*—**Bureau of Equipment.** See ★*bureau.*

equipoise (ē′kwi-poiz), *v. t.*; pret. and pp. *equipoised*, ppr. *equipoising.* [*equipoise, n.*] 1. To bring into a state of equipoise or balance; hold in equipoise.—**2.** To counterbalance.

equipostile (ē-kwi-pos′til), *n.* [L. *æquus*, equal, + (?) *post*, after, + *-ile.*] An object, value, or term in a series or array corresponding to values of an argument in arithmetical progression. *Biometrika*, Aug., 1902, p. 390.

equipotent (ē-kwip′ō-tent), *a.* [L. *æquus*, equal, + *potens*, powerful: see *potent.*] Equal in power.

Equipotential function. See ★*function.*—**Equipotential system,** a system of forces such as is represented by certain animal ova or adult lower animals, like *Tubularia* or *Clavellina*, each portion of which has the same prospective potency in development or regeneration, that is, is capable of responding adaptively to a number of conditions.

equipotentiality (ē″kwi-pō-ten-shi-al′i-ti), *n.* The quality of being equipotential.

equiprobabilism (ē-kwi-prob′a-bil-izm), *n.* [L. *æquus*, equal, + *probabilis*, probable, + *-ism.*] The opinion in moral theology that where the reasons for either of two opposed courses of action are equally balanced, a man may use his liberty to follow either.

equiradial (ē-kwi-rā′di-al), *a.* [L. *æquus*, equal, + *radius*, spoke (radius).] Having equal radii.

equiradiate (ē-kwi-rā′di-āt), *a.* [L. *æquus*, equal, + NL. *radiatus*, radiate.] Having radii of equal length, as certain sponge-spicules. *Proc. Zool. Soc. London*, 1900, p. 129.

equirotal, *a.* **II.** *n.* A vehicle, invented in the early part of the nineteenth century, having wheels of uniform size and the body jointed in the middle, the forward portion turning with the front axle.

Equisetales (ek-wi-sē-tā′lēz), *n. pl.* [NL., ⟨ *Equisetum* + *-ales.*] An order of pteridophytic plants of the class *Equisetineæ*, containing the family *Equisetaceæ* only, which see for characters.

Equisetineæ (ek-wi-sē-tin′ē-ē), *n. pl.* [NL., ⟨ *Equisetum* + *-ineæ.*] A class of cryptogamic plants of the phylum *Pteridophyta*. It embraces the orders *Equisetales* and *Calamariales*. Engler now uses the name *Equisetales* for this group, calling the order *Euequisetales*, a change of doubtful propriety.

equisized (ē′kwi-sīzd), *a.* [L. *æquus*, equal, + E. *sized.*] Of the same size.

The two Rhomboidea are about *equisized.*
Proc. Zool. Soc. London, 1897, p. 290.

Equitable assignment. See ★*assignment.*

equitative (ek′wi-tā-tiv), *a.* [*equitate* + *-ive.*] Of or pertaining to equitation or horsemanship.

equitensal (ē-kwi-ten′sal), *n.* [L. *æquus*, equal, + *tens*(*io*(*n-*)), tension, + *-al*[1].] A line which cuts a system of tense lines so that the tensions at the crosses are all equal.

Equitinæ (ek-wi-tī′nē). *n.pl.*[NL., ⟨ *Eques* (*Equit-*) + *-inæ.*] A subfamily of drumfishes typified by the genus *Eques:* called *ribbonfishes* from their lengthwise black stripes.

equiv. An abbreviation of *equivalent.*

equivalence, *n.* **2.** In *chem.*, capability of mutual replacement, in chemical combination, of definite quantities of different substances: thus, there is *equivalence* between approximately 18.07 parts of aluminium, 40.1 of calcium, 46.1 of sodium, and 55.9 of (ferrous) iron in combining with the same fixed quantity of oxygen.

equivalent. I. *a.* **3.** In *geom.*: (*b*) Said of two polygons if they can be cut into a finite number of triangles congruent in pairs.—**5.** In *chem.*, applied to the respective quantities of different substances which are capable of replacing each other in combination with a fixed quantity of some particular substance. These mutually replaceable quantities of such substances are said to be *equivalent* to each other. See ★*equivalence*, 2.—**Equivalent by completion,** in *geom.*, said of two polygons if it is possible so to annex equivalent polygons to them that the two polygons so composed are equivalent.—**Equivalent equations, focus, illumination, lens, projection, sets.** See ★*equation*, etc.

II. *n.* **3.** See ★*equivalence*, 2.—**Electrochemical equivalent of an element,** in *phys. chem.*, the weight in grams of that element which, in electrolysis, is transformed from the ionic to the non-ionic condition, or conversely, by the passage of the unit quantity of electricity, or one coulomb. If this equivalent is known for any one element, it thereby becomes known for all other elements by the third of Faraday's laws of electrolysis. Silver is the element selected for the experimental determination, and the value adopted for its electrochemical equivalent by the International Congress of Electricity at Chicago, in 1893, is 0.001,118 gram. This number is perhaps too small by about one part in a thousand. If we divide this equivalent by the atomic weight of silver and multiply by the equivalent weight of any other element, we obtain the weight of the second element which would be deposited by the passage of one coulomb of electricity. For instance, the atomic weights of silver and of copper being 107.93 and 63.6, and the equivalent weight of copper being half its atomic weight, we have $\frac{31.8}{107.93} \times 0.001{,}118$ gram equals the electrochemical equivalent weight of copper, or 0.000,328 gram.—**Mechanical equivalent of light,** the numerical quantity which expresses in ergs, or other units of mechanical energy, the value of a unit of light. If we take as the unit of light that which produces an illumination of one lux, we may define the mechanical equivalent of light as the energy in ergs of the light-giving ether-waves received in one second upon one square centimeter of surface at a distance of one meter from a source of light having an intensity of one hefner. The first attempt to estimate the mechanical equivalent of light (although not in precisely the above terms, which are of more recent origin) was made by Julius Thomsen in 1865. He determined in absolute measure the radiation from an incandescent body, as a gas or oil-flame; then filtered out the infra-red rays by interposition of a cell of water, and measured the transmitted light. On account of the incomplete adiathermancy of the cell, his values are, however, subject to a large correction. Measurements by more refined methods have since been made by Tumlirz and by Ångström. (See ★*efficiency of a source of light.*) Ångström found the luminous energy received by a square centimeter of surface at a distance of one meter from the flame of a Hefner lamp to be 20.6×10^{-8} gram-calories per second, or, in mechanical units, 8.63 ergs per second. The composition of light from various sources, as gas-flames, the electric arc, or the sun, differs, and the effect of radiation upon the eye varies greatly with the wave-length. The luminosity is a maximum for rays in the middle of the spectrum and diminishes rapidly toward the red and violet. The mechanical equivalent should therefore depend on the composition of the light. From Ångström's value it is possible to compute that of all other sources of light that have been spectrophotometrically compared with the Hefner flame. The results of such a computation are given in the following table:

Source of light.	Ergs per second per square centimeter for one lux.
Untreated carbon at 1,000° C.	29.0
Untreated carbon at 1,400° C.	9.14
Glow-lamp at 2,000° C.	7.26
Hefner lamp	8.63
Petroleum-flame	8.69
Gas-flame	9.13 to 7.70
Acetylene-flame	7.12
Zircon-light	7.17
Lime-light	7.21 to 5.89
Arc-light	5.89 to 5.79
Welsbach light	4.50 to 4.39
Sunlight	4.85
Daylight (from sky)	5.53

The energy in ergs given in the above table does not include the total energy received at the surface by radiation, but only that portion which is capable of affecting the eye—in other words, of producing illumination. The amount of energy falls off rapidly as the temperature of the source rises. It is less for a given temperature in the case of treated carbon surfaces, as in the incandescent-lamp filament, than with untreated carbon, and still less in the case of light obtained from incandescent oxids. Thus the ergs of luminous energy per centimeter per second, corresponding to an illumination of one lux, are less for the Welsbach mantle and for the magnesium flame than for the electric arc, although the temperatures for the former sources are much lower.—**Osmotic equivalent,** that quantity of any substance which, if contained in a given volume of solution, will produce the same osmotic pressure as a standard quantity of some other substance when contained in the same volume of solution.—**Principle of kinesthetic equivalents,** in *psychol.*, the principle that "for each of our intentional actions we must have some way of thinking about the action, of remembering how it feels, looks, etc.; we must have something in mind equivalent to the experience of the movement." *J. M. Baldwin*, Story of the Mind, p. 20.—**Saponification equivalent,** in *chem.*, the quantity of any particular oil or fat which can be saponified by a fixed quantity of an alkali: usually expressed in the form of the number of grams of the oil saponified by 56.1 grams of caustic potash or 40 grams of caustic soda. *Sadtler*, Handbook of Indust. Chem., p. 268.—**Water equivalent,** in *calorimetry*, the quantity of water which is equivalent, in capacity for heat, to a given body; the mass of a given body multiplied by its specific heat.

equivoluminal (ē″kwi-vō-lū′mi-nal), *a.* Equal as to volume; of equal cubical content.

equivote (ē′kwi-vōt), *n.* [L. *æquus*, equal, + *votum*, wish (vote).] A tie in voting, an equal number of votes being cast on each side.

equoid (ē′kwoid), *a.* [L. *equus*, horse, + *-oid.*] Resembling or having the characters of the *Equidæ*, or horse family; horse-like.

Equus beds. See ★*bed*[1].

er, *v.* A simplified spelling of *err.*

era, *n.* **4.** In *geol.*, a division of geologic time which, according to the recommendation of the International Congress of Geologists, is to be regarded as of highest rank, corresponding to the stratigraphic term *group.* See *group*[1], 3 (*b*).—**Lithic era,** the first half of J. D. Dana's azoic eon, during which there was a solid crust on the earth, but the temperature was too high to permit condensation of the vapors as oceans. It was followed by the oceanic era.—**Oceanic era,** according to the classification of the early stages in the earth's history, that era of the azoic eon in which the atmospheric waters were condensed into an ocean over all the sphere or in an oceanic depression, with finally some emerging lands cooled from molten rock. The temperature of this ocean is conceived to have been about 5,000° F. at the beginning of the period, and before its close the action of the ocean waters had caused the deposition of sediments which formed the earth's supercrust.—**Psychozoic era,** the present age, or the age of man, as distinguished from former geological ages before the appearance of man.

eradicator (ē-rad′i-kā-tor), *n.* **1.** One who roots up or roots out and destroys.—**2.** An agricultural implement or machine used in uprooting.

erasion, *n.* **2.** In *surg.*, the removal of morbid tissue by scraping.

Erasmianism (ē-raz′mi-an-izm), *n.* [*Erasmian, adj.* (⟨ *Erasmus*), + *-ism.*] The religious system of the scholar and humanist Erasmus (1466–1536). He anticipated Luther in affirming the Bible to be the true source of theology. He condemned the subtleties of the scholastic systems; emphasized the moral elements of Christianity; and satirized the faults of the clergy, but refused to follow Luther, remaining in the communion of the Roman Catholic Church. The term is applied, therefore, to the attitude of men who protest against error, but compromise with existing institutions.

Erastianize (ē-ras′tian-īz), *v.* [*Erastian* + *-ize.*] **I.** *trans.* To make to accord with Erastianism.

II. *intrans.* To favor Erastianism.

E-rays. See ★*ray*[1].

erbin (ėr′bin), *n.* [Also *erbine*, ⟨ *erb*(*ium*) + *-in*[2].] Same as *erbia.*

erdmannite (erd′man-īt), *n.* [Named probably for A. *Erdmann.* (*Chester.*)] A complex mineral substance near allanite in composition, but perhaps only a mixture: obtained from Norway.

Erdmann's float, reagent. See ★*float*, ★*reagent.*

erecting-shop (ē-rek′ting-shop), *n.* A building or room in which engines or machines are assembled, as the parts are completed, to insure that all the parts will fit properly. Such a shop is provided with foundations, base-plates, benches, cranes, and other conveniences, according to the character of the machines to be erected.

erection, *n.* **10.** In *astrol.*, the construction of a scheme or figure of the heavens.

By *erection* of her figure, I gest it.
B. Jonson, Alchemist, iv. 4.

erector, *n.* **3.** A workman employed to put in place the steel part of buildings, bridges, or ships.—**4.** A machine, such as a derrick, used to place material in position in any structure.

eremian (e-rē′mi-an) *a.* [Gr. *ἐρημία*, a desert, a solitude, ⟨ *ἐρῆμος*, solitary.] Of or pertaining to the desert.—**Eremian subregion,** in *zoögeog.*, a division or subregion embracing northern Africa, northern Arabia, the greater part of Persia and Afghanistan, and the desert region of central Asia from the steppes of southern Russia to Manchuria.

Eremochæta (e-rē-mō-kē′tă), *n. pl.* [NL., ⟨ Gr. *ἐρῆμος*, solitary, + *χαίτη*, bristle.] In the classification of Osten-Sacken, a superfamily of dipterous insects, including the families *Stratiomyidæ*, *Tabanidæ*, *Acanthomeridæ*, and *Leptidæ.*

eremochætous (e-rē-mō-kē′tus), *a.* Belonging to or characteristic of the superfamily *Eremochæta. Cambridge Nat. Hist.*, VI. 446.

eremomeline (er-ē-mom′e-lin), *n.* One of the group of African birds known as *Eremomelinæ.*

eremophobia (e-rē-mō-fō′bi-ă), *n.* [NL., ⟨ Gr. *ἐρῆμος*, solitary, + *-φοβια*, ⟨ *φοβεῖν*, fear.] Morbid fear of being alone.

Eremurus (er-ē-mū′rus), *n.* [NL. (Bieberstein, 1818), ⟨ Gr. *ἐρῆμος*, solitary, + *οὐρά*, tail, stalk. The name alludes to the leafless flower-stalk and raceme.] A genus of plants of the family *Liliaceæ.* There are about 18 species, natives of the mountains of western and central Asia. Several are

cultivated for their striking habit and great flower-stalks crowned with showy white, rose-colored, or yellow flowers. The leaves rise from the root in a dense clump or rosette; the flowers have 6 segments, usually withering on the stalk, 6 stamens, and a 3-partitioned and 3-cornered ovary. Among the garden species are *E. robustus*, *E. Himalaicus*, and *E. spectabilis*. The best known is *E. robustus*, which often sends up a stalk 8 feet high bearing rose-colored flowers.

Eremurus spectabilis.
One fourth natural size.

erepsin (e-rep′-sin), *n.* [L. *erep-(tus)*, pp. of *eripere*, snatch away, + *-s-* + *-in*[2].] A ferment discovered by O. Cohnheim in the intestinal mucosa, which is capable of causing the cleavage of acid albumins and albumoses into crystalline end-products of proteolytic digestion, but which is without effect upon the native albumins. It acts in neutral or feebly alkaline media. A similar ferment has apparently been found also in the vegetable world.

Erethizontidæ (er″ē-thī-zon′ti-dē), *n. pl.* [*Erethizon(t-)* + *-idæ*.] The American porcupines of the genera *Erethizon* and *Coendoo* (*Synotheres*), considered as constituting a family, a view generally held by American zoölogists. *O. Thomas*, 1897. See cut under *porcupine*.

eretmologist (er-et-mol′ō-jist), *n.* [**eretmology* (< Gr. *ἐρετμός*, oar, + *-λογια*, < *λέγειν*, speak) + *-ist*.] One who is skilled in the science of rowing; a professional oarsman. [Humorous.]

ergal (ėr′gal), *n.* [G. *ergal*, < Gr. *ἔργον*, work, + *-al*[1].] In *phys.*, potential energy: a word introduced by Clausius. It is that portion of the total energy of a system which diminishes as work is done by the system, and it corresponds, therefore, to the negative value of the force-function and also to Helmholtz's term *free energy*.

ergasiomania (ėr-gas″i-ō-mā′ni-ą), *n.* [NL., < Gr. *ἐργασία*, work, labor, + *μανία*, madness.] A restless desire, amounting at times to an insane impulsion, to be continually at work; also, a desire on the part of a surgeon to operate at every opportunity, whether or not the operation is indicated or justifiable.

ergasiophobia (ėr-gas″i-ō-fō′bi-ą), *n.* [NL., < Gr. *ἐργασία*, work, labor, + *-φοβια*, < *φοβεῖν*, fear.] An excessive disinclination, which may amount to an insane aversion, to work; also, excessive timidity, on the part of a surgeon, and fear to perform an operation even when it is urgently indicated.

ergastic (ėr-gas′tik), *a.* [Gr. *ἐργαστικός*, able to work, working, < *ἐργάζεσθαι*, work, < *ἔργον*, work.] Being the result of biologic activity: a term applied to rather stable substances formed by the activity of the cell-cytoplasm. *A. Meyer*, 1896.

ergastinæ (ėr-gas-tī′nē), *n. pl.* [Gr. *ἐργαστῖναι* (Hesychius), < *ἐργαστής*, < *ἐργάζεσθαι*, work.] In *Gr. antiq.*, maidens who were chosen to weave and embroider the peplum of Athena. Certain figures in procession in the eastern frieze of the Parthenon are supposed to represent them.

ergastoplasm (ėr-gas′tō-plazm), *n.* [Gr. *ἐργαστ-(ικός)*, able to work, + *πλάσμα*, anything formed.] The more active portion of the protoplasm which forms the fibrillar structures of the cell: nearly the same as *kinoplasm* (Strasburger) and *ergoplasm* (Davidoff). *Garnier*, 1897.

ergastoplasmic (ėr-gas-tō-plas′mik), *a.* Of or pertaining to ergastoplasm. *Nature*, March 12, 1903, p. 455.

ergastulum (ėr-gas′tū-lum), *n.*; pl. *ergastula* (lą). [L., an accommodated form (as if dim.) of an Italian Gr. **ἐργαστρον*, < Gr. *ἐργάζεσθαι*, work, labor: see ★*ergastic*.] In *Rom. antiq.*, a prison for slaves attached to a Roman villa or farm; a house of correction.

ergatandrous (ėr-ga-tan′drus), *a.* [Gr. *ἐργάτης*, a worker, + *ἀνήρ* (*ἀνδρ-*), male, + *-ous*.] Having worker-like males: said of certain ants.

ergatandry (ėr-ga-tan′dri), *n.* [Gr. *ἐργάτης*, worker, + *ἀνήρ* (*ἀνδρ-*), male, + *-y*[3].] In *entomol.*, the condition of certain male ants which fail to develop wings and resemble the worker-ants in form.

ergatogyne (ėr′ga-tō-jin), *n.* [Gr. *ἐργάτης*, worker, + *γυνή*, female.] A female ant of worker-like aspect due to the absence of wings and wing-muscles; an ergatoid female.

ergatogynic (ėr″ga-tō-jin′ik), *a.* Same as ★*ergatogynous*. *Biol. Bulletin*, May, 1904, p. 252.

ergatogynous (ėr-ga-toj′i-nus), *a.* [Gr. *ἐργάτης*, a worker, + *γυνή*, female, + *-ous*.] Having worker-like females: said of certain ants.

ergatoid (ėr′ga-toid), *n.* and *a.* [Gr. *ἐργάτης*, a worker, + *εἶδος*, form.] **I.** *n.* A wingless although sexually competent ant of either sex. The females are really secondary queens. *Cambridge Nat. Hist.*, VI. 140.

II. *a.* Having the characteristics of an ergatoid.

ergatomorphic (ėr″ga-tō-môr′fik), *a.* [Gr. *ἐργάτης*, a worker, + *μορφή*, form, + *-ic*.] Of or pertaining to ergatomorphism; having the appearance of a worker-ant.

ergatomorphism (ėr″ga-tō-môr′fizm), *n.* [*ergatomorph-ic* + *-ism*.] The resemblance of certain male and female ants to workers, through a failure to develop the wings and their musculature.

erg-nine (èrg′nīn), *n.* A practical unit of work or energy equal to 1×10^9 ergs. See *ergten*. [Rare.]

ergogram (ėr′gō-gram), *n.* [Gr. *ἔργον*, work, + *γράμμα*, anything written.] A record of muscular work; a tracing obtained by means of the ergograph. See ★*ergograph*.

The *ergogram* pictures a very specific form of fatigue and shows a very wide range of individual differences.
G. S. Hall, Adolescence, I. 150.

ergograph (ėr′gō-gráf), *n.* [Gr. *ἔργον*, work, + *γράφειν*, write.] An instrument for recording muscular work; a recording dynamometer or ergometer: used especially in the study of muscular fatigue. The work recorded by the ergographs ordinarily employed is that done by a single finger pressing against a spring or pulling against a weight. In Mosso's instrument, the earliest form of the ergograph, there are three principal parts: the padded arm-rest, with arm-straps and brass tubes which hold the unused fingers in position; the weights, attached to a cord which passes over a pulley to a finger-cap adjusted to the lifting finger; and the recording carriage, which moves between metal guides with the movement of finger and spring, and carries a writing-point by which the ergogram or work-record is traced upon the smoked surface of a kymograph drum. An ergograph of this type is termed a *weight ergograph*. In other forms of the instrument, the compression of a spring replaces the pull-up of the weight: *spring ergographs* have been devised, for example, by Cattell and Binet. In yet other forms, among which Meumann's ergograph may be mentioned, there is no graphic record; the recording carriage and kymograph are replaced by a work-adder.

This greatly increased range of individual variation in early puberty was no less marked in vital capacity and in resistance to fatigue as tested by the *ergograph*.
G. S. Hall, Adolescence, II. 151.

ergographic (ėr-gō-graf′ik), *a.* [*ergograph* + *-ic*.] Relating to, or obtained by means of, the ergograph.

He studied the effect on the *ergographic* curve of drinking-water, and of the injection of cocaine and caffeine.
Stud. Yale Psychol. Lab., VIII. 104.

ergology (ėr-gol′ō-ji), *n.* [Gr. *ἔργον*, work, + *-λογια*, < *λέγειν*, speak.] Physiology and psychology considered dynamically, as the performance of work.

ergometric (ėr-gō-met′rik), *a.* Of or pertaining to the ergometer or the results shown by it; recorded or furnished by the ergometer: as, an *ergometric* diagram; *ergometric* measurements.

ergonomy (ėr-gon′ō-mi), *n.* [Gr. *ἔργον*, work, + *νόμος*, distribution.] Physiological division of labor. *Haeckel* (trans.), Wonders of Life, p. 35.

ergophobia (ėr-gō-fō′bi-ą), *n.* [NL., < Gr. *ἔργον*, work, + *-φοβια*, < *φοβεῖν*, fear.] A morbid aversion to labor. Compare ★*ergasiophobia*. *N. Y. Times*, Oct. 17, 1903.

ergoplasm (ėr′gō-plazm), *n.* [Gr. *ἔργον*, work, + *πλάσμα*, anything formed.] The active protoplasm which arises from the achromatic portion of the germinal vesicle of the egg and produces, wholly or in part, the first polar spindle. *Davidoff*, 1889.

ergosterin (ėr-gos′te-rin), *n.* [*ergo(t)* + Gr. *στερεός*, solid, + *-in*[2].] A colorless compound, $C_{26}H_{40}O.H_2O$, contained in ergot of rye. It crystallizes in pearly leaflets or in pointed needles, melts at 154° C., and boils at 185° C. under 20 millimeters pressure.

ergot[1], *n.*—**Corn ergot**, the fungus *Ustilago Zeæ*, which transforms the kernel of corn into black spores. See *smut*.

ergotinic (ėr-gō-tin′ik), *a.* [*ergot* + *-in*[2] + *-ic*.] Pertaining to or derived from ergot.—**Ergotinic acid**, a poisonous substance found in ergot, but probably not concerned in the production of the clinical picture of ergotism.

ergotism[2], *n.* 2. Logical reasoning; ratiocination.

The ratiocination or *ergotism* of the logicians is only one kind of reasoning and one little used by the ordinary mind.
L. F. Ward, Pure Sociol., p. 462.

a, Corn ergot (*Ustilago Zeæ*), on an ear of corn. The affected kernels are enormously increased in size (reduced); *b*, spore (enlarged); *c*, germinating spore (enlarged).

ergotization (ėr′gō-tī-zā″shon), *n.* [*ergotize* + *-ation*.] The act or process of affecting with the poison of ergot.

ergotol (ėr′gō-tōl), *n.* [*ergot* + *-ol*.] A liquid preparation of ergot two and a half times as strong as the United States Pharmacopœia fluid extract.

Erian, *a.* **II.** *n.* In *geol.*, a major group of geological units comprising the Marcellus, Hamilton, Genesee, Portage, and Chemung divisions as used by the original New York geologists. The term was applied by Dawson to the entire Devonian system as represented in New York and Canada as a more appropriate term, but it is now restricted to that part of the Devonian which is represented by the Marcellus and Hamilton shales.

Ericales (er-i-kā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Erica* + *-ales*.] An order of dicotyledonous sympetalous plants characterized by regular flowers, usually free stamens as many or twice as many as the lobes of the corolla, and a compound ovary. It embraces 8 families, of which *Ericaceæ* is the most important. See *Diapensiaceæ* and *Epacridaceæ*.

erichthoid (e-rik′thoid), *a.* [*erichthus* + *-oid*.] Of or pertaining to an erichthus: as, an *erichthoid* larva.

erichthus (e-rik′thus), *n.* [NL., irreg. < Gr. *ἠρι*, early, + *ἰχθύς*, fish.] A late larval stage of a stomatopodous crustacean, as the mantis-shrimp, in which the full number of segments and of limbs of the adult animal is reached.

ericineous (er-i-sin′ē-us), *a.* Same as *ericaceous*.

ericinol (e-ris′i-nōl), *n.* [*eric(olin)* + *-in*[2] + *-ol*.] A colorless, volatile, oily compound, $C_{20}H_{26}O$, prepared by the action of dilute acids on ericolin. It turns brown in the air.

ericolin (e-rik′ō-lin), *n.* [L. *erica*, heath, + *-ol* + *-in*[2].] A very bitter, brown, resinous compound, $C_{34}H_{56}O_{21}$, found in several plants of the heath family, in *Arctostaphylos Uva-ursi*, and in *Ledum palustre*.

ericophyte (e-rik′ō-fīt), *n.* [L. *erica*, heath, + Gr. *φυτόν*, plant.] In *phytogeog.*, one of a class of plants, typified by the genus *Erica*, which are adapted to live on the soil of heaths and peat moors. *Encyc. Brit.*, XXV. 432.

Ericsson gun. See ★*gun*.

Ericymba (er-i-sim′bą), *n.* [NL., < Gr. *ἐρι-*, much-, + *κύμβη*, a cup, bowl.] A genus of small minnows found in the Mississippi valley, distinguished by the silvery mucous cavities on each side of the head. *E. buccata* is the common species.

Erie blue, Erie Canal china, Erie clay. See ★*blue*, etc.

erikite (er′i-kīt), *n.* [Named after *Erik* the Red, the discoverer of Greenland.] A silicate and phosphate of the cerium metals and sodium, with also aluminium and thorium. It occurs in complex orthorhombic crystals of a brownish color, in southern Greenland.

erinaceine (er-i-nā′sē-in), *n.* A hedgehog of the subfamily *Erinaceinæ*.

erinite (ē′rin-īt), *n.* [*Erin* + *-ite*[2].] A basic copper arsenate occurring in green mammillary crystalline forms: from Cornwall, but earlier supposed to come from Ireland, hence the name.

Eriobotrya (er″i-ō-bōt′ri-ą), *n.* [NL. (Lindley, 1821), in allusion to the lanate inflorescence, < Gr. *ἔριον*, wool, + *βότρυς*, a bunch of grapes.] A genus of plants of the family *Malaceæ*. They are small trees with evergreen leaves, racemose-paniculate inflorescence covered with woolly hairs, thick 5-toothed calyx, crenulate petals, and 3–5 seeds, one in each compartment of the fruit. There are about 10 species, natives of eastern Asia. The loquat, *Eriobotrya Japonica* (*Photinia Japonica* of Gray), sometimes errone-

ously called *Japanese plum* and *Japanese medlar*, is practically the only representative of this genus grown in the United States. It is hardy in the Gulf States, where it is grown for the small, acid, yellow, plum-like fruits. The flowers are white and are borne in terminal clusters late in the season; the fruits mature in the following spring.

eriocaulaceous (er″i-ō-kâ-lā′shius), *a.* Of, pertaining to, or having the characters of the plant family *Eriocaulaceæ*.

eriocome (er′i-ō-kōm), *n.* [NL. *eriocomus*, < Gr. ἔριον, wool, + κόμη, hair.] A woolly-haired person: a member of a division of mankind, the eriocomi, characterized by fleecy hair, like that of the Melanesians and negroes. *Deniker*, Races of Man, p. 40.

eriocyanine (er″i-ō-sī′a-nin), *n.* [Gr. ἔριον, wool, + *cyanine*.] An acid coal-tar color of the triphenylmethane carbinol type. It dyes wool a bright blue in an acid bath.

erioglaucine (er″i-ō-glâ′sin), *n.* [Gr. ἔριον, wool, + γλαυκός, greenish blue, + *-ine*².] An acid coal-tar color of the triphenylmethane type. It dyes wool and silk greenish-blue shades in an acid bath.

eriometer, *n.*—**Young's eriometer,** an instrument used in measuring the diameter of the rings of color seen when a bright light is examined through a mass of small particles or fine fibers. It consists essentially of two glass plates between which the fibers are placed and an aperture in a sliding-screen through which the eye may view the bright light. If the angular diameter of the colored ring is observed a numerical table gives the corresponding linear diameter of the particles. A corresponding graduation may be inscribed on the instrument so that the numerical tables need not be used.

eriometric (er″i-ō-met′rik), *a.* Of or pertaining to an eriometer; obtained by the eriometer.—**Young's eriometric scale.** In the eriometer, as constructed by Young, the first red-and-green ring is made to cover a given circle by moving the sliding-tube to and fro, and an index shows the diameter of the particles. On the arbitrary scale used by him, 1 is equivalent to a diameter of 0.00003 of an inch, and the other scale numbers represent simple multiples of these: 3, the size of the particles observed in a thin layer of milk; 3.5, the spores of *Lycoperdon bovista;* 32, lycopodium seed or spores; 46, diameter of coarse wool.

erionite (er′i-ọn-īt), *n.* [Irreg. < Gr. ἔριον, wool, + *-ite*².] A hydrated silicate of aluminium, calcium, sodium, and potassium, occurring in aggregates of wool-like fibers in cavities in a rhyolite tuff: found at Durkee, Oregon.

eriophorous (er-i-of′ō-rus), *a.* [Gr. ἐριοφόρος, wool-bearing, < ἔριον, wool, + -φορος, < φέρειν, bear.] Wool-bearing; cottony; flocculent.

eriophyllous (er-i-of′i-lus), *a.* [Gr. ἔριον, wool, + φύλλον, leaf.] Having woolly leaves.

Eritrean (ā-rē-trē′ạn), *a.* [It. *Eritrea* + *-an*.] Of or pertaining to the Italian Red-Sea colony of Eritrea: as, *Eritrean* currency; *Eritrean* defenses.

erizo (ā-rē′thō), *n.* [S. Amer. Sp., so named from the prickly, bur-like fruit, < Sp. *erizo*, < L. *ericius*, hedgehog. See *urchin*.] In Venezuela and Colombia, the tibourbou, *Apeiba Tibourbou*. See ★*tibourbou*.

erl, *n,* A simplified spelling of *earl*.

erlan (ėr′lan), *n.* [*Erla*, Crandorf, Saxony, + *-an*.] In *petrog.*, a fine-grained metamorphic rock composed chiefly of augite, with some feldspar, quartz, and other minerals. Also called (in German) *erlanfels*. *Breithaupt*.

erly, *adv.* and *a.* A simplified spelling of *early*.

erm. In *her.*, an abbreviation of *ermine*.

ermin, *n.* and *v. t.* A simplified spelling of *ermine*.

ernest, *n.*, *a.*, and *v. t.* A simplified spelling of *earnest*.

Ernestine order. See ★*order*.

Ernogrammus (ėr″nō-gram′us), *n.* [NL., < Gr. ἔρνος, a sprout, + γραμμή, a line.] A genus of blennies found in Japan, remarkable for the branching lateral lines.

erodent, *n.* **II.** *a.* Producing erosion; erosive.

erodible (ē-rō′di-bl), *a.* [*erode* + *-ible*.] In *geol.*, yielding to erosive action; subject to the destructive processes of surface agencies.

Eros, *n.* **3.** In *astron.*, No. 433 of the asteroid group, discovered photographically by Witt, at Berlin, in 1898, and for a time provisionally referred to as D. Q. Its orbit is much smaller than that of any other minor planet, its mean distance from the sun being less than that of Mars. Its period is 643.11 days. At times it can approach the earth within about 13,000,000 miles (nearer than any other member of the solar system), and thus furnishes perhaps the most precise of all methods for finding the solar parallax. At these rare approaches it may nearly reach the limit of naked-eye visibility, but it is usually observable only in large telescopes, its diameter being not more than 15 or 20 miles. At certain times there are regular variations in its brightness from which an axial rotation in 5 hours 16 minutes is inferred.

erosible (ē-rō′si-bl), *a.* [L. *erosus*, pp. of *erodere*, erode, + *-ible*.] Capable of being eroded: as, an *erosible* rock.

In some parts the tufa is traversed by vertical veins of a harder and less easily *erosible* rock.
Geog. Jour. (R. G. S.), X. 478.

erosion, *n.*—**Cycle of erosion.** See ★*cycle* 1.—**Erosion column.** See ★*column*.—**Glacial erosion,** the erosion produced by glaciers and subglacial streams. The efficacy of this process has been much discussed, but its importance is coming to be more and more accepted by geologists. See *corrie*, *comb*³, *fiord*, *hanging* ★*valley*, *rock-basin*.—**Head erosion.** Same as *head-water* ★*erosion*.—**Head-water erosion,** the erosion of a valley-head or escarpment so that it is worn back in a direction opposite to the flow of its stream. Also retrogressive erosion.—**Retrogressive erosion.** Same as *head-water* ★*erosion*.—**Sheet-flood erosion,** erosion accomplished by sheets of running water, as distinct from streams. *J. W. McGee*, in Bulletin Geol. Soc. Amer., VIII. 88.—**Table-land of erosion.** See ★*table-land*.—**Unconformability by erosion.** Flat strata forming a land area are often carved into valleys by running water. Without appreciable tilting they may then be depressed beneath the sea and the valleys may be filled with new sediments which do not differ in dip, although usually contrasted in kind with the old. The stratigraphic break between the two is called *unconformability by erosion*.—**Wind-erosion,** the wearing away and transportation of rock material by the wind.

He particularly commended to geologists the study of *wind-erosion* of snow hardened by pressure and low temperature. . . . One could see the structure change from form to form under one's very eyes, and thus quickly gain such an insight into the processes of *wind-erosion* as, in the case of more stubborn rock, could only be obtained by prolonged study. *Athenæum*, Dec. 7, 1901, p. 778.

erosional (ē-rō′zhọn-ạl), *a.* [*erosion* + *-al*¹.] Of, pertaining to, or produced by erosion.

The terraced character of the outlet at Horseheads was also described, and the opinion expressed that the broader terrace is an *erosional* and not a constructional (floodplain) feature, and that it represents the outlet of Lake Newberry at its principal stage.
Science, Jan. 2, 1903, p. 26.

erosodentate (ē-rō″sō-den′tāt), *a.* [L. *erosus*, eroded, + *dentatus*, toothed.] Having irregular tooth-like projections; specifically, in *bot.*, dentate with erose teeth.

erosodenticulate (ē-rō″sō-den-tik′ū-lāt), *a.* [L. *erosus*, eroded, + *denticulus*, dim. of *dens*, tooth, + *-ate*¹.] Having small, irregular, tooth-like points.

erotically (e-rot′i-kạl-i), *adv.* In an erotic manner or sense.

eroticism (e-rot′i-sizm), *n.* [*erotic* + *-ism*.] The state or character of being erotic; undue prominence of sexuality or the sexual emotions; in *pathol.*, excessive sexual desires.

eroticist (e-rot′i-sist), *n.* One affected with eroticism.

eroticomania (e-rot″i-kō-mā′ni-ạ), *n.* [NL., < Gr. ἐρωτικός, erotic, + μανία, madness.] Same as *erotomania*.

erotism (e-rot′ism), *n.* A condition marked by erotic tendencies; eroticism.

erotogenic (er″ō-tō-jen′ik), *a.* Exciting sexual desire.

erotology (er-ō-tol′ō-ji), *n.* [Gr. ἔρως (ἐρωτ-), sexual love, + -λογία, < λέγειν, speak.] The study of the phenomena of sexual love.

These [unwritten codes of modesty] are like psychic garments with changing fashions, but *erotology* well understands that sometimes to ignore their existence is itself to win. *G. S. Hall*, Adolescence, II. 118.

erotometer (er-ō-tom′e-tėr), *n.* [Gr. ἔρως (ἐρωτ-), sexual love, + μέτρον, measure.] A standard or gage of sexual love. *G. S. Hall*, Adolescence, II. 132.

erotopath (e-rot′ō-path), *n.* [A back-formation from *erotopathy*.] One who is dominated by perverted sexual ideas. *Alien. and Neurol.*, Feb., 1903, p. 72.

erotopathia (er″ō-tō-path′i-ạ), *n.* [NL., < Gr. ἔρως (ἐρωτ-), sexual love, + πάθος, disease.] Perversion of the sexual instinct. *Amer. Jour. Psychol.*, XIII. 328.

erotopathic (er″ō-tō-path′ik), *a.* Relating to or suffering from erotopathia; erotic. *Alien. and Neurol.*, Feb., 1903, p. 75.

erotopathy (er″ō-top′ạ-thi), *n.* Same as ★*erotopathia*.

erotopsychic (er″ō-top-sī′kik), *a.* [Gr. ἔρως (ἐρωτ-), sexual love, + ψυχή, mind.] Same as ★*erotopathic*.

errancy (er′ạn-si), *n.* The condition of erring; liability to err.

erratic, *a.* **6.** In *zoöl.*, occurring in an unusual location.

Parasites which occur in their normal host, but in an unusual location, like the brain cysticerci . . . in a subcutaneous cyst . . . may be spoken of as *erratic*.
Trans. Amer. Micros. Soc., 1903, p. 128.

error, *n.* **8.** In *base-ball*, a failure by one of the fielders to put out an opponent when he has the opportunity; a misplay by which a runner secures a base.—**Average error.** See ★*method of average error*.—**Clock error.** See ★*clock*².—**Defendant in error,** a party to an action, either plaintiff or defendant in the court below, who is opposed to the plaintiff in error in the appellate court. See *plaintiff in* ★*error*.—**Error of a planet,** the difference between its observed and its calculated position.—**Error of expectation, fatigue, habituation,** in *psychophys.*, variable errors, incidental more especially to work by the gradation methods. The error of expectation may make a change of judgment come either too soon or too late, according as the expectation is directed upon change or uniformity of the stimuli; the errors of fatigue and habituation delay the change of judgment beyond the normal point. The errors can be avoided by a fitting disposition of the series: in certain cases the error of expectation, may, perhaps, for all practical purposes, be eliminated by treating it as a constant error; that is, by repeating the series with reversal, and taking the average result.—**Fechnerian time-error,** in *psychophys.*, a constant or systematic error, due to temporal arrangement, which may be eliminated by performing the experiment twice over,—once in the time-order *ab*, and once in the time-order *ba*,—and by averaging the result of the two experiments to a single value.—**Law of frequency of error.** Same as *law of error*. See *error*, 5.—**Method of average error.** See ★*method*.—**Plaintiff in error,** in *law*, a party to an action, either plaintiff or defendant in the court below, who sues out in an appellate court, a writ of error, to review proceedings upon which the error is alleged.—**Probable error of an event.** See ★*coefficient of variability*.—**Space error,** in *psychophys.*, a constant or systematic error, due to spatial arrangement, which may be eliminated (like the Fechnerian time-error) by repeating the experiment with reversal of spatial conditions, and averaging the two results.—**Station error,** in *geod.* and *astron.*, the difference between the position of a point on the earth's surface determined by astronomical means (its astronomical latitude and longitude) and the same as fixed by combination with data obtained from an extended geodetic survey. The differences arise from local deviations in the direction of gravity, due to local accidents of the surface or the underlying strata, and seldom exceed a few seconds, but in mountainous regions and mining districts are often much larger.

error (er′ọr), *v. t.* In *law*, upon an appeal, to reverse the judgment or other determination of the court below, on account of error in its proceedings. [Rare.]

ersæiform (ėr-sē′i-fôrm), *a.* [NL. *Ersæa* (?) + L. *forma*, form.] Resembling or having the structure of the *Ersæidæ;* composed of three medusoids, a sterile, a fertile, and a special nectocalyx. Compare ★*eudoxiform*.

ersæome (ėr-sē′ōm), *n.* [Gr. ἑρσαῖος, dewy (< ἕρση, dew), + *-ome*.] One of the two main forms of cormidium in hydrozoans, consisting typically of a hydrophyllium, a gastrozoid with a tentacle, one or more medusoid gonophores, and generally a nectocalyx.

erthen, erthling, erthly. Simplified spellings of *earthen, earthling, earthly*.

erubim (e-rö′bēm), *n. pl.* [Heb. *'erūbīm*, pl. of *'erūb*, mixture, combination.] Among the Jews, certain devices to get around the strict observance of the Sabbath rules, when circumstances make such observance difficult or impossible. The strict follower of rabbinical injunctions must not go out on the Sabbath beyond a certain distance. In order to establish the legal boundaries the rabbis have ordained that certain eatables may be deposited beyond the limit on the day preceding the Sabbath or festival, so as to make it appear that the place where the food is deposited is one's domicile, extending thereby the limit for one's movements.

Erucæformia (e-rö-sē-fôr′mi-ạ), *n. pl.* [NL., erroneously for **eruciformia*, neut. pl. of **eruciformis*, < *eruca*, a caterpillar, + *forma*, form.] A group of flies of the family *Tipulidæ*, having caterpillar-like larvæ: supposed to be the most primitive of existing *Diptera*. *Phalacrocera* is an example.

erucic (e-rö′sik), *a.* [L. *eruca*, a sort of cole-wort.] Noting an acid, a colorless compound, $C_{22}H_{42}O_2$, contained, in combination with glycerol, in white and black mustard-seed oil. It crystallizes in long slender needles, melts at 33–34° C., and is readily converted into the isomeric brassidic acid.

erucin (e-rö′sin), *n.* [*eruc(ic)* + *-in*².] The glycerin ester of erucic acid, found in rape-seed oil.

erugatory (e-rö′ga-tō-ri), *a* and *n.* [NL. **erugatorius*, < L. *erugare*, free from wrinkles, < *e*, out, + *ruga*, wrinkle.] **I.** *a.* Having the property of removing wrinkles.

II. *n.* A remedy used to eradicate wrinkles.

eruption, *n.*—**Cone of eruption.** See ★*cone*.—**Massive eruption,** the protrusion of lava without the formation of a volcanic cone. Compare ★*fissure-eruption*. *Geikie*, Text-book of Geol., p. 342.—**Subaërial eruption,** outbreaks of lava or tuff upon the land, as contrasted with those beneath the sea.

Eruptive center, vein. See ★*center*¹, ★*vein*.

Eryops (er′i-ops), *n.* [NL., (?) irreg. < Gr. ἐρύειν, draw out, + ὤψ, face.] A genus of stegocephalian reptiles from the Permian rocks of North America, having an elongated triangular skull with somewhat tapering snout, relatively small

round orbits, and rugose cranial bones with indistinct sutures.

erysipeloid (er-i-sip′e-loid), *n.* and *a.* [*erysipel-as* + *-oid.*] **I.** *n.* A chronic inflammation of the skin resembling erysipelas, occurring sometimes in persons who have been brought into contact with the skins of wild animals, either living or recently dead.

II. *a.* Resembling erysipelas.

Erysiphaceæ (er″i-si-fā′sē-ē), *n. pl.* [NL., < *Erysiphe* + *-aceæ.*] The family of fungi typified by the genus *Erysiphe*. See *Erysipheæ*.

Erythea (er-i-thē′ä), *n.* [NL. (Watson, 1880), < Gr. *Ερύθεια*, one of the Hesperides.] A genus of palms. They have fan-shaped leaves, slender, naked trunks, perfect flowers in large, decompound panicles, and for fruit a black globose drupe. There are two species, *E. armata*, from Lower California, and *E. edulis*, a native of Guadalupe Island, off the western coast of Mexico. Both species are cultivated out of doors in favored localities of southern California.

erythræmia (er-i-thrē′mi-ä), *n.* [< Gr. *ἐρυθρός*, red, + *αἷμα*, blood.] A morbid state characterized by an increase, both relative and actual, in the number of red corpuscles in the blood, by cyanosis, and by enlargement of the spleen. Called also *myelopathic polycythæmia*, *Osler's disease*, and *Vaquez's disease*.

erythrarsin (er-i-thrär′sin), *n.* [Gr. *ἐρυθρός*, red, + *ars(enic)* + *-in*2.] A red pigment, $C_4H_{12}O_3As_6$, formed, in very small quantity, by the oxidation of cacodyl.

erythrasma (er-i-thras′mä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *-ασμα*, a termination.] A contagious skin disease, running a chronic course, due to the presence of a vegetable parasite, *Microsporon minutissimum*.

erythrin, *n.* **3.** A coal-tar color of the xanthene type, prepared by the methylation of eosin. It dyes silk a bluish red with a red fluorescence. Also called *primrose.*—**Erythrin X,** an acid coal-tar color. Same as ★*ponceau 5R*.

erythrism, *n.* **2.** In *anthrop.*, redness of hair, generally combined with light complexion.—**3.** In *zoöl.*, the assumption of red in animals, in place of their ordinary coloration.

Erythrism is particularly common among the Mungooses and is responsible for a large number of the untenable species which have been formed in that group.

Proc. Zool. Soc. London, 1886, p. 77.

erythroblast, (e-rith′rō-blast), *n.* [Gr. *ἐρυθρός*, red, + *βλαστός*, germ.] One of the colored amœboid cells found in the marrow of the bones and supposed to give rise to the red blood-corpuscles.

erythroblastic (e-rith-rō-blas′tik), *a.* Of or pertaining to erythroblasts.

erythrocentaurin (e-rith″rō-sen-tâ′rin), *n.* [*Erythr(æa) centaur(ium)* (see def.) + *-in*2.] A neutral, bitter, glucoside-like body, $C_9H_{14}O_5$, formed in *Centaurion Centaurium* (*Erythræa Centaurium of Persoon*).

Erythrochæte (er″i-thrō-kē′tē), *n.* [NL. (Siebold and Zuccarini, 1846), < Gr. *ἐρυθρός*, red, + NL. *chæta*, bristle, < Gr. *χαίτη*, mane. The allusion is to the color of the pappus in the type species.] A genus of plants of the family *Asteraceæ*, closely related to *Senecio*. There are about thirty species, chiefly Asiatic. One species, the leopard-plant, a variety of *E. Kæmpferi* (*Senecio Kæmpferi* of De Candolle), is well known in cultivation. It is called by gardeners *Farfugium*. It is grown in the North as a foliage pot-plant, and was at one time a favorite window-garden subject. From Washington southward, it is hardy in the open. The plant has large orbicular-cordate leaves, blotched and spotted with yellow, white or rose-colored patches. A form with glaucous-green leaves edged with creamy white is known as *silver-leaf*.

erythrochroic (e-rith-rō-krō′ik), *a.* Of or relating to erythrochroism.

erythrochroism (e-rith-rō-krō′izm), *n.* [Gr. *ἐρυθρός*, red, + *χρόα*, color, + *-ism.*] Same as *erythrism*.

erythroclastic (e-rith-rō-klas′tik), *a.* [Gr. *ἐρυθρός*, red, + *κλαστός*, < *κλᾶν*, break, + *-ic.*] Relating to destruction of the red blood-cells.

erythrocyte (e-rith′rō-sīt), *n.* [Gr. *ἐρυθρός*, red, + *κύτος*, a hollow (a cell).] A red blood-corpuscle as distinguished from a white or colorless blood-corpuscle (leucocyte).

erythrocytolysis (e-rith″rō-sī-tol′i-sis), *n.* [NL., < Gr. *ἐρυθρός*, red, + *κύτος*, a hollow (a cell), + *λύσις*, dissolution.] Destruction of the protoplasm of the red blood-corpuscles.

erythrocytolytic (e-rith″rō-sī-tō-lit′ik), *a.* Of or pertaining to erythrocytolysis or the destruction of red blood-cells by hemolysins.

erythrocytorrhexis (e-rith″rō-sī-tō-rek′sis), *n.* [Gr. *ἐρυθρός*, red, + *κύτος*, a hollow (a cell), + *ῥῆξις*, rupture.] Rupture of an erythrocyte or red blood-cell.

erythrocytoschisis (e-rith″rō-sī-tos′ki-sis), *n.* [Gr. *ἐρυθρός*, red, + *κύτος*, a hollow (a cell), + *σχίσις*, cleaving.] Division by fission of a red blood-corpuscle.

erythrocytosis (e-rith″rō-sī-tō′sis), *n.* [NL., < Gr. *ἐρυθρός*, red, + *κύτος*, a hollow (a cell), + *-osis.*] The formation of erythrocytes, or red blood-corpuscles.

erythrodermatitis (e-rith″rō-dėr-ma-tī′tis), *n.* [NL., < Gr. *ἐρυθρός*, red, + *δέρμα(τ-)*, skin, + *-itis.*] Inflammatory redness of the skin.

erythrogen (e-rith′rō-jen), *n.* [Gr. *ἐρυθρός*, red, + *-γενης*, -producing.] **1.** A fatty, green crystalline compound, said to occur in certain specimens of pathological bile.—**2.** A substance, possibly a chromogen, found in flowers.

erythrogenic (e-rith-rō-jen′ik), *a.* [Gr. *ἐρυθρός*, red, + *-γενης*, -producing, + *-ic.*] Producing or giving rise to red blood-corpuscles.

erythroglucin (e-rith-rō-glō′sin), *n.* [Gr. *ἐρυθρός*, red, + *γλυκύς*, sweet, + *-in*2 (see ★*glucin*).] Same as ★*erythrol*.

erythrogranulose (e-rith-rō-gran′ū-lōs), *n.* [Gr. *ἐρυθρός*, red, + E. *granulose.*] A variety of soluble starch which is colored red by iodine.

erythrol (er′i-thrōl), *n.* [Gr. *ἐρυθρός*, red, + *-ol.*] The correct name (by regulation) for *erythrite*.

erythroleinic (er″i-thrō-lē-in′ik), *a.* [*erythrolein* + *-ic.*] Noting an acid coloring-matter of unknown composition contained in archil or orchil.

erythrolysin (er-i-throl′i-sin), *n.* [*erythrolysis* + *-in*2.] A lysin which is specially directed against the red corpuscles of the blood. The term *hemolysin* is more generally used, although strictly speaking it would comprise the leucolysins as well as the erythrolysins.

erythrolysis (er-i-throl′i-sis), *n.* [NL., < Gr. *ἐρυθρός*, red, + *λύσις*, dissolution.] The destruction of red cells by means of specific cytolysins. See also ★*erythrolysin*.

erythromelia (e-rith-rō-mē′li-ä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *μέλος*, limb.] A neurosis characterized by redness of the skin on the exterior surfaces of the extremities.

erythrophage (e-rith′rō-fāj), *n.* [Gr. *ἐρυθρός*, red, + *φαγειν*, eat.] A phagocyte which destroys the red blood-globules.

erythrophilous (er-ith-rof′i-lus), *a.* [Gr. *ἐρυθρός*, red, + *φιλεῖν*, love, + *-ous.*] Readily staining in a red dye, such as erythrosin: said of cells: opposed to ★*cyanophilous*.

erythrophleine (e-rith-rō-flē′in), *n.* [*Erythrophle-um* + *-ine*2.] A crystalline poisonous alkaloid, $C_{28}H_{43}O_5N$ (?), contained in the bark of *Erythrophleum Guineense:* a local anesthetic and heart-poison. It is used by the natives of the west coast of Africa as an arrow-poison.

erythrophobia (e-rith-rō-fō′bi-ä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *-φοβια*, < *φοβεῖν*, fear.] A morbid aversion to the color red.

erythrophore (e-rith′rō-fōr), *n.* [Gr. *ἐρυθρός*, red, + *-φορος*, bearing, < *φέρειν*, bear.] The red chromatophore of algæ.

erythropia (er-i-thrō′pi-ä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *ὤψ* (*ὠπ-*), eye.] Red vision: a condition in which all objects appear to be tinged with red.

erythroplate (e-rith′rō-plāt), *n.* In *photog.*, a plate impregnated with erythrosin and used in the orthochromatic process.

erythropsia (er-i-throp′si-ä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *ὄψις*, view.] Same as ★*erythropia*.

erythropsin (er-i-throp′sin), *n.* [Gr. *ἐρυθρός*, red, + *ὄψις*, view, + *-in*2.] Same as *rhodopsin*.

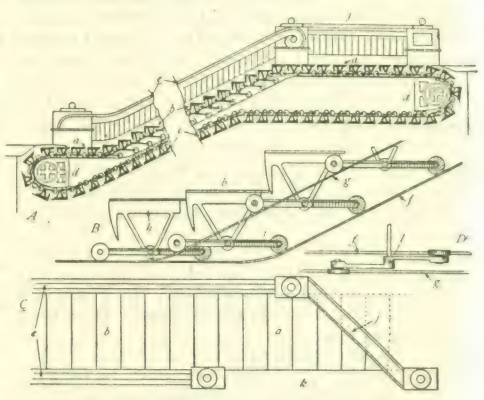
erythroretin (e-rith-rō-rē′tin), *n.* [Gr. *ἐρυθρός*, red, + *ῥητίνη*, resin.] One of the resinous substances remaining after the crystalline substances have been removed from rhubarb extract. *Buck*, Med. Handbook, VI. 974.

erythrose (er′ith-rōs), *n.* [Gr. *ἐρυθρός*. red, + *-ose.*] A sugar, $HOCH_2CH(OH)CH(OH)CHO$, belonging to the group known as tetroses. It is closely related to erythrol.

erythrosiderite (e-rith-rō-sid′ē-rīt), *n.* [Gr. *ἐρυθρός*, red, + *σιδηρίτης*, of iron (see *siderite*).] A hydrous chlorid of potassium and ferric iron, found as a red deliquescent coating on the lava of Vesuvius after the eruption of April, 1872.

erythrosin, erythrosine (e-rith′rō-sin), *n.* [Irreg. < Gr. *ἐρυθρός*, red, + *-in*2.] A coal-tar color of the xanthene type, the sodium or potassium salt of tetra-iodofluorescein. It dyes wool and silk bluish red or pink in a slightly acid bath. Also called *erythrosin B*, *erythrosin D*, *eosin J*, *pyrosine B*, and *iodeosine B.*—**Erythrosin BB.** Same as ★*phloxin P.*—**Erythrosin G,** a coal-tar color of the xanthene type, the sodium or potassium salt of di-iodofluorescein. It dyes wool and silk yellow, red, or pink in a slightly acid bath. Also called *dianthine G*, *pyrosine J*, and *iodeosine G.*—**Erythrosin plates,** in *photog.*, sensitized plates stained with the red organic dyestuff erythrosin to increase their sensitiveness to the longer wave-lengths of the spectrum.

erythrotoxin (e-rith-rō-tok′sin), *n.* [Gr. *ἐρυθρός*, red, + E. *toxin.*] Same as ★*erythrolysin*.



erythrozinkite (e-rith-rō-zing′kīt), *n.* [Gr. *ἐρυθρός*, red, + E. *zinc*, *zink*, + *-ite*2.] Probably a manganesian variety of the zinc sulphid wurtzite: from Siberia.

erythrozym (e-rith′rō-zim), *n.* [Gr. *ἐρυθρός*, red, + *ζύμη*, ferment.] A peculiar ferment of the nature of an enzym occurring in madder-root. It possesses the power of decomposing rubian, yielding several products the most important of which is alizarin. The formula assigned to it by Schunck is $C_{56}H_{34}N_2O_{40} + CaO$.

erythruria (er-ith-rō′ri-ä), *n.* [NL., < Gr. *ἐρυθρός*, red, + *οὖρον*, urine.] The passing of red urine. Usually *hematuria* or *hemoglobinuria*.

Esbach's albuminimeter. See ★*albuminimeter*.

escalator (es′ka-lā-tor), *n.* [F. **escalateur*, < NL. **scalator*, < ML. *scalare*, climb a stair: see *scale*3, *v.*] A moving stairway. It is essentially a conveyer, employing two chains which form an endless belt that travels on a double track, passing over two large sheaves, one below the floor at the foot of the stairway and one under the floor at the head of the stairway. The links of the chains support the treads and risers of a flight of steps, each pair supporting one tread and one riser. When the tracks are level, as at the landings of the stairway, the treads and risers travel on two pairs of wheels, each pair moving on one track, and the treads form a continuous platform, the risers hanging below out of sight. Where the tracks are inclined they separate, one pair of wheels following the upper track and the other the lower track; the treads separate and the risers fill the spaces between the steps, thus forming a continuous traveling stairway. In operation the belt travels over the lower sheave up the stairway and, turning downward over the second sheave, returns with the treads and risers hanging below until they are again reversed in turning upward over the lower sheave. The two landings are thus traveling horizontal walks, and the stairway is a series of steps continually moving upward. The passenger steps upon the lower platform and stands still, the steps lifting him until the upper platform is reached, where he walks off upon the floor. At the side of the casing an endless hand-rail travels upward at the same speed as the stairway. Very large escalators have two stairways, one carrying passengers up and the other down. A single escalator, having steps three feet wide, has a capacity of six thousand passengers an hour. See ★*conveyer*.

Escalator.

A: *a*, escalator operating as a horizontal apron-conveyer; *b*, escalator operating as an elevator; *c*, conveyer returning inverted and idle; *d*, *d*, sheaves over which conveyer turns, one being a live sheave giving motion to the conveyer; *e*, traveling hand-rail. *B*: *f*, lower track; *g*, upper track; *h*, frame supporting one tread and riser; *i*, four-wheel truck supporting frame, first pair on level position, others with forward pair of wheels on lower (inside) track, rear pair on upper (outside) track. (See *D*, showing wheels and tracks.) *C*: *a*, treads traveling horizontally; *b*, treads ascending; *f*, preventer or guard, guiding passenger off to *k*, second-story floor; *e*, traveling hand-rail. *D*: *f*, lower rail; *g*, upper rail; *l*, track and wheels.

escalin (es-ka-laṅ′), *n.* [F., < D. *schelling*, E. *shilling:* see *shilling.*] A name of various coins: (*a*) A coin of Haiti, equal to 6 sols, and later to 15 sols. (*b*) A silver coin of Liège, equal to ⅓ florin or 10 stivers. (*c*) A silver and billon coin, equal to 3 stivers, struck for a long period in the Low Countries. (*d*) A copper coin struck, by Russia, for Prussia, 1759–61. (*e*) A coin of Basel the one forty-fifth of a rix-dollar.

Escalloniaceæ (es-ka-lō-ni-ā′sē-ē), *n. pl.* [NL. (Dumortier, 1829), < *Escallonia* + *-aceæ.*] A family of dicotyledonous choripetalous plants of the order *Rosales*, typified by the genus *Escallonia* (which see), included by many authors in the *Saxifragaceæ*. It includes 25 genera of trees and shrubs, mostly natives of the southern hemisphere. *Itea* (which see) is the only genus which occurs in the United States.

escambron (es-käm-brōn′), *n.* [Sp. *escambron*, buckthorn (*Rhamnus* sp.).] A name of several plants armed with spines, especially the cat's-claw, *Pithecolobium Unguis-cati*, called *escambron colorado; Pisonia aculeata*, the cockspur; and *Volkameria aculeata*, called *escambron blanco*. [Porto Rico.]

escapado (es-kä-pä′dō), *n.* [Sp.] An escaped prisoner. *Mayne Reid.*

escape, *n.* 11. The outlet or gate in an irrigation or other hydraulic work by which water may be permitted to escape from the canal, either automatically or under direct control.

escapee (es-kā-pē′), *n.* An escaped person: used particularly with reference to convicts who have escaped from penal settlements, or have escaped and been recaptured.

escape-head (es-kāp′hed), *n.* A device by which an escape is operated. See ★*escape*, 11.

escapement, *n.* 3. In *pianoforte-making*, that part of the action which provides that the hammer, after striking the string, shall instantly recoil, whether or not the key is released. The escapement is called *double* when the mechanism admits of giving a second blow without fully releasing the key.—**Vertical escapement,** a form of clock escapement in which the escape-wheel is on a vertical axis, the rest of the train having horizontal axes: also called the crown-and-verge escapement, since the change from horizontal to vertical axes is usually made by a crown-wheel having teeth on the edge of the cylinder.

escapement-anchor (es-kāp′ment-ang″kor), *n.* In clockwork, the two arms of the detent or pawl which engage with the teeth of the escape-wheel, so as to allow only one of its teeth to pass at each oscillation of the pendulum or balance-wheel. The shape given to these two arms so as to envelop a part of the arc of the escape-wheel resembles that of the flukes of an anchor.

escape-pipe (es-kāp′pīp), *n.* An exhaust-pipe; the pipe through which steam escapes from an engine or a blow-off valve.

escape-scuttle (es-kāp′skut″l), *n.* In *shipbuilding*, a scuttle which can be opened from a confined space such as a coal-bunker, to permit escape therefrom when the ordinary entrance is blocked.

escape-warrant (es-kāp′wor″ant), *n.* See ★*warrant.*

escape-way (es-kāp′wā), *n.* The channel through which the water is discharged from an escape. See ★*escape*, 11.

escape-wheel (es-kāp′hwēl), *n.* The last wheel in the mechanism in clock- and watch-work by which the power of spring or weight is released or allowed to escape, by the catch and release of detent elements controlled by the timed swing of the pendulum or the oscillation of the balance-wheel.

escarole (es-ka-rōl′), *n.* Blanched endive: a salad vegetable. Also *escarolla.*

eschar, *n.* 2. Same as *slough*², 2.

escharine (es′ka-rin), *a.* Having the characters of, or resembling, the *Escharina.*

eschrolalia (es-krō-lā′li-ä), *n.* [NL. **æschrolalia*, < Gr. *αἰσχρός*, shameful, + *λαλεῖν*, speak.] Obscenity in speech.

escigenin, æscigenin (ē-sij′e-nin), *n.* [*æsci(nic)* + L. *-gen-*, produce, + *-in*.] A compound, $C_{12}H_{20}O_2$, formed from escinic acid, a glucoside found in horse-chestnuts. It is a crystalline powder insoluble in water.

escinic, æscinic (ē-sin′ik), *a.* [L. *æsc(ulus)*, horse-chestnut, + *-ine* + *-ic*.] Obtained from horse-chestnuts.—**Escinic acid,** an acid, $C_{24}H_{40}O_{12}$, which is also a glucoside: found in horse-chestnuts.

esciorcein, æsciorcein (ē-si-ôr′sē-in), *n.* [*æsc(letin)* + *orcein.*] A substance, $C_9H_7NO_5$, resembling orcein, formed by the action of ammonia on para-esculetin.

escoba (es-kō′bä), *n.* [Sp. *escoba*, broom, < L. *scopa*, broom.] A name, in many countries settled by the Spanish, of tough-stemmed undershrubs used for making temporary brooms for sweeping the floor or ground about a house, especially of species of *Sida* and plants resembling them. In Porto Rico, *Sida acuta* is called *escoba blanca*, or white broomweed; *S. rhombifolia, escoba colorada*, or red broomweed; and *S. ulmifolia, escoba dulce*, or sweet broomweed. These weeds are also called *escobilla.* See *Sida*, 1.

escobilla (es-kō-bil′yä), *n.* [Sp., dim. of *escoba*, broom.] Same as ★*escoba.*

escobita (es-kō-bē′tä), *n.* [Sp. *escobita*, a little whisk-broom, dim. of *escoba*, a broom.] In California, one of two species of the plant-genus *Orthocarpus*, the name referring to the brush-like inflorescence. *O. densiflorus* is the common escobita, *O. purpurascens* the purple escobita; the latter is also called *pink paint-brush.* See ★*owl's-clover.*

escolar (es-kō-lär′), *n.* [Sp., a scholar, a student: appar. first with reference to the black escolar, called also *domine* (see ★*domine*): in allusion to the 'black robe.'] A Cuban name for a scombroid fish of elongate body and swift movements, especially the species *Ruvettus pretiosus.*

escorzonera (es-kôr-thō-nā′rä), *n.* [Sp. *escorzonera*, scorzonera.] A name in tropical America of several plants having fleshy roots, especially *Craniolaria annua*, belonging to the family *Martyniaceæ*, and in Mexico to a composite plant, *Pinaropappus roseus*, the roots of which are used medicinally and are offered for sale in the markets. In Spain the name is applied to *Scorzonera Hispanica* and *Reichardia picroides.* See *black salsify*, under *salsify*, and *Scorzonera.*

escribano (es-kri-bä′nō), *n.* [Sp., a writer, a notary: see *scriven.*] A Cuban name for the fish called in English halfbeak (*Hemiramphus roberti*).

escudo, *n.* 2. A gold coin of Chile, of the value of five pesos, equal to $1.825.

esculetic (es-kū-let′ik), *a.* [*esculet(in)* + *-ic.*] Derived from esculetin.—**Esculetic acid,** an acid, $C_6H_2(OH)_3CH : CHCO_2H$, formed by boiling esculetin with a solution of barium hydroxid.

esculic (es-kū′lik), *a.* [*escul-in* + *-ic.*] Derived from esculin.—**Esculic acid.** Same as ★*sapogenin.*

esculotannic (es″kū-lō-tan′ik), *a.* [L. *æsculus*, horse-chestnut, + E. *tannic.*] Tannic, and derived from the horse-chestnut.—**Esculotannic acid,** a variety of tannic acid or tannin having the composition $C_{26}H_{24}O_{12}$, and found in the bark, leaves, and other parts of the horse-chestnut.

Escurial lace. See ★*lace.*

escutcheon, *n.*—**Sacral escutcheon,** a name given by Mivart to the slightly raised shield-shaped figure (apex backward) on the posterior portion of the dorsal face of the sacrum of parrots. The term is of limited application, since in most birds this portion of the sacrum is smooth.

esdragol (es′dra-gōl), *n.* A colorless liquid, $CH_3CH : CHC_6H_4OCH_3$, found in Chinese anise-oil. It boils at 215–216° C.

eseridine (ē-ser′i-din), *n.* [*eser(ine)* + *-id* + *-ine*².] A colorless crystalline alkaloid, $C_{15}H_{23}N_3O_3$, accompanying physostigmine (eserine) in Calabar bean, *Physostigma venenosum.* It has a pronounced action on the heart.

eserine-pilocarpine (es″e-rin-pī-lō-kär′pin), *n.* A combination of the alkaloids eserine (physostigmine) and pilocarpine: used in the treatment of horses for colic, and as a purge in herbivorous animals.

eshreen (esh-rēn′), *n.* [Ar. *'ishrīn*, twenty, < *'ashar*, ten.] A coin of modern Egypt, the 20-faddah piece.

Esmarch bandage. See ★*bandage.*

esmeralda (es-me-räl′dä), *n.* [Amer. Sp. use of Sp. *esmeralda*, emerald: see *emerald.*] A name applied by Spanish Americans to different fishes of the genus *Gobius.*

esmeraldaite (es-me-ral′da-īt), *n.* [*Esmeralda* (see def.) + *-ite*².] A hydrated ferric iron, $Fe_2O_3.4H_2O$, occurring in black masses with vitreous luster: from Esmeralda county, Nevada.

esocolitis (es″ō-kō-lī′tis), *n.* [NL., < Gr. *ἔσω*, within, + *κόλον*, colon, + *-itis.*] Same as *colitis.*

esofagus, *n.* A simplified spelling of *esophagus.*

Esophageal pouch. See ★*pouch.*

esophagectomy (ē-sof-a-gek′tō-mi), *n.* [Gr. *οἰσοφάγος*, esophagus, + *ἐκτομή*, excision.] Excision of the esophagus, in part or as a whole.

esophagism (ē-sof′a-jism), *n.* [*esophagus* + *-ism.*] Spasmodic narrowing of the esophagus.

esophagoblast (ē-sō-fag′ō-blast), *n.* [Gr. *οἰσοφάγος*, gullet, + *βλαστός*, germ.] A name given to each of three large ectodermal cells which, in certain annelids like *Thalassema*, give rise to the esophagus or gullet of the larva.

esophago-enterostomy (ē-sof″a-gō-en-te-ros′tō-mi), *n.* A surgical operation for establishing direct communication between the esophagus and the small intestine, shutting out the stomach which may or may not be wholly or partially excised.

esophagoplasty (ē-sō-fag′ō-plas-ti), *n.* [Gr. *οἰσοφάγος*, gullet, + *πλαστός*, < *πλάσσειν*, form.] Plastic surgery of the esophagus.

esophagoscope (ē-sō-fag′ō-skōp), *n.* [Gr. *οἰσοφάγος*, esophagus, + *σκοπεῖν*, view.] An instrument which enables an observer to obtain a view of the mucous membrane of the esophagus.

esophagoscopic, *a.* Relating to esophagoscopy.

esophagoscopy (ē-sof-a-gos′kō-pi), *n.* [Gr. *οἰσοφάγος*, esophagus, + *-σκοπια*, < *σκοπεῖν*, view.] Examination of the interior of the esophagus by means of the esophagoscope.

esophagospasm (ē-sof′a-gō-spazm), *n.* Same as *œsophagospasmus.*

esophagostomy (ē-sof-a-gos′tō-mi), *n.* [Gr. *οἰσοφάγος*, gullet, + *στόμα*, mouth.] The establishment of a permanent opening from the neck into the esophagus.

esophagotome (ē-sō-fag′ō-tōm), *n.* A knife used for the performance of esophagotomy.

esophagus, *n.*—**Posterior esophagus,** in certain gasteropods, as *Triton*, a narrow tube connecting the crop with the stomach.

esophoria (es-ō-fō′ri-ä), *n.* [NL., < Gr. *ἔσω*, within, + *-φορια*, < *-φορος*, < *φέρειν*, bear.] A condition, depending upon imbalance of the eye-muscles, in which there is a tendency to convergence of the visual axes less pronounced than in actual squint or esotropia.

esophoric (es-ō-for′ik), *a.* [< *esophor-ia* + *-ic.*] Relating to or characterized by esophoria.

Esopus grit. See ★*grit*².

esotropia (es-ō-trō′pi-ä), *n.* [NL., < Gr. *ἔσω*, within, + *-τροπος*, < *τρέπειν*, turn.] An exaggerated esophoria amounting to convergent squint.

espada (es-pä′dä), *n.* [Sp., a sword.] 1. A professional bull-fighter whose duty is to kill the bull with the sword. See also *matador.*—2. The swordfish.

espagnolette (es-pän-yo-let′), *n.* [F., < *espagnol*, Spanish, + *-ette.*] A fastening for a double casement-window or light double door. A round rod reaching from top to bottom of the casement is fixed to the outer valve or fold. When both folds are shut the rod is turned upon itself, and hooks at the top and bottom take hold of fixed pins in the head and sill of the frame.

esparcet, *n.*—**False** or **wild esparcet,** *Astragalus bisulcatus* a common leguminous plant of the western United States, congeneric with the principal loco-weeds, yet not only innocuous, but of growing importance as a forage-plant and capable of being made to grow densely like clover and alfalfa, so as to be cut as hay.

False or Wild Esparcet (*Astragalus bisulcatus*).
One fourth natural size.

espec. An abbreviation of *especially.*

Esperanto (es-pe-rän′tō), *n.* [Name transferred to the language from the pseudonym of its inventor, Dr. *Esperanto*, whose real name is Zamenhof (b. at Bielostok, Russia). The pseudonym *Esperanto* is a word of the artificial language so called, meaning 'hoper' or 'hoping person,' being a noun (in *-o*) from the participial adjective (in *-a*) *esperanta*, hoping, present participle (in *-anta*) of the verb (in *-i*) *esperi*, to hope, < F. *espérer*, < L. *sperare*, hope: see *esperance.*] The name of an 'international' language constructed, like Volapük, by arbitrary reduction and manipulation of words and forms taken from European languages, ancient and modern, and the adoption of a simple and regular inflection. The general aspect of the language as printed is that of a shrunken composite of Latin, Spanish, and French, with a Polynesian spelling.

esphera (es-fā′rä), *n.* [Pg., a sphere: see *sphere.*] A gold coin of Portugal, struck under Emanuel I. (1495–1521) for the colonies.

espinillo (es-pē-nēl′yō), *n.* [Sp. *espinillo*, a dim. of *espino*, thorn-tree, < *espina*, thorn: see *spine.*] In Spanish countries, a small thorn-bearing tree. In Uruguay and Argentina especially *Acacia Cavenia*, a shrub or small tree with numerous heads of yellow flowers closely resembling the widely spread *A. Farnesiana*, but having long conspicuous white stipulary spines. Like many other trees of the mimosa family, its legumes are rich in tannin. They are known commercially as *quirinca-pods* (which see). It shares with *A. Farnesiana* the name *aroma*, from the aromatic fragrance of its flowers.

espino (es-pē′nō), *n.* [Sp. *espino*, a thorn-bush or thorn-tree, < *espina*, a thorn: see *spine*.] **1.** Same as ★*espinillo*.—**2.** A name applied in Spain to several species of hawthorn (*Cratægus Oxyacantha*, etc.) and of buckthorn (*Rhamnus*), and in tropical America to thorny mimosas (*Acacia macracantha* and others) and species of *Fagara*, including the prickly-ash (*Fagara Clava-Herculis*).

esponja (es-pōn′hä), *n.* [Sp., sponge: see *sponge*.] In Porto Rico and Spanish America, the sponge-gourd. See *Luffa*.

espundia (es-pön′di-ä), *n.* [Sp., an ulcer in horses.] The Bolivian name for a skin-disease, said to be a lupus, peculiar to the lower eastern valleys and lowlands of western South America. It is not contagious, but may become mortal through neglect and excesses. Many attribute it to the sting of an insect.

Espy's dew-point method, rule, theory of storms. See *altitude of a* ★*cloud*, ★*rule*[1], ★*storm*.

essence, *n.*, **7.**—Within the last few years knowledge of the true chemical nature of the essences or essential oils, which occur in great variety in the vegetable kingdom, and to which the odors, tastes, and medicinal effects of many plants are due, has been greatly increased. Instead of single substances, these essences are found to consist of hydrocarbons, alcohols, aldehydes, and esters, often of special character and variously mixed with one another; and among the notable achievements of modern organic chemistry have been not only the successful study of these materials of natural origin, but also, in a number of cases, their artificial reproduction.—**Essence de Boulogne,** a trade-name for a solid bleaching material made by passing chlorin gas over crystallized carbonate of soda. Also known as *chlorozone*.—**Essence of ananas.** Same as *ethyl butyrate* (which see, under *butyrate*).—**Essence of beef,** the juice of beef, prepared in various ways for invalids.—**Essence of cajeput.** (*a*) An alcoholic solution of oil of cajeput. (*b*) The French designation for oil of cajeput.—**Essence of girofle.** Same as *oil of cloves*.—**Essence of miaouli,** the essential oil of the leaves of *Melaleuca viridiflora*, from New Caledonia. It is a mixture consisting of terebenthene, eucalyptol, and unidentified terpene hydrocarbons, and is said to be analogous to oil of cajeput.—**Essence of orange,** a colorless dextrorotatory oil obtained from the peel of sweet oranges. It contains terpenes and other substances and has its rotatory power largely affected by changes of temperature.—**Vinegar essence,** vinegar of extra strength, containing as much as 12 or 14 per cent. of acetic acid: sometimes made by removing a part of the water of ordinary vinegar by evaporation. Also known as *double vinegar*.

Essenize (e-sē′nīz), *v. t.*; pret. and pp. *Essenized*, ppr. *Essenizing*. [*Essene* + *-ize*.] To teach, or incline toward, the doctrines and practices of the Essenes.

essential, *a.* **5.** In *geol.*, noting those minerals of any species of rock which establish its character and which must be mentioned in its definition: contrasted with ★*accessory*. *Geikie*, Text-book of Geol., p. 89.—**Essential graphs.** See ★*graph*.—**Essential singular point.** See ★*point*[1].

Essex (es′eks), *n.* A breed of black hogs, of small size, named from Essex, England, where the breed had its origin: valued chiefly for rapid growth and early maturity.—**Essex lion.** See ★*lion*.

essexite (es′ek-sīt), *n.* [*Essex* county, Massachusetts, + *-ite*[2].] In *petrog.*, a phanerocrystalline rock intermediate in composition between diorite, gabbro, and nephelite-syenite. It contains labradorite and some orthoclase, occasionally nephelite, together with pyroxene, barkevikitic hornblende, olivin, and biotite. *Sears*, 1891.

essexitic (es-ek-sit′ik), *a.* [*essexite* + *-ic*.] In *petrog.*, having the chemical or mineral characters of essexite.

essoinee (e-soi-nē′), *n.* [A.F. *essoignié*, pp. of *essoignier*: see *essoin*, *v.*] In *law*, a person whose excuse for absence from court is allowed.

essoin-roll (e-soin′rōl), *n.* In *law*, a list of the essoins and the date to which the court is adjourned.

est., estab. Abbreviations of *established*.

establish, *v. t.* **8.** In *systematic biol.*, to give technical publication to; fix by publication in the nomenclatorial sense. See ★*publication*, 5.—**To establish a suit.** See ★*suit*.

estadia (es-tä-dē′ä), *n.* [Sp. *estadía*, < *estar*, be, < L. *stare*, stand.] In *Sp. law*, the period during which the charterer of a vessel, or the party who is bound to receive the cargo, must pay demurrage by reason of his delay in carrying out his contract.

estanco (es-tän′kō), *n.* [Sp., a monopoly, a monopoly store.] A place or store where articles included in the government monopolies are sold. [Philippine Is.]

estate, *n.*—**Customary estate,** in *Eng. law*, an estate which originated and existed according to the custom of the manor in which it was held.—**Dominant estate.** Same as *dominant tenement* (which see, under *dominant*).—**Estate by dower,** the estate in real property which a widow takes by dower. See *dower*[2], 2.—**Fast estate,** a term sometimes used for *real estate*.—**Real estate.** See *real*[1].—**To enlarge an estate.** See ★*enlarge*.

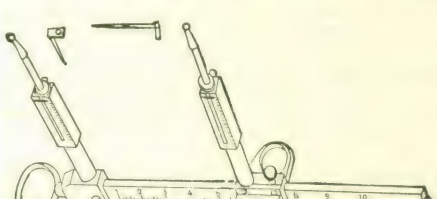
ester, *n.*—**Acetoacetic ester.** See ★*acetoacetic*.—**Ester number,** in *chem.*, the quantity of a neutral fat or oil required to saponify a fixed quantity of an alkali. If there is no free fatty acid present, the ester number is the same as the *saponification* ★*equivalent*. In the case of a natural fat which contains both neutral fat and free fatty acid, the ester number is the difference between the total saponification equivalent and the saponification equivalent of the free fatty acid. Also known as *ether value*.—**Lauric ester,** an ester of lauric acid. Sometimes the term is used, specifically, for the ethyl ester, $CH_3(CH_2)_{10}COOC_2H_5$, prepared by the action of ethyl alcohol and hydrochloric acid on lauric acid. It melts at −10° C. and boils at 269° C.—**Ortho ester.** See ★*orthoester*.—**Orthocarbonic ester,** a colorless liquid, $C(OC_2H_5)_4$, prepared by the action of sodium ethylate on trinitrochloromethane (chloropicrin). It has an aromatic odor and boils at 158–159° C.

esterification (es-tėr-i-fi-kā′shon), *n.* In *organic chem.*, the preparation of esters (ethereal salts) from alcohols and acids or certain of their derivatives. If the free alcohol and acid are employed, water is also formed, the reaction being represented thus: $ROH + HOCOR' \rightarrow ROCOR' + H_2O$.

The acid esters of mono-, di-, tri-, and tetra-methyl succinic acids have been prepared and their *esterification* constants and electric conductivities determined.
Rep. Brit. Ass'n. Advancement of Sci., 1902, p. 586.

esterify (es-ter′i-fī), *v. t.*; pret. and pp. *esterified*, ppr. *esterifying*. [*ester* + *-i-fy*.] To form an ester from. *Jour. Phys. Chem.*, May, 1905, p. 427.

Esth. An abbreviation of *Esther*. See Century Cyclopedia of Names.



esthesioblast, æsthesioblast (es-thē′si-ō-blast), *n.* [Gr. *aἰσθησις*, sensation, + *βλαστός*, germ.] In *neurol.*, a sensory cell in the integument of an animal, which serves to collect sensations from the external world.

esthesiogenic, *a.* **2.** Producing or conditioning sensation or perception: as, an *esthesiogenic* agent, *esthesiogenic* factors.

esthesiogenous (es-thē-si-oj′e-nus), *a.* Esthesiogenic.

esthesiomania, æsthesiomania (es-thē″si-ō-mā′ni-ä), *n.* [NL., < Gr. *aἰσθησις*, feeling, + *μανία*, madness: see *mania*.] A moral sense so perverted, or simple eccentricity so extreme, as to constitute the borderland or even a mild degree of insanity.

esthesiometer, *n.* The instrument is made in a great variety of forms, all based, however, upon the simple com-

Griesbach's Dynamometrical Esthesiometer.

pass pattern. In certain recent instruments the points are attached to rods which press against spiral springs inclosed in the metal tubes which form the legs of the compasses, and a scale is marked upon the front surfaces of the tubes. It is thus possible to read off the amount of pressure exerted in any given application of the points to the cutaneous surface; and the esthesiometer may be used not only to measure the limen of dual impression, equivalences of tactile extent, etc., but also to test the pressure-sensitivity, the depth of sleep, etc. See the extract.

One of the latest departures of the experimental psychologist consists in prodding people with a pointed instrument when they are asleep to find out how much excitation is required before they begin to move, and how much it takes to wake them up. . . . The instrument employed is called a Griesbach *esthesiometer*, . . . and may be used with either a sharp or blunt point. It measures the stimulus necessary to induce subconscious reaction, and that applied at the waking-point.
Nature, June 5, 1902, p. 137.

Hair-esthesiometer, in *psychophys.*, an instrument for the determination of the stimulus limen of

Hair-esthesiometer.

punctual pressure. The hair-esthesiometer, devised by M. von Frey, consists of a hair (human or horse-hair) set in a metal handle, and adjustable in length by a set-screw. When the length of hair has been found to whose stimulation a pressure-spot first responds, the pressure constant of the hair is determined by means of a balance, and the limen is expressed in terms of grammillimeters. *E. B. Titchener*, Exper. Psychol., II. i. 16.

esthesiometric, æsthesiometric (es-thē-si-ō-met′rik), *a.* In *psychol.*, pertaining to the esthesiometer or to its use: as, the *esthesiometric* compasses (the esthesiometer), the *esthesiometric* method.

esthetic, *a.* **5.** In *pathol.*, having sensation: as, "a patch of *æsthetic* skin." *Philos. Trans. Roy. Soc.* (London), ser. B, 1898, p. 64.

estheticist, æstheticist (es-thet′i-sist), *n.* Same as *esthetician*.

estheticokinetic, æstheticokinetic (es-thet″i-kō-ki-net′ik), *a.* In *physiol.*, relating to sensation and motion; both sensory and motor.

esthetology, æsthetology (es-thē-tol′ō-ji), *n.* [Gr. *aἰσθητός* (see *esthetic*) + *-λογια*, < *λέγειν*, speak.] The science of esthetics, particularly in reference to the forms of art in different types of culture. *J. W. Powell*, in 18th An. Rep. Bur. Amer. Ethnol., p. xxvi.

Esthonycidæ (es-thō-nis′i-dē), *n. pl.* [NL. prop. **Esthonychidæ*, < *Esthonyx*, the type genus, + *-idæ*.] A family of *Tillodontia*, comprising animals of moderate size, whose remains occur in the Wasatch, Lower Eocene, of the western United States. Like the other tillodonts, these animals resembled the rodents, ungulates, and carnivores, having incisor teeth like rodents, and molars suggesting those of ungulates. *Cope*, 1883.

estimator, *n.* **2.** A weighing-scale adapted to the estimating of the quantity of material in a gross (or other number) of articles by weighing a single article. A drop-forging or other article is placed on the scale-pan, and the sliding weight on the beam is moved until it balances the article, when it indicates, by the marks on the beam, the total weight of the desired number of the same kind of article.

estivation, *n.*—**Indeterminate estivation,** estivation in which the parts do not come into contact in the bud; open estivation.

estivator, æstivator (es′ti-vā-tor), *n.* An animal which becomes and remains dormant during the summer.

estivo-autumnal, æstivo-autumnal (es″ti-vō-â-tum′nal), *a.* Relating to both summer and autumn; specifically, designating a grave form of malarial fever occurring in the late summer and the autumn. *Encyc. Brit.*, XXX. 484.

Estlander's operation. See ★*operation*.

Estonioceras (es-tō-ni-os′e-ras), *n.* [NL., irreg. < *Estonia*, *Esthonia*, a province of Russia, + Gr. *κέρας*, horn.] The typical genus of the *Estonioceratidæ*.

Estonioceratidæ (es-tō-ni-os-e-rat′i-dē), *n. pl.* [NL. *Estonioceras* (*-at-*) + *-idæ*.] A family of Lower Silurian tetrabranchiate cephalopods having coiled or curved shells with biangular section in youth and triangular section in later stages.

estragol (es′tra-gol), *n.* [*estrag*(*on*) + *-ol*.] A colorless liquid, $CH_3{}^1OC_6H_4{}^4CH_2CH : CH_2$, contained in oil of estragon from *Artemisia Dracunculus* L. It boils at 215–216° C. and is used for flavoring pickles. Also called *paramethoxyallylbenzene*.

estramazone (es-tram′a-zōn), *n.* Same as *stramazone*.

Being eager to punish him, I made an *estramazone*.
Scott, The Monastery, xxvii.

Estrangelo (es-trän′ge-lō), *n.* [Also *estranghelo*; Syriac *estrangelo*, 'gospel character.'] An ancient form of the Syriac alphabet.

The brush of the Chinese determined the direction downwards and from right to left, as for painting. The ancient Syriac *estranghelo* was also written in the same way, but from left to right. *Deniker*, Races of Man, p. 142.

estrapado (es-tra-pā′dō), *n.* Same as *strappado*.

estremadurite (es-tre-ma-dö′rīt), *n.* [*Estremadura* (see def.) + *-ite*[2].] Phosphorite or massive apatite, mineral calcium phosphate, as found in Estremadura, Spain.

estriate (ē-strī′āt), *a.* [NL. *estriatus*, < L. *e-*, out, + *striatus*, striped.] Not striate; not possessing striæ: said of the surface of many insect sclerites. *Annals and Mag. Nat. Hist.*, June, 1903, p. 606.

estropajo (es-trō-pä′hō), *n.* [Sp., a dish-cloth, < *estropajear*, clean with a dry brush or rubber.] In Porto Rico and Spanish America, the sponge-gourd. See *Luffa*.

Estuarine series. See ★*series*.

esurience, esuriency (ē-sū′ri-ens, -en-si), *n.* The state or quality of being esurient. *Coleridge*.

No pretext beyond the fact of *esurience* and the sense of ability is suggested for the villany of Subtle, Dol, and Face. *Swinburne*, Ben Jonson, i. 40.

e. t. An abbreviation (*a*) of *electric telegraph*; (*b*) [*cap.*] of *English translation*.

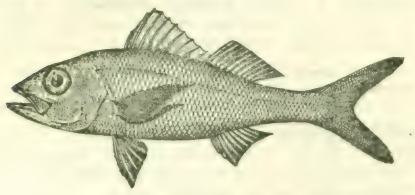
eta, *n.* **2.** In *elect.*, a symbol for *coefficient of magnetic hysteresis*. See *magnetic* ★*hysteresis*.

et al. An abbreviation (*b*) of the Latin *et alibi*, 'and elsewhere.'

eta-palm, *n.* Same as *ita-palm*.

Etcheminian (ech-e-min'i-an), *n.* [*Etchemin*, a river of Canada, also name of a tribe of Indians.] In *geol.*, a subdivision of the rocks of the Canadian Atlantic, regarded by some American geologists as Precambrian and by others as correlated with the Lower Cambrian.

It has a thickness greater than 1,200 feet, and is underlain by the Huronian and overlain by the Cambrian beds with *Protolenus*. Its characteristic fauna consists of *Hyolithidæ*, *Entomostraca*, small phyllocarids, and horny brachiopods, and it is claimed that the *Olenellus* of Lower Cambrian fauna has been found in it.



etching, *n.* **4.** In *photog.*, a plate, as of copper, coated with a substance sensitive to light, which after exposure and development is subjected to the dissolving action of a chemical, such as nitric acid, which attacks the bare metal.—**Typographic etching.** See the extract.

The invention of Palmer's process called at first Glyphography, about the year 1844; this was afterwards perfected, and used to a considerable extent under the name of Dawson's *Typographic Etching*.

Encyc. Brit., XXIX. 411.

Zinc etching, in *photog.*, any one of several reproduction processes in which a zinc plate is etched after having been subjected to photographic treatment.

Etelis (et'e-lis), *n.* [NL., < Gr. ἔτελις, an unidentified fish.] A genus of brilliantly colored fishes of the family *Lutianidæ*, allied to the snappers, but more elongate and swifter in movement. The color is bright crimson. *E. oculatus* occurs in the West Indies and is known there as *cachucho*; *E. evurus* is found in Hawaii.

Etelis oculatus.
(From Bulletin 47, U. S. Nat. Museum.)

ethane (eth'ān), *n.* [*eth(er)* + *-ane*.] A colorless, odorless gas, CH_3CH_3, found in illuminating gas and in crude petroleum, and prepared by the action of hydrogen on ethylene, acetylene, or ethyl iodide, and by the action of water on zinc ethyl. It boils at −93° C. Also called *methylmethane*, *dimethyl*, and *ethyl hydrid*.

ethelism (eth'el-izm), *n.* [Gr. ἐθέλ-ειν, be willing, + *-ism*.] A form of voluntarism. [Rare.]

ethenic (ē-then'ik), *a.* [*ethene* + *-ic*.] Of or pertaining to ethene or ethylene.

ethenoid (eth'e-noid), *a.* [*ethene* + *-oid*.] In *organic chem.*, having two atoms of carbon in the molecule doubly linked, as in ethylene, $\begin{matrix}H\\H\end{matrix}\!\!>\!C{:}C\!<\!\!\begin{matrix}H\\H\end{matrix}$.

ethenyl (eth'e-nil), *n.* [*ethene* + *-yl*.] A trivalent radical, CH_3C ←.

ether[1], *n.*—**Aran's ether.** Same as ★*ethylidene chlorid*. **Compound spirit of ether.** See ★*spirit*.—**Ether extract.** Same as *ethereal extract* (which see, under *ethereal*).—**Ether value.** Same as ★*ester number*.—**Fruit-ether,** the trade-name of certain esters possessing fruity aromas, some of which occur in fruits. They are chiefly compounds of ethyl, butyl, and amyl alcohols with acetic, propionic, butyric, and valeric acids: for example, isoamyl-propionate, $C_5H_{11}OCOC_2H_5$, has an odor of pineapple, and isoamylacetate, $C_5H_{11}OCOCH_3$, that of pears. They are largely used for the manufacture of fruit-syrups, essences, etc.—**Hydrobromic ether,** ethyl bromide, C_2H_5Br.—**Hydrocyanic ether,** a colorless ethereal fluid, C_2H_5CN, miscible with water, alcohol, and ether: because of its extremely poisonous nature not used in medicine.—**Quiescent ether,** ether the position of which in space is unaffected by the movement of bodies through it. In the theory of light, the luminiferous ether is supposed either to be carried along by bodies moving through space or to remain stationary and undisturbed by the motion of bodies. The ether of the latter hypothesis is called the *quiescent ether*.—**Salicylic naphthyl ether.** Same as ★*betol*.—**Spirit of vitriolic ether,** the pharmaceutical name for ordinary ether. Also called *sulphuric ether*. The correct chemical term is *diethyl ether*.—**Sulphur ether.** Same as *thio-ether*.—**Wigger's ether.** Same as ★*ethylidene chlorid*.

Ethereal sulphates. Same as *conjugate* ★*sulphates*.

etherene (ē'thėr-ēn), *n.* [*ether* + *-ene*.] A little-used name for ethylene. Other synonyms are *ætherin*, *æthylene*, *etherin*, *ethene*, and *elayle*.

etherion (ē-thē'ri-on), *n.* [NL., < Gr. *αἰθέριον*, neut. of *αἰθέριος*, of the ether: see *ethereal*.] A supposed new element announced by C. F. Brush in 1898, and described by him as a gas of density only one-thousandth that of hydrogen and having a much greater conducting power for heat, as present in the earth's atmosphere, and as perhaps extending throughout interstellar space. Sir W. Crookes has shown that etherion is probably nothing more than highly rarefied vapor of water.

etheromania (ē-thėr-ō-mā'ni-ą), *n.* [Gr. *αἰθήρ*, ether (air), + *μανία*, madness.] Addiction to the use of ether as an intoxicant.

etherous (ē'the-rus), *a.* [*ether* + *-ous*.] Of the nature of ether.

ethical, *a.* **2.** In a special sense, relating to medical ethics or in accord with the code of rules which guides physicians in their relations to one another and to their patients.—**Ethical culture, dualism.** See ★*culture*, ★*dualism*.

ethician (e-thish'ian), *n.* [*ethic* + *-ian*.] A student of ethics; a writer on ethics.

At a moment when *ethicians* . . . are coming to perceive the social bases of morality, one would not lay a straw in their way. Yet it is well to recognize that, after all is said, ethics is more than a mere wing of sociology.

E. A. Ross, in Amer. Jour. Sociol., May, 1903, p. 773.

ethicism (eth'i-sizm), *n.* [*ethic* + *-ism*.] Ethical quality or spirit; tendency to moralize.

The literature of those great men was . . . the Socinian graft of a Calvinist stock. Their faith . . . was Unitarian, but their art was Puritan. So far as it was imperfect— . . . it had its imperfections—it was marred by the intense *ethicism* that pervaded the New England mind for two hundred years, and that still characterizes it. . . . They . . . pointed the moral in all they did.

W. D. Howells, in Harper's Mag., Nov., 1895, p. 867.

ethico-political (eth″i-kō-pō-lit'i-kal), *a.* Relating to both ethics and politics: as, the *ethico-political* system of Confucius.

ethidene (eth'i-dēn), *n.* [*eth(er)* + *-id* + *-ene*.] Same as ★*ethylidene*.

Ethiopian. I. *a.* **2.** In *anthrop.*, relating to the negroid race which inhabits Africa (Blumenbach).—**3.** In *zoögeog.*, pertaining or belonging to the region constituted by the whole of Africa and Arabia south of the tropic of Cancer, together with Madagascar, Mauritius, Bourbon, Rodriguez, and the Seychelles.

II. *n.* **3.** In *anthrop.*, one of the Ethiopian race.

ethmoid. I. *a.*—**Ethmoid crest, fossa.** See ★*crest*, ★*fossa*[1].

II. *n.*—**Lateral ethmoid** in *ichth.*, the prefrontal, a bone lateral to the ethmoid. *Starks*, Synonymy of the Fish Skeleton, p. 509.

ethmoiditis (eth-moi-dī'tis), *n.* [*ethmoid* + *-itis*.] Inflammation of the mucous membrane which lines the cavities in the ethmoid bone.

ethmolysian (eth-mō-lis'i-an), *a.* [Gr. *ἠθμός*, a strainer, + *λύσις*, opening, + *-an*.] In echinoids, having the pores of the water-vascular system and the plate in which they open extending backward until they separate the two posterolateral genital plates. Compare ★*ethmophract*.

ethmophract (eth'mō-frakt), *a.* [Gr. *ἠθμός*, a strainer, + *φρακτός*, < *φράσσειν*, inclose.] In echinoids, having the pores of the water-vascular aperture situated only in the right anterior corner of the apical system. Compare ★*ethmolysian*.

ethmophysal (eth-mō-fī'sal), *n.* [Gr. *ἠθμός*, a strainer, + *φῦσα*, a bellows, + *-al*[1].] In *ichth.*, the nasal, a small lateral bone above the olfactory organ. *Starks*, Synonymy of the Fish Skeleton, p. 520.

ethmosphenoidal (eth″mō-sfē-noi'dal), *a.* [*ethmo(id)* + *sphenoid* + *-al*[1].] Relating to the ethmoid and sphenoid bones: as, the *ethmo-sphenoidal* suture.

Ethnic psychology, psychopathology, race, society. See ★*psychology*, etc.

ethnicist (eth'ni-sist), *n.* [*ethnic* + *-ist*.] Same as *ethnologist*.

ethnicize (eth'ni-sīz), *v. i.*; pret and pp. *ethnicized*, ppr. *ethnicizing*. [*ethnic* + *-ize*.] To tend toward or favor ethnic or pagan ideas or practices.

There were two errors which the new-born Christianity had to guard against, . . . a relapse into Judaism on the one side, and against a mixture with paganism and speculations borrowed from it, and a mythologizing tendency, on the other. Accordingly the earliest heresies, of which we have any trustworthy accounts, appear either as judaizing or as *ethnicizing* (hellenizing) tendencies.

K. R. Hagenbach (trans.), Hist. of Doctrines (revised by [Henry B. Smith, 1861), I. 54.

[In an earlier edition (1847), quoted in *N. E. D.*, the word is *ethnizing*.]

ethnicopsychological (eth″ni-kō-si-kō-loj'i-kal), *a.* Relating to ethnic psychology.

ethnize (eth'nīz), *v. i.*; pret. and pp. *ethnized*, ppr. *ethnizing*. [Gr. *ἔθνος*, nation, + *-ize*.] Same as ★*ethnicize*.

ethnobotanical (eth″nō-bō-tan'i-kal), *a.* Relating to the uses of plants among aborigines or primitive races.

In May, 1899, Dr. Walter Hough was detailed to carry on *ethno-botanical* researches in Mexico, in connection with certain explorations by the Division of Botany.

Smithsonian Rep., 1899, p. 65.

ethnobotany (eth-nō-bot'a-ni), *n.* [Gr. *ἔθνος*, people, + E. *botany*.] Botany in its relations to the economic uses of plants by different races, especially by aborigines or primitive races.

Collections of interest in ethnology, *ethnobotany*, and archæology. *Smithsonian Rep.*, 1899, p. 18.

ethnocentric (eth-nō-sen'trik), *a.* [Gr. *ἔθνος*, people, + *κέντρον*, center, + *-ic*.] Characterized by the idea that the tribal unit to which the self belongs is the center of the universe. *W. J. McGee*, in 19th An. Rep. Bur. Amer. Ethnol., p. 831.

ethnoconchology (eth″nō-kong-kol'ō-ji), *n.* [Gr. *ἔθνος*, people, + E. *conchology*.] The study of the use of shells by various peoples.

ethnodicy (eth-nod'i-si), *n.* [Gr. *ἔθνος*, people, + *δίκη*, justice.] The science of comparative jurisprudence, including the study of the forms of law found in primitive society.

ethnoflora (eth-nō-flō'rą), *n.* [NL., < Gr. *ἔθνος*, people, + NL. *flora*.] The plants, taken collectively, used by the aborigines of any locality. See ★*ethnobotany*.

The months of July to November, inclusive, were spent . . . in researches among the Zuñi Indians, the special objects being a comparative study of the peoples of the Southwest and a collection of the "*ethnoflora*" of Zuñi.

Smithsonian Rep., 1903, p. 36.

ethnog. An abbreviation (*a*) of *ethnographical*; (*b*) of *ethnography*.

ethnogamic (eth-nō-gam'ik), *a.* [*ethnogam-y* + *-ic*.] Pertaining to or characterized by ethnogamy.

ethnogamy (eth-nog'a-mi), *n.* [Gr. *ἔθνος*, people, + *γάμος*, marriage.] A form of marriage confined to the consanguineal group, with absence of captive or purchase ceremonies: a form of endogamy without any vestige of intertribal marriages. *W. J. McGee*, in 17th An. Rep. Bur. Amer. Ethnol., I. 284.

Ethnogenic association, sociology. See ★*association*, ★*sociology*.

ethnogeographer (eth″nō-jē-og'ra-fėr), *n.* One who studies the geographical distribution of races, or who is versed in that subject.

ethnogeographic (eth″nō-jē-ō-graf'ik), *a.* Of or pertaining to ethnogeography.

The features which distinguish one *ethnogeographic* province from another are chiefly . . . meteorological, and they permit . . . a much closer division of human groups than the general continental areas.

Brinton, Basis of Social Relations, p. 198.

ethnogeographical (eth″nō-jē-ō-graf'i-kal), *a.* Same as ★*ethnogeographic*.

ethnogeographically (eth″nō-jē-ō-graf'i-kal-i), *adv.* As regards ethnogeography; in accordance with the methods and results of ethnogeography. *Encyc. Brit.*, XXX. 487.

ethnogeography (eth″nō-jē-og'ra-fi), *n.* [Gr. *ἔθνος*, people, + *γεωγραφία*, geography.] The science or description of the distribution of races and peoples over the surface of the earth. *Brinton*, Basis of Social Relations.

Ethnographic parallels, the occurrence of similar customs, arts, and beliefs among peoples in nearly the same stage of culture in widely separated regions.

ethnol. An abbreviation (*a*) of *ethnological*; (*b*) of *ethnology*.

ethnologize (eth-nol'ō-jīz), *v. i.*; pret. and pp. *ethnologized*, ppr. *ethnologizing*. [*ethnolog-y* + *-ize*.] To discuss from an ethnological point of view.

ethnomaniac (eth-nō-mā'ni-ak), *n.* [Gr. *ἔθνος*, people, + *μανιακός*, < *μανία*, mania.] A rabid advocate of racial autonomy; an extreme nationalist. *Stand. Dict.*

ethnometry (eth-nom'e-tri), *n.* [Gr. *ἔθνος*, a people, a nation, + *-μετρια*, < *μέτρον*, a measure.] The measurement of the value of a people in the scale of civilization.

Dumont considers that the increase of population is the best criterion of the customs, manners, and habits of a people, that it is, in short, a veritable *ethnometry*.

G. S. Hall, Adolescence, II. 725.

ethnopsychic (eth-nop-sī'kik), *a.* [Gr. *ἔθνος*, people, + *ψυχή*, mind.] Pertaining to the collective mind of a nation, race, people, or analogous human group.

The *ethnopsychic* relationship between these [initiatory] rites and those indicating the new birth of the soul, with a background to both of the resurrection of spring following the death of autumn, . . . is unmistakable.
G. S. Hall, Adolescence, II. 407.

ethnos (eth'nos), *n.* [Gr. *ἔθνος*, a company, band, tribe, people, nation, pl. *ἔθνη*, L. *gentes*, 'the nations,' the gentiles, the (other) peoples, the heathen.] The tribe or nation, in an anthropologic aspect.

Note that I say ethnic mind. For let it be said here, as well as repeated later, that there is no such thing as progress or culture in the isolated individual, but only in the group, in society, in the *ethnos*. Only by taking and giving, borrowing and lending, can life either improve or continue.
Brinton, Basis of Social Relations, introd., p. xv.

ethnotechnics (eth-nō-tek'niks), *n.* [Gr. *ἔθνος*, people, + E. *technics*.] The science of comparative technology, including the study of the technology of primitive man.

ethnotechnography (eth″nō-tek-nog'ra-fi), *n.* [Gr. *ἔθνος*, people, + *τέχνη*, art, + *-γραφια*, < *γράφειν*, write.] The study of the technology of different peoples.

ethnozoölogy (eth″nō-zō-ol'ō-ji), *n.* [Gr. *ἔθνος*, people, + E. *zoölogy*.] The study of the fauna of any region in its relation to the human population. *Jour. Anthrop. Inst.*, 1901, p. 45.

ethochroi, *n. pl.* See ★*æthochroi*.

ethological, *a.* **2.** Relating to the study of human character.—**3.** Relating to the study of customs.—**4.** Relating to œcology.

To these genera, each of which embraces species presenting a considerable range of *ethological* peculiarities while differing but little in morphological characters, we must also add Leptogenys.
Biol. Bulletin, May, 1904, p. 251.

ethology, *n.* **3.** Same as *œcology*. [Rare.]

ethophysical (eth-ō-fiz'i-kal, *a.* [*eth(ic)* + *physical*.] Having both ethological and physical characters.

ethoxycaffein (eth″ok-si-ka-fē'in), *n.* [*eth(er)* + *oxy(gen)* + *caffein*.] A colorless, beautifully crystalline compound, $C_8H_9N_4O_2.OC_2H_5$, slightly soluble in water and alcohol, made by boiling 3 parts monobrom caffein with 2 parts potassium hydrate in 10 parts alcohol. It is sedative in nervous headache.

ethoxyl (eth-ok'sil), *n.* [*eth(er)* + *ox(ygen)* + *-yl*.] In *organic chem.*, the univalent organic radical, $-OC_2H_5$.

Ethyl bromide. See ★*bromide*.—**Ethyl chlorid,** a colorless very volatile liquid, C_2H_5Cl, prepared by heating alcohol with hydrochloric acid. It burns with a green flame, boils at 12.5° C., and is used in medicine as an anesthetic and in chemistry as an alkylating agent.—**Ethyl green.** See *green*[1].—**Ethyl hydrid.** Same as ★*ethane*.—**Ethyl phenacetin,** a yellow, oily compound, $C_6H_4(OC_2H_5)NC_2H_5CH_3CO$, almost insoluble in water but readily soluble in alcohol and ether, obtained by the action of ethyl iodide on phenacetin-sodium. It is hypnotic and analgesic.—**Ethyl violet.** See ★*violet*[1].

ethyldiacetic (eth″il-dī-a-set'ik), *a.* [*ethyl* + *diacetic*.] Noting an acid.—**Ethyldiacetic acid.** Same as ★*diacetic acid*.

Ethylene chlorid, a colorless liquid, $CH_2Cl.CH_2Cl$, prepared by the action of chlorin on ethylene. It boils at 83.5° C. Also called 1,2-*dideloreth*ane and very rarely *elaylchlorid*.—**Ethylene hydriodide.** Same as *iodide of ethyl*.—**Ethylene series,** the series of hydrocarbons, of the general formula C_nH_{2n}, homologous with ethylene.

ethylenimin (eth-il-en'i-min), *n.* [*ethylene* + *im(ide)* + *-in*[2].] A basic substance found in semen; the so-called spermin, C_2H_5N.

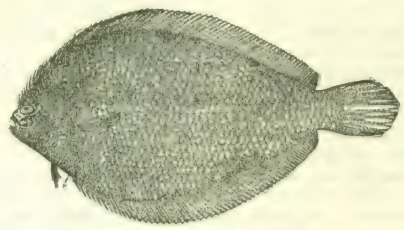
ethylidene (e-thil'i-dēn), *n.* [*ethyl* + *-id* + *-ene*.] A bivalent organic radical, CH_3CH <. Sometimes called *ethidene*.—**Ethylidene chlorid,** a colorless ethereal liquid, $C_2H_4Cl_2$, made by the chlorination of ethyl chlorid: employed as an anesthetic.

ethylidene-diamine (e-thil″i-dēn-dī-am'in), *n.* A non-poisonous ptomaïne, $C_2H_8N_2$.

ethylsulphuric (eth″il-sul-fū'rik), *a.* Noting the following acid.—**Ethylsulphuric acid,** a colorless syrup, $C_2H_5OSO_2OH$, formed by the action of sulphuric acid on alcohol. It readily yields salts and is important as an intermediate compound in the production of ether and ethylene from sulphuric acid and alcohol.

etiolation, *n.*—**False etiolation,** a condition characterized by the absence of chlorophyl, often observed in wheat and other grasses, due to too low temperature.

etiophyl (ē'ti-ō-fil), *n.* [Gr. *αἰτία*, cause, + *φύλλον*, leaf.] The yellow principle obtained from etiolated parts of plants, as buds of the skunk-cabbage, essentially different from chlorophyl. See the extract under ★*etioplast*.



etioplast (ē'ti-ō-plast), *n.* [Gr. *αἰτία*, cause, + *πλαστός*, formed.] A plastid found combined with etiophyl.

For this principle I propose the name etiophyl, and for the associated plastid, which seems to be a distinct body, I propose a corresponding name, *etioplast*.
H. Kraemer, in Proc. Amer. Philos. Soc., April 8, 1904, [p. 264.

Eton coat, Eton jacket. See ★*coat*[2].

étrenne (ā-tren'), *n.* [F. *étrenne*, OF. *estrenne*, < L. *strena*, a New-Year's present, prop. an omen; a Sabine word.] A present; properly, a New-Year's present. *Dickens*.

Etropus (ēt'rō-pus), *n.* [NL., < Gr. *ἠτρον*, abdomen, + *πούς* (*ποδ-*), foot.] A genus of small

Etropus crossotus.
(From Bulletin 47, U. S. Nat. Museum.)

fragile-bodied flounders having the mouth very small, found on both coasts of tropical America. *E. crossotus* is the common species abundant on sandy shores.

Etruria ware. See ★*ware*[2].

ettringite (et'ring-īt), *n.* [G. *Ettring-en* + *-ite*[2].] A hydrous sulphate of aluminium and calcium, occurring in colorless acicular crystals: found in cavities in lava at Ettringen and elsewhere.

-etum. [L. *-ētum*, also *-tum*, neut. of *-ē-tu-s*, *-tu-s*, orig. adj. and participial suffix: see *-ed*[2].] A suffix added in Latin to names of trees and other plants, to designate a plantation, grove, or garden of the plant specified: as, *pinetum*, *quercetum*, *arboretum*, etc., a forest of pines, oaks, trees, etc.; *rosetum*, a bed of roses; *vinetum*, a vineyard, etc. Hence, in modern scientific nomenclature and English use, the suffix is added to the genus or family name of a plant to form a collective expression for the living individuals of one or more species. Thus, it is used to denote: (*a*) An exhibitional collection in which many species are represented, as the *pinetum*, *quercetum*, etc., of a botanical garden; also attachable to a more general term, as in *arboretum*. (*b*) A treatise on a particular group of plants, as Gordon's *Pinetum*. (*c*) In *phytogeog.*, a natural association in which one species or more than one of the same genus predominates, as *ericetum*, *coryletum*, etc. See ★*characetum*.

E. U. An abbreviation of *Evangelical Union*.

euæsthesia, euesthesia (ū-es-thē'si-ă), *n.* [NL. *euæsthesia*, < Gr. *εὖ*, well (*εὐ-*, good, true), + *αἴσθησις*, perception.] A normal state of the senses.

euangiotic (ū-an-ji-ot'ik), *a.* [Gr. *εὖ*, well, + *ἀγγεῖον*, vessel, + *-otic*.] Having the retinal disk provided with blood-vessels: opposed to ★*anangiotic*.

Euascales (ū-as-kā'lēz), *n. pl.* [NL., < Gr. *εὖ*, well (*εὐ-*, good, true), + *ἀσκός*, a sac, ascus, + *-ales*.] A group including all the fungi and lichens which produce true asci.

Euasceæ (ū-as'ē-ē), *n. pl.* [NL., < Gr. *εὖ*, well (*εὐ-*, good, true), + *ἀσκός*, a sac, ascus, + *-eæ*.] Same as ★*Euascales*.

Euasteriæ (ū-as-tē'ri-ē), *n. pl.* [NL., < Gr. *εὐ*, well, + *ἀστήρ*, a star.] A subclass of the *Asteroidea* or starfishes, characterized by having the pairs of ambulacral ossicles placed opposite each other and inclined upward like the rafters of a roof. The position of the madreporite is generally on the dorsal surface.

Eubacteria (ū-bak-tē'ri-ă), *n. pl.* [NL., < Gr. *εὖ*, well, + *βακτήριον*, rod (see *bacterium*).] An order of *Schizomycetes*, including, according to Migula, four families, the *Coccaceæ*, *Bacteriaceæ*, *Spirillaceæ*, and *Chlamydobacteriaceæ*.

Eubasidieæ (ū-ba-sid-i-ē'ē), *n. pl.* Same as ★*Eubasidii*.

Eubasidii (ū-ba-sid'i-ī), *n. pl.* [NL., < Gr. *εὖ*, well, + NL. *basidium*.] A division of the *Basidiomycetes*, including all the orders having true basidia. Compare ★*Hemibasidii*.

Eubœic (ū-bē'ik), *a.* Same as *Eubœan*.

eucaine (ū'kā-in), *n.* [Gr. *εὖ*, well, + (*co*)*caine*.] A colorless crystalline compound, $CH_3N < \begin{matrix} C(CH_3)_2CH_2 \\ C(CH_3)_2CH_2 \end{matrix} > C < \begin{matrix} COOC_6H_5 \\ COOCH_3 \end{matrix}$, prepared from acetonamine. It is used by oculists as an anesthetic in place of cocaïne. Also called *methyltetramethyl-n-methyl-p-benzoylpiperidine-γ-carboxylate*.

eucalypsinthe (ū-ka-lip'sinth), *n.* [*Eucalyp*(*tus*) + (*ab*)*sinthe*.] A liquor distilled from the leaves of *Eucalyptus Globulus*: analogous to absinthe.

eucalyptene (ū-ka-lip'tēn), *n.* [*Eucalyptus* + *-ene*.] A colorless dextrorotatory terpene, $C_{10}H_{16}$, found in the essential oil of *Eucalyptus Globulus* and of *E. amygdalina*. It is a dextroterebinthine.

eucalyptic (ū-ka-lip'tik), *a.* [*Eucalyptus* + *-ic*.] Belonging or relating to the plant genus *Eucalyptus*.

eucalyptol, *n.* This substance is apparently identical with cineol, $C_{10}H_{18}O$; it occurs in many species of *Eucalyptus* besides *E. Globulus*.

Eucalyptus oil. See ★*oil*.

Eucharidæ (ū-kar'i-dē), *n. pl.* [NL., < *Eucharis* + *-idæ*.] A family of lobate ctenophorans, having large lobes with complex lobular canals, body covered with elongate touch-papillæ, and a main tentacular filament present as well as accessory filaments. The typical genus is *Eucharis*.

eucharistial (ū-kā-ris'ti-al), *n.* [ML. *eucharistialis*, prop. neut. of *eucharistialis*, adj., < LL. *eucharistia*, eucharist.] A vessel in which the eucharist is reserved.

eucharistize (ū-kā-ris'tīz), *v. t.*; pret. and pp. *eucharistized*, ppr. *eucharistizing*. [*eucharist* + *-ize*.] To bless; consecrate.

Placing the bread and wine upon the Lord's Table . . . as a devout offering to God of His creatures of bread and wine that He may accept them at our hands . . . to be by Him *eucharistized* to the higher sphere and purpose of the new creation.
Bk. Com. Prayer (1661), quoted in *J. H. Blunt*, Annot. [Bk. Com. Prayer, p. 174.

Euchlæna (ū-klē'nă), *n.* [NL. (Schrader, 1832), in allusion to the situation of the seeds; < Gr. *εὖ*, well, + *χλαῖνα*, cloak, covering.] A genus of grasses, consisting of a single species, *E. Mexicana*, the teosinte (which see).

In Guatemala the *euchlaena*, nearly akin to maize, was called the maize of the gods.
F. Ratzel (trans.), Hist. of Mankind, II. 176.

euchlorhydria (ū-klōr-hī'dri-ă), *n.* [NL., < Gr. *εὖ*, well, + E. *chlor(in)* + *hydr(ogen)*.] The presence of a normal amount of hydrochloric acid in the gastric juice.

euchre, *n.*—**Call-ace euchre,** a variety of euchre for from four to six players, each playing for himself. The pack varies according to the number of players: all cards below the 9-spot are omitted for four; the 8's are put in for five; and the 7's for six. Sometimes the joker is added. A trump is turned up by the dealer, and each player in turn can order up or pass. If it is turned down, each player in turn can name a new suit. The maker of the trump, whether he has ordered it up or taken it up, then has the privilege of calling upon the holder of the best card of any suit which is not trumps to be his partner, but the partner thus called upon must not disclose himself. When the hand is played the partner will be revealed. If the partners win 3 or 4 tricks, each scores a point. If they win all 5 tricks they score 2 if four play and 3 if five or six play. If the maker of the trump plays alone, either through not having called any suit or by discovering that he holds the best card in play of the called suit, he scores 1 for winning 3 or 4 tricks. If he wins all the tricks he scores as many points as there are players, including himself. All euchres count 2 points to the adversaries of the maker of the trump and his partner.—**Domino euchre,** a game resembling euchre, played with dominoes instead of cards.—**Drive euchre.** Same as *progressive euchre*. See *progressive* ★*games*.—**Railroad euchre,** a variety of euchre in which if any player says he will play alone, one of his adversaries can play alone against him, and either or both of the lone players can ask for his partner's best card, giving one from his own hand in exchange for it. If a lone hand euchres a lone hand it counts 4.—**Set-back euchre,** a variety of euchre in which the partners are set back 2 points if they are euchred instead of allowing their adversaries to score 2. The revoke penalty is settled in the same way.—**Seven-handed euchre,** a variety of euchre in which seven persons play with a full pack of 52 cards. Seven cards are dealt to each player, 2—3—2 at a time, and the remaining four are left on the table to form the widow. No trump is turned. Each player in turn, beginning on the dealer's left, bids a certain number of points, usually 5 or more, to make the trump. There are no second bids. The highest bidder takes the widow and selects from it what cards he pleases, discarding as many in their place. He then chooses his partners, giving them a marker to distinguish them. If he has bid 5 only, he can take two partners. A bid of 6 or 7 entitles him to three partners, but a bid of 10 must be played without partners. A bid of 20 must be played without seeing or exchanging with the widow and also without partners. The bidder always leads for the first trick. If he loses, failing to make what he bid, each of his adversaries scores that amount, or sets him back, as agreed.

euchroic (ū-krō'ik), *a.* [Gr. *εὖ*, well, + *χρόα*, color.] Noting an acid, a colorless compound, $(HOCO)_2C_6(\begin{matrix} CO \\ CO \end{matrix}>NH)_2.2H_2O$, prepared, together with paramide, by heating ammonium mellitate. It crystallizes in quadratic prisms which melt and decompose above 250° C.

euchylia (ū-kil'i-ă), *n.* [NL., < Gr. *εὖ*, well, + *χυλός*, juice (see *chyle*).] A healthy state of the chyle.

Eucinostomus (ū-si-nos'tō-mus). *n.* [NL., < Gr. *εὐκίνητος*), easily moved, + *στόμα*, mouth.] A genus of small silvery fishes of the tropics, of the family of *Gerridæ*, distinguished by

the very large size of the interhemal bone at the base of the second anal spine. *E. gula* is the commonest species.

Euciroa (ū-si-rō′ä), *n.* [NL., said to be (irreg.) < Gr. *εὖ*, well, + *κειρία*, a cord, a bandage.] The typical genus of the *Euciroïdæ*.

Euciroïdæ (ū-si-rō′i-dē), *n. pl.* [NL., < *Euciroa* + *-idæ*.] A family of anomalodesmaceous pelecypod *Mollusca*. They possess subequivalve shells with a strong tubercle in the right valve before the resilium, and the dorsal margins are modified so as to overlie and underlie each other. Species are rare and occur only in the Tertiary and recent periods.

Euclea, *n.* 2. In *bot.*, a genus of plants of the family *Diospyraceæ*. They are trees or shrubs with evergreen, coriaceous leaves, alternate, opposite, or rarely in whorls of three, and small flowers in usually axillary cymes. There are about 25 species, natives of tropical and southern Africa, and Arabia, of which *E. racemosa* is the type. Several species are used in wood-working, especially *E. Pseudebenus*, the *Orange River ebony*. The fruit of this species is eaten by the aborigines, under the name *embolo*, and that of *E. undulata* under the name *guarri*.

Euclidean number, motion, transformation. See ★*number*, etc.

Euclid's postulate. See ★*postulate*.

eucnemia (ūk-nē′mi-ä), *n.* [NL., < Gr. *εὖ*, well, + *κνήμη*, tibia.] In *anthrop.*, the normal condition of the shin-bone; the absence of platycnemia. *Amer. Anthropologist*, Jan.–March, 1901, p. 32.

eucone (ū′kōn), *a.* [Gr. *εὖ*, well, + *κῶνος*, cone.] Possessing a well-developed crystalline lens or cone: said of the eyes of certain insects, as the *Hymenoptera* and *Lepidoptera*, many *Coleoptera*, *Neuroptera*, etc.: opposed to ★*acone* and ★*pseudocone*.

eucrasite (ū′kra-sīt), *n.* [Gr. *εὐκρασία*, proper mixture (< *εὔκρατος*, well mixed), + *-ite*2.] A complex thorium silicate allied to thorite.

Eucratea (ū-krā-tē′ä), *n.* [NL., said to be < Gr. *εὖ*, well, + *κραταιός*, mighty (< *κράτος*, might), (otherwise perhaps < Gr. *εὔκρατος*, temperate, of similar elements).] The typical and only genus of the family *Eucrateidæ*. *Lamouroux*, 1812.

Eucrateidæ (ū-krā-tē′i-dē), *n. pl.* [NL., < *Eucratea* + *-idæ*.] A family of chilostomatous bryozoans. They are characterized by branching, erect, and free or recumbent zoaria with pyriform, uniserial or biserial zoœcia having a subterminal, usually oblique aperture. The family has lived from Cretaceous time to the present.

Eucrustacea (ū-krus-tā′shiä), *n. pl.* [NL., < Gr. *εὖ*, well, + L. *Crustacea*.] A division or subclass of the crustaceans which do not have the body divided into median and lateral lobes, and have two pairs of antennæ and the maxillæ or mandibles not pediform.

Eucryphia (ū-krif′i-ä), *n.* [NL. (Cavanilles, 1797), < Gr. *εὖ*, well, + *κρύφιος*, hidden. The opening flower is capped by the calyptriform calyx and the fruiting carpels are backed with a cork-like covering.] A genus of dicotyledonous plants, the type and only genus of the family *Eucryphiaceæ*. The species are ornamental evergreen trees or shrubs with opposite simple or pinnate leaves and large white flowers, solitary in the upper axils. Only 4 species are known, 2 in Chile and 2 in New South Wales and Tasmania. The wood of the Chilean species is very durable and is used for various purposes. See *muermo*.

Eucryphiaceæ (ū″krif-i-ā′sē-ē), *n. pl.* [NL. (Gay, 1846), < *Eucryphia* + *-aceæ*.] A family of dicotyledonous choripetalous plants of the order *Hypericales*, containing the single genus *Eucryphia*. See *muermo* and ★*Eucryphia*.

eucryphiaceous (ū-krif-i-ā′shius), *a.* Belonging to the plant-family *Eucryphiaceæ*.

Eucyclogobius (ū-sik-lō-gō′bi-us), *n.* [NL., < Gr. *εὖ*, well, + *κύκλος*, circle, + NL. *gobius*.] A genus of small gobies having small smooth scales: found in the streams of California. *E. newberryi* is the common species.

eudemonic, eudæmonic (ū-dē-mon′ik), *a.* [Gr. *εὐδαιμονικός*, of happiness, < *εὐδαιμονία*, happiness: see ★*eudemony*.] Relating or contributing to happiness; considered as relating or contributing to happiness. *N. E. D.*

eudemonize, eudæmonize (ū-dē′mon-īz), *v. t.*; pret. and pp. *eude-, eudæmonized*, ppr. *eude-, eudæmonizing*. [Gr. *εὐδαιμονίζειν*, call or account happy, < *εὐδαίμων*, happy: see *eudemon*.] To consider or esteem happy. Also *endæmonise*.

But happiness, as Aristotle understands it, is something measured more by the estimate of the judicious spectator than by the sentiment of the man in whose bosom it resides. No person is entitled to be called happy, whom the intelligent and reflective observer does not macarise or (*eudæmonise*), or whose condition he would not desire more or less to make his own.

Grote, Fragments on Ethical Subjects, V.

eudemony (ū-dem′ō-ni), *n.* [Gr. *εὐδαιμονία*, < *εὐδαίμων*, happy: see *eudemon*.] Happiness as understood by Aristotle, namely, as consisting, not in pleasure except as a sign of perfected activity, but in the activity which befits a human being, that is, in virtuous activity, of which the highest and best kind is that which is self-controlled through reason, the virtuous activity of the soul in a completed life.

eudermol (ū-dėr′mōl), *n.* [Gr. *εὖ*, well, + *δέρμα*, skin, + *-ol*.] A trade-name for nicotine salicylate. It is a colorless crystalline compound which is soluble in water, alcohol, and oils, and contains 54 per cent. of nicotine. Being non-irritating and odorless, it can be used in ointment of from 0.1 to 0.25 per cent. strength in the treatment of parasitic skin-diseases.

eudiagnostic (ū-dī-ag-nos′tik), *a.* [Gr. *εὖ*, well, + *διαγνωστικός*, able to distinguish: see *diagnostic*.] In *petrog.*, easily distinguished, that is, without the aid of a magnifying-glass: applied by Zirkel (1893) to the texture of rocks in which the mineral constituents can be recognized by the unaided eye.

eudidymite (ū-did′i-mīt), *n.* [Gr. *εὖ*, well, + *δίδυμος*, twin, + *-ite*2.] A silicate of beryllium and sodium, $HNaBeSi_3O_8$, occurring in white tabular monoclinic crystals.

eudiometer, *n.*—**Bunsen's eudiometer,** a glass tube of uniform bore, closed at one end and having at that end two platinum electrodes, with spark-gap, sealed into the glass. The tube is graduated in millimeters.

eudiometrically (ū″di-ō-met′ri-ka-li), *adv.* By means of the eudiometer; in a eudiometric method.

eudoxiform (ū-dok′si-fôrm), *a.* [*Eudoxia* + L. *forma*, form.] Resembling or having the structure of the *Eudoxidæ*; composed of a sterile and a fertile medusoid without special nectocalyx. Compare ★*ersæiform*.

eudoxin (ū-dok′sin), *n.* [Appar. < Gr. *εὔδοξος*, of good repute, + *-in*2.] A bismuth salt of nosophen (tetra-iodo-phenolphthalein) containing 52.9 per cent. of iodine. It is an internal astringent and stomachic.

eudoxome (ū-dok′sōm), *n.* [Gr. *εὔδοξος*, of good repute, + *-ome*.] In hydromedusans, one of the two main forms of cormidium, consisting typically of a hydrophyllium, a gastrozoöid with a tentacle, and one or more medusoid gonophores. Compare ★*ersæome*.

Eudrilidæ (ū-dril′i-dē), *n. pl.* [NL., < *Eudrilus* + *-idæ*.] A family of terricolous *Oligochæta*. It consists of worms of variable size having paired nephridia, setæ in couples and sigmoid in shape, spermiducal glands present, and the male and female generative openings, in some genera, unpaired. It contains about 20 genera, all of which except *Eudrilus*, which is almost cosmopolitan in range, are restricted to tropical Africa.

Eudrilus (ū-drī′lus), *n.* [NL. (Perrier, 1871).] The typical genus of the family *Eudrilidæ*.

euectics (ū-ek′tiks), *n.* Same as *evectics*.

eufemism, eufemistic. Simplified spellings of *euphemism, euphemistic*.

eufonic, eufony. Simplified spellings of *euphonic, euphony*.

eugallol (ū-gal′ōl), *n.* [*eu-* + (*pyro*)*gallol*.] A thick, syrupy, brownish-yellow compound, $C_6H_3(OH)_2O.C_2H_3O$, readily soluble in water; acetyl pyrogallol. It is employed in a 33-per-cent. acetone solution, and when painted on the skin leaves a firm, elastic film: used in the treatment of skin-diseases.

Eugaster (ū-gas′tėr), *n.* [NL., < Gr. *εὖ*, well, + *γαστήρ*, belly.] A genus of ophiurans or brittle-stars from the North American Devonian, possessing a small disk and long arms with a double series of alternating ambulacral plates, and on either side a series of spinous adambulacral plates.

Eugeniacrinus (ū-jē-ni-ak′ri-nus), *n.* [NL., < *Eugenia*, a woman's name, + Gr. *κρίνον*, lily (see *crinoid*).] A Mesozoic genus of crinoids possessing a small saucer-shaped calyx and concealed and closely united basal plates which are overlapped by radial plates extended upward so as to form conspicuous projections.

eugenic[1], *a.* **II.** *n.* The science which deals with the means of cultivating and improving the innate good qualities of man. Also *eugenics*.

eugenism (ū′je-nizm), *n.* [Gr. *εὐγενής*, well-born, + *-ism*.] The aggregate of the most favorable conditions for healthy and happy existence. *Galton*.

eugenoform (ū-jen′ō-fôrm), *n.* [*eugen*(*ol*) + *form*(*aldehyde*).] A colorless, crystalline compound soluble in water obtained by the action of formaldehyde upon eugenol-sodium, said to liberate formaldehyde in the intestinal fluids: an intestinal antiseptic.

eugenol (ū′jē-nōl), *n.* [Gr. *εὐγενής*, well-born, + *-ol*.] A colorless oily compound, $HO^4C_6H_3(O^3CH_3)^1CH_2CH{:}CH_2$, contained in oil of cloves, oil of bay, oil of cinnamon-leaves, oil of allspice, oil of cassia, oil of pimento, and in certain other essential oils. It boils at 247.5° C. and has a spicy odor. Also called 1[2]-*propenyl-phendiol-3-methyl ether*.

eugenol-acetamide (ū″jē-nōl-a-set′a-mid), *n.* A crystalline compound of eugenol and acetamide. It is used as a local antiseptic and dusting-powder.

eugenol-iodide (ū″jē-nōl-ī′ō-dīd), *n.* A yellowish odorless antiseptic compound, $C_{10}H_{11}IO_2$, obtained by the action of iodine on eugenol-sodium. Also called *iodo-eugenol*.

eugenol-sodium (u″jē-nōl-sō′di-um), *n.* A crystalline compound, $C_{10}H_{11}NaO_2$, obtained by dissolving eugenol in solution of sodium hydroxid. Also known as *sodium eugenolate* or *sodium eugenate*.

eugeogenous (ū-jē-oj′e-nus), *a.* [Gr. *εὖ*, well, + *γῆ*, earth, + *-γενής*, -producing. See *geogenous*.] In *geol.*, disintegrating readily; yielding plentiful detritus and producing good soil: said of rocks. *Thurmann*.

Both authors apply to Yorkshire Thurmann's recognition of *eugeogenous* and dysogeogenous rocks. The former class of rocks yield a plentiful detritus, and the overlying soils are cool and moist. The dysogeogenous rocks —or limestones of this area—yield a less abundant detritus, and are in Yorkshire much fissured and broken, so that the overlying soil is comparatively dry.

Geog. Jour. (R. G. S.), Aug., 1903, p. 151.

Eugerion (ū-jē′ri-on), *n.* [NL., < Gr. *εὐγηρία*, a green old age?.] A genus of hemipterous insects with large, membranous, reticulated fore and hind wings, prolonged lancet-like mouth-parts, and filiform antennæ. It occurs in the Permian formation.

eugetic (ū-jet′ik), *a.* [*eug*(*enol*) + *-et-* + *-ic*.] Noting an acid, a colorless compound, $HOC_6H(^5OCH_3)(^1CO_2H)^3CH_2CH{:}CH_2$, formed by the action of sodium and carbon dioxid on eugenol. It crystallizes in long, thin prisms and melts at 124° C. Also called 3-*allylphendiol*-(5,6)-*methyllic acid*.

Euglena phase, a stage in the development of some sporozoans in which they exhibit euglenoid movements made possible by the thin, flexible covering present at this time.

euglenoid (ū-glē′noid), *a.* [*Euglena* + *-oid*.] Resembling *Euglena*.

euglobulin (ū-glob′ū-lin), *n.* [*eu-* + *globulin*.] One of the supposed components of serum globulin which is insoluble in water. See also ★*pseudoglobulin*.

Euglypha (ū-glī′fa), *n.* The typical genus of the family *Euglyphidæ*. *Dujardin*, 1841.

Euglyphidæ (ū-glif′i-dē), *n. pl.* [*Euglypha* + *-idæ*.] A family of mostly fresh-water rhizopods which have a shell formed of regular plates of chitin or of silica, often bearing spines, and with the pseudopodia sharp-pointed and often branching but not anastomosing. It contains the genera *Euglypha, Trinema, Cyphoderia, Campascus*, and *Nadinella*.

eugranitic (ū-gra-nit′ik), *a.* [Gr. *εὖ*, well, + E. *granitic*.] In *petrog.*, distinctly granular or granitic in structure. *Lossen*.

eugraphic (ū-graf′ik), *a.* [Gr. *εὐγραφος*, well painted, < *εὖ*, well, + *γράφειν*, write, paint.] Pertaining to or characterized by graphic resemblance.

Eugraphic confusions are such as arise from the mistaking and transplacing of forms which appear alike.

H. H. Bawden, in Psychol. Rev. Mon. Sup., III. iv. 81.

euhyostylic (ū-hī-ō-stil′ik), *a.* [*eu-* + *hyostyl-y* + *-ic*.] Relating to or having the character of euhyostyly.

euhyostyly (ū-hī-os′ti-li), *n.* [*eu-* + *hyostyly*.] That condition of the second visceral arch, found in most rays, in which the hyomandibular forms the sole support of the jaw, the ceratohyal serving merely to support the gills: correlative with ★*hyostyly*, and ★*methyostyly*.

Euichthydina (ū-ik-thi-dī′nä), *n. pl.* [NL., < Gr. *εὖ*, well, + *Ichthyd*(*ium*) + *-ina*2.] A section or suborder of *Gastrotricha* which contains forms having two pedal appendages. It includes the genera *Ichthydium, Chætonotus, Chætura* and *Lepidoderma*. Compare ★*Apodina*.

euisopodous (ū-ī-sop′ō-dus), *a.* Having the characters of or resembling the *Euisopoda*.

eukinesia (ū-ki-nē′si-ä), *n.* [NL., < Gr. *εὐκινησία*, easiness of motion, < *εὐκίνητος*, easily

moved, < *εὖ*, easily, + *κινεῖν*, move.] Normal power of movement.

eukrite, *n.* Same as *eucrite.*

euktolite (ūk′tō-līt), *n.* [Gr. *εὐκτός*, desired, + *λίθος*, stone.] See ★*venanzite.*

Eulamellibranchiata (ū-lā-mel-i-brang-ki-ā′tă), *n. pl.* [NL., < *eu-* + *Lamellibranchiata.*] An order of mollusks of the class *Pelecypoda.* They have the mantle-edges united at one or more points, the branchiæ with vascular interfilamentary junctions, the genital glands with independent external openings, and usually two adductor muscles. It includes a number of large and important families, among them being the *Unionidæ*, *Cyprinidæ*, and *Cyrenidæ.*

Euleptorhamphus (ū-lep-tō-ram′fus), *n.* [NL., < Gr. *εὖ*, well, + *λεπτός*, fine, small, + *ῥάμφος*, beak.] A genus of halfbeaks, or *Hemiramphidæ*, found in the open seas of the tropics: distinguished by the ribbon-shaped body. *E. longirostris* is the common species.

Eulerian polyhedron. See ★*polyhedron.*

Euler's diagrams. See ★*diagram.*

Euler's line or **straight.** See ★*straight*[1].

Euloma (ū-lō′mă), *n.* [Gr. *εὖ*, well, + *λῶμα*, a fringe.] A genus of trilobites of the family *Proëtidæ:* characteristic of the lowest Silurian of Europe.

eumenid (ū′me-nid), *a.* and *n.* **I.** *a.* Of or belonging to the hymenopterous family *Eumenidæ.*

II. *n.* A member of the hymenopterous family *Eumenidæ.*

Eumicrotremus (ū-mik-rot′rē-mus), *n.* [NL., < Gr. *εὖ*, well, + *μικρός*, small, + *τρῆμα*, hole.] A genus of lump-fishes having the body nearly spherical and covered with prickles: found in the North Atlantic.

eumitosis (ū-mi-to′sis), *n.* [NL., < *eu-* + *mitosis.*] Typical mitosis or indirect cell-division, in which the chromosomes are divided longitudinally instead of transversely.

eumitotic (ū-mi-tot′ik), *a.* [*eumitosis* (*-ot-*) + *-ic.*] Of or pertaining to eumitosis.

Eumycetes (ū-mī-sē′tēz), *n. pl.* [NL., < Gr. *εὖ*, well, + *μύκητες*, plural of *μύκης*, fungus (see *Mycetes*).] A name used by recent systematists to include all the so-called true fungi, as the *Phycomycetes*, *Ascomycetes*, and *Basidiomycetes.* The *Myxomycetes* and *Schizophyta* are excluded.

eumycetic (ū-mī-set′ik), *a.* Of or pertaining to the *Eumycetes.*

Eunema (ū-nē′mă), *n.* [NL., < Gr. *εὖ*, well, + *νῆμα*, a thread.] A genus of Paleozoic rhipidoglossal gastropod mollusks having an elongate pyramidal spire with two or more keels and transverse striæ on the whorls.

eunicean (ū-nis′ē-an), *a.* [*Eunice* + *-an.*] Pertaining to or resembling the genus *Eunice.*

euniciform (ū-nis′i-fôrm), *a.* [*Eunice* + L *forma*, form.] Formed like a eunicoid worm.

eunicoid (ū′ni-koid), *a.* [*Eunice* + *-oid.*] Resembling or pertaining to the *Eunicidæ.*

eunol (ū′nōl), *n.* [*eu*(*calyptol*) + *n*(*aphth*)*ol.*] A compound, existing in an *α*- and *β*-modification, made from eucalyptol and *α*- and *β*-naphthol: used as an antiseptic in surgery and dermatology.

eunuch-flute (ū′nuk-flōt), *n.* An old musical instrument consisting of a slightly flaring wooden tube having a mouth-hole in the side near the smaller end, into which the player hummed or sang. The smaller end was closed by a very thin membrane, which was thrown into vibration by the player's tone and imparted to it a peculiar bleating and tremulous character. The instrument was made in several sizes so as to provide for part-music. It is still sometimes made as a toy.

Euomphalidæ (ū-om-fal′i-dē), *n. pl.* [NL., < *Euomphalus*, the typical genus, + *-idæ.*] A family of rhipidoglossal gastropods having depressed conical or discoidal, spirally coiled, and umbilicated shells, and often calcareous opercula. As at present construed, the family extends from the Cambrian to the Tertiary formations.

euonymous (ū-on′i-mus), *a.* [Gr. *εὐώνυμος*, well-named, < *εὖ*, well, + *ὄνομα*, name.] Well or fittingly named.

euonymus-oil (ū-on′i-mus-oil), *n.* Oil extracted from the seeds of the spindle-tree, *Euonymus Europæus*, of central Europe.

Euorthoptera (ū-ôr-thop′te-rä), *n. pl.* [NL., < Gr. *εὖ*, well, + *ὀρθός*, straight, + *πτερόν*, wing.] The *Dermaptera*, or earwigs, considered as a suborder of *Orthoptera.*

euosmite (ū-os′mīt), *n.* [Gr. *εὔοσμος*, sweet-smelling, < *εὖ*, well, + *ὀσμή*, *ὀδμή*, smell, odor (see *osmium*), + *-ite*[2].] A fossil resin, of a brownish-yellow color, found with lignite at Baiershof in the Fichtelgebirge, Germany.

eupepticity (ū-pep-tis′i-ti), *n.* Good digestion, or the state of feeling resulting from it. *Carlyle.*

euphemist (ū′fē-mist), *n.* [*euphem*(*y*) + *-ist.*] One given to the use of euphemisms.

euphonicon (ū-fon′i-kon), *n.* [NL.: see *euphonic.*] A variety of harmonichord.

euphonon (ū-fō′non), *n.* [NL., < Gr. *εὐφωνος*, well-sounding: see *euphony.*] A variety of harmonichord.

euphorbic (ū-fôr′bik), *a.* [*Euphorbia* + *-ic.*] Derived from *Euphorbia.*—**Euphorbic acid,** an amorphous acid contained in the gum-resin euphorbium from *Euphorbia resinifera.*

euphorbine (ū-fôr′bin), *n.* [*Euphorbia* + *-ine*[2].] A non-volatile poisonous compound, said to be present in the milky juice of *Euphorbia myrtifolia.*

euphorbone (ū-fôr′bōn), *n.* [*Euphorbia* + *-one.*] A colorless, neutral, dextrorotatory, crystalline compound, $C_{15}H_{24}O$, contained in the gum-resin euphorbium from *Euphorbia resinifera.* It melts at 116° C.

euphorin (ū′for-in), *n.* [Gr. *εὔφορος*, easy to bear or bearing well, < *εὖ*, well, + *φέρειν*, bear.] A trade-name of phenyl urethane, recommended for medical use as an antipyretic and analgesic.

euphorious (ū-fō′ri-us), *a.* [Erroneously for ★*euphorous*, < Gr. *εὔφορος*, bearing well, enduring easily or patiently, < *εὖ*, well, + *φέρειν*, bear.] Cheerful or patient in life.

> The conviction is borne in upon the soul . . . that man is a favored . . . being, . . . that real evil can not befall the good man, living or dead; and that he can afford to be glad and *euphorious* that he is alive.
> *G. S. Hall*, Adolescence, II. 547.

eupittone (ū-pit′ōn), *n.* [Gr. *εὖ*, well, + *πίττα*, pitch, + *-one.*] Same as *eupittonic acid.* See ★*eupittonic.*

eupittonic (ū-pi-ton′ik), *a.* [*eupittone* + *-ic.*] Noting an acid, an orange-yellow compound, $(CH_3O)_6C_{19}H_8O_3$, formed by the oxidation of wood-tar oil containing pyrogallol and methyl pyrogallol ethers. It crystallizes in long hair-like needles, melts at 200° C., and is dibasic. Also called *pittacal.*

eupnœic (ūp-nē′ik), *a.* [*eupnœa* + *-ic.*] Relating to or characterized by eupnœa; breathing normally.

Eupomotis (ū-pō-mō′tis), *n.* [NL., < Gr. *εὐ-*, well, + *πῶμα*, lid, + *οὖς* (*ὠτ-*), ear.] A genus of sunfishes (*Centrarchidæ*) distinguished by the blunt pharyngeal teeth. *E. gibbosus*, the commonest of the sunfishes, is abundant throughout the northeastern United States.

eupraxy (ū′prak-si), *n.* [Gr. *εὐπραξία*, well-doing, < *εὖ*, well, + *πράσσειν*, do: see *practic, practice, praxis.*] Well-doing; right conduct; morality in behavior.

Eupterotidæ (ūp-te-rot′i-dē), *n. pl.* [NL., < *Eupterota* + *-idæ.*] A family of moths allied to the *Lasiocampidæ*, but differing from them in possessing a frenulum. The European processionary moth, *Cnethocampa processionea*, is a striking example. The family is widely distributed, and the larvæ of many are gregarious.

Eupuccinia (ū-puk-sin′i-ă), *n. pl.* [NL., < Gr. *εὐ-*, true, + *Puccinia.*] A group of species of *Puccinia* which produce spermogonia, æcidia, uredospores, and teleutospores, the last germinating only after a resting period. The group is subdivided into the *Auteupuccinia* and the *Hetereupuccinia. Schrœter.*

eupyrene (ū′pī-rēn), *a.* [Gr. *εὖ*, well, + *πυρήν*, stone of a fruit (nucleus).] Containing a well-developed nuclear portion: applied to the normal spermatozoön: opposed to ★*oligopyrene* and ★*apyrene. Meves*, 1902.

eupyrin (ū-pī′rin), *n.* [Gr. *εὖ*, well, + *πῦρ*, fire, + *-in*[2].] A pale greenish-yellow crystalline compound having a vanilla odor, made from paraphenetidin and vanilla. It is antipyretic.

euquinine (ū-kwin′ēn), *n.* [*eu-* + *quinine.*] The pharmaceutical name for ethyl quinine-carboxylate, $C_{20}H_{23}O_2N_2COOC_2H_5$, prepared from quinine ethyl chlorcarbonate. It is tasteless, but otherwise resembles quinine in chemical and medicinal properties.

Eur. An abbreviation of *Europe* or of *European.*

Eurafric (ū-raf′rik), *a.* Same as ★*Eurafrican.*

> That *Eurafric* region which has been the birthplace of many nations. *Smithsonian Rep.*, 1899, p. 480.

Eurafrica (ū-raf′ri-kă), *n.* [*Eur*(*ope*) + *Africa.*] Europe and Africa considered as one continent or ethnic area.

Eurafrican (ū-raf′ri-kan), *a.* and *n.* **I.** *a.* Of, pertaining to, or including, in whole or in part, both Europe and Africa: as, a former *Eurafrican* continent; a *Eurafrican* race.

II. *n.* An individual belonging to the Eurafrican division of mankind, which, according to certain writers, includes the peoples of southern Europe and northern Africa.

Euramphæa (ū-ram-fē′ă), *n.* [NL., < Gr. *εὖ*, well, + *ῥάμφος*, beak.] The typical genus of the family *Euramphæidæ. Gegenbaur*, 1856.

Euramphæidæ (ū-ram-fē′i-dē), *n. pl.* [NL., < *Euramphæa* + *-idæ.*] A family of lobate ctenophorans having two wing-like projections at the aboral pole in which the subtentacular costæ and meridional vessels are produced. The typical genus is *Euramphæa.*

Euraryan (ū-rär′yan), *a.* and *n.* [*Eur*(*ope*) + *Aryan.*] **I.** *a.* Relating to the European Aryan.

II. *n.* A European Aryan.

euresol (ū′rē-sōl), *n.* [*eu-* + *res*(*orcin*) + *-ol.*] A viscid yellow mass, resorcin monoacetate. It is used as a substitute for resorcin in skin-diseases.

eurhodine (ū′rō-din), *n.* [Gr. *εὖ*, well, + *ῥόδον*, rose, + *-ine*[2].] The name of a class of organic compounds containing the complex

$$R_2NC_6H_3\begin{cases} \text{N.C.CH} \\ \| \\ \text{N.C.}C_6H_4 \end{cases}\!\!\diagdown\!\!\diagup\text{CH}.$$

They are prepared from amino-orthodiamines and quinones. They are feeble bases with a yellowish-green fluorescence. The salts are scarlet and have no technical application.

eurhodol (ū′rō-dōl), *n.* [*eurhod*(*ine*) + *-ol.*] The name of a class of organic compounds containing the complex $HOC_6H_3\begin{cases} \text{N.C.CH} \\ \| \\ \text{N.C.}C_6H_4 \end{cases}\!\!\diagdown\!\!\diagup\text{CH}$, formed by the action of hydrochloric acid on the eurhodines, which they resemble in color and fluorescence.

eurhythmic (ū-rith′mik), *a.* [*eurhythm-y, eurythmy* + *-ic.*] Harmonious: said especially of architecture in which the proportion is agreeable.

eurhythmy. See *eurythmy.*

euristic (ū-ris′tik), *a.* Same as *heuristic.*

eurobin (ū′rō-bin), *n.* [*eu-* + (*ara*)*roba* + *-in*[2].] Chrysarobin triacetate. It is insoluble in water, and is used as a substitute for chrysarobin.

Europasian subregion, in *zoögeog.*, a division of the Holarctic region comprising Europe north of the Alps and Asia north of the Himalayas. It is roughly the same as the Eurasiatic region of Heilprin and the Palearctic region of other writers.

European, *a.*—**The European concert.** See ★*concert.*

europhen (ū′rō-fen), *n.* A trade-name of diisobutyl orthocresol iodide, recommended for medical use as an antiseptic and a substitute for iodoform.

europium (ū-rō′pi-um), *n.* [NL., < L. *Europa*, Europe.] A supposed new element announced by Demarçay in 1901, obtained in very small quantity as oxid, sulphate, etc., from samarskite and monazite. Its compounds have been further examined by Urbain and Lacombe. It is characterized by a special spark-spectrum, and also by a phosphorescent spectrum, and appears to be intermediate between samarium and gadolinium, with an atomic weight of about 151.79.

eurybathic (ū-ri-bath′ik), *a.* [Gr. *εὐρύς*, wide, + *βάθος*, depth.] Having a wide or great range as to depth; able to live in both deep and shallow water. *Encyc. Brit.*, XXXIII. 936.

eurybenthic (ū-ri-ben′thik), *a.* [Gr. *εὐρύς*, wide, + *βένθος*, depth (see ★*benthos*), + *-ic.*] Enduring great differences of depth; found at different depths in the ocean.

Euryçampyli (ū-ri-kam′pi-lī), *n. pl.* [NL., < Gr. *εὐρύς*, broad, + *καμπύλος*, curved.] A suborder of the ammonoid cephalopods or goniatites having broad and entire septal lobes and saddles. In the earlier or Paleozoic forms the shells are for the most part laterally compressed, but they become rotund or coronate in later phases, and the simpler form of the suture is lost by subdivision.

eurycephalic, *a.* 2. Having a broad but dolichocephalic skull; belonging to a subdivision of the oöidocephalic crania as classified by Aitken Meigs.

eurycephalous (ū-ri-sef′a-lus), *a.* Same as *eurycephalic.*

eurygnathism (ū-rig′na-thizm), *n.* [*eurygnath*(*ous*) + *-ism.*] The condition of being eurygnathous.

> Combining this feature with *eurygnathism*, that is, lateral projection of the cheek-bones, Geoffroy Saint-Hilaire found that the Caucasic face is oval with vertical jaws;

the Mongolic broad (eurygnathous); the Negro prognathous; the Hottentot both pro- and eurygnathous.
Keane, Ethnology, p. 181.

eurygnathous (ū-rig′na-thus), *a.* [Gr. *εὐρύς*, broad, + *γνάθος*, jaw.] In *anthrop.*, having wide cheek-bones and upper jaws, like the Mongoloid race. *Geoffroy Saint-Hilaire.*

euryhaline (ū-rī′ha-lin), *a.* [Prop. **euryaline*, < Gr. *εὐρύς*, wide, + *ἅλς*, salt.] Having a wide range or capacity as to saltness; able to endure great changes in the salinity of water.

All Baltic marine animals can live in water of varying saltness, and are therefore said to be *euryhaline*.
Voyage of H. M. S. Challenger, xxix.

Eurynotus (ū-ri-nō′tus), *n.* [NL., < Gr. *εὐρύς* broad, + *νῶτος*, back.] A genus of extinct ganoid fishes having a deeply fusiform trunk, large pectoral fins, and the dorsal fin extended to the tail. It occurs in the Carboniferous rocks of Great Britain and Europe.

euryon (ū′ri-on), *n.* [Gr. *εὐρύς*, wide.] In *craniom.*, the points on the lateral faces of the skull at which the greatest width is found. *Von Török.*

eurypauropodid (ū-ri-pâ-rop′ō-did), *n.* and *a.* **I.** *n.* A member of the myriapodous family *Eurypauropodidæ*.

II. *a.* Of or belonging to the myriapodous family *Eurypauropodidæ*.

euryprognathous (ū-ri-prog′nā-thus), *a.* [Gr. *εὐρύς*, wide, + *πρό*, before, + *γνάθος*, jaw.] In *anthrop.*, having wide cheek-bones and upper jaws, combined with prognathism. *Geoffroy Saint-Hilaire.*

Craniological studies which had already been cultivated by Morton, and on which Geoffroy Saint-Hilaire based his four fundamental types: orthognathous, eurygnathous, prognathous, and *euryprognathous*.
Keane, Ethnology, p. 166.

eurypterid (ū-rip′te-rid), *n.* and *a.* **I.** *n.* A merostome crustacean of the family *Eurypteridæ*.

II. *a.* Having the characters of or pertaining to *Eurypterus* or the *Eurypteridæ*.

eurypteroid (ū-rip′te-roid), *a.* Having the characters of *Eurypterus*. *A. S. Packard*, Textbook of Entom., p. 6.

Eurypterus beds. Same as *Bertie* ★*dolomite*.

eurythermal (ū-ri-thėr′mal), *a.* [Gr. *εὐρύς*, wide, + *θέρμη*, heat, + *-al*[1].] Capable of enduring great differences of temperature; found in localities which differ widely in temperature: contrasted with ★*stenothermal*.

Some members of the epiplankton are, however, extraordinarily *eurythermal* and eurybathic; for example, Calanus finmarchicus ranges from 76° N. to 52° S. (excepting perhaps for 10° each side of the equator), and is apparently indifferent to depth.
Encyc. Brit., XXXIII. 936.

eurythermic (ū-ri-thėr′mik), *a.* Same as ★*eurythermal*.

Two species proved to be purely epiplanktonic, both in the warm and cold areas, twelve were *eurythermic* and eurybathic, ranging from the surface to 700 fathoms in both areas. *Nature*, Nov. 5, 1903, p. 23.

euryzygous (ū-riz′i-gus), *a.* [Gr. *εὐρύς*, wide, + *ζυγόν*, yoke.] With wide zygomatic arches. *Sergi.*

Eusarcus (ū-sär′kus), *n.* [NL., < Gr. *εὐσαρκος*, fleshy, < Gr. *εὖ*, well, + *σάρξ*(*σαρκ-*), flesh.] A genus of merostomatous *Crustacea*, of the family *Eurypteridæ*. It is characterized by having the first six abdominal segments greatly expanded and those following abruptly contracted. It occurs in the upper Silurian rocks of western New York.

Eusiphonacea (ū-sī-fō-nā′sē-ä), *n. pl.* [NL., < Gr. *εὖ*, well, + *σίφων*, a pipe, + *-acea*.] A superfamily of anomalodesmaceous *Pelecypoda*. It is characterized by the formation of a calcareous tube which may include one or both of the valves and is usually furnished with a perforated anterior disk. The division includes only two genera, *Clavagella* and *Aspergillum*, both of them fossil and recent.

Eusiphonia (ū-sī-fō′ni-ä), *n. pl.* [NL., < Gr. *εὖ*, well, + *σίφων*, pipe.] A section of the subfamily of anomalodesmaceous *Pelecypoda* characterized by long siphons and the position of the lithodesma at the anterior end of the internal resilium.

eusitia (ū-sī′ʂia), *n.* [NL., < Gr. *εὖ*, well, + *σῖτος*, food.] A normal appetite for food.

eusplanchnia (ū-splangk′ni-ä), *n.* [NL., < Gr. *εὖ*, well, + *σπλάγχνα*, bowels.] A normal state of the internal organs.

Eustachian fossa. See ★*fossa*[1].

eustatic (ū-stat′ik), *a.* [Gr. *εὖ*, well, + *στατός*, < *ἱστασθαι*, stand.] Well established; not subject to subsidence or elevation; in equilibrium: descriptive of land-areas.

eustomachous (ū-stom′a-kus), *a.* Same as *eupeptic*. *Syd. Soc. Lex.*

Eusuchia (ū-sū′ki-ä), *n. pl.* [NL., < Gr. *εὖ*, well, + *σοῦχος*, a local Egyptian name of the crocodile.] In Huxley's classification of the reptiles, a division or order of the *Crocodilia* characterized by the unpaired and terminal nostril, which is internally prolonged and floored by a secondary palate. This group includes the modern crocodiles and the later fossil forms.

eutaxic (ū-tak′sik), *a.* [Gr. *εὖ*, well, + *τάξις*, order.] Same as ★*quincubital*. *P. C. Mitchell*, 1899.

eutaxite (ū-tak′sīt), *n.* [Irreg. < *eutax-y* + *-ite*[2].] In *petrog.*, a name first applied by Fritsch and Reiss (1868) to phonolitic rocks of Teneriffe, but subsequently used for any lava possessing eutaxitic texture.

eutaxy, *n.* **2.** In *ornith.*, the condition of a bird's wing when the fifth secondary is present.

Eutectic alloy, eutectic point or **temperature.** See ★*alloy*, ★*point*[1].

eutectoid (ū-tek′toid), *a.* and *n.* [*eutect*(*ic*) + *-oid*.] **I.** *a.* Exhibiting eutectic character.

II. *n.* A substance which behaves as a eutectic.

eutexia (ū-tek′si-ä), *n.* [Gr. *εὐτηξία*, < *εὐτηκτος*, easily melted: see *eutectic*.] The property of fusing at low temperatures. See *eutectic*.

euthanasian (ū-tha-nā′ʂi-an), *a.* [*euthanasia* + *-an*.] Relating to or marked by euthanasia.

eutheca (ū-thē′ka), *n.* [Gr. *εὖ*, well, + *θήκη*, case: see *theca*.] In corals, the true theca as distinguished from a pseudotheca, the former having true centers of calcification. Compare ★*pseudotheca*. *Philos. Trans. Roy. Soc.* (London), ser. B, 1896, p. 141.

euthecate (ū-thē′kāt), *a.* [*eutheca* + *-ate*[1].] Characterized by the possession of a eutheca: as, the *euthecate* corals. *Annals and Mag. Nat. Hist.*, Jan., 1904, p. 24.

euthenics (ū-then′iks), *n.* [Gr. *εὐθηνία*, abundance, well-being, + E. *-ics*.] The science of improving the environment.

eutherian (ū-thē′ri-an), *a.* [*Eutheria* + *-an*.] Pertaining to or having characters found in the *Eutheria*, or placental mammals.

euthycomi (ū-thik′ō-mī), *n. pl.* [NL., < Gr. *εὐθύς*, straight, + *κόμη*, hair.] Individuals or types of man with straight hair, like the Mongols; a subdivision of the Lissotriches. *Haeckel.*

euthytropic (ū-thi-trop′ik), *a.* [Gr. *εὐθύς*, straight, + *τρόπος*, direction.] A descriptive term suggested by J. Milne for those earthquake shocks whose vibrations are in the same direction as the line of transmission of the shock itself. Also *euthutropic*. *Nature*, 1881, p. 126.

eutocia (ū-tō′si-ä), *n.* [Gr. *εὐτοκία*, < *εὐτοκος*, bringing forth easily, < *εὖ*, well, + *τεκεῖν*, bring forth.] Normal childbirth.

Eutracheata (ū-trā-kē-ā′tä), *n. pl.* [NL., < Gr. *εὖ*, well, + *τραχεῖα*, trachea.] A group of *Arthropoda* including the insects and myriapods as distinguished from the tracheate *Arachnida* and the *Prototracheata*.

Eutuberaceæ (ū-tū-be-rā′sē-ē), *n. pl.* [NL., < *eu-* + *Tuberaceæ*.] Same as *Tuberaceæ*.

euxenium (ūk-sē′ni-um), *n.* [NL., < Gr. *εὐξενος*, hospitable: see *euxenite*.] A supposed new element (or rather either of two, distinguished as euxenium I and II) announced by Hofmann and Prandtl in 1901 as present in the Norwegian mineral euxenite: said to resemble zirconium, but to differ from it in certain reactions. Its existence is very doubtful.

E. V. An abbreviation of *Engineer Volunteers*.

evacuator, *n.* **2.** In *surg.*, an instrument for removing fluid or solid particles from a cavity, as the detritus from the bladder after lithotrity.

evaginate (ē-vaj′i-nāt), *a.* [L. *evaginatus*, pp. of *evaginare*, unsheath, < *e*, out, + *vaginare*, sheath: see *vaginate*.] Pushed out or everted; turned inside out.

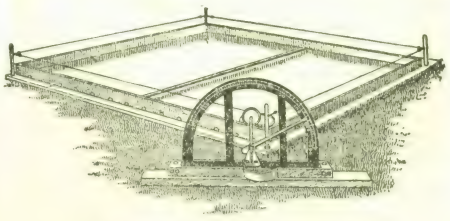
evagination, *n.*—**Potential evagination,** in *embryol.*, an arrangement of the cells, or of their nuclei, of such a nature as to indicate the point at which a future evagination will be formed.

evanescent, *a.* **5.** In *math.*, infinitesimal.

evang. An abbreviation of *evangelical* and *evangelist*.

Evangelical prophet. See ★*prophet*.

evaniid (e-vā′ni-id), *n.* and *a.* **I.** *n.* An insect of the family *Evaniidæ*.



II. *a.* Of or belonging to the hymenopterous family *Evaniidæ*.

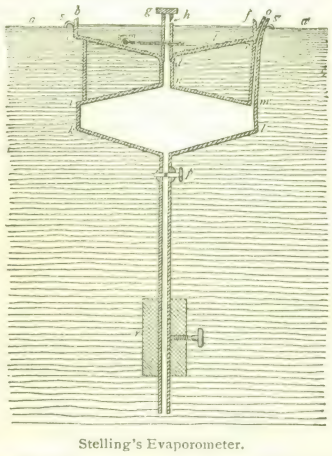
evans (ev′ans), *n.* A provincial corruption of *avens*.

evans-root (ev′ans-röt), *n.* [See ★*evans*.] The water-avens, *Geum rivale*.

evaporation, *n.*—**Heat of evaporation.** Same as ★*heat of vaporization*.—**Multiple-effect evaporation,** a process by which the latent heat of vapor given off from one evaporating-vessel is utilized by applying it to raise the temperature of the liquid in another vessel, and so on, the vapor in each case being carried through coils of pipe surrounded by the liquid to be heated. Such an arrangement is much used in sugar-refining.

evaporation-tank (ē-vap-ō-rā′shon-tangk), *n.* A vessel or tank holding a large quantity of water fully exposed to the sun and the weather. It is used for measuring the evaporation from a representative natural surface of water.

Symons's Standard Evaporation-tank.



A tank 6 feet square (rim, 3 inches aboveground) kept filled to a mark near the top; water, 2 feet deep. At one corner is the float and a semicircular scale with an index-finger, which shows the height of water in the tank.

Evaporative capacity, the capacity of a boiler or evaporator to convert water into steam. Evaporative capacity is usually stated in pounds of water per hour.—**Evaporative efficiency,** the ratio of the amount of water evaporated by a boiler per pound of coal burned, to the amount which it is theoretically possible to evaporate with the same pound of coal.

evaporator, *n.* **2.** A device for evaporating water into steam. The necessary heat is derived from live steam or from the waste gases given off by a furnace used primarily for some other purpose. Such evaporators are used on shipboard to make steam from salt water, this steam being then condensed to furnish fresh water for the boilers or for culinary purposes.

3. A device, used in connection with gasolene-engines, to transform the liquid hydrocarbon into a gas or vapor by heat or by fine subdivision in a current of air. *Hiscox*, Horseless Vehicles, p. 179.—**Lillie evaporator,** in *sugar-manuf.*, an arrangement for rapidly evaporating cane-juice in which, under progressively reduced pressure, the juice is sent through a series of tubes surrounded by steam.—**Multiple-effect evaporator,** a series of evaporators the first of which is heated by live steam from a boiler, the second by steam generated in the first, the third by steam generated in the second, and so on. There are usually three or four evaporators in the series, and as the heat range is lowered it is usually necessary to lower the pressure on the surface from which evaporation occurs.

evaporometer, *n.*—**Stelling's evaporometer,** an arrangement for determining the amount of evaporation under natural conditions from a surface of water representing the surface of a river or lake. It consists essentially of an evaporation-pan supported within another pan and floating on the surface of the water. The amount of evaporation is measured either by weight or by volume.

Stelling's Evaporometer.

a, *a'*, natural surface of the pond, river, or ocean; *b*, *c*, *d*, *e*, *f*, evaporation-pan; *t*, thermometer; *g*, *h*, *i*, *k*, *l*, *m*, *n*, *p*, float full of air to support the water in the pan at the proper height; *s*, *s'*, rim to prevent insplashing from waves; *r*, weight to keep the metal framework upright; *o*, vent-pipe to allow the air in the float to expand and contract.

eve[1], *n.*—**St. John's eve,** midsummer eve. See *midsummer*.

eve-eel (ēv′ēl), *n.* A common name of the conger-eel. [Eng.]

eve-jar (ēv′jär), *n.* Same as *eve-churr*.

Even or odd. (*b*) A way of betting or of settling who shall pay for something, as by calling the number of a bill (odd or even); or the number of matches held in the hand, even or odd. In the Spanish game of rondeau the players bet that the number of balls left on the table will be odd or even.

evener, *n.* 4. An acid liquor used in coloring skins to obtain a uniform shade. *Flemming,* Practical Tanning, p. 73.

evening-snow (ēv'ning-snō'), *n.* In California, a delicate herb, *Linanthus dichotomus,* related to *Gilia.* It opens its white flowers about four o'clock in the afternoon, closing them again in the morning. It is so abundant on open slopes as to whiten the ground. The flowers are salver-shaped, an inch wide, and oppressively scented.

Evening-snow (*Linanthus dichotomus*).
One third natural size.

Everglade State, the State of Florida.

evergreen. I. *a.*—**Evergreen beech.** See ★*beech*[1].

II. *n.*—**Broad-leafed evergreen,** an evergreen tree or shrub with broad leaves, chiefly dicotyledonous, such as *Magnolia fœtida,* as distinguished from coniferous trees with needle-shaped leaves.—**Bunch-evergreen,** the ground-pine, *Lycopodium obscurum.*—**Christmas evergreen,** *Selaginella rupestris,* a plant of wide distribution, often used for Christmas decoration. See *Selaginella.*—**Coral-evergreen,** the common club-moss or running pine, *Lycopodium clavatum.* See *Lycopodium.*—**Swamp-evergreen,** the shining club-moss, *Lycopodium lucidulum.* See ★*club-moss.*—**Trailing evergreen.** Same as *swamp-*★*evergreen.*

everlasting. I. *a.*—**Everlasting grass,** the sainfoin.

II. *n.*—**Alpine everlasting,** *Antennaria alpina,* a low floccose-woolly plant of northern North America, extending entirely across the continent and ranging from Colorado and California to the arctic circle.—**Clammy everlasting,** *Gnaphalium decurrens,* a rather tall glandular-viscid American plant, having the narrow sessile leaves decurrent on the stem, whence it is called *winged cudweed.* Also called *balsam-weed* and *sweet balsam.*—**Early everlasting.** Same as *mouse-ear everlasting* (which see, under *mouse-ear*).—**Large-flowered everlasting,** *Anaphalis margaritacea,* a widely diffused North American plant, also occurring in northern Asia and adventive in Europe; it is closely related to *Antennaria* and *Gnaphalium,* but has larger heads.—**Life-everlasting.** Same as *everlasting,* applied to the same species, but particularly to *Gnaphalium. G. obtusifolium* is called *fragrant* or *sweet life-everlasting* on account of the balsamic odor emitted after the flowers have fallen.—**Moor everlasting.** Same as *mountain* ★*everlasting.*—**Mountain everlasting,** *Antennaria dioica,* a low floccose-woolly plant with relatively large heads, the flowers of which are sometimes pink: found in nearly all parts of North America, and also in Europe and Asia, especially in mountainous regions.—**Mouse-ear everlasting.** See *mouse-ear.*—**Pearly everlasting.** (*a*) The mouse-ear everlasting (which see, under *mouse-ear*). (*b*) Same as *large-flowered* ★*everlasting.*—**Plantain-leaf everlasting,** the mouse-ear everlasting. **Rose-flowered everlasting,** the Swan River everlasting, *Syncarpha Manglesii.*

Evermannia (ev-ėr-man'i-ą), *n.* [NL., named for B. W. *Evermann,* an American ichthyologist.] A genus of small gobies distinguished by the naked body and elongate form: found on the Pacific coast of Mexico. *E. zosterura* is the common species.

everniin (e-vėr'ni-in), *n.* [*Evernia* + *-in*[2].] A yellowish tasteless amorphous compound, $C_6H_{14}O_7$, found in certain of the lichens of the genus *Evernia.*

Eversible sacs or **glands.** See *defensive* ★*glands.*

evertebrate (ē-vėr'tē-brāt), *v. t.*; pret. and pp. *evertebrated,* ppr. *evertebrating.* [L. *e-,* out, + *vertebra,* vertebra, + *-ate*[2].] To deprive of backbone; hence, to render useless and ineffective.

evertor (ē-vėr'tor), *n.* That which everts or rotates outward, as a muscle. *Lancet,* July 4, 1903, p. 56.

Eve's apple, in Ceylon, a name applied by the English to the fruit of *Ervatamia dichotoma* (*Tabernæmontana dichotoma* of Roxburgh), a small dichotomously branched tree belonging to the dogbane family. It has a milky latex, dark-green, coriaceous leaves, and fragrant white, salver-shaped flowers with yellow throat. The fruit consists of two distinct carpels, broadly ovoid when ripe, and orange yellow without. They contain numerous seeds surrounded by crimson pulp.—**Eve's cup,** the trumpet-leaf or huntsman's-horn, *Sarracenia flava.*—**Eve's darning-needle.** Same as *Adam's needle and thread, Yucca filamentosa.*—**Eve's plant,** the Spanish bayonet, *Yucca aloifolia.* See *bayonet.*

evidence, *n.*—**Self-regarding evidence,** in *law,* evidence for or against a party derived from statements made by or from the conduct of himself or his representatives. When in favor of the party it is called *self-serving evidence,* and is generally inadmissible; when against him it is called *self-disserving evidence,* and is always admissible—as an admission in a civil case, or as a confession in a criminal case.—**Self-serving evidence.** See *self-regarding* ★*evidence.*

evisceration, *n.* 2. In *ophthalmol.,* removal of the internal parts of the eyeball, the sclerotic coat being left. *Buck,* Med. Handbook, I. 557.

evisceroneurotomy (ē-vis″e-rō-nū-rot'ō-mi), *n.* Evisceration of the eye with division of the optic nerve. *Buck,* Med. Handbook, I. 557.

evocative (ev'ō-kā-tiv), *a.* [*evocate* + *-ive.*] Tending or fitted to evoke or call forth.

evolute, *n.* II. *a.* Evolved; developed: as, an *evolute* curve.

evolutility (ev″ō-lū-til'i-ti), *n.* [*evolut(ion)* + *-ile* + *-ity.*] The capability possessed by all living things of undergoing changes in form, size, or structure, as the result of the nutritive processes.

evolutine (ev'ō-lū-tin), *a.* [*evolut(ion)* + *-ine*[1].] Of or pertaining to evolutility.

The *evolutine* cycle of tissues deprived of their intimate relations with nerves. *Nature,* Feb. 5, 1903, p. 336.

evolution, *n.*—**Compound evolution,** evolution in which the rate and course of progress in one aggregate or group is affected by the proximity and influence of another aggregate.—**Determinate evolution,** the doctrine or opinion that the modification of species according to the principle of natural selection is guided into certain predetermined lines by a natural necessity, or by the adaptive acts of the organisms themselves. *Eimer.*—**Doctrine of evolution.** (*a*) In *embryol.,* in individual development or ontogeny, the doctrine or opinion that the generation of a living being from an egg consists in the unfolding, or evolution, or manifestation to sense, of the organization or specific constitution which is latent or potential in the egg: contrasted with or opposed to the doctrine that development is epigenesis, or new formation. The embryological doctrine of evolution has undergone many changes. In the seventeenth and eighteenth centuries most of its advocates regarded the germ as a complete and perfect miniature of the visible organism, so delicate and transparent and minute that it transcends our means of observation and eludes our senses, and is made known to us by the mind's eye. Development was held to be the distention of this miniature, and its manifestation to sense, by the intussusception of nutritive material, without any change in the volume or in the organization of the essential living substance which exists, in its completeness, at all stages of development. Most of the present advocates of this view believe that while the germ has a fixed and definite architecture which controls and directs each step in the process of development, this architecture is different from and much simpler than that of the developed organism. Some hold that it is not the individual organism as such that is preformed in and unfolded from a germ, but only its character as a member of a species; while its individuality as a particular organism is induced by the mechanical conditions under which it develops. Others hold that it is not the material equivalent of the completed organism, but only its latent potency, or the capacity for generating it, that resides in the germ. Others, again, hold that while the germ is neither the perfect organism in miniature, nor its material equivalent, the germ is like the perfect organism in so far as it is from the first organized into definite regions which are set apart for the construction of specific parts or regions of the body of the future organism. In general, any view of individual development which attributes predominant or supreme importance to the properties of the germ and subordinate importance, or no importance, to the conditions under which development takes place, is in so far evolutionary. Evolutionary views of individual development are usually, but not always, associated with evolutionary conceptions of ancestral development. (*b*) In ancestral development or phylogeny, the doctrine or opinion that the specific constitution or architecture which a germ-cell is held to possess at the beginning of its development, and to which the organization of the being that is generated from it is attributed, preëxisted in the germ-cells of preceding generations. In the extreme form in which it was held by the embryologists of the seventeenth and eighteenth centuries it is the doctrine that since individual development is and always has been the unfolding of preëxisting structure, each successive organism has existed, as such, from the beginning, in the germ-cells of its first ancestor, and in those of all successive ancestors, so that it is not the actual modern organism, but only its visibility or perceptibility by sense that is new. The modifications of this doctrine by more modern embryologists, who have sought to make it consistent with the progress of biological science, are too subtile and refined for concise statement. (*c*) In *biol.,* the doctrine or opinion, accepted as an established truth by all recent biologists, that all living beings have come into existence, in course of nature, by uninterrupted descent, without break of continuity, from a few ancient and simple forms of life, or from one.—**Mechanico-physical theory of evolution,** the doctrine or opinion, advocated by Nägeli, that the origin of species is due to a principle of improvement which brings about increasing complexity and greater division of labor, because the continual advance of an organism of its own accord is a property of living organic substance.—**Spontaneous evolution.** See *spontaneous.*—**Squadron of evolution** (*naval*), a squadron formed for exercise in naval evolutions, fleet tactics, and drill.—**Tidal evolution.** See ★*tidal.*

evolutionary, *a.*—**Evolutionary ethics,** as most commonly and usefully understood, that view of ethics which was inaugurated by Herbert Spencer, was improved by Leslie Stephen, and is supported by most of the recent writers, as Höffding, Wundt, Paulsen, Alexander, Simmel, and others, but is opposed by the followers of Green and other idealists and also by Dühring. The term has also been applied to the doctrine that conscience is educable, and has also been extended by some so as to include perfectionism.

evolv, *v.* A simplified spelling of *evolve.*

evolve, *v. t.* 4. In *chem., geol.,* etc., to give off or make manifest by separation from a mixture or a compound: most commonly used of a gas or vapor: as hydrochloric-acid gas *evolved* from a mixture of common salt and sulphuric acid.— 5†. In *math.,* to extract (roots).

Evoxymetopon (e-vok″si-me-tō'pon), *n.* [NL., < Gr. *εὖ-,* well, + *ὀξύς,* sharp, + *μέτωπον,* brow.] A genus of cutlas-fishes of the family *Trichiuridæ,* found in the West Indies.

exact, *v.* 4. In *Eng. law,* to call (a party) in court to answer. See ★*exact, v.,* 4.

When the party could not be found, he was exacted, usually five times at five successive county courts before being outlawed.

Exact differential. See ★*differential.*

exaction, *n.* 3. (*b*) The calling of a party to answer. See ★*exact, v.,* 4.

exaggerational (eg-zaj-ę-rā'shon-al), *a.* [*exaggeration* + *-al.*[1]] Pertaining to or characterized by exaggeration; hyperbolical.

exalgin (ek-sal'jin), *n.* [Irreg. < Gr. *ἐξ,* out, + *ἄλγος,* pain, + *-in*[2].] The trade-name of methylacetanilide, recommended for medical use as an analgesic.

ex all (eks âl). Sold without any of the rights or privileges that usually appertain to stocks or bonds, as, for example, the right to receive the maturing dividend (see *ex div.*), which is reserved to the sellers, or the right to participate in future issues. See ★*ex right.* [Eng.]

exaltado (ek-säl-tä'dō), *n.* [Sp., 'exalted.'] In modern Spanish history, a member of a political party about 1820–22, which was extremely democratic in sentiment.

exaltation, *n.* 6. An abnormal mental condition marked by an overweening sense of self-importance (amounting even to delusions of grandeur), an optimistic contentedness with one's surroundings or condition, and a state almost of rapture or ecstasy.

examin, *v.* A simplified spelling of *examine.*

examinationist (eg-zam-i-nā'shon-ist), *n.* [*examination* + *-ist.*] One who believes in or is an advocate of the system of basing appointments on fitness as ascertained by competitive examination.

exanthalose (eks-an'tha-lōs), *n.* [Gr. *ἐξανθεῖν,* effloresce, + *ἅλς,* salt.] A white efflorescence, perhaps $Na_2SO_4 + 2H_2O$, derived from Glauber's salt.

exanthema, *n.* 3. In *bot.,* same as *die-back.*

exappendiculate (eks-ap-en-dik'ū-lāt), *a.* [L. *ex,* out, + *appendicula,* appendage, + *-ate*[1].] Destitute of appendages.

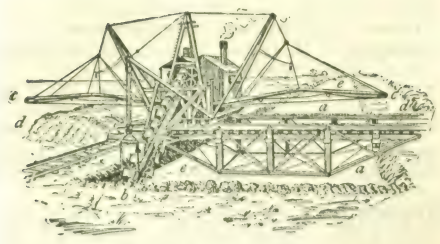
exarteritis (eks-är-te-rī'tis), *n.* [NL., < Gr. *ἐξ,* out, + *ἀρτηρία,* artery, + *-itis.*] Inflammation of the outer layer of the wall of an artery.

exarthrosis (eks-är-thrō'sis), *n.* [Gr. *ἐξ,* out, + *ἄρθρον,* joint, + *-osis.*] Dislocation of a joint.

Exc. An abbreviation of *excellency.*

excalate (eks'kā-lāt), *v. t.*; pret. and pp. *excalated,* ppr. *excalating.* [*ex-* + (*inter*)*calate.*] To drop out; remove from a series: the opposite of *intercalate.*

There remains the assumption that vertebræ have been *excalated* in front of the pelvis. . . . Six vertebræ must have been *excalated.*
Philos. Trans. Roy. Soc. (London), ser. B, p. 342.



excalation (eks-kā-lā'shon), *n.* [*excalate* + *-ion.*] 1. The omission, dropping out, absence, or removal (of something) from a connected series: the opposite of *intercalation.*

Hence the supposition of *excalation* of vertebræ in front of the girdle [of *Mustelus vulg.*] leads also to the necessary corollary that a vast amount of both inter- and *ex-calation* must go on at another spot.
Philos. Trans. Roy. Soc. (London), 1900, ser. B, p. 343.

Specifically—2. The absence, in a race of organisms, of any element in a series of homologous parts, such as a limb or a pair of limbs in an arthropod, or of a vertebra in the spinal column of a vertebrate, considered as evidence that the part in question has been lost or suppressed. *Nature,* Dec. 21, 1898, p. 171.

excavating-pump (eks'kā-vā-ting-pump), *n.* 1. A pump used to keep down water in excavations and trenches.—2. A pump used for excavating or removing soft materials or emptying cesspools.

excavator, *n.* (*c*) A modified form of dredging-machine used in digging irrigation canals. It consists of a chain-and-bucket conveyer mounted on a trolley that moves on rails laid on a traveling crane. Tracks are laid on each side of the canal, and upon these the crane moves. The conveyer, supported by a derrick, cuts into the soil, both below and above the water, and lifts it to chutes that discharge it on the banks at each side. Since the conveyer

Excavator.

a, crane, traveling on tracks (outboard track not shown); *b*, bucket-conveyer; *c*, spoil-chutes to spoil-banks; *d*, spoil-banks; *e*, excavated canal.

travels on the crane transversely to the length of the canal all the soil can be excavated and the crane advanced on the tracks as fast as the canal is dredged out.

excelsin (ek-sel′sin), *n.* [L. *excelsus*, high, + *-in*.²] A crystalline globulin contained in the Brazil nut.

excelsior, *n.* 2. A printing-type, now known as 3-point—about 24 lines to the inch. It is too small for letters, but is used for characters of music, piece fractions, and border decorations. See *type*, 8.—**Excelsior machine,** in *wood-working*, a machine for planing wood into excelsior. It is a simple form of vertical planer, using reciprocating cutters driven at a high speed.

exception, *n.*—**Declinatory exception,** in the civil law of Louisiana, a dilatory exception which denies the jurisdiction of the court before which the matter is brought.—**Preëmptory exception,** in the civil law of Louisiana, one intended to cause the dismissal of the action.

excernent (ek-sėr′nent), *a.* [L. *excernens* (*-ent-*), ppr. of *excernere*, separate: see *excern*.] Same as *excretory*.

excess, *n.*—**Excess fare.** See ★*fare*¹.—**Principle of motor excess,** in *psychophys.*, the principle that "pleasure and pain can be agents of accommodation and development only if the one, pleasure, carry with it the phenomenon of motor excess [heightened nervous energy], and the other, pain, the reverse,—probably some form of inhibition or of antagonistic contraction." *J. M. Baldwin*, Mental Develop., p. 189.

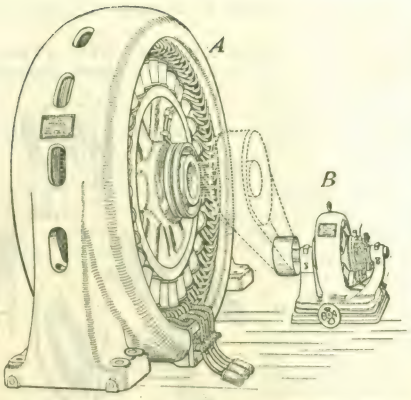
excessory (ex-ses′ō-ri), *a.* [*excess* + *-ory*.] Of the nature of excess; produced as a residual or by-product. *J. E. Cairnes*, Leading Prin. of Polit. Econ., p. 128.

exchange, *v. i.* 2. To go, by exchange with another officer, from one regiment or branch of service to another.

exchange, *n.* 12. A mutual transfer of two officers in different regiments or branches of the service.—13. In *chess*, the advantage of having a rook against the opponent's knight or bishop.—**Labor exchange,** a bureau for bringing employer and unemployed into communication. Such exchanges, under control of the Board of Trade, were established in Great Britain by act of Parliament of 1909.—**Post-exchange,** a store at a military post under the management of the military authorities: also called a *canteen*.—**To gain, win, lose the exchange,** in *chess*, to win or lose a rook for a knight or bishop.

Excipula (ek-sip′ū-lạ), *n.* [NL. (Fries, 1825), ⟨ L. *excipulum*, a vessel, NL., an exciple: see *exciple*.] A genus of *Fungi Imperfecti*, type of the family *Excipulaceæ*, having black membranous or leathery, somewhat cup-shaped pycnidia, with a simple opening. The spores are elongate, hyaline, and one-celled. The species occur on dead stems of plants.

Excipulaceæ (ek-sip-ū-lā′sē-ē), *n. pl.* [NL., ⟨ *Excipula* + *-aceæ*.] A family of *Fungi Imperfecti* of the order *Sphæropsidales*, having more or less cup-shaped black pycnidia either smooth or bearing bristles. Named from the genus *Excipula*.



excisor (ek-sī′zọr), *n.* One who or that which excises.

excitation, *n.*—**Law of polar excitation.** See the extract.

Pflüger stated his *law of polar excitation* as follows ("Untersuchungen," S. 456): "A given stretch of a nerve is irritated by the development of catelectrotonus and the disappearance of anelectrotonus, but not through the disappearance of catelectrotonus or the development of anelectrotonus." *Buck*, Med. Handbook, III. 770.

excite, *v. t.* 5. In electric machinery, to send current through the magnetic field coils, and so produce the magnetism required for the operation of the machine.

exciter, *n.* 3. In *elect.*, the dynamo-electric machine, battery, or other apparatus, which supplies current to energize the magnetic fields of other electric machines.—**Belted exciter,** an exciter driven by a belt from the machine which it excites.—**Compensating exciter,** an exciter directly connected and in synchronism with the alternater, and traversed by the current of the alternater, for the purpose of compensating for the armature reaction of the alternater. See *compensated* ★*alternater*.—**Hertzian exciter,** an apparatus for the production of electrical oscillations or Hertzian waves; a Hertzian oscillator.

Alternator with Belt-driven Exciter. *A*, alternator; *B*, exciter.

excitor (ek-sī′tọr), *n.* Same as *exciter*; specifically, a nerve, stimulation of which excites to greater action in the part supplied.

excitosecretory (ek-sī″tō-sē-krē′tọ-ri), *a.* Causing increased secretion.

excl., exclam. Abbreviations of *exclamation*.

Exclusive inheritance. See ★*inheritance*.

Ex. Com. An abbreviation of *executive committee*.

excrementive (eks-krē-men-tiv), *a.* [*excrement* + *-ive*.] Pertaining to or forming excrement.

excretin (eks′krē-tin), *n.* [L. *excretus* (see *excrete*) + *-in*².] A crystalline body of the composition $C_{29}H_{36}O$, which has been especially obtained from the feces of herbivorous animals. It is supposed to be closely related to cholesterin.

excretionary (eks-krē′shọn-ą-ri), *a.* [*excretion* + *-ary*.] Of or pertaining to excretion; of the nature of an excretion: as, *excretionary* matter. *Huxley*.

excretolic (eks-krē-tol′ik), *a.* [*excrete* + *-ol* + *-ic*.] Derived as an oil from excretions.—**Excretolic acid,** an oily substance of fecal odor, obtained from human excrement. Its composition is unknown.

excretophore (eks-krē′tō-fōr), *n.* [L. *excreta*, excreta, + Gr. *-φορος*, ⟨ *φέρειν*, bear.] A cell which serves to carry excreted matter away from the body.

The *excretophores* of leeches . . . undergo a similar process. *A. Mathews*, Biol. Lectures, 1899, p. 165.

Excretory tubule, one of the group of urinary tubules which open into the pelvis of the kidney.

excurvation (eks-kėr-vā′shọn), *n.* [L. *ex*, out, + *curvatio*(*n-*), curvation.] An outward curving or bending.

excusator, *n.* 2. (*a*) In *Eng. law*, one who makes an accusation. (*b*) In *old Ger. law*, a defendant; one who wholly denies the plaintiff's cause of action. *Bouvier*, Law Dict.

ex. doc. An abbreviation of *executive document*.

executancy (eg-zek′ū-tạn-si), *n.* [*executan*(*t*) + *-cy*.] In *music*, the function or action of an executant or performer; execution.

Execution parée, in *French law*, a right by which a creditor, without preliminary legal process, may seize and cause the goods of his debtor to be sold for payment of the debt. It involves an act upon the part of the debtor amounting to a confession of judgment, and is similar to a warrant of attorney.—**Stay of execution,** in *law*, an act or order which postpones the operation of an execution for a certain time, or which makes it dependent upon the happening of some event.

Executive mansion, the building in Washington, D. C., occupied by the president of the United States: popularly known as the 'White House.'

Executor of his own wrong, in *law*, same as *executor de son tort*.—**Executor to the tenor,** in *law*, a person charged in a will with a duty or duties which pertain to the office of executor, as the appointment of a particular person to discharge a particular debt.—**General executor,** in *law*, an executor appointed to administer the entire estate without limitation of time, place, or subject-matter.—**Instituted executor,** in *law*, an executor nominated and appointed in the will of the testator without conditions, and whose right to act is superior to that of substituted executors, when there are such. See *substituted* ★*executor*.—**Rightful executor,** in *law*, an executor legally nominated and appointed in the will of the testator, as distinguished from one appointed by the court by reason of the refusal or inability of the rightful executor to act. The distinction is of importance, as the rightful executor, deriving his authority from the will, may perform most of his duties prior to probate and grant of letters testamentary. He cannot, however, bring an action as executor prior to such time.—**Special executor,** in *law*, one appointed to administer a part of an estate, or the whole estate, for a limited time, or in a particular place.—**Substituted executor,** in *law*, an executor, nominated and appointed in the will of the testator, who is to act upon condition that another so appointed refuses the appointment. For example, A, by will, makes B his executor, but if B will not act, then he appoints C, and if C will not act, then D, etc. B is the instituted executor. C is said to be substituted in the first degree, D in the second degree, etc.

execx. A contraction of *executrix*.

exegete, *n.* 2. In *Gr. antiq.*: (*a*) A leader; guide; teacher; expounder. (*b*) In Athens, an interpreter of religious law and regulator of ceremonies. The office was confined to the aristocracy.

Exelissa (eks-ē-lis′ą), *n.* [NL., said to be (irreg.) ⟨ Gr. *ἐξελίσσειν*, unroll, ⟨ *ἐξ*, out, + *ἑλίσσειν*, roll.] A genus of platypodous gastropod *Mollusca*, with small turreted shells, having continuous transverse ribs, spiral striæ, and contracted aperture without canal and with continuous peristome. It is of Jurassic age.

exenteritis (ek-sen-te-rī′tis), *n.* [Gr. *ἐξ*, out, + *ἔντερον*, intestine, + *-itis*.] Inflammation of the peritoneum covering the intestines.

exercize, *n.* and *v.* A simplified spelling of exercise.

exhale, *v. i.* 2. To pass through in the form of drops; ooze: noting especially bleeding from a surface in the absence of any wound.

exhaust, *n.* 3. A pump, fan, or other device for removing air from a building, enclosure, or receptacle, by lowering the pressure in the egress-pipe or flue.—**Exhaust mill.** See ★*tumbling-mill*.—**Point of exhaust,** that point in the stroke or in the cycle of processes in an engine-cylinder at which the valve opens to release from the cylinder the contents which have done their work of driving. It should, theoretically, be just at the point when the crank and piston are at the dead center. In high-speed engines, to compensate for the inertia of the material, the release may take place just before the end of the stroke. See *release*, 5.

exhaust-gas (eg-zâst′gas), *n.* The products of combustion due to the firing of the charge in the cylinder of an internal-combustion engine.

exhaust-head (eg-zâst′hed), *n.* A device for diminishing the noise from the exhaust-pipe of a high-pressure engine, and for entrapping any water or oil which would otherwise be ejected with the outgoing steam. These heads are usually conical in form, so that the steam shall expand in volume and diminish in velocity as it reaches its vent. Helical and radial baffle-plates separate out water and oil, and convey the latter to convenient separators, and the dry steam issues in a steady stream over a large area, instead of in a succession of puffs with attendant noise.

exhaustion, *n.*—**Nervous exhaustion.** Same as *neurasthenia*.

exhaustion-method (eg-zâs′tyọn-meth″ọd), *n.* In *psychol.*, a method for the determination of the elementary qualities of olfactory sensation. The nose is exhausted, by continued smelling, for a given odor: then another odor is presented. The assumption which underlies the method is that if the second odor is qualitatively different from the first it will be sensed, despite the exhaustion of the organ for the first odor; while if the second odor belongs to the same qualitative group as the first, it will not be sensed at all, or will be sensed weakly and imperfectly. *E. B. Titchener*, Exper. Psychol., I. i. 76.

exhaustion-time (eg-zâs′tyọn-tīm), *n.* In *psychophys.*, the average time required to exhaust the olfactory organ for a given odor. See ★*exhaustion-method*.

exhaust-jacket (eg-zâst′jak″et), *n.* A chamber in or around any part of an engine within which exhausted products from the cylinder are circulated to utilize heat which would otherwise be wasted. *Encyc. Brit.*, XXVIII. 190.

exhaust-lap (eg-zâst′lap), *n.* The amount by which the edges of the working face of the slide-valve of a steam-engine project over the inner edges of the ports when the valve stands in its central position, symmetrical with the ports. Such an overlap on the exhaust edges of the valve prevents the steam from escaping prematurely from the expanding volume on the working side, and closes the delivery-port to the exhaust-passage before the piston reaches the end of its traverse, so as to imprison some steam behind the piston, whose compression acts as a cushion to bring the reciprocating masses to rest.

exhaust-lead (eg-zâst′lēd), *n.* The amount by which the exhaust-port of an engine is opened, or release occurs, before the end of the pressure-stroke.

exhaust-line (eg-zâst′līn), *n.* The line on an indicator-diagram from a steam or other engine which is traced by the pencil or point of the instrument when the pressure in the cylinder is that existing when the exhaust-valve is open and the engine-piston is making its return stroke with the driving steam in that end of the cylinder which is not connected with the indicator.

exhaust-mill (eg-zâst′mil), *n.* 1. A mill having hollow journals or an opening at one end to which an air-pipe with an exhaust-fan is fitted

for the purpose of drawing dust or moisture out of the mill when it is in operation. **2.** Same as ★*tumbling-mill*.

exhaust-opener (eg-zâst′ōp″nėr), *n.* In *cotton-manuf.*, a machine in which an exhaust-fan is employed for opening cotton as it comes from the bale. *Taggart*, Cotton Spinning, I. 66.

exhib. An abbreviation of the Latin *exhibeatur*, 'let it be given.' [Used in *med.* prescriptions.]

exhibitionism (ek-si-bish′on-ism), *n.* [*exhibition* + *-ism.*] A form of sexual perversion characterized by exposure of the person to others, without any attempt at concealment or any evidence of shame.

From time to time the Alienist and Neurologist is consulted by cases of *exhibitionism* which are as much a surprise to the unfortunate victims as to the astonished public and startled courts.
Alien. and Neurol., Aug., 1904, p. 347.

exhibitionist (ek-si-bish′on-ist), *n.* A degenerate who obeys a morbid impulse to expose the person.

ex hypothesi (eks hī-poth′e-sī). [NL.] 'From the hypothesis'; according to the hypothesis; hypothetically; supposedly; assumed to be.

exilarch (ek′si-lärk), *n.* [L. *exul*, an exile, + Gr. *ἀρχός*, chief. The word translates Aram. *rēsh galuta* 'chief of the captives.'] The chief of the Babylonian Jews after the destruction of the temple and until the tenth century A. D. The exilarch exercised great authority not only over the Jews of Babylonia, but in all other countries, levying taxes and exercising other similar powers.

exile-tree (ek′sīl-trē), *n.* The quashy-quasher, *Thevetia Thevetia*. See *Thevetia*.

existence, *n.* **5.** In *logic*, presence in the universe, system, or total collection of individual objects considered. A class is said to exist when an individual of the class occurs in the universe considered; a relation is said to exist when a set of individuals in the universe is in that relation. Consequently such relations as incompossibility, refuting the existence of, and the like, although they are in a sense relations (better called pseudorelations), do not possess existence. On the other hand the relation of adjectives to corresponding abstract nouns, and other similar relations, refer at once to two different universes, the one of actually existing things, the other of possible symbols, and may thus be admitted to possess existence relatively to a second universe.—**Existence theorem.** See ★*theorem*.

existential, *a.* **3.** Pertaining to external and accidental characters.

exit, *n.* **4.** In *phonetics*, an off-glide or vanish.

A somewhat less gentle *exit* of the isolated vowel. . . .
Scripture, Exper. Phonetics, p. 430.

Exit wound. See ★*wound*.—**Pupil of exit.** Same as *interfusion* ★*disk*.

exite (ex′īt), *n.* [Gr. *ἔξω*, outside, + *-ite*[2]. Cf. *endite*.] A process on the outer border of the leaf-like abdominal appendage of a phyllopod crustacean. *A. E. Shipley*, Zoöl. of Invertebrates, p. 260.

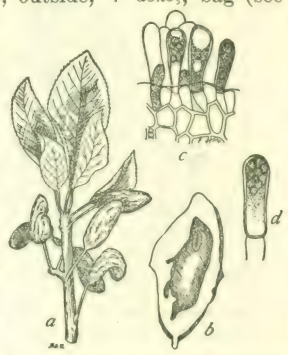
exit-pupil (ek′sit-pū″pil), *n.* In a lens system, the optical image of the entrance-pupil, which is formed by the whole system of lenses. It is also the image of the stop, formed by that portion of the lens system which lies between the stop and the image space. In instruments designed for visual use the eye of the observer should coincide in position with the exit-pupil. See *interfusion* ★*disk*.

exitus, *n.* **2.** Termination of a disease: usually an unfavorable ending: as, lethal *exitus*.—**3.** The external opening of a canal; meatus.

ex-librism (eks-lī′brizm), *n.* [*ex-libr(is)* + *-ism.*] The collecting and study of book-plates.

ex-librist (eks-lī′brist), *n.* [*ex-libr(is)* + *-ist.*] A collector of ex libris or book-plates.

If, on the one hand, the more enthusiastic "*ex-librists*" (for such a word has actually been coined) have made the somewhat ridiculous claim of "science" for "ex-librisme," the bitter animadversion, on the other, of a certain class of intolerant bibliophiles upon the "vandalism" of removing book-plates from old books has at times been rather extravagant. *Encyc. Brit.*, XXVI. 305.



exmeridian (eks-mē-rid′i-an), *a.* [L. *ex*, out, + E. *meridian.*] Not in the meridian: denoting observations or objects. See ★*extrameridian*. [Rare.]

Exoascaceæ (ek″sō-as-kā′sē-ē), *n. pl.* [NL., ‹ *Exoascus* + *-aceæ.*] A family of parasitic ascomycetous fungi, named from the genus *Exoascus*, having the asci borne free on the host and forming no distinct membrane beneath. See ★*Exoascus*.

Exoascales (ek″sō-as-kā′lēz), *n. pl.* [NL., ‹ *Exoascus* + *-ales.*] An order of ascomycetous fungi, having the asci borne free and separate on the surface of the host. It contains two families, *Ascocorticiaceæ* and *Exoascaceæ*.

exoascous (ek-sō-as′kus), *a.* [Gr. *ἔξω*, outside, + *ἀσκός*, a bag (see *ascus*).] Having the asci free, as in the order *Exoascales*. *Encyc. Brit.*, XXVIII. 558.

Exoascus (ek-sō-as′kus), *n.* [NL. (Fuckel, 1860), ‹ Gr. *ἔξω*, outside, + *ἀσκός*, bag (see *ascus*).] A genus of parasitic fungi, typical of the family *Exoascaceæ*: so named because the asci are produced in a thin layer on the surface of the host. The mycelium is perennial, and the asci are 4- or 8-spored. The species occur mostly on fruits, causing enlargements and other deformities. *E. Pruni* is a common species, attacking plums and producing plum-pockets.

Exoascus Pruni.
Plums affected by this fungus are devoid of stones and bear the fungus spores on their surfaces. *a*, branch, one fourth natural size; *b*, cross section of an affected plum, two thirds natural size; *c*, young asci; *d*, mature ascus (enlarged). (Drawn from Engler and Prantl's "Pflanzenfamilien.")

Exobasidiacæ (ek″sō-bā-sid-i-ā′sē-ē), *n. pl.* [NL., ‹ *Exobasidium* + *-aceæ.*] A family of parasitic basidiomycetous fungi, named from the genus *Exobasidium* and having the same general characters.

Exobasidiales (ek″sō-bā-sid-i-ā′lēz), *n. pl.* NL., ‹ *Exobasidium* + *-ales.*] An order of parasitic basidiomycetous fungi, containing the single family *Exobasidiaceæ*.

Exobasidium (ek″sō-bā-sid′i-um), *n.* [NL. (Woronin, 1867), ‹ Gr. *ἔξω*, outside, + NL. *basidium.*] A genus of parasitic basidiomycetous fungi, having 4-spored basidia breaking through the epidermis of the host and forming a thin whitish coating. The species attack ericaceous plants chiefly, producing gall-like formations. *E. Azaleæ* occurs frequently on *Azalea*: the fleshy galls formed are called *may-apples*. See *honeysuckle-apple*.

exocannibalism (ek-sō-kan′i-bal-izm), *n.* [Gr. *ἔξω*, outside, + E. *cannibalism.*] The custom of eating the flesh of strangers. *Deniker*, Races of Man, p. 148.

exocardia (ek-sō-kär′di-ą) *n.* [NL., ‹ Gr. *ἔξω*, outside, + *καρδία*, heart.] Displacement of the heart.

Exoccipital fissure. Same as ★*ape-fissure*.

exocephalous (ek-sō-sef′a-lus), *a.* [Gr. *ἔξω*, outside, + *κεφαλή*, head.] Pertaining to or having the characteristics of the *Exocephala*.

exocerite (ek-sos′e-rīt), *n.* [Gr. *ἔξω*, outside, + *κέρας*, horn, + *-ite*[2].] In crustaceans, a scale-like structure borne by the second joint of an antenna.

exochorion (ek-sō-kō′ri-on), *n.*; pl. *exochoria* (-ą). [Gr. *ἔξω*, outside, + *χόριον*, chorion.] **1.** In *embryol.*, the outer or ectodermal layer of the chorion in the mammalian embryo.—**2.** The outer layer of the chorion of an insect's egg. *A. S. Packard*, Text-book of Entom., p. 520.

exoclinal (ek-sō-klī′nal), *a.* [*exoclin(e)* + *-al.*] In *geol.*, pertaining to or of the nature of an *exocline*.

exocline (ek′sō-klīn), *n.* An inverted fan-fold, or a fan-structure of synclinal type. *Lapworth*, in Geol. Mag., VI. 62.

exocœle (ek′sō-sēl), *n.* [Gr. *ἔξω*, outside, + *κοῖλος*, hollow.] The portion of the cœlenteron or gut-cavity of a hexactinian polyp which lies between different pairs of mesenteries; the intermesenterial space: opposed to ★*entocœle*.

The two first pairs appeared within the dorsal *exocœles*, the moieties of each pair arising at the same time and remaining equal; the two next pairs were within the middle *exocœles*; and finally appeared the pairs within the ventral *exocœles*. *Biol. Bulletin*, July, 1904, p. 84.

exocœlic (ek-sō-sē′lik), *a.* In actinians, of or pertaining to an exocœle: as, the *exocœlic* tentacles. Compare ★*entocœlic*. *Trans. Linnean Soc. London*, Zoöl., Oct., 1902, p. 302.

exocœloma (ek″sō-sē-lō′mą), *n.*; pl. *exocœlomata* (-ma-tą). [Gr. *ἔξω*, outside, + *κοίλωμα*, a hollow, cavity: see *cœloma.*] In *embryol.*, that portion of the cœloma, or true body-cavity, which lies in the extra-embryonic region of the vertebrate embryo.

exoderm (ek′sō-dėrm), *n.* [Gr. *ἔξω*, outside, + *δέρμα*, skin.] **1.** Same as *epidermis*.—**2.** Same as *ectoderm*.—**3.** The external crust of the body of an insect. *N. E. D.*

exodermis (ek-sō-dėr′mis), *n.* [NL., ‹ Gr. *ἔξω*, outside, + *δέρμα*, skin.] The outermost cortical layer of the root corresponding to the hypoderma of the stem. See *hypoderma*.

exogamy, *n.* **2.** In *bot.*, the tendency of closely allied gametes to avoid pairing.

exogastric (ek-sō-gas′trik), *a.* [Gr. *ἔξω*, without, + *γαστήρ*, the belly.] In the tetrabranchiate cephalopods, having the ventral sinus on the arched external side of the shell, as in the *Nautilus*: contrasted with ★*endogastric* (which see).

exogastrula (ek-sō-gas′trō-lą), *n.*; pl. *exogastrulæ* (-lē). [NL., ‹Gr. *ἔξω*, outside, + NL. *gastrula.*] An abnormal kind of gastrula, produced by a bulging out (instead of an invagination) of the vegetative pole of the blastula.

exogenesis (ek-sō-jen′e-sis), *n.* [NL., ‹ Gr. *ἔξω*, outside, + *γένεσις*, origin.] Origin from without: said of a disease arising from external causes. *Jour. Trop. Med.*, July 15, 1903, p. 227.

exogenic (ek-sō-jen′ik), *a.* [As *exogen* + *-ic.*] Originating outside of the body; exogenetic.

exogenous, *a.* **3.** In *geol.*, applied by Von Humboldt to extrusive, volcanic rocks, in contrast to *endogenous* rocks. See ★*endogenous*, 3.

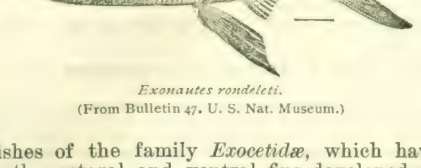
exogeny (ek-soj′e-ni), *n.* [Gr. *ἔξω*, outside, + *-γενεια*, ‹ *-γένης*, -born.] **1.** Same as *exogamy*.—**2.** In sporozoans, sporulation taking place after the cyst has left the host, as in *Gregarinida* and *Coccidiidea* generally. See ★*endogeny*.

exogynous (ek-soj′i-nus), *a.* [Gr. *ἔξω*, outside, + *γυνή*, female (style), + *-ous.*] Having the style or styles exserted.

exohysteropexy (ek-sō-his′te-rō-pek-si), *n.* [Gr. *ἔξω*, outside, + *ὑστέρα*, uterus, + *πῆξις*, fastening.] In *surg.*, operative fixation of the uterus beneath the fascia of the anterior abdominal wall outside of the peritoneal cavity.

exolemma (ek-sō-lem′ą), *n.*; pl. *exolemmata* (-a-tą). [NL., ‹ Gr. *ἔξω*, outside, + *λέμμα*, scale.] In *histol.*, a very delicate tubular sheath surrounding the endolemma, which in turn incloses the axial fiber in the tail of certain spermatozoa, like those of *Helix pomatia*.

exometritis (ek″sō-mē-trī′tis), *n.* [NL., ‹ Gr. *ἔξω*, outside, + *μήτρα*, uterus, + *-itis.*] Inflammation of the peritoneal covering of the uterus.



exomorphic (ek-sō-môr′fik), *a.* [*exomorph(ism)* + *-ic.*] In *petrog.*, belonging to or having the characters of exomorphism. *Amer. Jour. Sci.*, April, 1903, p. 280.

exomorphism (ek-sō-môr′fizm), *n.* [Gr. *ἔξω*, outside, + *μορφή*, form, + *-ism.*] In *petrog.*, that variety of contact-metamorphism which is developed, in the surrounding walls, by an intruded mass of eruptive rock. The commoner changes produced in the metamorphosed rock are induration and cementation in some cases, recrystallization (the conversion of carbonates into silicates) in others, etc.: contrasted with ★*endomorphism*, or the effects, chiefly those of chilling, produced upon the border of the eruptive itself.

exomphalous (ek-som′fa-lus), *a.* [Gr. *ἐξόμφαλος*, having a prominent navel, ‹ *ἐξ*, out, + *ὀμφαλός*, navel.] Relating to or having an umbilical hernia or projecting navel. *N. E. D.*

Exon[2] (ek′son), *n.* [NL. *Exonia*, Exeter.] A native or inhabitant of Exeter, England.

Exonautes (ek-sō-nâ′tez), *n.* [NL., ‹ Gr. *ἔξω*, outside, + *ναύτης*, sailor.] A genus of flying-

Exonautes rondeleti.
(From Bulletin 47, U. S. Nat. Museum.)

fishes of the family *Exocetidæ*, which have both pectoral and ventral fins developed as wings and the anal fin as long as the dorsal. *E. rondeleti* is a common species of the Atlantic.

exophoria (ek-sō-fō′ri-ą), *n.* [Gr. *ἔξω*, outside, + *-φορια*, ‹ *-φορος*, ‹ *φέρειν*, bear.] A condition depending upon imbalance of the ocular muscles in which there is a tendency to divergence of the visual axes, not amounting to actual divergent strabismus. *Med. Record*, April 18, 1903, p. 607.

exophoric (ek-sō-fō′rik), *a.* Relating to or characterized by exophoria.

exoplutonic (ek″sō-plō-ton′ik), *a.* [Gr. *ἔξω*, outside, + E. *plutonic.*] In *geol.*, formed or made up of originally plastic rock-material

that has been extruded, intruded, or protruded from deep-seated subcrustal sources.—**Exoplutonic hypothesis,** the assumed exoplutonic origin of certain rocks.

exoplutonism (ek-sō-plö′tō-nizm), *n.* The process of forming or exposing rock-formations by exoplutonic activity.

exopod (ex′ō-pod), *n.* [Gr. ἔξω, outside, + πούς (ποδ-), foot.] An exopodite.

Exopterygota (ek″sop-ter-i-gō′tä), *n. pl.* [NL., ‹ Gr. ἔξω, outside, + πτερυγωτός, winged.] A superorder of insects characterized by having all stages of wing development entirely external. It includes the *Orthoptera, Odonata, Hemiptera,* and related orders.

exopterygote (ek-sop-ter′i-gōt), *a.* and *n.* [Gr. ἔξω, outside, + πτερυγωτός, winged.] **I.** *a.* Pertaining to or having the characters of the *Exopterygota;* having the wings developed outside of the body.

II. *n.* A member of the *Exopterygota.*

exopterygotic (ek″sop-ter-i-got′ik), *a.* Same as ★*exopterygote.*

exopterygotism (ek″sop-ter′i-gō-tizm), *n.* The development of wings outside the body, as with the *Exopterygota. Encyc. Brit.,* XXIX. 503.

exopterygotous (ek″sop-ter-i-gō′tus), *a.* Same as ★*exopterygote.*

exorbital (ek-sôr′bi-tal), *a.* [L. *ex,* out, + *orbita,* orbit, + *-al.*] External to or beyond the orbit: as, *exorbital* protrusion of the eyeball.

exorcistic (ek-sôr-sis′tik), *a.* [*exorcist* + *-ic.*] Of or pertaining to an exorcist, or exorcism: used or practised by exorcists: as *exorcistic* adjurations.

exorcize, *v. t.* Another spelling of *exorcise.*

exosepsis (ek-sō-sep′sis), *n.* [NL., ‹ Gr. ἔξω, outside, + σῆψις, putrefaction: see *sepsis.*] Sepsis excited by a poison introduced from without, as opposed to ★*endosepsis* or ★*autotoxemia.*

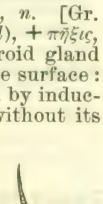
exoseptum (ek-sō-sep′tum), *n.*; pl. *exosepta* (-tä). [NL., ‹ Gr. ἔξω, outside, + L. *septum, sæptum,* partition.] One of the calcareous septa which make their appearance in an exocœle of a coral polyp. *Biol. Bulletin,* July, 1904, p. 82.

exosporangial (ek″sō-spō-ran′ji-al), *a.* Having the sporogenic organs without an integument of hyphæ, as in fungi of the family *Mucoraceæ.*

Antithetical to these are the remaining, or *exosporangial,* Zygomycetes, as they were termed by Brefeld.
Lafar (trans.), Technical Mycology, II. 66.

exostosis, *n.*—**Ivory exostosis,** a bony tumor of extreme density.

exostra (ek-sos′trä), *n.*; pl. *exostræ* (-trē). [L., ‹ Gr. ἐξώστρα, ‹ ἐξωθεῖν, thrust out, ‹ ἐξ, out, + ὠθεῖν, thrust.] In *Gr. antiq.*: (*a*) A theatrical machine, representing a movable chamber, which was wheeled out through one of the stage-entrances. (*b*) A bridge used in attacking a fortified town.



exotentacle (ek-sō-ten′ta-kl), *n.* [Gr. ἔξω, outside, + NL. *tentaculum,* tentacle.] In actinians, a tentacle arising from an exocœle.

It is worthy of note in this connection that the *exotentacles* in *Siderastrea radians* have been found to appear throughout in advance of the entotentacles, being the only zoantharian in which this relationship is known to occur.
Biol. Bulletin, July, 1904, p. 88.

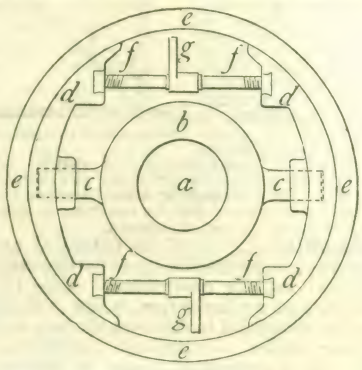
exotherm (ek′sō-thèrm), *n.* [Gr. ἔξω, without, + θέρμη, heat.] In *chem.,* a compound substance in the formation of which from its constituents heat is evolved, and in its decomposition, energy (frequently heat) is absorbed.

exothyropexy (ek″sō-thī′rō-pek-si), *n.* [Gr. ἔξω, outside, + θύρα, door (see *thyroid*), + πῆξις, fastening.] Dissection of the thyroid gland from its bed and fixation of it on the surface: an operation for the relief of goiter, by inducing atrophy of the thyroid gland without its entire destruction.

exotospore (ek-sō′tō-spōr), *n.* [Gr. ἐξωτ(ικός), foreign (see *exotic*), + σπορά, seed (spore).] One of the minute bodies (sporozoites) which form a stage in the development of malarial parasites, introduced into the body by the bite of a mosquito (*Anopheles*). Each is slender, almost filamentous in shape, sharply pointed at each end, and thicker in the middle where the nucleus is lodged. *Lankester.*

Exotospores. (From Lankester's "Zoology.")

exotropia (ek-sō-trō′pi-ä), *n.* [NL., ‹ Gr. ἔξω, outside, + -τροπια, ‹ -τροπος, ‹ τρέπειν, turn.] An exaggerated exophoria amounting to actual divergent strabismus or walleye.



exotropic (ek-sō-trop′ik), *a.* [Gr. ἔξω, out, + -τροπος, ‹ τρέπειν, turn: see *tropic.*] In *bot.,* tending to grow away: said of lateral roots with relation to the main root or to that next higher in order than themselves.

exotropism (ek-sot′rō-pizm), *n.* [*exotrop-ic* + *-ism.*] In *bot.,* the property of being exotropic.

exp. An abbreviation (*a*) of *ex parte;* (*b*) of *expired;* (*c*) of *export;* (*d*) of *express.*

expand, *v.* **I.** *trans.*—**Expanded metal.** See ★*metal.*

II. *intrans.*—**Expanding brake.** See ★*brake.*—**Expanding clutch,** a friction-clutch in which the contact is obtained by expanding or forcing radially outward

Expanding Clutch.

a, shaft; *b,* hub keyed or otherwise fastened to *a*; *c, c,* arms or spider fitting loosely in the pads or drum-segments *d, d,* so that the latter may move radially outward; *e, e, e, e,* the internal ring surface or drum against which *d, d, d, d,* press and to which is attached the part to be driven from *a* when the clutch is engaged; *f, f,* right- and left-hand screws by which *d, d, d, d,* are separated or brought together; *g, g,* arms by which *f, f,* are turned through the angles necessary by means of an external lever (not shown).

a part which bears against the inner cylindrical surface of a rim. The expanding is usually done by pushing a cone between the parts it is desired to force outward, or by wedging apart the segments of a cylinder which is split at one or more points to allow this action.—**Expanding cultivator, hanger, pulley.** See ★*cultivator,* etc.

expander, *n.* **2.** A tool used to secure a tube in a plate or sheet so that the joint shall be steam- or water-tight under pressure. The tube is inserted in the hole, which it fits closely but so as to slide or be driven into place. Then within the tube is inserted the expander, having rollers which can be forced out radially against the inside of the tube while they are revolved in place. This pressure rolling-action enlarges the tube and forces its outer surface against the walls of the hole. The end of the tube is usually also headed over.

expansion, *n.* **7.** In *ship-building,* a drawing in which a curved or warped surface, as a ship's outside plating or a longitudinal, is laid out or expanded on a plane surface by conventional methods to show approximately the true relations and dimensions of the parts.—**Adiabatic expansion,** the increase in volume of a gas when no heat is added to it from without to do the mechanical work of overcoming the external resistance, so that the gas has less intrinsic energy than when expansion began. The gas will be at a lower temperature at the end of the expansion than when it began, and hence the pressure will be less for a given increase of volume than in isothermal expansion.—**Expansion by stages,** the process of expansion used in compound engines in which the gas or vapor is introduced successively into cylinders of greater and greater size as the pressure decreases. The process is called *two-stage expansion, three-stage expansion,* etc., according to the number of stages.—**Initial expansion,** the expansion of water into steam which occurs in a boiler when the valve is opened to supply steam to the engine-cylinder. It is an amount sufficient to fill the cylinder and its clearance-volume up to the point at which cut-off takes place.—**Irreversible expansion,** an expansion which takes place in such a manner that, by reversing the operation, compression will not be obtained; so, the expansion of steam through a nozle is a case of irreversible expansion.—**Isothermal expansion,** the increase or volume of a gas when the pressure varies inversely as the volume, and the temperature is kept constant during all such changes. The gas follows the law of Mariotte or Boyle.

The ideal motor for using compressed air is one which will supply heat to the air as it is required in expanding. This is called *Isothermal Expansion,* and is often attained, and sometimes exceeded, in practice by supplying heat artificially. *Encyc. Brit.,* XXXI. 899.

Maclaurin expansion. Same as *Maclaurin's theorem* (which see, under *theorem*).

expansion-box (eks-pan′shọn-boks), *n.* A reservoir placed in a gas-line close to an engine to assist in maintaining a steady flow of gas through the pipe and to check pulsations in the pipe-line which supplies other apparatus.

expansion-cock (eks-pan′shọn-kok), *n.* A valve or cock for regulating the flow of a gas so as to provide for a given amount of expansion when it has passed the valve. Such expansion-cocks are used for regulating the expansion of ammonia in a refrigerating-system.

expansion-coupling (eks-pan′shọn-kup″ling), *n.* An expansion-joint; a device for connecting two lengths of pipe so that they are free to expand and contract as the temperature changes.

expansion-fabric (eks-pan′shọn-fab″rik), *n.* In *petrog.,* the arrangement of microscopic crystals in a layer about a phenocryst in a porphyritic rock, indicating that they have been crowded back into the solution by the expansion of the phenocryst in crystallizing. *Pirsson,* 1899.

expansionism (eks-pan′shọn-izm), *n.* [*expansion* + *-ism.*] A policy of (territorial) expansion.

expansionist (eks-pan′shọn-ist), *n.* One who favors expansion, as of the currency, or the extension of national territory; one who advocates the annexation of outlying territory.

expansion-plate (eks-pan′shọn-plāt), *n* Same as ★*hook-plate.*

expansion-rate (eks-pan′shọn-rāt), *n.* The change of volume of an expanding substance divided by the time required for the change. If dv is the change of volume occurring in a short interval of time dt, then $\frac{dv}{dt}$ is the *expansion-rate.*

expansion-ratio (eks-pan′shọn-rā″shiō), *n.* The ratio of the volume of a gas or vapor, such as steam in a thermal engine, after expansion to the volume before expansion began.

expansion-roller (eks-pan′shọn-rō″lėr), *n.* A roller placed under one end of a truss of a bridge, boiler, or roof (the other end of which is fastened) to allow the structure to expand or contract freely with changes of temperature: also used under long pipe-lines for the same purpose.

expansion-shaft (eks-pan′shọn-shâft), *n.* A shaft in the valve-gearing of certain forms of engines which is regulated by the governor so as to determine the point of cut-off and the degree of expansive working of the steam in the cylinder.

expansion-slide (eks-pan′shọn-slīd), *n.* A slide or valve on the back of the main valve of an engine, for cutting off the steam earlier and more sharply than is done by the main slide-valve, and causing a greater degree of expansive working of the steam than would be secured by the main valve.

expansion-tank (eks-pan′shọn-tangk), *n.* In a hot-water heating-system, a sheet-metal vessel placed at the highest point in the pipe-system and open at the top to the atmosphere. It is kept partly filled with water to unite the flow and return water, and, at the same time, to give the whole mass of water in all the pipes room to expand under the influence of heat. It is fitted with a glass water-gage and supply- and overflow-pipes.

expansion-trap (eks-pan′shọn-trap), *n.* A device for separating water of condensation from steam which uses the unequal expansion of metals by heat as a means of opening or closing the inlet-valve. A rod immersed in the water is cooled and shortened or deflected, opening the valve and allowing the accumulated water to flow out; when the water has been discharged and steam replaces it, the rod expands or bends in the other direction and closes the valve. A tube may be used instead of a rod, or a compound rod or tube made of two metals.

expansion-trunk (eks-pan′shọn-trungk), *n.* In *ship-building,* a trunk at the top of each tank-compartment of a vessel which carries oil or other liquids in bulk. In such vessels, in order to avoid the shocks on the bulkheads and deck and the loss of stability due to the motion of a liquid with a free surface, the large compartments must be completely filled. The trunk extending above the compartment is of comparatively small area and is partly filled with the liquid, the level of which rises or falls in it with change of volume of the liquid due to changes of temperature. The trunk thus acts as a feeder to the tank-compartment.

expansion-valve, *n.* **2.** Same as ★*expansion-cock.*

expansometer (eks-pan-som′e-tėr), *n.* An instrument for the determination of coefficients of expansions; a ★dilatometer (which see).

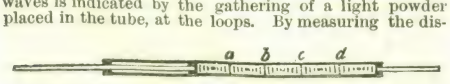
expectation, *n.*—**Curtate expectation of life,** a simplified formula of life-expectancy which deals only with complete years, and is computed to be about six months less than the actual expectancy in any individual case.—**Error of expectation.** See ★*error.*

expectoration, *n.*—**Prune-juice expectoration,** matter of a dark purplish color, due to admixture of blood, expectorated in certain cases of cancer or destructive inflammation of the lungs.

expectorator (eks-pek′tō-rā-tọr), *n.* One who expectorates.

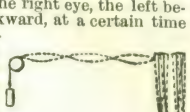
expense (eks-pens′), *v. t.*; pret. and pp. *expensed,* ppr. *expensing.* To charge or debit

with an item of incurred expense to be collected from the proper party and accounted for by the chargee: used chiefly in dealings between express or railway companies or their agencies.

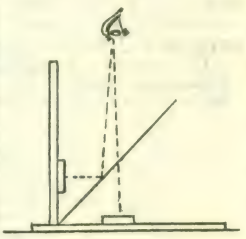


expensilation (eks-pen-si-lā′shọn), *n.* [NL. *expensilatio(n-)*, in LL. prop. two words, *expensi latio(n-)*, a setting down of expense: *expensi*, gen. of *expensum*, expense; *latio(n-)*, bearing, setting. Cf. *acceptilation*.] In *Rom. law*, the merging of an existing indebtedness into a new and more formal contract or obligation.

expenthesis (eks-pen′the-sis), *n.* [Appar. an arbitrary fusion of *exp(ansion)* + Gr. *ἐνθεσις*, insertion.] The lengthening of a word by the use of affixes. Compare *epenthesis*. *S. S. Haldeman*, Analyt. Orthog.



experiment, *n.*—**Aristotelian experiment,** an experiment in which a bead held between the tips of the first and second fingers is felt as one if the fingers are parallel, but as two if they are crossed.—**Blank experiment,** in *psychophys.*, an experiment, irregularly introduced in a regular series of observations, to test the bias of the observer. Also termed, under different circumstances, *catch experiment*, *puzzle experiment*, *test experiment*.



Go to all psychological books, to see if they contain any reference to mental measurement, and the metric methods, and the *blank experiment*, and so forth.
Amer. Jour. Psychol., XIV. 86.

Cornu's experiments. See *velocity of* ★*light*.—**Experiment area,** a forest area of known size upon which successive measurements or other detailed studies are made for the determination of the growth and behavior of the stand, or upon which experiments are conducted to ascertain the effect of methods of treatment upon the forest. See ★*valuation area*.—**Experiment station.** An establishment in which experiments are systematically carried on in a particular line of research or activity. See ★*agricultural experiment station*.—**Fechner's cloud experiment,** in *psychophys.*, an experiment for demonstrating the sensible equality of just noticeable differences of sensation at various points of the brightness scale. Two clouds are found, in a clouded sky, which present to the naked eye a barely discernible difference of brightness. The difference remains just perceptible when the clouds are viewed through gray glasses of various shades of darkness. *E. B. Titchener*, Exper. Psychol., II. i. 29.—**Fechner's paradoxical experiment,** in *psychophys.*, an experiment which shows that, under certain conditions, the removal of a part of the stimulus received by the total visual apparatus increases the intensity of sensation. "Look at a uniformly illuminated surface. Now bring before one eye a darkened glass: the binocular field is darkened. Close the eye behind the dark glass: the field becomes noticeably brighter. The explanation is probably that, in the first part of the experiment, the monocular fields are not too different to blend to an average result; whereas, in the second part, the bright field wholly suppresses the dark." *E. C. Sanford*, Exper. Psychol., p. 169.—**Fechner's shadow experiment,** in *psychophys.*, an experiment for demonstrating the sensible equality of just noticeable differences of sensation at various points of the brightness scale. A Rumford photometer is so arranged that one of the two shadows on the screen is barely different from the background of the screen itself. The shadow remains just perceptible when viewed through gray glasses of various shades of darkness. *E. B. Titchener*, Exper. Psychol., II. i. 31.—**Fick's inspiration experiment,** in *psychophys.*, an experiment which indicates the relation of the field of smell to the field of breathing: devised by A. Fick in 1864. "Introduce an olfactory stimulus — *e. g.*, the pointed end of a paper funnel held over some scented object — into the posterior half of the nostril, and you smell nothing at all; shift the stimulus to the anterior half of the nostril, and you get an intensive smell sensation." *E. B. Titchener*, Exper. Psychol., I. ii. 118.—**Inclining experiment,** in *naval arch.*, the inclining of a vessel by known weights moved across the deck for known distances, thus giving the ship an angular inclination which is measured by suitable instruments. The draft of the vessel, and, from it, the displacement and position of the metacenter, being known, the position of the center of gravity of the ship and its contained weights can be determined from the data obtained by the experiment.—**Kundt's experiment,** in *acoustics*, an experiment in which a system of standing sound-waves is produced in a horizontal glass tube by means of the longitudinal vibrations of a rod attached to a plunger in one end of the tube, and the length of the waves is indicated by the gathering of a light powder placed in the tube, at the loops. By measuring the distance between the transverse ridges of powder (*a*, *b*, *c*, *d*) thus formed, the wave-length, which is twice that distance, may be found and the velocity of sound in the gas within the tube may be computed.—**Mariotte's experiment,** a method of determining the blind spot in the eye: demonstrated by Mariotte to Charles II. in 1668. A black spot on a white ground, or the reverse, is placed on the wall; then if one stands a little to the left of it and looks straight ahead at the wall with the right eye, the left being closed, and slowly steps backward, at a certain time the image of the spot will disappear when the rays from it impinge upon the blind spot in the retina.—**Melde's experiment,** in *acoustics*, an experiment in which one end of a flexible cord is attached to the vibrating prong of a tuning-fork and the cord is stretched by the application of weight to the free end. At certain degrees of tension, depending upon the frequency of the fork and the weight and length of the cord, the latter vibrates in parts showing well-defined loops and nodes.—**Meyer's experiment,** in *psychophys.*, an experiment in visual contrast. A strip of gray paper is laid upon a colored background, and the whole is covered with white tissue-paper. The elimination of contours by the tissue-paper enhances the contrast effect. The experiment was described by H. Meyer in 1855.—**Michelson's experiments.** See *velocity of* ★*light*.—**Ragona-Scinà's experiment,** in *psychophys.*, an experiment in visual contrast. Two white cards, carrying black figures (for example concentric circles), are set together at a right angle. Between them, at an angle of 45°, is placed a sheet of colored glass. If one looks down at the horizontal card through the glass, the one black figure appears tinged with the antagonistic color. The experiment was described by Scinà in 1859.—**Wundt's mirror experiment,** in *psychophys.*, an experiment, described by Wundt in 1862, for the demonstration and analysis of the perception of transparency (reflection in a mirror, the seeing of an object through or behind another object). The apparatus employed is of the same type as that used in Ragona-Scinà's contrast experiment.

Kundt's Experiment. *a*, *b*, *c*, *d*, transverse ridges of powder.

Melde's Experiment.

Ragona-Scinà's Experiment.

experimental, *a.* **3.** Of the nature of an experiment; characterized by experimentation; tentative: as, the *experimental* stage in the production of an invention, when it is being tested or examined to discover its uses and its behavior under commercial conditions or usage; an *experimental* scale, a limited or small scale.—**Experimental geology, pathology.** See ★*geology*, ★*pathology*.

experimentalism (eks-per-i-men′tal-izm), *n.* **1.** That philosophy which regards observation of fact as affording the only assurance of positive truth, as distinguished from mere mathematical truth; the philosophy which was naturally developed out of the prosecution of the experimental sciences; the school of English philosophy of Locke, Berkeley, Hartley, the Mills, and others, together with Hume.—**2.** Experimental research in some branch of science.

expertise (eks-per-tēz′), *n.* [F., in OF. *espertise*, ‹ *expert*, *espert*, expert.] An examination by experts; a survey by a board of skilled examiners of any obscure or doubtful case in order to establish a foundation upon which the court may base an intelligent and definite judgment.

expiation, *n.*—**Fast of expiation.** See ★*fast*3.

expirate (ek′spi-rāt), *a.* [L. *exspiratus*, breathed out, pp. of *expirare*, breathe out: see *expire*.] In *phonol.*, that is the result of or is accompanied by expiration or outbreathing.

Ordinary speech is generally *expirate* in European languages. *Yale Psychol. Studies*, 1902, p. 103.

expiration, *n.*—**Expiration group,** in *phonol.*, a sequence of sounds limited by pauses. *Yale Psychol. Studies*, 1901, p. 75.—**Expiration interval,** in *phonol.*, the period of a sequence of sounds limited by pauses; the duration of an expiration group.

expiree (ek-spī-rē′), *n.* [*expire* + *-ee*[1].] One whose term has expired; specifically, a convict whose term of imprisonment or transportation has expired. [Australia.]

explemental (eks-plē-men′tal), *a.* [*explement* + *-al*[1].] Of the nature of an explement; specifically, designating: (*a*) two arcs which together complete the circle; (*b*) an arc which with a given arc completes the circle; (*c*) two sects which together complete the straight; (*d*) a sect which with a given sect completes the straight.

explicit (eks′pli-sit), *n.* [*explicit*[2], *v.*] The concluding words of a book or section of a book. See the quotation under ★*incipit*.

exploder, *n.* **3.** *Milit.*, a device for exploding gunpowder or a high explosive; a primer.—**Mowbray's exploder,** an apparatus for use in blasting which fires the charge by means of static electricity. It is put up, for convenient transport, in a wooden case shaped like a small barrel and furnished with a handle by which it may be carried. Hence it is sometimes called the *powder-keg exploder*.

exploit, *v. t.* **4.** To work (as a mine, etc.); to turn to industrial use.

explorer, *n.*—**Linear explorer,** a device for indicating or recording the linear oscillations of a moving railway-car or other vehicle.

exploring-coil (eks-plōr′ing-koil), *n.* In *elect.*, a coil of wire which is connected to a measuring-instrument and is used to investigate magnetic fields, etc., by observing the electromotive force induced in the coil or its change of resistance when placed in the field.

exploring-needle (eks-plōr′ing-nē″dl), *n.* A sharp-pointed needle with a longitudinal groove which is thrust into a tumor and, on withdrawal, may engage in the groove sufficient pus or other soft contents of the swelling to permit of a diagnosis.

exploring-tambour (eks-plōr′ing-tam″bör), *n.* An apparatus used to record the respiratory movements of the chest.

explosion, *n.*—**Detonative explosion,** an explosion produced, not by the application of flame or a heated body, but by shock, usually from the discharge of a small primer charge of fulminating mercury.—**Wave of explosion.** See ★*wave*1.

explosion-bomb (eks-plō′zhọn-bom), *n.* In *thermochem.*, a form of calorimeter used for the determination of heats of combustion. It consists of a steel vessel within which are placed a small amount of the substance to be oxidized and oxygen enough to insure complete combustion. Ignition is secured by sending a strong electric current through an iron wire. The heat evolved is measured by the rise in temperature of a water-bath in which the bomb is submerged.

explosion-chamber (eks-plō′zhọn-chām″bėr), *n.* A chamber at the end of the cylinder of an internal-combustion engine where the charge is compressed and ignited; the clearance-space of an internal-combustion engine.

explosion-engine (eks-plō′zhọn-en″jin), *n.* A form of internal-combustion engine in which the mixture of fuel and air is drawn into the cylinder in such proportions that, when ignited, combination with the oxygen takes place so rapidly and concussively as to produce a report. The modern engines which compress the mixture before igniting it are not explosive in this sense, but are practically silent.

explosion-lake (eks-plō′zhọn-lāk), *n.* A lake which occupies a volcanic crater or caldera.

explosion-motor (eks-plō′zhọn-mō″tọr), *n.* Same as ★*explosion-engine*.

explosion-pipette (eks-plō′zhọn-pi-pet″), *n.* A pipette of stout glass, of some suitable shape, having two platinum electrodes so sealed in that an electric spark may be made to cross the gap between them and thus ignite an explosive mixture of gases contained in the pipette. *M. W. Travers*, Exper. Study of Gases, p. 136.

explosive. **I.** *a.*—**Explosive speech.** See ★*speech*.

II. *n.* **1.** The principal classes of explosive substances are: (*a*) gunpowder; (*b*) nitroglycerin and its compounds, the most important being dynamite; (*c*) guncotton and similar nitro-substitution compounds; (*d*) picric acid and the picrates; (*e*) fulminates; (*f*) Sprengel safety-mixtures; (*g*) nitrate mixtures other than gunpowder, and chlorate mixtures. There are many varieties of each class.—**Amino explosive.** See ★*amino*.—**Explosive D,** a high explosive consisting largely of picric acid: used in the United States land service as a bursting-charge for shell.—**Favier explosives,** explosive agents patented by Favier in Belgium, consisting chiefly of a mixture of alkaline nitrates and nitronaphthalene. Poudre Favier No. 1 contains ammonium nitrate and dinitronaphthalene; No. 2, ammonium nitrate, sodium nitrate, and dinitronaphthalene; and No. 3, sodium nitrate and mononitronaphthalene. These explosives are not readily fired by accidental shock, require heavy detonators to explode them, and, in the case of those containing ammonium nitrate, are very liable to injury by absorption of moisture in storage.—**Parone's explosive,** an explosive agent which consists of two parts of potassium chlorate and one of carbon disulphid.—**Phonic explosives,** consonants uttered with vocal-chord action, as *b*, *d*, *g*.—**Sprengel explosives,** a class of explosive materials proposed by *D. H. Sprengel* in 1873, which involve the principle of mixing just before use a combustible with an oxidizing substance, neither of these being explosive in the separate state. Some of the mixtures proposed were open to serious objection, as, for instance, petroleum or carbon disulphid mixed with liquid nitrogen tetroxid, but some useful mixtures have been devised, notably that known as *rend-rock* or *racka-rock* (which see).

Exponent of a ratio, the number of times the consequent is contained in the antecedent.—**Exponent of irregularity of a permutation,** the number of cycles in it.

exponentially (eks-pō-nen′shal-i), *adv.* By exponentials.

exponentiation (eks-pō-nen-si-ā′shọn), *n.* [*exponent* + *-i-* + *-ation*.] The act of affecting with an exponent or index.

Moreover *exponentiation* unavoidably introduces ordinal notions, since a^b is not in general equal to b^a.
A. W. B. Russell, Prin. of Math., p. 120.

Export duty. See ★*duty*.

exposit (eks-poz′it), *v. t.* [L. *expositus*, pp. of *exponere*, set forth: see *expound*, *exposition*.] To expound; explain or interpret.

exposition, *n.* **7.** In *music*: (*a*) The act, process, or result of presenting or enunciating the themes or subjects of a composition. (*b*) Specifically, the opening section of a fugue or a sonata, in which the subject or subjects are first set forth: often called the *exposition section*.—**8.** That sort of setting forth of a pur-

pose or general idea which consists in showing how the purpose or idea will apply to particular cases.

exposure, *n.* **7.** In *meteor.*, the method of placing any instrument so that it shall correctly measure a given meteorological element. A barometer should be so placed as to indicate the pressure prevailing in the free air at a given level. If the wind is blowing the instrument, or the house in which it is placed, becomes an obstacle to the wind, by which the pressure is increased on the windward and diminished on the leeward side; similarly, in a wind, an open chimney in a closed room causes a lowering of the pressure, while a window opened on the windward side causes an increase. In general, a barometer, whether mercurial or aneroid, should be so placed that the wind-effect may be annulled or measured and allowed for. The latter is accomplished by the ★anemobarometer (which see). In order that a thermometer shall indicate truly the temperature of the air, it must receive heat from the air by convection and conduction, but all radiation from other objects should be cut off except from those having the same temperature as the air. When a thermometer is hung in the open air in the shade, it is usually exposed to radiant heat from the soil, buildings, and clouds, and to reflections of the rays of the sun; it also radiates its own heat to cold objects and to the sky. Its temperature represents a balance between its momentary gain and loss of heat, and has little to do with the temperature of the adjacent air unless the wind is blowing strongly enough. When held in the shadow of a wall or tree, its temperature is usually somewhat lower than when it is moved a few inches farther on into the full sunshine, although the temperature of the air is the same in both places. A common method of exposure is to place the thermometer within a screen or so-called thermometer-shelter made of light slats overlapping each other so as to cut out direct sunlight but allow the free entrance of the wind. This method fails if the wind fails to keep the interior surfaces of the shelter at the true air-temperature, for, in general, the temperature of these surfaces lags behind the temperature of the air. By rapidly whirling a thermometer or by creating a rapid current past it, the convection may be increased to such an extent as to bring the thermometer to the temperature of the air within a very small limit. Numerous methods of effecting this have been devised and employed.

8. In *forestry*, see ★*aspect*, 9.—**Sod-exposure,** the location of a thermometer-shelter, or the exposure of a thermometer, over a large expanse of grass-covered soil rather than over the tinned surface of a roof or the hot sandy or rocky surface of a plain.

express, *v. t.* **9.** In *math.*, to give or represent by means of a figure, graph, symbol, or function.—**To express y in terms of x,** to give explicitly *fx* for $y = fx$.

express. I. *a.*—**Express warranty.** See ★*warranty.*

II. *n.*—**Limited express,** an express train having accommodations for a limited number of passengers. Very fast trains are thus limited, in order that the speed may be maintained. As originally used, the limit applied only to the number of cars. See *limited train.*—**Local express,** in *railroading*, a train scheduled to run a certain distance (for example, over one division) as an express and then to run as a local train, making all stops. [U. S.]—**Pony express,** rapid transit by relays of ponies: the system in use in the United States for the conveyance of the mails across the western prairies before through railway-communication was established in 1869.

express-buggy (eks-pres′bug″i), *n.* A buggy of which the body is made in imitation of that of an express-wagon.

expression, *n.*—**Method of expression:** (*a*) In *psychol.*, a method for the study of mental processes by means of their concomitant physiological phenomena; specifically, a method for the study of affective processes by means of such physiological phenomena. The method covers the use of instruments such as the automatograph, plethysmograph, sphygmograph, dynamograph, and pneumograph, which record changes of muscular innervation, voluntary or involuntary. Opposed to it, in the psychology of the affective processes, is the method of impression, in which stimuli are presented to the observer in pairs or series, and their affective value is noted by introspection. The method of expression itself involves introspection, since this alone can guarantee the nature of the experience which the recorded physiological changes serve to 'express.' (*b*) In *obstet.*: (1) *Credé's method*, compression of the flaccid uterus by the hand externally applied in order to express the placenta after the birth of the child. (2) *Kristeller's method*, pressure and friction of the uterus made by the hand on the abdominal wall, in order to hasten the birth of the child.

expressionism (eks-presh′ŏn-izm), *n.* [*expression* + *-ism.*] The methods or style of the expressionists.

expressionist (eks-presh′ŏn-ist), *n.* [*expression* + *-ist.*] An artist who aims chiefly to give expression to the emotions or passions.

expressive, *a.*—**Expressive method,** in *psychol.*, same as *method of* ★*expression.*

express-pump (eks-pres′pump), *n.* A high-speed pump; one that makes a high number of strokes per minute.

express-wagon, *n.* **2.** A wagon with a body framed to show parallel and upright ribs outside of the panel.

exquisit, *a.* and *n.* A simplified spelling of *exquisite.*

exr. A contraction of *executor.*

exradio (eks-rā′di-ō), *n.* [NL. *exradio* (*exradion-*?) (preferably ★*exradium*), from the phrase *ex radio*, 'from radium': see *ex* and ★*radium.*] The name proposed by Sir William Ramsay for the radioactive, gaseous product produced by radium salts, which was first observed in 1900 by Dorn and afterward more carefully investigated by Rutherford, who called it the *radium emanation.* The name *exradio* has never received any general recognition from workers in this branch of science and its use has been abandoned by Ramsay in his recent writings which have dealt with the action of radium emanation on water and on copper salts in aqueous solutions.

Finding the name 'radium emanation' somewhat long and clumsy, Sir William Ramsay has recently suggested *'ex-radio'* as an equivalent. This name is certainly brief and is also suggestive of its origin.

Rutherford, Philos. Trans. Roy. Soc. Lond., 1904, p. 172.

exradius (eks-rā′di-us), *n.* [*ex-* + *radius.*] The radius of an escribed circle.

ex right (eks rīt). Sold without the right, usually accorded to stockholders, of having new issues first offered to them for subscription: used in stock or bond transactions.

exrupeal (eks-rū′pē-al), *n.* [L. *ex*, out, + *rupes*, rock, + *-al*[1].] In *ichth.*, the pterotic, the most lateral of the posterior bones of the cranium. *Starks*, Synonymy of the Fish Skeleton, p. 510.

exrx. An abbreviation of *executrix.*

exsanguination (ek-sang-gwi-nā′shŏn), *n.* [*exsanguine* + *-ation.*] Loss of blood; bloodlessness.

exsert (eks-sėrt′), *v. t.* [L. *exserere*, pp. *exsertus*, thrust out: see *exserted.*] To protrude or thrust out.

ex ship (eks ship). In *com.*, same as ★*ex steamer.*

ex steamer (eks stē′mėr). In *com.*, free of all expense as far as the steamer: said of commodities sold to be exported.

ex store (eks stōr). In *com.*, without free delivery after leaving the store or warehouse: said of goods for export.

exstulpate (ek′stŭl-pāt), *v. t.*; pret. and pp. *exstulpated*, ppr. *exstulpating.* [NL. **exstulpare*, representing G. *ausstülpen*, turn inside out, < *ex*, out, + **stulpare*, < G. *stülpen*, turn inside out.] In *zoöl.*, to extrude or push out, as an eversible papilla or other process.

exstulpation (ek-stŭl-pā′shŏn). *n.* [*exstulpate* + *-ation.*] In *zoöl.*, the act of extruding or pushing out, as an eversible papilla, or any other process.

ext. An abbreviation (*a*) in *law*, of *extended*; (*b*) of *external*, *externally*; (*c*) of *extinct*; (*d*) of *extra*; (*e*) of *extract.*

exta (ek′stä), *n. pl.* [L.] In *Rom. antiq.*, the internal organs from which the haruspices drew their auguries.

extasis, *n.* See *ecstasis.*

extemporaneous, *a.* **2.** In *phar.*, noting a preparation which is compounded at the time it is ordered, in distinction from a ready-made, or officinal preparation.

extensimeter (eks-ten-sim′e-tėr), *n.* Same as *extensometer.*

extension, *n.*—**Calculus of extension.** See ★*calculus.*—**Compressive extension,** a term used by T. M. Reade for the tendency of rocks, affected by increase of temperature under circumstances which prevent lateral expansion, to secure relief by flowage and anticlinal folding. *T. M. Reade*, Origin of Mountain Ranges, p. 327.—**Extension of phase,** in *statistical mech.*, a name given by J. W. Gibbs to the value of the integral

$$\int \ldots \int dp_1 \ldots dp_n\, dq_1 \ldots dq_n,$$

in which $p_1, \ldots p_n$ are the generalized momenta and $q_1 \ldots q_n$ the generalized coördinates of a system of n degrees of freedom.

extensionally (eks-ten′shŏn-al-i), *adv.* From the point of view of logical extension; with reference to the number of the contained individual objects: opposed to ★*intensionally.* See *extension*, 5.

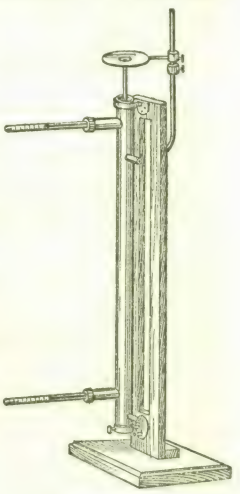
A class may be defined either *extensionally*, by an enumeration of its terms, or intensionally, by the concept which denotes its terms. *Nature*, Sept. 3, 1903, p. 411.

extension-bolt (eks-ten′shŏn-bōlt), *n.* A long bolt for a door, controlled by a thumb-piece in a mortised plate; a long flush bolt.

extensionist (eks-ten′shŏn-ist), *n.* One who favors extension or expansion of any kind; an expansionist.

extension-ladder (eks-ten′shŏn-lad″ėr), *n.* See *aërial* ★*truck.*

extension-lens (eks-ten′shŏn-lenz), *n.* A lens which can be substituted for one of the lenses in a photographic objective to increase the focal length of the combination and consequently the size of the image. *Nature*, July 17, 1902, p. 280.



extension-spring (eks-ten′shŏn-spring), *n.* A spiral spring designed to resist a pull or a strain in line with its length. It is made by winding wire in a tight coil, each turn of the spiral resting on the next. In use, the estimated pull must not exceed a point at which the spiral will be deformed. It is used to sustain a suspended weight or to resist any pulling strain.

Extension-spring.

extensive, *a.* **5.** In *agri.*, noting that method of farming or husbandry in which relatively small crops or returns of any kind are taken from large areas with a minimum of labor and expense. This method is profitable where land is very cheap on account of being poor or thinly settled. Opposed to ★*intensive* (which see). Also called *low farming.*—**Extensive feeling, fusion, idea.** See ★*feeling*, etc.

extensometer, *n.* In the instrument devised by Lavelle, a metal rod is surrounded by a steam-jacket whose temperature is indicated by two thermometers. The lower end of the rod rests at the bottom of the jacket, while the upper end passes through a movable metal cap which acts as a support for a spherometer (not shown in cut), by means of which the expansion of the rod is accurately measured.

Extensometer.

extent, *n.* **6†.** The length and the breadth (of power, greatness, duty, or the like).

Duke. You are great in all that's good.
King. You shew the bounty
Of your opinion. My *extent* in all things
Is but to bid you welcome.
Shirley, The Royal Master, i. 1.

Illusions of extent. See ★*illusion*, 2.

Exterior polygon. See ★*polygon.*

exteriority, *n.* **3.** Exteriorization; externalization; the mental reference of sense-processes to objects in the external world. [Rare.] *N. E. D.*

exteriorize, *v. t.* **2.** To transport to some place outside of and away from the source: said of the transfer of radioactivity from the radioactive substance itself to the walls of the containing vessel. *Sci. Amer. Sup.*, Feb. 20, 1903, p. 23523.

extern, *n.* **3.** A young physician, or advanced medical student, who is a member of the medical staff in a hospital but attends only during the day, sleeping outside; also, one who cares for patients in the out-patient department or in their homes.

External association, lobe, point, segments. See ★*association*, etc.

externalist (eks-tėr′nal-ist), *n.* [*external* + *-ist.*] A partizan of the theory of the external origin of certain forms of skin-disease. *Encyc. Brit.*, XXXI. 568.

externalistic (eks-tėr-na-lis′tik), *a.* Of or pertaining to externalism; regardful of what is merely external and not essential.

externalization, *n.* **2.** That process by which a phenomenon of sensation is referred to a point in the space surrounding the body: in contradistinction to *localization*, by which the phenomenon is referred to some part of the body.

externe, *n.* See ★*extern*, 3.

externolateral (eks-tėr-nō-lat′e-ral), *a.* On the outer side.

externum (eks-tėr′num), *n.*; pl. *externa* (-nä). [NL., neut. of L. *externus*, external.] In *ichth.*, the pterygoid, a small bone connecting the palatine with the quadrate. *Starks*, Synonymy of the Fish Skeleton, p. 514.

extinction, *n.*—**Curve of extinction.** See ★*curve.*—**Extinction angle,** the angle which the extinction-direction (see *extinction*, 3) in a section of a crystal makes with some definite crystallographic line, usually either a crystallographic axis or the intersection-line of two prominent faces.

extinctive (eks-tingk′tiv), *a.* Tending to extinguish, suppress, or destroy.

extinguished (eks-ting′gwisht), *p. a.* Quenched; put out; destroyed. Specifically: (*a*) In *phar.*, rendered indistinguishable through fine subdivision: noting the condition produced by triturating mercury with lard until the metallic globules are no longer visible. (*b*) In the petrographical investigation of rocks and minerals with a polarizing microscope, noting the complete darkening of a transparent section of a bire-

fracting mineral when its axes of elasticity coincide with the planes of the crossed Nicol prisms. *Geikie*, Text-book of Geol., p. 125.

extispicium (eks-ti-spish'i-um), *n.* [L.] Same as ★*extispicy*.

extispicy (ek-stis'pi-si), *n.* [L. *extispicium*, < *exta*, entrails, + *specere*, inspect.] In *Rom. antiq.*, divination by inspection of entrails.

extra, *n.* 3. In *cricket*, a score or run not made from the bat, as a bye or a wide: usually in plural.

extra, *adv.* Used in trade to denote a size somewhat larger than that mentioned: as, *extra* elephant folio; *extra* foolscap octavo.

extra-articular (eks″trä-är-tik'ū-lär), *a.* Outside of, or not in relation with, a joint.

extrabranchial (eks-trä-brang'ki-al), *a.* and *n.* I. *a.* Lying outside of or external to the branchial arches; forming the external support of the branchial septa.

Each main *extra-branchial* bar is seen to be behind the corresponding cleft, or aperture.
Trans. Zool. Soc. London, 1883, II. 419.

II. *n.* A term applied by W. K. Parker to certain cartilages which take part in the formation of supports for the divisions between the gill-chambers in tadpoles, lampreys, and sharks. In lampreys the extrabranchials are the vertical bars of the branchial basket; in sharks they are the cartilaginous bands external to the rays of the branchial septa.

The last *extra-branchial* sends off no cervicorn process, except from the transverse bars.
Trans. Zool. Soc. London, 1883, II. 420.

extrabronchial (eks-trä-brong'ki-al), *a.* Outside of, or independent of, the bronchial tubes.

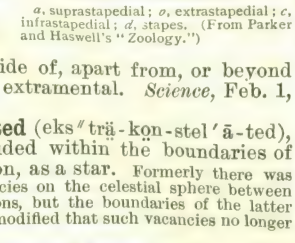
extracalycinal (eks″trä-ka-lis'i-nal), *a.* Outside of the calyx; specifically, in corals, denoting growths not taking place within the calyx: as, *extracalycinal* gemmation, which takes place either from the sides of the polyp or in the cœnenchyma.

Polyps with a well-defined edge-zone send out their buds in the edge-zone, the buds being then said to be *extracalycinal*.
Philos. Trans. Roy. Soc. (London), ser. B, 1896, p. 147.

extracanonical (eks-trä-ka-non'i-kal), *a.* Being outside of the canon of Scripture: referring usually to books not included in the present canon or list of sacred books, but contemporaneous with them.

Extracapsular fracture. See ★*fracture*.

extracapsulum (eks-trä-kap'sū-lum), *n.*; pl. *extracapsula* (-lä). [NL., < *extra*, outside, + *capsula*, capsule.] The outer, jelly-like, pseudopodia-emitting portion of the sarcode body of the *Radiolaria*, which is differentiated from the inner system or capsule of tough, slimy protoplasm.



extracarpal (eks-trä-kär'pal), *a.* Lying just without the region of the wrist or carpus.

extraciliary (eks-trä-sil'i-ā-ri), *a.* Derived from the outer layer of the ciliary body of the cerebellum.

extracivical (eks-trä-siv'i-kal), *a.* That exceeds or oversteps the province, duties, or privileges of a citizen.

extracivically (eks-trä-siv'i-kal-i), *adv.* Beyond the proper sphere of citizenship.

extracolumella (eks″trä-kol-ū-mel'ä), *n.* A three-rayed cartilaginous extension of the bony columella. The direct branch is the extrastapedial, the superior branch the suprastapedial, the inferior branch the infrastapedial.

Columella auris of *Columba livia*, showing extracolumella.

a, suprastapedial; *o*, extrastapedial; *c*, infrastapedial; *d*, stapes. (From Parker and Haswell's "Zoology.")

extraconscious (eks-trä-kon'shus), *a.* Outside of, apart from, or beyond consciousness; extramental. *Science*, Feb. 1, 1901, p. 184.

extraconstellated (eks″trä-kon-stel'ā-ted), *p. a.* Not included within the boundaries of any constellation, as a star. Formerly there was a number of vacancies on the celestial sphere between certain constellations, but the boundaries of the latter have now been so modified that such vacancies no longer exist.

extracorporeal (eks″trä-kôr-pō'rē-al), *a.* Situated, existing, or occurring outside of the body: specifically applied to stages of a parasite occurring elsewhere than in a host.

extracorpuscular (eks″trä-kôr-pus'kū-lär), *a.* Situated or occurring outside of the blood-corpuscles.

extra-cover (eks'trä-kuv″er), *n.* In *cricket*: (*a*) A fielder who plays between cover-point and mid-off, but farther from the batsman's wicket than either; an extra cover-point. (*b*) His position in the field.

extract, *n.* 8. Shoddy or loose wool fiber, obtained by tearing apart old cloth, from which the cotton or other vegetable fiber has been removed by means of acids and heat.—**Adrenal extract.** See ★*adrenal*.—**Chestnut extract,** an extract of tannin prepared from the wood and bark of the *Castanea vesca*, a variety of chestnut-tree. It is largely employed in the dyeing of logwood blacks upon silk and silk-and-cotton-mixed goods.—**Extract of columbo,** an extract prepared from the root of African columbo, *Jateorrhiza palmata*: a bitter tonic, said to be free from tannic acid.—**Extract style.** See ★*style*[1].—**Hemlock-bark extract,** a material prepared on a large scale for tanners' use, by digesting the bark of the hemlock-spruce with hot water and evaporating the clear liquid to dryness or to the consistence of a soft paste.—**Pituitary extract.** See ★*pituitary*.—**Suprarenal extract.** Same as ★*adrenal extract*.—**Tanning extracts.** See ★*tanning*.—**Thyroid extract.** See ★*thyroid*.

extracted (eks-trak'ted), *p. a.* 1. Produced by extraction. Specifically—2. Brought about by extraction, or the production of segregated descendants by Mendelian hybrids.

By pairing such hybrids with *extracted* albinos we should, in the Mendelian view, produce equal numbers of albinos and dark-eyed hybrids.
A. B. Darbishire, in Biometrika, Jan., 1905, p. 25.

Extracted honey, hybrid, recessive. See ★*honey*, etc.

extraction, *n.* 4. The production of segregated descendants by Mendelian hybrids. *Bateson*.

extractor, *n.* (*g*) A kitchen press for extracting the juices of meats in making meat extracts, beef-tea, etc. (*h*) A machine with rollers through which skins are wrung to remove the surplus water after they have been soaked. *Flemming*, Practical Tanning, p. 2.—**Caldwell's extractor,** a simple form of apparatus used for extracting fat from milk, etc. It consists of a double-walled glass tube, the inner tube having perforations and containing the mass to be extracted. The small tube at the lower end is attached to a flask containing the boiling liquid used for extracting, while a return condenser is connected with the upper end.—**Soxhlet extractor.** See *Soxhlet's extraction* ★*apparatus*.

extract-wool (eks'trakt-wůl), *n.* Wool which has been freed from vegetable impurities by some chemical process.

extracystic (eks-trä-sis'tik), *a.* Situated outside of a cyst or a bladder. *Buck*, Med. Handbook, V. 401.

extradition (eks-trą-dish'ọn), *v. t.* Same as *extradite* (which see).

extradural (eks-trä-dū'ral), *a.* Situated outside of the dura mater.

extra-embryonic (eks″trä-em-bri-on'ik), *a.* Not forming a part of the embryo proper; specifically, noting that portion of the vertebrate embryo which lies outside of the umbilical stalk.

extrafascicular (eks″trä-fa-sik'ū-lär), *a.* Lying outside the vascular bundles.

In certain cases the structure was further complicated by the appearance of *extrafascicular* zones exterior to the whole stellar system. *Encyc. Brit.*, XXXI. 419.

extragenital (eks-trä-jen'i-tal), *a.* Originating or located elsewhere than in or on the genital organs.

extraglacial (eks-trä-glā'shial), *a.* Situated or occurring outside of the region occupied by a glacier. *J. Geikie*, The Great Ice Age, p. 644.

extragovernmental (eks″trä-guv-ėrn-men'tal), *a.* Being beyond the province, powers, or proper sphere of government.

extra-illustrate (eks-trä-i-lus'trāt), *v. t.* To add illustrations to (a book) after it is printed, by pasting or binding them in.

extra-illustration (eks-trä-il-us-trā'shọn], *n.* Illustration of a book after its completion, by binding in cuts or engravings.

extrajural (eks-trä-jō'ral), *a.* Same as *extra-judicial*.

extralateral (eks-trä-lat'ę-ral), *a.* Situated or extending beyond the sides; specifically, noting the right of a mine-owner to the extension of a lode or vein from his claim beyond the side-lines, but within the vertical planes through the end-lines.

extralegal (eks-trä-lē'gal), *a.* Being beyond or outside of the domain of law: sometimes used in the sense of *illegal*.

extramarginal (eks-trä-mär'ji-nal), *a.* In *mental pathol.*, below the limen of consciousness; infraconscious. See the extract.

Those [disturbances] that are sub-dominant bring about *marginal* or sub-conscious psychical states, and finally those impulses or irritations which are infra-dominant act, in the psychical sphere, below the threshold of consciousness and bring about infra-conscious or *extra-marginal* psychical activities.
Buck, Med. Handbook, III. 260.

extramatrical (eks-trä-mat'ri-kal), *a.* [L. *extra*, outside, + *matrix*, matrix (the host plant), + *-al*[1].] In *bot.*, lying outside of the host plant: applied to that part of a fungus or parasitic growth which is so situated. See ★*intramatrical*.

extramental (eks-trä-men'tal), *a.* Apart from, outside of, or beyond the mind; independent of mental apprehension.

The rejection, not merely of things-in-themselves, but of *extra-mental* realities in general would imprison us within our own consciousness and make the latter coextensive with the universe.
C. A. Strong, Why the Mind has a Body, p. 214.

extrameridian (eks″trä-mē-rid'i-an), *a.* In *astron.*, not made on the meridian, as an observation; used out of the meridian, as equatorials, almucantars, etc.

extrameridional (eks″trä-mē-rid'i-ọ-nal), *a.* Same as ★*extrameridian* (which see).

extrametrical (eks-trä-met'ri-kal), *a.* In *pros.*, same as *hypermetric* (which see).

extrametropolitan (eks″trä-met-rō-pol'i-tan), *a.* Beyond the limits or jurisdiction of the metropolis.

extramorainic (eks″trä-mọ-rā'nik), *a.* Situated outside of or beyond the terminal moraine of a glacier: usually applied to sedimentary deposits near a moraine but not produced by the ice-sheet. *Geikie*, Text-book of Geol., p. 1339.

extranatural (eks-trä-nat'ū-ral), *a.* Outside the operation of natural laws: as, *extranatural* agencies. *Huxley*.

extrane (eks'trān), *a.* Not belonging or proper to a thing; foreign; extraneous; specifically, in *psychol.*, beyond the range of the hypnotic rapport. [Rare].

extraneous, *a.* 2. In *music*, not belonging to a standard scale or key; chromatic.—**Extraneous body.** Same as *foreign body* (see *foreign*, 4).—**Extraneous root.** See ★*root*[1].

extra-Neptunian (eks″trä-nep-tū'ni-an), *a.* Beyond the planet Neptune; referring to objects, especially hypothetical planets, more distant than Neptune from the sun.

extra-orbital (eks″trä-ôr'bi-tal), *a.* Situated outside of the orbit (in any sense of that word).

Extraordinary index of refraction, tithe, wave. See ★*index*, ★*tithe*[1], ★*wave*[1].

extra-ovate (eks″trä-ō'vāt), *a.* and *n.* I. *a.* Situated outside of the ovum or egg.

II. *n.* A part of the contents of an egg extruded through a rupture in the membrane. In certain circumstances extra-ovates are capable of development.

It often happens that the *extra-ovate* receives its nucleus later, obtaining in that case a still smaller fragment, but, nevertheless, the outcome is a perfectly normal embryo. *J. Loeb*, Biol. Lectures, 1893, p. 52.

extra-ovular (eks-trä-ō'vū-lär), *a.* Outside the egg: opposed to ★*intra-ovular*.

extraparental (eks″trä-pā-ren'tal), *a.* Taking place outside the body of the parent, as the development of the majority of invertebrates.

extrapatriarchal (eks″trä-pā-tri-är'kal), *a.* Being beyond the limits of the patriarchal form of family.

extrapelvic (eks-trä-pel'vik), *a.* Being outside of, or unconnected with, the pelvis.

extraperineal (eks″trä-per-i-nē'al), *a.* Being outside of, or away from, the perineum.

extraperiosteal (eks″trä-per-i-os'tē-al), *a.* Being outside of, or independent of, the periosteum.

extraphysiological (eks″trä-fiz″i-ọ-loj'i-kal), *a.* Not in accord with, or not subject to, physiological laws; non-physiological.

extraplacental (eks″trä-plā-sen'tal), *a.* Independent of the placenta.

extraplanetary (eks-trä-plan'e-tā-ri), *a.* Same as ★*ultra-planetary*.

Extrapolar region. See ★*region*.

extrapolate (eks-trap'ọ-lāt), *v. t.*; pret. and pp. *extrapolated*, ppr. *extrapolating*. [*extra-* + *(inter)polate*.] In *math.* and *astron.*, to determine (a value or quantity) by carrying out an empirical formula beyond the limits of the data from which the formula has been deduced. The results are usually more or less doubtful. See *interpolate*.

extrapulmonary (eks-trä-pul'mọ-nā-ri), *a.* Being outside of, or independent of, the lungs.—**Extrapulmonary gill.** See ★*gill*[1].

extra-red (eks-trä-red'), *a.* and *n.* I. *a.* Having a wave-length greater than that of the red rays of the spectrum; belonging to the infra-red portion of the spectrum.

II. *n.* The invisible portion of the spectrum which lies outside of the region occupied by the red rays and of greater wave-length.

extrasacerdotal (eks″trā-sas-ėr-dō′tal), *a.* Being outside the priestly order.

extraspectral (eks-trā-spek′tral), *a.* Beyond the boundaries of the visible spectrum: said of lines or bands lying in the infra-red or ultra-violet regions.

extrastapedial (eks-trā-stā-pē′di-al), *n.* In *ornith.*, the direct, external cartilaginous extension of the columella auris.

extratelluric (eks-trā-te-lū′rik), *a.* Not found among the constituents of the earth: as, *extratelluric* matters. *J. N. Lockyer.*

extraterrene (eks″trā-te-rēn′), *a.* Extraterrestrial.

extratheistic (eks″trā-thē-is′tik), *a.* Being outside of, or independent of, theism or theistic inquiry.

extrathermodynamic (eks″trā-thėr-mō-dī-nam′ik), *a.* Being beyond heat-energy or not due to the transformation of heat into other forms of energy, as the losses of heat by an engine which are not directly due to the work done by the engine.

extratribal (eks-trā-trī′bal), *a.* Relating to individuals or social groups outside of the tribe.

extratubal (eks-trā-tū′bal), *a.* Situated outside of a tube.

extratympanic (eks″trā-tim-pan′ik), *a.* Being outside of the tympanum or drum of the ear.

extravaginal (eks″tra-vaj′i-nal), *a.* Being outside of, or unconnected with, the vagina.

extravasate, *a.* **II.** *n.* The fluid which has been extravasated.

extravasated (eks-trav′a-sā-ted), *a.* **1.** See *extravasate.*—**2.** In *geol.*, poured forth from a subterranean source in a molten state: used in description of certain eruptive rocks.

extravasation, *n.* **2.** In *geol.*, the protrusion of molten lava, either primarily from interior reservoirs, or locally from the interior of an uncongealed flow, through cracks in its hardened crust.

extraventricular (eks″trā-ven-trik′ū-lăr), *a.* Not contained in a ventricle either of the heart or of the brain.

extra-violet (eks-trā-vī′ō-let), *a.* and *n.* **I.** *a.* Of shorter wave-length than the violet-rays of the spectrum; ultra-violet.

II. *n.* All that portion of the spectrum which is of shorter wave-length than the extreme violet-rays.

extravisceral (eks″trā-vis′e-ral), *a.* In *embryol.*, not situated within the visceral arch.

extrazodiacal (eks″trā-zō-dī′a-kal), *a.* In *astron.*, situated outside the zodiac.

extreme, *n.*—**Length and breadth extreme,** in *shipbuilding*, the greatest length and breadth of a vessel measured to the extreme outward portion of the hull, whether above or below water. **Extrinsic association.** Same as *external* ★*association.*—**Extrinsic variation.** See ★*variation.*

extro-. [A prefix: see *extra-*. Compare *intro-* and *intra-*.] A prefix occurring in a few words formed in antithesis to words in *intro-*.

extropical (eks-trop′i-kal), *a.* [*ex-* + *tropic* + *-al*[1].] Pertaining to the regions outside the tropics.

extroversate (eks-trō-vėr′sāt), *v. t.*; pret. and pp. *extroversated*, ppr. *extroversating*. [*extro-* + L. *versare*, turn: see *versant.*] To turn outward.

The rather low, very powerful mandible is remarkable for the angular aspect of its symphysis, and of its posterior angles, which are prominent, often *extroversated*, and which extend on either side in a kind of voluminous heel. *Smithsonian Rep.*, 1895, p. 510.

extrovert (eks-trō-vėrt′), *v. t.* [extro- + L. *vertere*, turn.] To turn from within outward. See the extract.

The orifice admitted the thumb with ease, and the bladder mucous membrane was *extroverted* through it. *Therapeutic Gazette*, Feb. 15, 1903, p. 131.

extrusive (eks-trö′siv), *a.* and *n.* [L. *extrusus*, pp. of *extrudere*, extrude, + *-ive.*] **I.** *a.* Capable of being extruded or thrust out; that tends or serves to extrude or thrust out or forth; specifically, in *petrog.*, erupted or extruded: applied to igneous rocks. Same as ★*effusive.*

II. *n.* That which is extruded; specifically, in *petrog.*, same as ★*effusive* (which see): contrasted with *intrusive.*

extubate (eks-tū′bāt), *v. t.*; pret. and pp. *extubated*, ppr. *extubating*. [L. *ex*, out, + *tubus*, tube, + *-ate*[2].] To remove the tube from (the larynx) after intubation (which see).

extubation (eks-tū-bā′shon), *n.* Extraction or expulsion of the laryngeal tube used in intubation.

Exuberant granulation. See ★*granulation.*

exudate, *v. t.* **II.** *intrans.* In *bot.*, to yield an exudate.

Abundantly provided with sessile *exudating* glands. *U. S. Nat. Herb.*, VIII. 298.

Exudation vein. See ★*vein.*—**Plastic exudation,** an exudation which tends to become organized.

Exurgat money. See ★*money.*

ex-votive (eks-vō′tiv), *a.* [L. *ex voto*, from a vow, + *-ive.*] A needless substitute for *votive.*

ex warehouse (eks wār′hous). In *com.*, same as ★*ex store.*

exx. A contraction of *executrix.*

ey, *n.* and *v.* A simplified spelling of *eye.*

eye[1], *n.*, **9.** (*q*) In *petrog.*, same as ★*auge*[2]. (*r*) That one of the three scars or spots at the stem end of a cocoanut at which the embryo is located. (*s*) In *painting*, the peculiar form assumed by a break in a fold of drapery; notably in the works of Dürer and the early German masters. (*t*) An opening in a heddle through which thread or yarn is drawn. (*u*) Same as ★*eye-box.*

13. In some echinoids, a minute pigmented nodule, probably without visual functions, situated at the end of an ambulacrum.—**14.** In *photog.*, the spectral range of wave-lengths to which a photographic plate or film is sensitive

If the spectral colours of red, orange, yellow, green, blue, and violet are thrown upon an ordinary photographic plate, . . . it is at once seen that the emulsion is not sensitive to the entire range of the spectrum, and that the different colours which affect it do not do so equally with one another. This selective capacity may be called the "*eye*" of the plate. *Jour. Roy. Micros. Soc.*, Dec.,1904, p. 712.

Appendages of the eye. See ★*appendages.*—**Cephalic eye,** a visual organ found in the head of lamellibranchs during the larval stage, and in adult gastropods. *Philos. Trans. Roy. Soc.* (London), 1903, ser. B. p. 311.—**Dorsal eye.** (*a*) See *dorsal eye*, under *dorsal.* (*b*) In chitons, one of the numerous pigmented spots scattered either irregularly or symmetrically over the outer surface of the exposed area of the shell. Same as ★*shell-eye.*—**Elliott eye** (*naut.*), an eye worked over a thimble in a hawser or cable end.—**Eye-agate.** See ★*agate*[2].—**Eye formula,** a formula which expresses the arrangement of the simple eyes in the different groups of *Arachnida.*—**Eye of the storm,** the clear and calm region sometimes found in the center of a completely developed cyclone of extensive area, especially at sea.—**Eye of the wind,** the precise point from which the wind is blowing.—**Hare's eye.** Same as *lagophthalmia.*—**Larval eye,** in gastropods, a pigmented visual organ situated immediately behind the velum.—**Marginal eye,** in triclad and polyclad turbellarians, one of the eyes situated along the margin of the body. See ★*brain-eye.*—**Pallial eye,** one of the numerous ocelli or pigmented spots, sensitive to the action of light, which are developed on different parts of the mantle of bivalve mollusks.—**Parapineal eye,** a rudimentary eye-like body, developed from the epiphysis of the brain of some vertebrates in addition to the more frequently found pineal eye.—**Pseudocone eye,** an insect eye in which the crystalline lens or cone is wanting, its place being taken by four cells filled with a transparent fluid and a smaller nucleated protoplasmic portion.—**Selenium eye,** a device provided with a selenium resistance and two slides for eyelids, and sensitive to light.—**Tentacular eye,** in polyclad turbellarians, one of the eyes situated upon the tentacles. See ★*brain-eye.*—**Thermoscopic eye,** an eye-like organ in certain cephalopods which has been regarded as an organ for perceiving differences in temperature.—**Unpaired eye,** a single eye, lying in the median line, occurring among invertebrates.—**Watery eye,** epiphora.

eye-animalcule (ī′an-i-mal″kūl) *n.* A euglena-like, usually green, organism, having a colored eye-spot.

eye-area (ī′ā″rē-ă), *n.* In *decorative art*, the eye-device, which includes the eye, the eyelashes, and often the cheek-fold. *Haddon*, Evolution in Art. p. 36.

eye-balm (ī′bäm), *n.* The goldenseal, *Hydrastis Canadensis*, used for affections of the eyes.

eye-band (ī′band), *n.* A boat's mast-band fitted with one or more eyes or rings for holding ropes or blocks.

eye-bender (ī′ben″dėr), *n.* A machine for forming loops or eyes on the ends of bars, rods, screw-bolts, etc., by bending the end of the bar round a forming-tool; an eye-bolt machine. It is made in various forms, from that of a small hand-power machine to large and powerful machines for bending the ends of rods and bars into crooks, loops, and angles.

eye-block (ī′blok), *n.* In *marine hardware*, any form of metal block having a metal ring or eye at the top.

eye-bolt, *n.*—**Nut eye-bolt,** an eye-bolt in which the bolt is plain except at the end where it has a thread and nut.—**Rivet eye-bolt,** an eye-bolt in which the bolt is a plain rivet and is fastened in place in a rivet-hole and the end upset as in ordinary riveting.—**Screw eye-bolt,** an eye-bolt in which the bolt is a wood screw.—**Shoulder eye-bolt,** any kind of eye-bolt having a shoulder under the eye for obtaining a firmer hold when screwed or riveted in place.

eye-box (ī′boks), *n.* A box built in a leach and reaching from bottom to top: used to ascertain the depth of liquor contained in the leach. *Modern Amer. Tanning*, p. 67.

eyebright, *n.* Several plants which are either reputed remedies for diseases of the eye, or, more frequently, have bright flowers, usually with a central spot suggesting the pupil of the eye: (*a*) Any plant of the genus *Euphrasia.* (*b*) The sundew, *Drosera rotundifolia.* (*c*) The Indian-pipe, *Monotropa uniflora.* (*d*) The pimpernel or poor-man's weather-glass, *Anagallis arvensis.* (*e*) The germander speedwell, *Veronica Chamædrys:* also called *angel's-eye, bird's-eye,* and *god's-eye.* (*f*) The bluet or innocence, *Houstonia cærulea.* (*g*) The officinal lobelia or emetic-weed, *Rapuntium inflatum.*—**Red eyebright,** *Odontites Odontites*, a plant of the figwort family related to *Euphrasia*, native of Europe and Asia and naturalized in Maine and Nova Scotia.—**Spotted eyebright,** *Eupatorium maculatum*, a handsome American species, with pink or purple flowers, found from New York to Kentucky, and westward to Minnesota and New Mexico; also, in British Columbia: so called from the bright flowers and spotted stems. Also called *spotted joe-pye weed* and *spotted boneset.*

Spotted Eyebright (*Eupatorium maculatum*).
Two fifths natural size.

(From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

eyebrow, *n.* **4.** In *arch.*, a molding over a window; a window-cap: in American usage, a light dormer without vertical sides set in a roof.

eye-cap (ī′kap), *n.* A tuft of scales, sometimes present on the basal joint of the antenna of microlepidopterous insects, which serves as a cap for the eye. *Proc. Zool. Soc. London*, 1897, p. 142.

eye-cup (ī′kup), *n.* A cup or glass the rim of which is curved to correspond to the contour of the orbit: used in the application of lotions to the conjunctiva.

eye-dot (ī′dot), *n.* In various invertebrates, one of the pigmented spots of supposed visual function, sometimes covered by a lens; an eye-speck. Such spots are found in a variety of situations on the body.

eye-end (ī′end), *n.* That end of a telescope to which the eye is applied.

eye-fly (ī′flī), *n.* A minute fly, possibly a *Hippelates*, which in East India in summer-time swarms into the eyes of human beings and domestic animals. *Kirby and Spence*, Entomology, II. 130.

eye-ground (ī′ground), *n.* The fundus of the eye, or the back part of the interior of the eyeball which can be seen on ophthalmoscopical examination. *Jour. Exper. Med.*, Oct. 25, 1900, p. 196.

eyelet (ī′let), *v. t.* [*eyelet, n.*] To furnish or fasten with an eyelet.

eyelet-machine (ī′let-ma-shēn″), *n.* In *sewing-machine work*, an overseaming machine fitted with a rotary feed. This feed-mechanism causes the fabric to move in a circle under the needle, and (since the needle has a reciprocating sidewise motion between stitches) the combined motions of feed and needle-bar produce a series of radial stitches placed round a center, this center being the opening of an eyelet. The opening may be cut in the fabric and the radial stitches placed round it, to bind the edge of the eyelet. The stitching can also be locked or purled into place on the fabric. A counting stop-motion is used on some machines, the machine automatically stopping when the required number of stitches has been made. Eyelet-machines are also used to cover and sew into place metal eyelets and reinforcing-rings, to do many forms of decorative stitching.

eyelet-raiser (ī′let-rā″zėr), *n.* In *laundry-work*, a hand-tool which resembles a punch, used for raising and forming the eyelet-holes in shirt-fronts.

eyelet-set (ī′let-set), *n.* A hand-punch for inserting an eyelet and fixing it in place.

eyelet-stitch (ī′let-stich), *n.* In *sewing-machine work*, the method of placing the stitches in

radial lines round an eyelet-hole or over a metal reinforcing ring or eyelet. See ★*eyelet-machine*.

eye-line, *n.* 2. In some primitive forms of trilobites, one of two raised lines which extend outward from near the forward end of the glabella to the eyes.

eye-minded (ī′mīn″ded), *a.* In *psychol.*, having a marked tendency to carry on mental operations (remembering, thinking, imagining, dreaming, etc.) in terms of visual images; of a visual, as opposed to an auditory or motor, type of mental constitution. A person is called *eye-minded*, in a narrower sense, when his memory is chiefly or exclusively visual, and, in a still narrower sense, when his verbal memory is thus visual in type.

> The individual may be *eye-minded* or ear-minded or motor-minded.
>
> *E. B. Titchener*, Outline of Psychol., p. 293.

eye-mindedness (ī′mīn″ded-nes), *n.* In *psychol.*, a type of mental constitution characterized by the predominance of visual processes as vehicles of the complex mental functions (thought, memory, etc.)

eye-panel (ī′pan″el), *n.* A panel-shaped decorative element which has developed through conventionalization from the representation of an eye. *Haddon*, Evolution in Art, p. 23.

eye-pedicel (ī′ped″i-sel), *n.* A stalk or pedicel bearing an eye, as in various crustaceans. Also ★*eye-peduncle*.

eye-peduncle (ī′pē-dung″kl), *n.* Same as ★*eye-pedicel*.

eyepiece, *n.* 2. In *entom.*, the eye-covering in the pupæ of lepidopterous insects. *A. S. Packard*, Text-book of Entom., p. 631.—**Achromatic eyepiece**, any eyepiece in which chromatic aberration is approximately eliminated.—**Comet eyepiece**, a telescopic eyepiece, of low power and large field, especially adapted for use in the observation of comets and similar objects.—**Compensating eyepiece**, an ocular used with apochromatic objectives, and so constructed as to compensate for errors of aberration not entirely eliminated in the objective itself.—**Compound eyepiece**, an ocular system which consists of two or more lenses.—**Continental eyepiece**, an ocular the mounting of which consists of a tube of uniform diameter.—**Deep eyepiece**, an eyepiece which magnifies the real image ten or more diameters.—**Goniometer-eyepiece**, an eyepiece designed for making angular measurements, especially of the angles of crystals in the microscope field.—**High eyepiece**, an eyepiece of considerable magnifying power.—**Index eyepiece**, an eyepiece provided with one or more adjustable points in the plane of the real image for locating and making rough measurements of the position of objects in the field.—**Kellner's eyepiece**, an ocular lens system of the Ramsden type in which the eye-lens is made achromatic and the field-lens is placed in the front focal plane of the former. Also called *orthoscopic ocular*.—**Monocentric eyepiece**, an ocular lens system for telescopes, designed by Steinheil. See the extract.

> The Steinheil *monocentric eyepiece* is a triple glass, achromatic, and composed of two flint menisci of different thicknesses capping a double convex crown on both sides. *Todd*, Stars and Telescopes, p. 341.

Nelson's eyepiece, a microscopic ocular provided with a micrometer-screw and cross-hairs.—**Orthoscopic eyepiece**, an eyepiece in which the field-lens is in the focus of the achromatic eye-lens. See *Kellner's* ★*eyepiece*.—**Parfocal eyepieces**, a set of eyepieces so constructed as to be interchangeable without readjustment of the focus of the microscope.—**Periscopic eyepiece**, a positive ocular lens system which consists of a triple eye-lens and double convex field-lens.—**Polarizing eyepiece**. See *solar eyepiece* under *solar*[1].—**Prismatic eyepiece**. (*a*) A spectroscopic eyepiece. (*b*) An eyepiece with right-angled reflection-prism attached to the eye-lens, so that the observer looks in at the side, perpendicularly to the axis of the instrument.—**Projection-eyepiece**, a lens system which corresponds to the eyepiece of an ordinary microscope, but is used in conjunction with the objective in the projection of microscopic objects upon the screen.—**Searching eyepiece**, in *micros.*, an eyepiece of low power and large field, adapted to the ready finding of object, under the microscope rather than to the detailed observation of them when found.—**Solid eyepiece**, a negative ocular consisting of a single solid cylinder of glass with curved end-faces, the face of lesser curvature serving as field-lens, that of greater curvature as eye-lens: designed by Tolles.—**Spectral eyepiece**. Same as *spectroscopic* ★*eyepiece*.—**Spectroscopic eyepiece**, an attachment to a telescope or microscope which consists of a more or less complete spectroscope with slit, dispersion-prisms, scale for wave-lengths, and the necessary lenses: applied in place of the ordinary eyepiece and used to produce a spectrum of the real images.—**Stauroscopic eyepiece**, a form of polarizing eyepiece with quartz plate, used in the examination of minerals.—**Working eyepiece**, any eyepiece used for observing the details of a microscopic object, as distinguished from a *searching* ★*eyepiece*, which is employed in finding the object in a field of high power.

eye-plate (ī′plāt), *n.* A chitinous sclerite in which the eyes of *Acarina*, of the family *Hydrachnidæ*, are placed. *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 505.

eye-purple (ī′pėr″pl), *n.* Same as *rhodopsin*.

eye-ring (ī′ring), *n.* In *optics*, the exit-pupil of a lens system; a circular space within which the eye of the user of an optical instrument must be placed in order to utilize fully the field of view. *P. Drude*, Theory of Optics, p. 77.

eye-root (ī′röt), *n.* Same as ★*eye-balm*.

eye-shield (ī′shēld), *n.* A covering for the eyes designed to protect them from injury, as by flying particles, by mud and dust in riding in automobiles, etc.

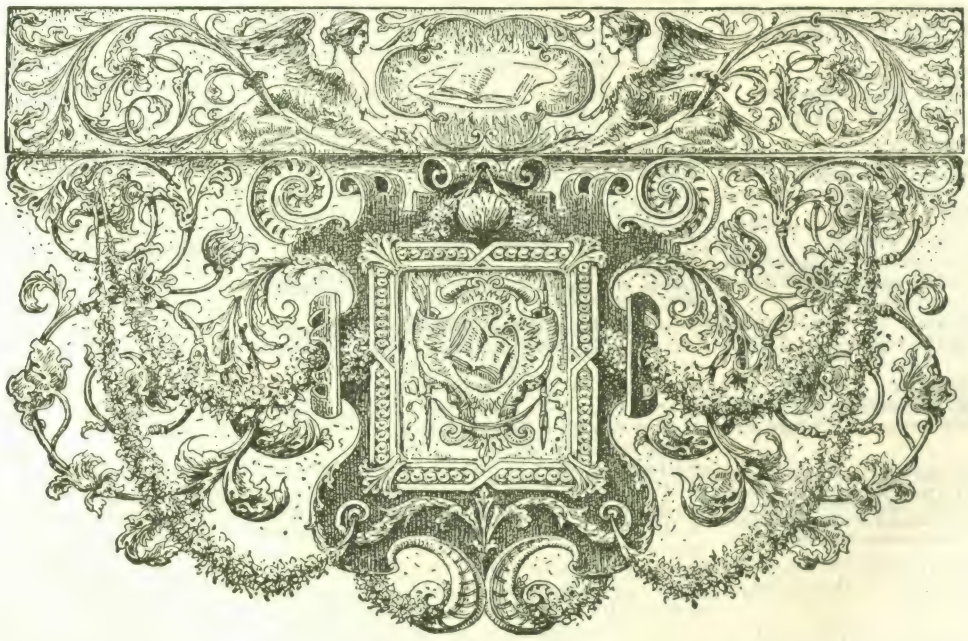
eye-strain (ī′strān), *n.* Weakness resulting from excessive use of the eyes, from use of the eyes in a bad light, or from use of them without correcting glasses when muscular imbalance, astigmatism, or other form of ametropia is present. Headache, dyspepsia, and various other reflex disorders are, at times, due to it.

eye-structure (ī′struk″tūr), *n.* See ★*structure*.

eye-tube (ī′tūb), *n.* The tube of the eyepiece in a telescope or other optical instrument.

eye-tubercle (ī′tū″bėr-kl), *n.* One of paired prominences on the exterior of the valves of the *Ostracoda* which indicate the position of the lateral eyes.

eye-tumulus (ī′tū″mū-lus), *n.* The raised portion of the cephalothorax of certain spiders which contains the eyes. *Proc. Zool. Soc. London*. 1896, p. 742.



eye-wattle (ī′wot″l), *n.* A fleshy excrescence lying near or about the eye of a bird.

eye-wire (ī′wīr), *n.* Wire drawn with a concave side, for making the loops to hold the lenses in eye-glasses or spectacles.

eye-worm (ī′wėrm), *n.* A nematoid worm, *Filaria lentis*, found in the human capsula lentis; also, *F. loa*, which occurs in the conjunctiva of negroes on the Kongo.

Ez., Ezr. Abbreviations of *Ezra*.

Ezek. An abbreviation of *Ezekiel*.

5. An abbreviation (*d*) (2) in a ship's log-book, of *furlong*; (*e*) in *elect.*, of *farad*; (*f*) of *farthing*; (*g*) of *fathom*; (*h*) of *field of vision*; (*i*) of *florin*; (*j*) of *folio*; (*k*) of *foot*; (*l*) in *music*, of *forte* (loud).—**7.** [*l. c.*] In *elect.*: (*a*) A symbol occasionally used for *magneto-motive force*, in ampere-turns. See *magnetic* ★*circuit*. (*b*) A symbol of *magnetic reluctance*. —**8.** A symbol of focal distance: F′, *first focal distance*; F″, *second focal distance*.—**F system**, A system of rating the diaphragms or stops for lenses in which the designations indicate the ratio between the diameter of the opening and the focal length of the lens.—**The three F's.** See *three*.

fa (fä), *v. i.* [*fa. n.*] To sound the fourth note of the scale in solmization: as, do, re, me, *fa*, sol (or soh), etc. [Nonce-word.]

> *Pet.* I will carry no crochets: I'll re you,
> I'll *fa* you; do you note me?
> *First Mus.* An you re us and *fa* us, you note us.
> *Shak.*, R. and J., iv. 5.

fabaceous, *a.* 2. Belonging to the plant family *Fabaceæ*.

Fabian, *a.* 2. Designating a variety or school of socialism more flexible and opportunist than the socialism of Marx and the International, and laying emphasis on municipal experiments in public ownership. See ★*Fabian Society*.—**Fabian Society,** a prominent socialistic society founded in London about 1884.

> In municipal politics, again, especially in London, the *Fabian Society*, founded in 1884 by a group of young literary men, had exercised some influence; but, if we compare the "Fabian Essays" of 1889 with the later utterances of their writers, it becomes clear that these Socialists have become for the most part hearty Radical politicians *Encyc. Brit.*, XXXII. 668.

II. *n.* A member of the Fabian Society.

fabianine (fā′bi-an-in), *n.* [*Fabiana* + *-ine*².] A coloring-compound contained in the violet flowers of pichi, *Fabiana imbricata*: said to be identical with crocin.

Fabianism (fā′bi-an-izm), *n.* The socialism advocated by the ★Fabian Society (which see).

Fabianist (fā′bi-an-ist), *n.* A member of the ★Fabian Society (which see).

fabianol (fā′bi-an-ōl), *n.* [*Fabiana* + *-ol.*] The odoriferous constituent of the volatile oil of the dried leafy twigs of *Fabiana imbricata*. It imparts its characteristic odor to the drug pichi.

fabiculture (fab′i-kul-tūr), *n.* [L. *faba*, bean, + *cultura*, culture.] The cultivation of beans or other leguminous plants.

fabric, *n.* 5. In *petrog.*, the pattern of a rock produced by the shape and arrangement of the crystalline or non-crystalline parts: distinguished from the granularity or size of the parts, and the crystallinity or degree of crystallization. (See *quantitative classification of igneous rocks*, under ★*rock*¹.)

fabricative (fab′ri-kā-tiv), *a.* [*fabricate* + *ive.*] Possessing power to fabricate or make. *Margaret Fuller.*

fabula (fab′ū-lä), *n.* [L. See *fable.*] In *old law*: (*a*) A covenant or contract. (*b*) Among the Lombards, etc., a marriage contract; a will.

façade, *n.* 2. In *organ-building*, same as ★*prospect*, 12.

face¹, *n.*, **15.** (*c*) See the extract.

> The demands were for a rise of 15 per cent. in wages, an eight hours' shift from bank to bank, the payment of wages twice a month, and other concessions. On 18th May the Coal Association at Essen agreed to an eight hours' day "at the *face*," with certain exceptions.
> *Encyc. Brit.*, XXXIII. 26.

21. In *geom.*, the angle of two consecutive edges of an angloid.—**22.** In *arch.*, the outer and generally vertical surface of any part of a building, whether a single stone or course of stones, or a whole side, front, or rear. When a wall is not concealed within by plastering and woodwork it may even be spoken of as having an outer and an inner face. Before a stone is put in place each one of its surfaces may be called a face, but when placed in the wall it has two beds, two joints (vertical), a face, and a back. For a face of a building in the sense of front, see *façade*. **23.** In turpentine orcharding, the surface of wood exposed on the side of the trunk of the pine to cause the resin to flow. There may be two or three faces to a tree. A crop consists of about 10,500 faces.—**24.** In *fort.*, the outer side of a bastion or lunette: in contradistinction to the inner side or flank.—**25.** In *mech.*: (*a*) A smooth or polished surface. (*b*) The side of a slide-valve which slides on the seat; the seat or surface on which a slide-valve travels. (*c*) The contact-surface of a valve which lifts from its seat to open the passage through.—**Dry face,** in *turpentine-making*, that portion of the face of a bled tree which has become unproductive.—**Heavy face,** a term descriptive of a bold-faced printing-type like this:

THIS IS TITLE TYPE ON 6-POINT BODY.

Often called *fat-face*.—**To lose face,** to lose one's credit, reputation, good name, or self-respect; be or feel humiliated in regard to one's standing in the eyes of others.—**To save one's face,** to act in such a way as to preserve one's credit, standing in the eyes of others, or one's self-respect.—**A slap in the face,** a sudden rebuff or insult.

face¹, *v. t.* **6.** In post-office usage, to arrange (letters) with their faces in one direction: as, to *face* the stamped and paid letters.—**7.** To give a false face or surface to; cause to imitate something else, fraudulently; specifically, to color (tea or coffee) so as to give a false impression of superior quality.

> Paddy husks and many kinds of leaves *faced* with China clay, soapstone, catechu, and black lead also found their way abundantly into tea. On the European side, exhausted leaves were again dried, impregnated with catechu and gum, and *faced* up to do duty as fresh tea.
> *Encyc. Brit*, XXIII. 101.

8. In *hort.*, to place a layer of apples (usually with the stem ends uppermost or outermost) next the head of (the barrel), so that the fruit will have a uniform and attractive appearance when the barrel is opened.

face-bedded (fās′bed″ed), *a.* In *masonry*, noting a stone or course in which the plane of stratification of the stone is placed parallel with the face of the masonry, and not perpendicular to the face and horizontal, as is now usual.

face-bone (fās′bōn), *n.* The malar bone.

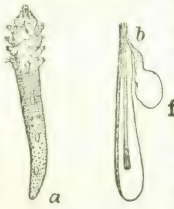
face-chuck (fās-chuk), *n.* Same as *face-plate*³.

face-cog (fās′kog), *n.* A cog or tooth which protrudes from the face of a wheel instead of projecting radially from the rim; a pin; one of the teeth of a pin-gear.

face-cutter (fās′kut″ėr), *n.* See ★*milling-cutter*, 2.

Faced card. (*b*) A card which is found face upward in the pack: distinguished from one which is faced after it has left the dealer's hand and which is called an *exposed card*.

face-gear (fās′gēr), *n.* A wheel having teeth or pins on the face, which is at right angles to the shaft, instead of on the rim, parallel to it.



face-harden (fās′här″dn), *v. t.* To make hard on the surface; harden a thin layer on the face of (a piece of metal); subject to a face-hardening process.

face-hardening (fās′här″dn-ing), *n.* The process of hardening the face or outside surface of a piece of metal by the addition of carbon or some other hardening element. Usually the plate to be hardened is placed in a kind of oven with carbon in some form in contact with the surface it is desired to harden. This is then subjected to a high heat for a length of time depending on the depth to which the hardening is to penetrate. By this treatment cementation takes place and the plate is given a very hard surface.

face-joint (fās′joint), *n.* A joint (in the sense of a division between stones or bricks) which shows on the finished side of the wall, and is treated carefully with a view to the appearance of the masonry.

face-milling (fās′mil″ing), *n.* The operation of machining metal pieces with a mill having teeth on its face rather than on its periphery, as in the usual form of mill.

face-mite (fās′mīt), *n.* A small mite, *Demodex folliculorum*, of worm-like form, living in the hair-follicles and sebaceous glands, especially of the face: supposed to be an occasional cause of comedones and blackheads in human beings.

Face-mite (*Demodex folliculorum*).
a, mite, greatly enlarged; *b*, mites in sebaceous gland.

face-plate, *n.* 4. The cover of a journal-box on a railroad-car.—**5.** The outer plate, or web, which joins the rim and the hub of a car-wheel.—**Face-plate coupling.** See ★*coupling*.

facer, *n.* **4.** A post-office employee whose business is to arrange letters with their faces in one direction.

face-symbol (fās′sim″bol), *n.* In *crystal.*, the symbol by which a crystal face or plane is designated.

facet¹, *n.* **5.** In the embryo of *Pentastomum*, the circular thickening left on the detached integument at the site of the dorsal cone after the separation of the embryo from the integument. Also *facette*. Compare ★*cervical cross*.

facetiation (fa-sē-shi-ā′shon), *n.* [*facetiate* (< *faceti-ous* + *-ate*²) + *-ion.*] The making of fun; the subjection of a matter to facetious treatment.

> After some lumbering *facetiation* about "those countless volumes of contemporary biography wherein successful men of business are frequently invited to insert their lives and portraits," he goes on to assure us that "Emerson's Representative Men were of a different stripe from these" men.
> *W. D. Howells*, in N. A. Rev., April, 1901, p. 627.

face-wall (fās′wâl), *n.* A wall built to sustain the face of an excavation: opposed to a *retaining wall*, which sustains material which has been placed behind it

face-work (fās′wėrk), *n.* In *masonry*, that part of a wall, or the like, which forms the exterior, especially of the side exposed to view. It is generally composed of better material and is more carefully laid up. Thus, in a brick wall, the face-work may be of what are called face-brick and laid with thinner joints.

Facial chorea. Same as ★*tic non-douloureux*.—**Facial neuralgia.** See ★*neuralgia*.—**Facial spasm,** intermittent contraction of the muscles supplied by the facial nerve.

faciend (fā′shi-end), *n.* [L. *faciendum*, neut. fut. part. of *facere*, make, do: see *fact.*] Any magnitude or symbol which is operated upon: thus, a multiplicand is a *faciend*.

facies, *n.* **5.** Specifically—(*a*) In *geol.*, the entirety of the lithologic and paleontologic characteristics resulting from the external conditions which determine the existence of any particular fauna or flora for a given region. These characteristics are defined by physical conditions, such as climate, altitude, or bathymetry, and the geological or chemical nature of the medium. (*b*) In *phytogeog.*, the physiognomy or characteristic appearance of a vegetation, depending upon the one or several species which predominate in it; or, the characteristic growth itself. A plant formation has one facies when there is one controlling species, and several when there are several such. See ★*character-plant*. (*c*) In *petrog.*, the different modifications of one mass of igneous rocks, distinguished by their texture, or by their mineral or chemical composition: as, granitic and porphyritic *facies* of a dike; a gabbro *facies* of a diorite mass.—**Adenoid facies,** a dull, stupid expression, with habitually open mouth, characteristic of children with extensive adenoid growths in the nasopharynx.—**Facies abdominalis,** a pinched, drawn face, expressive of severe pain and anxiety, seen in sufferers from disease of the abdominal viscera, usually with peritonitis.—**Facies cadaverica.** Same as *facies Hippocratica* (see *Hippocratic face*).—**Facies ovarica,** a pale, drawn face, with thin and compressed lips, characteristic of a woman suffering with disease of the ovaries.—**Facies uterina,** a facies similar to the ovarian, observed in sufferers from disease of the uterus.

facies-suite (fā′shi-ēz-swēt), *n.* A series of modifications of one rock-mass in which the parts vary in composition or in texture, or both. It is distinguished from a rock-suite, which consists of rocks forming distinct geological bodies, erupted at different times, but genetically related to one another (consanguineous). *Brögger*, 1894.

facilitative (fā-sil′i-tā-tiv), *a.* [*facilitate* + *-ive.*] That serves to facilitate.

facing-head (fā′sing-hed), *n.* In *machine-shop practice*, an attachment or supplementary tool for a boring-machine used in facing or finishing cylindrical work.

facing-lathe (fā′sing-lāᵺh), *n.* A metal-working lathe having a head-stock and tool-carriage only. There is no tail-stock and the carriage, mounted on the bed, can be placed directly in front of the work on the chuck. It is used in facing or finishing flat surfaces or parts of the work. A similar lathe for finishing wood surfaces is called a *face-lathe.*

facing-machine, *n.* 2. In *marble-working*, a machine for holding flooring-tiles in position while they are being faced or rubbed down to a true surface on a rubbing-bed. It consists of a group of vertical, weighted, and pointed rods supported in a frame suspended over the bed. The point of the rod is centered on the back of the tile and holds it in place, while leaving it free to revolve as the bed turns under it. See *rubbing-bed.*

3. A chucking-machine, particularly equipped for facing or finishing the ends of axles, bolts, screws, and studs.

facing-slip (fā′sing-slip), *n.* In *postal service*, a slip of paper accompanying each package of letters, showing the destination of the package, the point of departure, the date, and the name of clerk sending it.

facing-tool (fā′sing-tōl), *n.* In *machine-shop practice*, a cutting-tool in a boring-mill or an end-mill or other cutter in a milling-machine, used to face or finish the exterior surface of a piece of work.

faciobrachial (fā″si-ō-brā′ki-al), *a.* [L. *facies*, face, + *brachium*, arm, + *-al*[1].] Relating to both the face and the arm.

faciocervical (fā″si-ō-sėr′vi-kal), *a.* [L. *facies*, face, + *cervix* (*cervic-*), neck, + *-al*[1].] Relating to both the face and the neck.

faciolingual (fā″si-ō-ling′gwal), *a.* [L. *facies*, face, + *lingua*, tongue, + *-al*[1].] Relating to both the face and the tongue: said of a form of paralysis.

factor, *n.*—**Association factor.** See ★*association.*—**Domestic factor,** one who resides in the same country as his principal. See *foreign* ★*factor.*—**Factor group** of G in respect of H, the group defined by the division of the operations of G into sets in respect of the self-conjugate subgroup H.—**Factor of safety,** as commonly used, the ratio of the ultimate strength or breaking stress of a piece of material to the load to be actually applied; the ratio by which the load required to break a piece or structure is greater than the maximum load to be applied; the ratio of the breaking stress to the working stress; in a stricter and more recent use, the ratio of the elastic limit of the material to the working load. The last is better than the older and more common definition of the term, because the real measure of the strength of a piece of material, which is to be repeatedly strained, is its elastic limit, not its ultimate strength, and the factor of safety should hence be based upon the elastic limit.—**Foreign factor,** one who resides in a different country from his principal. The importance of the distinction between a *domestic* and a *foreign factor* lies in their transactions with third parties. In the absence of an agreement to the contrary, a domestic factor is presumed to bind his principal, and in case credit is given a purchaser is responsible to both the factor and his principal; while foreign factors are held personally liable upon contracts made for their principals, and if credit is given or taken, it is upon the exclusive responsibility of the factor.—**Form factor.** (*a*) The ratio, expressed decimally, between the volume of a tree, or portion of a tree, and that of a cylinder of the same height and diameter. The volume of this cylinder multiplied by the form factor gives the actual volume of the tree, or portion of the tree. Three kinds of form factors are distinguished, according to the portion of the tree to which they refer: a *tree form factor* is used for determining the actual volume of the whole tree; a *stem form factor* for determining the volume of the stem; and a *timber form factor* for determining the merchantable contents of stem, crown, or both. A form factor is called *absolute* when the diameter of the tree is measured at any convenient height, the form factor referring only to that portion of the tree above the point at which the diameter is measured; *normal*, when the diameter is measured at a height in constant proportion to the total height of the tree; and *artificial*, when the breast-high diameter is measured. Also called *factor of shape.* (*b*) In *elect.*, in alternating current-waves, a constant which characterizes the shape of the wave: usually defined as the ratio of the effective value of the wave to the effective value of a sine wave of equal mean value. *Trans. Amer. Inst. Elect. Engin.*, 1897, p. 310.—**Imbalancing factor.** (*a*) A force which tends to disturb the balance of one or more elements of a mechanism. (*b*) Specifically, in an engine, the ratio of the difference between the maximum and mean turning moments to the mean turning moment. This factor determines the weight of the fly-wheel necessary to make the engine run steadily, the function of the fly-wheel being the storing up of energy at the time of the maximum turning moment, or when it is greater than the mean, and the giving up of that energy when the turning moment is less than the mean.—**Impedance factor,** in *elect.*, the ratio of the impedance of a conductor or circuit to its ohmic resistance. *Houston*, Dict. Elect.—**Inductance factor,** in *elect.*, the ratio of the wattless or reactive current to the total current, in an alternating-current circuit.—**Lag factor,** in *elect.*, a term formerly used for *power factor.* See *power* ★*factor.*—**Load factor,** in electric-distribution systems, the ratio of the average load on the system to the maximum load during the day.—**Power factor,** in *elect.*, the ratio, in an alternating-current electric circuit, of the true power divided by the apparent power (see *apparent power*), or the watts divided by the volt-amperes.—**Spherical reduction-factor,** in *photom.*, a numerical factor by means of which the mean spherical intensity of a source of light may be computed from the intensity of the light emitted in a single given direction.—**Unbalancing factor,** the greatest percentage of excess or deficiency of power, over or under the mean power, that occurs in one revolution of an engine; the percentage of fluctuation in the tangential pressure on the crank-pin above or below the mean pressure during a revolution.

factorage, *n.* 3. The aggregate of all constituent factors.

Factorial periodicity, that of a function where F (x + w) = C F x. Here C is a constant. *Forsyth.*

factorization (fak-tọ-rī-zā′shọn), *n.* [*factorize* + *-ation.*] In *math.*, the resolution into factors.

factorize, *v. t.* 2. To resolve into factors.

faculary (fak′ū-lā-ri), *a.* [*facula* + *-ary*[2].] Pertaining to *faculæ.*—**Faculary flames,** in *astron.*, brilliant masses of vapors, principally calcium, overlying the faculæ of the sun's surface and shown by photographs taken with the spectroheliograph. *H. Deslandres.* See ★*faculid.*

faculid (fak′ū-lid), *n.* [Also (as F.) *faculide;* < *facula* + *-id*[2].] In *astron.*, same as ★*faculary flames* (which see). See the extract.

The images of the atmospheric vapors have also received widely different names. Hale calls the brilliant parts of these images "bright spots," supposing them to be emitted by the vapors confounded with the highly incandescent portions. Since 1903 he gives them the name of flocculi, referring to their form. In turn, I have always considered them as emitted by the vapors of the atmosphere, and have called them faculary flames. I propose the word *faculide*, which is shorter.

H. Deslandres (trans.), Sci. Amer. Sup., Oct. 15, 1904, [p. 24,070.

faculous (fak′ū-lus), *a.* [*facula* + *-ous.*] 1. Abounding in faculæ: applied to regions of the solar surface where they are numerous.—2. Of the nature of faculæ.

He considers that the latter may be the portions of the umbra left uncovered by "*faculous* veils," which, extending from the penumbra, not unfrequently lighten up certian regions of nuclear gloom, leaving others more profoundly dark by contrast.

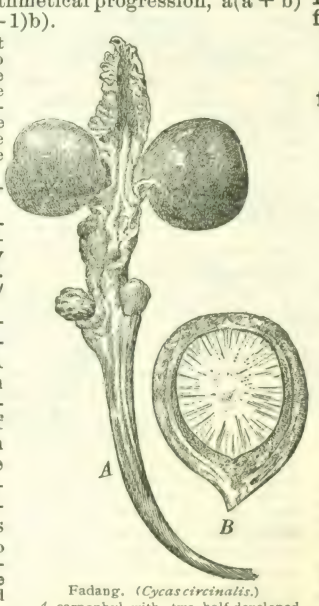
A. M. Clerke, Problems in Astrophysics, p. 77.

facultate (fak′ul-tāt), *v. t.*; pret. and pp. *facultated*, ppr. *facultating.* To give power or authority to; invest with faculty; empower. *Baring-Gould.*

Facultative aërobia, anaërobe, anaërobia, regeneration. See ★*aërobia*, etc.

Facultatively aërobic, anaërobic. See ★*aërobic*, ★*anaërobic.*

facultize (fak′ul-tīz), *v. t.*; pret. and pp. *facultized*, ppr. *facultizing.* [*fault-y* + *-ize.*] To endow with practical ability.



faculty, *n.* 7. In *alg.*, the product of a series of factors in arithmetical progression, a(a + b) . . . (a + (m − 1)b).

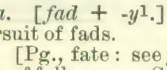
Such a product was called by Kramp a *faculty*, and he introduced for it the notation $a^{m}/_{b}$, calling *a* the base, *m* the exponent, and *b* the difference of the *faculty.*

G. Chrystal, Algebra, II. 374.

Faculty psychology. See ★*psychology.*—**Faculty theory of mind.** Same as *faculty* ★*psychology.*

fadang (fä′-däng), *n.* [Chamorro name.] A name in Guam of *Cycas circinalis*, the nuts of which, though poisonous, are used by the natives as a food-staple in times of scarcity. To remove the poisonous principle the kernels are soaked in water, which is repeatedly changed. They are then dried and stored. When required for food they are ground into meal on a stone slab, mixed with water, and baked in the form of thin cakes. Also called *federico.* See *Cycas*, 1.

Fadang. (*Cycas circinalis.*)
A, carpophyl with two half-developed fruits and two aborted fruits; *B*, mature fruit shown in cross-section, one half natural size.



fadda (fäd′dä), *n.* [Ar. *faḍḍa*, silver, a para.] The Egyptian para, equal to one fortieth of a piaster.

faddism (fad′izm), *n.* [*fad* + *-ism.*] A disposition to take up with fads; a fondness for fads.

faddy (fad′i), *a.* [*fad* + *-y*[1].] Fond of or given to the pursuit of fads.

fado (fä′dọ̄), *n.* [Pg., fate: see *fate.*] 1. A Portuguese form of folk-song. See the extract.

The nearest we can get to the original signification of the word is to call the "*fado*" the laborer's song of fate; which is more than we can do with the present form, for the Portuguese indiscriminately call "*fados*" what we designate as serenades, ballads, jigs, and sailor's hornpipes. *Jour. Amer. Folk-lore*, July–Sept., 1902, p. 165.

2. A Portuguese dance common among the lower classes, or the music for it. The characteristic pattern of the music is 

fæcula, *n.* See *fecula.*

Faentine (fā-en′tin), *a.* Of or pertaining to Faenza, a city in the province of Ravenna, Italy: as, *Faentine* majolica.

faeton, *n.* A simplified spelling of *phaeton.*

Fagaceæ (fa-gā′sē-ē), *n. pl.* [NL. (Alexander Braun, 1864), < *Fagus* + *-aceæ.*] A family of dicotyledonous archichlamydeous (apetalous) trees or shrubs of the order *Fagales*, typified by the genus *Fagus;* the beech family. It includes also the oak and chestnut, and is characterized by monœcious flowers, the staminate often in catkins, the pistillate with an urn-shaped or oblong perianth and a 3–7-celled ovary, the fruit a 1-seeded nutor acorn. There are 5 genera and about 375 species widely distributed. See *beech, Castanea, chestnut, Fagus, oak, Quercus.*

fagaceous (fā-gā′shius), a. Belonging to the family *Fagaceæ;* pertaining to or resembling the beech.

Fagales (fā-gā′lēz), *n. pl.* [NL. (Engler, 1886), < *Fagus* + *-ales.*] An order of dicotyledonous archichlamydeous plants including the families *Fagaceæ* and *Betulaceæ*, or the beech and birch families. It is therefore the same as the *Cupuliferæ* of many authors.

Fagara silk. See ★*silk.*

fagine (fā′jin), *n.* [L. *fagus*, beech, + *-ine*[2].] An alkaloid said to occur in beechnuts.

fagot, *v. t.* 3. To ornament (a fabric) by drawing out a number of threads and tying together in the middle a series of the cross-threads. See *fagoting.*

fagot-drain (fag′ọt-drān), *n.* A drain made by placing fascines, fagots, or brush in the bottom of a trench and covering the same with stones or earth.

fagot-iron (fag′ọt-ī″ėrn), *n.* Iron made by welding together a bundle or pile of flat bars, or bars of special shape or selected material: applied to weld-iron.

fagottino (fa-gọt-tē′nō), *n.* [It., dim. of *fagotto:* see *fagotto.*] A small bassoon, usually with a pitch a fifth above that of the ordinary bassoon.

Fah. An abbreviation of *Fahrenheit.*

fahaka (fa-hä′kä), *n.* [NL. *fahaka*, intended to represent Ar. *faqqāqa.*] The swell-fish or ball-fish, *Tetraodon fahaka*, found in the lower Nile and the neighboring seas.

faience, *n.*—**Armorial faience,** table-services decorated with the armorial bearings of noble families, religious houses, etc. These form a distinctive class of faience produced at Rouen, Lille, Nevers, Paris, and Bordeaux. *M. L. Solon*, French Faience, Glossary.—**Faïence à la corne** [F.], a variety of tin-enameled pottery in which the principal decorative motif is a cornucopia of many-colored flowers. This pattern was first used on old Rouen faience, and was imitated later elsewhere in France and in other countries.—**Faïence à niellure** [F.], a name sometimes given to Henri II. ware, from the resemblance

Armorial Faience in Rouen Style.
In the Pennsylvania Museum, Philadelphia.

Faïence à la Corne.— Plate, Rouen, France.
In the Pennsylvania Museum, Philadelphia.

of the inlaid clay decorations to niello-work. See *faïence d'Oiron*, under *faience*.— **Faïence au réverbère** [F.], a term applied to decorated pottery which has been fired in a muffle or reverberatory kiln. See *reverberatory furnace*, under *furnace*. Also called *reverberatory*.— **Greenpoint faience.** See *American* ★*pottery* (*b*).— **Grueby faience,** See *American* ★*pottery* (*b*).— **Lambeth faience,** an art pottery made at Lambeth, England, on the principles of the old Italian majolica, with underglaze painted decorations.— **Palissy faïence.** See *Palissy ware*, under *ware*[2].— **Saint-Porchaire faïence,** pottery made of clay from Saint-Porchaire, near Oiron, France: same as *Henri II. ware*, *faïence d'Oiron*, and ★*faïence à niellure* (which see).— **Stanniferous faience,** pottery coated with a tin glaze or enamel, such as majolica, delf, and the earthenware of the old French potters. See also *stanniferous* ★*enamel*, and *stanniferous ware*, under *ware*[2].

faïencerie (fa-yoṅ-se-rē′), *n.* [F., < *faïence*, faience.] A pottery in which stanniferous faience is made: applied particularly to the old French manufactories.

faïencier (fa-yoṅ-syā′), *n.* [F.] **1.** A dealer in crockery.— **2.** A maker of faience; specifically, a potter who makes stanniferous faience in the style of the old French tin-enameled wares.

fail-spot (fāl′spot), *n.* In *forestry*, a place where natural or artificial reproduction has failed. [Colloq.]

Failure of issue, lack of living children at the time of death: but the death of a child, capable of inheriting, prior to the death of the father will not deprive the latter of his right of courtesy; and there is no failure of issue if a child is born within the period of gestation after the death of the father.

faint, *a.* **8.** Oppressive: applied to the atmosphere. *Hawthorne.*

faints-back (fānts′bak), *n.* In the distillation of whisky, the receiver in which the faints, or weak spirit, is collected, to be afterward redistilled: same as ★*faints-cask*. See *faint*, *n.*, 2.

faints-cask (fānts′kask), *n.* See ★*faints-back*.

Fair catch. See ★*catch*[1].— **Fair hit** or **fair ball,** in *base-ball*, a ball hit within the limits of the foul-lines.— **Fair-play men,** a name given by settlers in Pennsylvania, in a tract between the Lycoming and Pine creeks, about the year 1769, to three men elected annually, in rotation, to whom authority was given to determine all questions of boundaries at a time when the land was still unsurveyed because it was doubtful whether it had ever been ceded by the Indians. Their decision was final, and was reinforced by the common consent of the community. — **Fair pleader.** See ★*pleader*.

fairies'-arrow (fār″iz-ar′ō), *n.* Same as *elf-bolt*.

fairish (fār′ish), *a.* [*fair*[1] + *-ish*[1].] Pretty fair; passably good, etc.: as, a *fairish* crop.

fair-lead (fār′lēd), *n.* Same as *fair-leader*.

fair-stitch (fār′stich), *n.* A sort of machine-sewing stitch in which the visible portion of the thread between the stitches on the face, or fair side of the work, appears to be raised or rounded instead of lying flat, as in ordinary plain or flat sewing. It is done by creasing the stitched material to cause the exposed portion of the thread to be forced up into a rounded form.— **Fair-stitch machine,** in *shoe-manuf.*, a sewing-machine for sewing harnesses and boots and shoes, having an attachment for forming a fair-stitch.

fair-trader (fār′trā″dėr), *n.* One who advocates or favors the fiscal system known as fair trade (which see, under *trade*).

fair-water (fār′wâ″tėr), *n.* In *ship-building*, a cover or filling-piece fitted in front or rear of any projection or abrupt break in the surface of the under-water parts of a vessel's hull, to permit the water to flow past smoothly and without eddying.

fairy-bells (fār′i-belz), *n.* The purple foxglove, *Digitalis purpurea*.

fairy-creeper (fār′i-krē″pėr), *n.* The climbing fumitory, *Adlumia fungosa*.

fairy-smoke (fār′i-smōk), *n.* The Indian-pipe, *Monotropa uniflora*.

fairy-stone, *n.* **2.** In Scotland, the name of a clay concretion also called *clay-dog* or *clay-stone*. See *clay-stone* and *concretion*, 3.— **3.** A popular designation of a stone arrow-head, from the superstitious belief that it is of supernatural origin.— **4.** A fanciful name sometimes given to twin crystals of staurolite.

fairy-tale (fār′i-tāl″), *n.* **1.** A tale or story about fairies.— **2.** A story as unreal and as incredible in its statements as fairies or tales about them.

faith-curist (fāth′kū″rist), *n.* One who believes in the efficacy of faith and prayer by themselves as therapeutic agencies; a believer in faith-cure.

faith-mark (fāth′märk), *n.* A fundamental and characteristic doctrine of a religious faith.

faith-philosophy (fāth′fi-los″ō-fi), *n.* A form of the philosophy of common sense which is distinguished by insisting that we ought to repose upon our natural tendency to view the origin of the universe and of high moral aspirations anthropomorphically. Common-sense philosophy proper, on the other hand, instead of saying that we ought to yield to certain dispositions to believe says that it is impossible not to believe certain doctrines upon sufficient consideration, and if the propositions are not too definitely enunciated.

faith-state (fāth′stāt), *n.* In *psychol.*, an emotive state, characterized by the sense of communion with God and nature, which plays a prominent part in the psychological process of conversion. See the extracts.

That state of confidence, trust, union with all things, following upon the achievement of moral unity, which we have found, more or less tersely expressed, in every conversion considered, is the *Faith-state*.
J. H. Leuba, in Amer. Jour. Psychol., VII. 345.

The resultant outcome of them is in any case what Kant calls a 'sthenic' affection, an excitement of the cheerful, expansive, 'dynamogenic' order which, like any tonic, freshens our vital powers. . . . We have seen how this emotion overcomes temperamental melancholy and imparts endurance to the Subject, or a zest, or a meaning, or an enchantment and glory to the common objects of life. The name of *'faith-state,'* by which Professor Leuba designates it, is a good one.
W. James, Var. of Religious Exper., p. 505.

faitour's-grass (fā′törs-gràs), *n.* The leafy spurge, *Euphorbia Esula:* so called because used by faitours or quacksalvers. See *leafy spurge*, under *spurge*[2].

fake[1], *n.*— **Flemish fake** (*naut.*), a number of turns of rope that are concentric, or have a common center, and lie flat on the deck instead of riding over each other.

falanstery, *n.* A simplified spelling of *phalanstery*.

falanx, *n.* A simplified spelling of *phalanx*.

falarica (fa-lar′i-kä), *n.* [L., < *fala*, a kind of tower or scaffold from which missiles were thrown in sieges.] A missile bearing burning tow and pitch, used in antiquity and in the middle ages. It was thrown by a catapult or by hand.

Falcate orange-tip. See ★*orange-tip*.

falcial (fal′siạl), *a.* [L. *falx* (*falc-*), sickle, + *-i-al*.] Of or relating to the falx cerebri.

falcidia (fäl-thē′dē-ạ̈), *n.* [Sp., < LL. *Falcidia* (sc. *pars*), the fourth part of an inheritance, as secured by the *lex Falcidia*, 'the law of (Publius) Falcidius,' a Roman tribune who proposed the law (about 40 B. C.) assuring to the heir at least one fourth part of the whole inheritance.] In *Sp. law*, one fourth of an inheritance. It legally belongs to the heir. To protect it the heir has the right to reduce legacies to three fourth parts of the succession.

Falciform body, in gregarines, one of the 6 to 8 sickle-shaped, nucleate bodies into which a pseudonavicella divides, each becoming a young gregarine.— **Falciform lobe, process.** See *lobe*, ★*process*.

falcon, *n.*— **Laughing falcon,** a large South American hawk, *Herpetotheres cachinans*, which belongs to the accipitrine division of the birds of prey.

Falconiformes (fal-kon-i-fôr′mēz), *n. pl.* [NL., < L. *falco*, a falcon, + *form*, *a*, form.] An order which contains the diurnal birds of prey: divided by Pycraft into three suborders, *Accipitres*, birds of prey proper, *Serpentarii*, the secretary-bird, and *Cathartæ*, the American vultures. The term seems to have been first employed in an ordinal sense by Seebohm, 1890, in the "Classification of Birds."

falcula, *n.* **3.** Same as *falx cerebri*.

Falerian (fa-lē′ri-ạn), *a.* [L. **Faleriānus*, < *Falerii*.] Belonging or relating to Falerii, an ancient city of Etruria, on the site of the modern Cività Castellana.

fall[1], *v. i.* **14.** In *Scots law*, to lose; forfeit; be deprived of: as, to *fall* from a right or estate. — **To fall calm,** to cease to blow, as the wind; become calm.— **To fall down.** (*d*) To show unexpected weakness; fail unexpectedly or completely. [Slang.]— **To fall on** or **upon.** (*c*) In *geom.*, to come precisely upon; rest upon; be congruent to.

Let the triangle ABC be applied to the triangle DEF, so that the point A may *fall on* the point D.
Ass'n for Improvement of Geom. Teaching, Plane [Geom., p. 25.

To fall within, in *geom.*, to come within; rest inside of.

In the same way it may be proved that the line BA does not *fall within* the angle EFG.
Ass'n for Improvement of Geom. Teaching, Plane [Geom., p. 19.

fall[1], *n.* **23.** An apron, attached to the front edge of a carriage-seat, suspended between the point of attachment and the bottom of the carriage-body.— **24.** The capture or surrender (of a besieged city or fortress): as, the *fall* of Port Arthur.

fallage (fâl′āj), *n.* [*fall*[1] + *-age*.] **1.** The felling or cutting down of timber-trees.— **2.** Fallen branches collectively.

fall-apparatus (fâl′ap-ạ-rā″tus), *n.* [G. *fall-apparat*.] In *psychophys.*: (*a*) An instrument devised by Hipp for the control of his chronoscope. An ivory ball drops from a variable height upon a metal plate, breaking and making electrical contacts as it falls. The electrical circuit includes the chronoscope, which thus registers the time of fall. (*b*) An instrument devised by Hering for the comparison of the binocular and monocular perceptions of depth. The eyes look through openings in a screen at a fixed black bead about 12 inches away. White beads are dropped by the experimenter at various distances, nearer and farther, from the black bead.

fall-chronometer (fâl′krō-nom″e-tėr), *n.* [G. *fallchronometer*.] In *psychophys.*, a gravity-chronometer. The instrument consists ordinarily of a heavy screen of metal, falling practically without friction between vertical metal guides, and making and breaking electrical contacts as it drops. It may be used to mark off a known and constant time-interval, thus serving in place of hammer or pendulum as a control of the Hipp or other chronoscope; or, as a tachistoscope, to expose visual stimuli for a brief and accurately measurable period. *E. B. Titchener*, Exper. Psychol., I. ii. 201.

faller, *n.* **3.** In *lumbering*, one who fells trees.

faller-motion (fâ′lėr-mō″shọn), *n.* The action of the faller-wires on a spinning-mule during the process of winding the yarn into cops. *Nasmith*, Cotton Spinning, p. 369.

faller-rod (fâ′lėr-rod), *n.* Same as ★*faller-shaft*.

faller-shaft (fâ′lėr-shâft), *n.* A rod which runs lengthwise of the spindle-carriage of the spinning-mule and to which the arms of the faller-wire are attached. *Nasmith*, Cotton Spinning, p. 297.

fall-fish, *n.*— **Red fall-fish,** a small minnow, *Notropis rubricroceus*, found about waterfalls in tributaries of the Tennessee and Savannah rivers.

fall-flower (fâl′flou″ėr), *n.* The white-wreath aster, *Aster multiflorus:* so called from the lateness of its flowering. See *white-wreath* ★*aster*.

falling-ax (fâ′ling-aks), *n.* An ax with a long helve and a long, narrow bit, designed especially for felling trees.

falling-wedge (fâ′ling-wej), *n.* A wedge that is driven into the kerf of a tree that is being cut down to cause it to fall in the desired direction.

fall-line (fâl′lin), *n.* In *phys. geog.*, a line drawn through a number of rivers at points where they have falls or rapids due to a common cause; specifically, a line of this character in the eastern United States, near the inner border of the Atlantic coastal plain, passing through Trenton, Philadelphia, Baltimore, Richmond, etc.

fallow[2], *n.*, **2.** In loose practice, the soil is merely neglected or plowed only once or twice for one or more seasons, for the sake of 'resting' it. This is often done in alternate years. In more scientific farming, except in situations where 'extensive' methods are justified (see ★*extensive*, 5), a fallow may be either 'uncropped' or 'cropped,' but the ground is always cultivated. The technique of fallowing is very closely worked out in Great Britain, and less so in the United States, where conditions are more various and methods less settled; but the difference is partly of terms. See phrases below, and compare *rotation of crops*, under *rotation;* see also phrases under ★*crop*.— **Bare fallow,** a fallow without crops; usually, in a specific sense, an uncropped fallow of a year's duration with thorough cultivation. In British practice, cultivation is begun in the autumn after the removal of grain, and is continued in the succeeding spring and summer; or sometimes it is not begun till winter, the larger part in any case falling in summer. As many as nine plowings and cross-plowings are sometimes given, besides numerous harrowings, etc. The object is the destruction of weeds and insect pests and the mechanical and chemical amelioration of the soil. Bare fallows have now largely given way to cropped fallows, though they are still approved by British authorities for stiff clays. For bare-fallowing to conserve moisture see *dry* ★*farming*. — **Cropped fallow,** in Great Britain, a fallow in which the ground is occupied, at least in summer, by a manured and closely cultivated crop which serves the purpose of

cleaning and mechanical improvement, at the same time yielding feed, which is returned to the soil through the manure products; a green fallow.—**Dead fallow.** Same as *bare* ★*fallow.*

In any case a saving upon the old *dead* or bare fallow.
J. Wrightson, Fallow and Fodder Crops, p. 31.

Double-cropped fallow, a variation of root fallow in which a fodder crop is sown in the autumn and cut in the spring in time for the root crop. The practice of this kind of fallowing is called *catch-cropping.* See *catch* ★*crop.*—**Half, rag, or ragged fallow,** a fallow in which a fodder crop is sown in autumn and cut late in the spring, the land being then fallowed during the summer and put in wheat in the autumn. [Great Britain.]—**Naked fallow.** Same as *bare* ★*fallow*[2].—**Root fallow,** in Great Britain, a cropped fallow in which, after winter fallowing, a root crop (see ★*crop*) is grown.—**Summer fallow,** a bare fallow: so called because the summer crop is omitted and because the tillage takes place chiefly at that season.—**Winter fallow,** a fallowing in which the soil is thoroughly cultivated during the period when not occupied by the summer crop: in Great Britain it forms part of a root fallow.

fall-phonometer (fâl′fō-nom″e-tėr), *n.* [G. *fallphonometer.*] In *psychophys.*, a gravity-phonometer: an instrument consisting of uprights with mechanical releases which allow balls to drop from variable heights upon plates of metal, slate, etc. Given constancy of the weight of the balls and homogeneity of materials of balls and plates, the intensity of the sound produced by the impact of the ball on the plate is proportional to the height of the fall. The fall-phonometer thus furnishes a series of sound-stimuli which are intensively graded in terms of some arbitrary unit.

fall-poison (fâl′poi″zn), *n.* Same as *fly-poison,* 2.

fall-tube (fâl′tūb), *n.* A glass tube about 800 millimeters long through which, in a mercury-pump, the mercury falls to create a vacuum.
M. W. Travers, Exper. Study of Gases, p. 8.

fallway (fâl′wā), *n.* A hoist-shaft or an opening through which freight is hoisted: so called from the custom of using a block and fall to do the hoisting.

fall-wind (fâl′wind), *n.* A wind that descends rapidly from the upper regions of the atmosphere. Such are the foehn, the bora, the mistral, the chinook, etc.

faloos, *n.* See ★*falus.*

false, *a.* **10.** Additional; assistant; subsidiary; supplementary; temporary; used to supplement or temporarily displace something: as, the *false* work or supports for a bridge which is under construction.—**False banana.** Same as ★*banana,* 2.—**False bow.** Same as ★*ice-prow.*—**False cirrus.** See ★*cloud*[1].—**False grain, morning,** etc. See ★*grain*[1], etc.—**False music.** See *musica ficta,* under *musica.*

falset, *v. t.*—**To false a doom.** See ★*doom.*

false-card (fâls′kärd), *v. i.* To play a card with a view to deceiving one's adversary as to the true holding in the suit, as to win with the ace when holding the king also.

The dealer *false-cards* so that the adversaries will not know that he holds the queen. *Elwell,* Bridge, p. 82.

falsework (fâls′wėrk), *n.* See *false work,* under *false.*

falsidical (fâl-sid′i-kạl), *a.* [L. *falsidicus,* ‹ *falsus,* false, + *dicere,* speak, + *-al*[1].] Expressing falsehood; falsifying: opposed to *veridical.*

falúa (fä-lö′ä), *n.* [Sp.: see *felucca.*] A boat, used in the Philippine Islands, resembling in general a felucca, but with a square sail, usually of matting.

Falunian (fä-lū′ni-ạn), *n.* In *geol.*, the Upper Miocene strata in France which are characterized by the faluns. See *faluns.*

falus (fạ-lös′), *n.* [Also *faloos, floose, fluce;* Hind. *fālūs, fulūs,* a small copper coin, Pers. *fulūs,* small copper coins, ‹ Ar. *falūs, filūs, fulūs,* money, cash.] In North Africa, Arabia, India, and neighboring countries, a small copper coin of various values ranging from one fourth to one tenth of a cent.

F. A. M. An abbreviation of *Free and Accepted Masons.*

fam. An abbreviation (*a*) of *familiar;* (*b*) of *family.*

fame-flower (fām′flou″ėr), *n.* See *Talinum.*

Famennian group. See ★*group*[1].

fa mi (fä′mē′). [See *fa* and *mi.*] In *music,* an old name for a half-step or semitone.

familial (fạ-mil′yạl), *a.* [L. *familia,* family, + *-al*[1].] **1.** Occurring in members of the same family, though not necessarily hereditary: said of certain diseases, especially of the nervous system.

It it necessary to distinguish acute forms following exhaustion or infectious diseases in persons without hereditary or constitutional defect, the subacute and chronic forms or habit-neurasthenias frequently without heredity, and the chronic constitutional type, said to be to a large extent *familial.*
Amer. Jour. Psychol., July–Oct., 1903, p. 364.

2. As in a family; family-like.

The essentially *familial* character which this people [the Chinese] has retained.
Tarde (trans.), Laws of Imitation, p. 252.

family. I. *n.*, **6.** In petrography the term is used by Rosenbusch to embrace igneous rocks which are alike in composition and texture: as, the *family* of syenitic rocks; the *family* of essexite; the *family* of phonolitic rocks. In the quantitative system of classification (1902) it is suggested that the term be applied to a group of igneous rocks which are developed from the same parent magma by processes of differentiation—that is, any group of consanguineous rocks.—**Man of family,** a man of birth; a person of noble or gentle descent: to be distinguished from *family man,* a man with a family.—**Monosyllabic family of languages,** a group of languages so designated which is spoken in southeastern Asia, including as its principal members Chinese, Cochin-Chinese or Annamese, Siamese, and Burmese.

II. *a.*—**Family arrangement,** an agreement for the disposition of property between members of the same family, in which the relationship of the parties is a sufficient consideration for the agreement.

famin, *n.* A simplified spelling of *famine.*

fan, *n.*, **1.** (*a*) The fan has been used by various peoples to guard sacred mysteries. In the older ritual of the Roman and Greek churches, a fan was carried by a deacon of the mass, at the gospel side of the altar.

9. In *projective geom.*, one of the flat pencils which are determined by the sides of a polygram.—**Electric fan** or **fan motor.** See ★*motor.*—**Fan engine.** See ★*engine.*—**Plenum fan,** a fan which is used to force air into a room or hall, thus creating a current of air: the reverse of *vacuum* ★*fan.*—**Vacuum fan,** a fan which is used to exhaust the air from a room or hall, thus producing a current of air: the reverse of *plenum* ★*fan.*

fan[1], *v.* **I.** *trans.* **6.** To "cool with a club"; club, as policemen sometimes club refractory prisoners. [Slang.]

II. *intrans.* **3.** To strike at something (as a base-ball) without hitting it; fan the air. [Slang.]—**To fan out.** (*b*) To pass muster; come out of an examination, test, or contest successfully: probably from def. 4. (*c*) To strike out, as in base-ball. [Slang.]

fan[2] (fan), *n.* [Said by some to be short for *fanatic,* namely a 'fanatical' admirer of the sport. Others associate the word with *fan*[1], which has various slang uses.] One who is very enthusiastic on the subject of athletic sports, especially base-ball; one who haunts base-ball grounds and base-ball games; a base-ball 'fiend.' [Slang.]

Cranks and '*fans*' of all degrees
Are there to howl and scream.
Kansas City Daily Times, April 23, 1903.

fanam, *n.*—**Canteroy fanam,** a coin of southern India weighing 5.87 grains.

fan-bath (fan′bȧth), *n.* A method of reducing the heat of fever in which rapid evaporation is produced by fanning the patient's wet body.

fanchonnette (fan-sho-net′), *n.* [F. dim. of *Fanchon,* a pet form of *Françoise,* Frances, a feminine name.] A small pastry covered with meringue.

fan-crest, *n.* **2.** In *ornith.*, a large longitudinal crest which opens and closes somewhat like a fan. The crests of the hoopoe and cockatoo are examples.

Fancy dress. See ★*dress.*

fandangle (fan-dang′gl), *n.* [*fan*(*dango*) + *dangle.*] A fancy or fantastic trinket or ornament.

fan-drill (fan′dril), *n.* Movements and evolutions performed in concert by a company of girls or ladies armed with fans.

fan-duster (fan′dus″tėr), *n.* In *paper-making,* a revolving wire-cloth cage inclosed in a casing, used to shake the dust out of stock.

fanega (fä-nā′gä), *n.* [Sometimes *faneague;* ‹ Sp. *fanega, hanega* = Pg. Cat. *fanega,* ‹ Ar. *fanīqa,* a large sack (Freytag).] **1.** A Spanish and Spanish-American dry measure containing about 1½ United States bushels.—**2.** A Spanish and Spanish-American land-measure containing about 1⅗ acres.

fanfare, *n.* **3.** In *bookbinding,* an erratic or eccentric style of decoration which purposely avoids regular or geometrical design.

fanfest (fan′fest), *n.* [*fan*[2] + G. *fest* (as in *schützenfest,* etc.), festival.] A gathering of 'fans,' that is, base-ball enthusiasts. [Slang.]

There was a regular *fanfest* over the rumors of difficulties among the Giants. *N. Y. Eve. Amer.,* July 27, 1904.

fan-flower (fan′flou″ėr), *n.* An Australian shrub, *Lobelia cuneiformis,* so called from the flattened, fan-like appearance of its flowers. See *Scævola.*

fan-forge (fan′fōrj), *n.* A forge in which a centrifugal fan instead of a bellows furnishes the blast.

fang, *v. t.*—**To fang a pump,** to prime it. [Local, Eng.]

fang, *n.* **6.** A valve in a pump; the water-seal of a pump.—**To lose the fang,** to break the seal or allow the water to run out of a pump, so that it will not draw without priming.

fang-bolt (fang′bōlt), *n.* A bolt used for attaching ironwork to wood. In some cases the head of such a bolt has fangs or teeth for biting into the timber, and in other cases the fangs are on washers.

fangle[2] (fang′gl), *n.* [Prob. orig. connected with *fangle*[1].] A large, irregular bundle of straw tied together at intervals, and serving as a torch.

fango (fäng′gō), *n.* [It. Sp. *fango* = Pr. OF. *fanc,* mud.] Mud in its therapeutic uses.

Measurements which were made of the ionising power and of the rate of decay of the emanation of "*fango*" or mud from the hot springs of Battaglia, would indicate that its activity is due solely to the presence of radium.
Nature, Sept. 8, 1904, p. 458.

fanguito (fän-gē′tō), *n.* [Sp., dim. of *fango,* mud.] A killifish, *Pœcilia vittata,* found in fresh water in Cuba.

fanning (fan′ing), *n.* In *machine-sewing,* a variety of free embroidery stitching on ornamental fabrics used for decorative purposes. Also called *flossing.*

Fan-shaped structure. See ★*structure.*

Fantail axle. See ★*axle.*

fantaisie (foṅ-tā-zē′), *n.* [F.: see *fantasy.*] Same as *spun silk* (which see, under *silk*).

fantasm, *n.* A simplified spelling of *phantasm.*

fantasmagoria, *n.* A simplified spelling of *phantasmagoria.*

Fantasy pearl. See ★*pearl.*

fantigue (fan-tēg′), *n.* [Also *fanteague, fanteag, fanteeg, fantaig, fantag;* prob. a dial. mixture of *fantastic* and *fatigue.*] A state of worriment or anxiety. [Prov. Eng.]

fantod (fan′tod), *n.* [Also *fanted;* origin obscure. Cf. ★*fantigue.*] The fidgets: as, to give one the *fantods. Mark Twain.* [Slang.]

fantom, *n.* and *a.* A simplified spelling of *phantom.*

fan-work (fan′wėrk), *n.* Same as *fan-tracery.*

Far point. See ★*point*[1].

far[3] (fär), *n.* [L. *far,* spelt: see *farina.*] A type of spelt now out of notice.

Triticum Zea, *Far,* is one of the class of spelt-wheats. It is distinguished by the distance of its spikelets from one another. *Low,* Pract. Agr., p. 325.

far. An abbreviation (*a*) of *farriery;* (*b*) of *farthing.*

faracurd (far′ạ-kėrd), *n.* [A trade-name prob. ‹ It. *fare, far,* make, L. *facere,* + E. *a curd*?] A preparation of skim-milk in the form of a dry powder: used by bakers and confectioners.

Faraday effect. See ★*effect.*

Faraday's dark space or **Faraday's space.** See *dark* ★*space.*—**Faraday's electric bag, tubes.** See ★*bag*[1], ★*tube.*

faradimeter (far-ạ-dim′e-tėr), *n.* Same as ★*farad-meter.*

The current is from a secondary coil of about 8000 turns of fine wire and the dose is carefully measured by my *faradimeter* which I exhibited before the British Electro-Therapeutic Society in 1902.
S. Sloan, in Lancet, May 30, 1903, p. 1519.

faradization, *n.*—**Galvanic faradization,** the stimulation of a nerve by combined galvanic and faradic currents.

farad-meter (far′ad-mē″tėr), *n.* In *elect.*, an instrument for determining, in farads, the electrostatic capacity of a condenser.

faradocutaneous (far″ạ-dō-kū-tā′nē-us), *a.* Relating to the skin and a faradic current.—**Faradocutaneous sensibility,** sensibility of the skin to stimulation by a faradic current. *Alien. and Neurol.,* Feb., 1903, p. 40.

faradometer (far-ạ-dom′e-tėr), *n.* Same as ★*farad-meter.*

Farang (fä′rang), *n.* [Hind. Pers. *farang:* see *Frank*[1], 2.] A Frank; a Feringhee or European; a non-Asiatic foreigner.

They [the Siamese of Lakawn] have seen less of the *Farang* than many of their countrymen in Upper Siam.
Geog. Jour. (R. G. S.), XI. 489.

farcy-button (fär′si-but″n), *n.* A small tumor (enlarged lymphatic gland) occurring in a horse suffering from farcy. Also called *farcy-bud.*

farcy-pipe (fär′si-pīp), *n.* A hard, cordy swelling of the subcutaneous lymphatics in farcy.

fare[1], *n.*—**Excess fare,** on railways, steamboats, etc., the payment made by a passenger for traveling beyond the place specified on his ticket, or in a higher class than that for which the ticket was issued.

farewel. A simplified spelling of *farewell.*

Farfugium (fär-fū′ji-um), *n.* [NL. (Lindley, 1857), ‹ L. *farfugium,* the plant called colts-

foot, *Tussilago Farfara.*] An untenable name for *Erythrochæte*, a genus of plants of the family *Asteraceæ*. See ★*Erythrochæte*.

farinatome (fa-rin′a-tōm), *n.* [L. *farina*, meal, + Gr. *-τομος*, ‹ *τέμνειν*, *ταμεῖν*, cut.] An apparatus used in the study of seeds to make cross-sections of many grains (of cereals) at once. The object in cutting is to determine whether the seeds are horny or starchy.

farinha (fä-rēn′yä), *n.* [Pg.: see *farina*.] In Guiana and the West Indies, cassava meal.

farinivorous (far-i-niv′ō-rus), *a.* Feeding upon farinaceous products: said of a meal-worm or a grain-weevil.

Farm lateral. See ★*lateral*.—**Poor farm.** See *poor-farm*.—**Sewage-farm,** a farm of a type found near many British towns in which the public sewage is utilized for irrigation. Such farms are devoted chiefly to market-gardening and to growing forage-crops. *Muir*, Agriculture, p. 124, note.

farmacy, *n.* A simplified spelling of *pharmacy*.

farm-boiler (färm′boi″lėr), *n.* A large portable furnace and boiler for cooking food for cattle, pigs, etc. The boiler is usually so arranged that it can be tipped up and its contents discharged without disturbing the fire or furnace. Also called *feed-boiler*.

Farmers' Alliance, institute, itch. See ★*alliance*, etc.

farmer's-ruin (fär′mėrz-rö″in), *n.* The corn-sperry, *Spergula arvensis:* so called from its effect on crops.

Farmer's theorem. See ★*theorem*.

farming, *n.* **4.** The commercial production of any plant (even horticultural) or animal which has an economic value: as, fruit-*farming*, perfumery-*farming* (growing flowers for extraction of perfumery-oils), ostrich-*farming* (for feathers), cat-*farming* (for fur), etc.—**All-grain farming.** See *grain-*★*farming*.—**Arid farming.** Same as *dry* ★*farming*.—**Cottage farming,** farming with an acre or two of ground without working animals; spade husbandry. [Great Britain.]—**Dairy-farming,** farming which is occupied with the production of milk and milk products, including the growing of feeds, the management of milch-cattle, and the manufacture of butter and cheese, at least when this is conducted on the farm; dairying.—**Dry farming,** the practice of ordinary agriculture dependent upon rain, when carried on in an arid or semi-arid country, in distinction from the form of agriculture by irrigation. The fundamental principle of dry farming, as a method, is that pulverizing the soil makes it receptive of water and at the same time prevents evaporation. By constantly stirring the soil for a year without crop (see *bare* ★*fallow*) enough moisture may, in some cases, be stored to secure a crop for one or more succeeding years. By such methods good crops can be grown where the rainfall does not exceed 12 inches per annum. Dry farming is coming into practice in the drier regions of the western United States where irrigation is not available.—**Grain-farming,** farming which is occupied with the production of cereals. Exclusive grain-farming (sometimes called *all-grain farming*) impoverishes the soil, because no return is made for the plant-food taken away.—**Grass-farming,** that system of farming (usually of the "low" type) which rests upon the production of grass for pasture or hay. *F. Storer*, Agriculture, III. 326.—**Intensive farming,** that method of husbandry in which, by liberal application of labor and expense, the maximum returns are obtained from small areas. Such a method is profitable in situations where land is valuable on account either of fertility and dense population or of adaptation to a special crop: opposed to ★*extensive agriculture*. Also called *high farming*.—**High farming,** same as *intensive* ★*farming*.—**Stock-farming, truck-farming.** See ★*stock-farming*, ★*truck-farming*.

farming-shelter (fär′ming-shel″tėr), *n.* A shed or wind-break intended to shelter cultivators at work upon their fields: used especially in connection with the Red Indians of North America.

farolito (fä-rō-lē′tō), *n.* [Sp. *farolito*, dim. of *farol*, lantern.] In Porto Rico the balloon-vine, *Cardiospermum Halicacabum*, so called from the fancied resemblance of its inflated fruit to a miniature paper lantern.

farouche (fä-rösh′), *a.* [F.; origin obscure.] Distant or repellent in manner; unsociable; shy. *Mrs. Gaskell.*

Farre's line. See ★*line*[1].

Farrington group, series. See ★*group*[1], ★*series*.

farrisite (far′i-sīt), *n.* [*Farris*, a lake in Norway, + *-ite*[2].] In *petrog.*, a name given by Brögger (1898) to a compact chocolate-brown rock composed of 35 per cent. of a melilite-like mineral, 33 per cent. of barkevikite, 25 per cent. of diopside, and a little lepidomelane, altered olivin, and iron oxid. It occurs in a narrow dike cutting augite-syenite.

farsang (fär′sang), *n.* [Pers.: see *parasang*.] A Persian itinerary measure equal to about four miles.

farynx, *n.* A simplified spelling of *pharynx*.

F. A. S. An abbreviation (*a*) of *Fellow of the Antiquarian Society;* (*b*) of *Fellow of the Society of Arts;* (*c*) of *free alongside ship*.

fasc. An abbreviation of *fasciculus*.

fascia, *n.*—**Dentate fascia,** a strip of gray matter beneath the corpus fimbriatum in the brain.—**Fascia propria,** a layer of tissue covering the neck of a femoral hernia, derived from the cribriform fascia or from the femoral sheath.—**Fascia recta,** the sheath of a rectus muscle, particularly of the rectus abdominis.—**Fascia semilunaris.** See *semilunar fascia*.—**Fascia superficialis.** See *superficial fascia*, under *fascia*, 7.—**Tenon's fascia.** Same as *Tenon's capsule*.

fasciated, *a.* **3.** In *zoöl.*, marked with vertical or transverse bands of color. [Rare.]

fascicle, *n.*—**Trineural fascicle** or **fasciculus,** a small collection of nerve-fibers in the upper part of the spinal cord connecting the glossopharyngeal and vagus nerves.

Fasciculated bladder. See ★*bladder*.

fasciculus, *n.*—**Fasciculi innominati,** two bundles of nerve-fibers within the medulla oblongata, continuous with the fasciculi teretes.—**Fasciculus acusticus,** one of a number of white striæ which cross transversely the floor of the fourth ventricle of the brain.—**Fasciculus arciformis.** Same as *arciform fibers*.—**Fasciculus cuneatus,** the lateral column of the spinal cord.—**Fasciculus of Goll,** nerve-fibers which ascend along the posterior median fissure of the spinal cord to the cerebellum.—**Solitary fasciculus.** Same as *solitary funiculus*.—**Trineural fasciculus.** See ★*fascicle*.

Fascigeridæ (fas-i-jer′i-dē), *n. pl.* [NL., ‹ *Fasciger*, typical genus, + *-idæ*.] A family of repent or erect *Bryozoa* having the zoœcial apertures arranged in bundles or fascicles.

fasciotomy (fas-i-ot′ō-mi), *n.* [L. *fascia*, a band, + Gr. *-τομια*, ‹ *ταμεῖν*, cut.] In *surg.*, operation for the division of a fascia.

Fascipora (fa-sip′ō-rä), *n.* [NL., ‹ L. *fascis*, a bundle, + Gr. *πόρος*, a pore.] The typical genus of the *Fasciporidæ*.

Fasciporidæ (fas-i-por′i-dē), *n. pl.* [NL., ‹ *Fascipora* + *-idæ*.] A family of cyclostomatous *Bryozoa* of the Cretaceous formation, growing in clustered zoœcia opening radially and without accessory pores.

fase, *n.* A simplified spelling of *phase*[1].

F. A. S. E. An abbreviation of *Fellow of the Antiquarian Society of Edinburgh*.

fashion-art (fash′on-ärt), *n.* The art which follows new or exotic models, in distinction from *custom-art*, which follows the traditional models of clan, tribe, or nation. *Tarde* (trans.), Laws of Imitation, p. 357.

fashion-imitation (fash′on-im-i-tā″shon), *n.* The imitation of new examples or models, especially of those of foreign origin, in distinction from *custom-imitation*, which consists in following the traditional usages of family, clan, or nation.

All resemblances of social origin in society are the direct or indirect fruit of the various forms of imitation, custom-imitation or *fashion-imitation*, etc.
Tarde (trans.), Laws of Imitation, p. 14.

fashion-morality (fash′on-mō-ral″i-ti), *n.* Morality built up from new or exotic ideas and examples, in distinction from *custom-morality*, the traditional morality of family, clan, or nation.

Hence the individualistic character of *fashion-morality*, analogous to that of fashion-art.
Tarde (trans.), Laws of Imitation, p. 357.

F. A. S. L. An abbreviation of *Fellow of the Anthropological Society of London*.

Fassanian (fa-sā′ni-an), *a.* [It. *Fassa*, a district in Tyrol, giving name to the Fassa valley and the Fassanian Alps.] In *geol.*, noting a group of strata which constitutes the lowest member of the Upper Trias in the Mediterranean province.

fast[1]. **I.** *a.* **8.** Favorable to high speed: said of the condition of a race-track or road, and also, in *cricket*, of the wicket or playing-ground when it is hard and dry, so that the ball travels fast.—**Fast acid-blue, acid-magenta, acid-ponceau, acid-red, acid-violet.** See ★*acid-blue*, etc.—**Fast acid-fuchsin.** Same as *fast* ★*acid-magenta*.—**Fast acid-scarlet.** Same as ★*acid-ponceau*.—**Fast black, Bordeaux, marine blue,** etc. See ★*black*, etc.—**New fast green.** See ★*green*.

II. *n.* **4.** In *arch.*, a fastening, usually a simple button or bolt to keep a door or window shut: often used in combination, as *door-fast, shutter-fast*, etc.

fast[3], *n.*—**Jewish fasts.** The principal Jewish fast-days are those mentioned in the Bible. The most solemn fast is the *Great Day of Atonement* or *Fast of Expiation*, on the tenth day of the month Tishri (which see), prescribed by Moses. It is a holy day, "the Sabbath of Sabbaths." Next in order are: (*a*) *The fast of the fourth month*, on the seventeenth day of Tammuz, which is the fourth month of the Jewish ecclesiastical year; on that day, the rabbis declare, Moses destroyed the tablets; on the same day the daily sacrifices ceased, and Apostemus burned the law and placed an idol in the sanctuary. (*b*) *The fast of the fifth month*, on the ninth day of Ab, the fifth month of the Jewish ecclesiastical year; on that day, the Talmud relates, it was decreed that the children of Israel should not enter the Promised Land: the destruction of the first and second temples occurred on the same day. (*c*) *The fast of the tenth month*, on the tenth day of

Tebeth, the reason for this fast being the siege of Jerusalem by Nebuchadnezzar. (*d*) *The fast of Esther*, on the thirteenth day of the month Adar, which is the eve of Purim (which see). Besides the above there are numerous other fasts, general, local, and private. For instance, in some localities the Jews fast on the twentieth day of Sivan (about the middle of June), on account of the calamities inflicted upon them in 1648 by the Cossacks under Chmielnicki. The Jews of Frankfort-on-the-Main fast on the nineteenth day of Adar, on account of the atrocities committed upon them at the time of their expulsion from that place in 1614. The orthodox Jews observe no less than twenty-five regular fast-days, besides a score or so of other self-imposed and private fasts, including *Jahrzeit*, a fast on the anniversary of the death of parents, and *the fast of bad dreams*, which takes place in order that God may be invoked to ward off the threatening evil. The very pious Jews fast every Friday, so that they may better enjoy the Sabbath feast in the evening, which is considered a meritorious meal.

fast-fur (fást′fur), *a.* In Newfoundland, noting the young of the harp-seal when in such condition that the coat of soft, woolly fur in which it is clothed when born does not readily pull out. This coat is shed when the seals are a few weeks old, leaving them clad in the short, close hair common among hair-seals.

fastidium (fas-tid′i-um), *n.* [L.: see *fastidious*.] Slight nausea with repugnance to food.

fastigiation (fas-tij-i-ā′shon), *n.* [*fastigiate* + *-ion*.] The condition of being, or tendency to be, fastigiate; applied to trees.

fastigium, *n.* **4.** A period of continuous fever in an acute disease, when the temperature has ceased to ascend but has not yet begun to fall. —**5.** A projection in the roof of the fourth ventricle of the brain.

fat[1]. **I.** *a.* **9.** In *painting*, rich; full of color.

Put in with an infinity of small '*fat*' touches, the effect being completed by sharp flashes of white and vermilion.
C. J. Holmes, in Burlington Mag., I. 83.

Fat acid. Same as *sebacic acid*, $(CH_2)_8(CO_2H)_2$. Also called *ipomic acid*.

II. *n.* **4.** A local Australian term for fat or marketable cattle.—**Bayberry fat.** Same as *bay-oil*.—**Becuiba fat.** Same as *becuiba-tallow* (which see, under *tallow*).—**Fat embolism.** See ★*embolism*.—**Natural fats,** solid substances of a fatty nature obtained from animal or vegetable sources.—**Nün fat,** a fat-like or waxy substance produced by the insect *Coccus adipifera*.—**Otoba fat.** Same as *otoba-butter*.—**Pichurim-bean fat.** See ★*bean*[1].—**Pichurim fat.** Same as *Pichurim* ★*camphor*.—**Vateria fat,** solid fat from the seeds of *Vateria Indica*. Also known as *piny tallow* or *Malabar tallow*. *T. E. Thorpe*, Dict. Applied Chem., III. 937.—**Wakefield fat.** Same as *Yorkshire* ★*grease*.

fat[1], *v. t.* **2.** In *leather-manuf.*, to smear over with a heavy oil. *Flemming*, Practical Tanning, p. 166.

fat-body (fat′bod″i), *n.* One of the masses consisting of connective tissue and fat-globules found in the bodies of arthropods, amphibians, and other low forms.

fat-face (fat′fās), *n.* In *printing*, same as *heavy* ★*face*.

fath. An abbreviation of *fathom*.

father, *n.*—**Father of lies,** Satan.—**Father of the Faithful.** (*a*) Abraham. (*b*) The Sultan of Turkey.—**Father Time,** time personified as an old man. See *time*[1], 1.

father-right (fä′ᴛʜėr-rīt), *n.* Supremacy of the father in the family that traces descent in the male line: distinguished from supremacy of the uncles or brothers of a wife and mother in the family that traces descent in the female line. It is a broader and less technical term than the Latin *patria potestas*. *L. Gumplowicz* (trans.), Outlines of Sociol., p. 53.

father-rule (fä′ᴛʜėr-röl), *n.* Supreme authority of the father in the family. In the evolution of the family, father-rule has generally appeared later than the so-called mother-rule, which was in reality the authority of the male relatives of the mother. *L. Gumplowicz* (trans.), Outlines of Sociol., p. 112.

fathom, *n.*—**Nautical fathom,** in the United Kingdom, the fathom used for the measurement of cables, which is one thousandth part of a nautical mile, or about 1⅛ per cent. longer than the ordinary fathom of six feet.

fatiguability (fā-tēg′a-bil-i-ti), *n.* Inability to resist fatigue; lack of staying power.

fatigue, *n.*—**Coefficient of fatigue,** in *phys.*, a numerical constant denoting the extent to which a given substance exhibits the phenomenon of elastic fatigue.—**Curve of fatigue.** See ★*curve*.—**Elastic fatigue.** See ★*after-strain*.—**Error of fatigue.** See ★*error*.—**Fatigue fever,** an elevation of temperature observed after an unusual amount of muscular exertion: caused by the presence in the system of toxic matters resulting from the disintegration of tissue.—**Magnetic fatigue,** the loss of permeability with age exhibited by some specimens of iron and steel.

fatihah (fä′ti-hä), *n.* [Ar. *fātiḥa*, *fāṭḥa*, opening, beginning, ‹ *fataḥa*, he opened.] The first chapter (sura) of the Koran. It consists of seven verses (lines), and contains a doxology ('Te Deum laudamus') and a prayer. It is greatly reverenced by Mohammedans, who use it much as Roman Catholics use the paternoster.

"Gabriel! why stay'st thou me?" the Prophet said,
"Since at this hour the *Fatihah* should be read."
Edwin Arnold, Pearls of the Faith, Ali and the Jew, st. 4

fat-liquor (fat′lik″o͝or), *n.* A mixture of oils and alkali for oiling hides or skins to make them soft. *Flemming*, Practical Tanning, p. 127.

fat-liquor (fat′lik″o͝or), *v. t.* To anoint or coat with fat-liquor. *Flemming*, Practical Tanning, p. 22.

fat-necrosis (fat′nek-rō″sis), *n.* A degenerative alteration of fatty tissue, shown by the presence of firm opaque white areas.

fat-pork (fat′pôrk), *n.* [From the appearance of the pulp of the fruit.] The edible fruit of the monkey-apple, *Clusia flava*, or the tree itself. [West Indies.]

fatten, *v. t.* **3.** In *poker*, to add chips to (a jack-pot which was not opened on the previous deal).—**4.** In *skat*, to discard valuable cards on (a partner's tricks).

fattend, *pp.* A simplified spelling of *fattened*.

fat-tree (fat′trē), *n.* In *phytogeog.*, one of a class of trees of temperate zones, consisting chiefly of soft-wooded species such as conifers, birches, and lime-trees, in which, at the beginning of winter, all the starch of the cortex and wood is converted into fat, to be reconverted into starch in the spring. Compare ★*starch-tree*. *A. F. W. Schimper* (trans.), Plant-Geog., p. 436.

Fatty casts. See ★*cast*[1].—**Fatty oils.** See *oil*, 1.—**Fatty series,** the class of carbon compounds which have a chain-like structure, as distinguished from those which have a cyclic structure. Also called *aliphatic series*.—**Fatty tumor.** See ★*tumor*.

fau (fou), *n.* [Samoan, Marquesan, etc., *fau*.] **1.** A name in Polynesia of several nettle-like plants which yield fiber used in making fishing-lines and nets: as, *fau-songā*, *Pipturus argenteus* (Samoa).—**2.** A Polynesian name for *Pariti tiliaceum*, a tree belonging to the mallow family, with tough bark yielding cordage and very light wood used by the natives for making outriggers of canoes and for kindling fire by friction. Also *hau*. See ★*balibago*, *corkwood*, and *mahoe*, 1.

fauces, *n. pl.* **5.** In ancient Roman building, a passage in a house, especially that leading from the first vestibule to the atrium or first court. It is disputed whether the term is ever used for inner passages. *Vitruvius* (trans.), Architecture, vi. 4.

faucet, *n.*—**Rabbit-ear faucet,** a compression-faucet in which the valve is closed by pressing together two upright blades or ears.

faucet-filter (fâ′set-fil″tėr), *n.* Same as *filter-faucet*.

fault, *n.*—**Bedding fault,** in *geol.*, a fault whose plane of displacement coincides with the bedding-planes of the strata.—**Dip-fault,** a fault which crosses the strike of the faulted strata: the opposite of *strike-fault*.—**Distributive fault,** a fault in which the displacement is not confined to a single plane, but is distributed among a series of parallel planes at short distances from one another. *Chamberlin and Salisbury*, Geol., I. 494.—**Gravity fault,** an inclined fault the upper side of which has slipped down on the under side, because, being the portion with the smaller base and therefore with the less support, gravity is conceived to have pulled it down, when, under tension, the strata drew apart; a normal fault. *Geikie*, Text-book of Geol., p. 702.—**Normal fault.** Same as *gravity* ★*fault*. The great majority of faults in nature are normal faults.—**Overthrust fault.** See *reverse fault*.—**Rhine-Ticino fault,** a great line of disturbance of strata, antedating the Triassic period and separating the Eastern from the Western Alps. The line extends from the upper Rhine valley, on the northeast, to the valley of the Ticino, on the southwest.

faultage (fâlt′āj), *n.* [*fault* + *-age*.] In *geol.*, faults collectively considered.

My geological surveys go to prove that all that portion of Iceland has subsided, there being well-marked lines of *faultage* going down to the bases of the mountains.
Geog. Jour. (R. G. S.), XIII. 272.

fault-breccia (fâlt′brech″iä), *n.* A breccia formed by the crushing of rock along a fault. Sometimes called *fault-conglomerate*.

fault-bundle (fâlt′bun″dl), *n.* In *geol.*, a group of faults.

Varied arrangements in *fault-bundles* and fault-polygons. *Geog. Jour.* (R. G. S.), XVI. 464.

fault-conglomerate (fâlt′kon-glom″e-rāt), *n.* Same as ★*fault-breccia*.

fault-fissure (fâlt′fish″ūr), *n.* The fissure produced by a fault, even though it is afterward filled by a deposit of minerals. Veins in fault-fissures are especially valued by miners because they are generally believed to be persistent to relatively great depths. *Geikie*, Text-book of Geol. (4th ed.), p. 372.

faulting, *n.*—**Block-faulting,** a process resulting in a series of intersecting faults which serve to break up the surface of the earth into polygonal blocks, which are afterward modified by erosion. See *fault-block*.

fault-plane (fâlt′plān), *n.* The plane or approximate plane along which faulting has occurred. It is not, usually, a simple plane, but is rather a zone of some width throughout which there is shattering and movement.

Inclined *fault-planes* with downthrow towards one trough may be parallel with reverse *fault-planes* upon which a portion of an arch has moved backward over an adjacent trough. *Geog. Jour.* (R. G. S.), XVI. 466.

fault-scarp (fâlt′skärp), *n.* The upthrow side of a fault left standing as a line of cliffs. The tendency of erosion is to destroy such inequalities, so that a fault-scarp is rarely well preserved. *Chamberlin and Salisbury*, Geol., I. 491.

fault-vein (fâlt′vān), *n.* A mineral vein deposited in a fault-fissure.

fault-vent (fâlt′vent), *n.* In *geol.*, a volcanic vent located on a fault.

During the geological periods when the *fault-vent* continued intermittently active, the form of the sill-complex was capable of being re-moulded periodically in harmony with the localised crust-stresses.
Nature, Sept. 3, 1903, p. 413.

fauna, *n.*—**Euloma-Niobe fauna,** an assemblage of extinct organisms, characterized by the trilobites *Euloma* and *Niobe*, at the base of the Lower Silurian system which extends from Swedish Lapland to Languedoc in France. It bears a transitional character between the Cambrian and Silurian faunas.—**Prenuncial faunas.** See *doctrine of* ★*colonies* and ★*prenuncial*.

faunally (fâ′nal-i), *adv.* As regards the fauna or zoölogical remains (of some formation or area).

Faunally the same species characterize the lower and upper members of the Portage.
Science, Feb. 5, 1904, p. 235.

faunistically (fâ-nis′ti-kal-i), *adv.* As regards the fauna; faunally.

faunule (fân′ūl), *n.* [NL., *faunula*, dim. of *fauna*, fauna.] A little fauna; a subdivision or subordinate association of the species of a fauna: used especially of local congeries of fossils in the successive beds of a given formation.

Favier powders. Same as *Favier* ★*explosives*.

faviform (fav′i-fôrm), *n.* [L. *favus*, honeycomb, + *forma*, form.] Resembling a honeycomb in appearance.

favord, *a.* A simplified spelling of *favored*.

favored, *a.* **3.** In *organic chem.*, noting that configuration of the atoms or radicals in a compound in which the atoms which have an attraction for each other are brought as close together as possible. Thus of the two configurations for ethylene chlorid,

b is said to be a *favored* configuration because in it the chlorin and hydrogen atoms are nearer together than in *a*.

favorit, *n.* and *a.* A simplified spelling of *favorite*.

favositoid (fav-ō-sī′toid), *a.* [*Favosites* + *-oid*.] Pertaining to or having characters of the genus *Favosites*.

Tangential sections very near the surface of the recticulation show minute points projecting into the openings of the mesh suggesting the septa of a *favositoid* coral or certain of the hydrocorallines.
Amer. Jour. Sci., Aug., 1904, p. 136.

favous (fā′vus), *a.* [NL. **favosus*, < L. *favus*, honeycomb.] **1.** Resembling a honeycomb.—**2.** Of or relating to favus.

favrile (fav′ril), *a.* and *n.* [Formed (by L. C. Tiffany, the producer of the glass, in 1894), with a differentiation of form intended to make the word distinctive in trade, from the normal type **fabrile*, < L. *fabrilis*, of or pertaining to an artisan, < *faber*, an artisan, a smith: see *fabric*.] **I.** *a.* Artistic in a distinctive and concentrated way, namely, characterized by rich colors, enameling, and iridescence, with decorative effect: applied to glass so produced. See the etymology.

II. *n.* A highly decorative colored, enameled, and iridescent glass, usually in vase-forms.

fawn[2], *n.* **3.** The color of the fawn; a light yellowish brown.

fawn-colored (fân′kul″ord), *a.* Of a light yellowish-brown color.

fawn-lily (fân-lil′i), *n.* A dog-tooth violet, *Erythronium giganteum*, of the Coast Range of California and Oregon. This and other western species are much finer plants than the eastern, *E. Americanum*. The name was proposed by John Burroughs and alludes to the two leaves, which resemble fawns' ears, and the lily-like flower. Also called (with other species) *chamise-lily*.

faxiness (fak′si-nes), *n.* [Dial. var. of *foxiness*[2].] In *veg. pathol.*, a disease of flax, of

unknown origin, which turns the tops of the plants red and renders them unfit for retting.

faya (fä′yä), *n.* [Chamorro name.] In the Marianne Islands, *Tristiropsis obtusangula*, a tree belonging to the *Sapindaceæ*, with bipinnate leaves having usually three pairs of pinnæ, each with 4 to 6 leaflets, and with ellipsoidal, obtusely 3-angled fruit covered on the surface with minute dust-like hairs, and containing a bony putamen. On the island of Guam the wood is used in the construction of small boats.

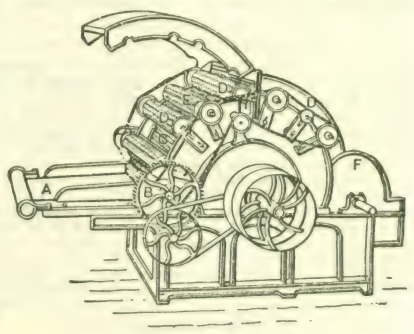
Fayal lace. See ★*lace*.

fayberry (fā′ber″i), *n.* Same as *feaberry*.

F. B. An abbreviation (*a*) of *Fenian Brotherhood*; (*b*) of *Free Baptist*.

F. B. O. U. An abbreviation of *Fellow of the British Ornithologists' Union*.

F. B. S. An abbreviation of *Fellow of the Botanical Society*.



F. C. An abbreviation (*b*) in *freemasonry*, of *Fellow-craft*; (*c*) [*l. c.*] of the Latin *fidei commissum*, bequeathed in trust.

F. C. P. An abbreviation of *Fellow of the College of Preceptors*.

fcp., fcap. Abbreviations of *foolscap*.

F. C. S. An abbreviation (*a*) of *Fellow of the Cambridge Philosophical Society*; (*b*) of *Fellow of the Chemical Society* (London); (*c*) [*l. c.*] in *marine underwriting*, of *free of capture and seizure*.

fearnaught, *n.* **2.** A machine with a main cylinder, workers, and strippers with steel hooks,

Fearnaught.
A, feed-table; B, feed-rollers; C, main cylinder; D, workers; E, strippers; F, doffer. (From Vickerman's "Woollen Spinning.")

or teeth, for teasing or opening wool preparatory to carding.

feasance (fē′sans), *n.* [Also *fesaunce*; < AF. *fesance*, *fesaunce* (F. *faisance*), < *fesant*, ppr. of *faire*, do: see *fact*. Cf. *malfeasance*, *nonfeasance*.] Performance; doing or performing an act or thing; the act or fact of omitting to do or perform an act or thing.

Feast of ingathering. See *Jewish* ★*festivals*.—**Feast of lights.** See ★*Hanukah*.—**Feast of Unleavened Bread, Feast of Weeks.** See *Jewish* ★*festivals*.

feast-rite (fēst′rīt), *n.* A rite relating to the celebration of a feast.

feather, *n.*, **3.** (*b*) In *archery*, a piece cut from one side of a feather, trimmed to the desired size and shape, and glued upon an arrow near the nock to improve its flight. Sometimes other material is used. Ordinarily an arrow has three feathers set at equal distances on its circumference: see *cock-feather*.—**Balloon** or **parabolic feather,** a feather trimmed to a round shape toward the nock of the arrow.

feather, *v.* **I.** *trans.* **7.** To drop (melted metallic tin) into cold water, which has the effect of spreading it out with a feathery appearance.

II. *intrans.* **4.** To make a quivering movement of the tail: said of dogs.—**To feather out,** specifically, said of plants that throw out many adventitious shoots after they are pruned or headed back.

feather-beds (feᵀᴴ′ėr-bedz), *n.* A plant of the genus *Chara*, so called from the thick and soft mat which these plants form at the bottom of pools in which they grow.

feather-board (feᵀᴴ′ėr-bōrd), *n.* A board with a tapered section thinner at one side than at the other; a clapboard. [Great Britain.]

Feathered antimony, tin. See ★*antimony*, ★*tin*.

Feather-edge machine, in *shoe-manuf.*, a hand-power machine for skiving off or cutting a feather-edge on the shanks of shoe-soles.

feather-fern (feᵀᴴ′ėr-fėrn), *n.* An ornamental branching herb of the saxifrage family, *Astilbe Japonica*. See *Spiræa*, 2, (*b*), and ★*Astilbe*.

feather-follicle (feᵀᴴ′ėr-fol″i-kl), *n.* The little pit in which the base of a feather rests: formed by the sinking of the feather-papilla.

Featherfoot spider. See ★*spider*.

feather-germ (feᵀᴴ′ėr-jėrm), *n.* The papilla from which a feather is developed. In the embryo it lies on the surface of the skin, but in older birds at the base of each feather, within the feather-follicle.

feather-grass, *n.* 3. See ★*chloris*, 4.—**4.** One of several American species of *Stipa*, including the crested feather-grass, *S. coronata*, of Arizona and California, and the slender feather-grass, *S. tenacissima*, of Texas and New Mexico; also *S. comata*, one of the needle-grasses, and *S. viridula*, the featherbunch-grass.—**5.** A weed, *Leptochloa mucronata*, of cultivated grounds southward in the United States and in Mexico and Cuba. Its panicle is composed of many slender spreading branches. See *slender-grass*.—**6.** The velvet-grass, *Holcus lanatus*.

feathering, *n.* **6.** In *violin-playing*, a very light and delicate use of the bow.—**Double feathering,** an arrangement of cusps by which smaller ones are used to subdivide the curve inclosed by the larger ones. See cut under *cusp*, Fig. 3.

feather-key (feᵀᴴ′ėr-kē), *n.* In *mach.*, a key fastened to a wheel which slides along a shaft but also turns with the shaft, the key sliding along an axial groove, spline, or slot. The key may be on the shaft, and the groove or slot be cut in the wheel.

feather-papilla (feᵀᴴ′ėr-pa-pil″ą), *n.* The minute conical elevation which marks the place of development of a feather. It subsequently sinks below the level of the skin and lies at the bottom of the feather-follicle.

feather-pulp (feᵀᴴ′ėr-pulp), *n.* The assemblage of cells by which a growing feather is nourished, forming a soft, pulpy mass within the base of a young feather.

feather-sedge (feᵀᴴ′ėr-sej), *n.* A beard-grass, *Andropogon saccharoides*, so called from its plume-like panicle. It occupies 'sedge-grass prairies' inland in the southwestern United States and serves the purpose of grazing. Sometimes called *cotton-grass*.

Feather-sedge (*Andropogon saccharoides*).
a, plant, one fourth natural size; *b*, perfect spiklet; *c*, sterile spiklet, enlarged. (From U. S. D. A.)

feather-stitch (feᵀᴴ′ėr-stich), *v. t.* To ornament with feather-stitching.

feather-stroke (feᵀᴴ′ėr-strōk), *n.* In *Eng. billiards*, a delicate touch by which the cue-ball is pushed from balk past the first object-ball and into pocket, moving the object-ball only slightly. Also called *quill-stroke*. It has long been abolished among experts. *W. Broadfoot*, Billiards, p. 370.

Feather-tongue spline. See ★*spline*.

feather-tract (fēᵀᴴ′ėr-trakt), *n.* Same as *pteryla*.

feather-tree (feᵀᴴ′ėr-trē), *n.* **1.** The smoke-tree, *Cotinus Cotinus*.—**2.** The valley-mahogany, *Cercocarpus parvifolius:* so called in California on account of the feathery styles of the fruit.

feather-wedge (feᵀᴴ′ėr-wej), *n.* Same as *fox-wedge*.

feather-weed (feᵀᴴ′ėr-wēd), *n.* **1.** One of the red algæ of the genus *Ptilota*.—**2.** The common everlasting, *Gnaphalium obtusifolium*.

feature, *v. t.* **2.** To make a feature or special attraction of; display or mention prominently; give prominence to: as, A B is *featured* at the Academy as Othello. [Chiefly in newspaper and theatrical use.]

feazings, *n.* See ★*feezings*.

febricity (fe-bris′i-ti), *n.* [Erroneously formed (as if from a L. adj. **febricus*) from L. *febricitare*, have a fever, ⟨ *febris*, a fever: see *fever*.] A state of fever or feverishness. *Browning*.

febril, *a.* A simplified spelling of *febrile*.

Febrile urine. See ★*urine*.

Febronian, *a.* **II.** *n.* One who holds the Febronian doctrine, which maintains the primacy of the body of the episcopate over the Pope.

fec. An abbreviation of the Latin *fecit*, (he) did it or made it.

Fechnerian (feċh-nē′ri-an), *a.* Relating to G. T. Fechner (1801–87), a German psychophysicist: as, *Fechnerian* psychophysics, the *Fechnerian* method of average error.

Fechner's cloud, paradoxical, shadow experiment. See ★*experiment*.—**Fechner's colors, formulas.** See ★*color*, ★*formula*.

fecht (feċht), *v.* and *n.* The Scotch form of *fight*.

federal, *a.*—**Federal architecture,** in the United States, the architecture of the time since the adoption of the Constitution, as distinguished from that of the period before, which is often called *colonial* or *old colonial*.—**Federal forest.** See *national* ★*forest*.

federalistic (fed″e-ral-ist′ik), *a.* **1.** Pertaining to federalism.—**2.** [*cap.*] Pertaining to the Federalist party in the United States.

federate, *v.* **II.** *intrans.* To unite in forming a league or federation.

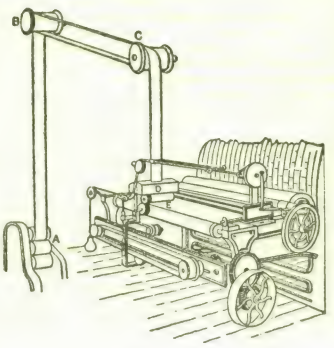
> Always as the Federative work goes on, it perfects itself, and Patriot genius adds contribution after contribution. Thus, at Lyons, . . . we behold as many as fifty or some say sixty thousand, met to *federate;* and a multitude looking on, which it would be difficult to number. *Carlyle*, French Rev., II. i. 8.

Federation of labor, a national or other inclusive organization of trade-unions or other organizations of wage-earners; especially in the United States, the American Federation of Labor.

> The *Federation of Labour* goes more wisely to work, dealing with particular grievances of particular trades, and pressing for redress of flagrant grievances. Appeal is made to the State mainly when the Federation has failed; action through the State is the second resource, not the first. *Encyc. Brit.*, XXXII. 671.

Social Democratic Federation, an important socialist society founded in London, in 1881, by H. M. Hyndman, William Morris, and other socialistic reformers, under the name of the 'Social Federation.' Two years later the present name was adopted. It is the largest of the socialist societies in the United Kingdom. Its theories and its teachings are largely those of Karl Marx.

federico (fā-dā-rē′kō), *n.* [Spanish name.] See ★*fadang*.



federovite (fed′e-rō-vīt), *n.* [Named for E. *Federov*, a Russian mineralogist.] A variety of pyroxene related to ægirite.

fee[1], *n.* **6†.** In *hunting*, certain portions of the dead animal which were distributed among the huntsmen according to definite regulations.

fee[2], *n.*—**Fee and life-rent,** in *Scots law*, two estates in land, the former importing absolute ownership and the latter a life-estate. The two estates might coexist in different persons at the same time, and from the loose way in which the expressions were used by conveyancers, difficulties of construction arose, and the term *life-rent* came often to import a fee: for example, an estate "to husband and wife in conjunct fee and life-rent and children of the marriage in fee" meant that the surviving husband or wife took the fee; and following this construction, an estate to a father in life-rent and to his heirs in fee gave the fee to the father. Accordingly, it came to be held that the technical meaning of *life-rent* was fee in all cases where the expression would, in its ordinary meaning, indicate that the fee was left over to those who would naturally take it by inheritance. This construction yielded to the ordinary meaning of the expression when accompanied by words or conditions clearly indicating such intent.

feed, *v. t.* **6.** In *founding*, to supply extra metal to (a thick, heavy casting) while it is setting. This is done by having a shrink-head or riser over the thick portion of the casting and keeping communication open between this and the metal in the mold by working a feeding-rod up and down until the metal sets. The object of doing this is to prevent the formation of shrinkage-holes in the casting by the contraction of the metal as it cools, this process beginning from outside and leaving interior holes unless the latter are filled.

feed, *n.*—**Blamire's feed,** a lattice-apron device for automatically conveying cotton, wool, and like fibers from one carding-machine to another, the fibers being delivered at right angles to the direction in which they are received.—**Continuous feed.** See *intermittent* ★*feed*.—**Cut feed,** in *stock-raising*, animal food or fodder, particularly hay, which has been cut into small pieces by running it through a cutter.—**Intermittent feed,** the feed given to a tool, or to the work, by means of a pawl and ratchet or a similar device: distinguished from the *continuous feed* obtained by the use of a constantly rotating screw.—**Piano feed,** a form of feeding-device, arranged in sections resembling piano-keys, for equably delivering cotton into a scutching-machine. *Nasmith*, Cotton Spinning, p. 80.—**Rough feed.** See ★*roughage*, 2.—**Scotch feed,** a self-acting feed used in wool-carding for reducing the carded wool into a flat ribbon about five inches wide and half an inch thick, and delivering it to a succeeding carding-machine.—**Silent feed,** a mechanism for moving a tool to the work or the work to a tool, in any machine-tool or woodworking machine in which the intermittent effect of a ratchet and dog is replaced by a friction apparatus, so that there is no audible click when the feed-motion acts. The most usual forms embody the idea of a cam or toggle, which slips when pulled in one direction, but which nips upon a suitable surface when motion occurs in the opposite direction, and in this second position drives the feed-gear.—**Star-feed,** a device for feeding a tool to its work by means of a screw on a lathe-carriage or boring-bar. As the work or

Scotch Feed.
A, calender- or drawing-rolls; B, C, carrying-pulleys for the ribbon-sliver; D, carrier for spreading the sliver; E, feed-apron. (From Vickerman's "Woollen Spinning.")

the bar revolves, a projecting arm of a rimless wheel on the end of the screw strikes an adjusted pin, which compels a partial revolution of the wheel and feed-screw. The projecting arms are of such a shape as to suggest a star of four, five, six, or more points.

feed-bag (fēd′bag), *n.* Same as *nose-bag* (which see).

feed-bed (fēd′bed), *n.* **1.** A place where animals feed.—**2.** A level surface forming a table along which material is fed to a machine.

feed-board (fēd′bōrd), *n.* The table attached to a printing- or folding-machine which upholds the pile of paper that is fed into the machine sheet by sheet. See *laying-on* ★*table*.

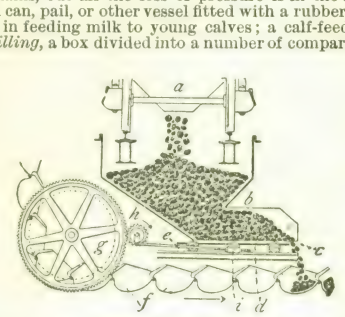
feed-boiler (fēd′boi″lėr), *n.* Same as ★*farm-boiler*.

feed-box (fēd′boks), *n.* **1.** A box which contains a set of feed-gears or other apparatus for feeding a machine.—**2.** A box in which oats or other feed for horses or cattle is kept.

feed-cloth (fēd′klôth), *n.* Same as ★*feed-sheet*.

feed-cock (fēd′kok), *n.* The valve or cock by which the supply of feed-water for a boiler is controlled.

feed-cone (fēd′kōn), *n.* A cone-pulley, or a cone of gears, used to change the rate of feed on a machine, in order to adjust it to the cutting speed which is best for the material or for the tool.

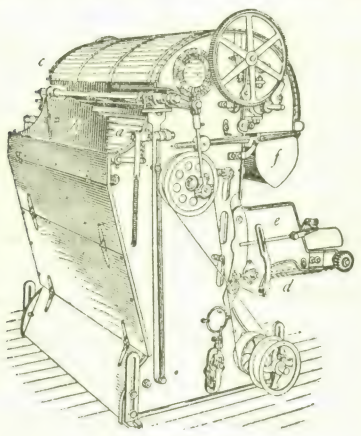


feed-cup (fēd′kup), *n.* An oil-cup; specifically, an oil-cup which holds a supply sufficient to last for some time, and from which the oil is fed at a uniform rate.

feed-cutter (fēd′kut″ėr), *n.* A machine for cutting hay, clover, ensilage and the like. Such machines are made in many forms.

feed-door (fēd′dōr), *n.* The opening or door-frame through which fuel is supplied to a stove, furnace, gas-retort, etc. In heating-furnaces and boilers it may be at the side, just above the fire-pot; in a magazine-stove or cook-stove, at the top and closed by a lid; in a gas-retort, at one end, serving also as the discharging door; and in a blast-furnace, water-gas plant, or coke-oven, at the top.

feed-engine (fēd′en″jin), *n.* A feed-pump.



feeder, *n.*, **6.** (*d*) (2) A part of a machine, such as a finger or arm, for pushing along the material to be operated upon. (*g*) (2) In *elect.*, a conductor which leads from the generating-station to a point in the distribution-system, for the supply of electric current. In low-pressure electric distribution-systems, in which an appreciable loss of pressure occurs between generator and consumer, a system of mains is provided, from which the current is supplied to customers, and a system of feeders which supply the mains from the generating-station at so many points that no appreciable variation of pressure occurs in the mains, but all the loss of pressure is in the feeders. (*h*) A can, pail, or other vessel fitted with a rubber nipple, used in feeding milk to young calves; a calf-feeder. (*i*) In *milling*, a box divided into a number of compartments,

Automatic Coal-feeder.
a, hopper-car on railroad-track discharging coal to feeder; *b*, hopper of feeder; *c*, delivery; *d*, reciprocating gate; *e*, short track on which gate travels; *f*, bucket-conveyer traveling on track (not shown); *g*, wheel operating and guiding conveyer, also geared to control small gear; *h*, small gear that by its rotation causes gate (through the crank and connecting-rod) alternately to open and close; *i*, screw for adjusting movement of gate to deliver exact load to each bucket. Arrows show direction of travel of conveyer and rotation of gear.

each provided with an adjustable gate. It is used and combined with blending-machines for distributing the different flours or meals in exact proportions and at the same speed to the blender. It is sometimes united with a dividing- and distributing-machine for the purpose of feeding several bolting-machines or other machines, and is then called a *divider and feeder*. (*j*) In *transportation*, any automatic machine which feeds or supplies loose material in bulk to a conveyer or elevator. It may feed the load to a belt conveyer in a continuous stream, or intermittently to a bucket conveyer, filling one bucket at a time; it may form the delivery end of a conveyer, supplying coal to crusher-rolls or to another conveyer. It is made in many forms. See cut on previous page.

9. The player who tosses the ball to the batsman (in rounders and similar games); hence, the name of a particular game resembling rounders. *N. E. D.*—**Automatic feeder**, a mechanical device used in mining, to secure a uniform and definite supply of ore for treatment.—**Bramwell feeder**, in *textile, manuf.*, a mechanical device for feeding automatically raw material, as wool or cotton, to a machine: invented by W. C. Bramwell in 1876.

Bramwell Feeder.

a, elevating toothed apron; *b*, box or case; *c*, oscillating comb; *d*, feed-lattice; *e*, feed-table; *f*, weighing-scale.

feeder-bar (fē′dėr-bär), *n.* An oscillating bar, in a cotton-machine, by which the supply of cotton to the machine is controlled. Also called *feeler-bar*. *Taggart*, Cotton Spinning, II. 21.

feeder-head (fē′dėr-hed), *n.* Same as *feed-head*.

feed-gage (fēd′gāj), *n.* A small guide-post, attached to a printing- or folding-machine, against which the feeder of the sheets places each sheet of paper, for the purpose of securing uniform and exact margins: oftener called, in printing, the *feed-guide*.

feed-gate (fēd′gāt), *n.* **1.** The gate or opening through which material is fed to a machine, as that which admits water to a turbine.—**2.** The opening into a mold, through which the molten metal is poured.

feed-gear (fēd′gēr), *n.* The mechanism by which either the material operated upon or the tool is fed forward.

feed-grinder (fēd′grīn″dėr), *n.* A power grinding-mill for reducing corn, wheat, oats, etc., to coarse meal suitable for feeding to cattle. It uses steel burs in place of stones, and is often fitted with an automatic feeding-device and elevator for lifting the grain to a sack-filler.

feed-guide (fēd′gīd), *n.* See ★*feed-gage*.

feed-hopper (fēd′hop″ėr), *n.* A hopper into which material is poured at intervals and from which it is regularly fed to a machine.

feeding, *n.*—**Feeding standard,** in *stock-raising*, the experimentally established amounts of the different nutritive substances required by animals under specified conditions. Feeding standards widely adopted give the amounts required per day (per 1,000 pounds of live weight) of protein, carbohydrates, and fat, together with the fuel-value of the ration, for oxen at rest, at work, etc.—**Forced feeding,** the introduction of food into the stomach through a tube in cases of attempted suicide by starvation.

feeding-cake (fē′ding-kāk), *n.* The solid cake left from the expression of colza, cotton-seed, and other oils, used as food for cattle. *Groves and Thorp*, Chem. Technol., II. 26.

feeding-dish (fē′ding-dish), *n.* A circular plate or dish which forms the feeding-mechanism of the Hübner continuous cotton-combing machine.

feeding-groove (fē′ding-gröv), *n.* A longitudinal groove on the ligula of a honey-bee worker by the use of which one bee feeds another.

feeding-machine (fē′ding-ma-shēn″), *n.* An apparatus attached to a printing- or folding-machine, for the automatic delivery of single sheets to the machine.

feeding-rod (fē′ding-rod), *n.* A wrought-iron rod about ¼ to ⅝ of an inch in diameter, used by foundrymen to feed heavy castings, by keeping open a passage for fluid metal during the shrinking process.

feeding-stuff (fē′ding-stuf), *n.* The various kinds of food for cattle. [Local Eng.]

This great change in country dairying . . . has necessitated the extensive purchase of *feeding-stuffs* for the production of milk, especially in winter time.
Encyc. Brit., XXVII. 363.

feed-pawl (fēd′pâl), *n.* A pawl or finger which imparts motion to a ratchet-wheel to feed a machine, or which receives such motion from the feeding-mechanism.

feed-peg (fēd′peg), *n.* A device, connected with a star-wheel, which gives an intermittent rotary motion to one of the feed-rolls of a Heilmann cotton-combing machine, for projecting the cotton forward through nippers. *Thornley*, Cotton Combing Machines, p. 39.

feed-regulator (fēd′reg-ū-lā-tor), *n.* A device for regulating the amount of feed-water to be supplied to a steam-boiler. Such a device is particularly necessary on coil, water-tube, or flash boilers on account of the small reserve-supply of water they contain.

feed-rod (fēd′rod), *n.* **1.** A rod or shaft which actuates a feed-motion.—**2.** Same as ★*feeding-rod*.

feed-sheet (fēd′shēt), *n.* A movable apron or table which feeds material into a machine, as the feed-apron of a wool-carding engine. Also called *feed-cloth*.

feed-table (fēd′tā″bl), *n.* In *textile-manuf.*, a movable, flexible table, usually constructed of narrow slats of wood, for carrying or feeding material into a machine.

feed-tank (fēd′tangk), *n.* **1.** A reservoir or vessel in which the water to be supplied or fed to a steam-boiler is contained. The water may be hot or cold: when hot the tank is usually closed to prevent loss by evaporation.—**2.** A reservoir or vessel designed to hold liquid fuel, such as kerosene or gasolene, which is to be fed to a burner.—**3.** A reservoir or tank containing reagents, or raw materials, which are to be fed to a vessel in which some chemical or manufacturing process is conducted.

feed-trough, *n.* **2.** A long, narrow trough, about 18 inches wide, 4 inches deep, and 1,500 feet long, placed between the rails of a railway-track and partly filled with water. A scoop suspended from the tender of the locomotive of a moving train and dipping into the trough causes the water to rise along the slope of the scoop and pass into the water-tank of the tender.

feed-wheel (fēd′hwēl), *n.* A hand-wheel for operating the feeding-mechanism of a machine.

feed-wire (fēd′wīr), *n.* Same as *feeder*, 6 (*g*).

feel[1], *v. t.*—**To feel the blade,** in *fencing*, to be aware of the otherwise imperceptible preparations of the opponent for attack through the contact between the foils or swords.

feeler, *n.* **6.** A thickness-gage.—**7.** A thin piece of metal for determining the space or play left in a bearing or for determining the distance between the two plates in a riveted joint.

feeler-bar (fē′lėr-bär), *n.* Same as ★*feeder-bar*.

feeling, *n.*—**Common feeling.** See ★*common*.—**Discordant feeling,** in Wundt's psychology, a total feeling, derived from the oscillatory feeling, in which the affective oscillations follow each other very quickly, and the successive feelings themselves are strongly opposed: instances are tickling, doubt, the feeling of tonal dissonance, etc.—**Extensive feeling,** in *psychol.*, a feeling which arises from the spatial and temporal arrangement of the sense-elements of a perception or idea.—**Intensive feeling,** in Wundt's psychology, a feeling, or affective process, which depends upon the relation of the qualitative attributes of the sensational elements in perceptions or ideas.

The expressions "*intensive*" and "extensive" do not refer to the character of the feelings themselves, for they are in reality always *intensive*, but to the conditions for the rise of these feelings.
W. Wundt (trans.), Outlines of Psychol., p. 164.

Law of feeling, in *psychol.*, the doctrine that, in many cases, association of ideas depends, not upon the contiguity or resemblance of the ideas themselves, but upon a permanent or transient state of the feelings.

The writers who have pointed out this influence (often efficacious though latent) have conceived this superior law, which might be called the *law of feeling*, in two different ways, some as absolute and universal, others as partial and local.
T. Ribot (trans.), Psychol. of Emotions, p. 173.

Oscillatory feeling, in Wundt's psychology, a total feeling in which opposing feelings, or affective processes, alternate with each other in rapid succession.—**Partial feeling,** in Wundt's psychology, a feeling, or affective process, which enters as a component into a total feeling.

Every composite feeling may, accordingly, be divided (1) into a total feeling made up of all its components, and (2) into single *partial feelings* which go to make up the total feeling. These *partial feelings* are in turn of different grades, according as they are simple sense-feelings (*partial feelings* of the first order), or feelings which are themselves composite (*partial feelings* of the second or higher orders).
W. Wundt (trans.), Outlines of Psychol., p. 159.

Total feeling, in Wundt's psychology, the affective experience which results from the simultaneous presence of separate affective processes in consciousness; the resultant of a number of partial feelings.

feeling-effect (fē′ling-e-fekt″), *n.* In *psychol.*, the affective, as distinguished from the sensory, result of the application of a stimulus.

Likeness may mean "likeness of *feeling-effect*," as in the former case it means likeness of direct sense-effect. Green and blue would then be like, because they put us in like moods, of restfulness or quiet.
E. B. Titchener, Exper. Psychol., I. ii. 54.

feeling-tone (fē′ling-tōn), *n.* In *psychol.*, affective experience, as referred to the intellectual experience which it accompanies and colors; more especially, simple affection, as referred to the sensation which it thus accompanies, and of which, in some psychological systems, it is even regarded as an attribute; affective tone.

Perhaps the most efficient agent in determining the manner in which delusions are formed is the *feeling-tone* of pleasantness and unpleasantness.
J. W. Slaughter, in Amer. Jour. Psychol., XI. 307.

feezings (fēz′ingz), *n. pl.* [*feeze*[3].] *Naut.*, the unlaid end of a rope.

Fehling's reagent, test. See ★*reagent*, ★*test*[1].

fei (fā′ē), *n.* [Tahitian *fei*, the vernacular name of the plant and its fruit.] The wild banana of Polynesia and New Caledonia, *Musa Fehi*. It is distinguished from cultivated bananas and plantains in having erect fruit-spathes, bearing numerous crowded, angular, orange-colored fruits containing a few seeds. The fruit is prepared in various ways for food: sometimes beaten to a consistency of paste and made into puddings together with cocoanut-custard and other ingredients. In Samoa, where it is called *soaa*, the natives prepare from the sap a dark-purple dye with which they stain their bark-cloth, and which they sometimes use for ink. The species has been introduced into the Hawaiian Islands and is found growing in some of the higher ravines of the island of Oahu.

feint, *n.* **3.** *pl.* See *faint*, *n.*, 2.

fei-tsui (fā-tswē′), *n.* [Chin. *fei-ts'ui*: *fei*, *fé*, the blue-green kingfisher; *ts'ui*, the feathers of this bird, used in ornamental feather-work.] A beautifully variegated green variety of jadeite much prized, on account of its coloration, by the Chinese. The prevailing shade is a bright emerald- or cabbage-green.

fel (fel), *n.* [L., gall: see *gall*[1].] Gall; bile.—**Fel bovis,** the pharmacopœial name for ox-gall.

feldsparic (feld-spär′ik), *a.* [*feldspar* + *-ic*.] Same as *feldspathic*. *N. E. D.*

feldspathization (feld-spath-ī-zā′shọn), *n.* [*feldspath(ic)* + *-ize* + *-ation*.] In *petrog.*, the development of feldspar in rocks through contact-metamorphism. *Fournet*.

feldspathize (feld′spath-īz), *v. t.*; pret. and pp. *feldspathized*, ppr. *feldspathizing*. [*feldspath* + *-ize*.] To change to feldspar: a term employed in geology to describe this metamorphic process. *Geikie*, Text-book of Geol., p. 780.

feldspathoid (feld′spath-oid), *n.* [*feldspath* + *-oid*.] Feldspar or some other species (nephelite, sodalite, leucite, and the scapolites) which plays a similar part in the composition of rocks.

Félibre (fā-lēbr′), *n.* [F. *Félibre*, mod. Pr. *felibre*, a particular use, in connection with *Felibrige*, of *felibre*, a parishioner, usually identified with Sp. *feligrés*, a parishioner, of unknown origin but conjectured by some to be reduced from L. *filius gregis*, 'son of the flock,' or *filius ecclesiæ*, 'son of the church.' A literary fancy has made *félibre* mean 'bookmaker,' as if from Pr. *faire* (< L. *facere*), make, + *libre* (< L. *liber*), book.] A member of the literary society known as ★*Félibrige* (which see).

Felibrian (fe-lib′ri-an), *a.* [F. *félibrien*, < *Félibre*: see ★*Félibre*.] Relating or pertaining to the Félibres or the Provençal literature, etc., produced by them: as, *Felibrian* studies.

The two *Félibrien* societies maintained in Paris by the children of the South of France.
T. A. Janvier, A Feast Day on the Rhone, *i.*

Félibrige (fā-lē-brēzh′), *n.* [F. *Félibrige*, Pr. *Felibrige*, a name adopted by the society mentioned: see ★*Félibre*.] A society constituted in Provence, in 1854, for the maintenance and purification of the Romance dialects of the south of France, represented by the Provençal, and for the promotion of Provençal literature and art.

felic (fel′ik), *a.* [*fel*(*dspar*) + *-ic.*] In *petrog.*, in the quantitative system of classification (1902), a term used to signify that a rock, or group of rocks or minerals, has the properties of or contains feldspar. See *quantitative system of igneous* ★*rocks.*

Felichthys (fel-ik′this), *n.* [NL., < L. *felis*, cat, + Gr. *ἰχθύς*, fish.] The generic name of a large sea-catfish, known as *gaff-topsail cat*, from the elevated dorsal fin. The common species is *F. felis.*

fellaheen (fe-lä′hēn), *n. pl.* See *fellah.*

felleous (fel′ē-us), *a.* [L. *felleus*, < *fel* (*fell-*), gall.] Relating to the bile; bilious.

fellmongery (fel′mung-gėr-i), *n.* [*fellmonger* + *-(er)y.*] The business of a fellmonger or his establishment.

> Woollen mills, tanneries and *fellmongeries.*
> *Nature*, Aug. 28, 1902, p. 413.

Fell sandstone. See ★*sandstone.*

Felly cut-off and doweling machine, a saw-table with two circular saws used to cut off the ends of felly-blanks, at the right length and proper bevel, and to make the dowel-seats.— **Felly-planing machine,** a wood-planer for planing strips and blanks for fellies, shafts, carriage-bows, etc. It planes several at once. A more complicated machine is allied to a molding-machine and employs one, two, or four cutter-heads placed vertically or horizontally to dress two or four sides of bent fellies.— **Felly-rounding machine,** a machine for rounding and finishing the inner curve of bent and planed fellies. It is essentially a molding-machine having one horizontal cutter-head.— **Felly-truing machine,** a sander used in finishing fellies. See ★*sander.*

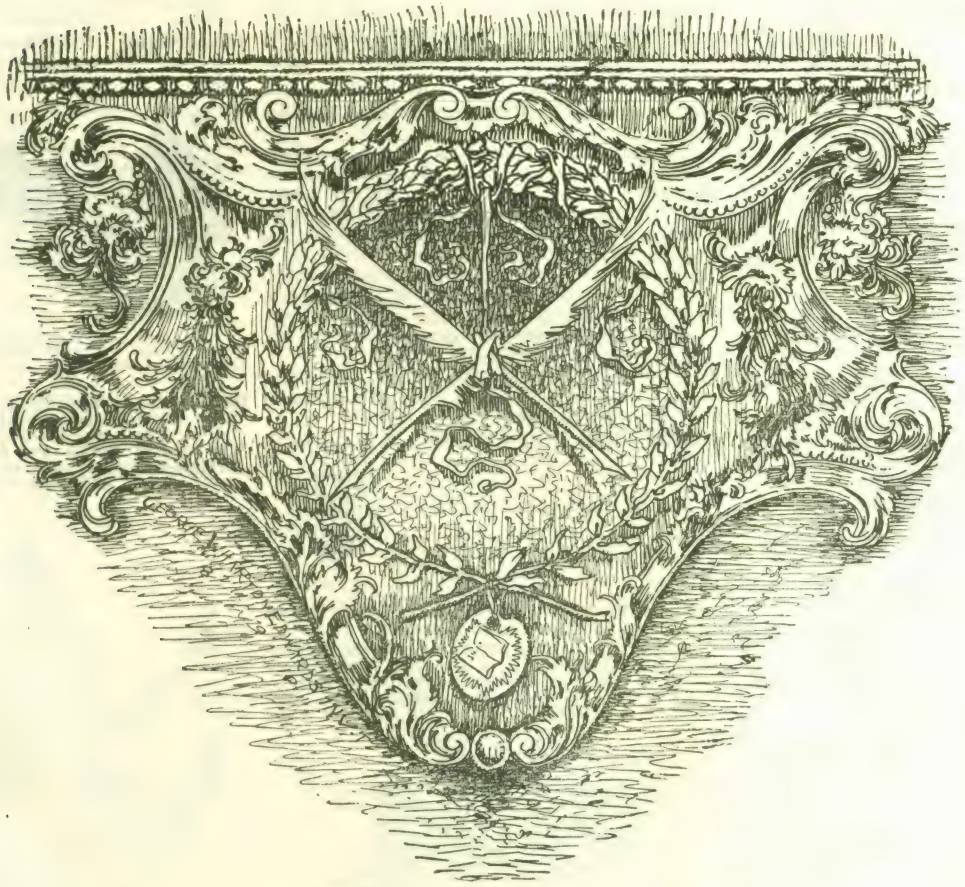
felly-holder (fel′i-hōl″dėr), *n.* A felly-plate and a T-head bolt which together form a clamp over the joint in a felly and prevent the wood from splitting.

felon-grass (fel′on-gras), *n.* Either of two plants reputed to cure felons: (*a*) The masterwort, *Imperatoria Ostruthium.* (*b*) The black hellebore, *Helleborus niger.*

felon-herb (fel′on-ėrb), *n.* Either of two plants reputed to cure felons: (*a*) The common mugwort, *Artemisia vulgaris.* (*b*) The mouse-ear hawkweed, *Hieracium Pilosella.* See *mouse-ear*, 1.

felonice (fē-lon′i-sē), *adv.* [Law L., adv. from **felonicus*, adj., < *felo*(*n-*), felon.] In *Eng. law*, feloniously: a term formerly required to be used in all indictments for felony.

felon-weed (fel′on-wēd), *n.* The common Old World or tansy ragwort, *Senecio Jacobæa*, adventive in the United States: so called from its use as a remedy for felons.



felsi-. [G. *fels*, rock, + *i*, a letter used to signify that the character is microscopic. Cf. ★*felso-.*] In *petrog.*, in the quantitative system of classification (1902), a prefix placed before the name of a rock to signify that its texture is microfelsitic, microscopically aphanitic, and homogeneous, but not that of isotropic glass: as, *felsimonzonose.*

felsitic, *a.* 2. Having an aphanitic texture: applied to the ground-masses of those porphyries which are so fine-grained as to be aphanitic, and to those glassy ones that do not have a vitreous luster.

felsitoid (fel′sit-oid), *a.* [*felsite* + *-oid.*] In *petrog.*, having a felsitic appearance, with an exceedingly compact aphanitic texture: applied to metamorphic rocks. Such rocks occur in beds or bed-like masses, sometimes in districts of contact-metamorphism. They embrace hälleflinta, adinole, and porphyroid. *Geikie.*

felso-. [G. *fels*, rock, + *o*, a letter used to signify that the character is megascopic.] In *petrog.*, in the quantitative system of classification (1902), a prefix placed before the name of a rock to signify that its texture is megascopically felsitic, megascopically aphanitic, but not glassy: as, *felsomonzonose.* It is used in a similar manner in petrography generally and may be prefixed to the name of any aphanitic rock: as, *felsorhyolite, felsoliparite*, etc.

felsöbanyite (fel-sō-ban′yīt), *n.* [Hung. *Felsö Bánya*, 'upper mine': *felsö*, upper, *bánya*, mine.] A hydrated aluminium sulphate, occurring in snow-white crystalline masses, found at Kapnik Bánya, near Felsö Bánya, Hungary.

felt[1], *n.*—**Fire felt,** a fire-proof material made up in sheets to be placed in walls and floors to increase their fire-resisting qualities.—**Foundation felt,** a coarse felt, made in sheets of varying thickness, to be placed between the feet of a machine and its foundation, to decrease the amount of vibration transmitted to the foundation from the machine.—**Microlitic felt,** in *petrog.*, the ground-mass of some lavas, trachytes and andesites, which are composed of microscopic prisms or fibers of feldspar.

felter (felt'ėr), *n.* [*felt*[1] + *er*[1].] One who follows the occupation of feltmaking.

feltrum (fel'trum), *n.* [ML., felt, packing: see *felt*[1] and cf. *feuter*[1].] In medieval armor, woolen wadding used to protect parts of the body.

felwort, *n.* The common felwort is *Gentiana Amarella,*

Felwort (*Gentiana Amarella*).

also called *autumn gentian.* The name is also applied to species of *Swertia,* a genus closely related to *Gentiana.*

femaleness (fē'māl-nes), *n.* The quality of being female.

Numerous facts point to the conclusion that maleness and *femaleness* may be regarded as expressing metabolic alternatives open to the germ-cell in its development, and that the bias in one direction or the other is largely due to environmental stimuli. *Encyc. Brit.*, XXXII. 210.

feme, *n.*—**Feme sole trader,** a married woman who, by the custom of London, and either by common law or by statutory authority in many of the United States, is entitled to carry on business on her own account and responsibility.

femic (fem'ik), *a.* [*fe*(*rro*)*m*(*agnesian*) + *-ic.*] Having the characters of, or belonging to, the second group of standard minerals, including non-aluminous ferromagnesian and calcic silicates, silicotitanates, and non-silicate and non-aluminous minerals. Used in the quantitative classification of igneous rocks. See ★*rock*[1].

feminin, *a.* and *n.* A simplified spelling of *feminine.*

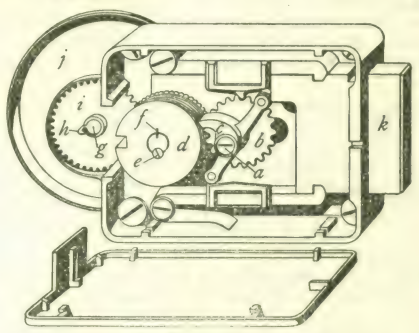
feminism, *n.* 2. The presence of specifically feminine characteristics in the male.

feminist (fem'i-nist), *n.* [F. *féministe,* ‹ L. *femina,* woman, + *-ista,* E. *-ist.*] 1. An advocate of the claims of women as the equals of men in the realms of literature and art as well as in the sociological world.

The clash of the sexes has long since extended from the sociological world to the intellectual and artistic, and there have been *feminists* who claimed George Eliot as the rival of Thackeray. Mr. Courtney discovers a passion for detail to be the distinguishing mark of nearly every female novelist. Charlotte Brontë and George Eliot he excepts from this generalization, remarking that the latter's mind was masculine. In reality it was no more masculine than is Mrs. Humphry Ward's. The chains of sex are ineluctable. George Eliot's methods were placider than are customary to her sex, but so are Mrs. Humphry Ward's. Detail, we fear, must remain as the stumbling-block of the *feminist.* But there is a more serious defect—and that is the lack of form.
Athenæum, Nov. 26, 1904, p. 730.

2. One who devotes himself to the study of woman, especially from the physiological and medical points of view. *G. S. Hall,* Adolescence, I. xiv.

femorohumeral (fem″ō-rō-hū'me-ral), *a.* Relating to both the femur and the humerus.



femoropopliteal (fem″ō-rō-pop-li-tē'al), *a.* Of or pertaining to both the femur and the popliteus.—**Femoropopliteal neuralgia.** Same as *sciatica.*

femorotibial, *a.* 2. Relating to the femur and tibia.—**Femorotibial index.** See ★*index.*

femur, *n.*—**Pilastered femur,** a thigh-bone on which the linea aspera is greatly enlarged and prominent.

fence, *n.*—**Cockatoo, dead-wood, dog-leg fence.** See ★*cockatoo,* etc.—**Panel fence.** Same as *snake fence.* See *fence.*—**Stump fence,** a fence composed of uprooted stumps of trees laid horizontally, the roots of contiguous stumps interlacing.—**To mend one's fences,** to guard one's own political interests at home. [Political slang, U. S.]

fence-arbor (fens'är″bọr), *n.* A piece which

Fence-arbor.

a, fence-arbor; *b*, fence-gear; *c*, fence; *d*, curb; *e*, curb-screw; *f*, curb-stump; *g*, spindle; *h*, key; *i*, outer driving-gear; *j*, dial-ring; *k*, bolt.

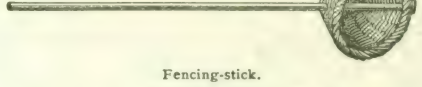
connects the spindle and the tumblers in a combination-lock. See *lock*[1].

Modern combination locks are so constructed that by means of independent bearings, which are operated through the revolution of the spindle, and by use of a balanced *fence-arbour,* . . . it is impossible for any one manipulating the spindle or the dial to form any idea of the position of the tumblers on the inside, because the moment the spindle is revolved, the *fence-arbour* is lifted away from the tumblers, and there is no possibility of feeling their motion. *Encyc. Brit.*, XXXII. 360.

fence-row (fens'rō), *n.* A fence with the line of shrubs and other vegetation which frequently grows up under its protection.

Along *fence-rows* in partial shade.
N. L. Britton, Manual of Flora of Northern States, p. 952.

fence-season (fens'sē″zn), *n.* Same as *close-time.*

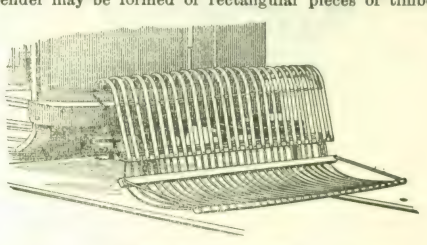


fence-shop (fens'shop), *n.* A shop where stolen goods are sold. See *fence,* n., 7.

fenchene (fengk'ēn), *n.* [*fench*(*yl*) + *-ene.*] An oil, $C_{10}H_{16}$, of the terpene series resembling camphene. It is prepared by boiling fenchyl chlorid, $C_{10}H_{17}Cl$, with aniline.

fenchone (fengk'ōn), *n.* [*fench*(*yl*) + *-one.*] A ketone, $C_{10}H_{16}O$, isomeric with camphor, which it resembles in general chemical properties. The dextro-form occurs in fennel-oil, the levo-form in thuja-oil.

fenchyl (fengk'il), *n.* [G. **fenchyl,* ‹ *fenchel,* fennel, + *-yl.*] In *chem.*, the levo-form of **fenchone* (which see).



fencing-stick (fen'sing-stik), *n.* A stick,

Fencing-stick.

usually made of hickory, with a basketwork guard for the hand, used in fencing.

fender, *n.*, 1. (*b*) *Naut.*: (2) A projection extending longitudinally along the side of a vessel a short distance above the water-line to protect it from damage when going alongside other vessels or landing at wharves. The fender may be formed of rectangular pieces of timber

Fender for Electric Car.

firmly secured to the side, or of plates of U-shaped cross-section riveted to the outside plating. Tugboats usually have an upper fender at the level of the deck and a lower fender just above the water-line. Ferry-boats and river-steamers have a heavy fender extending all around the vessel at the level of the main deck. (*f*) A removable net or scoop placed at the front of an electric car to catch or push aside an object or person overtaken by the car or falling in front of it.

fender-bar (fen'dėr-bär), *n.* *Naut.*, a long

fore-and-aft fender of wood hung over a ship's side just above the water-line amidships to prevent chafing against a dock.

fender-boom (fen'dėr-bōm), *n.* See *shear* ★*boom.*

fender-guard (fen'dėr-gärd), *n.* See ★*fender-rail.*

fender-rail (fen'dėr-rāl), *n.* A rail on the exterior of a street-car designed to act as a fender in protecting the side-panels against injury from the wheels of passing vehicles. It is armed with a strip of iron called the fender-guard.

fender-skid (fen'dėr-skid), *n.* In *lumbering,* a skid placed on the lower side of a skidding-trail, on a slope, to hold the log on the trail while being skidded.

fendillate (fen'di-lāt), *v.t.*; pret. and pp. *fendillated,* ppr. *fendillating.* [F. *fendiller* (dim. of *fendre*), ‹ L. *findere,* split: see *fent* and *fission* + *-ate*[2].] To split or crack slightly in many places.

fendillation (fen-di-lā'shọn), *n.* The condition of being fendillated.

fenessi, *n.* See ★*finessi.*

fenestella, *n.* 4. [*cap.*] A genus of pyrenomycetous fungi having the perithecia arranged in more or less definite groups beneath the surface of the bark of the host. The name refers to the spores, which have both longitudinal and transverse septa, giving their surface a resemblance to small windows.

fenestra, *n.* 3. In *surg.*, an opening in a splint or immovable dressing to permit of inspection of the part or to relieve pressure.—**Mandibular fenestra,** the mandibular foramen.

fenestrate, *a.* 3. In *mycol.*, same as ★*dictyoid.*

fenestrated, *a.* 3. In surgical instruments, having large openings.

The entire covering of the mastoid should be chiseled away with . . . a bone gouge, aided at some steps by a *fenestrated,* sharp, hollow curette, and with bone-cutting forceps. *Phil. Med. Jour.*, Jan. 31, 1903, p. 223.

fêng-hwang (fung'-hwäng'), *n.* See *fung-hwang.* In Chinese art it is used as the emblem of the empress.

Fung-hwang, or 'Chinese Phenix': wood-carving of about 1600, from the Imperial Palace of Peking, China. In the Pennsylvania Museum, Philadelphia.

fennel, *n.*—**Azorean fennel,** the sweet fennel, *Fæniculum dulce.*—**Indian fennel,** a variety of the common fennel, *Fæniculum Fæniculum,* cultivated in India and used in curries and for medicinal purposes.—**Prairie-fennel,** a plant of either of the umbelliferous genera *Lomatium* or *Musineon,* abundant in

Prairie-fennel (*Lomatium montanum*).
One third natural size; fruit natural size.

the western United States from Montana to Washington: suspected of being poisonous to stock. There seems to be some proof of this in the case of *Lomatium nudi-*

Prairie-fennel (*Musineon Hookeri*).
One third natural size; fruit twice natural size.

caule, but *L. montanum* and *Musineon Hookeri* are innocuous and bid fair to become useful forage-plants.

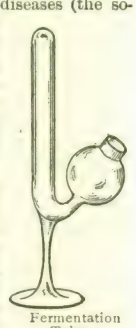
fenomenal, fenomenon, etc. Simplified spellings of *phenomenal*, etc.

fense, *n.* and *v.* A simplified spelling of *fence*.

fent, *n.*—**To spring a fent,** to test the color-strength of a dye by dipping in it a piece of the material to be colored.

fên-ting (fun'ting'), *n.* See ★*fun-ting*.

Fenzlia (fenz'li-ä), *n.* [NL. (Lindley, 1833), named in honor of Eduard *Fenzl* (1808–79), an Austrian botanist.] A former generic name of a plant of the family *Polemoniaceæ*, now referred to *Linanthus* under the specific name *L. dianthiflorus* (*Fenzlia dianthiflora* of Lindley). It is an old garden annual from southern California, dwarf and tufted, bearing a profusion of lilac, purple, or sometimes white flowers resembling pinks. The white-flowered form is sometimes catalogued as *Fenzlia alba*. See ★*ground-pink*.



ferding (fêr'ding), *n.* [LG. *ferding* or Sw. *fjerding*, a fourth part, = E. *farthing*.] A silver coin struck at Riga and Revel in the sixteenth century and belonging to the currency of the Order of Livonia. It was equal to the fourth of a thaler.

Fermatian demonstration. See ★*demonstration*.

Fermat's law. See ★*law*[1].

ferment, *n.*, 2. Familiar examples of the action of ferments are the conversion of starch to dextrose, of albumins to peptones, and of fats to fatty acids and glycerin, by the diastatic, proteolytic, and lipolytic ferments of the digestive juices. Besides the common *digestive ferments* which are secreted by the digestive glands, there are numerous others which exercise their specific functions within the cells, and which, in contradistinction to the former, are designated as *tissue-* or *intracellular ferments*. The number of these is very large, and it appears that many metabolic processes, which were formerly attributed to a special vital activity on the part of cells, are referable to their action. In the liver-cell not less than a dozen different ferments of this character have been demonstrated. The great majority of known ferments are hydrolytic. These effect the cleavage of those substances against which their special activity is directed, in the presence of water, the components of which take part in the reaction. In addition there are the so-called *oxydases*, which can effect oxidations, and there is evidence to show that reducing ferments, *reductases*, likewise occur. Until quite recently it was held that ferment action was in all cases destructive. Research has shown, however, that certain ferments are capable of a reversible action, and are hence constructive as well as destructive. Lipase, for example, will not only cause the decomposition of ethyl butyrate to ethyl alcohol and butyric acid, but it will also construct this substance from the corresponding radicals. Maltase will similarly invert maltose to dextrose and reconstruct the maltose molecule from dextrose. Whether or not all hydrolytic ferments exert a reversible action is not known, but it is quite possible. All ferments have a certain optimum temperature at which their activity is most extensive. This varies somewhat with the different members of the group, but is about that of the body. Boiling destroys the ferments, but in the dry state they may be heated to a higher temperature without losing their activity. The effect of cold is similar to that of heat. Quite important also is the reaction of the medium. Certain ferments do best with a feebly acid reaction; with others an alkaline reaction is necessary; while still others can act in acid as well as in alkaline and neutral media, but exhibit certain preferences. Generally speaking, the action of the different ferments is specific, that is, a given ferment will act only upon a certain substance in a manner comparable to the relation existing between a lock and its key. Or it might also be said that a given ferment is specifically tuned to the substance upon which it can act. Upon this behavior the classification and nomenclature of the ferments are based. In the latter the suffix *-ase* is used in connection with the name of the substance against which the specific action of the ferment is directed. A ferment which causes the cleavage of proteins (albumins) is thus termed a *protease;* one which decomposes fats, a *lipase;* and similarly *amylase, maltase, lactase, urease, nuclease, aldehydase*, etc. Of the chemical nature of the ferments very little that is definite is known. As a class, they are usually regarded as being of albuminous character; but it is possible that the reactions which suggest this view are referable merely to contaminating albuminous substances. Colloidal solutions of various metals, such as platinum, palladium, iridium, osmium, etc., have properties which are very similar to those of the ferments, for which reason they are sometimes spoken of as *metallic ferments* or *inorganic ferments*. Bredig and Von Bernek have shown that a gramatomic weight (193 grams) of colloidal platinum, diffused in 70,000,000 liters of distilled water, is still capable of producing an effect upon more than a million times its amount of hydrogen peroxid. It could further be proved that the reaction which occurs is monomolecular, a fact which indicates that the platinum itself does not enter into the reaction. Such colloidal solutions will invert cane-sugar exactly like the organic ferments of an animal or a vegetable organism. As in the case of the latter, also, the action of the inorganic ferments can be destroyed by such substances as hydrocyanic acid, mercuric chlorid, hydrogen sulphid, etc. The mode of action of the ferments is still a matter of speculation. Formerly they were sharply differentiated from the so-called organized ferments or ferment organisms, which occur widely distributed in nature and comprise the important group of bacteria, blastomycetes, and molds. During the life-processes of these organisms chemical changes result in the various media in which they have found lodgment, which are perfectly analogous to those of the ferments proper, but which are apparently dependent upon the life of the organism and cease when this has been destroyed. Recent research has shown, however, that the resulting chemical changes are, after all, not strictly dependent upon the life of the cell, and are referable also to unorganized ferments which, in contradistinction to the common digestive ferments, are not secreted to the outside, but remain intracellular. Their action can be demonstrated after the death of the cell, if the cell-body is entirely broken up, as by repeated thawing and freezing, by high pressure, etc. Familiar examples of the action of organized ferments are the alcoholic fermentation produced by yeast, the acid fermentation caused by the mycoderma aceti, etc.—**Conform ferment,** a bacteriolytic ferment which will cause the destruction of those bacteria only which produce it.—**Glycolytic ferment,** a ferment assumed by Lépine to exist in the blood and to cause the decomposition of glucose into water and carbon dioxid. Also *glucolytic*.—**Heteroform ferment,** a bacteriolytic ferment which will cause the destruction not only of the bacteria which produce it but of others as well.—**Hydrolytic ferment,** a ferment which causes the cleavage of a more complex substance into simpler bodies in the presence of water, which is at the same time decomposed. The action of all the digestive ferments is hydrolytic. See ★*ferment*, 2.—**Lactic ferment,** a ferment which will decompose lactose (milk-sugar) into lactic acid and carbon dioxid.—**Sucroclastic ferment,** a ferment which causes the cleavage of disaccharides to simpler sugars with 6 atoms of carbon.

fermentation, *n.*—**Fermentation test,** a test for sugar in the urine, in which yeast is added to the suspected fluid. If sugar is present, fermentation will occur.—**Fermentation theory of disease,** the theory (now superseded by the germ theory) that certain diseases (the so-called zymotic diseases) are due to a process analogous to fermentation induced in the tissues by the presence of a minute quantity of the specific virus derived from one sick of the same disease.—**Fermentation tube,** a delicate glass apparatus designed to detect gases set free by fermentation. The bubbles of gas rise in the vertical tube, which is frequently graduated to measure the gas.—**Mucic or mucous fermentation,** a special kind of fermentative change sometimes observed in solutions of cane-sugar, in which neither common alcohol nor acetic acid is produced, but in which the sugar yields carbon-dioxid gas, mannitol, and a mucilaginous or gummy substance. Access of air and the presence of nitrogenous matter are necessary, and the solution must be neutral or slightly alkaline. *Jour. Soc. Chem. Industry*, VIII. 811.—**Ropy fermentation,** a so-called disease of wine and beer which renders the fermenting liquid viscid. It is believed to be caused by the occasional presence of an abnormal ferment-organism.—**Tobacco fermentation,** a peculiar form of fermentation which occurs during the process of curing tobacco. Oxidizing ferments probably play an important part.

Fermentation Tube.

ferment-cell (fêr'ment-sel), *n.* In *histol.*, a cell which secretes a ferment.

fermenting-square (fêr-men'ting-skwãr), *n.* A shallow vat for fermentations.

fermentiscible (fêr-men-tis'i-bl), *a.* [Irreg. ‹ *ferment* + L. *-isc-ere*, inceptive formative, + *ible*.] Capable of undergoing fermentation.

The molecular disturbance thereby produced is imparted to the *fermenti[s]cible* substance, sugar, and breaks it up into simpler bodies, alcohol and carbon dioxide.
Science, N. S., Jan. 2, 1903, p. 15.

fermentum (fêr-men'tum), *n.* [NL. use of L. *fermentum*, ferment.] In the medieval church, a portion of the eucharist reserved from a previous consecration, which was brought to a priest about to celebrate mass. The particle thus used was called *fermentum*, the leaven, and was often sent by the Pope or a bishop, as a token of Christian communion, to priests in neighboring churches.

fern[1], *n.*—**Baby fern,** the black maidenhair or maidenhair spleenwort, *Asplenium Trichomanes*.—**Beaver-meadow fern,** *Dryopteris thelypteris*, with reference to its habitat.—**Bird's-foot fern,** *Pellæa ornithopus*, of western North America, referring to the characteristic shape of the pinnæ.—**Bird's-nest fern,** *Neottopteris Nidus*, widely distributed through the eastern tropics. See *bird's-nest*, 1 (*c*) and ★*ekaha*.—**Black fern,** an Australasian tree-fern, *Cyathea medullaris*, the pith of which was formerly eaten. See *Cyathea*.—**Blue fern,** *Pellæa atropurpurea*, a common North American fern, usually called *cliff-brake*.—**Bog fern,** *Woodwardia Virginica*, a lowland plant of the eastern United States and Canada. See *Woodwardia*.—**Boston fern,** a luxuriant cultivated form (*Nephrolepis exaltata* var. *Bostoniensis*) of the common sword-fern. See *sword-fern*.—**Boulder-fern,** *Dennstædtia punctilobula*. See ★*Dennstædtia* and *hay-scented* ★*fern*.—**Braid fern,** in Australia, *Platyzoma microphyllum*.—**Brittle-fern,** *Filix fragilis*, (*Cystopteris fragilis*), a nearly cosmopolitan fern. See *Cystopteris*.—**Caterpillar-fern,** *Phyllitis Scolopendrium* (*Scolopendrium vulgare*), known commonly as the *hart's tongue* (which see).—**Chain fern.** See *chain-fern*.—**Cloak fern,** any fern of the genus *Notholæna*, certain species of which have the margins of the frond inflexed, serving as a partial 'cloak' or covering to the sporangia. See *Notholæna*.—**Coffee-fern,** *Pellæa andromedæfolia*, of Arizona and California, so called in allusion to the resemblance of the revolute-margined leaf-segments to kernels of coffee.—**Coral-fern,** *Gleichenia circinata*, an Australasian fern.—**Cotton-fern,** *Notholæna Newberryi*, a fern of southern California, covered on its under surface by a webby tomentum of entangled soft, whitish hairs, suggesting cotton.—**Crape-fern,** *Leptopteris superba*, of New Zealand.—**Creeping-fern.** Same as *climbing-fern* (which see).—**Deer-fern,** an evergreen fern, *Struthiopteris Spicant* (*Lomaria Spicant*), so called in the northwestern United States and Canada.—**Eagle-fern,** the common brake, *Pteridium aquilinum*. See *Pteris*.—**Elk-horn fern.** Same as *stag-horn fern* (which see, under *stag-horn*). *Alcicornium* (*Platycerium*), to which it belongs, is a genus of coarse epiphytic tropical ferns.—**Floating-fern,** the pod-fern, *Ceratopteris thalictroides*. See ★*Ceratopteris* and *pod-fern*.—**Fragrant fern,** *Dryopteris fragrans*, a boreal species common to both hemispheres.—**Grass-fern,** any one of several species of *Vittaria;* in the United States, *V. lineata*, occurring in Florida. See ★*Vittaria*—**Grass-leaved fern,** same as *grass-*★*fern;* especially *Vittaria elongata*, a variable eastern tropical species.—**Hay-scented fern,** *Dennstædtia punctilobula*. See *Dicksonia* and ★*Dennstædtia*.—**Horse-shoe fern,** in New Zealand, *Marattia fraxinea*.—**Interrupted fern,** *Osmunda Claytoniana*. The sporangia are borne usually in two or three pairs of much reduced pinnæ near the middle of the otherwise foliose frond, hence the

Bird's-foot Fern (*Pellæa ornithopus*).
a, plant, one third natural size; *b*, pinna, slightly enlarged.

Coffee-fern (*Pellæa andromedæfolia*).
a, entire plant (one fourth natural size); *b*, segment (three fourths natural size).

Interrupted Fern (*Osmunda Claytoniana*).
(From Britton and Brown's "Illustrated Flora of the Northern States and Canada.") Two fifths natural size.

vernacular name. It is a native of the eastern United States and Canada.—**King fern,** the royal fern, *Osmunda regalis.* See *Osmunda.*—**Ostrich fern.** See *ostrich-fern* and ★*Matteuccia.*—**Parasol-fern.** Same as *coral-*★*fern.*—**Pod fern.** See *pod-fern.*—**Prickly-fern,** in Australia, *Alsophila australis,* a tree-fern 25 to 30 feet high.—**Resurrection-fern,** in the southern United States, *Polypodium polypodioides,* which contracts during drouth but revives in moist seasons; hence the name. See *polypody.*—**Ribbon fern.** (*a*) *Pteris serrulata,* a native of China, widely spread throughout tropical and warm temperate regions. (*b*) In Australia, *Ophioderma pendula.*—**Snake-fern.** (*a*) See *snake-fern.* (*b*) The royal fern, *Osmunda regalis,* which grows in low, wet situations and is thus associated popularly with snakes. See *Osmunda.*—**Spider-fern.** Same as *ribbon-*★*fern.*—**Strawberry-fern,** *Hemionitis palmata,* so called in Jamaica.—**Sword-fern.** (*a*) Any species of the genus *Nephrolepis,* especially *N. exaltata,* which is, in one or another form, by far the most commonly cultivated fern in the United States. See *Boston* ★*fern,* and *Nephrolepis.* (*b*) In Australia, *Grammitis australis,* a small species with simple leaves.—**Umbrella-fern.** Same as *eagle-*★*fern.*—**Water-fern.** (*a*) and (*b*) See *water-fern.* (*c*) Same as *floating-*★*fern.* See ★*Ceratopteris.*—**Windsor fern.** Same as *creeping-*★*fern.*

fern-ball (fėrn′bâl), *n.* An artificial ball consisting of the creeping rhizomes of certain Japanese ferns, commonly of *Davallia bullata,* closely bound together with absorbent vegetable fiber. Growth is induced by drenching in water and hanging in a warm shaded situation.

fern-bird (fėrn′bėrd), *n.* A small passerine bird of New Zealand, which belongs to the genus *Sphenœachus* and is usually placed with the warblers of the Old World.

fern-bush (fėrn′bůsh), *n.* Same as *sweet-fern* (which see with cut).

fern-chafer (fėrn′chā″fėr), *n.* A British collectors' name for a European scarabæid beetle, *Rhizotrogus solstitialis.*

fern-cycad (fėrn′sī″kad), *n.* Any plant belonging to the *Cycadofilices.* See ★*Cycadofilices.*

These plants, therefore, whilst retaining the outward form of ferns, are in reality transitional types. For convenience, these plants, which include the genera Heterangium, Lyginodendron, Medullosa, and many others, have been placed in a special group, the Cycadofilices or *Fern-Cycads.* *Nature,* June 4, 1903, p. 113.

fern-tree (fėrn′trē), *n.* In Australia, a tree-fern (which see).

fernwort (fėrn′wėrt), *n.* Any plant belonging to the *Pteridophyta,* or ferns and fern allies.

In recent years tardy justice has been given to the *fernworts* (Pteridophyta). *Science,* May 22, 1903, p. 830.

Ferranti effect. See ★*effect.*

ferrarenite (fe-rar′en-īt), *n.* [L. *ferrum,* iron, + *arena,* sand, + *-ite*2.] In *petrog.,* a sandstone composed of iron ores. *Grabau,* 1904.

ferrated (fer′ā-ted), *p. a.* [L. *ferratus,* covered with iron, + *-ed*2.] Charged with iron as a constituent, as a substance of organic origin intended for medical use.

ferratin (fer′a-tin), *n.* [*ferrate* + *-in*2.] An iron-containing nucleoproteid which occurs in the liver. It was discovered by Schmiedeberg. See ★*phosphocarnic acid.*

ferratogen (fe-rat′ō-jen), *n.* [*ferrate* + *-gen.*] A nuclein compound of iron containing 1 per cent. of that metal: said not to be affected by the gastric juice but absorbed in the intestine.

Ferrel's gradient formula, law, theory of cyclones, theory of the circulation of the atmosphere. See ★*gradient,* ★*law*1, ★*cyclone,* ★*circulation.*

ferret[1], *n.*—**Black-footed ferret,** *Putorius nigripes,* a member of the weasel family, which inhabits the plains of Nebraska and Kansas, where it feeds largely on prairie-dogs. It is of a yellowish-brown color, with the tip of the tail and the legs black.

ferric, *a.* 2. In *elect.,* containing iron.—**Ferric hydroxid,** in *chem.,* a substance, $Fe_2(HO)_6$, which occurs as a constituent of brown hematite ore of iron and of common iron rust; artificially prepared it is a useful coagulant for clarifying water, and serves as a brownish or buff-colored dye. Improperly called *ferric hydrate.*—**Ferric inductances,** inductances with an iron core.—**Ferric nitrosulphate,** in *chem.,* a basic ferric salt, made by treating ferrous sulphate with nitric acid; it has been used in tanning.—**Ferric oxid,** in *chem.,* Fe_2O_3, the red oxid of iron, which occurs in nature as specular iron ore and red hematite, and as a constituent of brown hematite ore and of iron rust; artificially prepared it is used as a polishing-powder (colcothar) and a cheap pigment.—**Ferric sulphate,** in *chem.,* a substance, $Fe_2(SO_4)_3$, used, alone or as a constituent of iron alum, in certain processes of tanning and dyeing.

ferricyanhydric (fer″i-sī-an-hī′drik), *a.* Same as *hydroferrocyanic*

Ferrier's albumin process. See ★*process.*

ferrilutite (fer-i-lū′tīt), *n.* [L. *ferrum,* iron, + *lutum,* mud, + *-ite*2.] In *petrog.,* a ferruginous mud rock. *Grabau,* 1904.

ferrin (fer′in), *n.* [L. *ferrum,* iron, + *-in*2.] A brown iron-containing pigment found in the so-called livers of various invertebrates.

ferrirudite (fer-i-rō′dīt), *n.* [L. *ferrum,* iron, + *rudus,* rubble, + *-ite*2.] In *petrog.,* a conglomerate or breccia of iron ore or distinctly iron-bearing minerals. *Grabau,* 1904.

ferrite, *n.* 2. In *chem.*: (*a*) A compound of ferric oxid (Fe_2O_3) with a more basic metallic oxid, as calcium ferrite ($CaFe_2O_4$), from the union of ferric oxid with lime (CaO). The mineral franklinite consists essentially of zinc ferrite, and magnetite or magnetic iron ore (Fe_3O_4) may be viewed as iron ferrite (FeO. Fe_2O_3). (*b*) Pure iron as separated out (from iron carbides) in the cooling of steel.

ferritization (fer″i-ti-zā′shọn), *n.* [*ferrite* + *-ize* + *-ation.*] In *petrog.,* alteration of other minerals into ferrite.

ferro-alloy (fer′ō-a-loi″), *n.* An alloy of iron; a chemical mixture of some metal with iron.

ferro-aluminium (fer″ō-al-ū-min′i-um), *n.* In *metal.,* an alloy of iron and aluminium, used in modifying the character of steel, and in the production of mitis-castings of wrought-iron.

ferroboron (fer-ō-bō′ron), *n.* In *metal.,* a compound of iron with boron, iron boride, intended for use in ascertaining the modifying effect of boron upon steel.

ferrobronze (fer′ō-bronz), *n.* In *metal.,* bronze or gun-metal alloyed with a small proportion of iron.

ferrochrome (fer′ō-krōm), *n.* See ★*ferrochromium.*

ferrochromium (fer-ō-krō′mi-um), *n.* An alloy of iron and chromium, the proportions of the latter element varying from over 20 per cent. in poor ferrochromium to more than 63 per cent. in rich ferrochromium. The percentage of carbon in the alloy is sometimes as high as 10. Ferrochromium is prepared in crucibles and requires a large consumption of fuel. When the required proportion of chromium is not above 40 per cent., it is prepared in a blast-furnace from chrome iron-ore. Ferrochromium is used chiefly in the production of *chrome-steel* (which see, under ★*steel*1). It is also made by electric smelting, and by the Goldschmidt process (see ★*aluminothermics*).

ferrocobaltin (fer-ō-kō′bâl-tin), *n.* Same as ★*ferrocobaltite.*

ferrocobaltite (fer-ō-kō′bâl-tīt), *n.* The mineral cobaltite, when containing a more than usually large proportion of iron.

ferroconcrete (fer-ō-kon′krēt), *n.* Reinforced concrete; steel-concrete. See ★*concrete.*

ferrocyanhydric (fer″ō-sī-an-hī′drik), *a.* Same as *hydroferrocyanic.*

ferrodolomite (fer-ō-dol′ō-mīt), *n.* In *mineral.,* a carbonate intermediate between dolomite and siderite, containing variable amounts of iron. *Van Hise,* 1904.

ferroferric (fer-ō-fer′ik), *a.* In *chem.,* same as *ferrosoferric. Jour. Soc. Chem. Industry,* XIV. 157.

ferrogallic (fer-ō-gal′ik), *a.* 1. In *photog.,* noting a printing process in which paper sensitized with a solution containing gelatin, ferric chlorid, ferric sulphate, and tartaric acid, and dried in the dark, is, after exposure beneath a negative or a tracing, developed by immersion in a solution of gallic acid. The print shows black lines on a white ground. Gallic acid may be dusted on the sensitized paper before exposure. The print is then developed by washing in water.

2. Noting paper sensitized as above described: largely used by architects and engineers.

ferroglass (fer′ō-glȧs), *n.* [L. *ferrum,* iron, + E. *glass.*] Same as ★*wire-glass.*

ferrolite (fer′ō-līt), *n.* [L. *ferrum,* iron, + Gr. *λίθος,* stone.] In *petrog.,* a rock composed of iron ores. *Wadsworth,* 1892.

ferromagnesian (fer″ō-mag-nē′si-ạn), *a.* [L. *ferrum,* iron, + E. *magnesium* + *-an.*] Containing both iron and magnesium: applied to minerals and also to rocks. The common ferromagnesian rock-making minerals are pyroxenes, amphiboles, micas, and olivin.

ferrometer (fe-rom′e-tėr), *n.* [L. *ferrum,* iron, + Gr. *μέτρον,* a measure.] An instrument devised for the determination of the quantity of iron in the blood.

ferromolybdenum (fer″ō-mo-lib-dē′num), *n.* A chemical mixture of iron and molybdenum, prepared by melting pure metallic molybdenum and adding to it the required percentage of metallic iron: used principally in making steel for gun-forgings.

ferronatrite (fer-ō-nā′trīt), *n.* [L. *ferrum,* iron, + NL. *natrum,* niter, + *-ite*2.] A hydrated sulphate of sodium and ferric iron, occurring in whitish spherical forms: found in Chile.

ferronickel (fer-ō-nik′el), *n.* An alloy of nickel and iron.

ferropallidite (fer-ō-pal′i-dīt), *n.* A white granular ferrous sulphate, $FeSO_4.H_2O$, which occurs with roemerite in Chile.

ferroproteid (fer-ō-prō′tē-id), *n.* An albumin in combination with an iron-containing radical —for example, hemoglobin.

ferropyrin (fer-ō-pī′rin), *n.* [L. *ferrum,* iron, + Gr. *πυρ(ετός),* fever, + *-in*2.] A trade-name for an orange-colored powder prepared from antipyrin and ferric chlorid, containing 64 per cent. of the former and 12 per cent. of the latter. It is soluble in water and alcohol and is stated to have remarkable styptic properties without caustic effects.

ferrosilicon (fer-ō-sil′i-kon), *n.* In *metal.,* a compound of iron with silicon (iron silicide), rich in the latter element, for use in steel-making.

ferrosomatose (fer-ō-sō′mạ-tōs), *n.* A brown tasteless powder which consists of a mixture of 2 per cent. of an organic compound of iron with somatose, easily soluble in water: hematinic and non-styptic.

ferrotitanium (fer″ō-ti-tā′ni-um), *n.* In *metal.,* an alloy of iron and titanium used to some extent in steel-making.

ferrotungsten (fer-ō-tung′sten), *n.* In *metal.,* an alloy of iron and tungsten, rich in the latter metal, used in the manufacture of tungsten steel for cutting-tools.

Ferrous oxalate, in *chem.,* oxalate of iron with ferrous (apparently dyad) valence, FeC_2O_4. It occurs in the mineral humboldtite in lignite deposits, and is used in solution by photographers.—**Ferrous oxid,** in *chem.,* a compound of iron with oxygen, FeO, in which the iron has apparently dyad valence.—**Ferrous sulphate,** in *chem.,* sulphate of iron (with ferrous valence), $FeSO_4$, or in the crystallized condition $FeSO_4.7H_2O$, a salt extensively used in the arts for many purposes: same as *green vitriol* or *copperas.* See *copperas.*

ferro-vanadium (fer″ō-va-nā′di-um), *n.* A chemical mixture of iron and vanadium, used somewhat in the manufacture of steel.

ferrugination (fe-rō-ji-nā′shọn), *n.* The process whereby, in the alteration of iron-bearing rocks, the residue becomes permeated and stained with compounds of iron, chiefly the hydroxid limonite.

ferrule-hook (fer′il-hůk), *n.* A ferrule and hook combined, used as an end-trimming for a swingletree.

ferrule-ring (fer′il-ring), *n.* A combined ferrule and ring for the end of a neck-yoke.

ferrum (fer′um), *n.* The Latin name for iron, from which the chemical symbol for the metal, Fe, is derived: used by German pharmaceutical chemists, in price-lists, etc., and in the names for iron compounds, as *ferrum citricum,* citrate of iron.

ferry, *n.*—**Aërial ferry,** a transporter bridge or ferry-bridge; a device for transferring traffic across a navigable stream or waterway by means of a platform suspended from a traveler or trolley running on a track on a bridge-span, elevated by end-towers sufficiently high to prevent interference with navigation. The traveler, which is operated by motors controlled from the platform or car, travels back and forth across the bridge-span, and thus conveys the suspended platform at the level of the roadway or approaches back and forth from one approach or landing to the other.

fertil, *a.* A simplified spelling of *fertile.*

Fertile worker. See ★*worker.*

fertilization, *n.*—**Artificial fertilization.** (*a*) The bringing about of fertilization by artificial means, such as placing the ripe ova and male cells of a fish in contact, or placing the pollen of a flower upon the stigma. (*b*) The artificial initiation of the process of development in an unfertilized egg by something else than a male cell. In 1899 Loeb found that after the unfertilized eggs of the sea-urchin have been immersed in a dilute solution of magnesium chlorid in sea-water they undergo normal or nearly normal development when they are transferred to pure sea-water. This has been held to be proof that fertiliza-

tion is a chemical process; but more recent experiments have shown that a similar effect may be produced by cane-sugar, urea, sulphuric acid, strychnine, and even, in the silkworm, by gently brushing the eggs. The eggs in which the experiments are most successful are those that occasionally develop without fertilization under normal conditions, and as there is no physical or chemical similarity between the objects that have been used with success, it seems probable that they do no more than to disturb the stability of the egg and permit its organic mechanism for development to work, and that the effect may be no more like that produced by the male cell than a jar which opens the valve of a steam-engine is like the engineer.—**Asymmetrical fertilization,** the appearance, in the second generation and in later generations, of the descendants of a cross between two varieties of individuals that differ among themselves with respect to a parental characteristic: considered as evidence of the resolution of compound gametes into unit-characters.

In general terms we can declare that the result of the cross — the "*asymmetrical fertilization*," to speak strictly — is the production of a diversity of gametes.
Proc. Roy. Soc. (London), 1903, II. 79.

fertilizer-sower (fėr′ti-lī-zėr-sō″ėr), *n.* A horse-power machine for sowing chemical fertilizers in drills or broadcast; an attachment to a seed-sower, either a broadcast or drill machine.—**Hand fertilizer-sower,** a small machine, resembling a hand broadcast sowing-machine, used to scatter ashes or other fertilizer or to spread sand upon icy sidewalks or roadways. See *sowing-machine.*

fertilizing-pouch (fėr′ti-lī-zing-pouch), *n.* The spermatotheca or receptaculum seminis of the queen-bee.

ferulic (fe-rö′lik), *a.* [*Ferula* + *-ic.*] Derived from *Ferula Narthex* or asafetida.—**Ferulic acid,** metamethoxy-parahydroxycinnamic acid, $C_{10}H_{10}O_4$, a crystalline substance which occurs in asafetida and can be made artificially from vanillin.

F. E. S. An abbreviation (*a*) of *Fellow of the Entomological Society;* (*b*) of *Fellow of the Ethnological Society.*

fescue, *n.*—**California fescue,** *Festuca aristulata,* a Pacific species forming large and handsome tussocks along streams, etc.: rather harsh and coarse for forage.—**Creeping fescue.** Same as *red* ★*fescue.*—**Hard fescue,** *Festuca ovina duriuscula,* a variety of the sheep's-fescue, which thrives on dry sandy soils and resists summer drought. It is of value for pasture, in cooler and mountainous regions and, if sown thickly and exclusively, makes a good lawn.—**King's fescue,** a native bunchgrass, *Festuca confinis,* valuable for forage on dry slopes in the northern Rocky Mountain region.—**Meadow fescue.** See *tall* ★*fescue.*—**Rat's-tail fescue,** a slender weedy species, *F. Myuros,* with a close narrow panicle to which the name refers. It is a European species now well spread over North America.—**Red fescue,** *Festuca rubra,* a species of many forms with somewhat the range of the sheep's-fescue, and differing from that species in having creeping rhizomes by which it forms a compact turf. In Europe it is rated with the best forage plants: in Germany it is highly esteemed for dry sandy meadows. It is a good sand-binder and is useful also for shady lawns. A variety (*glaucodea*) called *Tennessee fescue* is the best pasture-grass in mountain valleys of North Carolina and East Tennessee.—**Reed-fescue.** See *tall* ★*fescue.*—**Sheep's fescue.** See *sheep's-fescue.*—**Slender fescue,** a native species, *F. octoflora,* with thin erect culms and a narrow raceme or panicle, found in dry sandy places, etc., in the United States.—**Tall fescue,** a European species, *Festuca elatior,* widely cultivated and thoroughly naturalized in North America, of great value for meadow and pasture on moist soils rich in humus. A form 2 or 3 feet high with a narrow panicle is the ordinary *meadow-fescue.* A more robust variety (*arundinacea*) is called *reed-fescue* and is very hardy and productive.—**Various-leafed fescue,** a slender European species of creeping habit, *Festuca heterophylla,* related to the red fescue and of like use in similar localities.

fest[3] (fest), *n.* [G., a feast, a festival: see *feast.*] In German usage, a gathering of many persons to participate in or enjoy some festal performance, as singing, shooting, gymnastic exercises, etc.: as, a *sängerfest, schützenfest, turnfest,* etc. *Forest and Stream.*

festilogy (fes-til′ō-ji), *n.* [L. *festum,* festival, + Gr. *-λογια,* ‹ *λέγειν,* speak.] A treatise on ecclesiastical festivals. Sometimes spelled *festology.*

festinate (fes′ti-nāt), *v. i.*; pret. and pp. *festinated,* ppr. *festinating.* To quicken the steps involuntarily when walking, as in paralysis agitans. *Buck,* Med. Handbook, VI. 486.

Festival of Lights. See ★*Hanukah.*—**Jewish festivals.** The Jewish festivals or holy days may be divided into two categories, Biblical and post-Biblical. The former are: (*a*) The Sabbath (which see). (*b*) Rosh hodesh, the first (day) of the Jewish lunar month (Num. x. 10). (*c*) Pesah, the Passover, also called *Chag ha-mazoth,* the Feast of Unleavened Bread (see ★*matsoth*). (*d*) Shabuoth, or *Chag ha-Shabuoth,* the Feast of Weeks, also called *Yom ha-bikurim,* or Day of the First-fruit (Num. xxviii. 26). (*e*) Sukkoth, meaning 'booths,' or 'tabernacles,' also called *Chag ha-'Asiph* (Ex. xxiii. 15, 16), the Feast of Ingathering (see *Feast of Tabernacles*). (*f*) Yom Teruah (Num. xxix. 1), the 'day of blowing the trumpet,' now known as *Rosh ha-shanah* or first of the Jewish year, when the shofar (ram's horn) is used. (*g*) Yom ha-kippurim, the Day of Atonement, which is not properly a day of feasting, but the most solemn fast-day in the year. The post-Biblical Jewish authorities have added an extra day to the principal festivals; thus the Feast of the Passover has now eight instead of seven days; the Feast of Weeks has two instead of one; the Feast of Tabernacles has (including *Shemini 'Atsereth* and *Simhath Torah*) nine instead of eight; and Rosh ha-shanah has two instead of one. There are several minor festivals and holidays in the Jewish calendar, but these, with the exception of ★*Hanukah* (which see), as well as the above-named additional days, are disregarded by many reformed congregations.

festivous (fes′ti-vus), *a.* [*festive* + *-ous.*] Festive: as, a *festivous* occasion.

festology (fes-tol′ō-ji), *n.* Same as ★*festilogy.*

festoon, *n.* 5. A British collectors' name for a European limacodid moth, *Apoda testudo,* yellow-brown in color with narrow brown stripes arranged like a festoon.

festoon-pine (fes-tön′pīn), *n.* Same as *Christmas* ★*evergreen.*

Fetal circulation, the course of the blood-current in the fetus. It differs in some important respects from that in the adult, owing to the fact that the aëration of the blood occurs in the placenta instead of in the lungs. There is a communication between the two sides of the heart, and the entire mass of blood in the body is of a mixed venous and arterial character, except that in the umbilical vein, which passes from the placenta to the liver, which more nearly resembles the arterial blood in the adult.—**Fetal envelops,** the membranes which cover the fetus in the womb; the chorion, amnion, and allantois.—**Fetal inclusion,** a double monstrosity in which one fetus is inclosed in the other; intrafetation.—**Fetal membranes.** Same as ★*fetal envelops.*

fether, fethery. Simplified spellings of *feather, feathery.*

Fetid limestone. See ★*limestone.*

fetidity (fē-tid′i-ti), *n.* [*fetid* + *-ity.*] Fetid nature or smell.

fetid-shrub (fē′tid-shrub), *n.* The papaw, *Asimina triloba.*

fetish-drum (fē′tish-drum), *n.* A drum used in connection with fetishistic rites.

fetish-house (fē′tish-hous), *n.* The house or hut in which a fetish is kept. *E. B. Tylor.*

fetishic (fē-tish′ik), *a.* [*fetish* + *-ic.*] Pertaining to or having the character of a fetish. *F. Ratzel* (trans.), Hist. of Mankind, I. 43.

fetish-priest (fē′tish-prēst), *n.* A person who, with the assistance of a fetish, exercises magical powers and performs religious functions: a term used to designate the shaman of Africa. *F. Ratzel* (trans.), Hist. of Mankind, II. 367.

fetticus (fet′i-kus), *n.* [Origin not known.] The leaves of the corn-salad, used as a salad.

fettler (fet′lėr), *n.* One who fixes or prepares. Specifically—(*a*) One who cleans castings in a foundry, chipping off rough spots, fins, etc., and brushing off the sand. (*b*) One who prepares the hearth of a puddling-furnace. (*c*) One who shaves and smooths green pottery to remove the seams made in molding. (*d*) In *textile-manuf.,* one who cleans up machinery, or serves as a helper in a menial capacity.

fettling, *n.* 2. The repairing or preparation of a machine or part of a machine.—3. The process of cleaning castings after they leave the foundry sand, including the chipping off of runners, fins, and scabs, filing rough spots, cleaning sand from the surfaces, and cleaning out cores.—4. The repairing of the hearth of a puddling-furnace by the use of iron ore rich in oxygen.—5. In *ceram.,* the process of evening the glaze on the surface of biscuit-ware before it is fired in the glost-kiln. After the ware has been dipped in the liquid glaze and allowed to dry, the excess of dry glaze is scraped out of the hollows and perforations. The surface is then retouched with a brush in spots which are thin or bare.

feu et lieu (fė ā lyė). [F., L. *focus et locus,* 'hearth and place.'] In *old French Canadian law,* hearth and home, meaning actual settlement by a tenant on the land. *Bouvier* Law Dict.

feu-holding (fū′hōl″ding), *n.* In *Scots law,* a tenure in which the tenant pays feu duty to his superior. See *feu.*

feuillemorte, *n.* 2. Same as *feuillet,* 2.

fever[1], *n.*—**Acclimation fever,** an ephemeral fever which attacks a new-comer in the tropics. It has no definite character, but may be of gastric, malarial, or thermal origin, or may be a mild yellow fever in places where that disease is endemic. It has no real relation to the process of acclimation.—**Aden fever.** Same as *dengue.*—**Adenonervous fever.** Same as *bubo plague* (which see, under *plague*).—**African Coast fever,** a very severe piroplasmosis of cattle in Africa, similar to Texas fever, and transmitted by the brown tick (*Rhipicephalus appendiculatus*) and the black-pitted tick (*R. sinus*). Also called *Rhodesian redwater, Rhodesian tick-fever, coast tick-fever, East Coast fever.*—**African fever.** (*b*) Pernicious malarial fever.—**Algid fever.** See ★*algid.*—**Assam fever.** Same as ★*kala-azar.*—**Autumnal fever,** an indefinite term denoting any fever which occurs in the autumn, usually malarial or typhoid fever.—**Ballast fever.** See ★*ballast.*—**Biduotertian fever.** See ★*biduotertian.*—**Black fever.** (*b*) Same as ★*kala-azar.*—**Black-water fever,** malarial hemoglobinuria.—**Bladder fever.** See ★*bladder.*—**Boohoo fever,** a disease of Hawaii and other Pacific islands, of which the chief symptoms are gastro-intestinal disorder and extreme depression of spirits.—**Broken-wing fever.** Same as *dengue.*—**Bucket fever,** an old term for *dengue.*—**Bulama fever,** yellow fever.—**Digestive fever,** a slight rise in the temperature of the body during the process of digestion.—**Dumdum fever,** a disease occurring in India, which resembles, and perhaps is identical with, kala-azar. It is marked by enlargement of the liver and spleen and by the presence of protozoan parasites in blood drawn from the spleen.—**East Coast fever.** Same as *African Coast* ★*fever.*—**Elephantoid fever.** See ★*elephantoid.*—**Fracture fever,** a slight elevation of the body temperature coming within a few hours of the occurrence of a fracture.—**Garrick fever.** Same as *Siddons* ★*fever.*—**Giraffe fever.** Same as *dengue. Sci. Amer.,* April 9, 1904, p. 287.—**Hemoglobinuric fever.** Same as *black-water* ★*fever* and *hemoglobinuria. Jour. Trop. Med.,* June 1, 1903, p. 183.—**Lazaret fever.** Same as *typhus fever.*—**Malarial fever of cattle.** Same as *Texas* ★*fever.* Also known as *piroplasmosis bovis.*—**Malta fever,** a disease marked by long continuance of the fever at a nearly constant level, prostration, pains in the joints, headache, and diarrhea. It prevails along the shores of the Mediterranean and in other subtropical and tropical regions, and is associated with the presence in the body of a special microbe, *Micrococcus melitensis.* Also called *rock-fever, Mediterranean fever, Naples fever.*—**Mediterranean fever.** Same as *Malta* ★*fever.*—**Naples fever.** Same as *Malta* ★*fever.*—**Neapolitan fever.** Same as *Malta* ★*fever.*—**Paratyphoid fever,** a continued fever resembling typhoid in its general symptoms, but not responding to the specific tests for that disease: it is caused by one of two bacilli distinct from the typhoid bacillus.—**Rhodesian fever,** a cattle-disease in Africa, resembling in its symptoms and mode of transmission (by a tick) Texas fever.—**Rocky Mountain spotted fever.** See ★*tick-fever.*—**Siddons fever,** a low fever believed to be due to the aggregation of large numbers of persons in poorly ventilated rooms: so called because it once prevailed in Edinburgh while Mrs. Siddons was playing there.—**Southern fever.** Same as *Texas fever* of cattle, an anemia caused by *Piroplasma bigeminum.*—**Spotted fever.** (*c*) See ★*tick-fever.*—**Stiff-necked fever.** Same as *dengue.*—**Subcontinuous fever,** remittent malarial fever.—**Texas fever.** See *Texas.*—**Trypanosoma fever,** a fever in man (sleeping-sickness?) or in animals (surra, dourine) due to the presence in the blood of one of the species of *Trypanosoma. Nature,* Dec. 3, 1903, p. 108.—**Undulant fever.** Same as *Malta* ★*fever.*—**Urinary fever.** Same as *urethral fever* (which see, under *fever*[1]).—**Walking typhoid fever,** a form of typhoid fever in which the constitutional symptoms are not very severe at first, and the patient is not confined to his bed, but moves about during the greater part or the whole of the course of the disease.

fever-bush, *n.*—**California fever-bush.** Same as ★*quinine-bush.* See ★*bear-brush* and *tassel-tree.*

feverd, *pp.* and *a.* A simplified spelling of *fevered.*

fever-fly (fē′vėr-flī), *n.* A name given in England to a fly, *Dilophus febrilis,* which occasionally multiplies excessively. In past years the coincidental prevalence of fever during the swarming of this fly gave rise to the popular name. The larva eats the roots of the hop-plant.

fever-gum (fē′vėr-gum), *n.* The blue-gum, *Eucalyptus globulus.* See *fever-tree,* 1.

feverwood (fē′vėr-wūd), *n.* Same as *fever-bush,* 1.

fezant, *n.* A simplified spelling of *pheasant.*

ff. An abreviation (*a*) of the Latin *fecerunt,* they did it or made it; (*b*) of *folios;* (*c*) of *fortissimo;* (*d*) of *following* (plural).

F. F. A. An abbreviation of *Fellow of the Faculty of Actuaries.*

Ffestiniog flags. See ★*flag*[4].

fff. In *music,* an abbreviation of *fortissimo:* more usually *ff.*

F. F. P. S. An abbreviation of *Fellow of the Faculty of Physicians and Surgeons.*

f. g. a. An abbreviation of *free of general average.*

F. G. S. An abbreviation of *Fellow of the Geological Society.*

f. h. p. An abbreviation of *friction horse-power.*

F. H. S. An abbreviation of *Fellow of the Horticultural Society.*

F. I. A. An abbreviation of *Fellow of the Institute of Actuaries.*

Fianchetto di donna opening. See ★*opening.*

fiat, *n.*—**Joint fiat,** in *law,* a fiat which formerly issued against two or more trading partners. *Bouvier,* Law Dict.

fiber[1], *n.*—**Ansulate fibers,** a decussating system of fibers which exists in the brain of reptiles and amphibians and is regarded as corresponding to Meynert's commissure in mammals.—**Association fibers,** in *neurol.,* fibers which connect different regions of the same cerebral hemisphere: opposed to *commissural fibers,* which connect the two hemispheres.—**Bahama fiber,** the fiber of *Agave rigida,* from plants cultivated in the Bahamas. See *henequen.*—**Bamboo fiber.** See ★*bamboo.*—**Bast-fibers.** See *bast*[1], 2.—**Bolo-bolo fiber,** the bast-fiber obtained from *Clappertonia ficifolia,* a West African plant of the linden family.—**Chambered fibers,** in *bot.,* fibers which have become septate so as to appear multicellular, such as occur in the secondary wood of dicotyledons.—**Cosmos fiber,** any mixed waste of vegetable fibers, as flax, jute, hemp, nettle, etc.—**Gaboon fiber,** a stiff variety of the African bast or piassava: used for stiff brushes.—**Hard fiber,** a trade-name for paper which has been passed through a warm solution of zinc chlorid, and afterward over heated rolls, cooled, and thoroughly washed with pure water. It is strong and tough, and is not injured by water.—**Indurated fiber.** Same as *hard* ★*fiber.*—**Interzonal fibers,** a bundle of delicate achromatic fibers constituting the central spindle during karyokinetic cell-division. This spindle is

enveloped by the ★mantle-fibers (which see, and also cut at ★*dispireme*).—**Leaf-fiber machine,** a machine for extracting the fiber from fleshy-leaved plants, as the agave.—**Manila fiber.** Same as *manila,* 2.—**Mauritius fiber.** Same as *Mauritius ★hemp.*—**Mexican fiber.** Same as *Tampico ★fiber.*—**Mexicana fiber,** the fiber of the *Agave heteracantha,* or istle, found in Mexico, Texas, and California, used for the manufacture of cheap brushes.—**Moriche fiber,** a fiber obtained from the young leaves of the ita-palm, *Mauritia flexuosa.* It is prepared in the same manner as raffia, by stripping off the outer skin of the unexpanded leaves and drying in the sun. It is then twisted into strings and made into cords and hammocks. See *Mauritia* and *ita-palm.*—**Motor fiber,** one of the fibers in a mixed nerve which convey motor or centrifugal impulses only.—**Odontogenic fibers,** a term suggested by Mummery for the "layer of connective tissue surrounding the pulp and entering into the substance of the matrix." The term is suggested because of their great similarity to the osteogenic fibers of bone.—**Oloná fiber,** a fiber prepared from the bast of *Touchardia latifolia,* a nettle-like plant growing in the Hawaiian Islands, called *oloná* by the natives. It is remarkable for its strength and durability, and is used chiefly for making fish-nets, some of which are more than 100 fathoms long.—**Opuhe fiber,** a bast-fiber derived from the stems of *Urera Sandwicensis,* a Hawaiian plant belonging to the nettle family. It is highly esteemed by the natives, who use it for the same purposes as the oloná.—**Palma fiber.** Same as *palma ★istle.*—**Palmyra fiber,** a fiber obtained from the base of the leaf-stalks of the palmyra palm, *Borassus flabellifer.* It is harsh and wiry, and has become of importance commercially since 1891, replacing to a great extent the West African bast-fiber, derived from *Raphia vinifera* in the manufacture of stiff brushes. See *palmyra,* 1.—**Pontine fibers,** the nerve-fibers present in the pons Varolii.—**Postcommissural fibers,** fibers of the postcommissure situated just posterior to the peduncle of the epiphysis. The fibers pass through the optic thalami and, according to Meynert, diverge into the white substance of the cerebral hemispheres. In lower vertebrates the fibers pass ventrally through the thalami and join the basal tract. Smith applies the term to uncrossed fibers derived from the hippocampus which "collect upon the dorsal aspect of the ventral [pre]commissure and incline backward and downward to enter the thalamic region." *Trans. Linnean Soc. London,* June, 1897, p. 54.—**Postretinal fiber,** any one of a series of nerve-fibers arising from the facets of the compound eye of an insect and passing into the ganglionic or outer lobe of the optic ganglion of the brain.—**Precommissural fibers,** fibers of the precommissure in the lamina terminalis. In each hemicerebrum the bundle of fibers divides. One division, passing outwardly and anteriorly, is designated as the *pars olfactoria;* the other division, passing posteriorly, is the *pars temporalis.* Smith uses the term in another sense, referring it to fibers originating in the hippocampus which, in their course, are divided by the ventral commissure (precommissure of other writers). Those proceeding downward and forward in front of the ventral commissure are termed precommissural fibers.—**Prussak's fibers,** fibers which extend from the short process of the malleus to the notch of Rivini.—**Quartz fiber,** a fiber obtained by fusing quartz in the oxyhydrogen flame and drawing it out while soft into a filament. Fibers thus produced are sometimes so fine as to be invisible to the unaided eye. They are, however, of great tensile strength, and have elastic properties which adapt them for use in the suspension of the moving parts of galvanometers and of other physical instruments of extreme delicacy.—**Reissner's fiber,** a rod-like structure or fiber lying within the lumen of the central canal of the spinal cord and brain of lower vertebrates. It extends the length of the cord into the brain as far as the diencephalon and connects with the torus longitudinalis. The theory has been advanced that the structure is the result of secretion, but Sargent maintains that it is of a nervous character.—**Scattered fillet fibers,** fibers which lie internal to the chief fillet or lemniscus and which, according to Bechterew, include the central continuation of the vagus and trigeminal nerves.—**Short association fibers,** fibers in the cerebrum which serve to connect adjacent convolutions, passing around below the gray matter at the bottom of the fissures. Also *fibræ propriæ.*—**Sisal fiber.** Same as *sisal hemp.* See *henequen.*—**Spiral fiber,** the spiral chitinous thickening of the endotracheal membrane in the tracheæ of insects.—**Tampico fiber,** the coarse, stiff fiber obtained from four or five species of plants which grow on the high, arid tablelands of northern Mexico, and which is exported from the port of Tampico. It is used as a substitute for bristles in the manufacture of brushes and is also in demand for the cheaper grades of twine and the medium grades of cordage. The most important of the plants yielding this fiber are *Agave lophantha, A. Lecheguilla, Samuela Carnerosana,* and *Yucca Treculeana.* See ★*lechuguilla,* ★*palma pita,* and ★*palma samandoca.* For the three most important commercial grades of this fiber, see *Jaumave, palma,* and *Tula istle,* under ★*istle.*—**Tibisiri fiber,** in British Guiana, same as *moriche ★fiber.*—**Tomes's fibers** or **fibrils,** processes given off from the odontoblasts, in the dentinal canals.—**Weismann's fibers,** intrafused muscle fibers, or fibers within the muscle spindle.—**Yucatan fiber.** Same as *henequen.*

fiber-faced (fī′bėr-fāst), *a.* **1.** Covered or faced with a compressed composition made from wood-pulp or other materials and called fiber. There are many kinds of fiber, most of them having names to define the use for which they are intended. **2.** Said of paper that plainly shows fibers on its surface, as that made for United States bank-notes and some forms of bond-paper.

fibra, *n.*—**Fibræ propriæ.** Same as *short association ★fibers.*

fibrification (fī″bri-fi-kā′shọn), *n.* The formation of fibers or fibrous structures.

I have not detected any other *fibrification* of the cells except this.
H. Burmeister (trans.), in C. L. Nitzsch, Pterylography, [p. 9.

fibril, *n.* **3.** In *histol.,* a delicate fiber, such as, according to one theory, is found in the protoplasm of cells.—**Side fibril of Golgi,** a delicate branch passing off at right angles from the neuraxone near its junction with the body of a ganglion-cell.—**Tomes's fibrils.** See *Tomes's ★fibers.*

fibrilia (fī-bril′i-ạ), *n.* [NL., < L. *fibra,* fiber.] Any fine vegetable fiber that can be substituted for cotton in the manufacture of fabrics.

fibrillate, *v.* **II.** *intrans.* To form fibrils, as coagulating blood.

fibrillation, *n.* (*b*) The formation of fibrils.

Fibrin antipeptone. See ★*antipeptone.*—**Myosin fibrin,** an insoluble form of myosin; one of the coagulated albumins.

fibrin-factor (fī′brin-fak″tọr), *n.* A substance which is concerned in the formation of fibrin; specifically, a substance which will give rise to the formation of fibrin, such as fibrinogen.

fibrin-globulin (fī′brin-glob″ū-lin), *n.* Same as ★*fibrinoglobulin.*

fibrinocellular (fī″bri-nō-sel′ū-lạr), *a.* Composed of fibrin with an admixture of desquamated cells.

fibrinogenetic (fī″bri-nō-jē-net′ik), *a.* Same as *fibrinogenic.*

fibrinoglobulin (fī″bri-nō-glob′ū-lin), *n.* A globulin which is derived from fibrinogen during the process of coagulation, that is, during the transformation of fibrinogen into fibrin.

fibrinopurulent (fī″bri-nō-pū′rọ̈-lent), *a.* In *pathol.,* noting the type of certain exudates, of inflammatory character, which show a tendency to clot and which contain pus.

fibrinose (fī′bri-nōs), *n.* An albumose derived from fibrin.

fibrinosis (fī-bri-nō′sis), *n.* [NL., < *fibrin* + *-osis.*] In *pathol.,* a condition in which there is an excessive tendency to coagulation of the blood.

Fibrinous bronchitis. See ★*bronchitis.*—**Fibrinous croup,** true croup.—**Fibrinous pleurisy.** See ★*pleurisy.*—**Fibrinous pneumonia.** Same as *croupous pneumonia* (which see, under *pneumonia*).

fibrinuria (fī-bri-nū′ri-ạ), *n.* [NL., < *fibrin* + Gr. οὖρον, urine.] The passage of fibrin in urine: sometimes associated with *chyluria.*

fibro-adenoma (fī″brō-ad-e-nō′mạ), *n.*; pl. *fibro-adenomata* (-ma-tạ). A glandular tumor containing much fibrous tissue.

fibro-adipose (fī-brō-ad′i-pōs), *a.* Composed of fibrous and fatty tissue.

fibro-angioma (fī″brō-an-ji-ō′mạ), *n.*; pl. *fibro-angiomata* (-ma-tạ). An angioma with a large admixture of fibrous tissue.

fibrobronchitis (fī″brō-brong-kī′tis), *n.* A croupous inflammation of the mucous membrane of the bronchial tubes.

fibrocarcinoma (fī″brō-kär-si-nō′mạ), *n.*; pl. *fibrocarcinomata* (-ma-tạ). A carcinomatous tumor which contains much fibrous tissue.

fibrocaseous (fī-brō-kā′sẹ̄-us), *a.* Containing fibrous tissue with cheesy matter.

Fibrocellular tumor. Same as *fibroma.*

fibrochondritis (fī″brō-kon-drī′tis), *n.* [NL., < L. *fibra,* fiber, + Gr. χόνδρος, cartilage, + *-itis.*] Inflammation of a fibrocartilage.

fibrocrystalline (fī-brō-kris′ta-lin), *a.* Crystallized in fibrous form, as many calcareous organic structures, such as the skeletons of the corals.

fibrocyst (fī′brō-sist), *n.* [L. *fibra,* fiber, + Gr. κύστις, bladder (cyst).] A fibroid tumor which is undergoing cystic degeneration.

fibrocystoma (fī″brō-sis-tō′mạ), *n.*; pl. *fibrocystomata* (-ma-tạ). [NL., as *fibrocyst* + *-oma.*] A fibroma which contains cysts.

fibro-elastic (fī″brō-ẹ̄-las′tik), *a.* Containing white fibrous and elastic tissue.

fibroglioma (fī″brō-gli-ō′mạ), *n.*; pl. *fibrogliomata* (-ma-tạ). [NL., < L. *fibra,* fiber, + NL. *glioma.*] A mixed fibroma and glioma.

fibrolamellar (fī-brō-lam′e-lạr), *a.* In *mineral.,* a structure produced by the separating of a fibrous mineral or mineral aggregate into thin lamellæ. *Geikie,* Text-book of Geol., p. 105.

fibrolipoma (fī″brō-li-pō′mạ), *n.*; pl. *fibrolipomata* (-ma-tạ). [NL., < L. *fibra,* fiber, + Gr. λίπος, fat, + *-oma.*] A mixed fatty and fibroid tumor.

fibrolitic (fī-brō-lit′ik), *a.* [*fibrolite* + *-ic.*] Pertaining to, resembling, or characterized by the presence of fibrolite (sillimanite): applied to certain metamorphic rocks, such as gneiss or schist.

Fibroma molluscum, a soft connective-tissue tumor of the skin.

fibromatosis (fī-brō-ma-tō′sis), *n.* [NL., < *fibroma(t-)* + *-osis.*] The development of fibroid tumors.

fibromembranous (fī-brō-mem′brạ-nus), *a.* [L. *fibra,* fiber, + *membrana,* membrane, + *-ous.*] Composed of a membrane containing much fibrous tissue.

fibromyitis (fī″brō-mī-ī′tis), *n.* [NL., < L. *fibra,* fiber, + Gr. μῦς (μυ-), muscle, + *-itis.*] Inflammation of a muscle with hyperplasia of the fibrous tissue.

fibromyxoma (fī″brō-mik-sō′mạ), *n.*; pl. *fibromyxomata* (-ma-tạ). A tumor composed of fibrous and mucous elements.

fibromyxosarcoma (fī″brō-mik″sō-sär-kō′mạ), *n.*; pl. *fibromyxosarcomata* (-ma-tạ). A myxosarcoma containing much fibrous tissue.

fibroneuroma (fī″brō-nū-rō′mạ), *n.*; pl. *fibroneuromata* (-ma-tạ). A fibrous tumor involving nerve structures.

fibronucleated (fī-brō-nū′klē-ā-ted), *a.* Composed of fibers and having elongated nuclei in the interstices.

fibropapilloma (fī″brō-pap-i-lō′mạ), *n.*; pl. *fibropapillomata* (-ma-tạ). A tumor which contains the elements of both fibroma and papilloma.

fibroplate (fī′brọ̄-plāt), *n.* An interarticular fibrocartilage.

fibropurulent (fī-brọ̄-pū′rọ̈-lent), *a.* Marked by pus with an admixture of fibrin in flakes.

fibrose (fī′brōs), *v. i.*; pret. and pp. *fibrosed,* ppr. *fibrosing.* [*fibrose, a.*] To form fibrous tissue, as in cirrhosis or in cicatrization. *Buck,* Med. Handbook, V. 561.

fibrospongian (fī-brọ̄-spon′ji-ạn), *a.* and *n.* **I.** *a.* Pertaining to or possessing the characters of the *Fibrospongiæ.*

II. *n.* One of the *Fibrospongiæ.*

fibrotic (fī-brot′ik), *a.* [*fibrosis* (*-ot-*) + *-ic.*] Relating to fibrosis. *Buck,* Med. Handbook, II. 99.

Fibrous oak-apple. See ★*oak-apple.*—**Fibrous slab,** a building material, invented in the nineteenth century, used for the internal finishing of surfaces to replace plaster or boarding. Compare *staff* 2.

F. I. C. An abbreviation of *Fellow of the Institute of Chemistry.*

ficelle (fē-sel′), *a.* [F. *ficelle,* packthread.] Resembling packthread or string (in color): as, *ficelle* lace.

ficiform (fis′i-fôrm), *a.* [L. *ficus,* a fig, + *forma,* form.] Fig-shaped; elongate ovoid, rapidly tapering to one extremity.

fickle-midge (fik′l-mij), *n.* An American chironomid fly, *Sciara inconstans,* the larvæ of which breed in rich hothouse earth and sometimes damage planted seeds and the roots of plants.

Fick's law of diffusion, inspiration experiment. See *law of ★diffusion* (*a*), ★*experiment.*

ficoid, *a.* **II†.** *n.* A plant of the family *Aizoaceæ,* formerly called *Ficoideæ* (which see). *Lindley.*

fid, *n.*—**Hand-fid,** a pointed pin of hardwood, from 14 to 20 inches long, used to open the strands of a rope in splicing. A somewhat longer metallic pin of this sort is called a *marlinespike.* [Naut.]

fiddle, *n.* **4.** In *ceram.,* a rack in which pieces of ware that have been dipped in liquid glaze are placed to drain.—**5.** A piece of wood by which the guy-ropes of a tennis-net are stretched to keep them taut.—**Corn-stalk fiddle.** See ★*corn-stalk.*

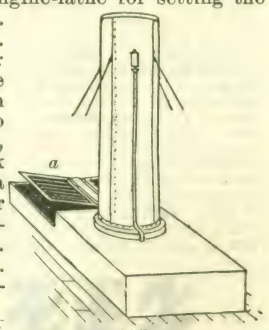
fiddle-back (fid′l-bak), *n.* An Australian scarabæid beetle, *Schizorrhina australasiæ.* [Australia.]

fiddle-beetle (fid′l-bē″tl), *n.* A large carabid beetle, *Damaster blaptoides,* which occurs in Japan and other oriental regions, and which, by the widening of its elytra, is somewhat fiddle-shaped.

fiddle-grass (fid′l-gras), *n.* The great hairy willow-herb, *Epilobium hirsutum.*

fiddle-head, *n.* **2.** *pl.* The crozier-like uncoiling young fronds of the cinnamon-fern, *Osmunda cinnamomea:* so named from their fancied resemblance to the carved head of a violin.

fiddle-headed (fid′l-hed-ed), *a.* Having handles that are fiddle-shaped: as, *fiddle -headed* serving spoons; *fiddle-headed* forks.



fiddler, *n.* **5.** A fish, *Trygonorhina fasciata,* a member of the family *Rhinobatidæ.* [Australia.]

fiddle-rack (fid′l-rak), *n.* *Naut.* Same as *fiddle, n.,* 2.

fiddler-fish (fid′lėr-fish), *n.* A fish, *Rhinobatus percellus,* of the family *Rhinobatidæ.*

fiddle-slide (fid'l-slīd), *n.* A slide in the compound-rest of an engine-lathe for setting the tool to turn a taper.

fiddley (fid'li), *n.* [Also *fiddly*, *fidley*; prob. a nautical use of **fiddly*, adj. from *fiddle*, in allusion to the grating.] *Naut.*, the iron framework or cover forming a hatch on deck over the engine- or fire-room of a steamer. *Jour. Brit. Inst. Electr. Engin.*, 1899–1900, p. 574.

a, fiddley.

fiddling-stone (fid'ling-stōn), *n.* A small whetstone. *Modern Amer. Tanning*, p. 175.

fideicommiss (fid″ē-ī-ko-mis'), *n.* In *civil law*, same as ★*fideicommissum*.

fideicommissary (fid″ē-ī-kom'i-sā-ri), *n.*; pl. *fideicommissaries* (-riz). In *civil law*, the beneficiary of a fideicommissum.

fideicommissor (fid″ē-ī-kō-mis'ôr), *n.* In *civil law*, the one by whom a fideicommissum was made.

fideicommissum (fid″ē-ī-kō-mis'um), *n.* [L. *fidei commissum*, a thing given in trust.] In *civil law*, a trust. It originated in a devise by which property was left to one who was to use it for the benefit of, or give it to, another who was incapable of taking it by the will. It is said to be the origin of the trusts and uses of the common law.

fidejussory (fī-dē-jus'ō-ri), *a.* Of or pertaining to a fidejussion.

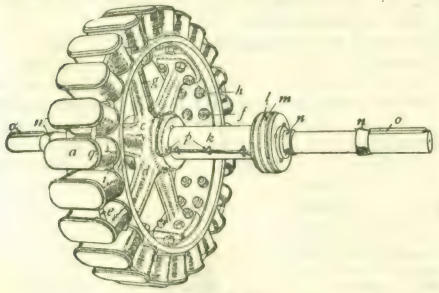
fideos (fē-dā'ōs), *n.* [Sp. *fideos*, vermicelli.] In Porto Rico, a species of dodder, *Cuscuta Americana*, which in places covers masses of vegetation with its yellow, thread-like, twining stems.

Fid-hook.

fid-hook (fid'hůk), *n.* A slender, flat hook used to keep another hook from slipping on a chain.

fidibus (fid'i-bus), *n.* [G., origin unknown. The form is like that of L. *fidibus*, dat. and abl. pl. of *fides*, a lyre, or of *fides*, faith.] A spill or lighter; a kindler; a match.

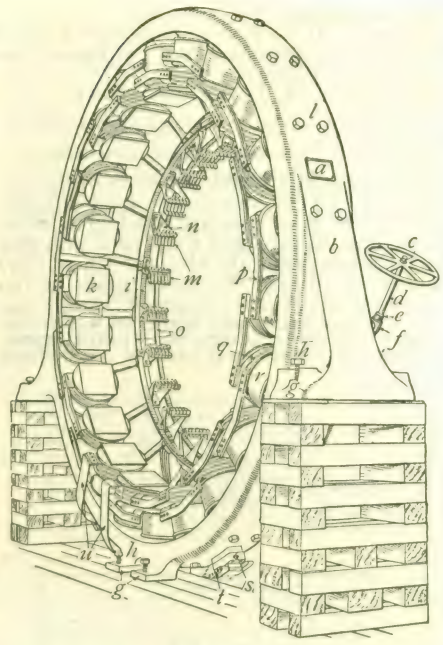
fidley, *n.* See ★*fiddley*.



fiducial, *a.* **4.** Relating to or characterized by the belief in supernatural powers.

The ceremonies of the folk, like those of other primitive peoples, are primarily *fiducial*, and involve representation, or even personation, of the deified potencies forming the tribal pantheon.

J. W. Powell, Smithsonian Rep., 1900, p. 62.



Fiducial points, in *thermom.*, the melting-point of ice, called the *ice-point*, and the boiling-point of water under a barometric pressure of 760 millimeters, called the *steam-point*.

field, *n.* **13.** Specifically, in electric machines, that part of the structure in which the magnetic flux is excited. The electrical or mechanical power is produced by rotation of the armature in the magnetic field or of the magnetic field in the armature. See cuts under ★*armature*.— **15.** In *math.*, same as ★*domain*, 8.— **Angle of field.** See ★*angle*[3].— **Corporal of the field.** See ★*corporal*[2].— **Curvature of field.** See ★*curvature*.— **Field boiler.** See ★*boiler*.— **Field of attention**, in *psychol.*, the range of consciousness that is characterized by clearness of the perceptual or ideational processes of the moment; the range of perceptions or ideas that represent the object of attention.— **Field of audition**, in *psychol.*, the range of space over which sounds of a certain intensity and quality are audible or within which they are localized. The phrase is used loosely, but always on the analogy of the *field of vision*.— **Field of consciousness.** See ★*consciousness*.— **Field of force**, the space throughout which the attractive or repellent action of a mass or system is manifested. A field of force may be regarded as a system of equipotential surfaces and lines of force, by means of which the distribution of potentials and intensities is indicated.— **Field of inattention**, in *psychol.*, the range of consciousness that is characterized by obscurity of the perceptual or ideational processes of the moment; the background of consciousness; the contents of consciousness apart from those conscious processes that represent the object of attention.— **Field of smell**, in *psychol.*, the range of space from which we receive olfactory stimuli that are effective for sensation. *E. B. Titchener*, Exper. Psychol., I. i. 73.— **Field of a lens, of touch.** See ★*lens*, ★*touch*.— **Flatness of field.** See ★*flatness*.— **Galois field.** Same as *Galois* ★*domain*.— **Magnetic field, motor field.** See *magnetic* ★*circuit*, ★*motor*.— **Multipolar field**, the magnetic field of a motor or generator having more than two poles.— **Old field growth.** See *volunteer* ★*growth*.— **Point field**, in *projective geom.*, the ∞^2 points on a plane.— **Polyphase field**, in an electric generator or motor, a magnetic field produced by polyphase currents.— **Relative field.** Same as ★*association area*.— **Rotary field**, in *elect.*, a magnetic field in which the lines of force have a motion of rotation. The term is usually applied to fields produced by means of polyphase currents in fixed coils; but the fields of certain dynamos and motors with revolving field-magnets are sometimes called rotary fields.— **Shifting field**, in *elect.*, a magnetic or electrostatic field the lines of which change position with respect to the medium within which they are formed.— **Straight field**, in *projective geom.*, the ∞^2 straights on a plane.— **Stray field**, in *elect.*, that portion of the electrostatic or electromagnetic field of any apparatus or machine which is not utilized in its operation.— **Strength of field**, the force upon a unit mass, unit pole, or unit charge situated at the point where the intensity of the field of force is to be measured. Strength of field is likewise expressed in terms of the number of lines of force per unit of area of field.— **Zero field**, in *phys.*, a field of force, such as an electrostatic or magnetic field, the intensity of which is zero.

Revolving Field.

a, pole-piece; *b*, field-ring; *c*, hub of spider; *d*, spokes of spider; *e*, field connections; *f*, pole-piece bolt; *g*, field-leads; *h*, nut for pole-piece bolt; *i*, field-winding; *k*, shaft; *l*, field-ring lamination; *m*, field-ring; *n*, oil-deflector; *o*, key; *p*, field-lead fastener; *q*, field-collar.

Stationary Field.

a, name-plate; *b*, magnet-frame; *c*, hand-wheel; *d*, hand-wheel shaft; *e*, hand-wheel shaft-collar; *f*, fulcrum-pin; *g*, foot; *h*, holding-down bolt; *i*, brush-holder yoke; *k*, pole-face; *l*, pole-piece bolts; *m*, brushes; *n*, stud-support; *o*, bus-ring; *p*, series-connection bars; *q*, series windings; *r*, shunt windings; *s*, connection-board; *t*, terminal; *u*, field-leads.

field, *v. t.* **2.** In *chem. industries*, to induce oxidation or other change by exposing to the air and solar heat. A term not in general use.

field-coil (fēld'koil), *n.* In *elect.*, a coil of wire around the field-magnet of a generator, motor, or other electrical machine, or one which serves to produce by means of the current flowing in it the magnetic field of any electrical device.

field-company (fēld'kum″pa-ni), *n.* A company of engineers in the British army, equipped as pioneers and pontoniers for field service.

field-cornetcy (fēld'kôr″net-si), *n.* The office or rank of field-cornet. [South Africa.]

field-cress (fēld'kres), *n.* Same as *cow-cress*.

field-derrick (fēld'der″ik), *n.* An oil-well derrick. See ★*derrick*, 2.

field-distortion (fēld'dis-tôr″shon), *n.* The twisting, bending or displacement in any way of the lines of an electrostatic or magnetic field or of any field of force.

field-geologist (fēld″jē-ol'ō-jist), *n.* A geologist who works in the field, as distinguished from one who is confined to a laboratory or library.

field-geology (fēld″jē-ol'ō-ji), *n.* Geological work in the open air or in nature, as contrasted with investigation pursued in the laboratory.

field-glass, *n.*— **Prismatic field-glass.** See *prismatic* ★*binocular*.

field-gun, *n.*— **Ehrhardt field-gun**, a field-gun designed for long recoil (about four feet) on its carriage. The carriage is so constructed that after two or three rounds it takes a nearly fixed position and hence permits very rapid firing.

field-hockey (fēld'hok″i), *n.* An outdoor game played by two opposing teams or sides who endeavor to drive the ball toward and into the opponents' goal with clubs curved at one end. Also *shinny*, *shinty*, and *bandy*.

fieldman (fēld'man), *n.*; pl. *fieldmen* (-men). A man employed in the field, as a member of a field-party; also, a traveling representative of an enterprise or an undertaking: distinguished from one employed indoors.

The *fieldmen* of the Geological Survey have been the pioneer surveyors of the natural features of the vast regions which constitute half the continent.

Sci. Amer. Sup., Jan. 31, 1903, p. 22,647.

field-music (fēld'mū″zik), *n.* A military band of any size accompanying a body of soldiers.

field-pine (fēld'pīn), *n.* A small heath-like herb, *Hudsonia ericoides*, of the rock-rose family, found near the Atlantic coast from Nova Scotia to Virginia.

Field-pine (*Hudsonia ericoides*). About one half natural size. (From Britton and Brown's "Illustrated Flora of the Northern States and Canada.")

field-pole (fēld'pōl), *n.* In *elect.*, the magnetic pole of the field of a generator or motor.

field-rheostat (fēld'rē″ō-stat), *n.* A rheostat or adjustable resistance used for the control and regulation of the magnetic field of an electric generator or motor.

field-roller (fēld'rō″lėr), *n.* A land-roll (which see).

field-salad (fēld'sal″ad), *n.* Same as *corn-salad*.

field-spool (fēld'spöl), *n.* A spool or bobbin on the field-magnet of an electric generator, motor, or other device, upon which the field-coil is wound.

field-trash (fēld'trash), *n.* In the British West Indies, the tops and leaves of the sugar-cane, which are removed in the field and generally serve for feeding stock or for manure. See *cane-trash*, 1.

The refuse, or macerated rind of the cane (which is called cane-trash in contradistinction to *field-trash*), . . . serves for fuel to boil the liquor.

B. Edwards, Hist. British Colonies in W. I., II. 262.

field-troop (fēld'tröp), *n.* A company of pioneers and sappers of the British Royal Engineers.

field-wormwood (fēld'wėrm″wůd), *n.* See ★*wormwood*.

fiend-fly (fēnd'flī), *n.* Any one of many species of tree-hoppers of the family *Membracidæ*; so named on account of their strange forms and sinister appearance. For similar reasons they are also called *brownie-bugs*.

fierse, *a.* Another spelling of *fierce*.

fiery, *a.* **4.** In *cricket*, causing the ball to bound high after pitching: said of wicket or bowler.

fiery-hunter (fīr″i-hun'tėr), *n.* An American carabid beetle, *Calosoma calidum*, dark in color, with reddish or copper-colored pits on the elytra. In Canada this beetle is called ★*copperspot* (which see, with cut).

fiest[2] (fēst), *a.* [Also *feest*, < D. *vies*, nauseous, disgusting, also disgusted (*ik ben vies van hem*, I am sick of him).] Disgusted (with): sick and tired (of). [Local (orig. New York?), U. S.]

fife, *n.* **2.** In *organ-building,* a piccolo stop.

fifteen, *n.*—**Half fifteen.** See ★*half.*

fifth. I. *a.*—**Fifth quarter.** See ★*quarter*1.

II. *n.*—**Circle of fifths.** See *circle of keys,* under *circle.*

fig2, *n.* **9.** In *soap-making,* same as *figging.*—**Barbary fig,** the Indian fig or prickly-pear, *Opuntia Opuntia.*—**Blue fig,** an Australian tree, *Elæocarpus grandis,* bearing globular blue fruits which resemble plums and are eaten by children and aboriginals. It yields a soft, easily worked wood and a bark rich in tannin. Called also *calhun* and *Brisbane quandong.*—**Cape fig.** Same as *Hottentot fig* (which see, under *fig*2).—**Clustered fig,** in Australia, a large tree, *Ficus glomerata,* native to India, Malaysia, and Australia, the fruit of which is of a light red color when ripe and hangs in clusters along the trunk and highest branches. It is eaten by the aborigines. Its wood is soft, coarse, light, and not durable.—**Fig wax, wine.** See ★*wax*2, ★*wine.*—**Goat-fig.** Same as *caprifig.*—**Golden fig,** *Ficus aurea,* a tree of southern Florida, the Keys, and the Bahama Islands. At first it is parasitic on the trunks of other trees, but later sends down aërial roots which coalesce on reaching the ground and produce large trunks from 3 to 4 feet in diameter, the growth of additional roots from the branches serving to propagate the trees over large areas after the manner of the banian. See *banian*2 (with cut).—**Gular fig,** in India, same as *clustered* ★*fig.*—**Horse-fig,** *Mesembryanthemum edule.* Also called *sour fig.*—**Indian fig.** (*b*) The fruit of the saguaro, *Cereus giganteus.*—**Moreton Bay fig,** *Ficus macrophylla,* a handsome evergreen tree, much used as an ornamental tree in streets and gardens in Australia, especially in Sydney and Adelaide. Its fruits are not edible.—**Mulberry-fig,** the sycamore-fig. See *sycamore,* 1.—**Poplar-leaf fig,** *Ficus lævigata.* See *fig*2, 1.—**Prickly fig.** Same as *blueberry-*★*ash.*—**Purple fig,** in the United States, a cultivated form of *Ficus Carica;* in Australia, *Ficus scabra,* a large tree yielding a brittle, spongy, useless wood, and small, black, edible fruits.—**Ribbed fig,** in Queensland, *Ficus pleurocarpa.* It yields a light, soft, elastic wood.—**Rough-leaved fig,** same as the Australian *purple* ★*fig.*—**Rusty fig,** the *Port Jackson fig, Ficus rubiginosa.* It yields soft, brittle, spongy wood, sometimes used for packing-cases.—**Sour fig.** Same as *horse-*★*fig.*—**Thorny fig,** *Mesembryanthemum spinosum,* a plant of the Cape region of Africa, the flowering branches of which harden into sharp spines, which protect it from herbivorous animals: in sharp contrast with the purple-flowered *M. floribundum,* which yields excellent pasturage and is so succulent that cattle feeding upon it require little water.—**Umbar fig,** in India, same as *clustered* ★*fig.*—**White fig.** Same as *rough-leaved* ★*fig.*—**Wild fig.** (*b*) Either the poplar-leaf or the golden fig.—**Willow fig,** the East Indian benjamin-tree, *Ficus Benjamina.* It is a medium-sized tree, often epiphytic, and yields a mottled, gray wood.

Golden Fig (*Ficus aurea*).
a, branch bearing fruit and leaves, one fourth natural size; *b*, fruit, three fourths natural size.

fig. An abbreviation (*b*) of *figurative* or of *figuratively.*

fig-bar (fig′bär), *n.* A device attached to a panning-machine to work semi-soft dough. The dough is pressed from a box by means of fine corrugated rollers and falls upon the apron of the panning-machine in long strips, where it is cut to any desired length. The box is built with three compartments, so that three different doughs or two doughs and a jelly can be run at the same time.

fig-eater, *n.* **3.** A local Australian name of a small passerine bird of the genus *Zosterops.* Also termed *grape-eater.*

fighting-top (fī′ting-top″), *n.* In a man-of-war, a platform, generally circular in shape, on or near the top of a mast, and provided with rapid-fire guns of small caliber and with accommodations for riflemen. It is generally reached by a ladder inside the hollow steel mast. Also called *military top.*

fig-insect (fig′in″sekt), *n.* Any insect of the chalcidoid family *Agaonidæ,* which inhabits figs, or any one of the numerous parasites of the insects of this family; specifically, *Blastophaga grossorum,* which fertilizes the Smyrna fig of commerce. See ★*Blastophaga,* with cut.

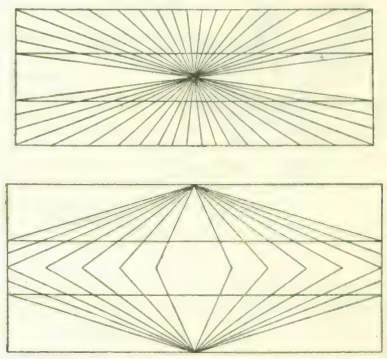
fig-marigold (fig′mar″i-gōld), *n.* See *marigold* and *Mesembryanthemum.*

fig-moth (fig-môth), *n.* A cosmopolitan phycitid moth, *Ephestia cautella,* whose larva lives in dried figs, nuts, cacao-beans, flaxseed meal, dried currants, and other stored products. Also called *dried-currant moth.*

fig-paste (fig′pāst), *n.* **1.** A confection of figs; a national sweetmeat of Turkey and Greece. —**2.** A pink or white confection consisting of squares of a semi-transparent sweetish paste dusted with fine white sugar.

Fig-tree disease. See ★*disease.*

figuline, *n.* **II.** *a.* Of or pertaining to a potter or pottery: as, *figuline* ware. See *figuline rustique,* under *figuline.*

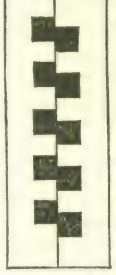


figurative, *a.* **5.** In *geom.,* at infinity.

On each straight is one and only one point 'at infinity,' or *figurative* point.

Merriman and Woodward, Higher Mathematics, p. 73.

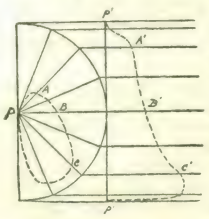
Figurative point, straight. See ★*point*1, ★*straight*1.



figure, *n.* **18.** In ornamental woodwork, the grain of the wood, especially such grain when of unusual richness and when used with special care as a part of the design.—**19.** *pl.* The highest division of the lowest grade in the classical course in a Jesuit school. [Eng.]—**Accompaniment, achromatic figure.** See ★*accompaniment,* ★*achromatic.*—**Hering's** and **Wundt's figures,** in *psychol.,* figures embodying a variable optical illusion of direction. The horizontal lines of the figures are really parallel, but appear curved. The figures were published by E. Hering in 1861 and by W. Wundt in 1898.—

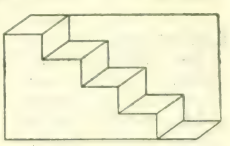
Hering's and Wundt's Figures.

Láska's figure, a simple geometrical diagram which consists of two or more straight lines of equal length, *a* and *b,* making different angles with the horizontal base-line *H.* It serves to illustrate certain illusions of extent and perspective.—**Lichtenberg's figures,** patterns upon a powder-strewn insulating surface which are produced by electrostatic action, as when the spark or brush from a positively charged conductor is received upon an ebonite surface covered with powdered sulphur or red lead: so called from G. C. Lichtenberg, who in 1778 described such figures and the method of obtaining them.—**Müller-Lyer figure,** in *psychol.,* a figure embodying a variable optical illusion of extent. Two vertical or horizontal lines of the same length are supplied with oblique end-pieces, converging in the one case and diverging in the other. The line with the diverging end-pieces appears the longer. This illusion, also termed the arrow-head and feather illusion, was published by F. Müller-Lyer in 1889.—**Münsterberg's figure,** in *psychol.,* a figure embodying a variable optical illusion of direction. Two vertical rows of black and white chess-board squares are laid edge to edge so that there is some overlapping of black by white and conversely. The line of junction appears not vertical, but oblique. The illusion was described by H. Münsterberg in 1897.—**Plane figure,** a figure all the points of which are in the same plane.—**Poggendorff's figure,** in *psychol.,* a figure which embodies a variable optical illusion of direction. Two vertical parallel lines are crossed obliquely (except over the interspace, which is left blank) by a third line: the two parts of this third line, on either side of the verticals, appear not to lie in the same straight line. Attention was called to the illusion by J. C. Poggendorff in 1860.—**Primal figure,** in *projective geom.,* a range, a flat pencil, or an axial pencil.—**Rousseau's figure,** a diagram for the approximate graphical determination of the mean spherical intensity of a source of light where the distribution of the light about a vertical axis is symmetrical. It is a curve with Cartesian coördinates in which the abscissæ are the intensities of light measured at varying angles with the horizontal plane through the source, and the ordinates are the sines of the corresponding angles. The curve P′A′B′C′P′ is the Rousseau's figure for the source of light at P for which the polar curve P A B C P indicates the vertical distribution of light intensities. The mean spherical intensity is measured by one half the area included by the Rousseau figure.—**Schroeder's figure, Schroeder's stair figure,** in *psychol.,* a figure which embodies an optical illusion of reversible perspective. The figure may be seen, by change of fixation, either as a flight of stairs, or as the under side of such a flight (or a piece of overhanging masonry). The illusion was published by H. Schroeder in 1858.—**Vertex of a solid figure,** a point of a figure where three or more of its faces intersect.—**Zöllner's figure,** in *psychol.,* a figure which embodies a variable optical illusion of direction. The parallel verticals of the figure appear to converge and diverge under the influence of the oblique cross-pieces. The illusion was described by F. Zöllner in 1860. Also *Zöllner's lines.*



Láska's Figure.

Müller-Lyer Figure.



Münsterberg's Figure.

Poggendorff's Figure.

Rousseau's Figure.

Schroeder's Stair Figure.

Zöllner's Figure.

figure-painting (fig′ūr-pān″ting), *n.* Painting which is concerned especially with the dramatic or decorative use of the human figure.

figure-skating (fig′ūr-skā″ting), *n.* Fancy skating in which figures of various kinds are described on the ice by the skater.

figurette (fig-ū-ret′), *n.* A small figure. See *figurine.*

figure-weaving (fig′ūr-wē″ving), *n.* The weaving of fancy designs.

figuring, *n.* **3.** The adding of figures, as to a drawing. In architectural and engineering work the drawings, however accurately made to scale, are covered with the dimensions in Arabic figures. Figuring includes also the dotted lines and the little arrow-heads which mark the dimensions figured.

fig-wasp (fig′wosp), *n.* The agaonid insect, *Blastophaga grossorum.* See ★*fig-insect.*

The introduction into California, by the United States Department of Agriculture, of the blastophaga or *fig wasp* has fairly passed the experimental stages, as is well proved by the largely increased production of Smyrna figs at Fresno, in that State, where a colony of this useful insect has been established.

Yearbook U. S. Dept. Agr., 1901, p. 673.

fig-worm (fig′wėrm), *n.* The larva of the ★fig-moth (which see).

F. I. Inst. An abbreviation of *Fellow of the Imperial Institute.*

F. I. J. An abbreviation of *Fellow of the Institute of Journalists.*

fil3, *v.* and *n.* A simplified spelling of *fill.*

filament, *n.* **6.** In *geometrical topics,* a movable object which at any one instant, or indivisible determination of time, is at every part of a line. During a lapse of time a filament is restricted to being in some surface, which it is said to generate.—**7.** A long thread-like bacterial growth.—**Linin filament,** in *cytol.,* a delicate thread or network of linin spread through the cell-nucleus.—**Seminal filament,** a spermatozoön.

filander3, *n.* and *v.* A simplified spelling of *philander.*

filanthropic, filanthropist, etc. Simplified spellings of *philanthropic,* etc.

Filar hypothesis, the doctrine or opinion that the separate threads seen in some protoplasm are the essential structures of all protoplasm.

Filaree (*Erodium cicutarium*). One third natural size.

filaree (fil-a-

rē′), *n.* [A reduction of *alfilerilla.*] In California, either of two species of stork's-bill, *Erodium cicutarium* and *E. moschatum;* alfilerilla.—**Musky filaree,** *Erodium moschatum,* the coarser of the species named above. Its foliage has a musky odor, especially when wilted. Also called *musk-clover* and sometimes *green-stemmed filaree.*—**Red-stemmed filaree.** Same as *alfilerilla.*

Filarial periodicity. See ★*periodicity.*

filariasis (fi-lā-ri-ā′sis), *n.* [NL., < *Filaria* + *-asis.*] Presence of *Filaria* in the blood-vessels and lymph-vessels: the underlying cause of elephantiasis.

In certain tropical countries a disease known as *filariasis,* which somewhat resembles certain forms of leprosy, is transferred among human beings by certain mosquitoes. *L. O. Howard,* in Yearbook U. S. Dept. Agr., 1901, p. 190.

filariosis (fi-lā-ri-ō′sis), *n.* [NL., < *Filaria* + *-osis.*] Same as ★*filariasis.*

filarious (fi-lā′ri-us), *a.* Same as *filarial.*

filasse (fi-las′), *n.* [F. *filasse,* bast, harl, tow, < F. *fil,* < L. *filum,* thread.] Vegetable fiber prepared for the processes of manufacture.

filator (fi-lā′tor), *n.* [NL. **filator,* < **filare,* spin a thread: see *file*[3], *v.*] The spinning apparatus of a silkworm, situated in the tubular spinneret.

filbert, *n.*—**Black-knot of the filbert.** See ★*black-knot.*—**West Indian filbert,** the seeds of the similar pod or match-box bean, *Lens phaseoloides.* See ★*gogo.*

filbert-gall (fil′bėrt-gâl), *n.* A gall which resembles a filbert.—**Grape-vine filbert-gall,** one of a bunch of woolly greenish galls, resembling a bunch of filberts, found on the stem of the grape and inhabited by a cecidomyiid larva. The gall was named *Vitis coryloides* by Walsh and Riley, and the insect which makes it is probably a *Diplosis.*

filbert-mildew (fil′bėrt-mil″dū), *n.* The fungous disease, due to *Phyllactinia suffulta,* which attacks the leaves of filberts.

filch, *n.* **3.** One who filches or is given to filching; a filcher.

fild[2], *pp.* A simplified spelling of *filled.*

file[1], *n.*—**Lateral file,** a small steel file set in a metallic frame and adjustable laterally or otherwise, used by dentists in spacing teeth.—**Molar file,** a small file formerly used by dentists in filing molar teeth: now superseded by the carborundum wheel.—**Separating file,** a file formerly used by dentists for separating teeth: now superseded by thin carborundum disks.

file[3], *n.* **11.** An individual soldier.

But the poor *file* who has to carry it, as well as his gun and various other accoutrements; how does it appeal to him? *Med. Record,* Feb. 7, 1903, p. 227.

Blank file, in a two-rank formation, a file consisting only of a soldier in the front rank.—**Open file,** in *chess,* a file on which there are neither pieces nor pawns. A player may obtain possession or command of such an open file ('take the open file') by playing his queen or rook on any of its squares.—**Right by file,** a movement, in drill, in which a column in single file is formed from a column of twos or squads.

File-cutters' disease. See ★*disease.*

filer[3] (fī′lėr), *n.* [*file*[2] + *-er*[1].] One who defiles something.

[The Chinese] eate their meate with two sticks of Ivory, Ebony, or the like: not touching their meat with their hands, and therefore no great *filers* of linnen.
P. Heylyn, ΜΙΚΡΟΚΟΣΜΟΣ, ed. 1633, p. 680.

file-stripper (fīl′strip″ėr), *n.* One who draws files or finishes the blanks for files, either by hand or in a machine, preparatory to cutting the teeth.

Filet lace. See ★*lace.*

filharmonic, *a.* A simplified spelling of *philharmonic.*

filiation, *n.* **5.** An individual or group of individuals derived from one source or parent.

filibranch (fil′i-brangk), *a.* and *n.* [NL. *filibranchius,* < L. *filum,* thread, + *branchiæ,* gills.] **I.** *a.* Having long gills formed of tubular filaments, as certain bivalve mollusks; filibranchiate.

II. *n.* A bivalve mollusk of the order *Filibranchiata.*

Filibranchia (fil-i-brang′ki-ą), *n. pl.* [NL.] Same as ★*Filibranchiata.*

Filibranchiata (fil-i-brang-ki-ā′tą), *n. pl.* [NL.] An order of bivalve mollusks. They have the gills in the form of long filaments that hang down into the mantle cavity, are bent back upon themselves in the form of a V, and may or may not be connected by interfilamentary ciliated junctions. The order includes the families *Anomiidæ, Arcadæ, Trigoniidæ,* and *Mytilidæ.*

filibranchiate (fil-i-brang′ki-āt), *a.* [NL. *filibranchiatus,* < L. *filum,* a thread, + *branchiæ,* gills: see *branchiate.*] Having, as some pelecypod mollusks, the plates of the gills narrow, strap-like, and much elongated. *Phil. Trans. Roy. Soc.* (London), ser. B, 1903, p. 178.

filicauline (fil-i-kâ′lin), *a.* [L. *filum,* thread, + *caulis,* stem, + *-ine*[1].] Having a thread-like stem.

filicic (fi-lis′ik), *a.* [L. *filix* (*filic-*), fern, + *-ic.*] Derived from or pertaining to ferns.—**Filicic acid,** a crystalline compound, $C_{14}H_{16}O_5$, contained in the rhizome of the common male fern, *Dryopteris Filix-mas.* To it the extract chiefly owes its therapeutic value as an anthelmintic.

filicide[1] (fil′i-sīd), *n.* [L. *filius,* son, or *filia,* daughter, + *-cida,* < *cædere,* kill.] One who kills his or her son or daughter.

filicide[2] (fil′i-sīd), *n.* [L. *filius,* son, or *filia,* daughter, + *-cidium,* < *cædere,* kill.] The killing of one's son or one's daughter.

filicin (fil′i-sin), *n.* [L. *filix* (*filic-*), fern, + *-in*[2].] One of the active vermifuge principles found in the rhizome of the male fern.

filicinean (fil-i-sin′ē-ąn), *a.* Belonging or related to the *Filicineæ* or *Filicales;* fern-like.

filicineous (fil-i-sin′ē-us), *a.* Same as ★*filicinean.*

filicologist (fil-i-kol′ō-jist), *n.* [*filicolog-y* + *-ist.*] One versed in filicology; one engaged in the study of ferns.

Filicornia (fil-i-kôr′ni-ą), *n. pl.* [NL., < L. *filum,* thread, + *cornu,* horn.] A superfamily of beetles corresponding to the *Adephaga* or *Caraboidea,* having the antennæ filiform and all the tarsi 5-jointed.

filiform, *a.* **II.** *n.* In *surg.,* a very slender hair-like bougie. *Buck,* Med. Handbook, II. 745.

filigree (fil′i-grē), *v. t.* [*filigree, n.*] To ornament with filigree-work.

filing-block (fī′ling-blok), *n.* Same as *filing-board.*

filing-gap (fī′ling-gap), *n.* In *elect.,* the space between the terminals of a coherer in which the filings or other conducting particles upon which its action depends are placed.

filing-machine (fī′ling-ma-shēn″), *n.* A power-machine for filing metals, resembling in general plan a scroll-saw in which the vertical reciprocating saw is replaced by a file. The work to be filed is placed upon a table and is fed to the file by hand. Files of any shape or size can be used in the machine, and by tilting the table the work can be fed to the file at any angle. Filing-machines for sharpening cotton-gin saws employ horizontal reciprocating files with an automatic feed-motion which presents one tooth of the saw at a time to the file and controls the number of strokes of the file upon each saw-tooth.

filio-pietistic (fil′i-ō-pī-e-tis′tik), *a.* [Irreg. adj. from *filial piety.*] Relating or pertaining to filial piety. [Rare.]

He has set . . . in its true light the theocracy which the Puritans founded and maintained in Massachusetts. As long as that theocracy lasted men dared not speak the truth about it; since it decayed, orators and historians, indulging in what Mr. Adams calls "*filio-pietistic* cant," have praised the Puritans for those qualities which they have condemned in other bigots.
Harvard Graduates' Magazine, March, 1894, p. 439.

Filipendula (fil-i-pen′dų-lą), *n.* [NL. (Adanson, 1763, adopted from Tournefort, 1700), < L. *filum,* thread, + *pendulus,* hanging. The allusion is to the tubers, connected by the root-stocks as if upon threads.] A genus of plants of the family *Rosaceæ.* They are perennial herbs, which have flowers similar to those of *Spiræa,* but with about 10 pistils ripening into dry, one-seeded, indehiscent fruits. There are about 9 species, natives of the north temperate zone. Some are familiar garden plants, as *Filipendula Filipendula* (*Spiræa Filipendula* of Linnæus), the meadow-sweet, and *F. Ulmaria,* the queen-of-the-meadows, both white-flowered, and *F. rubra* (*Ulmaria rubra* of Hill), the queen-of-the-prairie, with pink flowers. See *queen-of-the-prairie* and *queen-of-the-meadows.*

Filipina (fil-i-pē′nä), *n.*; pl. *Filipinas* (-äz). [Sp., fem. of *Filipino,* Filipino.] A native woman of the Philippine Islands.

Filipino (fil-i-pē′nō), *n.* [Sp., < NL. *Philippinus,* adj. (NL. *Insulæ Philippinæ,* Sp. *Islas Filipinas,* Philippine Islands), < *Philippus,* Sp. *Filipo, Felipe,* Philip.] A native of the Philippine Islands; in a restricted sense, a native of more or less pure Spanish descent. Also incorrectly *Philippino.*

filippic, *n.* A simplified spelling of *philippic.*

Filippi's gland. See ★*gland.*

filippo (fi-lip′ō), *n.* [It.] The silver testone of Milan issued under Philip III. of Spain, and continued by his successors.

filipuncture (fil-i-pungk′tūr), *n.* [L. *filum,* wire, + *punctura,* puncture.] Introduction of fine wire into an aneurism with the design of inducing coagulation of blood within the sac.

filistatid (fi-lis′tą-tid), *n.* A spider of the family *Filistatidæ.*

filitannic (fil-i-tan′ik), *a.* [L. *fili(x),* fern, + *tannic.*] Noting an acid, a glucoside tannin obtained from the rhizome of the male fern.

filite (fī′līt), *n.* [L. *filum,* thread, + *-ite*[2].] An explosive, a variety of smokeless powder, largely produced at the Italian government powder-works, the same in composition as ballistite, but formed into slender cords instead of into cubical grains. See *ballistite.*

Filix (fil′iks), *n.* [NL. (Adanson, 1763), < L. *filix,* a fern.] A genus of polypodiaceous ferns, the equivalent of *Cystopteris* (Bernhardi, 1806). The type of the genus is *F. bulbifera,* the common bladder-fern of the United States and Canada. See *Cystopteris* and *bladder-fern.*—**Filix-mas,** the male fern, *Driopteris Filix-mas.*

fill[1], *v. t.* **10.** In *poker,* to draw cards which improve the hand: usually restricted to filling four-card flushes or straights. *Amer. Hoyle,* Poker, p. 162.—**11.** To execute: as, to *fill* an order for goods.—**12.** To make up: as, to *fill* a prescription.—**Filled soap.** See ★*soap.*

fill[1], *n.* **3.** In *engin.*: (*a*) An embankment of earth or rock made as a road-bed: the opposite of *cut.* (*b*) The vertical height of the top of an embankment above the natural surface at any point.—**4.** Deposition alternating with or in contrast to scouring out. The contrasting terms are *scour* and *fill, cut* and *fill. Rep. Brit. Ass'n for Advancement of Sci.,* 1900, p. 733.

filler[1], *n.* **5.** A machine for filling bottles, cans, or bags with liquids or dry materials. —**6.** In *hort.,* a tree that is planted in an orchard temporarily, to be removed when the trees of the regular planting and of more enduring character are well grown and occupy the land. [*Colloq.*]—**7.** In the manufacture of plastic materials, a solid substance, such as wood fiber or mineral powders, used to give greater consistence to a viscid constituent, such as collodion or a fused resin.—**8.** In *engin.*: (*a*) A longitudinal timber or other material placed between two parallel members, as a timber placed between two steel I-beams to stiffen them and to enable them to act as one beam. (*b*) A hollow cylindrical pipe or spool through which a bolt is passed to fasten together two parallel beams or struts. The bolt in conjunction with the filler prevents the two beams or struts from spreading apart and from moving too close together.

The floor framing consists of six sills, the four centre ones being six-inch "I" beams with wood *fillers* extending the entire length of car.
Elect. Rev., Sept. 11, 1904, p. 450.

filler[3] (fi-lăr′), *n.* [Hung. *filler.*] A current subsidary coin of Hungary, the hundredth part of a krona, equivalent to two tenths of a United States cent.

filler-vase (fil′ėr-vās), *n.* In Mycenæan pottery, a narrow vase having a funnel-shaped bottom with a hole: used apparently to transfer liquids to narrow-necked receptacles.

Filler-vase.
(From "Annual of the British School at Athens.")

fillet, *n.*, **5.** (*k*) The rounded corner of a groove in a roll, or of a pattern for molding, etc.—**11.** A loop-shaped instrument or bandage by means of which, when passed over a projecting part of the fetus, traction is made in cases of tedious or obstructed labor.—**Fillet decussation,** a crossing of nerve-fibers over the median line in the medulla oblongata. These fibers lie above or dorsad to the decussation of the pyramids and form a bundle of longitudinally coursing fibers known as the fillet (lemniscus). See *fillet,* 9.—**Fillet-flock.** See the extract.

In its course towards the cerebrum, the fillet is said to receive accessions of fibers from the nuclei of the sensory cranial nerves, from little clumps of nerve cells scattered in its course—the '*fillet flock*' of Roller.
Ferrier and Turner, in Philos. Trans. Roy. Soc. (London), [1894, ser. B, p. 760.

Lateral fillet-tract, a tract which leaves the lateral fillet at the level of the motor nucleus of the fifth nerve, lying between the nucleus and the superior olivary body on the mesial side of the motor root. The tract may be traced to the distal end of the inferior olive, and gradually diminishing in size may be followed distinctly as far as the sixth thoracic segment. *Ferrier and Turner,* in Philos. Trans. Roy. Soc. (London), 1894, ser. B, p. 742.—**Scattered fillet fibers.** See ★*fiber*[1].

fillet, *v. t.* **2.** In *cooking:* (*a*) To form into or dress as a fillet, as a piece of beef. (*b*) To cut fillets from, as from a chicken or a fish.

filleting, *n.* **4.** Mortar or plaster used to fill up a close joint where one surface meets another. Thus, at the beginning of a slated roof at the eaves mortar is used to close the cracks between the wall and the first rows of slate. Filleting in this sense is a poor substitute for flashing.

fillet-strap (fil′et-strap), *n.* In a harness, a strap which passes over a horse's rump and

extends down to the shaft, to which it is connected by a loop.

filling, *n.* **7.** In *wooden ship-building*, a piece of timber placed between the frames to fill up the spaces and give greater strength. When placed in the bottom, between the floor-timbers, such pieces are called *filling-timbers*.

filling-case (fil'ing-kās), *n.* In *cotton-carding*, a cylindrical can in which the sliver from a doubler is collected.

filling-timber (fil'ing-tim″bėr), *n.* In *ship-building*, see ★*filling*, 7.

film, *n.*— **Surface film,** the outer or boundary layer at the free surface of a body of liquid. The surface film behaves in many respects like a stretched membrane, and by its action upon the inclosed liquid produces the so-called capillary effects.

filmogen (fil'mō-jen), *n.* [Irreg. < *film* + *-o-* + *-gen*, -producing.] A solution of soluble nitrate of cellulose in acetone with addition of a small amount of castor-oil. It resembles flexible collodion, liquor adhæsivus.

film-tension (film'ten″shon), *n.* The adhesive power of a thin film of any material; the force required to separate two plates having between them a thin film of a given material.

filobacterium (fī″lō-bak-tē'ri-um), *n.*; pl. *filobacteria* (-ä). [NL., < L. *filum*, thread, + NL. *bacterium*, bacterium.] A bacterium having a filamentous or thread-like form.

filo-floss (fil-ō-flos'), *n.* Same as *filoselle*.

filologer, filological, etc. Simplified spellings of *philologer*, etc.

filomel, *n.* A simplified spelling of *philomel*.

filopena, *n.* A simplified spelling of *philopena*.

filosity (fi-los'i-ti), *n.* [*filose* + *-ity*.] The character of producing many threads or shoots: applied to the habit of the potato of producing, under certain conditions, many thin, slender shoots.

filosofer, filosofic, etc. Simplified spellings of *philosopher*, etc.

fils (fēs), *n.* [F., < OF. *fils*, *fis*, *fiz*, < L. *filius*, son: see *filial*.] Son: used in French as *junior* is used in English, *père* (father) being used for *senior*: as, 'Dumas *fils*,' 'Dumas the younger' or 'junior.'

filter[1], *n.*— **Berkefeld filter,** a filter for sterilizing liquids. It consists of a hollow cylinder made from infusorial earth, the silicious skeletons of *Diatomaceæ*, inserted in a metallic case. Water and other liquids pass rapidly through the filtering medium while germs, animalculæ, or suspended matters remain on the surface. The cylinder can be easily removed for cleansing.— **Bichromate ray filter.** Same as ★*bichromate cell*.— **Dumont filter,** a vessel containing coarsely granular animal charcoal or bone-black through which, in sugar-refining, colored syrup is slowly percolated and thereby becomes decolorized.— **Gooch filter** or **crucible,** in *chem. analysis*, a platinum crucible the bottom of which is perforated with fine holes and covered with a layer of asbestos in short fibers.— **Intermittent filter,** a component element of a system of water-filtration in which the inflow and outflow are not simultaneous in any one basin. The water to be cleansed is brought into an empty basin, and when full the inlet-valves are closed, to allow an interval of quiescence during which settling and precipitation may occur. The outlets are opened at the end of the interval, and the contents drawn off through the layers of sand or other filtering-material on the bottom; then the process is repeated. When an intermittent filter is used for sewage, it is more properly called a ★*contact-bed*, since bacterial purification with chemical change is added to mechanical separation of suspended matter.— **Kitasato filter,** a filter resembling in construction the Pasteur filter, but of small size, used in laboratory work for the filtration of small quantities of fluid.— **Leaf filter,** a contrivance used in sugar-refining, consisting of a series of rectangular bags of cotton cloth, each stretched over a wooden frame, the frames being placed parallel to each other, in the same trough. The syrup is run into this trough and filters into the bags, running off from each through a hole in the bottom of the frame. The suspended solid impurities are thus left on the outside of the bags, which are the more easily cleaned from time to time by washing.— **Lovering's filter.** Same as *leaf* ★*filter*.— **Pasteur-Chamberland filter,** a filter designed to render water germ-free. It consists of an unglazed porcelain tube or candle which serves as the filtering material, incased in a suitable jacket, the whole being connected with the water-supply. The candle may also be inserted in foul water and the filtering process be effected by a suction-pump. The candle is easily removed from the jacket for cleansing by friction with a brush and is sterilized by heating in a bake-oven.— **Peyron's filter,** a cylindrical vessel, with an air-tight closed top, used by sugar-refiners for the continuous filtration of syrup through animal charcoal in order to remove color. Hydrostatic pressure may be employed to increase the rapidity of flow of the liquid.— **Taylor's filter,** in *sugar-refining*, a long bag of closely woven cotton cloth through which syrup is filtered in order to remove suspended impurities. Also known as a *bagfilter*.

filtering-plate (fil'tėr-ing-plāt), *n.* A perforated glass or porcelain plate with beveled edge, inserted in a funnel or in a bottomless crucible for filtering purposes.

filtering-tube (fil'tėr-ing-tūb), *n.* A laboratory device of glass for filtering through glass wool or asbestos.

filter-plate (fil'tėr-plāt), *n.* A plate or screen made of two perforated metal plates with the filtering material between them: used for filtering a liquid.

filter-press (fil'tėr-pres), *v. t.* To filter by means of a filter-press. This mode of extracting a liquid from mixture with a solid is largely applied in a number of chemical industries, notably in sugar-making. *S. P. Sadtler*, Handbook of Indust. Chem., p. 133.

filtration, *n.*— **Electrochemical filtration,** in *phys. chem.*, a term formerly used to denote electric osmose, or cataphoresis.

filum, *n.* **3.** A hair-like process on the radius of the down-feathers in some birds.

fimicolous (fi-mik'ō-lus), *a.* [L. *fimus*, dung, + *colere*, inhabit, + *-ous*.] Living in dung.

fin[1], *n.*, **3.** (*g*) The thin sheet of metal squeezed out between the collars of the rolls in a roll-train.

fin. An abbreviation of the Latin *ad finem*, at or to the end.

Fin. An abbreviation (*a*) of *Finland*; (*b*) of *Finnish*.

finca (fēn'kä), *n.* [Sp., < *fincar*, also *hincar*, OSp. *ficar*, fix, attach: see *fitch*[3], *fichu*.] Fixed property; real estate.

finch[1], *n.*— **Cutthroat finch,** a bird-fanciers' name for one of the small African weaver-birds, *Amadina fasciata*: given on account of the red mark around the throat of the male.

find, *v. i.* **2.** To discover scent or game: said of dogs in the field.

fin de siècle (faṅ'dė [F.] The end of the century: used attributively of anything that exhibits certain characteristics supposed to mark the closing years of the nineteenth century, regarded as a period of emancipation from the traditional social and moral order.

All these *fin-de-siècle* cases have . . . a common feature, . . . a contempt for traditional views of custom or morality. Such is the notion underlying the word. . . . It means a practical emancipation from traditional discipline which theoretically is still in force, . . . the end of an established order which for thousands of years has satisfied logic, fettered depravity, and in every art matured something of beauty.
Max Nordau (trans.), Degeneracy, p. 5.

finding, *n.*— **Special finding,** in *law*, same as *special verdict*.

finding-circles (fīn'ding-sėr″klz), *n. pl.* Circles attached to the mounting of an equatorial, and so placed as to be readily seen from the floor, which show the declination and hour-angle to which the telescope is directed; also, circles on the tube of a transit instrument which show by the aid of an attached level, the altitude of the object to be observed.

fine[1], *n.*— **Fine for alienation,** in *feudal law*, money paid by a vassal to his superior for the privilege of transferring his feudatory.— **Fine for endowment,** in *old Eng. law*, a fine required to be paid to the lord by the widow of a vassal as a condition of receiving dower in her husband's lands.— **Fresh fine,** in *old Eng. law*, a fine levied within a year. See *to levy a fine*, under *levy*.— **Joint fine,** in *old Eng. law*, a fine or amercement that might be imposed upon an entire community.

fine[2], *a.*— **Fine blue.** See ★*blue*.

fine[2], *v. t.* **4.** In *ship-building*, to reduce the lateral dimensions of a vessel below the waterline.

fine[2], *adv.*— **To sail fine** (*naut.*), to sail close to the wind; sail so as to keep the luff or forward leach of the sail trembling.

fine-hair (fīn'hār), *v. t.* In *leather-manuf.*, to remove (from a skin) the fine hair or down which is sometimes left after the coarser hair has been removed. *C. T. Davis*, Leather, p. 381.

fineness, *n.*— **Coefficient of fineness.** See ★*coefficient*.

fines (fīnz), *n. pl.* [Pl. of *fine*[2], *a.*, 13, used as noun.] In *metal.*, ore which is pulverized or in too small particles to be smelted in the ordinary way.

finesse, *n.* **4.** In the *fine arts*, subtlety and delicacy in color or form.

Subtlety of the modelling, as seen particularly in the face of the Christ and the *finesse* of the drawing of the hands.
R. Fry, in Burlington Mag., III. 93.

finessi (fi-nes'ē), *n.* [Swahili *fenessi*, *mfenessi*, *mfinessi*, jackfruit.] In West Africa and Zanzibar, the name for *Artocarpus integrifolia*. See *breadfruit* and *jack-tree*.

finetop, *n.*— **Alkali finetop.** Same as ★*alkali-grass*, 2.

finger, *n.* **5.** In a mechanical piano-player, a lever that strikes or depresses a key. See ★*piano-player*.— **6.** A projecting pin or rod, straight, or slightly curved; specifically, a projecting curved wire which carries an electric current into the clearance-volume of an internal-combustion motor, so that at the proper time a spark may pass between its tip and another terminal and fire the charge of explosive mixture. See *internal-combustion engine*, under *engine*.— **7.** In *flax-manuf.*, a small lot of fiber that has been treated at one operation in the scutching process.— **Dead fingers.** See ★*dead*.— **Hammer finger,** a condition of permanent flexion of the middle joint of a finger, analogous to the deformity called hammer-toe.— **Hippocratic fingers,** a condition in which the finger-tips are clubbed with curved nails, seen in various chronic affections, especially of the heart and lungs.— **Morse finger.** Same as *telegraphers' cramp*.— **Peeled fingers,** the rhizomes of the male fern from which the leaf-bases and chaff have been removed.— **To give one the finger** to give scanty recognition or encouragement; to act coldly or disappointingly toward one who had been led to expect assistance or friendship.

finger-berry (fing'gėr-ber″i), *n.* The American or high-bush blackberry, *Rubus nigrobaccus*.

finger-fish (fing'gėr-fish), *n.* A starfish.

finger-gage (fing'gėr-gāj), *n.* An automatic device in a sheet-metal press, for holding the sheet-metal in position while it is being cut and allowing it to advance again a fixed distance and serving also as a gage in guiding the work to the press.

finger-grass, *n.* **2.** *Syntherisma serotina*, a native American grass with shorter, broader, and more hairy leaves than the common finger-grass: found from Delaware to Florida and westward to Mississippi. Other species, as, *S. filiformis* and *S. villosa*, are also called *finger-grass*. — **3.** Any species of the genus *Chloris*, which consists of handsome and sometimes useful grasses with radiating spikes like those of the crab-grass and crowfoot-grass, rendered specially attractive by the long awns of the flowers. Several are in ornamental cultivation, as the Australian *C. truncata*, called *windmill-grass*, *bearded crowfoot*, and *star-grass*; *C. verticillata*, of Kansas, Texas, etc., also called *windmill-grass*; and *C. elegans* of the southwestern United States, called *feather crowfoot*. In the Bahamas the name is applied to *C. Swartziana*.

Finger-grass (*Chloris verticillata*).
a, plant, three fourths natural size, the panicle unexpanded: when expanded the branches are spread at right angles to the axis; *b*, spikelet, broken open to show the parts (enlarged). (U. S. D. A.)

finger-lake (fing'gėr-lāk″), *n.* In *geog.*, one of a group of lakes which diverge somewhat like the fingers of an open hand: such a group occurs in central New York.

finger-leaf (fing'gėr-lēf), *n.* The fivefinger, *Potentilla Canadensis*.

finger-machine (fing'gėr-ma-shēn″), *n.* A piece of gymnasium apparatus intended to exercise the muscles of the hand and forearm. It consists of small parallel bars which are held separate by weights and far enough apart to be grasped with the fingers extended, and then drawn together by an effort of the muscles of the hand and forearm.

finger-parted (fing'gėr-pär″ted), *a.* In *bot.*, digitately parted.

finger-print (fing'gėr-print), *n.* An impression made, as with ink or some other pigment, with the tip of a finger, so that its markings are recorded. These markings are individual in character and are permanent throughout life. They are used for purposes of identification according to a system devised by Francis Galton.

In June 1897 a resolution of the governor-general in council directed the adoption of the *finger-print* system throughout India, and its gradual substitution for the previously existing anthropometric system has since been carried out. Its use is not confined to the police department, but extends to all branches of public business.
Encyc. Brit., XXV. 469.

finger-stone (fing'gėr-stōn″), *n.* A popular local name for belemnite.

finger-tip, *n.* **2.** In *archery*, a tip of leather or other material worn upon a drawing-finger to protect it from the friction of the bowstring. Tips are of two kinds: *screw-tips*, adjustable to any degree of tightness by a screw-bolt and nut; and *knuckle tip*, shaped so as to stick to the fingers when the arrow is loosed. See *drawing-glove*.

3. *pl.* On the coast of southern California, a plant of the stonecrop family, *Stylophyllum edule*, with tufted cylindrical leaves the size of a

lead-pencil. The Indians used the leaves as a salad. *Parsons and Buck*, Wild Flowers of California, p. 142.

finish, *n.* 5. In *building*, all those parts of the work which are not essential to the structure but are intended to give elegance of appearance or neatness within, or such smoothness of surface as makes it easily cleaned. Thus the interior finish includes the woodwork of door-trims, dados, and the like, the marble-work when put to similar uses, and mantelpieces, etc.—**Brush finish,** a finish for the surface of brass which is obtained by buffing it to a dull or 'old' brass finish; a finish for the surface of brass that makes the metal appear dull and old.—**Cabinet finish.** See ★*cabinet.*—**Dead finish,** anything, such as an impenetrable thicket, an impassable place, or the like, which brings a traveler to a dead stop; also, the stop itself. [Australia.]—**Grease finish,** a dull mat finish on either gold or silver, generally produced by rubbing the metal with finely ground pumice mixed in oil.—**Stone finish,** a dull mat finish slightly coarser than the grease finish, produced by rubbing down silver, gold, or other metal with flat smooth surfaces of pumice-stone.
